places most sulject to these visitations are Asia Minor, the I'ersian mountains, Cabool, the regions between Lake Baikal, and the volcano of Ho-cheou in the S.E. of Tartary, and in the province of Cutch in Hindoostan. An earthquake oceurred in the second of these districts ou January 22, 1832, the concussions of which were felt throughout a space of about 800 m . in length from N.W. to S.E., by about 450 m . in breadth, or from Lahore to near Taslikand in Middle Tartary. Another oceurred in Cuteh on June 16, 1819, which did mueh damage.

Table-lands, Plains, or Steppes and Deserts.-The tablelauds of Asia, like all the other physical features of that vast eontinent, are upon the most gigantic scale. That of Iran in I'ersia oceupies an area of $1,700,000 \mathrm{sq}$. m., and is generally from 4000 to 7000 ft . above the sea, while that of Thibet comprises $7,600,000 \mathrm{sq} . \mathrm{m}$. at a mean altitude of $11,600 \mathrm{ft}$. The table-lands of the interior are frequently fertile, and enjoy genial elimates, but in some instances, as in that of the table-land of Thibet, are cold and sterile, snow falling there every month in the year. Among the less extensive tablelands are those of Taxila in the Punjab, of Malwah or Central India, of the Deccan, and of Mysore. Nearly the whole of N.W. Asia is one vast plain or undulating surface, oceupying upwards of $7,000,000 \mathrm{sq} . \mathrm{m}$. , and in W. Asia, around the Caspian, there are extensive tracts of country many feet below the level of the sea. The great plain or steppe of Ischim in Siberia, extends from the E. slope of the S. extremity of the Ural Mountains, aeross the Tobol to the Irtish, a distance of about 700 m . It is covered in part with dense forests, and abounds in game. Next to this plain is the steppe of Baraba, oceupying the space between the Irtish and the Upper Obi. To the S. of these steppes is another of several hundred miles in extent, lying between the Altaï Momntains and the E. confines of Tartary, and including Lake Tengiz. In the E. of China, again, there is an alluvial plain of $210,000 \mathrm{sq} . \mathrm{m}$., most of it productive and highly cultivated, and in Hindoostan there are plains that extend 2000 m . along the S. slope of the Himalaya. The steppes of Asia generally consist of rich pastures, intermingled with woods, barren sands, muriatiferous elay, and abouuding in lakes, pools, and streams of salt and bitter waters. Deserts are numerous in Asia, and many of them of great extent. The most remarkable is that of the Great Gobi or Shamo (which see), 'sea of sand,' occupying an area of $300,000 \mathrm{sq} . \mathrm{m}$. in its E. extremity; its whole length being, probably, not under 1200 m . The great salt desert of IrakAjimi in Persia is about 390 m . in length, and 210 in breadth. There are, besides, four other deserts in this country, the whole occupying three-tenths of its entire surface. In Tartary there are the great deserts of Kizil, Koom, and Khiva, whieh, with other tracts of a similar description, and equally sterile, extend over nearly lalf the country. The deserts ot Afghanistan, N.W. Hindoostan (the Indian desert), and Thibet, are also of great extent, and on S.W. Asia are the vast deserts of Arabia, occupying many thousand square miles.

Rivers and Lakes.- Asia contains some of the largest rivers in the world. Those in W. Asia are the Euphrates and Tigris; in E. Asia, the Amoor, the Hoang-Ho, the Yang-tse-Kiang, the Hong Kiang, and the Sang Koi or Tonquin River ; in N. Asia the Oby or Obi, the Irtish, the Yenisei, the Lena, the Indigirka, and the Kolyma; in S. Asia, the Indus and its conIluents, the Attok, Jhelum, Chenab, and Sutlej, the Canges, the Brahmapootra, the Irawady, the Martaban, the Menam, and the Camboja. Some of the basins of these rivers are of vast extent. That of the Obi is 924,800 geo. sq. m., being the largest in the world with the exception of those of the Amazon and Mississippi. The basin of the Yenisei is 784,530 geo. sq. m., that of the Lena 594,400 geo. sq. m. ; while those of the Amoor, Yang-tse-Kiang, and Hoang IIo, are all above 500,000 geo. sq. m. The river of greatest length in Asia is the Yang-tse-Kiang, the development of which is 2880 geo. m .; that of the Yenisei, 2800 m . The lengths of the other principal rivers are from $1400 \mathrm{geo} . \mathrm{m}$. to 2400 .

The largest lake or inland sea of Asia is the Caspian ; it las no outlet, is about 750 m . in length from N. to S., and about 230 in breadth, having an area of $18,000 \mathrm{sq} . \mathrm{m}$. Next in extent is Lake Aral in Tartary, abont 270 m . in length, and varying from 100 to 120 or 130 m . in breadth; area, 3372 sq. m.; it is shallow, and, like the Caspian, has no outlet. The Vol. I.
other principal lakes to the E. are Lake Tengiz or Balkash, about 150 m . in length, varying in breadth from 20 to 50 m ., and Lake Baikal in Irkutsk, Siberia, the largest of Alpine lakes. It is a fresh-water lake, embedded in a knot of mountains, is of a creseent shape, and about 350 m . in lengtl, by about 40 m . only in breadth. There are, besides, a number of smaller hakes dispersed over the continent. A great many of them are salt, some of them intensely so, and also bitter.

Minerals.-All the precious and useful minerals are found in Asia. Diamonds are found in Bundelcund, Sumbhulpoor, Gundur, the Deecan, the Ural Mountains, Borneo, and Ceylon, and various other places. Rock-crystals, amethysts, rubies, torquoises, cornelians, agates, onyxes, beryl, lapis lazuli, topazes, and many other precious stones, are found in numerous different quarters. Gold is found in a great many of the countries, but is, perhaps, most abundant in Siberia, in the Altaỉ chain, called emphatically the Gold Mountains, in the Chinese province of Yunnan, in the mountains of the Indo-Chinese peninsula, in Japan, aud in Borneo. Silver is a product of China, Asiatie Russia, Anam, and the Japanese and Ottoman Empires; mereury of China, Thibet, Japan, India, and Ceylon. Tin is met with over all the Malay peninsula, in Burmah, China, and some of the islands of the Indian Arehipelago; copper and iron in Japan, Asiatic Russia, Thibet, Hindoostan, Anam, Persia, Asiatic Turkey; in most of which countries lead also is found. Coal has been discovered in N. China, Bengal, and in some of the islands of the Indian Archipelago, and doubtless exists in many other localities not yet explored. Salt is very generally diflused over the continent, few extensive districts being altogether destitute of salt lakes or sjrings; but our knowledge of the distribution of the mineral wealth of Asia, as well as on many other points, is still exceedingly imperfeet.

Climate.-Asia, as a natural consequence of its vast extent, stretching from the polar cirele to the equator, possesses every variety of climate, from excessive heat to the most intense cold; being exceeded as regards the former, by the tropical deserts of Afriea alone. This variety of climate is further increased by local influences, particularly by the great heights of its table-lands and mountains, by its compaet configuration, not being deeply penetrated by gulfs, and by the great extension of land it presents towards the pole, and regions of perpetual ice. Beyond the 56th parallel of N. lat., which includes all Siberia, the ground is permanently frozen, in some plaees to the depth of 630 ft . ; and a degree of cold exceeding $90^{\circ}$ below the freezing point, is here of annual occurrence; while, in other parts of the same region, such as Tobolsk, Barnaul, and Irkutsk; the smmmers are equal to those of Berlin, Münster, and Cherbourg, but are succeeded by winters of great severity, the mean temperature being $0^{\circ} 4^{\prime}$ to $4^{\circ} 0^{\prime}$. 'The greatest heat experienced in Asia oceurs in the province of Mukran, in Beloochistan, where, according to the natives, the unburnt bricks are made red by the scorching rays of the sun. The overpowering heat of this district corresponds with that on the Tehama of Arabia, and of the countries on the banks of the Sunegal, in Africa. But the remarkable variety of climate for which Asia is distinguished, is not manifested by its larger regions alone, but is equally exhibited within the limits of its different countries down to their provinces and districts. Thus, in Afghanistan, the snow lies in some places for three months in winter; and the thermometer sinks to from $10^{\circ}$ to $15^{\circ}$ below zero; while, in summer, it ranges from $90^{\circ}$ to $94^{\circ}$. At Delhi, the winter's cold is sometimes $3^{\circ}$ or $4^{\circ}$ below freezing; while at Calcutta, the thermometer rises to $110^{\circ}$. These extraordinary varieties and sudden vicissitudes of climate are owing, in the greater number of instances, to corresponding elevations and depressions of the earth's surface, but are, in some cases, the result of other influencing causes. The violent winds called typhoons prevail in S.E. Asia, between lat. $4^{\circ}$ and $40^{\circ} \mathrm{N}$. ; their sphere of action diminishing westerly, to a space included between $13^{\circ}$ and $26^{\circ} \mathrm{N}$. lat. They thus comprise all China, and the empire of Anam or Cochin Clina, to which countrics, indced, and neighbouring seas, they seem to be ahnost exclusively limited. These destruetive winds blow at all seasons, but rarely between May and December. The monsoons, which also prevail in this quarter of the world, extend into Asia, from their central region in the Indian Ocean, as far as lat. $36^{\circ} \mathrm{N}$. ; including China, all Hindoostan, 29
the Punjab, and part of Thibet. They blow regularly from the S.W. from April to Oetober; and from the N.E. from October to April, the change being accompanied by heavy rain, and violent storms of thunder and lightning. South of the equator, the monsoons blow from the S.E. and N. W. during the same periods. The rainless regions of Asia are of vast extent ; one of these extends from Delhi in N. Hindoostan, to near Nertehinsk in S.E. Siberia, a distance of about 2500 m ., with a width of nearly half that extent. It thus includes part of Thibet, the great desert of Gobi, and part of Mongolia-a space estimated to comprise two millions of sq. m . The other is the continuation of the vast rainless region, which, commencing on the borders of Morocco, terminates in Beloochistan, of which latter it includes the greater part; with a large portion of Persia, the N. part of Arabia, and the S. of Syria.

Vegetation.-The vegetation of Asia is as various as its elinate; and is further diversified by geographical position, and by the higher or lower elevations on which it is exhibited. The extreme S. portions only, including Anam, Siam, the Malay peninsula, Burmah, peninsular Hindoostan, the shores of the Persian Gulf, and Arabia, exlibit the claracteristic features of tropical vegetation, excepting iu partial instances; the other portions display those of temperate regions, extending N . into those of the aretic zone. In W. Asia, the vegetation approaches nearly to that of India at the one extremity, and to that of Europe at the other. N. of the Altai and Yablonoi Krebit Monntains, perhaps the most characteristic vegetation is the pine tribes, which pervade this part of the continent throughout its whole extent. On the E. coast, the pines descend S. through Manchooria and China, to near the tropic of Caneer; and in the W. of Asia, they proceed in a S.E. direction, from the Caucasus Mountains along the plateau of Iran to the Himalaya Mountains, over all which the species are plentiful, and thus nearly quite encircle Mongolia and Thibet, regarding whose vegetation comparatively little is yet known. The S. parts of the continent, comprising Arabia, S. Persia, Beloochistan, India, Burmah, Anain, Malacea, the S. part of China, and the islands of the Indian Archipelago, are altogether a palm region. No cereals are cultivated in Asia N. of about lat. $62^{\circ} \mathrm{N}$. From that parallel, S. to the Altaï, there are two regions; the most N. characterized by the cultivation of barley, oats, and rye; and the most S. by that of rye and wheat. Over both, buckwheat and potatoes are raised. The W. part of the continent, S. of the Altaï to about lat. $26^{\circ}$ N., is wholly a wheat region, excepting the coasts of Anatolia and Syria, where maize is likewise cultivated. On the W. coast of Arabia, and in the S. of Persia and Beloochistan, and the N. of India, wheat and rice are cultivated. The whole of S. India, and the littoral countrics of the E. coast, as far N. as the S. end of the island Sagalin, including the Japanese Islands, and the islands of the Indian Archipelago, are characterized by the cultivation of rice. The tea plant is cultivated over nearly the whole of China and Cochin-China, between lat. $17^{\circ}$ and $35^{\circ}$ N., and lon. $94^{\circ}$ and $120^{\circ} \mathrm{E}$., whieh includes Upper Assam; but is most successful between the parallels of $25^{\circ}$ and $33^{\circ} \mathrm{N}$. which compreliends the principal tea districts. It is also cultivated in the Japanese Islands. Cotton is grown in Central and S. India, Burnah, Siain, Anain, and China. Sugar in Bengal, and the other countries to the E. just named ; also, in Malacca and Java. Ceylon and Java are faned for their coffee, which is also grown on the coast of Malabar, iia Sumatra, and the Philippines. Cinnamon luxuriates in Ceylon, probably its native seat, and is grown in Anam; mut nutmegs, eloves, and peppers, have long been known as the products of the faned spice islands of the Indian Arehipelago. In these latter localities, also, the sago-paln attains the highest perfection; and in many of them, as well as on the continent of lndia, the valuable indigo-plant is grown. Nor would it do, even in this short and imperfect enumeration of the vegetable riehes of Asia, to overlook that most valuable, and at the same time most baneful plant, the poppy (Papaver somniferum), which flourishes in the S. parts of Anatolia, in Syria, and E. into India.

Zoology.-Asia has 288 mammalia, of which 102 are peculiar; 64 specics of ruminating animals, of which 46 are peculiar; 60 genera of carnivorous animals, and 180 species of apes and nonkeys, all of whieh are entirely Asiatic. The
quadrupeds of the continent and islands include the elephant, rhinoceros, camel, lion, tiger, leopard, panther, hyena, tapir, wolf, bear, wild boar, hog, dog, antelope, deer, chanois, stag, ox, buffalo, horse, goat, sheep, wild ass, monkey, ape, fox, hare, squirrel, jackal, elk, martin cat, wild cat, weasel. The habitat of the elephant extends from the S. point of Sumatra, lat. $6^{\circ}$ S. through that island, across the peninsula of Malacea, over the S. province of China, throughout all India, including Ceylon, to nearly lat. $30^{\circ} \mathrm{N}$. It is also met with on the Himalayas, at a height of 5000 or 6000 feet, and roams wild in immense herds through the forests and jungles at the foot of these mountains. The habitat of the rhinoceros is nearly the same, only extending a little further N. in China. The camel is a native of Asia, where, from the earliest ages, it has formed the chief means of commmication between the different regions of the East. The greatest numbers, and the best, are produced in Arabia. The camel of Central Asia is the Bactrian camel, which has two humps; it is stronger and more muscular than the common or Arabian camel, and its hair much more rough and shaggy. The latter is the only description of camel known in other parts of Asia, where it occurs chiefly in a domesticated state. The Asiatic lion has no mane, and is confined to a comparatively linited region, extending from Mount Zerdah Koh, in the Persian platean, lat. $32^{\circ}$ N., to Goojerat and the jungle countries of India on the E., and to the distriets bordering on the Euphrates on the W. The tiger of Asia (royal tiger) has its chief habitat in the sultry jnngles of Bengal, and the islands of Java and Sumatra; but it occasionally wanders as far as the Altaï and Ilimalaya Mountains, which it ascends to a height of 9600 ft . in search of prey, and to the mountains of Persia and Armenia; it also penetrates into Siberia, and is distributed over Corea, Siam, Tonquin, and the Malay peninsula, where it abounds. But the tiger of the N. and E. regions of Asia, though equally large and strong, differs considerably in its nature from the tiger of Bengal, being much less ferocious, seldon attacking man during the day-time. The leopard, panther, and hyena are common, and are met with everywhere, with the exception, as regards the last, of the Burman empire, in which there are neither hyenas, wolves, foxes, nor jackals. The leopard, like the tiger, ascends the Himalaya Mountains to great heights. The tapir is confined to the Malay peninsula, the S. provinees of China, and the Asiatic Archipelago, inlabiting the forests of Sumatra, and the N. parts of Borneo. Amōngst the most renarkable of the Asiatic bears are the Syrian bear, which is seldom met with; the Thibet bear, an inhabitant of the mountains of Silhet and Nepaul; and the sun-bear of Sumatra. It is thought probable that the brown bear exists in Siberia and Kamtehatka, but this has not been ascertained. The wild boar and hog are very gencrally distributed over Asia, and several of the islands of the Asiatic Arehipelago, particularly Celebes, Booroo, and some of the Xulla Islands, which are inlabited by a singular species, called Sus babyroussa. The dog tribe abounds in the tropical province of Asia, the greatest number of species, next to Africa, being found there; but there are none in India beyond the Ganges, and in the Indian Archipelago only two species are known. The musk-deer inhabits the mountainous countries of Central and S.E. Asia, between China and Tartary, and in the regions extending from Lake Baikal to the Altaï Mountains; it is also common in Nepaul, Bhotan, 'Thibet, and the adjacent countries of China and Tonquin. Four other species of deer occur in India, Ccylon, Sumatra, and Bornco. The rein-deer occurs in the N. parts of Asia; the fallow-deer in the N. parts of Persia and China; the common stag or red-deer, and the roebuck, in Siberia, between the Altaï Mountains and the Lena. Ten species of antelopes are peeuliar to Asia, two of which belong to the table-lands, the others are distributed in the Asiatic Archipelago. Various kinds of oxen have been domesticated in India from time immemorial. The most remarkable of these are the Indian ox, whith has a hump on the shoulder; and the Tartary ox, with a beautiful white silky tail. The buffalo is native in China, India, Borneo, and the sunda Islands; it is a large animal, and in its wild state formidable, but is universally domesticated. The horse is now known only as a domestic animal in Asia, although believed to have at one time run wild in the central plains of that continent. The greatest number of species of the goat family occurs in Asia, one of the most celebrated being the goat of

Cashmere, which is also spread over Thibet, where they browze at elevations of from 10,000 to 13,000 feet. Another species, called the Dzeran or yellow goat, is both swift and shy. The sheep is originally from the countries of W. Asia, and, like the goats, is most numerous in this part of the world. They also browze at great heights; a species called the ras, with straight spiral horns, living on the table-lands of Pamer, at an elevation of $15,000 \mathrm{ft}$. above the sea. The wild ass or onagra of Tartary, a lively and handsome animal, of great speed, is regarded as the origin of the common ass. It inhabits the dry mountainous parts of Great Tartary, ranging, in summer, as far as lat. $48^{\circ} \mathrm{N}$. Whole herds of them are seen in motion, also, as far as the deserts of the Lower Indus; but they are distributed chiefly over the E. provinces of Persia. The wild ass of Cutch and N. Goojerat, is not found further E. than lon. $75^{\circ}$ E., on the S. side of the Ilimalaya Mountains ; it especially frequents the salt deserts and open plains of Jodhpoor, Jaymlmeer, and Bickaneer. Wild asses abound, likewise, on the elcvated regions of Thibet, on the shores of the lakes of Manasarowar and Rakastal, at a height of more than $15,250 \mathrm{ft}$. above the sea. Of the ape and monkey tribe $\Lambda$ sia has 180 species. Monkeys are found only on the coast of India, Cochin-China, and the Sunda Islands; apes in the Sunda Islands, Malayan peninsula, Sumatra, and Bencoolen; the orang-outang in Sumatra and Borneo; the latter, and the Chimpanzee of Africa, approach the nearest to man. The Asiatic species of gnawers are all, with the exception of the jerboa, which burrows in sandy deserts, confined to Siberia; the most rentarkable of these is the flying squirrel. At the junction of Europe and Asia, on the coasts of the Black Sea and the Caucasus, the European and Asiatic forms of animals are mixed, and pass into cach other.
The chief haunts of the reptilia of Asia are the N. and N.E. parts of Hindoostan ; between about lon. $78^{\circ}$ and $100^{\circ}$ E., and between the Himalayas and the Bay of Bengal; China, in a less degree; the islands of Ceylon, Sumatra, Celebes, and Java, in the latter in greater numbers and variety than in any other part of the world. The reptile fauna of Asia, so far as known, comprises only 44 species, but there is little doubt that many more remain to be added to the list. At the head of this class of animals stands the crocodile, the Asiatic genera of which is the Gavial (Gavialis Gangeticus), frequenting the Ganges and other great Indian rivers. The crocodile with the helmet (Crocodilus galeatus), and the double-crested crocodile (Crocodilus biporcatus), are numerous in various quarters, both continental and insular. There are 10 species of frogs peculiar to $\Lambda$ sia, and nine species of toads; but of the former three only belong to the mainland, the others are distributed through the islands, two being peculiar to Japan. Amongst the serpents of Asia are the Cobra da Capello, and a species of Trigonocephalus, both amongst the most dangerous snakes in existence; vipers, two species of which are peculiar to Asia. Tree-serpents, inhabiting the great tropical forests; boa constrictors, pythons, the largest snake of the eastern world; chameleons, fresh-water tortoises, of which eight are peculiar to Asia. Sea and fresh-water snakes are also numerous; the former swarm in the Indian Ocean, and many of them are extremely venomous and ferocious.

The number and varicty of birds in Asia is too great to attempt either enumeration or description; they include eagles, vultures, falcons, buzzards, quails, pheasants, partridges, starlings, herons, storks, cranes, swans, wild ducks, pelicans, nightingales, \&c. In S.E. Asia and the islands of the Indian Archipelago, birds of the most gorgeous plumage abound; while several of those above mentioned, though bearing European names, here present themselves in the splendid hues of the tropics. Asia is peculiarly prolific in gallinaceous fowls, some of them possessing most brilliant plumage. Among these may be named the horned pheasants of the Himalaya, a species of Tragophans, the gold and silver pheasants of China, and the Argus pheasant of Sumatra and Borneo. A large gallinaceous fowl (Megapodius), of remarkable habits, is found in some of the islands of the Indian Archipelago; and to this region, or to the S. part of continental Asia, we are indebted for that most valuable of domestic fowls, the common cock and hen.

The same or similar specics of insects and fishes being diffused over a very wide extent of country, it becomes much more difficult to adduce such as peculiarly characterize any particular locality than when dealing with quadrupeds, whicb
are not endowed with the same facilities of locomotion. We slall, therefore, on these departments of zoology, refer the reader to the separate articles on the countries composing Asia, in which the more prominent genera of insects and fishes frequenting them will be noticed.

Races of Asia, Language, and Religion.-Asia is supposed to have been the cradle of the human race. It contains a vast varicty of tribes and nations. The great divisions or families consist of the Caucasian group, the Mongol-Tartar group, and the Malayan, and Ethiopian nations. The first occupy nearly the whole of W. Asia, the Ilimalaya to the Bralmapootra, and all India between these mountains and the ocean. The Mongol-Tartar family occupies all $\Lambda$ sia N. of the Persian table-land and of the Hinalaya, the whole of E. Asia from the Brahmapootra to Behring's Strait; it includes the Mongol and Tartar tribes, the Chinesc, Indo-Chinese, and Japanese. The Malay nations occupy the Indian Archipelago. The Ethiopian, Ceylon, Bornco, Sumbawa, Timor, and, exclusively or partially, numerous other islands. These great divisions of the Asiatic population are again subdivided into numerous tribes, most of which will be noticed in detail in the respective articles on the various countrics of Asia. Of the four principal groups mentioned, the Caucasian is the handsomest, and probably the most intellectual, though this admits of question. A portion of the Mongol-Tartar race are also capable of high culture, especially the Chinese. The Kalmuks, a branch of the same family, who lead a pastoral life on the steppes of Central Asia, are an intelligent and well-formed race. The Malayan nations are dark, with lank, coarse black hair, flat faces, and obliquely set eyes. They are active, ingenious, mild, and gentle, in some places; in others, fierce and vindictive. The distinguishing physical characteristics of the Ethiopians are well known to consist of a black complexion, black woolly or frizzled hair, thick lips, projecting jaws, high cheek-bones, and large prominent eyes. The most numerous of the great Asiatic races is the Mongolian, next the Caucasian, then the Malay, and, lastly, the Ethiopian, frequently now called the Papran race, which is estimated at a million only.

The languages of Asia are nearly as numerous as its tribes, there being, according to Aderburg, no fewer than 937 different dialects. The prevailing religions of $\Lambda$ sia are Brahmanism and Buddhism ; the former being professed in Hindoostan, the latter in China, Japan, Anam, Siam, the Burman Empire, Ceylon, and amongst the Mongols and Tunguzes. In the S.W. of Asia, Islamism prevails; and Mussulmans are numerous in India, Malacca, and many parts of the Indian Archipelago. There are multitudes of other sects in various parts of the continent.

History.-The term Asia, the origin of which is unknown, was first applied to a small province of the peninsula now called Anatolia or Asia Minor, but has since been gradually extended to the whole Asiatic continent. The early history of Asia may be regarded as that of the world. Here the human race was first planted; and here also, from the few survivors of the deluge, arose in succession the primitive families, tribes, nations, and dynasties, of whose history only a few fragments remain. The ancient history of $\Lambda$ sia is thenceforth divisible into four great epochs, of unequal duration, corresponding with the existence of four great dynasties -the Assyrian or Babylonian, the Mcdo-Persian, the Grecian, and the Roman, which last may be considered as extending to the period of the Mahometan conquest, in A.D. 638. It was during this latter period, and when its power was at its height, that the introduction and establishment of Christianity took place. This event formed a new era in the history of man, and became the source of great and favourable changes, both in the physical and moral state of society. It has given a tone to all succeeding history, and, apart from its blessed results to our race, must, even in a mere listorical point of view, be regarded as the most important event that has ever occurred, not only in the history of Asia, but of the whole world. During this long period geography had made little progress. By Ptolemy's account, it would appear that not more than about a fourth of the continent of Asia was known to the ancients, who divided it into Asia citerior, and Asia ulterior; the former corresponding with the modern Anatolia or Asia Minor, and the latter with the rest of Asia them known.

The next division of $\Lambda$ siatic history is that which comprehends what are usually termed the Middle Ages, extending
from the commencement of the Mahometan era to the end of the 15 th century, wheu Vasco de Gama discovered a passage to India by the Cape of Good Hope. In less than a century after the Megira, or flight of Mahomet from Meeca, in 622, his imposture, whieh was destined to excreise so great and permanent an influence in the Eastern world, had been spread over a territory extending S. and N. from the lied Sea to the Caspian, and E. and W. from the confines of Tartary and India to the shores of the Atlantic. In 1037, the Tartars, under Togrul Beg, subdued Persia, and his successors conquered India, Tartary, Syria, and Egypt. They also took and plundered Jerusalem, and by their cruelties towards the Christian pilgrims to that city, aroused, throughout Europe, a feeling of indignation which led to the crusades. These memorable expeditions were undertaken in succession during a period of 200 years, commencing about 1095 , and drew into their cause some of the most powerful kings and most noted warriors of the Middle Ages. After various changes, the dominion of the Saracens, about the middle of the 13th century, ultimately extended, under the sway of Kublai Khan, over all the provinces of W. Asia. The crusades, and other contemporary circumstances, had contributed, in a more remarkable degree than formerly, to direct the mind of Europe towards Asia; and the result was, the establishment of permanent commercial relations between them. About 1250, two Venetian noblemen, Nicolo and Maffio Polo, visited Asia as merchants, taking with them Nicolo's son Mareo, who was afterwards the most celebrated Asiatic traveller of the Middle Ages. During a residence of 24 years at the Tartar court, by which he was frequently employed as an ambassador, he traversed most of China, a considerable part of India, Java, Ceylon, and perhaps several other countries, making also a few voyages along the S. coast of Asia. He likewise collected much information regarding places which he never visited ; and his correct deseription of countries formerly unknown to Europeans, must be considered as having laid the foundation of modern Asiatic geography. After him several travellers published notices of Asia; but their relations, in seneral, are full of fables, and the partial knowledge of China, and of portions of Northern and Central Asia, gleaned prineipally from the travels of Polo, with the discovery, by Rubruquis, that the Caspian is an inland sea, must be regarded as all the geographical knowledge that the Middle Ages have furnished, in addition to that possessed by the ancients. At length, the Portuguese navigator, Vasco de Gama, in 1498, doubled the Cape of Good Hope, and, opening a new channel of intercourse with the E., ultimately led to a more accurate and more extensive knowledge of its geography. From the end of the 15 th century to the present times, the history of Asia has gradually risen in importance, and the progress of its geography has been much advanced. Within a few years after the arrival of De Gama on the Indian coast, the Portuguese had acquired a complete knowledge of the whole coast, from Cape Comorin to the Bay of Cambay, and effected settlements in the kingdoms of Camboja, Cochin-China, Tonquin, China, and all the fertile islands of the great Indian Archipelago. At the death of their famous naval commander and hero, Albuquerque, in 1515 , their colonics were established at various points of the Asiatic coast, and extended from the Cape of Good IIope to the empire of Japan, a distance of at least $12,000 \mathrm{~m}$. In 1600 , the Portuguese encountered a new competitor and formidable enemy in the Dutch, who sent several commercial expeditions to the E. by the Cape of Good IIope, and, by 1640, had made themselves masters of all the E. islands and seas, with the exception of some British settlements on the coast of Sumatra. The Duteh, however, in extending their settlements, acted chiefly ou mercantile principles, and have not added much to our geographical knowledge. Their most important contribution was through the German naturalist, E. Kimpfer, who has given a good description of Japan, in which he resided, in the eapacity of Dutch physician, from 1684 to 1692 . During the protracted contest between the Dutel and Portuguese, the N. part of Asia, not previously known either to ancients or moderns, suddenly emerged from obscurity. Russia, having thrown off the Tartar yoke in 1461, proceeded to enlarge her dominion by the conquest of Kasar in 1552, and Astraklian in 1555, thereby extending our geographical knowledge over the basins of the Don, Wolga, and Ural, up to the Ural Mountains. In

1578, Ycrmak, a hetman of the Cossacks, having crossed the Ural range with his troop, entered Siberia, the discovery and survey of which were pursued so vigorously, that, int 1644, the mouth of the Amoor was reached; and, in 1648 , Deshneff, another hetman, proved the separation of Asia from America by an open sea, by sailing round the N.E cape from the mouth of the Kowyma to that of the Auadir. Somewhat later, a complete geographical view of the vast empire of China and part of Central Asia was obtained from the Jesuits, who, having risen to high favour in China, actually published a map of China, under the authority and at the expense of the Chinese Govermment. The attention of Britain had long been dirceted to Asia, and the discovery of the passage by sea had given a new impulse to their views in that quarter. For many years after that event, frequent voyages of discovery were made by British navigators, and several embassies and other journcys were performed by British subjects on land. But the formation of the E. ludia Company, in 1600, which ultimately established British authority in the L., has done more than any other event to extend our geographical knowledge in that quarter. At first the new information obtained was scanty, but from 1740, during the wars with the French in the Decean, and more especially from 1757 , after the conquest of Bengal, it rapidly increased; numerous expeditions, both military and exploring, have been made, and the quantity of unknown territory is at length circumscribed within comparatively narrow bounds.
Population.-The entire population of Asia is estimated at $480,000,000$, which is considerably more than half the entire population of the globe. They are thus divided-Caueasian race, $164,000,000$; Mongolian, 291,000,000; Malay, $24,000,000$; Ethiopian, 1,000,000, of which the islands are supposed to contain between 50,000 and 60,000 .- (Balbi's Abrégé; Foreign Quarterly Rieview; Ilumboldt's Asie Centrale, Aspects of Nature, Cosmos, \&ec. ; Murray's Cyclopedia of Geography; Travels of Mareo Polo; Historical and Descriptive Account of British India; Johnston's Physical Atlas; Mrs. Nommerville's Physical Geography; Lyell's Geology; \&e.)

ASIL MINOR. See Anatolia.
ASI $\Lambda$ GO, a tn. and dist. Austrian Lombardy, gov. Venico, prov. Vicenza. The town, cap. of the dist., stands on the ridge of an eminence, 40 m. N.E. by N. Verona; and is celebrated for the manufacture of straw hats, of which vast numbers are made here annually. Pop. 4670.-The Distuct is known by the name of the 'Seven Communes' (Sette Comuni). It is gencrally well wooded; and is very productive in cattle and sheep, great numbers of which are reared throughout the territory. It is also famous for its turnery, cabinet-work, and other manufactures in wood. The inliabitants are of German descent. Pop. 25,500.

ASIATLC ARCIIPELAGO. See Indian AremipleLAgo.

AslMAGOMY, a lake, Upper Canada; the centre in lat. $48^{\circ} 35^{\prime} \mathrm{N}$. ; lon. $85^{\circ} 30^{\prime} \mathrm{W}$. It is about 12 m . in length, with a breadth varying from 2 to 4 m ., and discharges itself into the E. extremity of Lake Superior, by a stream about 36 m . long.

ASINALUNGA [ane. Ad Meusulas], a tn. and com. Tuseany, prov. of, and 22 m . S.S.W. Arezzo, on the E. declivity of a hill in the plain of the Chiana. It is well built, has wide and well-paved streets, a handsome collegiate ehureh, in which are many fine paintings; an hospital, and a theatre. The surrounding country is well watered and fertile. Pop. 7767. -(Dizio Univ. Italia.)

ASINARA, a small isl. off the N.W. extremity of the island of Sardinia, 2 m . N. Cape Falcone; lat. $41^{\circ} 5^{\prime} \mathrm{N}$. ; lon. $8^{\circ} 18^{\prime} 15^{\prime \prime}$ E. (в.) It is about 10 m . long by 2 broad; mountainous, but fertile, and has a great deal of excellent pasturage. The coast abounds with fish. It is now inhabited by a few shepherds and fishermen only. It has a good lighthouse, and an excellent port, called Trabuccato.

ASIR, an independent state, Arabia, occupying the high land on the confines of Hejaz, Yemen, and Nejd. It appears to be of recent origin, for it was unknown to Niebuhr; and though Burckhardt mentions the tribe of the Asir, yet he does not scem to lave heard of a state so called. The limits of Asír are formed by leserts or impassable mountains, and, like the boundary lines of all other Arabian states, do not adinit of being precisely defined. Nearly in the 18th parallel of latitude, a number of small streams or torrents water the
fertile valley of Khamír Misheít, enelosed within the roeky summits of the maritime chain of mountains. If the opening of this valley N., be followed, it leads to Wady Shehran, which is also well watered; still further N., or N.E., extend the valleys of Mamáleh Kebír, and Mamáleh Saghír (great and little Mamaleh), the latter called also Hamamah from Hamám, the name of a bird resembling a dove in size and figure, but with brilliant plumage. A little below Wady llamámah, the narrow bed of an occasional torrent with a well sunk in it, marks, in the sandy plain, the N. boundary of Asír, towards Hejaz. This point is probably not far from the parallel of $19^{\circ} 10^{\prime}$. The chain of valleys forming the main portion of the territory of Asír may be presumed, therefore, to extend about 80 m . in length. The obvious alvantages of this country are, first, its numerous mountain streams, which, with the aid of eanals, irrigate a wide extent of cultivated land; and, secondly, its natural strength and general inaccessibility ; for though an overpowering foree may march through the central valleys of Asir, it eamnot follow the inhabitants to the hills, so as to complete their subjngation. The streams seem to flow collectively into the river of Wady Bisheh, which has water constantly, and fertilizes a tract of about 45 m . in length; though the Arabs, in their usual style of exaggeration, say that it reaches to the gates of Bagdad. The rivulets are dry during half of the year; but water may generally be found in their beds at a moderate depth; and when heavy rain falls in violent thunderstorms (in August, and perhaps in May also), they are speedily converted into violent and impassable torrents. To persons arriving from Wady Bisheh, which is low and sultry, the air of this elevated region feels cool and humid; there is not, however, any positive ground for supposing that the mountains of Asír rise to a great leeight. The favoured valleys of this country have probably an elevation of from 3000 to 4000 ft ., while the rocky erests around them may rise 1000 or 1500 ft . higher. Granite seems to be the prevailing roek in the eastern chain; higher up in Asír, M. Tamisier thought that he found marble, with ores of tin and lead. In the lower valleys, the date-palm grows to a great height, but the dates are inferior to those of Wady Bisheh ; cetten is also cultivated; higher up, the dategroves are interspersed with almonds, figs, apricots, peaches, and vines; the sides of the hills, where they offer any soil, being elothed with forests of sidr, or pine-like juniper. The valley of Khamír Misheít, the most elevated part of Asir, produces wheat, barley, dúrrah (IIolcus sorgham), and excellent fruit in abundance. The middle of the valley in the neighbourhood of the stream is usually resigned to cultivation; while the villages are perched on the surrounding heights, enclosed by walls, and otherwise fortified after the fashion of the country. ln some places, as in Wady Hanámah, each house is a little fort. The houses are generally two stories high, built of sun-dried brieks, and with roofs varying in different situations from flat to pointed, aceording to the local climate, and the violence of the rains. The ground-floor is given up to the cattle. The door of the house is but a foot wide, so that it may be made of a single date-tree plank. Besides the loopholed and narrow-doored walls of the villages, which bear witness to the frequency of feuds and intestine wars, there are also regular fortresses, strong, against native means of attack, near all the prineipal date plantations. It was in the war waged by Mehemet Ali with the Wahábi, that the importance of Asir first came to light; the resources of that country, and the courage of its inhabitants, proved the Pasha of Egypt's chicf obstruetions. LIaving subdued the Wahábi, therefore, he turned his arms against the mountaineers of $\Lambda$ sir, and, between 1824 and 1837, the Egyptian army made three eampaigns against them, which all proved unsuccessful ; the invaders being either beaten in the field, as in the first campaign, or worn out and famished in marches through deserted villages, surrounded by a vigilant enemy, who allowed them no rest, and cut off all supplies, till at last they were compelled to negotiate a peace, which virtually amounted to permission to retreat ummolested. The people of Asír are bigoted followers of Abd-el-Wahab, by whom, it is said, they were first converted to Mahometanism, in the beginning of the last century ; and many of their rites-among others, their mode of cireumeising-still retain a pagan charaeter. -(Jomard, Etudes Gcog. et ITist. sur l'Aralie, 1839; Tamisier, Foyage dans l'Arabie, 1837.)

ASIRMINTAR, an active volcane in the island of Onekotan or Anakutan, the most northerly of the Kurile Islands; lat. $49^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $155^{\circ} 8^{\prime} \mathrm{E}$. Its height is not ascertained.

ASK, or Asek, a tn. Persia, prov. Mazanderan, dist. Larijan, of whiel it is the cap., about 12 m . N. by E. Mount Demavend, r. bank, IIeraz; lat. $36^{\circ} 0^{\prime}$ N.; lon. $52^{\circ} 8^{\prime}$ E. ; at a height of 5900 ft . above the level of the sea. It contains from 1000 to 1500 houses.

ASKEATON, a market-tn. and par. Ireland, co. Limerick. The town is on the river Deel, about 2 m . above its junction with the Shamnon, 16 m . W.S.W. Limerick. In the reign of Charles I., it was a large walled town, but is now a mere village. The parish churelh was formerly that of the Commandery of Knights Templars, founded in 1298. There are here also a R. catholie chapel and several schools. The ruins of a Franciscan monastery, founded in 1420, are beautifully situated elose to the Deel; which at high water is navigable for vessels of 60 tons up to the town. It is crossed by an old bridge of five arches, which connects the two parts of the town. The principal trade is in grain and flour. Area of par. 6551 ac. Pop. (1341), par. 4438 ; tn. 1862.

AsKERNE, a vil. England, co. York, W. Riding, $7 \frac{1}{4} \mathrm{~m}$. N. Doneaster, pleasantly situated on a roeky acclivity, ascending gradually from an extensive plain. It has risen during the present century from an obseure hamlet to an elegant and fashionable watering-place, through the celebrity of its sulphurous spring. The accommodation provided for visitors is very complete; the hotels, baths, boarding-houses, \&e., being all of the first class, and most of them agrecably situated in the midst of gardens and orelards. l'ermanent pop. in 1841, 468.

ASKERSWELL, a par. England, co. Derset; 2330 ac.; E. Bridport. Pop. in 1841, 233.

ASKHAM, three parishes, England:-1, $\Lambda$ par. and townslip, co. Westmorland ; 3000 ac.; S. l'enrith. Pop. in 1841, 635.-2, (Bryan), a par. and township, co. York; 1920 ae.; W.S.W. York. Pop. in 1841, 342.-3, (Fiichard), a par., co. York; 960 ae. ; S.W. York. Pop. in 1841, 232.

ASKRIGG, a small market-tn. and ehapelry, England, co. York, N. Riding. The town is built on an acelivity, and consists of one street, well paved, and kept very clean. The houses are of stene, slated, and substantial. There is an ample supply of water from springs in the vieinity. It contains a elureh and a place of worship belonging to the Wesleyan Methodists, and a school supported by subscription. There is also a grammar-sehool at the distance of about a mile, which is now (1850) being rebuilt. Near the town are six alms-houses for poor widows. The only manufactory in the town is a small mill for dressing wool for stocking-making. Market-day, Thursday, but very indifferently attended. There are four fairs in the year for cattle and lorses. These are held in May, June, July, and September, that in July is the largest sheep fair in Yorkshire. The country around is wild and mountainous, and has many pieturesque waterfalls. Area of chapelry, 4790 ac. P'op. in 1841, 726.

ASLA, or Assela, a vil. Algeria, $149 \mathrm{~m} . \mathrm{S}$. Oran; lat. $33^{\circ} 32^{\prime} \mathrm{N}$.; lon. $0^{\circ} 30^{\prime} \mathrm{W}$. It is situated on the edge and erest of a plateau, on a small stream of the same name, whicls waters the little gardens that compose the prineipal riches of the inhabitants. The village consists of ahout sixty badlybuilt, damp, and mnhealthy houses, arranged so elosely together that their exterior fronts, almost without opening in them, scrve the purpose of walls. From a little distance the village presents the appearance of a ruined castle of the Middle Ages. In the centre is a sort of square, from which lead four little streets, conducting to all the honses, and to the mosque. It is a storing-place for the grain of certain nomadic tribes of the vieinity.-(Bul. Geo. Soc.)

ASLACKBY, a par. England, co. Lincoln; 4810 ac.; N. Folkingham. Pop. in 1841, 507.

ASLACTON, a par. England, co. Norfolk; 1310 ac.; W.S.W. St. Mary Stratton, near the London and Norwich Railway. Pop. in 1841, 404.

## asmannshaUsen. See Assmannshausen.

ASNA. See Esneh.
ASNIERES, the name of several villages in France, one of which, agreeably situated on the 1 . bank of the Seine, arrond. St. Denis, and about 4 m . from Paris, forms a station of the railway from Paris to St. Germain. The Versailles
railroad here branches off to the left, and the Rouen railway to the right. Before entering the village, the Seine is crossed by a railway bridge of five arehes. Pop. 702.

Asolin, a small fortified tn . Austrian Lombardy, 20 m . N.W. Mantua, on the Chiese. It has an hospital, and a silk spiming faetory; and is a place of high antiquity. Pop. 4000.

ANOLO, a small tn. Austrian Lombardy, 20 m . N.W. Treviso; agreeably situated on a hill. It has an old cathedral, some elcgantly-built houses, and the remains of a Roman bath and aqueduct. Near the middle of the town is an extensive old castle, now uninhabited, formerly the residence of Catherine Cornaro, Queen of Cyprus. The inhabitants rear silkworms. A little E. of the town is the frecstone quarry of Rocea. 1'op. 3400 .

## AS()PII. See Azof.

AsOPO [anc. Asopus], a river, Grecee; it has its source about lat. $38^{\circ} 16^{\prime}$ N.; lon. $23^{\circ} 23^{\prime}$ E.; 6 m .S.S.W. Thiva or Thebes, and 27 m . W. by N. Athens. It falls into the ehannel of Negropont, lat. $38^{\circ} 24^{\prime}$ N.; lon. $23^{\circ} 47^{\prime}$ E., after an E. by N. course of about 25 m .

ASPALL, a par. England, co. Suffolk; 1240 ac.; S. Eyc. Pop. in 1841, 132.

ASPATRIA, a par. and township, England, ee. Cumberland; 8610 ae.; N.E. Maryport, near the Maryport and Carlisle hailway. Pop. in 1841, 1921.

ASPE, a tn. Spain, in Valeneia, prov. of, and 17 m . W. Alicante, at the foot of a low hill, near the river Elcha; having tolerably good houses, streets somewhat narrow and winding, a chnreh, townhouse, hospital, prison, abattoir, several schools, a cemetery, and two squares, in one of whieh is a fountain. Besides flonrmills, there are here 18 oilmills, five soap manufatories, and 10 brandy-distillerics. The commeree consists ehiefly of oil, wine, and brandy. Pop. 6744.

ASP'E, a valley, France, dep. Basses-l'yrénées, extending about 27 m . S. to N., from Mount Aspe to the ridge of the P'yrences near Oléron. It contains about 15 villages, tho inhabitants of whieh are are mostly shepherds. Very little grain is grown; but a great quantity of timber for shipbuilding is felled, and floated down to Bayonne by the Gave d'Aspe, whieh traverses the valley, and, joining the Gave d'Oléron, passes into the Adour. The valley contains a quarry of alabaster.

ASPEDEN, a par. England, co. Herts; 1620 ae.; S.W. Buntingford. Pop in 1841, 529.

ASPEREN, a tn. Holland, prov. S. Holland, 20 m . E.N.E. Dort, l. bank, Linge, in form of a parallelogram, walled, with four gates. Formerly it was strongly fortified, and had two castles, the ruins of one of which still exist. It has a townhouse; a ehurch, built early in the 15th century; a school, and two annual fairs for eattle and horses, held in April and October, of which the latter, for sheep espeeially, is the greatest in Holland. Pop. 1200.

Asperg, Asberg, or Hohen-Asberg, a tn. Würtemberg, circle, Neekar, bail. of, and 3 m . W.N.W. Ludwigsburg. At a short distance to the $\mathbf{N}$. is the aneient fortress of HohenAsberg, upon an isolated rock, 1100 ft . above the sea level; the only strong plaee in the kingdom, and now, or recently, used as a military and state prison. Pop. 1570.

ASl'ELRN, or Gross Aspern, a vil. arehduchy of Austria, r. bank, Damube, nearly opposite Vienna. It was, with the villages of Essling and Engendorf, the scene of a sanguinary battle, fought between 100,000 Freneh, under Napoleon, and 75,000 Austrians, under the Arehduke Charles, on May 21 and 22, 1809. On this occasion the French sustained great loss. Marshal Lannes and several of their generals were killed, and they were foreed to retreat to the island of Loban.

ASI'LEY-GUISE, a par. England, co. Bedford; 1960 ac.; N. by W. Woburn. Pop. in 1811, 1139.

ASPROPOTAMOS, or Aspro Potomo [ane. Achelous], a river, Turkey and Greece, having its souree in the former, and its termination on the W . shore of the latter. It rises in the Mezzovo Mountains, part of the Pindus range ; lat. $39^{\circ} 50^{\prime}$ N.; lon. $21^{\circ} 21^{\prime} \mathrm{E}$; about 20 m . E. Janina, and a few miles only from the sonrces of the Arta. From this point it flows due S., enters Greeee at lat. $39^{\circ} 3^{\prime} \mathrm{N}$. , traverses Livadia from N. to S., and now, taking a S.W. by W. direction, falls into the Ionian Sea, near Cape Skropla, on the N. side of the entrance into the Gulf of Patras ; its whele course being about 120 m .

ASSAB (BAY of), Abyssinia, about 40 m. N.W. the narrowest part of the Strait of Bab-el-Mandeb; lat. $12^{\circ} 55^{\prime} \mathrm{N}$.; lon. $42^{\circ} 45^{\prime} \mathrm{E}$. It is 16 m . in length, and upwards of 5 m . in width, at the broadest part; bounded, S.E. and E., and N.E. and N., by islands, the largest of which is Darmabah, nearly 20 m . in eircunference; very low, and partly eovered with jungle. The soundings insile the bay are 6 and 7 fathoms mud. Wood may be procured on the islands, but water is scarce and brackish.

ASSAL, an extensive salt lake, E. Afriea, 25 m . S.W. Tajoora, about lat. $11^{\circ} 40^{\circ} \mathrm{N}$.; and lon. $42^{\circ} 40^{\prime} \mathrm{E}$. It is, according to D'Héricourt, upwards of 700 ft ., according to other authorities, 570 ft . below the level of the sea; of an oval form, 8 m . in length N . to S ., and about 4 m . in breadth. The shores are covered with a thick salt crust, resembling ice, which in most places rests on the ground, the water having subsided; the inerustation is frequently found to be about half a foot thick. Numerons caravans from Abyssinia resort to this lake, to carry away the salt. D'Héricourt describes it as having a singularly dismal and repulsive appearance, the landseape around being lifeless and desolate, and much broken up by deep chasms and ravines, of volcanic formation; while the waters of the sullen lake 'become turpid, thicken, and slowly solidify under a burning sun.' The same author advanees the theory, in which other authorities agree, that it is an ancient gulf of the sea, eut ofi from the ocean by a sudden upheaving of the land between the latter and the former, a distance of about 5 or 6 m .-(D'Hérieourt, Voy. dans le Roy. de Choa.)

ASSAM, or AsAM, a large distriet or country, India beyond the Ganges, in the valley of the Brahmapootra; between lat. $25^{\circ} 45^{\prime}$ and $28^{\circ} 15^{\prime} \mathrm{N}$., and lon. $90^{\circ} 35^{\prime}$ and $96^{\circ} 50^{\prime} \mathrm{E}$. Its limits, however, especially on the E., are not well defined; but its extreme length may be estimated at 400 m ., with a breadth varying from 40 to 70 m .; area abont $22,000 \mathrm{sq} . \mathrm{m}$. ; bounded, S.W. by Bengal, N. by Bhotan, E. by Thibet, and S. by Burmalı and Cachar. It is divided by the Brahmapootra into three parts, Outerkole, comprelending the provinees on the N . of that river; Deccaneole, comprehending those on the S. ; and the Majuli or Great Island, formed by the separation of the stream into two branches, namal the Lohit and the Dihing. It is otherwise divided into Camroop, Assam Proper, and Sodiya; or Lower, Midlle, and Upper Assam. The country lias the appearance of a perfect flat, studded over with little conical green hills, rising abruptly from the level plains, to the height of from 200 to 700 ft .; bounded on the N. and E. by lofty mountains. It contains several extensive tracts of well-cultivated land; amongst whieh are some distriets of primitive soil, above the reach of inundation, and suited for crops of all kinds. Of these high plains, those at Bishnauth, Chardwar, and Chotegah, are the most considerable. Though the country is generally swampy, and interseeted with half-filled ehannels and stagnant lakes, yet in the dry season it is very suseeptible of cultivation, and amply repays any labour and expense bestowed upon it. The soil is, for the most part, composed of rieh black mould; though occasionally of red stiff clay. On the hills, it is universally eomposed of red rich loam.

Assam has no fewer than 61 rivers, of whieh 37 flow from the N., and 24 from the S. mountains. Of the former, the principal is the Brahmapootra. Mest of the rivers, especially during floods, are navigable by the flat boats of Assam as far up as the mountains. Gold is found in nearly all the moun-tain-streams that flow into the Brahmapootra, and also in the latter river itself. But the best is found in the most winding waters with the strongest eurrents. Iron abounds in most of the hill countries. Coal has been diseovered in several places, and limestone and shell lime are found in considerable quantities. There are also mines of preeious stones, and several amber mines, which are wrought with considerable advantage. The amber is eut into cylinders about one-fourth of an inch in diameter, and 2 inehes long, and is worn in the ear as an ornament. In the Naga hills are numerous brine springs, from which salt is manufaetured. Petroleum is found in small quantitics in some parts of Upper Assam.

The climate of Assam has been long considered so unhealthy, that some insurance offices exact a higher rate of premium on the insuranee of lives in that province than usual. It does not appear quite to deserve this charaeter ;
many of those instances of extreme mortality on which it is founded having been the result of local influences, and of the unguarded conduet of the vietims themselves. The wind here blows from the E. or N.E. for more than nine months in the year, and seldom from any other lirection for more than a few days at a time. There is a greater cquality of temperature during the year than is general throughout India. The hot weather also is much more moderate and endurable, and the nights are eool and refreshing. Very violent storms are frequent during April, May, and June; accompanied with tremendous thunder and lightning, hail showers, and torrents of rain. The rainy season lasts six months; commencing in April and ending in October. During this scason one universal deluge prevails, and all the labours of the field are nceessarily suspended. It might be thought that this would be a miserable time for the natives. It is quite otherwise. 'Every one,' says M'Cosh, 'seems happy and contented; and lives luxuriously upon haunches of venison, or steaks of the hog or the buffalo. The native anchors his boat to his own roof tree, performs his ablutions on his flooded hearth, and drags his net in his tobaceo garden; where the oxen lately ploughed, they are swim across to higher pasture; the sites of larga villages are known only by their roofs above the stream. When the inundation has risen too high for the natives to wade from one house to another, they paddle out of their houses in canoes, or roost on scaffolds, with the frequent ealamity of their children falling out of their nests and being drowned.'

Agriculture is generally in a very backward state; and immense tracts of eountry are lying waste that might be protitably cultivated. Rice is the principal crop; sugar-cane grows well, but does not attract much attention. Mustard, cotton, and opium, are extensively cultivated. The tea tree, which grows wild on the mountains in great abundance, has beeone an important artiele of cultivation and commerce. Coffee, in its natural state, also grows luxuriantly, but attracts little attention, and is, in cousequence, not very fruitful. The betel-nut palm is cultivated to a large extent about most villages. Fruit-trees, with a very few exceptions, do not thrive in Assam. The ratan grows wild throughout the country, and even forms impenetrable jungles. The plantain grows abundantly on most of the hills. India-rubber, or eaoutchoue, is an indigenous production of Assam, but is inferior to the Ameriean. The tree producing this substance is one of the largest known; the trunk often attaining a cireumference of 74 ft ; height, 100 ft .; area covered by branches, 610 ft ; it occurs generally as a solitary tree, but oceasionally two or three may be found grouped together. Many valuable gums are found in the forests, including gum-copal. Fig trees form a large proportion of the vegetation, but the fruit is uneatable. Valuable timber abounds in many parts.

Wild elephants are numerous, moving about in large herds; and the densest parts of the forests are inhabited by the rhinoceros. Tigers, leopards, bears, and buffaloes, also abound. Cows are of inferior quality, and are generally in wretehed condition. There are no horses indigenous to Assam, but they are imported from Bhotan. Sheep also are imported from the same place, and from Bengal. Wild hogs and wild game abound, but poultry is searee. Porcupines, flying squirrels, iguana, otters, pangolin, civet cat, and an infinite variety of monkeys and snakes, are common to the country. The white ant is very destructive. Crocodiles swarm in all parts of the Brahmapootra; and tortoises are also numerous. The rivers abound in fish of excellent quality, which are nearly all taken by the net, hooks being rarely employed.

There are few manufactures in Assam; and, with exception of potters and coppersmiths, all kinds of artizans are brouglit from other parts of India. There are three different qualities of silk made, ealled, respectively, Path, Moonga, and Judy; the first is a fine and costly fabric; the others are of an inferior description, the last being the coarsest. Large quantities of lac are prepared for export. There is little or no trade. What there is, is earried on entirely by an enterprising class of men, called Kyahs, emigrants from Marwar, who establish themselves in all the principal parts of Assam, and, through their petty agrents, carry on a barter trade; exchanging salt for lac, gold-dust, and ivory. Nankins, silks, laequered and China ware, lead, copper, and silver, ure imported from China and Burmah.

The natives of Assam chiefly consist of Hindoos, but there is also a large proportion of Mussulmans, who, however, are held in little estimation. The Assamese have generally been described as a degenerate and weakly race, inferior even to the Bengalese. They are a shade or two lighter than the latter, with high cheek-bones, and a physiognomy resembling the Chinese. Their moral character is extremely low ; falsehood and knavery prevail to the greatest extent; they are idle and indolent in their habits; childish and timid in their manners; and perfectly indifferent about providing for their future wants. Those represented in the accompanying wood-

cut are Gossains, or land-holders; a fine race of people, of high Hindoo easte. Their large picturesque hats are beautifully made of straw, or fine cane. The young man has his d'hao or large knife, in his hand, with which he cuts his erops, or clears jungle. The father carries his food, tobacco, or any other little valuable, in neat-made ratan baskets, which have a covering also made of cane or leaves, impervious to water. The white clothes are of fine cotton; the coloured, of wild silk tissue called Tufah. The women form a striking contrast to the men, being fair and handsome; but their morality is at a very low ebb. Elueation is extremely limited throughout Assam, and, as in many other Eastern countries, is confined entirely to the male sex. The aggressions of the Burmese on the British territories led to a war, which, in 1825, ended in their expulsion from Assam, and the accession of that disturbed district to the British empire. The functionaries appointed by the Bengal Government are subject, in civil cases, to the court of the Sudder Dewanny Adawlut; in eriminal cases, to the Aviamut Adawlut; and in revenue eases, to the Sudder board of revenue. The native government of Assam is composed of a king, or rajah; three gohaings, or hereditary councillors of state; the boro boruya, or ehief seeretary; six choruya phukons, or inferior councillors; and 12 rajkhaoyas, or captains of 3000 men. The greater part of the land is bestowed in grants upon persons ealled payiks, wbo are bound to work four montlis in the year for the king or his officers. Amongst the principal sourees of the royal revenue are the gold mine of Pakerguri, the salt mine of Soduja, and an iron mine in the Doyang district. The eustom-house duties form another addition to the royal treasury; and in 1836, the whole revenue of the kingdom amounted to $£ 44,000$ sterling. The towns of Assam are numerons, but are composed of long straggling ranges of huts, whieh searcely deserve the name of towns. The country contains many ancient temples, and several large and substantial causeways. Pop. in 1836, 602,500. - Martin's History, Antiquitics, \&c., of Eastern India; IIamilton's East India Gaz.; Murray's Liritish India; Pemberton's Report on the Eastern Frontiers of Eritish India; M'Cosh's Topography of Assam.)

ASSAMAREH, a large vil., W. Africa, l. bank, Niger, about lat. $5^{\circ} 58^{\prime} \mathrm{N}$. ; lon. $6^{\circ} 45^{\prime} \mathrm{E}$. Camwood abounds in the vicinity, and is a staple article of commerce.

ASSASSINS or HASSASSINS [Persic, hassissin, a poniard], the name of a military and religious order formed in Persia, by a seet of Mahometans, in the ninth century, who, in process of time, obtained possession of 10 or 12 cities, and chose a leader or king, to whom they gave the name of The Ohl Man of the Mountain, who resided in the hill-fort of Alamut, N. of Casvin in Persiia, and surrounded himself with a devoted band, Iressed in a peculiar manner, and armel with shary daygers, who paid the most implicit deference to his commands, esteemed assassination meritorious when sanctioned by his mandate; and who believed that the highest joys of paralise awaited them, should their lives be saerificed in his service. Seeret assassination, against which no precaution conld prevail, was the tremendous instrument of his vengeance. The greatest monarehs stood in awe of him, for his was a power which they could not guard against ; and many princes fell under the daggers of their followers, assassins who had succeeded in getting into their service, for the purpose of destroying them. About the middle of the 12 th century, however, the assassins were themselves exterminated, by the great - Mongol conqueror, Mangoo Klian, their haunts all taken one ufter another, and their inmates massaered without distinetion.

ASSATCHINSKAJA SOPKA, an active voleano in Kamtsehatka, lat. $52^{\circ} 2^{\prime} \mathrm{N}$. ; lon. $157^{\circ} 43^{\prime} \mathrm{E}$. Its last eruption oceurred in 1828.

ASSAYE. See Assre.
ASSCHE, a tn. and coin. Belgiam, prov. S. Brabant, ilist. of, and 8 m . N. W. Brussels, on the road to Ghent. It has a considerable trade in grain, hops, flax, and fruit. Pop. 5820.

ASSEERGILUR, or Aseergilur, a tn. and furtress, IIindoostan, prov. Candeish, presidency, Bombay, 15 m . N. Burhampoor, and 280 N.E. Bombay; lat. $21^{\circ} 20^{\prime} \mathrm{N}$. ; lon. $76^{\circ} 20^{\prime}$ E.; long distinguished as the key of the Deccan. The town, called a pettalı or suburb, is large and irregular, with one good street and a bazaar. It lies round the foot of a rocky hill 750 ft . high, on whose summit is the fortress, the walls of which are built on the edge of a preeipice about 100 ft . high, and only aecessible at two points, both strongly fortified. The fort is well supplied with water, and has several magazines cut in the solid rock. The prineipal approaeh is on the S.W., where there is a double line of outworks of admirable masonry. It was besieged and taken in 1819, and, along with a small traet of unproductive country around it, ceded to Great Britain.

ASNEN, a tu. Holland, cap. prov. Drenthe, and of arrond. and can. Assen, 16 m . S. Groningen at the N. end of the Sinilder Canal, by which it communieates with Meppel, Zwart-sluis, and the Zuider-Zee. It is the seat of the court of justice for the provinee, for the arrondissement, and canton; has paved streets, and well-built houses, mostly having gardens attached, and altogether has sueh a good appearance, that it has been called 'a little town of palaces.' It possesses a townhall, a handsome (iovermment-house, a courthouse, prison, bank, a Calvinistic and a R. catholie ehureh, and a Jewish synagogue, a gymnasimm, and three other sehools. The inhabitants are chiefly oceupied in agriculture, and in the shop and transit trade. An annual fair is held for cattle, \&c. Pop. about 2700.- (Van der Aa.)

ASSENDELFT', a vil. Holland, prov. N Hol* land, 7 m . N.N.E. Haarlem, and 8 m . N. W. Amsterdam. It has a townhall, a handsome eruciform Calvinistic and a R. catholic chureh, two orphanhouses, and some schools. Its inhabitants are employed in making butter and sweet-milk cheese, and in weaving sailcloth, upwards of 300 looms being frequently at work. In the vieinity are four paper-mills, and two oilmills. Pop. about 2500.— (Van der Aa.)

ASSENEDE, or Assende, a tn. and com. Belgium, prov. E. Flanders, N. Ghent. It has dyeworks, and manufaetures of woollen and cotton cloths. Pop. 4306.

ASSENS, a small tu. and seaport, Denmark, W. side of the island of Fuilnen, situated on the wider part of the Little Belt, about 20 m . S.W. Odensee; lat. $55^{\circ} 16^{\prime} 6^{\prime \prime} \mathrm{N}$. ; lon. $9^{\circ} 53^{\prime} 45^{\prime \prime} \mathrm{E}$. (R.) It has some distilleries, several manufactures, amongst which is an extensive wool-card manufactory, a considerable trade in corn, and a small but
safe harbour, with 12 ft . water. The town has ten vessel. , gross tonn., 750. There is constant communication from Assens aeross to the Sehleswig coast. Pop. 2700.

ASSLE' EARS, the name of various remarkable rocky peaks, in different parts of the world:-1, A double-peaked hill, near the mountainous peninsula, Jebel Hassau in Arabia, at the S . entrance into the Strait of Bab-el-Mandeb.-2, Two sharp peaks near Kisseen point on the S. coast of Arabia, in lat. $15^{\circ} 20^{\prime}$ N. ; lon. $51^{\circ} 48^{\prime}$ E.-3, Two remarkahle hills in Persia, prov. Fars, 5 m. E. the slores of the Persian Gulf; lat. $28^{\circ} 29^{\prime} \mathrm{N}$.; lun. $51^{\circ} 14^{\prime} \mathrm{E}$. (r.) - 1. A rngeed double-peaked hill in Malabar, about 18 m . N.E. from Mangalore, and 12 or 15 m . from the sea; lat. $13^{\circ} 2^{\prime} \mathrm{N}$.; it rises almost vertically from the low country. - 5 , Two spire like peaks in the S. part of the island of Lingin, in the China Sea, about lat. $0^{\circ} 18^{\prime} \mathrm{s}$. ; lon. $105^{\circ} 4^{\prime}$ E.-6, Two high remarkable peaks on the llaePong or Ky-loong 1sland, off the S. coast of China, prov. Quang-tong; lat. $21^{\circ} 5 \mathrm{H}^{\prime} \mathrm{N}$. ; lon. $114^{\circ} \mathrm{E}$. (r.) They rise from the same base almost perpendicularly trom the sea, and sloping suddenly down on the N.E. side, are united to a piece of moderately elevated land, whieh terminates that part of the island.-7, Two singular peaks on the S. end of the islard of Timoan or Teoman, Clina Sea, off the E. coast of the Malay peuinsula ; lat. $2^{\circ} 54^{\prime} \mathrm{N}$. ; lon. $104^{\circ} 15^{\prime} \mathrm{E}$. The peaks stand on one lase, and rise abruptly from the sea to a great height.

ASSEY, a par. Ireland, co. Meatl; 1218 ae. Pop. in 1841, 138.

ASSIN, a small state in the Ashantee territory, l. bank, Amissa.

ASSINEE, a river and vil. Guinea, N.W. coast, Africa. The river forms the W. boundary of the Ashantee territory, as the Volta and Loka do the E. The village is situated at the mouth of the stream, which is in lat. $5^{\circ} 8^{\prime} 36^{\prime \prime} \mathrm{N}$. ; lon. $3^{\circ} 23^{\prime} \mathrm{W}$. (r.)

ASSINGTON, a par. England, co. Suffolk; 3450 ac.; N.W. Nayland. Pop. in 1841, 778.

ASSINIBOIN, a large river, N. Ameriea, within the Inndson's Bay territory, which, after a sinnous course of about 480 m ., having been previously joined about lat. $50^{\circ}$ by the Red River, flows into the S.W. end of Lake Wimipeg. It is navigable for canoes to its souree; and gives its name to an Indian tribe of the Sioux nation, residing in the W. part of N. America, near the Rocky Mountains.

ASSISI, or Assissı [Latin, Assisium], a tu. Papal States, delegation of, and 13 m . S.E. Perugia, 20 m . N.W. Spoleto, pieturesquely situated in one of the finest parts of Italy. It stands on a hill, across which a long line of aqueducts stretches, and is surrounded by battlements and towers, overhung by a lofty citadel in ruins. It is the birthplace of St. Franeis, founder of the order of Franciscans; and the most remarkable edifiee which it contains is the double churel which is built over the erypt where his remains lie, and was ereeted in the I3th century. Its arehitecture belongs to the carly (rohnie, and has served as a model to all the churches of the Francivean

THE PlaZZA, ASSISI. - From souvenure d'lathe.
order. It contains fine paintings by Ciambue, Giotto, Lo Spagna, Cavallino, and other celebrated artists of that period: and the tomb is annually visited by imnense numbers of pilgrime, during a great fair which is held here between July 21
and August 1, and attracts visitors from all R. catholic countries by the indulgences which are then given. There are 20 other churches, and 12 monasteries for neendicant friars. In the Piazza, or square, stands a magnificent portico of the ancient Temple of Minerva; it consists of fluted columns and a pediment. The ruin has been attached to a church, to which it has given the name of Santa Maria della Minerva. Assisi has manufactures of iron files and needles; of the latter it produces 4000 lbs annually. Assisi gave birth to Metastasio, and is celebrated by Dante. Pop. 6000.

ASSMANNSHAUSEN, a poor vil. Nassau, r. bank, Rhine, about 2 m. N.W. Ridesheim, celebrated for the excellent red wine grown in the Hellenberg, fanned as far back as 1108. In early times the religious houses and noblemen around seized on the vineyards, whence arose the poverty of the inhabitants. Pop. 579

ASSO, a tn. and com. Austrian Lombardy, prov. of, and 9 m. N.E. Como, and 7 m. W. Lecco, on an elevated plain near the source of the Sambro, having a parish church, eight chapels of case, and a school. It has a large bonded storehouse, two cotton factories, and a linen-weaving factory, making cloth for the great hospital in Milan. Pop. 1832.(Dizio Univ. Italia; Raffelsperger.)

ASSOFOODAH, a tn. Fellattalı country, W. Africa; about lat. $10^{\circ} 25^{\prime} \mathrm{N}$; ; lon. $2^{\circ} 35^{\prime} \mathrm{E}$. The natives are Mahometans. Pop. 12,000.

ASSOS, or Assus, an ane. and ruined city, Asiatic Turkey, pash. Anatolia, near the modern Beiram or Bealirahm, on the Gulf, and about 30 m . W. the town of Adramyti ; lat. $39^{\circ} 30^{\prime} \mathrm{N}$.; lon. $26^{\circ} 20^{\circ} \mathrm{E}$. It is surrounded by rocks, which rise abruptly to the height of 60 or 80 ft ., and which were formerly crowned with temples. Among the ancient relies here are numerous tombs, the ruins of temples, baths, theatres, \&c.

ASSOUAN, or Esoons [ane. Syene], a tn. Upper Egypt, r. bank, Nile, near the tenth Cataract; lat. $24^{\circ} 5^{\prime} 30^{\prime \prime} \mathrm{N}$. Few remains of the ancient city now exist. The environs are sandy and barren, producing little else than palms, dates, and grain; every other kind of provision being brought from other parts of the country. Dates are among the principal exports of the town. Senna, clarcoal, hemna, wieker-baskets, and a few slaves, from the interior, from Abyssinia, and Upper Ethiopia, are sent thence to different parts of Lower Egypt. Near Assouan commences the granite regions of Egypt; and the most interesting objects in the vicinity are the ancient quarries, whence obelisks and statues were excavated of the kind of granite called sienite. Syene was the place to which Juvenal was banished.

ASSOUR, a tn. Nubia, kingdom of Dongola, r. bank, Nile, about $10 \mathrm{~m} . \mathrm{N} . W$. Meroe, celebrated for the number of its pyramids. Fine ruins abound in this vicinity.

Assuln. See Assouan.
ASSUA PMOUSSOIN, a lake, Lower Canada; lat. $49^{\circ} 22^{\prime}$ $\mathrm{N} . ;$ lon. $73^{\circ} 55^{\prime} \mathrm{W}$. It is from 8 to 10 m . in length, and about 4 in breadth, and is comected with a numerous series of small lakes which lie thickly aromed, all having communication with each other by small streams.

AssuAy. See Asuay.
ASSUMPTION, or Asuncion [Nuestra Senhora D'Assumpçao), a city of S. America, cap. of the state of Paraguay, on a height, l. bank, Paraguay, a little way above where it is joined by the Pilcomayo, 650 m. N. Buenos Ayres; lat. $25^{\circ} 18^{\prime} \mathrm{S} . ;$ lon. $57^{\circ} 30^{\circ} \mathrm{W}$. Founded in 1535 by a colony of Spaniards, and originally but a small fort, from its advantageous position it became in a few years a city of some importance. It has a eathedral, three churches, four convents and monasteries, an hospital, a theological seminary, and a college. It is ill built and irregular, most of the houses are of earth, and the streets are crooked and unpaved. The inhabitants earry on a considerable trade in tobacco, timber, hides, and sugar; and especially m matté or Paraguay tea, grown abundantly in the surrounding distriet, and exported to Buenos Ayres, Tucuman, Chili, Peru, and other parts of S. Ameriea. The air is temperate, and the climate healthy; the adjacent country is fertile, and abounding in rich pastures, on which numerous flocks of eattle, and considerable numbers of horses, mules, asses, sheep, and goats are fed. Wheat, maize, sugar, tobacco, cotton, mandioca, and potatoes are extensively cultivated, and honey and wax are produced in abundance. Pop. about 12,C00.

Vol. 1.

ASSUMPTION ISLAND.-1, An isl., N. Pacifie Ocean, Marianne Arehipelago ; lat. $19^{\circ} 41^{\prime} \mathrm{N}$. ; lon. $145^{\circ} 27^{\prime}$ E. (r.); between 9 and 12 m . in circumference. It contains an active volcano of 2026 ft . in height, and is almost wholly composer of or covered with black lava, and presents a very dismal and repulsive appearance from the sea. Perouse describes it as a most wretehed place, but it has been somewhat improved since his time by the Spaniards, who have planted rice in it, and introduced horses, cattle, swine, and lamas. It produces also a few eocoa-trees; anchorage unsafe.-2, A small isl. at the N . entrance into the Mozambique Channel; lat. (S.E. point) $9^{\circ} 46^{\prime} \mathrm{S}$. ; lon. $46^{\circ} 34^{\prime} \mathrm{E}$. (r.) ; it is about 7 m . in length, is low, with some sand downs, covered with shrubs.

ASSYE, or Assaye, a small vil. Hindoostan, prov. Berar; 28 m . N. Jaulna, and 220 E.N.E. Bombay ; lat. $20^{\circ} 15^{\prime}$ N.; lon. $75^{\circ} 50^{\prime}$ E.; chiefly remarkable as the spot where the battle was fought, on September 23, 1803, between the British and native forees under Wellington, then General Wellesley, and the combined armies of Dowlet Row Sindia, and the rajah of Berar. The forces under Wellesley amounted to 14,300, of which 4500 only were brouglit into action. The combined Indian army is variously stated at 30,000 to 50,000 , and of these about 10,000 were regularly-disciplined infantry, commanded by French officers. Notwithstanding this disparity of numbers, the enemy was completely routed, and British supremacy established in India. Ninety-eight pieces of cannon, seven standards, the camp equipage, and a large quantity of ammunition, fell into the hands of the victors. The slain on the side of the British Indian army, amounted to 1566 men killed and wounded, on that of the confederates to 1200 .(Hamilton's East India Gaz.; Historical Account of British India; Martin's East Indies.)

ASSYNT, an extensive par., N.W. coast, Scotland, co. Sutherland, 36 m . long, 18 broad, and comprising 97,000 ae. It is one of the wildest and most rugged districts in Scotland. Some of its monntains are of considerable elevation, and of peculiar form. The loftiest, Benmore, rises to a leight of 3230 ft . above the level of the sea. Limestone abounds in the parish. In one part, there is a stupendous ridge of that valuable material, interspersed with sandstone, of about $1 \frac{1}{2}$ m . in length, and 300 ft . in height. There are also inexhaustible quarries of beautiful marble, one white, and the other of a variegated colour, and both capable of receiving the finest polish. These quarries were worked some years since, but, in consequence of the difficulty and expense of conveying the blocks to the coast, they have been abandoned. Fresh-water lakes are numerous; the largest, Loeh Assynt, is about 7 m . in length, and 1 in breadth, where broadest. It abounds in trout of various kinds, and is surrounded with the most beautiful scenery. On a peninsula that juts into this lake, are the ruins of the ancient castle of Ardorack, in which the unfortunate Marquis of Montrose was confined by Macleod of Assynt, after he had been taken prisoner by that chieftain. Of sea lochs or arms of the sea, whish are numerous, the largest is also named Loch Assynt. It is about 14 m . long, from Store Point to the head; and varies from 6 m . broad at Store Point, to half a mile opposite Duart More. Springs and streams also abound; the former remarkable for their size, and for the purity and excellence of their waters; one of these springs discharges a current of four cubic fect. A large portion of the parish is laid out in sheep-walks, a very small part only being cultivable. On this account, the great bulk of the population live along the shores, where they have the benefit of fishing. There is no market-town within the parish, and only one village, Lochinver. The coast is bold and rocky, but has some good harbours. The parish is the property entirely of the Duke of Sutherland. Pop. in 1841, 3178.

ASSYRIA, the name which is usually appropriated to the first of what are known as the four great empires of the world; but which, in geography, is more correctly confined to what was called Assyria Proper, and nearly corresponds with the modern Kurdistan. It was bounded on the N. by Mount Niphates and part of Armenia, E. by the part of Media toward Mounts Chaboras and Zagros, S. by Susiana and part of Babylonia, and W. by the Tigris. Its capital was Ninevel, which is still feelly represented by a modern town of the same name, near which the ancient ruins may still be traced; but though it had many other important cities, even the sites of the greater number are unknown.

ASTABEL, Sherm Antar, or Istabl Antar, a th. Arabia, in Hejaz, coast of the lied Sea; lat. $26^{\circ} 24^{\prime} \mathrm{N}$. Near it is a good anchor station, in a deep bay, formed in coral rocks. The plant Pavetta longifolia is found abundantly in the vicinity. From the long roots and twigs of this plant the Arabians make tooth-picks, which they chew, that the acid juice thereby obtained may clean their teeth.

ASTAFFOR'T, a tn. France, dep. Lot-et-Garonne, r. bank, Gers; 10 m. S. Agen. It owes its origin to the English, and its name is said to be a corruption of Stafford. It was anciently a place of some strength, and is still surrounded by walls and bastions, in a ruinous state. In the neighbourhood, a field called Champ de Huguenots commemorates the defeat of a body of Protestants, headed by Conde, who narrowly escaped being taken. Pop. 1318.

ASTARA, a frontier tn. Russia, gov. Georgia, prov. Shirvan, upon the river Astara, which forms the boundary between Russia and Persia; a quarter of a mile from its outtet into the Caspian Sea; 45 m. N.E. Ardebeel, and 130 m . E. by N. Tabreez; lat. $38^{\circ} 20^{\prime} \mathrm{N}$.; Ion. $48^{\circ} 20^{\prime} \mathrm{E}$. It has a small port, in former times flourishing; and exports grain, fruits, and silk.

ASTBURY, a par. England, co. Cheshire; 18,070 ac. It has a spacious beautiful church, of all styles of English arehitecture, but more especially the later. The sereen and the stained glass windows are finc. Pop. in 1841, 14,355.

ASTELL'S ISLAND, N. coast of Australia, N.W. side of the Gulf of Carpentaria, one of the English Company's group, situated at the entrance to the Bay of Arnhem. It is of considerable height, well-wooded, and contains iron ore.

ASTEN, or Asthen, a vil. Holland, prov. N. Brabant, 12 m . E.S.E. Eindhoven. It is a large k autiful village in the S.W. part of the Peel ; and has a large handsome cruciform R. catholic chureh, and an elegant townhouse, in the under part of which is the butter weigh-house. Outside the village is a castle called the IIuis te Asten. Two annual cattle-fairs are held. The inhabitants are nearly all R. eatholics. Pop. 2800.- (Van der Aa.)

ASTERABAD, or Astrabad [anc. Hyrcania], a small prov. Persia (cap. Asterabad), between lat. $36^{\circ} 20^{\prime}$ and $38^{\circ} \mathrm{N} .$, and lon. $53^{\circ} 40^{\prime}$ and $57^{\circ} 55^{\prime}$ E.; bounded, N. by the desert of Khiva, S. by the Koh Caucasian or Elbruz Mountains, E. by prov. Goorgan and N. bend of the Attruck, and W. and N.W. by the Caspian. The S. border, forming the abutment of the Elbruz, is lufty and mountainous; but immediately below, an extensive plain of surpassing beauty and richness stretches out to the N.E. and W. Towards the Caspian, however, the country, though still continuing level, loses its beauty and fertility, and exhibits the well-known characteristics of a steppe. Great part of the surface, botl towards the S . slopes and throughout the rich plain, is covered with magnifieent forests, so close and tangled as not only to be often impassable, but to exclude the proper circulation of the air, and generate pestilential vapours. The diseases thus spread over the province have repeatedly made fearful ravages; and are so much dreaded by the roving Turkomans, of whom the rural population chiefly consists, that when the rain sets in, and begins to form stagnant pools and swamps, they retire beyond the Attruck, and prefer the verge of a burning sandy desert to the fatal luxuriance of Asterabad. The inhabitants of the villages, being stationary, have not the same resource, and suffer severely from sickness. Nor is this their only calamity. Though the rich soil produces all kinds of grain and fruit in the greatest abundance, it too often happens that those who sow the crop are not permitted to reap it. The Turkonians who had retired usually return again before harvest, and make no seruple of appropriating it as their own. No redress can be obtained. The King of Persia, though nominally sovereign, is scarcely able, and probably is not much disposed to interfere with these predatory hordes, so long as they continue, as at present, to furnish him with the best toffunchees, or armed horsemen, of which his army can boast.-Asterabad, capital of the above province, lies at the foot of the N. slope of the Elbruz range, aud on a small stream which falls into Asterabarl Bay in the S.E. of the Caspian, about 20 m . below. It has a circuit of about 3 m .; and is surrounded by a dry diteh and a mud wall, which, though once lofty and flanked by numerous towers, has mouldered down to an earthen mound, on whieh a low para-
pet, loop-holed for musketry, has been erected. Great part of the town is in ruius; but the parts still standing have a lively and pieturesque appearance. The houses are chicfly of wood, in a light and open style of architecture, with projecting fronts, and sloping roofs covered with red tiles or thatch. Not unfrequently they are furnished with verandahs, supported on wooden pillars; and lofty square towers, called vaudgeers, with openings on cach side, which act like windsails, and maintain a circulation of fresh air throughout their interior. The large extent of open space within the town, generally planted or laid out in fine gardens, is one of its peculiar and most attractive featurcs. None of the buildings are deserving of particular notice. The palace, in which the governor resides, is extensive; but has a mean appearance, and bears visible marks of decay. The bazaars, though large, are very indiffereutly supplied. The manufactures are chiefly confined to a few silk and cotton stuffs; and though the locality seems well fitted to make it the key of commerce between the East and the Caspian, the trade is inconsiderable. The greatest obstacle to its prosperity is its pestilential atmosphere, which has procured for it the ominous surname of 'City of the l'lague.' During the summer rains no inhabitant, whose circumstances enable him to depart, remains within it. It has been repeatedly ravaged by the plague; and when Burnes visited it, it had been so depopulated by that scourge the year before, that the streets were literally deserted, and half of the shops and houses shut from want of masters. Asterabad is the birthplace of the Knjurs, the reigning family of Persia, and is always governed by a royal prince.-(Fraser; Burnes ; Chesney.)

As'TERBY, a par. England, co. Lincoln ; 620 ac.; N. Horncastle. Pop. in 1841, 256.

ASTFELD, a vil. Brunswick. in the dist. and vicinity of Wolfenbittel, in the Harz Mountains. In its neighbourhood is a mine furnishing lead, litharge, zine, and silver. Pop. 664.

ASTIIALL, a par. England, co. Oxford; 1180 ac. ; E. by S. Burford. Pop. in 1811, 389.

ASTI [anc. Asta, or Llasta, Pompeia], a city, Sardinian States, gov. Alessandria, cap. prov. of Asti, l. bank, Bourbo, near its confluence with the Tanaro, 28 m . E.S.E. Turin. The town is surrounded with decaying walls, formerly celebrated for their 100 towers, although few of them now remain. It is in general badly built, although it contains many noble mansions ; the streets are wide, but little frequented. It is the seat of a bishop, suffragan to Turin, has a royal college, a court of justice, a school of jurisprudence, and a theological

the cathedral churcit of st. magdalenr, astl From Chapuy, Cathedralen.
seminary, a rich, picturesque building. The original catledral fell in 1323, and was replaced shortly thereafter by tho present fine venerable Gothie building, in which are numerous fine paintings. Besides the cathedral, there are other three
fine churches in Asti, which moreover possesses a printingoffice, carried on continuously since its establishment in 1479. There are likewise, in the town, several mills for spinning silk, and several silk manufactories; but it has otherwise little trade, and no great appearance of prosperity. The vineyards in the vicinity supply the best wines produced in Piedmont, and a considerable trade is carried on in them. Alfieri was born here in the year 1749 (January 17). Asti is a town of high antiquity, having been in existence long previous to b.c. 400 , when it was devastated by the Gauls. It subsequently formed alliance with the Romans, and was afterwards again destroyed by the Gauls, but was rebuilt by Pompey the Great. After a series of vicissitudes, extending through many centuries, and including many sanguinary visitations, it fell into the hands of the French, with whom it remained till about the middle of the 16 th century, when it passed into the hands of the Duke of Savoy, to whose dominions it is still attached. Pop. 20,000.-The province, one of the six intendenze or subdivisions of Alcssandria, is bounded, W. and N. by prov. Turin, S. by Alba, S.E. by Alessandria Proper, and N.E. by prov. Cassali. It is lilly, but fertile, and is celebrated for a sparkling white wine, resembling champagne, called vino d'Asti. It produces, likewise, corn and fruits in great abundance; also, excellent silk, mulberries being cultivated to a great extent for feeding the silkworms. Pop. 118,709.

ASTLEY, the name of three parishes in England:1, Co. Warwick; 2550 ac . ; on the Sow brook, E. Leigh; ancient chapel; remains of Astley Castle here. Pop. in 1841, 371.-2, Co. Worcester; 3310 ac. ; S. Bewdley, on a tributary of the Scvern. Pop. in 1841, 834.-3, Astley (Abbots), co. Salop ; 3330 ac. ; N. Bridgeworth. Pop. in 1841, 657.

ASTON, a tn. and par. England, co. Warwick. The town is $2 \frac{1}{4} \mathrm{~m}$. N.E. by E. Birmingham, and $95 \frac{1}{4} \mathrm{~m}$. by railway from Liverpool. The parish contains three churches, and several dissenting chapels, with attached Sunday-schools, infant and national schools, alms-houses, and a large union workhousc. The Birmingham and Fazely Canal passes here, and is crossed by the Grand Junction Railway, on a viaduct of 10 arches. The inhabitants, of whom there were 45,720 in 1841, are chiefly employed in varions branches of the liardware and Birmingham toy manufactures; and there are likewise some small silk and cotton-mills.-Aston is also the name of several liamlets in many parts of England.

ASTON, the name of numerous parishes in England:1, Co. Hereford; 1098 ac.; S.W. Ludlow. Pop. in 1841,52. -2, Co. Herts; 1990 ac.; S.E. Stevenagc. Pop. in 1841, $556 .-3$, Co. York, W. Riding; 2870 ac.; S. Rotherham. Pop. in 1841, 763.-4, Aston (Abbots), co. Bucks; 2180 ac.; N.N.E. Aylesbury. Pop. in 1841, 356.-5, Aston (Blank), co. Gloucester; 2250 ac.; N.E. Northleach. Pop. in 1841, 302.-6, Aston (Botterell), co. Salop; $3000 \mathrm{ac} \cdot$; S.W. Bridgenorth, on a branch of the Rea. Pop. in 1841, 173.-7, Aston (Cantlow), co. Warwick; 4300 ac.; N.E. Alcester, E. of the Stratford-on-Avon Canal. Pop. in 1841, 1089.-8, Aston (Clinton), co. Bucks; 3640 ac.; E. Tring. Pop. in 1841, 1025.-9, Aston, or Ashton-sub-Edge, co. Gloucester; 850 ac.; S.E. Evesham. Pop. in 1841, 134.-10, Aston (Flamville), a par. and township, co. Leicester; 4670 ac.; E.N.E. Hinkley. Pop. in 1841, 1909.-11, Aston (Ingham), co. Hereford; 2300 ac.; N.E. Mitcheldean. Pop. in 1841,621.-12, Aston (North), co. Oxford; 1230 ac.; S.E. Deddington, E. of the river Cherwell. Pop. in 1841, 289.-13, Aston (Rowant), co. Oxford ; 2980 ac. ; N.E. Tetsworth. Pop. in 1841, 885.-14, Aston (Sundford), co. Bucks; 650 ac. ; E.N.E. Thame. Pop. in 1841, 86.-15, Aston (Somerville), co. Gloucester; $1320 \mathrm{ac}$. ; s. by E. Evesham, on the river Avon. Pop. in 1841, 89.16, Aston (Steeple), co. Oxford; 1870 ac.; S. by E. Deddington. Pop. in 1841, 580.-17, Aston (Tirrold), co. Berks; 2030 ac.; S.W. Wallingford. Pop. in 1811,343.-18, Aston-upon-Trent, co. Derby; 3290 ac.; S.E. by S. Derby. Pop. in 1841, 1952.

ASTORGA [anc. Asturica Augusta], a city, Spain, prov. of, and 30 m . W. by S . Leon; on a plain, 2 m . from the r . bank of the Tuento, 2500 ft . above the sea level. This city, surrounded by ancient walls, flanked with numerous semicircular towers, and described, by Pliny, as magnificent in ancient times, was the scene of various military operations in the peninsular war; and its fortifications were dismantled
by the French in 1812. It has a noble Gothic cathedral, built in 1471, with a splendid screen, by Gasper Becerra; four parish churches, town and courthouses, several schools, an hospital, some convents, and the remains of a palace of the Osorio family, to which Astorga gives the title of Marquis. In the neighbourhood of the town is the small lake of Sanabria, which abounds with fish, and has in the middle a rock on which stands the old castle of the Counts of Benavente. Astorga is the capital of the country of the Maragatos, a tract which occupies about $69 \mathrm{sq} . \mathrm{m}$. S.E. of the mountain Telleno. The Maragatos follow the occupations of muletcers and carriers, and monopolize nearly all the transit trade between Galicia and the Castiles; their own land, which is rocky and stubborn, being cultivated entirely by the females. They are a strong-built, grave people, and remarkable for scrupulous honesty. Whatever is intrusted to them is conveyed to its destination in the most perfect sccurity; while their character for intrepidity is such, that few robbers care to attack them. They value their services, however, at a high rate, and thus often acquire considerable wealth. They have their own peculiar dialect, customs, and dress, and never intermarry with other tribes. Pop. of Astorga, 2850.-(Madoz; Murray's Handbook ; \&c.)

ASTORIA, a small trading port and fort, Oregon, on the Columbia River, about 8 m . from its junction with the Pacific. It was established in 1811, by John Jacob Astor, of New York, after whom it has been named. It is now called Fort George, and is occupied by the Hudson's Bay Company, who, however, pay little regard to it, having abandoned the idea of improving it as a port, and, in consequence, removed their principal seat of operations to Vancouver, 80 m . further up the river. Though formerly a stirring and considerable place, it now consists of a few log-houses only, with some sheds and pig-styes, and presents, in all respects, an appearance of rapid decay. The Colnmbia River, opposite to Astoria, is 4 m . wide, but is obstructed by an extensive sand bar, on which there is only a few feet water. The situation of the port is very beautiful, being surrounded with hills and forests, and presenting wide expanses of luxuriant sward covered with white clover. In the pine forests, in the rear of Astoria, some of the largest trees perhaps in the world are to be found, measuring, many of them, from 40 to between 50 and 60 ft . in circumference, and from 200 to 300 ft . in height, with a bark of 10 to 12 inches in thickness. - (U. States' Exploring Expedition.)

ASTRABAD. Sce Asterabad.
ASTRAKHAN, a gov. Russia in Europe, N.W. coast, Caspian Sea, between lat. $44^{\circ} 40^{\prime}$ and $49^{\circ} 45^{\prime}$ N.; lon. $43^{\circ} 5^{\prime}$ and $51^{\circ} 5^{\prime}$ E., having the Maloi Uzen for its N.E. boundary, and the Manitch for its S.W. It is divided into two nearly equal parts by the Volga, which traverses it from N.W. to S.E. Its coast line, excluding minute sinuosities, is about 520 m . in length, and is crowded throughout its whole extent with small islands, rocks, and shifting sand-banks. The entire length of the province is 370 m ., its greatest breadth 250. Area $83,000 \mathrm{sq}$. m., or $51,480,000$ English ac. It consists almost wholly of two vast steppes or plains, separated from each other by the Volga, the greater portions of which are arid stcrile desert. The largest tracts of this description are the deserts of Naryn and Sedok, the former, in which occur hills of moving sand, on the N.E. side of the Volga, the other on the S.W. The whole of Astrakhan was at one period submerged by the Caspian, as is evident from the saline nature of the soil, and the shclls it contains; and as both are upwards of 80 ft . below the level of the sea of Azof, should any convulsion of nature cause a depression of the intervening land, Astrakhan would again be overwhelmed by the ocean. The soil consists generally of mud, salt, and sand, intermixed, and in some parts of extensive salt marshes, rendering it almost wholly one wide and sterile waste, destitute of wood; the few trees it has to boast of being met with on the banks of its rivers only. These are oaks, poplars, birches, and some mulberry trees, the latter of which are found in greatest numbers along the Aktuba. Notwithstanding the general sterility of the country, a few fertile tracts are met with on the skirts and delta of the Volga, including some excellent pastures. Here corn is grown, but not in sufficient quantity to maintain the population, with some fruits, herbs, vines, tobacco, and cotton.

Salt lakes and pools are numerous throughout the province,
the largest of the former, Baskutehatsk, is situated to the E. of the Volga, and is about 12 m . in length and 5 in breadth. When evaporated in summer, these lakes and pools leave thiek crusts of culinary, and, in some cases, Epsom salt. In this district, low hills of gypsum and rock-salt also occur; the former vary in size and elevation, the highest rising about 60 ft . above the level of the steppe; they are mostly of semicircular form, and many of them are crater-shaped at the top. The salt hills rise to about the same height, and contain gemsalt, above which is sandstone, and over that the common yellow sand of the steppe. The salt is colourless, firm, and contains clear and perfectly transparent cubes.

The principal rivers of Astrakhan are the Volga (which see), the Aktuba, which runs parallel to it at the distance of 2 or 3 m ., and the Sarpa. The Kuma, which once formed a part of the S. boundary of the province, does not now reach the Caspian Sea, being absorbed by the sands 60 m . inland. The climate is extremely hot in summer, and equally cold in winter, and is unhealthy to all but natives, from the quantity of saline particles with which the atmosphere is impregnated. Pasturage and fishing constitute the principal occupation of the inlabitants; the former of the rural and nomadic tribes; the latter of the popnlation on the coast and banks of the Volga. The live stock consists chiefly of sheep of the broadtailed breed. Cattle and goats are also reared, the latter principally for their skins, from which moroceo leather is madc. The breeding of horses likewise obtains some attention, but they are diminutive and ill-conditioned. The fisheries of the Volga are of great value, no stream in the world being more abundantly stocked with fish, particularly between the city of Astrakhan and the Caspian, a distance of about 25 to 30 m .* On this ground, an immense number of vessels and boats, and many thousand persons, are employed in spring, autumn, and winter, in taking fish, chiefly sturgeon, from the roes and bladders of which large quantities of isinglass and caviar are manufactured. The population is composed of a great variety of races, including Russians, Cossacks, Tartars, Kalmuks, Indians, Persians, Armenians, \&c. The most numerous are the Kalmuks, who ocenpy large tracts to the E. of the Volga. They are a mild and intelligent people, but addicted, it has been said, to dishonesty. Astrakhan is politically divided into four cireles-Astrakhan, Krasno-Yarsk, Yenotayewsk, and Tsherno-Yarsk. The population of the government in 1850 was 290,000 .

ASTRAKIIAN, a city, Russia, cap. of above gov., on an elevated island in the Volga, about 30 m . from its embouchure in the Caspian Sea; lat. $46^{\circ} 25^{\prime} \mathrm{N}$. ; lon. $48^{\circ} 0^{\prime} \mathrm{E}$. It is irregularly built, streets crooked, mostly unpaved and dirty, being covered with mud in winter, and with sand in summer. Some of the houses are of brick or sandstone, but by far the greater number are of wood. Of streets, there are altogether 146 ; squares or public areas, 46 ; market-places, 8 ; 11 wooden and 9 earthen bridges. In the upper part of the town stands the cathedral, from the towers of which, says Dr. Gæbel, a fine view of the city is obtained, with its broad streets and canals bordered by trees, the haven covered with ships, and of the broad majestie Volga, with its beautiful green islands. The cathedral is in the form of a parallelogram, with four small gilt and painted cupolas on the roof, and a large one in the centre, for the admission of light. Its walls inside are hung with coarsely-painted pictures, set in costly frames, mostly of silver filagrane work. There are, besides, 31 stone and three wooden churches, and fifteen mosques; many of the former richly ornamented and gaudily furuished. The other public buildings of note are the archiepiscopal palace, the Government-offiees, and the three factory halls for the Russian, Asiatic, and Hindoo dealers or merchants. An interesting areliitectural antiquity is a small disused Moresco church, in the fort of Peter the Great, said to have been built by order of Joan IV. Astrakhian is the seat of a Greek and Armenian ecelesiastical eparchy, also of Greck and Armenian arehbishopries. It contains a high eourt of eivil and eriminal jurisdiction; also a Greek theological seminary, a botanic garden, a gymnasium, and upwards of 20 superior and ordinary schools, with about 1000 seholars of all ranks. The manufactures are ineonsiderable, not giving employment to more than 200 work-people; they comprise silks, cottons,

* Ir. Gxbel says 85 versts, or $56_{3}^{3}$ miles.
woollens, shagreen skins, morocco leather, and soap. The fisheries form the staple trade of the city, immense quantities of fisin, caviar, and isinglass, being exported to foreign countries. In the fishing seasons, from 20,000 to 30,000 persons connected with the fisheries resort to the city. The haven of Astrakhan is now so sanded up as to leave only 6 ft . depth of water ; so that large vessels have to land their cargoes on an island nearer the Caspian. A few steam tug.

boats are employed in taking vessels $u_{p}$ and down the river In 1846 three iron steamers were started, to ply between Astrakhan and the other ports of the Caspian. Previous to that period, there was but one steamer on the Volga, and it was of only 40 horse power.

Fresh water being scaree in the city, some attempts were lately made to obtain an increased supply by Artesian wells, but none was found at a depth of 400 ft . From some of the borings, however, there issued streams of carbonic liyllrogen gas, which readily burnt with a clear flame. The population as in the case of the province generally, consists of various races; but most of the trade of the place is in the hands of the Tartars and Armenians; the latter of whom are also the chief cultivators of the land in the vicinity. The city was once fortified in the Oriental manner ; and many vestiges of Tartar residence are met with in the neighbourhood, ineluding numerous graves, the stones of which have been taken by the inhabitants to form ovens. Several of the old embattled towers, and portions of dilapidated walls, still remain. In summer, when the thermometer seldom falls below $98^{\circ}$ in the day-time, the air is filled with gnats and other small inseets, which are a source of much annoyance. The resident pop. of the tn . in 1842, was 45,703 .

ASTROS, or Astro, a th. and haven, Grecee, in tho Morea, 20 m . S.E. Tripolitza, W. shore of the Gulf of Nauplia. The second national congress of the Greeks was held here.

ASTUDHLLO, a tn. Spain, in Leon, prov. of, and 22 m . N.N.E. Palencia, in a valley and on the declivity of a small hill. The town is surrounded by a wall entered by five gates; it contains several squares, in one of which is held an unimportant annual fair; and its streets are narrow, tortuons,
and badly paved. The publie buiidings are three parish churches, the prineipal of which is eelebrated for its antique grand altar ; a townhall, prison, convent, two well-attended sehools, and an hospital. Its manufaetures consists of tanning, dyeing, cloth weaving, shoe-making, and several other branches. Pop. 4151.-(Madoz.)

ASTURA, a vil. Papal State3, 37 m . S.S.E. Rome, at the mouth of a small strean of its own name. It formerly had a liaven, and was a place of much greater importanee than now. Here Cicero was beheaded; and here the last of the IIohenstaufens was made prisoner by Charles of Anjon, after the battle of Tagliacozzo, in 1268. Near it, on the coast, are the ruins of a small castle. Pop. 250.

ASTURIAS, an ane. division of Spain, now prov. Oviedo (which see), formerly the kingdom of Asturia, and the only part unconquered by the Moors. It was inhabited by a race who maintained their independenee against the Carthaginians, but were subdued by the Romans in the time of Augustus. After the fall of the Roman empire, Spain was overrun by the Goths and Vandals, who were opposed by the Asturians with a courage that long resisted all their efforts, but they were at last compelled to yield. Upon the Moorish invasion, at the beginning of the eighth century, the mountains of Asturia again beeame the refuge of those who still struggled against them ; Pelayo was elected king, and shortly after defcated the Moors at Covadonga, in a battle whieh may be considered as the inanguration of the sanguinary struggle which lasted for eight centuries, and ended in the final expulsion of the Moors. In 1388, it becanne a prinerpality, and was appointed appanage of the heir to the Spanish throne, whe also has the title of Prince of Asturias. A remarkable security of persen and property has long existed in this country; and one consequence is, that the peasantry, instead of congregating in walled towns for proteetion, live in small farms, and often own the land which they eultivate. They are generally of kind and eivil dispositions, especially the women, who are gentle and attentive to strangers ; of sober andi industrious habits, and proverbial for their honesty and fidelity. They are, however, great loasters, and, during the peninsular war, afforded many instances of the common association of mueb talk with little work. Notwithstanding, too, their proverbial honesty, they have been aceused of gross misapplication of the money sent from England in support of the Spanish cause. The costume of the lower elasses resembles that of the Swiss; the females, when dressed in their best, wear boddices of yellow or green, laced in front with gold ornaments, and coral neeklaces. Dark-coloured serges are also in great vogue, which, with blaek mantles or dengues, are thrown over the head. The men generally wear white felt eaps, turned up with green. The patois spoken by the peasantry differs from the Galician, and is called Bable. Travelling in Asturias is performed on mule or horseback, the roads being impassable to carriages.

ASTWICK, a par. England, eo. Bedford; 570 ac. ; S.S.W. Biggleswade. Pop, in 1841, 84

ASTWOOD, a par. England, co. Bueks; 1300 ae.; N.N.E. Newport Pagnell. The female population are employed in the mannfacture of lace. The chureh is an ancient structure, with a square tower; it contains a handsome Norman font, and some curious and interesting monuments. Pop. in 1841, 243.

ASUAY, or Assuay, a dep. Eeuador; bounded, n. by dep. Eeuador, W. by dep. Guayaquil and Peru, S. by Peru, and E. by Brazil ; length, W. to E., about 644 m. ; breadth, N. to S., about 276 m . It lies on the E. slope, and to the E. of the Audes, and stretehes E. over the immeasurable plains of the Marañon to the Orinoco and the confines of Brazil. The whole of its W. part is covered by the paramo or desert of Asuay, whence the department is named. This paramo is a desert mass of mountains running E. and W., joining the two N . and S . parallel ranges of mountains, and forms the S . boundary of the plateau of Quito. It consists of porphyry, mica-slate, and other primitive rocks; and attains an elevation of about 13,000 to $15,500 \mathrm{ft}$. The department is watered by numerons streams, all affluents of the Marañon. The climate varies with the elevation, from very hot to very cold; consequently the vegetable productions are equally varied; partaking of the nature of those both of the torrid and temperate zones. In the warmer localities, sugar-cane, maize, indigo, tobacco, yams, batattas, bananas, \&e., are raisell; and in
the colder localities, the crops are wheat, barley, rye, flax, lueerne, potatoes, and all kinds of European vegetables. The rearing of eattle, horses, asses, and mules, and above all, sheep, is vigorously pursued. The department exports salted flesh, butter, cheese, wax, beasts of burden, eattle, agricultural produce, and small quantities of eloths of various descriptions. It imports European goods of all kinds, eloths, stockings, linen, \&e.; wine, brandy, oil, and dried fruits. It is divided into the provinces of Cuenca, Loxa, and Jaen de Bracamoros. Pop. in 1827, 110,894. - (Guthsmuth Colombia.)

ASUNCION. See Assumption.
ASWARBY, a par. England, co. Lineoln; 1940 ac.; N. by W. Folkingham. The chureb is a handsome building, in the pointed style. Pop. in 1841, 119.

ASWARDBY, a par. England, co. Lineoln; 650 ac.; N. W. Spilslyy, Pop. in 1841, 92.

ASWATADA IsLANDS, Mozambique Channel. See Querimba Islands.

ASYN KALE [ane. Jasus], a tn. Asiatic Turkey, at the head of the bay of same name, W. coast, pash. Anatolia; lat. $37^{\circ} 15^{\prime} \mathrm{N}$. ; lon. $27^{\circ} 42^{\prime} \mathrm{E}$. The ancient city occupied a rocky islet, about $1 \frac{1}{4} \mathrm{~m}$. in cireust, now united to the continent by an isthmus. The N. side of the roek is abrupt and inaccessible, and the summit is oceupied by a fortress. Here are remains of a theatre, temples, and other buildings, with ancient inseriptions, one of which is of the age of Alexander the Great. The peninsula terminates in a flat point of land, with a small square fort at the extremity.

ASYR. See Asir.
ASZALO, a market tn. IIungary, this side the Theiss, 1. bank, Hernad, 3 m. N.E. Szisko, in a valley. Pop. 1781

ASZOD, a market tn. Hungary, co. and $23 \mathrm{~m} . \mathrm{N} . \mathrm{E}$. Pesth, on the Galga. It is well built, and has a R. Catholic, and a Protestant chnreh, and a synagogue ; manufactures of cloaks, lined with sheep-skins, dyed blue and green; and a considerable trade in corn and wine. Pop. 2470.

ATABAPO, a considerable river, Venezuela. It rises in lat. $3^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $66^{\circ} 40^{\prime} \mathrm{W}$., whenee it flows nearly due W. for about 70 m . or 80 m .; then turning N . falls into the Orinoeo at San-Fernando; lat. $4^{\circ} \mathrm{N}$. ; lon. $68^{\circ} 10^{\prime} \mathrm{W}$., nearly at the same point where the latter river is joined by the Gnaviare and Juirila. Total course, about 140 m . The waters of the Atabapo are dark, elear, agreeable to the taste, and singularly eool ; and so great is their transparency, that the smallest fishes are distinguishable at the depth of 20 ft . or 30 ft .: and the bottom, which consists of white quartzy sand, is usually visible. There are no crocodiles in this river, but water-snakes are numerous, as are also bavas and fresh-water dolphins. The banks of the stream are also free from mosquitoes. and other tronblesome insects.

ATACAMA, a large, thinly-peopled, sterile tract of country, forming the N. portion of Chili, and S. portion of Bolivia. No exact boundary line is fixed. The Chilians elaim as far as the Bay of Mexillanes, lat. $22^{\circ} \mathrm{S}$; and the territory thence to the port of IIuaseo, lat. $28^{\circ}$ S., with the Andes for the E., and the lacific for the W. boundary, constitutes the present Chilian provinee of Atacama.
Its capital is Copiape (which see); and it also contains the towns of Vallenar and Freirina, heads of departments of same names. In this province are fonnd the richest silvermines in Chili, principally in the distriets of Chañareillo and Tre3 Puntas. In the latter, discovered a few years back, large masses of native silver are frequently found at tho depth of 1000 ft . or 1500 ft ., weighing half a ton and upwards, and the country is everywhere rich in metallic deposits. The annual products of the mines anount to about one million sterling; and from the frequent discovery of new mines, are rapidly on the inerease. Next to silver, copper is the most abundant metal, and a considerable quautity of copper-ore is annually exported, chiefly to England. From the dry, arid nature of the country, agricultural pursuits are limited; yet a little cultivation exists on the banks of the rivers, and wherever irrigation is to be had.
A railway has lately been opened between the capital of the province and Caldera, one of the three ports in the provinee, the others being Huasco, and Chanaral. The principal rivers are, the Copiapo, the Salado, Juneal, and Chanaral; all of them form safe anehorages at their moutls; but all of
them having short courses, contain so little water that they are nearly dry in the summer. Fop. (1847), 25,103.

Tife Bolivian province of Atacama embraces the sea board of the country, bounded, S. by Chilian Atacama, N. by the river Loa, which separates it from Perı; E. by the Andes; W. by the I'acitic. The comntry throughout is a complete desert, without water or vegetation; and the lower grounds on the coast, which are within the rainless district of S. America, consist of wide plains, with a dark-brown movable sand. It is said that in this desert the ancient Peru vians were acenstomed to bury their dead, the dryness of the climate preserving them from decay for a long period. Some copper-mines are worked in the vieinity of the port (Cobija) gold in small quantities is found on the banks of the rivers Guano formerly existed in this province, but the deposits are now well nigh exhausted. In this prov., lat. $21^{\circ} 35^{\prime} \mathrm{s} . ;$ lon $69^{\circ} 15^{\prime}$ W., lies the Jolcano of Atacama ( $18,000 \mathrm{ft}$.), one of the most S. peaks of the Bolivian Andes. The only town is Cobija

ATACAMES, a small seaport tn. Ecuador; lat. $0^{\circ} 53^{\prime}$ S.; lon. $79^{\circ} 46^{\prime} \mathrm{W}$. (k.); 15 m . S.W. Esmeraldas.

ATALAIA, a tn. and par. P'ortugal, prov. Beira-Baixa, 7 m . S. Thomar. It has an important annual fair. 1. 2200 . aTALANTI. See Talanti.
ATALAYA, a small tn. Brazil, prov. of, and abont 20 m . S.E. Alagoas, and close upon the banks of the estuary formed by the rivers Alagoas and Itinga. It contains a church, a townhouse, and a prison. Its inhabitants carry on some trade with Bahia and Pernambuco in ipecacuan, cotton, tobacco, and sugar, all produced in the district. Pop. of tn. and dist. 2000.

ATARAlPU [the Devil's Rock], a remarkable isolated pyramidal granitic peak in British Guiana; lat. $2^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $58^{\circ} 48^{\prime} \mathrm{W}$. It rises from a plateau between the upper waters of the rivers Guidaru and Rupununi, and from amidst a dense mass of foliage, which spreads around it in all directions, to a height of 900 ft above the former river, and 1300 ft . above the sea. For 350 ft . above its base, the mountain is wooded, and for 550 ft . more it rises in a pyramidal form, destitute of vegetation, forming a striking contrast to the luxuriant growth at the base, and in all the surrounding country. There being no heights so clevated as Ataraipu for a considerable distance in every direction, renders the appearance of this natural pyramid all the more curious.-(Schomburgk.)

ATAUN, a tn. Spain, in Biscay, prov. Guipuzcoa, 18 m . S.W. Tolosa; in a valley, r. bank, Agaunza, surrounded by mountains. In the centre of the town is a square, containing the parish clurch and townhouse. The produce of the vicinity consists of grain, fruits, vegetables, and wood for charcoal; and the river yields fish of various kinds. Pop. 2164.

ATAWAL [for Altwal, the Long Island], an isl. Arabia, N . part of the Red Sea. It contains a large fishing village of the same name.

A'TBARA, a territory and river, Nubia; the former sometimes called the island of Meroe, from its being partially inkulated by the river Atbara on the N.E., the Bahr-cl-Azrek on the W. and S.W., and the Nile on the N.W. Linant describes it as a very flat country, with mountains scattered here and there like stones placed on a floor; the surface, for the most part, thickly covered with trces and grass; but in some places entirely destitute of vegetation. The inhabitants are Bisharee Arabs, a handsome and bold race of people; the women of slender and elegant form, with dark brown complexions, beautiful eyes, and fine tecth. The men go constantly armed, and are frequently engaged in quarrels, being, according to Burckhardt, crucl, avaricious, revengeful, and inhospitable. The cattle of this territory are of a superior description, and very numerons. The river Atbara, one of the principal affluents of the Nile, is formed by the united streams of Tokoor, Ohha, and Guangue, and those of the Tecazze and Augrab, all having their sources in Abyssinia. The two former uniting at lat. $14^{\circ} 15^{\prime} \mathrm{N} . ; \operatorname{lon} .36^{\circ} 28^{\prime} \mathrm{E}$. ; the two latter at lat. $48^{\circ} 11^{\prime} \mathrm{N} . ;$ lon. $36^{\circ} 46^{\prime}$ E.; and the conjoined streams that form the Atbara, neeting near Sofic, in lat. $14^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $36^{\circ} 25^{\prime}$ E. ; thence flowing in a N.W. direction, and subsequently falling into the Nile at Adamer; lat. $17^{\circ} 38^{\prime}$ N. ; lon. $34^{\circ} 8^{\prime} \mathrm{E}$. The whole course of the Atbara from Sofie, the point of its formation, to Adaner, where it joins the Nile, is about 270 m . Burckhardt thus describes the appearance of its banks :-'After a march of three hours among sandy plains, we came in sight of the river Atbara,
and entered the groves of trees with which it is lined. The luxuriant vegetation which now surrounded us, filled with pleasure even the stony hearts of the slave-traders. Amongst the trees were different species of the mimosa, doum trecs of the largest size, whose luxuriant clusters of fruit excited the wishes of the slaves; the nebek tree, with its fruit ripe; the allobe and a number of others, with an abundance of wild herbage, growing on a rich fat soil, similar to that of Egypt.' At those parts of the river visited by Burckhardt, the banks were not more than 25 ft . high, and from 400 to 500 paces apart and the current so slow as to be hardly perceptible. During high water, crocodiles are found in the river, but no hippo-potami.-(IBurekhardt's Travels in Nubia.)

A'TCHA, Atchu, Atcham, Аtchak, or Аtschak, al Aleutian isl. Andrenovian group, lat. $52^{\circ} 31^{\prime}$ N. ; lon. $173^{\circ} 40^{\prime}$ W. (1.), about 75 m . long, by about 10 m . broad. At its E. point is a harbonr, near which is a volcano that throws out a considerable quantity of sulphur, and at the foot of which there is a hot spring. l'op. 50 or 60.-(Ritter's Lex.)

A'TCIIAFALAYA, a river, U. States, an outlet of the Mississippi, which it leaves on the r. bank, about 2 m . below the confluence of the Red River. It flows very irregularly for about 150 m ., forming the W. boundary of the Missis sippi delta, and enters a bay of its own name in the Gulf of Mexico, in lat. $29^{\circ} 20^{\prime} \mathrm{N}$. ; lon. $91^{\circ} 20^{\prime} \mathrm{W}$. Its navigation, however, is greatly impeded by masses of floating trees, called rafts, which have been arrested in their progress by snags, islands, shoals, and other obstructions, and made to accumulate, so as to form natural bridges reaching entirely across the stream. One of these rafts, which was cleared away in 1839, after four ycars' labour, and which had taken 38 years to accumulate, consisted of a mass 10 m . in length, 220 yards wide, and 8 ft . dcep. It was covered with beautiful flower-bushes and trees, some of the latter of which had grown to a height of about 60 ft . A floating light-vessel has been lately placed in the bay, for the guidance of vessels.

ATCHAM, a par. England, co. Salop; 3490 ac. ; S.E. Shrewsbury. Pop. in 1841, 513.

## ATCHEEN. Sec Acheen.

ATCIIERA, a considerable tn. Hindoostan, S. Concan or Bhoonslah country, $46 \mathrm{~m} . \mathrm{N}$. Goa; lat. $16^{\mathrm{c}} 11^{\prime} \mathrm{N} . ;$ lon. $73^{\circ} 37^{\prime} \mathrm{E}$. It was formerly a place of great reputed sanctity, and a notorious depôt for goods obtained by piracy. It was captured by the British in 1818.-(IIamilton's East India Ga\%)

ATCHINSK, or Achansk.-1, A tn. Siberia, gov. Yelliscisk, 75 m . W. Krasnoyarsk; pleasantly situated in a hilly fertile country, r. bank, Tehulym or Chulùim, an affluent of the Obi ; lat. $56^{\circ} 49^{\prime} \mathrm{N}$. ; lon. $57^{\circ} 50^{\prime} \mathrm{E}$. It has two churehes; and the exterior of the houses is in general remarkably handsome. The district around is fertile in grain, and has brine springs, producing a considerable quantity of salt. Pop. 2000.-2, A tn. Russia, gov. Perm, and in the vicinity of the city of that name. It is one of the mining localitics of the Government, where a considerable quantity of copper ore was wont to be produced. The miners inhabit a little village, in a fertile dell, close to the pits.

ATCHUJEFF, Atchuck, or Atchu, an isl. on the E. shore of the Sea of Azof, in the Strait of Enikale, a little to the N.E. of Taman, near the mouths of the Kuban, about lat. $45^{\circ} 15^{\prime} \mathrm{N}$.; lon. $36^{\circ} 40^{\prime} \mathrm{E}$. ; and comprised in the Russian government of Taurida. It is mountainous, and full of swamps and morasses; contains a castle and a port, and a small town called Cozadji. The inhabitants, who are Cossacks of the Black Sea, follow the occupation of fishing, and send large quantitics of sturgeons in a dried state, caviar, fish-fat, and isinglass, to Constantinople.

A'TECA, a tn. Spain, in Aragon, prov. Saragossa, 5 m . W. by S. Calatayud, on the high road from Madrid to Saragossa. It lies on the Jalon, at its conflnence with the P'iedra and Manubles, in a damp position, in consequence of which the inhabitants are much subject to ague. The Jalon, here crossed by a handsome stone bridge, divides the town into two nearly equal parts, the smaller of which, on the N.W. bank of the river, contains the better streets. Ateca lias six squares an ancient parish chureh, two chapels, guildhall, hospital, and three schools. The inhabitants are employed in agriculture, weaving, fishing, the manufacture of fire-arms, locks, tallow, and wax; and they do a little trade in cotton fabries, hardware, tallow, fish, \&c. Pop. 3600.

ATEF (El-), a tn., N. Africa, in the sahara, half a mile S. Beni-Isguen; lat. $32^{\circ} 28^{\prime} \mathrm{N}$. ; lon. $2^{\circ} 18^{\prime} \mathrm{E}$. It is walled, has two gates, and is eomposed of 500 to 600 houses, including six mosques. IIere is a trade in grain, \&e.

A'TEGERA'T, or Adegrat, a tn. Abyssinia, kingdom, Tigré, cap. prov. Agamé, 50 m. N.N.W. Antalo, on an elevation 8180 ft . above sea level. It contains a royal residence, a large plain strueture, and 2200 inhabitants.

ATELLA, a tı. Naples, prov. Basilieata, dist. of, and $6 \mathrm{~m} . \mathrm{S}$. Melfi, on a river of its own name, an affluent of the Ofanto.

ATENA, a vil. Naples, prov. Principato Citra, 45 m. S.E. Salerno. Pop. 3400.

ATERNO, or Pescara [ane. Aternus], a river, Naples, separating the two Abruzzi ; rising in Mount Reale, and running past Aquila S.E., and then N.E. from Popoli, into the Adriatic Sea, near Pescara, in lat. $42^{\circ} 26^{\prime}$ N.; lon. $14^{\circ} 15^{\prime}$ E., after a course of about 84 m .

ATESCH-JAH, Ateschgav, Ateshga, or Atasimudda [The Place of Fire], a spot on the peninsula of Apsheron, on the W. coast of the Caspian Sea, the objeet of numerous pilgrimages by the Guebers, who regard it as sacred, and worship the fire which issues from it by the ignition of the naphtha, with which the soil is thoroughly impregnated. The Atesch-Jah is about 1 m . in diameter, and, from its centre, when the weather is dry, emits a yellowish blue flame visible by day, but of course, much inereased in intensity during night. A number of eottages are erected in the neighbourhood, and the inhabitants, by several simple devices, apply the light to ceonomieal purposes. To prevent the eseape of the naphtha vapour, they eover their floors with about a foot of loam, leaving small holes which they can open or shut at pleasure. To kindle a fire, they have only to open a hole and hold a light over it, when a continuous flame is immediately obtained. An opening of 2 inches, has been known to give a flame of about 4 ft . To regulate the flane, a hollow reed of the size required, and previously eoated with lime, by the transmission of lime-water, to prevent it from being consumed, is placed in the aperture. The vapour is pereeptible, and henee, though both light and beat are obtained for nothing, the probability is, that, being prejudicial to health, they are dearly purehased.

A'TESHGA. See Atesch-Jaif.
A'TESSA, a tn. Naples, prov. Abruzzo Citra, dist. of, and 12 m . W.S.W. Vasto d'Ammone. It has a beautiful collegiate ehureh, four parish churehes, several convents, an hospital, and three monts-de-piété. Pop. 7526.

A'TFEII, a vil. Lower Egypt, 1. bank, W. branch of the Nile, about 14 m . above Rosetta, at the junetion of the Mahmoudieh Canal with the Nile, where passengers who have come from Alexandria by the former, and are going either to India or the interior of Egypt, embark in steamers for Cairo, which is about 90 m . distant S.S.E. The voyage by steaner is generally performed in a day and a half; but in a sailing vessel, oceupies about three days. The return voyage is aecomplished by a steamer in from 12 to 15 hours, having the advantage of the current in deseending. The passage by the canal, from Alexandria to Atfeh, is made by track-boats. Thus occupying an important position on the overland route to India, and to Central and Upper Egypt, Atfeh has become a bustling place; and is rendered still more so by an extensive transit-trade, the canal being constantly lined with vessels loading grain and other eargoes.

A'TFIEH, or Atfeir, a tn. Central Egypt, cap. prov. Atfyh, r. bank, Nile, from which it is about 3 m . distant, and $41 \mathrm{~m} . \mathrm{S}$. Cairo. It was the capital of the Aphroditopolite nome, and, according to Strabo, noted for the worship of a white cow, the emblem of the goddess Athor, the Egyptian Venus. The Coptic name of the town is Tpêh or Petpieh. It contains no monuments. Pop. 4000.

ATII, a fortified tn . and com. Belgium, prov. Hainaut, on the Dendre, about 17 m . E. Tournay, on the railway from Tournay to Mons. It eontains several ehurehes, an orphan asylum, an hospital, a theatre, and a college. The prineipal buildings are the Hotel de Ville, built in 1600; the magazines and arsenal; the chureh of St. Julien, founded in 1393, destroyed by lightning in 1817, but since rebuilt; and the college ${ }_{3}$ which was founded in 1416, and, with its buildings, covers a considerable space. Among the ancient monuments of the
town, is a tower ealled Tour du Burband, supposed to have been fonnded about the middle of the 12 th century. Dyeing, bleaching, and soap-making are carried on here to a considerable extent. There are also manufactures of gloves, lace, and linen eloths (of which last 25,000 pieces are annually sold in its market), a cotton printfield, a worsted mill, several brandy and gin distilleries, and a considerable trade in hemp, grain, oleaginous seeds, leather, eloth, wine, and colonial produce. Ath is famous for its trinkets, which cireulated all over Franee; but the demand is now confined to Belgium, particularly Flanders and Brabant. The defences of the town were originally eonstrueted by Vauban, but have been greatly improved and strengthened since the battle of Waterloo. The great barrack, which is bomb-proof, can accommodate 3000 men. Pop. of tu. and com. 8837.

ATHABASCA, or Athapescow, a river and lake, British N. America, N.W. territory. The river has its sourees in the E. slopes of the Rocky Mountains, near Mount Brown; lat. $52^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $116^{\circ} 30^{\prime} \mathrm{W}$. From this point, it pursues a tortuous, but generally N.E. and N. course till it falls into Lake Athabasca, at its W. extremity. Its whole length, following the larger windings, is about 600 m . It reeeives the waters of the Lesser Slave Lake, in about lat. $55^{\circ} \mathrm{N}$. by means of a connecting stream about 20 m . in length. It also receives in about lat. $56^{\circ} 25^{\prime} \mathrm{N}$. the united waters of several small lakes. In the upper part of its course, it is known also by the name of the Biche, and in the lower part, or near its entrance into the lake, by that of the Elk River.

The Lake of Athabasea, or Lake of the Hills, as it is frequently called, is situated about 190 m . S.S.E. the Great Slave Lake. It is about 200 m . in length from E. to W., and about 35 m . wide at the broadest part, but gradually narrows to a point at either extremity. It occupies an area of upwards of $3000 \mathrm{sq} . \mathrm{m}$. The only outlet of the lake is by the slave River, with which it communieates by several small streans that issue from its W. end, and by which its superfluous water are carried into the Great Slave Lake. The Stone River falls into it at its E. extremity. The N. shore of the lake is high and roeky, and thickly wooded with firs and poplars, \&e. The S. shore, again, is level, and consists of alluvial soil. On this side, there is a shoal of many miles in extent, formed by the drift-timber and vegetable debris brought down by the Athabasea River. The lake abounds in fish; the most numerous are trout, earp, pike, methye, \&c.

ATIIAN (St.), a par., S. Wales, co. Glamorgan ; 1300 ae.; S. Cowbridge. Pop. iu 1841, 379.

ATHANSEL, a par. Ireland, co. Tipperary; 12,770 ac.; contains the ruins of a priory of great extent and magnificence. Pop. in 1841, 5431.

ATHBOY, a market tn. and par. Ireland, eo. Meath, prov. Leinster. The town is $35 \mathrm{~m} . \mathrm{N}$. W. Dublin, and 6 m . N.W. Trim; its name, in the Irish language, meaning 'the yellow ford,' being derived from its position on a stream called the Athboy river, a tributary of the Boyne. The town eonsists chiefly of one long street; and possesses a chureh, a ehapel, a sessions-house, and a constabulary barracks. Large cattle fairs are held here; and the weekly eattle-market, on Thursday; is well attended; but there is little trade besides. Two sehools and a small widows' alms-house are supported by the Earl of Darnley, to whose estate the town belongs. A loan fund was established in 1845 . Athboy returned two members to the Irish parliament, but was disfranehised at the Union. Near the town, on the N., stands the Ilill of Ward, about 390 ft . high-a distinguishing feature in the landseape. Area of par. 11,884 ae. Pop. in 1841, 5365; of tn. 1826.

ATHELINGTON, a par. England, co. Suffolk ; 980 ae.; S.E. Eye. Pop. in 1841, 111.

ATHELNEY (IsLE of), the ane. name, now disused, of a rising ground situated in a marsh in the co. Somerset, England, par. East Ling, about 6 m. S.S.E. Bridgewater. The morass by whieh the island was surrounded was, in former times, all but impassable; thus rendering it a place of sceurity, for whicl it was often made available. Amongst those who sought safety in this bog begirt island, was Alfred the Great, who fled thither after lis retreat from the Danes, then overrunning Wessex. To eommemorate this event, a small obelisk with an inseription has been ereeted on the spot by the owner of the land. Alfred founded a Benedietine
abbey here, abont 888. Many architectural remains, bones, and other relics, have been dug up on the site of the buildings, which appear to have been extensive and magnificent. The mound, now no longer insulated, contains about 100 ac . It was, in ancient times, covered with alders, in which stags, wild goats, and many other animals sheltered.

ATHELS'I $A$ NEFORD, a par. Scotland, co. Haddington; 4000 ac . Ifome, author of the Tragedy of Douglas, was for 10 years minister of this parish; and it is the birthplace of Blair, author of 'The Grave.' Pop. in 1841, 991.

ATHENRY, or Athenree, an anc. tn., barony, and par. Ireland, co. Galway. The town is 13 m. E.N.F. Galway; and was originally called Athmere, from Ath-na-Riagh, 'the king's ford'or 'the abode of a king.' It was at one time enclosed within the walls, some vestiges of which still remain. In the 13th century, Meyler de Berminglam granted a site of land for the foundation here of a Dominican monastery, an account of which is given in Grose's Antiquities of Ireland; but it was accidentally destroyed by tire in the 15 th century. lart of the ruins are extant, as well as of the castle of the Berminghams, Earls of Lowth. There was also a Franciscan friary founded liere in 1464 . It sent two members to the Irish parliament, but was deprived of the franchise at the Union. Having no manufactures or trade, it is a poor place, and wears altogether a very desolate aspect. Aronnd the town, the country is flat and dreary, presenting constant alternations of peat, marsh, rich pasture, bare crag, and tillage-lands.-The narony is 20 m . in length, and from $1 \frac{1}{2}$ to 8 m . in breadth; area, $25,782 \mathrm{ac}$. Pop. in 1841, 8179. Area of par. $24,950 \mathrm{ac}$. ; pop, in 1841,5989 . Pop. of th. in 1841, 1236.

ATHENS, the name of a county, and of numerous townships, \&c., U. States:-1, A co. in the S.E. of Ohio; area, $740 \mathrm{sq} . \mathrm{m}$. ; watered by the Hockhocking, the Raccoon, and several smaller streams. The surface is hilly and broken, but the soil is productive, and alike adapted for tillage or grazing. Iron, coal, limestone, freestone, clay, and saltsprings, add to the riches of the comnty, which, besides raising numerous herds of cattle, sheep, and swine, yields maize, oats, potatoes, tobacco, \&c. Pop. 19,109.-2, A post vil., cap. of above co., $72 \mathrm{~m} . \mathrm{S} . \mathrm{E}$. Colnmbus. It is a picturesque village, lies on a bend of the Hockhocking, las well built brick houses. a Presbyterian and Methodist church, a college, founded in 1821, with five professors; an academy, courthouse, two tanneries, three grist and three saw-mills, \&c. Pop. $710 .-$ Athess is also the name of townships in Maine, Vermont, New York, Pennsylvania, Michigan, Georgia, Alabama, \&c.

ATHENS [anc. Afryos Athenac], the capital of Greece; and not only for several ages the centre of European civilization, but still, in many respects, particularly to the scholar and the artist, the most interesting city in the world. Its site, equally magnificent for scenery, and advantageous for commerce, is about 4 m. N.E. of the Saronic Gulf or Gulf of Egina, in an extensive plain of its own name, watered by the llissus and Cephisus, and surrounded by hills on all sides, except towards the sea, where it lies open, and gives a fine view both of the gulf and the numerous islands which seem to float on its surface. This plain, instead of being uniformly level, is broken by numerous ridges of limestone, several of which, with their intervening valleys, are partly occupied by the city; while the highest of them rises up precipitously, and forms the Acropolis or citadel. The chicf approaches to Athens are one on the $W$. by way of Eleusis, over a well made carriage road, in a plain remarkable for the luxuriant beanty of its olcanders; and another on the S.W. by the celebrated harbour of Pirxus, along a tract which, though once a mere swamp, has been covered with vincyards, oliveyards, and fig-plantations. In its most prosperous days, Athens enclosed a large space, including not only the city proper, but a long narrow suburb, stretching continuously to the Pireus, and was surrounded by walls which had a circuit of nearly 20 m . Parts of these walls still remain, particularly on the S. and W.; but within a comparatively modern period, a wall of about 4 m . in circuit had been built, enclosing a space which, during the possession of the city by the Turks, was more than sufficicnt to accommodate its inhabitants. Since 1834, when Atheus again became the seat of Government, this wall, which was in a ruinous state, has been pulled down to make way for new
strects and edifices, which are rapidly springing up on all sides, and promise to give the city at least the appearance of a modern capital, how much soever they may fail to rival its ancient splendour. Previously to these improvements, the greater part of Athens was a mere heap of ruins, the effect of the recent struggle for independence; while the portions still habitable furnished one of the worst specimens of a Turkish town, consisting of a mere labyrinth of narrow, crooked, and irregular lanes. The houses in general had no architectural merit, and even those of them which it was impossible to pass unobserved, attracted attention merely by occupying sites on which some of the tinest remains of ancient art were still standing, barbarously and grotesquely dovetailed into modern structures. A specimen of this curious and incongruous mixture is exhibited in the woodcut on the following page, of a marble structure on the E. side of the Acropolis, supposed to have been dedicated to Rome and Angustus. It now stands across a street, the thoroughfare of which passes between its central columns, and is seen proceeding in the direction of a Turkish mosque, while modern buildings not only abut on the monument, but are built into and partly conceal it. Artists have too often kept these rude accompaniments out of view, and, in their sketches of Athenian buildings, have exhibited them not in their actual state, but as they cither imagine them to have once been, or expect them to become by means of the renovating processes which the present Government has begun in good earnest to employ. Though several public buildings well deserving of public notice have been recently erected, the chief interest connected with Athens must long continue to be derived from its antiquities, and with these, therefore, though contrary to the usual order, it scems proper to begin. For this purpose, the reader must transport himself to the Acropolis, a lofty limestone rock, 150 ft . high, precipitous and inaccessible on all sides except the W., but terminating in a large expanse of an oval form, enclosed by a wall 2330 yards in circuit. The ascent com mences on the N. side, and winds round till it reaches the only entrance, the Propylæa, a splendid portal, with a front of six marble Doric columns and two wings, giving admission by five doorways, all of which have recently been cleared of Turkish rubbish, and once more appear almost in their original perfection. Immediately without the entrance, on the right side, a beantiful temple of Wingless Vietory has recently been brought to light by the removal of a Turkish battery. It is now in process of re-construction from its numerous fragments, which lic seattered about; and, both from its beautiful workmanship and commanding position, is expected ultimately to become one of the noblest ornaments of the city. On turning into the Acropolis, the majestic Parthenon, justly described as 'the finest edifice, on the finest site in the world,' bursts on the view. It stands near the centre, on the most elevated spot within the Acropolis, and is built of the white marble of Pentelicus. It was in the form of a parallelogram, 228 by 100 ft ., its longest sides facing the N. and S. ; and consisted of a cell surrounded by a peristyle, which had eight Doric columns in front, and 17 on itss sides, each column 34 ft . high, and 6 ft .2 inches in diancter at the base, and standing on a pavement elevated by three steps. The whole height was 65 ft . The Parthenon stood almost entire, at least as the Emperor Hadrian had repaired it, till 1687, when, during a siege by the Venctians, a bomb fell upon part of it, which was employed as a powder magazine, and destroyed the roof. Since then, it has received numerous injurics, some of them of a very recent date, and its more delicate ornaments must now be looked for in private cabinets and public museums. The more solid parts are tolerably entire, though even these have suffered much, and must ultimately have disappeared under the barharism of the Turks; who not only, in a case of necessity, had converted its marble into cannon balls, but were in the practice of pounding it for mortar. The other principal building of the Acropolis is the Ercetheum, or temple of Minerva Polias, consisting of a cell about 90 ft . long from E. to W., and intersected at its W. end by an irregular transept. The N. and E. porticoes were supported by Ionic columns, the S. by a kind of sculptured female figures, ealled Caryatides. The chicf compartments in tho Erecthenm were the temple proper, at the E. end; the Pandroseum, at the W. ; and, in the centre, the Cecropium, supposed to have been so called from containing the remains of

Cecrops, the first founder of the city. Immediately to the N.W. of the Acropolis, and separated from it by a narrow valley, is the Areopagus, or, as our Bibles also call it, Mars' Hill, famous for the venerable court which there held its sittings under the open air; and still more famous as the spot on which the apostle Paul pleaded the cause of heavenly truth against

THE GATE OF AUGUSTUS, ATHENS.-From Thurtner, Ansichten von Athen.
Stoic fatalists and Epicurean scoffers, and proved, by a simple appeal to the gorgeous temples around him, that 'in all things ' they 'were too superstitious.' A little to the S.W. of this c.lebrated hill, and due W. of the Acropolis, lies a small valley, forming the old Agora (forum or market-place); and on a slope immediately above it, the Pnyx, with its rude bench of stone, at which Demosthenes was wont to stand and fulmine forth his matchless eloquence to the half-overawed and enraptured multitudes crowding the forum below. To the S. of the Pnyx, and almost of equal height with the Acropolis, is the Musæum Hill, so called because Musæus is said to have sung, and to have been buried there; but deriving its chief interest from a deed of shame-one out of four curious dungeons, cut out of the rock at its base, being by tradition that where Socrates drank the poisoned cup. At the base of the Acropolis, near its S.E. angle, was the theatre of Bacchus; but a few seats, cut in the rock, are almost the only vestiges of it that remain. About 500 yards N. W. of the A cropolis is the temple of Theseus, built b.c. 465, 30 years before the Parthenon, and more fortunate in its fate, having not only at one time been employed as a Christian church, but still forming the most complete ancient building of any extent within the city, and serving as its museum. It
 is built of Pentelic marble, which has assumed a rich mellow hue, and is equally remarkable for solidity and gracefulness. It is surrounded with Dorie columns, 13 on each side, but is of comparatively small dimensions, the cell being only 40 ft . long by 20 broad. Considerably to the S.E. of the Acropolis, and a little above the torrent Ilissus, is the temple of Jupiter Olympius, which was the largest in Athens; and though begun by Pisistratus, B.C. 530 , was first completed by Hadrian, A.D. 145. It consisted of a cell, surrounded by a peristyle of Corinthian columns, 10 in front and 20 at the sides, each $6 \frac{1}{2} \mathrm{ft}$. in diameter, and above 60 ft . high, and appears to have had a circuit of 2300 ft . All that now remains is 16 columus, on an artificial platform, supported by a wall. It were almost endless to attempt to detail all the ancient edifices with which Athens Vol. I.
was adorned, and the remains of which may still be traced; but before passing to the modern buildings, there is one belonging to an intervening period, which ought not to be overlooked. It is the Cathedral, built of massive blocks of white marble, and furnishing one of the most interesting specimens of the Byzantine style. A modern steeple conceals the original dome; but a frieze, running along the front, is carved with a curious Greek zodiac. The interior is covered with paintings. The chief part of the modern town is to the N., where a new quarter, of good houscs, has been built, to which the diplomatic corps has recently removed. In the W., also, a line of houses has lately risen up, not so regularly as could be wished, but all well built, and many of them large and commodious. Here the new palace has been erected, but, unfortunatcly, by an architect on whom the mantle of his earliest predecessors appears not to have fallen. It is a huge quadrangular building, with massive walls of broken limestone, faced with cement; but the front portico, as well as a colonnade, together with all the window-frames, cornices, \&c., are of Pentelic marble. The interior is higlly decorated in the modern style of Munich. The university or Panepistimion, is the finest modern structure of Athens, and when completed, will not be unworthy of it; but unfortunately, from want of funds (the greater part of which have hitherto been furnished by subscription, chiefly from foreign Greeks), only half of the design has yet bcen carried out. It has a handsome portico of Pentelic marble, from each side of which an open corridor leads to the six lecture-rooms, an anatomical theatre, councilroom, \&c. A double flight of stairs leads to the library, which is a noble hall, and already contains about 30,000 volumes. The number of students exceeds 200 . It is pleasing to see that among the different institutions which are springing into existence here, education holds its proper place. In addition to the university, there are numerous schools, supported partly by Government, partly by public societics and private munificence. Among the higher class of these establishments are the gymnasium, which prepares for the university, and has 600 pupils; the polytechnic school for drawing, geometry,
\&c., attended by nearly 200 ; the seminary or normal school; and the Risari ecclesiastical school, so called after its founder, and designed to give a preparatory education to students of divinity. Among the secondary schools may be mentioned those of the Greek committee of education, with about 250 pupils; and the Athens' free school, and the Amcrican school, each with 600. Athens has no manufactures, and as yet cannot be said to have any important trade, though it has an excellent harbour, which seems to invite the commerce both of the E. and the W. This harbour, called, in modern times, Porto Leone, from the marble colossal lions which once stood upon it, but still better known by its ancient name of Piræus, is abont 4 m . to the S.W. of the city, and was brought within its enclosure by means of what was called the Long

## ATHLONE

Walls. It is very deep and capacious, forming a large basin, whieh is somewhat difficult of entrance, but within which, in its best days, 1000 triremes have rode. To the trade of this port, and the naval superiority connected with it, Athens was mainly indebted for the pre-eminence which she held among the states of Greece; and apparently to the same sources must she still look, if she is again to become great. Of this the Government seems fully aware; and accordingly, one of its earliest labours was to fill up a marsh, and commence the eonstruction of a quay, at which several hundred merchant vessels may lie. Piræus itself, instead of being a mere suburb, is rapilly rising into a town. It has been almost entirely built since $183 t$, and already contains 1000 houses. See Pireves.

The early history of Athens is obscured by fable; and though Cecrops is universally admitted to have been its foumder, so little is known of him that it is still disputed whether he came from Egypt or was a native Greek. At first the Acropolis, and a few cottages clustering round its base, formed the whole city; but it soon rose into importance, though it does not take a very prominent place till about B.c. 594 , when Solon became its legislator. The jealousy of neighbouring states began now to be excited, and a combination, headed by the Spartans, was formed against it, when the appearance of a formidable foreign foe showed the Greeks the folly of intestine dissension, and convinced them that union alone could insure their safety. A numerous Persian host arrived in Attica, and threatened to make Greece the paltry province of a barbarian empire; but the battle of Marathon, в.c. 490, drove back the invader, and laid the first great foundation of Athenian renown. Ten years later, Xerxes arrived with almost countless hordes, seeking vengeance, and partly obtained it, by laying the greater part of Athens in ashes. Defeat, however, overtook him at Salamıs, and drove him across the Hellespont, a most inglorious, and almost a solitary fugitive. Mardonius, his satrap, still remained, and again obtaining possession of Athens, left it a heap of ruins. But the victory of Platæa rid the Athenians of Persian invaders, and opened a career of prosperity which, under the guidance of Themistocles, they were not slow to follow. The city suddenly rose with a magnificence whieh it had never before possessed, and was enclosed by a wall, which not only secured it against sudden incursions, but extended, so as to form a bulwark around its fleet. The Athenian naval supremacy being now established, an extensive commerce arose, wealth flowed in from all quarters, and the munificence of individuals vied with the state in extending and embellishing the city. This prosperity both made the Athenians arrogant and their neighbours envious. The Peloponnesian war broke out, and terminated most disastrously for Athens, which surrendered to the Spartans, B c. 404 , was deprived of its fleet, and saw its Long Walls, and other maritime fortifications, demolished to the sound of music. It never completely recovered the shock; and though not a few of its great names afterwards appeared, internal degeneracy, as well as outward force, concurred in preparing the Athenians for a foreign yoke. First Philip, and then Alexander (B.c. 336), became the generalissimo of the Greeks; and no higher part was left for Athens than to furnish her quota of mercenaries to the intended invasion of Persia. The Roman empire followed, and Athens finally fell under it, being taken by Sulla, b.c. 86. It afterwards was repeatedly ravaged by the Goths; but its worst degradation befell it in 1456 , when it passed from the possession of Christian powers, and sunk under the domination of the Turks. A new era in its history has commenced. It is now the capital of a monarchy, at least nominally constitutional, and has nothing but its own misconduct to prevent it from rising even to a higher eminence than it ever before obtained. Pop. (1845), 26,300.-(Wordsworth; Thirlwall; Giflard; Clarke; Murray's Mandbook; Leake's Morea.)

ATHERING'TON, a par. England, co. Devon; 2500 ac. ; W. South Molton. Pop. (1841), 629.

ATHERSTONE [anc. Edrestome and Adrestone], a market tn. and township, England, co. Warwick, 20 m. N.N.E. Warwick, and 97 m. N.W. by N. London, situated in a valley scrcened by finely-wooded hills. It consists chiefly of one main street, which is but indifferently kept. The houses are irregularly built; many of them are very ancient; these are of stone, the modern buildings of brick. The town is amply supplied with water, and well lighted with gas. The chapel,
anciently belonging to an Augustine priory, founded in 1376, has been recently entirely rebuilt, with exception of the old octagonal tower, which still remains. There are also in the town chapels for the Wesleyan and Independent Methodists; and, in its immediate vicinity, are a convent and chapel for Romanists, both handsome structures. The educational means of the plaee consist of a free grammar-school, an endowed charity school, and an infant school. Hats and stockings are manufactured here, the former to some extent. Atherstone is said to be the birthplace of Drayton, the poct. The Trent Valley Railway runs by the town; and the Coventry and Fazely Canal passes at its N.W. extremity, where extensive coal and lime wharfs have been constructed. The county magistrates hold a petty session weekly. Market-day, Tuesday. Three fairs annually. Pop. of township in $1841,3743$.

Atherstone-upon-Stour is the name of a small parish in the same county, hun. Kingston; 1120 ac . Pop. 93.(Correspondent in Atherstone.)

## ATHERTON. See Chowbent.

ATHLACCA, par. Irel., Limerick; 5511 ac. Гop. (1811), 1372.

ATILLEAGUE, a par. and vil. Ireland, cos. Galway and Roscommon: 13,012 ac. Limestone and freestone, both of exeellent quality, abound. Pop. (1841), 5087.

A'THLONE, a tn. and barony, Ireland. The town lies on the Shannon, about 67 m. W. by N. Dublin, and 12 N.E. Ballinasloe, partly in co. Westmeath, prov. of Leinster, and partly in co. Roscommon, prov. of Connaught, and stands almost in the centre of Ireland. It is divided by the river into two ncarly equal parts, connected by a spacious and handsome new stone bridge of five arches, opened for traffic, for the first time, in November 1844; communication having been previously maintained hy a narrow old bridge, erected in the time of Elizabeth, now removed. The two divisions were formerly called English town and Irish town, but are now known as the Leinster side and Connaught side. It is an ill-built, irregular, and ill-paved place; and consists chiefly

of narrow, dirty, crooked strects, and obscure lanes and alleyz. It is composed of three parishes; St. Peter and Kiltoom, in the barony of Athlone, co. Roscommon ; and St. Mary, in the barony of Brawney, co. Westmeath. The best private houses, and the only clean strect in the whole place, are on the Leinster side. On the Connaught side is the castle of Athlone, erected in the reign of King John, and enlarged and strengthened in that of Queen Elizabeth, and now strongly fortified in the modern style. It was once the residence of the Lord President of Connaught, and completely commanded the old bridge. The town was incorporated by charter from James I., and received a further charter from Charles II. It derives im portance from being one of the chief stations or Government depôts for troops and military stores in Ireland. The barracks, N.W. the castle, can accommodate 2000 men ; to it an ordnance-yard, magazines, armoury, with muskets for 15,000 men, and hospital, are attaehed, all occupying an elevated position on the river above the bridge, and, with the three large
squares for parade and exercise, cover at least 15 English ac. N.W. of the barracks, and outside the town, are extensive outforts and batteries, commanding the main roads from Galway and Ballinasloe. The sessions-house is in the Connaught town. Besides the parish churches, there are four R. catholic chapels, including those of the Augustinian and Franciscan friaries; also places of worship for Baptists, Presbyterians, and Wesleyan Methodists; a charter school, and several free schools, one in the barracks; with branches of the national and provincial banks of Ireland, the usual municipal and county offices, several inns, and a union workhouse, opened in Nov. 1841. There are also two breweries, one of them very extensive; some large flourmills, and two distilleries. The manu facture of felt hats, which has long been carried on here to a considerable extent, is now declining. Friezes and linens are also manufactured. The markets, held three times a week, are well supplied with sea and river fish, vegetables, and meat. By means of a canal at Athlone, a mile long, constructed for the purpose of avoiding some fords, the Shannon is rendered navigable for 71 m . above the town. The facilities for carrying on trade here are further augmented by the grand canal from Dublin, which joins the Shannon 17 m . below the town. The first bridge in Ireland is said to have been one built across the Shannon at Athlone, by Turlough O'Connor, king of Connaught, in 1140. Athlone sent two members to the Irish Parliament, but sends only one to the British House of Commons; constitueney, 388. Pop, of tn. (1841), 6393.-The barony is 16 m . in length by 10 in breadth; area, $146,185 \mathrm{ac}$. Pop. (1841), 51,927.-(Inglis's Ireland; Otway's Tour in Connaught; Murray's Handbook for Ireland; Parliamentary Papers.)

ATHLUMNEY, par. Irel., Meath; 2454 ac . Pop. (1841), 1269.

ATHNASSEY, par. Irel., Limerick; 2837 ac. Pop. (1841), 1503.

ATHNOWEN, a par. Ireland, co. Cork; 4838 ac. There are some remarkable limestone caves in this parish, and the remains of an ancient castle. Pop. (1841), 1925.

ATHOLE, or ATholle, a mountainous and romantic dist., the most N. part of Perthshire, Scotland, 45 m . long, and 30 broad. It comprehends a great portion of the ancient Caledonian forest ; and, along with Stormont, constituted, in the eighth century, the possessions of a Pictish prince. It contains several lakes, and richly cultivated valleys; and in the extensive forest of Athole game of various kinds is abundant. The pass of Killiecrankie, celebrated for the battle fought near it in 1689, in which Graham of Claverhouse was killed, is in this district; it is a romantic, finely-wooded pass, rising steeply on either side of the Garry. Amongst the most beautiful of its valleys are Glen Tilt and Glen Bruar. The district contains a nu.nber of villages. It gives the title of Duke to the ancient house of Murray. Athole is said to signify 'pleasant land,' and Blair-Athole, the name of its principal valley, is 'the field or vale of Athole.' The famed 'Athole Brose' is a mixture of whisky and honey.-(Pennant's Tour ; Anderson's Guide to the Highlands and Islands.)

ATHOS (Mount) [Modern Greek, Hagion Oros; Italian, Monte Santo], the name given properly to a lofty mountain in the S.E. of Turkey, lat. $40^{\circ} 10^{\prime} \mathrm{N} . ;$ lon. $24^{\circ} 21^{\prime}$ E., but generally applied to the whole of the narrow peninsula lying between the Gulf of Contessa, and the Gulf of Monto Santo, and separated from the mainland of prov. Salonichi by an isthmus, whose breadth from gulf to gulf, at its narrowest point, does not excced $1 \frac{1}{2} \mathrm{~m}$. This peninsula, which stretches into the Archipelago N.W. to S.E. 25 m ., with an average breadth of about 4 m ., is generally rugged, being intersected by innumerable ravines. The isthmus itself is flat and sandy, standing only a few feet above the level of the sea; and traces have lately been discovered of the canal which Xerxes cut across it, to avoid a recurrence of the disasters which his fleet experienced in rounding the promontory; but immediately beyond the isthmus, at its N. end, the ground rises abruptly about 300 ft ., forming the abutment of a plateau, which for 12 m . maintains a height of 600 ft . From this point the peninsula becomes more decidedly mountainous, two of its heights reaching respectively to 1200 and 1700 ft . Near this stands the town of Karyes, picturesquely situated amidst vineyards and gardens. Beyond Karyes, both the height and the ruggedness increase, and dark forests of oak, chestnut, and pine, extend without interruption to the foot of the monntain-an
isolated cone of white limestone or narble, resting on a gnciss and schistous base, and rising abruptly, particularly towards the sea, to a height of 6700 ft . The view from the summit is described as one of the finest panoramas in the world. The mountain belongs to Caloyers, or Greck monks, whose monasteries, chapels, \&c., are scattered over its sides, and have procured for it its modern name of 'Holy Mount.' The monks attempt to trace their institution to the time of Constantine, but their earliest authentic documents do not go further back than the 10 th century. The site of these monasteries is very picturesque, but none of them have much architectural merit. They are remarkable chicfly for the solidity of their structure, and the precautions adopted to make them secure as places of defence. One principal monastery, St. Laura, stands on the S.E. side of the mountain facing the sea. It looks like an ancient fortress surrounded with high blank walls, over the tops of which are scen numerous domes and pinnacles, odd-shaped roofs, and cypress trees. It encloses an irregular space of 3 or 4 ac ., and has a front of about 500 ft . The only entrance is by a crooked passage defended by three iron doors. The interior consists of several small courts, and two large open spaces surrounded with two churches, and buildings to accommodate the monks. These at present are only 120 . The whole number now inhabiting the peninsula, has been estimated variously from 8000 to 2500 . The latter is probably the more accurate estimate. At one time the whole of the monasteries were rich in ancient MSS., but the monks were in general too illiterate either to read them or know their valuc. Several of the most ancient, which had become nere lumber, and must soon have rotted away altogether, have been happily saved, and now enrich various collections.-(Curzon's Monasteries; Handbook for the East; Orographie de l'Europe.)

ATII Y, a municipal and market tn. Ireland, co. Kildare, ir the parishes Athy St. John and Athy St. Michael, $20 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Naas, and $37 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Dublin; pleasantly situated on the Barrow, which is crossed here by a stone bridge of five arches. It consists chiefly of a main street and market square; having three Protestant and two R. catholic churches, two dissenting chapels, several parish schools, a dispensary, sessions-house, extensive county jail, fever hospital, large union workhouse, and police barraeks. Athy, which was first incorporated in the reign of James I., is included in a circle extending 1 m . from the town, and governed by a mayor, two bailiffs, 12 burgesses, and a recorder. Before the Union it sent two members to the Irish Parliament, but was then disfranchised. It is, alter nately with Naas, the assize town of Kildare; quarter-sessions are held in January and June, petty sessions every Tuesday, and a court of presentation is held in October. The modern importance of Athy is due to its position, at the junction of the Grand Canal with the Barrow, which is navigable hence to its mouth ; and it is also one of the chief stations on the Carlow branch of the Southern and Western Railway. It has a large trade in corn, which is sent in barges to all parts of Ireland; and it has two weekly markets, with six aunual fairs. The manufactures, however, are quite insignificant. On the W. bank of the river are the remains of Woodstock Castle, built, in the 15 th century, by the seventh Earl of Kildare; it is in tolerable preservation, and has a fine arched gateway and beautiful mullioned windows. Pop. (1841), 4698._TThe Parisi of Athy St. John, partly in Queen's co., and partly in co. Kildare, comprises an area of 1123 ac. Pop. (1841), 394. The parish of Athy St. Michael, co. Kildare, comprises 1881 ac. Pop. (1841), 2849.

ATIBAIA, a tn. Brazil, in the E. of the prov. São Paulo, on a river whence the town derives its name, 110 m . N.N.E. Santos. It has a church, townhouse, and prison; and its inhabitants, who are subject to goitre, cultivate the necessaries of life, and rear cattle and hogs for the market. Pop. of tn. and dist. 7000.

ATIENZA, a tn. Spain, in New Castile, prov. Guadala jara, 18 m . W.N.W. Siguenza, on the E. summit of a rocky hill, surrounded by a dilapidated wall, flanked with 14 towers, entered by three gates. It has an old and extensive castle on its N. side, has ill-paved steep streets, a square, six parish churches, a hall of justice, a prison, an endowed school hospital, and a convent. Pop., chiefly agricultural, 1983.

ATLNA [anc. Atinum], a tn. Naples, prov. Terra di I $L_{a}$ voro, dist. of, and 11 m . S.E. Sora, near the Melfa. It has a
cathedral, a convent, and an hospital ; was formerly a bishopric, and is one of the most ancient towns of Italy, being named by Virgil amongst the cities that took part in the war between Eneas and Turnus, prince of the Rutuli. It was a Roman colony during the reign of Nero, and then considered one of the most populous and important in the empire. It has some manufactories of carpets. Pop. 6768.

ATININENI, called also Atiniveny, a large lake, Brazil, prov. Para, in Brazilian Guiana, between the rivers Negro and Japura, 110 m . above the junction of the former stream with the Amazon. It communicates S. W. with the Codaya, an arm of the Japura; and N.E. with the Negro, through the rivers Ananay and Jaumuhi. Its banks are covered with the copaiba plant.

ATITLAN, a lake and active volcano, Central America, republic Guatimala. The LAKe is 60 m . W.N.W. the city of Guatimala, 30 m . in length, about 10 m . in breadth, and entirely surrounded by rocks and mountains. There is little gradation of depth from its shores, and the bottom has not been found with a line of 300 fathoms. It receives several rivers, and all the waters that descend from the mountains, but there is no known channel by which this great body is carried of. Crabs, and a species of very small fish, are caught in it; the latter are in immense quantities.-The volcano is in lat. $15^{\circ} 47^{\prime} \mathrm{N} . ;$ lon. $91^{\circ} 28^{\prime} \mathrm{W}$. , and is $12,500 \mathrm{ft}$. in height.

ATLANTIC OCEAN, the name given to the vast expanse of sea lying between the W. coasts of Europe and Africa and the E. coasts of N. and S. America, and extending from the Arctic to the Antarctic Seas, or, as may with sufficient propriety be said, from pole to pole, being separated from the Pacific Ocean by lines drawn from Cape Horn and Cape Agulhas to the Antarctic Circle. Its greatest breadth is between the W. coast of N. Africa and the E. coast of Florida in N. America, the distance here being 4150 m . If the Gulf of Mexico, in reality one of its bays, be included, it will extend to 5000 m . Its least breadth, which is between Norway and Greenland, is about 930 m . Between Cape St. Roque, Brazil, and Sierra Leone, the breadth is 1792 m . Its superficial extent has been estimated at $25,000,000 \mathrm{sq} . \mathrm{m}$. From the number and extent of its inlets, gulfs, and bays, its coast lines are of great length, the E. being upwards of $32,000 \mathrm{~m}$., and the W. upwards of 55,000 . Its principal inlets and bays are Baffin's and Hudson's Bays, the Gulfs of Mexico, Honduras, and San Juan, the North Sea or German Ocean, the Bay of Biscay, and the Gulf of Guinea. The principal islands N. of the equator are Iceland, the Faroe and British Islands, the Azores, Canaries, and Cape de Verd Islands, Newfoundland, Cape Breton, and the W. India Islands; and S. of the equator, Ascension, St. Helena, Trinidad, Columbus, and Tristan da Cunha, the last three being mere rocks. The Atlantic is of vast depth. In lat. $15^{\circ} 3^{\prime} \mathrm{S} .$, lon. $23^{\circ} 14^{\prime} \mathrm{W}$., or rather more than half way between St. Helena and the E. coast of S. America, Sir James Ross tried soundings with a line of $27,600 \mathrm{ft}$. without finding bottom, this being the greatest depth yet satisfactorily ascertained, although it is believed that many parts of the Atlantic are much deeper. Some of the other more remarkable depths recently ascertained are-

Lat. $33^{\circ} 21^{\prime}$ S. ... lon. $9^{\circ}$. $0^{\prime}$ E.
Lat.

,
N. Atlantic Ocfan, 1843.

Lat. $25^{\circ} 55^{\prime} \mathrm{N} . .$. lon. $66^{\circ}$ of W. ... 19,500 ft. (line broke) Capt. Barnett. " 4119 "... "44 16 ,... 22,200 ", Do.
In the Antarctic Ocean, the depth was found by Sir James Ross to be generally about 2000 ft ., but on one occasion a line of $24,000 \mathrm{ft}$. failed to reach the bottom. The saltness and specific gravity of the Atlantic are greatest near the equator, diminishing gradually towards the poles, where they are affected by the melting of the ice. The degree of saltness is greater in the S . hemisphere than in the N ., and is greater in the Atlantic than in the Pacific. The temperature of the Atlantic is higher in the N. than in the S. hemizphere, and is highest between lat. $5^{\circ} 45^{\prime}$ and $6^{\circ} 15^{\prime} \mathrm{N}$., where it has been found to be from $82^{\circ} 5^{\prime}$ to $84^{\circ} 5^{\prime}$ Fah.; bnt in the Gulf of Mexico it attains a temperature of $88^{\circ} 52^{\prime}$. The maximun temperature of the Atlantic Ocean does not, therefore, correspond with the terrestrial equator, the line of greatest warmth being found invariably N . of it.

Currents.-The great currents of the Atlantic are of two kinds, the drift current and the stream current. The former
is produced by the wind, either by the perpetual or tradewinds, or by prevailing winds; those having the former origin are constant, running always in the same direction, and generally with a nearly equal velocity; those having the latter are not so constant, neither do they always run in the same direction, nor at a similar rate. The drift currents produced by the trade-winds are found between the tropics ; those resulting from prevailing winds, N. and S. of the parallels of $30^{\circ}$. They are comparatively slow in their motions, proceeding at a rate of little more than half a mile an hour, and are confined to the surface or upper strata of water. The stream currents, again, the causes of which are but imperfectly known, extend to a great depth, and have, some of them, an average velocity of 60 m . per diem, the maximum reaching to 120 m . The great stream currents of the Atlantic are the Gulf stream, the Equatorial current, the $N$. African and Guinea current, the Southern connecting current, the Southern Atlantic current, Cape Horn current, Rennel's current, and the Arctic current. The Gulf stream originates in the Gulf of Mexico, passes through the Strait of Florida, runs N. along the shores of that territory to lat. $31^{\circ} \mathrm{N}$., then in a N.E. direction to about lat. $36^{\circ} \mathrm{N}$., when it crosses the Atlantic, passes the W. of the Azores, and is lost in the occan. Its entire length, from its commencement to the W. of the Azore Islands, is about 3000 geo. m., traversing in its course 20 degrees of latitude, or from $23^{\circ}$ to $43^{\circ} \mathrm{N}$. Its mean breadth is about 350 m .; its broadest part is between $40^{\circ}$ and $60^{\circ} \mathrm{W}$. lon., where it is upwards of 400 m . broad; its narrowest, in the Strait of Florida and along the American coast to about lat. $34^{\circ} \mathrm{N}$., where it does not exceed 60 m ., and is often much narrower. Its comparative mean velocity in the Atlantic is 35 m . in 24 hours. In lat. $26^{\circ}$ and $27^{\circ} \mathrm{N}$., it was found to have a velocity of 80 m . in 24 hours, and at the end of the Gulf of Florida, in the parallel of Cape Cannaveral, 5 m . an hour. On issuing from the Strait of Florida it is of a dark indigo blue colour, and is distinguishable from the green waters of the Atlantic for many hundred miles. The Equatorial current, so called from its being under the line, commences on the W. coast of Africa, about lat. $10^{\circ} \mathrm{S}$., or nearly opposite San Paul de Loando. From this point it pursues a N.W. direction till it makes $0^{\circ}$ lon., when it proceeds due W. on both sides of the equator, till it arrives at Cape St. Roque in S . America, when it is divided into two branches, one running along the Guiana coast, the other along the ccast of Brazil, and so called, respectively, the Brazil current, and the Guiana, or main equatorial current. It throws off a third branch at lon. $22^{\circ} \mathrm{W}$., called the N.W. branch, from its taking that direction. The length of this current, from the coast of Africa to Cape St. Roque, is 2500 m . Its breadth, near the commencement, is 160 geo. m.; opposite Cape Palmas, 360 ; and before dividing, about lon. $31^{\circ}$ or $32^{\circ}$ W., it is 450 . Its average velocity, which is greater in summer than in winter, is from 25 to 30 m . a day. The Guiana branch of the Equatorial current runs along the low coast of Guiana to the island of Trinidad, where it enters the Caribbean Sca. It extends about 500 m ., and has a velocity, varying at different parts of its course, from 10 to 21 and 36 m . per day. Temperature, $81^{\circ}$ to $84^{\circ}$. The Brazil branch flows at a distance of from 250 to 300 m . from the shores of S . America, and extends from six to seven degrees into the ocean. The average velocity of its N . portion is about 20 m . per day. The $N$. African and Guinea current originates in the sea opposite the coast of France, between Cape Clear in Ireland, and Cape Finisterre in Spain. It flows in a S.E. direction to Cape St. Vincent, when, after sending a maass of water into the Mediterranean, it pursues a S. course to Cape Mesurada, S. of Sierra Leone, keeping at a considerable distance from the land. It then flows rapidly for 1000 m . due E., to the Bight of Biafra, where it seems to mingle with the Equatorial current. The two currents come first in contact off Cape Palmas, where they are found running swiftly in opposite directions. The breadth of the N. African and Guinea current varics with the season; opposite Cape Palmas it extends to 180 m . It runs at the rate of 12 m . per day near the beginning of its course, but after passing Cape Mesurada its velocity is increased to 50 m . The $S$. connecting current is supposed to be united to the Brazil current, but this is not certainly known. It flows from about lon. $40^{\circ} \mathrm{W}$. in a S.E. direction, passes the Cape of Good Hope at the distance of about 150 to 180 m ., and enters the Indian Ocean, where
traces of it are found 2000 m . beyond the Cape. The S. Atlantic, or S. African current originates N. of the Cape of Good Hope, from whieh it flows in a N.W. direetion, at a rate of from 15 to 30 m . a day, and eventually merges into the Equatorial current. Cape Horn current flows constantly from the Antarctie and S. Seas into the Atlantic Ocean, its general direction being E.N.E. and N.E. Its velocity off Tierra del Fuego is from 12 to 15 m . per day, but in other parts it attains a velocity of 52 and 56 m . per day. In the vicinity of the coast its average rate is about 24 m . per day. Rennel's current commences near Cape Finisterre, and, running along the N. coast of Spain, turns to the N. and N.W. along the W. coast of Franee, and traverses the English and Irish Channels; it then passes Cape Clear in Ireland, and about lon. $20^{\circ} \mathrm{W}$. bends round, and, proeeeding S., joins the N . African current. Its velocity is about 24 to 28 m . per day. The Arctic current is believed to originate in the masses of ice which surround the N. pole, whenee it runs along the E. coast of Greenland to Cape Farewell; having donbled this Cape, it flows up the W. coast of Greenland to about lat. $66^{\circ}$ N., when it turns to the S. along the coast of Labrador. Arriving at the N. end of Newfoundland, it sends a braneh through the Strait of Belle Isle, the main stream passing between the great and outer bank of Newfoundland, and eventually joining the Gulf stream between lat. $44^{\circ}$ and $47^{\circ} \mathrm{N}$. Immense masses of ice are borne S . by this current from the polar seas, and either strewn along the coast of Greenland, or carried into warmer regions, where they gradually dissolve and disappear. Many hundred icebergs have been seen at one time borne along by this eurrent, and it has been calculated that $20,000 \mathrm{sq} . \mathrm{m}$. of drift ice are annually brought by it along the coast of Greenland to Cape Farewell. Besides these great and enduring currents, there are many of a temporary character, of small extent, and of merely local influence; these are the periodical currents occasioned by tides, monsoons, and other long-continued winds, and temporary currents arising from similar causes.

Winds.-The winds of the Atlantic, unlike its aqueous currents, are not peculiar to that ocean, but identical with those that prevail in the same latitudes in the other seas around the globe. The most remarkable of these are the perennial or trade-winds, which blow constantly in one direction, namely, from E. to W., or nearly so. They extend generally to $28^{\circ}$ on each side of the equator, but are divided by a tract of sea, usually occupying a width of from six to eight degrees of latitude, in which calms and variable winds prevail. The track of the trade-winds to the N. of this zone, which is almost always found on the N . side of the equator, is called the region of the N.E. trade-wind, from blowing one or two points N. of E.; that to the S., the region of the S.E. trade-wind, from blowing S. of E. Tbe N.E. trade-wind blows with less steadiness than the S.E., but towards the W. India Islands it keeps generally steady between E. and N.E. The trade-winds are constant only at a considerable distance from land, and become more steady the greater the expanse of water over which they blow. They are exceedingly gentle, as well as equable, never rising into squalls, but always maintaining a uniform rate; and as the sea is but little moved by their action, sailing in these regions is exceedingly pleasant. The voyage from the Cape de Verde Islands or the Canaries, both of which are, according to the season, alternately situated in the very centre of the region of the N.E. trade-winds, to the W. Indies or Gulf of Mexico, is thus the most agrecable that can be imagined, and so safe, that it might be accomplished without the slightest apprehension of danger in an open boat, though a distance of several thousand miles. Beyond the limits of the trade-winds, in the temperate climates of both hemispheres, are the regions of the S.W. and N.W. winds; the former prevailing in the N. hemisphere, the latter in the S . The most desolating hurricapes of the Atlantie occur in the region of the W. Indies; they generally commence E. of the Lecward Islands, blow in a.W.N.W. direction to about lat. $30^{\circ}$ N., then bend round to the N E., forming a segment of a circle, whose beginning is in about lat. $10^{\circ}$ or $15^{\circ} \mathrm{N}$., and the termination about lat. $45^{\circ}$ or $50^{\circ} \mathrm{N}$. They, however, not unfrequently cross the Gulf of Mexieo, and sometimes take other eccentric courses; but the former is their more usual track. Their breadth has been estimated at 600 and 1000 m . The W. India hurricanes generally occir in the months of August, September, and

October, rarely in June or July. It must be obser ved, however, generally, that both the space and position oeeupied by the various regions of wind in the Atlantic, though stated above with some precision, are in reality subject to considerable changes in both respeets, according to the season of the year; the trade-wind advaneing towards the N. with the progress of the sun in the N. hemisphere, and receding when it passes the equator on its return to the S . hemisphere.

Tracks of Vessels-Outward Voyages.-Vessels sailing from Europe to the W. eoasts of N. America keep to the N. of the Gulf stream, which, if entered, would greatly retard their voyage, making a difference against them of probably about a iortnight. The usual and best course is between lat. $40^{\circ}$ and $50^{\circ} \mathrm{N}$., by which not only is the Gulf stream avoided, but, on nearing the American continent, the advantage of the counter current, which runs from Newfoundland to Cape Hatteras and Florida, is obtained. Vessels going to the W. Indies, or to the N. parts of S . America, direct their eourse to the S.W. immediately on reaching the Atlantic, in order to get as quiekly as possible into the N.E. trade-winds, carefully avoiding, however, too near an approach to the Afriean coast, where, between Cape Nun and Cape Blanco, both tide and wind set in towards the shore, and have caused the destruction of many vessels that had come unguardedly within their influence. In going to S. America, S. of Cape St. Roque, vessels traverse the line between lon. $18^{\circ}$ and $23^{\circ} \mathrm{W}$., keeping thus far to the E. in order to avoid getting into the Guiana current, which would carry them to the N. W., or nearly in an opposite direetion to that desired. Having passed the line about the point specified, they make for the Brazil eurrent, which, earrying them to the S., enables them to reach any part of the coast they ehoose. In sailing to the E. Indies, vessels now generally follow the track to Brazil; holding S., they pass the roeky island of Trinidad on its W. side, and fall in with the S. connecting, or S. Atlantic current, which carries them E., but wide of the Cape of Good Hope. By this route, the voyage from the English channel to the Cape has been made in 59 days, the usual time by other courses being 70 days.

Return Voyages.-On returning from N. Ameriea to Europe, the Gulf stream, though flowing towards the latter, is equally avoided as in going out, it having been found that the loss snstained by the tear and wear of vessels in that stormy region, was not compensated by the gain in point of time; they therefore keep to the N. of it in returning, as well as in going out. On returning from the W. ports of the W. Indies, and the ports of Central and S. America on the Caribbean Sea, vessels take the Mona passage, between Mayti and Puerto Rico, and immediately afterwards steer in a N.E. direction, so as to ent the parallel of $40^{\circ} \mathrm{N}$., between the meridians of $30^{\circ}$ and $35^{\circ} \mathrm{W}$. Sometimes, however, they return by the Strait of Florida, which having eleared, they sail E. to avoid the Gulf stream, cross the Atlantic S. of the Bermudas, and subsequently either pass between Flores and the other Azores, or keep to the E. of the group. On returning from S. America, vessels keep near the coasts, in order to take advantage of the periodical and variable winds which prevail there. On erossing the equator, they steer for the Azores, and sail as close with the N.E. passage wind as they did with the S.E. when proceeding to the S. hemisphere. In coming from the E. Indies or Cape of Good Hope, vessels sail with the S.E. passage wind to St. Helena, and crossing the line about lon. $20^{\circ}$ W., steer for the Azores, where they fall into the tracks from the W. Indies to Europe.

In the centre of the Atlantic is a vast eddy or whirl, cansed by the revolution of the currents, which is thickly covered with a sea-weed, called Sargasso or gulf-weed (Fucus natans), in many places so closely matted as to retard greatly the progress of vessels. The space covered by this weed is upwards of $260,000 \mathrm{sq} . \mathrm{m}$., extending from the meridian of $30^{\circ} \mathrm{W}$. to the Bahama Islands, between the parallels of $20^{\circ}$ and $45^{\circ} \mathrm{N}$. Mueh of this weed is floated down the Gulf stream from the Mexican Sea. It was formerly supposed to have been torn from the bottom of the ocean, but there is now good reason to believe that it propagates in the sea, and vegetates floating. In the S . Atlantic there are evident signs of volcanie action. roeks and islands having from time to time appeared and disappeared.

Ice.-At both extremities of the Atlantic, vast masses of ice are accumulated in a variety of shapes and sizes. The
most remarkable are icebergs, ice-fields, and ice-flocs. The first are often several miles in circuinference, and rise from 180 to 200 ft . above the sea, with seven times as much below, as floating ice shows only one-eighth of its bulk above the surface of the water. These ice islands have the sppearance of chalk cliffs, with a glittering surface, and emerald green fractures: pools of water of azure blue lie on their surface, or fall in cascades into the sea. The icebergs come to a lower latitude by $10^{\circ}$ from the S . pole than from the N., being often seen near the Cape of Good Hope. They appear also to be larger; one observed by Captain D'Urville was $13 \mathrm{~m} . l \mathrm{long}$, with perpendicular sides 100 ft . high ; but they are more rare in the S . than in the N . Atlantic. The ice-fields are generally of much greater exteut than the bergs, though, as their name would imply, not nearly so thick, seldom exceeding from 10 to 40 feet. Some of them extend 100 m . in length, with an average breadth of 50 m . These immense masses of ice chill the winds that blow from them, and cool the surrounding seas to a distance of 40 or 50 m . on every side. Sometimes they acquire a rotary motion of great velocity, and dash against each other with tremendous violence. The floe-ice is of comparatively small size, rarely extending to a quarter of a mile in circumference.

Fislı are met with in greater variety and abundance in the N . Atlantic than in the S . In the latter there are only whalefisheries, while in the former there are the cod-fisheries of Newfoundland, the herring-fisheries of Great Britain, the pil-chard-fisheries in the British Channel, and the whale-fisheries of Greenland, \&c.-(Lyell's Geology; Mrs. Sommerville's I'hysical Geography; Johnston's Physieal Atlas; Ritter's Lex.; Sailing Directions.)

ATLAS (MOUNT), an extensive mountain-system in N. Africa, the S. extremity of which commences near Cape Nun, in lat. $28^{\circ} 46^{\prime}$ N., on the $A$ tlantic Ocean, and, after traversing the kingdoms of Morocco, Algiers, and Tunis, terminates on the coast of the Mediterranean Sea, about lon. $11^{\circ} \mathbf{E}$. The general course of these mountains is from W.S. W. to E.N.E.; but they do not, like most other systems, consist of one continuous and definite range, but of a congeries of elevations; sometimes isolated, and sometimes connected, with endless branches and offisets, irregularly diffused over nearly the whole N.W. extremity of Africa. The Atlas Mountains have been divided generally into two principal and parallel ranges, running W. to E., the one called the Greater, and the other the Lesser Atlas; the latter lying towards the Mediterranean, and the former adjoining the Sahara or Great Desert, from which it is separated by low sandy hills. The entire course of the principal chain may be reckoned at about 1500 m ., measured from Cape Nun, on the Atlantic, to Cape Bon or Ras Ildall, on the Mediterranean Sea. Little is known of the heights of the Atlas Mountains; in some places, however, they rise above the line of perpetual congelation, and, in many, approach it. The highest ascertained elevation is that of Miltsin in Morocco, stated, by Capt. Waslington, to be $11,400 \mathrm{ft}$. high; but their general altitude is moderate, as they do rot shoot up into lofty peaks like the Alps, but consist principally of broad ridges and rounded summits. Of the geology, botany, and mineralogy of the Atlas range, we know hardly anytling. As respects its geology, our information supplics only the fact, that granite, gneiss, and schist, appear on the higher peaks, and the lower parts of the ridges are formed by secondary limestone; while, as to botany, the few travellers who have penctrated these regions tell us, that on the S. side, or side next the desert, the lower ranges are covered with palm-trees, more especially date-trees; hence the name of this region, Beled-el-Jerid [the land of dates]. Higher up, gum-trees, almonds, olives, and other tropical productions, abound; while, on the table-lands, apples, pears, cherries, walnuts, apricots, \&c., are grown in great quantities. Higher up still occur forests of immense pines. The mineral riches of the Atlas, so far as known, are silver, antimony, lead, copper, iron, rock-salt, saltpetre, \&c. The precious metals, however, are confined to the province of Suse in Morocco, but even there they do not appear to abound; the principal silver mine is situated about $150 \mathrm{~m} . \mathrm{s} . \mathrm{W}$. from Morocco. Three bundred miles N.E. from the same place, are mines of antimony and lead; copper is also plentiful in the same vicinity, though there scems but little activity on the part of the inhabitants in availing themselves of these
resources. From the N. and W. slopes flow the principal rivers of Morocco and Algeria to the Atlantic Ocean and Mediterraluan Sea; and from their S. slopes flow numerous streams, nearly all of which are absorbed in the sands of the Sahara.
The Atlas Mountains are infested by large and fierce lions, and abound in antelopes, monkeys, and porcupines. The inhabitants consist of various tribes of the aboriginal race, called the Berbers, a fierce and warlike people, who have always maintained an entire independence of all the neighbouring powers, with whom they are frequently at war. The name Atlas is said to have been derived from Atlas, King of Mauritania, who, according to ancient fable, having been transformed into a mountain, was feigned to support the heavens on his shoulders. From the name of this mountain region came the mame of the adjoining or Atlantic Ocean.

These mountains also possess a classical celebrity from the frequent mention made of them by the ancients, particularly Herodotus, and the exaggerated notions which they seem to have entertained of their elevation. The Atlas, however, of the writer just named, was a single isolated hill, probably the highest of those at Cape Ghir or Gheer, as scen from the Atlantic; although several Greek authorities give the name to the branch terminating at Cape Spartel, at the Strait of Gibraltar.

ATLIXCO, a tn. Mexico, state, Puebla, in a very fertile district, celebrated for its fruits and its fine climate; 20 m . S . La Puebla de los Angeles.

ATOKO, one of the smallest of the Ionian Islands; lat. $38^{\circ} 30^{\prime}$ N.; lon. $20^{\circ} 43^{\prime} \mathbf{E} . ; 5 \mathrm{~m}$. N.N.E. from the N. extremity of Ithaca, and 9 m . S.S.E. from the nearest S. point of St. Maura. It is about 2 m . in length, and 1 m . in breadth.

ATOLL, a singular description of coral formation peculial to the Pacific and Indian Oceans. It consists of a ring of coral, sometimes circular, but more frequently oval, varying from 2 to 90 m . in diameter; about a quarter of a mile in breadth, oftener less, and from 6 to 12 ft . in heiglit, enclosing a lagoon or pertion of the occan in its centre. The appear ance of these annular recfs is equally striking and beautiful. The ring is often covered with lofty cocoa-nut trees or other palms; while round this band of verdure is spread a beach of glittering white sand, whose outer margin is encircled with a ring of snow-white breakers, beyond which are the dark waters of the ocean. The inner beach, also composed of white sand, encloses the still clear waters of the lagoon, which, when illuminated by a vertical sun, is of a most vivid green. The depth of the lagoon varies from 20 to 50 fathoms; but outside, the walls of the ring plunge at once into the unfathomable depths of the ocean, no bottom laving been found, in some instances with a line of $1 \frac{1}{2} \mathrm{~m}$. long, within 200 or 300 yards of the reef. Ships often find safe anchorage in the tranquil waters of these lagoons, to which access is obtained by gaps or openings on the leeward side, where only they occur, the windward presenting always a high and unbroken wall; the coral insects, by which it is reared, working with greatest vigour, activity, and perseverance on the stormy side of their structure, the agitation of the sea supplying them with a greater abundance of food than they can find in the still waters to leeward. Many of the atolls contain inhabited islands; and as they are generally fertile, and the waters of the lagoon in which they are situated swarm with fish, the inhabitants have the means of subsistence in great abundance. The most remarkable assemblage of atolls in the Pacific Ocean, is Dangerous Archipclago, E. of the Society Islands, which consists of 80 , generally of a circular form, surrounding very deep lagoons, and separated from each other by profound deptlis; and the Caroline Archipelago, N. of the equator, which extends its atolls in 60 groups over 1000 m . In the Indian Ocean, the most perfect specimens of this peculiar formation are the Maldive and Laccadive Archipelagos (which sce).-(Horsburgh; Lyell's Geology; London Geo. Journal, vol, ii.)

ATOOI, or TAUAI, one of the Sandwich Islands, lat. (E. point) $22^{\circ} 8^{\prime} \mathrm{N} . ;$ lon. $159^{\circ} 20^{\prime} \mathrm{W}$. (r.); about 240 m . N.N.W. Hawai or Owyhee. It is of an oval form, 40 m . long, and more than 24 m . wide at the broadest part; arca between 600 and 700 sq . m. It slopes on all sides from an elevated centre to the sea, where it terminates in a high coast. Numerous wide, fertile, and well-cultivated valleys run fromb

## ATOUGIA

the shore inland. The only anchorage is the roadstead at Waiméa, on the S. coast of the island. The number of inhabitants is stated to be 10,000 .

ATOUGIA, a tn. and par. Portugal, prov. Estremadura, dist. Torres Vedras, at a short distance from the Atlantic, and 27 m . W. Santarem. It was a place of some consequence during the occupation of the famous Torres Vedras lines by the British. Pop. 1940.

ÄTRAN, a river, Sweden, rising in a small lake near lat. $58^{\circ}$ N. ; lon. $13^{\circ} 35^{\prime}$ E., and flowing N. for a few miles ; then turning rapidly S.S.W., it forms Lake Asunden, and after receiving several afluents, falls into the Kattegat at Falkenberg.

ATRANI, a vil. Naples, prov. Principato Citra, about 1 m . N. Amalfi, on the Mediterranean Sea. Pop. 2200.

ATRATO, a river, S. America, New Granada, dep. Choco, having its sources in the mountains of the latter district; lat. $5^{\circ} 12^{\prime} \mathrm{N}$. ; lon. $76^{\circ} 43^{\prime} \mathrm{W}$. It flows nearly due N., and, after a course of about 220 m . in length, falls into the Bay of Choco, the most S. part of the Gulf of Darien; lat. $8^{\circ} 10^{\prime} \mathrm{N} . ;$ lon. $77^{\circ} 0^{\prime} \mathrm{W}$. The country drained by the Atrato and its affluents is extremely mountainous, and does not contain a level tract of any extent, except at its mouth. Considerable quantities of gold are obtained from its sands; and several Europeans have settled on its banks, to prosecute gold-washing. It is navigable for a short distance only from its mouth by large vessels. It was at one time believed that a water communication, by the Atrato, existed between the Atlantic and Pacific Oceans; but this is now known to be incorrect. The junction was said to be effected by a canal connecting the sources of the Atrato and the San Juan, which latter river falls into the Pacific Ocean, on the W. coast of New Granada; but it has been ascertained that no such canal exists, and that the sources of these two rivers, though near, are in no way connected.

A'TRI, or Atria [anc. Hadria, or Hatria Picena], a tn. Naples, prov. Abruzzo Ultra I., dist. of, and 18 m. S.E. Teramo, 11 m . N. Civita di Penne, and 5 m . from the coast of the Adriatic; on a stcep hill. It is the seat of a bishop, and has a eathedral, parish church, several convents, a theological academy, two lospitals, and a mont-de-piété. It is a place of great antiquity, and was at one time surrounded by walls; but these, together with the town itself, have fallen into decay. It is said, though on questionable anthority, to have given its name, Hatria or Hadria, to the Adriatic. There are some remarkable excavations in a hill near the town, consisting of a number of chambers, wrought out with the greatest regularity; but to what purpose they were appropriated is unknown. They are supposed to be of very remote construction. The Emperor Adrian was originally from this city. Pop. 6000.

ATRIPALDA, a tn. Naples, prov. Principato Ultra, dist of, and about 1 m . E. Avellino. It has a collegiate and parish church, and several manufactories of cloth, paper, nails, iron, and copper, and a considerable trade in pork. Pop. 3797.

ATTAH, a tn., N.W. Africa, l. bank, Niger, 260 m. from its embouchure; lat. $7^{\circ} 15^{\prime} \mathrm{N} . ;$ lon. $8^{\circ} 30^{\prime} \mathrm{E}$. It is situated close to the water's edge, in an elevated situation, on a fine green sward, and has a beautiful appearance. It is clean, of great extent, and surrounded with fine trees and shrubs.

ATTAKEMBO, one of the smallest of the Feejee Islands; lat. $18^{\circ} 25^{\prime}$ S.; lon. $179^{\circ} 0^{\prime} \mathrm{W}$.

ATTANAGH, a par. Ireland, Queen's co., and co. Kilkenny; 2561 ac. Pop. (1841), 919.

ATTARAM, a river in the Tenasserim provinces, having its source in the lofty range of mountains that separate the Tenasserim coast from Siam Proper. It flows in a N.N.W. direction, and falls into the Gulf of Martaban, at Moelmyne or Moulmein, opposite the N. end of the island of Balu, in lat. $16^{\circ} 25^{\prime} \mathrm{N} . ;$ lon. $97^{\circ} 37^{\prime}$ E., having a course of about 92 m . It flows through a teak-clothed valley, formed by ranges of sandstone and limestone hills; and on its banks may lie seen sections of the secondary strata, composing beds of soft blue clay with ironstone nodules, and the shales of the coal basins, accompanied by a coarse calcareous conglomerate. -(Jour. Ind. Archip.)

A'TTENBOROUGH, a par. England, co. Notts; 1930 ac.; $5 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Nottingham, intersected by the Nottingham Canal,
the Birmingham and Derby Railway, and rivers Trent and Erewash. Henry Ircton, Cromwell's son-in-law, was born here. Pop. (1841), 1036.

ATTERCLIFFE-cum-darnalla, a considerable vil. and chapelry, England, co. York, W. Riding; $1 \frac{1}{2} \mathrm{~m}$. E. Sheffield; situated on an acclivity, above the river Don. It has two principal streets, which are tolerably well kept. The whole village, which is straggling and irregular, is about three-quarters of a mile in length. The houses are chiefly brick, and generally well built. The supply of water is inadequate, and the quality indifferent. It is lighted with gas, and is, on the whole, improving; it is also increasing in extent. The church, a handsome Gothic edifice, was built between 1822 and 1826, at an expense of $£ 14,000$. There are also an Independent and a Methodist chapel, and two schools, the town school for boys, erected in 1779; and the girls' national school, erected in 1824 , both of which are numerously attended. The inhabitants are employed in the manufacture of cutlery, and spades, scythes, anvils, \&c., for the Sheffield manufacturers. Pop. of chapelry (1841), 4156.

ATTERSEE, or Kammersee, a lake, Upper Austria, 40 m. S.W. Linz, about 12 m . in length, N. to S., and 3 m . in breadth. The river Ager flows from its N. extremity. It abounds in fish. The decaying village of Attersee, once cap. of the district, is situated on the N.W. side of the lake.

ATTLICA. See Attike.
ATTIGNY [anc. Attiniacum], a com. and tn. France, dep. Ardennes (Champagne), 30 m . N. Rheims, 1. bank, Aisne. Manufactures:-cloth, shoes, and biscuits. It has also worstedmills, breweries, tanneries, and some trade in slates, coal, wood, \&c. Its vast and splendid palace, of whieh some remains still exist, was often the residence of the Kings of France in early times. Here, too, in 786, Wittikind, a bold Saxon chief, received baptism, in presence of Charlemagne, his conqueror and godfather; and here, in 822 , Louis Debonnaire was obliged to do public penance for the alleged maltreatment of his brothers. Pop. 1162.

AT'IIKE and VIOTIA [anc. Attica and Boootia], a nome or prov. Greece, Roumelia, partly insular and partly mainland. The insular parts consist generally of the islands of Salamis, Agina, and Angistri (which see). The mainland part joins Phokis and Phthiotis on the W. and N., and is connected with the Morea, on the S., by part of the narrow tract which forms the Isthmus of Corintli. In all other directions it is washed by the sca-by the cliannels Talandi and Negropont, with the intervening Euripus, on the N.E. ; the Archipclago on the L.; the Saronic Gulf, or Gulf of Egina, on the S.E. ; and the Gulf of Lepanto or Corinth, on the S.W. This nome, the territory of which anciently formed the independent states of Thebes and Athens, is now divided into the three eparchs or dioceses of Attiké, Thiva, and Viotia; which again are subdıvided into demés or parishes, of which Attıké has 16, Thiva 10, and Viotia 9. The capitals of the respective eparchs are Athens, Thebes, and Livadia. The territory is broken throughout by a succession of lofty ridges thrown off from the Pindus, and occasionally rising into mountains of considerable altitude. Of these, the principal are Hymettus in the S.E. of Attiké, Parnes on its N., and Cithacron on its W. border; Helicon in Thiva; and, in the N.W. of Viotia, the loftiest and most celebrated of all, Mount Parnassus, or Liakura, 7570 ft . high. The principal river is the Gayrios or N. Cephissus, which, in the lower part of its course, flows through a spacious fertile plain, and falls into Lake Topolias. This lake, the ancient Copais, notwithstanding of its receiving this river, with smaller streams, and having no visible outlet for its waters, continues somewhat unaccountably to be little more than a marsh, with some deep pools. After heavy rains, however, it is subject to overflowings; one of which, of unusual magnitude, is supposed by some to be fabled under the name of Deucalion's Flood. The only other rivers deserving of note are the Asopo, which flows E. into the channel of Negropont, and the classic streams of the Ilissus and Cephissus, the former washing the E. part, and the latter watering the spacious plain of Athens. The minerals of the district are of great celebrity, and the working of them might still, it is thought, yield profitable returns. In ancient times, Athens owed much of its wealth to the silver mines of Laurium, situated in the peninsula which terminates in Cape Colonna; and the beantiful white marble in which its architects and statuaries embodied
their glorious conceptions, lies inexhaustible in the mountains. The nome, as a whole, is of indifferent fertility, its rugged nature adapting it more for pasture than for tillage. The chief exception is to be found in Bcotia, whose rich plains are almost associated in our minds with the idea of fertility. Throughout the territory the most celebrated vegetable products continue to be, as before, the vine and the olive. The modern province embraces the whole of ancient Attica, and the greater part of Bœotia.

ATTINGHAUSEN, or Ettiohusen, a vil. Switzerland, can. Uri, $1 \frac{1}{2} \mathrm{~m}$. S.W. Altdorf, l. bank, Reuss. On a rising gronnd in the vicinity, near the pretty little church, are the ruins of the castle of the Masters of Attinghausen. It was the dwelling-place of Walter Furst, one of the founders of the Swiss confederacy. Pop. 507.

ATTLEBOROUGH, a market tn. and par. England, co. Norfolk, W. division, on the London road, 15 m . S.W. Norwich, in the midst of a flat, open country, well wooded, and highly cultivated. The town consists of one principal street, upwards of a mile in length, built on each side of the road. The houses are not constructed on any regular plan, but some of them are well built, and all are of brick. The town is supplied with water from wells; it is not lighted. The church, the only architectural object in the town deserving notice, is in ancient cruciform structure, with a square embattled tower, built in the commencement of the 15 th century. It contains many interesting monuments. There are in the town places of worship for Primitive Methodists, Baptists, and the Society of Friends; and a large new national school, in which about 200 children are taught. Market-day, Thursday, chicfly for corn. Two fairs annually. Attleborough is a very ancient town, having been a place of considerable importance during the Saxon era.-The PARISH comprises 5247 assessable ac. Pop. (1850), about 2000.

ATTLEBRIDGE, par. Eng., Norfolk; 810 ac. Pop. (1841), 94.

ATTOCK, or Atac, a fort, enclosing a small tn. Punjab, on a rock, l. bank, Indus, about $1 \frac{1}{2} \mathrm{~m}$. below the confluence of the Cabool, 200 m . N.W. by N. Lahore; lat. $33^{\circ} 54^{\prime}$ N. ; lon. $72^{\circ} 18^{\prime}$ E.; on the line of the great route between Afghanistan and N. India. Attock commands the entrance from the Punjab into the Khyber Pass, by which it is said Alexander the Great, Tamerlane, and Nadir Shah, in different ages, have crossed the Indus and invaded Hindoostan. During the military operations against the Afghans in 1841-42, the British forces frequently marched on the same line. The former fort and town of Attock, built by Akbar in 1581, were swept away by a sudden and tremendous inundation of the Indus in the latter end of June or beginning of July 1841, when hundreds of other towns and villages were also carried away, and many thousands of human beings perished. Both town and fort have been since rebuilt. 'The Indus at this spot,'says Baron Hügel, 'is a clear, rapid, but unimportant stream, seven-eighths of its sandy bed being quite dry at this season of the year. Both banks are steep; on the N . they soon become nearly level, but on the S . side, on the contrary, they increase in steepness, and lofty hills arise, to all appearance, from the river itself. The banks, which rise abruptly on both sides from the sandy bed, are about 80 ft . high above the level of the watcr. The bridge, and the river in its present state, may be from 40 to 45 fathoms across, and the stream in the middle about three dcep, but the breadth between the two shores must be at least 300. During the rainy season the river is filled from bank to bank, the waters rising at this time as much as 50 ft .; when the bridge, which is admirably contrived, and made of the very best timber, is taken to picces, the boats being employed to navigate the stream.'-(Travels in the Punjab.) Other authorities give 30 ft . for the lowest, and 80 ft . for the greatest depth of the river. On the opposite bank from Attock are a large fort and village named Khyrabad, said by some to have been founded by Akbar; by others, by Nadir Shah. The pop. of Attock is estimated about 2000, though it once was much more. - (Hügel's Travels ; Thornton's Gazetteer.)

ATTRI, or Attree, a river, Hindoostan, presid. Bengal, formed by an offset of the Teesta; lat. $26^{\circ} 22^{\prime} \mathrm{N}$. ; lon. $88^{\circ} 48^{\prime} \mathrm{E}$. It flows S., passes near Dinagepoor, traverses dist. Rajshahye flowing S.E., expands into numerous marshes and small lakes, and falls into an offset of the Brahmapootra; lat. $23^{\circ} 59^{\prime} \mathrm{N}$.;
lon. $89^{\circ} 45^{\prime}$ E. ; 60 m . W.N. W. Dacca; total course, 252 m. . navigable in the wet season for boats of 30 to 40 tous.

ATTUU, or Arrou, the most W. of the Aleutian Islands ; in lat. (W. point) $52^{\circ} 58^{\prime}$ N.; lon. $172^{\circ} 17^{\prime} \mathrm{W}$. (r.) ; nearly 70 m . in length, and about 30 in breadth. It has the same repulsive and stevile aspect as the other islands of this chain.

ATTWOOD'S CAY, or Samana, one of the Baliama Islands ; lat. $23^{\circ} 5^{\prime} 5^{\prime \prime} \mathrm{N}$. ; lon. $73^{\circ} 49^{\prime} \mathrm{W} . ; 10 \mathrm{~m}$. long, S.W. to N.E., and about 1 m . broad.
 3435.

ATWICK, a par. and township, England, co. York, E. Riding; 2100 ac. Pop. (1841), 300.

AU, the name of nearly 140 villages in Austria; one of them, in the circle of Brück, of some importance, from its extensive works for making coke, and its iron-foundries. Numerous other places, also, particularly in Bavaria, Baden, and Prussia, have the same name.

AUBAGNE [Latin, Albania, Aubania], a tn. France, dep. Bouches-du-Rhône (Provence), on the Huveaune, 10 m . E. Marseilles. The old town stood on the top and S. side of a hill of shale, overlaid by a thick layer of pudding-stone, but has been abandoned for the new town, which lics below, on both sides of the great road from Marseilles to Toulon, and is built with some degree of regularity and elegance. It has numerous cloth manufactories, a magnesia-work, potteries, distilleries, tanneries, paper-mills, \&c. ; and a trade in wine, fruits, pot-herbs, and the products of the different works already mentioned. Various antiquities have been found in the neighbourhood. Pop. 3887.

AUBE [anc. Alba], a river, France, rising in a range of hills near the village of Praslay, at the extremity of the wood of Auberive, dep. Haute Marne, and running S.E. to N.W. through the dep. of Aube, to which it gives its name. It becomes navigable at Arcis, 22 m . from its embouchure, and falls into the Scine a little above Marcilly, its whole course being about 113 m .-AUBE is also the name of a small river of Clampagne and Picardy, which flows into the Oise; and of two villages in France, the one in Lorraine, and the other in Normandy.

AUBE, a dep. France, formed out of the S. part of Champagne and a small portion of Burgundy, and comprised between lat. $47^{\circ} 55^{\prime}$ and $48^{\circ} 42^{\prime}$ N., and lon. $3^{\circ} 24^{\prime}$ and $4^{\circ} 48^{\prime}$ E.; bounded, N. by dep. Marne, E. by Haute Marne, S.E. by Côte' d'Or, S. and S.W. by Yonne, and W. by Seine-et-Marne; greatest length, 72 m. E. to W. ; breadth, 57 ; area, 609,000 hectares, or $1,504,839 \mathrm{ac} .$, equal to $2351 \mathrm{sq} . \mathrm{m}$. The surface is undulating, with few hills of great height, and consists generally of a slight covering of loam, resting on a subsoil of chalk. It is not of equal quality throughout. In the N. and N.W. it is extremely sterile, producing only scanty crops of oats, rye, and buckwheat. The land is bare of trees, and almost of vegetation; large tracts, decmed incapable of repaying the expense of cultivation, are allowed to lie waste. In the S.E., again, the soil is remarkable for its fertility. It consists of an alluvial deposit of great depth. This district abounds in all the ordinary grain and pulse crops, yields large quantities of hemp of the finest quality, is well planted with vineyards, and possesses extensive forests, which, after satisfying the local consumption, leave a large surplus of wood and charcoal for the supply of Paris. The whole arable land of the department is $983,928 \mathrm{ac}$; meadows, $93,575 \mathrm{ac} . ;$ vineyards, $57,270 \mathrm{ac}$. ; wood, $199,132 \mathrm{ac}$; orchards, nurserygrounds, and gardens, 9583 ac. ; lakes, \&c., $5695 \mathrm{ac} . ;$ heath and uncultivated land, 55,102 ac. About 122,222 pipes of wine are produced annually, one-half of which is exported. The best wines are those of Riceys, Bar-sur-Aube, Bouilly, Laine-au-Bois, and Javernaut. Horses, horned cattle, and sheep are reared to a limited extent. Much attention is paid to poultry, and the rearing of bees. Small game, wild boars, stags, and roebucks are plentiful. The department is traversed S.E. to N.W. by the river Aube (which see), from which it derives its name. Among the streams of less importance are the Armance, the Mogne, and the Vanne. In the N. parts are about 100 tarns or ponds, which furnish carp and other fish.

Stone quarries exist in various parts, and chalk and marble are also worked, but in minerals the department is poor. The principal manufactures consist of cotton and woollen stuffs, and yarn, hosiery, particularly nightcaps and stockings; flan
nels, blankets, ribbons, lardware, and carthenware; brandy, beet-root sugar, glass, leather, and paper. In 1844 there were 2500 looms, and 3500 workmen occupied in the weaving of cotton, producing about 30,000 pieces of cloth; 5400 looms, employing 3600 work-people, produced annually 80,000 dozen caps, and 270,000 dozen pairs of stockings. The spinning of wool furnishes yearly about $800,000 \mathrm{lbs}$. of yarn, and that of cotton about $1,000,000 \mathrm{lbs}$. of yarn. The tanneries produce yearly about 110,000 skins of leather. The trade of Anbe is principally in grain, wine, brandy, pork, cheese, biscuits, hemp, wool, firewood, and charcoal for Paris, hosiery, cloth, and other articles of manufacture. Capital, Troyes; other towns, Arcis-sur-Aube, Bar-sur-Aube, Bar-sur-Seine, Nogent-sur-Seine, Brienne, where Napoleon was educated, Romilly, and Clairvaux. The dep. of Aube is divided into five arronds. and 26 cans., subdivided into 447 coms. Pop. (1846), 261,881. -(Dict. Geo. et Stat.; French Official Tables.)

AUBEL, a tn. and com. Belgium, prov. Liege, 9 m . N. Verviers, with manufactures of woollen cloth and tobacco. It has also spinning-mills, brick and tile works, breweries, freestone quarries, a considerable trade in butter, cheese, and pigs, and an important weekly corn-market, at which the greater part of the province of Liege, and part of that of Limburg, obtain their supplies. Pop. 3260.

AUBENAS [Latin, Albiniacum], a tn. France, dep. Ardèche (Languedoc), 13 m. S.W. Privas, r. bank, Ardèche, at the foot of the Cevennes. It is picturesquely situated, on a height in a rich country, and surrounded by the volcanic mountains of the Vivarais, but the streets, with one exception, are narrow, crooked, and dirty; the squares small and inelegant; and the houses, as a whole, irregularly built. It has a court of commerce, a royal college, and a high school. Its old Gothic castle, occupied during the wars of religion alternately by Romanists and Huguenots, is still in good preservation, and now accommodates nearly all the public and municipal offices. Aubenas is the great mart for the sale of the chestnuts of the department, and of the silks of Ardèche. Reeling and throwing silk are carricd on extensively. In the town there are manufactures of cotton, coarse cloths, and coloured handkerchiefs; also tarneries, dye-houses, \&c., and the banks of the river are lined with corn, oil, paper, and other mills. Aubeuas has several important fairs. At two of them silk is sold to the value of $£ 83,000$ sterling. Pop. 4262.-(Murray's Handbook ; Dict. Geo. et Stat.)
aUBERVILLiERS, or Notre-Dame-Des-Vertus, a vil. France, dep. Seine, 5 m . N. Paris. It has a sugar refinery, and is surrounded with gardens, which help to supply Paris with vegetables. Pop. 2444.

AUBETERRE, a vil. France, dep. Charente (Perigord), placed in the form of an amphitheatre at the foot and on the slope of a hill, and traversed by the Dronne. The hill is crowned with an ancient castle, and immediately beneath is the parish church. The manufactures are coarse cotton, and paper, and some trade is done in corn. Pop. 672.

AUBIERE, a tn. France, dep. Puy-de-Dôme (Auvergne), 2 m . from Clermont. In the vicinity some common red wines are produced. Pop. 3183.

AUBIGNY.-1, [Latin, Albiniacum,] a tn. France, dep. Cher, $27 \mathrm{~m} . \mathrm{N}$. Bourges. It is traversed by the Nero, and is ugly and ill built. It has manufactures of cloth, druggets, serges, and leather, and a considerable trade in a white wool known by the name of Sologne. Pop. 2381.——There are several little towns of the same name in various parts of France.-2, A tn. Lower Canada, r. bank, St. Lawrence, opposite Quebec. It was laid out, in 1818, in marine villas for the opulent merchants of Quebec, and has a Protestant church, \&c.

AUBIN, a tn. France, dep. Aveyron, 17 m . N.N.E. Villefranche; consisting chiefly of one long street on the side of a hill. It is supposed to have been built by the Romans, to whom several ancient excavations in the rock are attributed. The district of Aubin is remarkably rich in minerals-pyrites, sulphur, alum, but particularly iron and coal, which furnish materials for several blast furnaces, and malleable ironworks, situated chiefly at Decazeville and La Forezie. A considerable quantity of linen is sent into Aubin from the neighbouring communes, and disposed of principally at its fairs. Pop. 1537.-There are several other small towns and villages in France named Aubin.

Vol. I.

AUBIN (Sт.), a market tn., isl. Jersey, in a large bay of the same name, opposite St. Helier. It consists principally of one street, and contains a parish church, chapel of ease, an endowed meeting-house for Independents, and a Wcsleyan Methodist place of worship. The pier, which is commodious and strongly built, projects from a rock, surmounted by a fortress called St. Aubin's Castle. At low water, the rock and harbour are left dry, but at high water there is a depth of 30 ft . within the pier. There are some handsome villas in the vicinity, inhabited mostly by Jersey families. Pop. (1841), 2170.-(Inglis's Channel Islands.).

AUBONNE, or Alpona, a tn. Switzerland, can. Vaud, on a river of the same name, 12 m . W. Lausanne, and about 3 m . from the Lake of Geneva. It has an old church, in which are some curious sepulchral inscriptions. It occupies a delightful situation, and commands an extensive prospect, including the Laki of Geneva, with Mont Blanc towering in the distance beyond. In this locality are made some of the most esteemed wines in Switzerland. Pop. (Protestants), 1534.

AUBOURNE, a par. and township, England, co. Lincoln ; 3090 ac.; S.W. Lincoln. Pop. (1841), 374.

AUBURN, the name of a number of places in the U. States, the most important of which is the capital of Cayuga co., state of New York, situated on the outlet of the Owasco Lake, 169 m. N.W. Albany. It is a thriving and beautiful village, and contains some handsome buildings, a theological seminary, the Auburn female seminary, the Auburn academy, seven clurches, belonging to various religious denominations, two banks, and a number of manufactories of various descriptions, including tanneries, distilleries, and a brewery, and four weekly newspapers. It is, however, chiefly remarkable for its stateprison, erected with a view to the adoption of a new system of prison discipline, the principal feature of which was solitary confinement, and a total deprivation of social intercourse. Having been found, when pursued in its utmost rigour, to produce the most serious effects on the health of the prisoners, and even to render some of them insane, the system, though still partaking largely of its original principle, has been considerably modified, the prisoners being now allowed to work together, but not permitted to hold any conversation. The outer wall of the prison encloses a space of ground 500 ft . square. The principal building, which is within this wall, is of three sides, with a front of 276 ft ., each of the sides being 242 ft . long. It contains 555 cells, capable of holding only one person, each being 7 ft . long, $3 \frac{1}{2}$ wide, and 7 ft . ligh. They are well ventilated, and are arranged in five stories, opening into galleries. This part of the building is so constructed, that the slightest whisper in the space in front of the cells can be heard on the ground story. Pop. 5626.

AUBURN, or Aldbourne.-1, A vil. and par. England, hun. Selkly, co. Wilts, N.E. Marlborough, formerly a market town, but, being nearly destroyed by fire in 1760, its trade fell off, and the market was discontinued. Area of par. 8060 ac . Pop. (1841), 1556.-2, [Formerly called Lishoy,] a hamlet, Ireland, par. and barony of Kilkenny West, co. Westmeath, about 6 m . N.E. Athlone, the supposed scene of Goldsmith's poem of the 'Deserted Village.'

AUBUSSON, a manufacturing tn. France, dep. Creuse, 20 m . S.E. Guéret, in an arid, sterile district, in a mountain gorge, and surrounded by rocks, which give it a very picturesque appearance. It is traversed by the Creuse; and consists of but one street, broad, and well built, is the seat of a court of primary jurisdiction and a communal college, and possesses a theatre, a literary club, and an agricultural society. The principal manufacture is of carpets, of a superior description; besides which, cloth, velvet, hats, silk, and thread are made. Tanning and dyeing are carried on; and a good trade is doue in salt, wine, and pulse. Pop. 4828.-The Arrondissement of Aubusson is divided into 10 cantons and 100 communes ; area, 860 sq . m. Pop. (1846), 106,795. Aubusson is also the name of two villages; the one, dep. Puy-de-Dôme, with pop. 796; and the other, dep. Orme, with pop. 601.

AUCH [anc. Elimberis, Ausci], a city, France, cap. dep. Gers (Gascogne), 42 m . W. Toulouse; lat. $43^{\circ} 38^{\prime} 39^{\prime \prime} \mathrm{N}$. ; lon. $0^{\circ} 35^{\prime} 19^{\prime \prime} \mathrm{E}$. (L.) Built in the form of an amphitheatre, on the summit and side of a hill, it presents a very picturesque appearance. The Gers divides it into the upper and the lower town, which communicate with each other by means
of a long fight of stairs, of more than 200 steps. The strects are narrow and crooked, but well paved. The Place Royale, in the upper part of the town, is a fine square, terminated W. by a beautiful promenale, which commands a view of the Pyrences. The cathedral, founded in 1489, but
upwards of a mile in length; the houses of which it is formed -built of stone, roofed with blue slate, and generally two stories high-occupying both sides of the highway. It is well supplied with water, and lighted with gas. There are four places of worship in the town, the parish church, the S. and N. U. Presbyterian churches, the latter a handsome Gothic edifice; and the Free Church, built in 1843, and surmounted by a handsome square tower, 75 ft . high; and four schools, in one of which gratuitous education is given to 22 poor children. The principal occupation of the inhabitants is weaving, there being about 500 looms in the town, chiefly employed by Glasgow houses in making pullicats, ginghams, tweeds, galas, \&c., the last being one of the most important articles manufactured in the locality, about 20,000 pieces being made anmally. The linen manufacture formerly carried on here, was superseded, towards the close of last century, by the cotton fabrics. Auchterarder is a place of considcrable antiquity, and appears to have been of more importance formerly than now. In 1716, the town was burned by order of Prince Charles Edward, who, at the same time, promised indemnification to the inhabitants, the measure being one of some supposed political necessity, but the promise was never fulfilled. In modern times, the parish has acquired notoriety from the litigation carried on by the Earl of Kinnoul, the patron, and his presentee, against the presbytery, with
not completed till the reign of Louis XIV., is one of the finest Gothic edifices in the S. of France. The vaulted roof, and carved woodwork of the choir, are greatly admired; and the painted windows, executed by Armand de Moles in 1513, are of exceeding richness and beauty. The hotel of the prefecture is onc of the finest of the public buildings, and the townhouse is an elegant structure. The town is the seat of petty courtsiof justice and a tribunal of commerce, and contains a royal college, a large hospital, a departmental normal school, a scientifie seminary with a library of 15,000 volumes, an agricultural society, a museum, a drawing academy, barracks, and a theatre. The neighbouring district yields corn, wine, and brandy, and is famous for its fruits. The principal trade is in wine, wool, quills, brandy of Armagnac, and ship timber; and the mannfactures are of coarse woollen and cotton stuffs, thread, worsted velvet, serges, crapes, leather, and hats. In the vicinity, a torquoise mine was formerly worked. Auch is one of the most ancient towns in France, and great numbers of Roman antiquities have been brought to light by means of extensive excavations. Pop. (1846), 7572.

AUCHENAIRN, a vil. Scotland, co. Lanark, par. Cadder, about 3 m . N.E. Glasgow. Part of it, called Old Auchenairn, is of considerable antiquity, and stands near a spot which is supposed to derive its name of 'The Tombs,' from having been used as a burial-place during the plaguc. The more modern part is of recent construction, and owes its existence to the iron mines which have been opened in its vicinity, and give employment to the greater part of the inhabitants. There is an endowed school in the village, but no place of worship. At a short distance S.W. of Auchenairn is Robroyston, where Wallace was betrayed by the 'fause Menteath.'

AUCHINLECK, a vil. and par. Scotland, co. Ayr. The village, which is 10 m . E. Ayt, and 14 m . S.S.E. Kilmarnock, consists chiefly of a row of honses on each side of the Glasgow and Dumfries road.-The Parish is upwards of 20 m . in length, and more than 8 in breadth. It abounds in limestone; coal also has been found, and in some places is wrought to a considerable extent. A considerable portion of the pop. subsist by handloom weaving for the Glasgow manufacturers; the more common fabrics being light silks and muslins. Snuffbox making is also a very general employment. Boswell, the biographer of Dr. Johnson, resided in this parish, where he was visited by the great lexicographer on his return from the 'Journey to the Mebrides.' Pop. of par. 1659.

AUCHTERARDER, a tn. and par. Seotland, co. Perth. The тown is $13 \frac{1}{2} \mathrm{~m}$.S.W. Perth, and about 15 m . N.E. Stirling, on the public road between these two towns. It consists chiefly of one principal street, broad, and tolerably clean, and
reference to the well-known Veto Act; the termination of which, in favour of his Lordship, led to the formation of the Free Church of Scotland. The par. is 8 m . long by 3 m . broad. Pop. of par. and tn. (1841), 3434.

AUCHTERDERRAN, par. Scot., Fife; 920 ac. Pop. (1841), 1143.

AUCHTERGAVEN, par. Scot., Perth; 19,000 ac. Pop (1841), 3366.

AUCHTERHOUSE, par. Scot., Forfar; 3567 ac. Pop. (1841), 769

AUCHTERLESS, par. Scot., Aberdeen; 16,000 ac. Pop. (1841), 1685.

AUCHTERMUCHTY, a tn. and par. Scotland, co. Fife. The тown is 9 m . W. Cupar, and 24 m . N. Edinburgh; has three principal streets, and a number of lanes. The houses are of stone, some of two stories in height, but mostly of one only, with clay or earthen floors. The town is well supplied with water, and is lighted with gas ; and has a parish chureh, built in 1779, a Free church, three U. Presbyterian churches, and five schools, including the parish school. A savings'-bank was instituted here in 1821, the deposits in which, in the beginning of 1850 , amounted to $£ 5054$. Damasks, dowlas, sheetings, tweels, drills, stripes, checks, \&c., are manufactured in the town and parish to a considerable extent. In these branches of industry, 1516 persons, about one-half females, are employed. Distilling and malting are carried on to a considerable extent, the latter considerably improved of late years. Auchtermuchty was erceted into a royal burgh by James VI., and although not now recognized as snch, it still enjoys all the privileges of that rank. -The Parish is about 3 m . in length, and from $1 \frac{1}{2}$ to 2 in breadth. Pop. (1841), of tn. and par. 3356; supposed to be now (1850) about 3700.

AUCHTERTOOL, a small vil. and par. Scotland, co. Fife, at the foot of the Cullalo hills. It contains an extensive brewery, long famed for its ale, porter, and table-beer, the first of which is much used in London. The par. is about 3 m . long by $1 \frac{1}{2}$ broad. Pop. (1841), 530.

AUCKLAND, a maritime co. New S. Wales, 60 m . in length and 40 in breadth ; contains about $1,536,000 \mathrm{ac}$. It possesses some fertile tracts, the most extensive of which is that comprising the plains of Bega. Pop. upwards of 1000 .

AUCKLAND, a port, and thriving settlement, in New Zealand, isl. of New Ulster ; lat. $36^{\circ} 51^{\prime} 30^{\prime \prime}$ S.; lon. $175^{\circ} 45^{\prime}$ E. (R.) The town consists of two streets, one running down a rather steep little hill, and the other at the foot, rumning off to the left at a right angle; from these streets numerous small lanes diverge in various directions. It has a number of good, though small shops, and a great many pot-houses, the latter
accounting for a remark of Capt. Hayes, of H.M.S. Driver, who visited Auckland in 1847, that 'he had never seen so many drunken men collected together, at one time, in such a smail place before.' On a hill above the landing-place is the chureh, an ungainly red building, and close by is the governor's house. The general appearance of the town is not prepossessing. The harbour is good and safe, and the water of great depth, but the landing places are exceedingly bad; and at low water, and even half ebb, are unapproachable, from the extent of soft mud that stretches far out into the sea. The anchorage is abreast of the town. Prevailing winds, S.W. and N.E. Auckland, however, is a thriving place; its eustoms' duties in 1848 exceeded $£ 20,000$, being nearly $£ 7000$ more than they were in 1847. Its wealth and population are also rapidly increasing. For this prosperity it is indebted in a great measure to its position, which is on the E. side of a narrow isthmus connecting the $N$. and $S$. portions of the island, and thus affording an easy communication with both the E. and W. seas. There is a small rope manufactory in the town. Provisions are tolerably abundant, and the climate agreeable and healthful. The country around is not remarkable for fertility, but yields sufficient for the present population of the settlement. A considerable extent is now under cultivation, including some market gardens in the immediate vieinity of the town. Pop. (1844), 2754; in 1847, 5217.

AUCKLAND-BISHOP. See Bishop-Auckland.
AUCKLAND ISLANDS, a group of islands in the S. Pacific Ocean, lying S. of New Zealand, discovered August 18, 1806, by Abraham Dristow, of the ship Ocean, a S. sea whaler belonging to the Messrs. Enderby; lat. (S. Cape) $50^{\circ} 56^{\prime} \mathrm{S}$. ; lon. $166^{\circ} 7^{\prime} \mathrm{E}$. (R.) The group consists of Auckland Island,

30 m. long by 15 in extreme breadth, and several smaller islands, as Adams, Enderby, Rose, Ocean, Ewing, Disappointment Island, \&c., separated from each other by narrow channels; total area, about $100,000 \mathrm{ac}$. The Auckland Islands are of volcanic formation, and composed chiefly of basalt and greenstone, and have a wild picturesque appearance. They are so highly magnetic in many places, that the group may be compared to an enormous magnet. The highest land, Mount Eden, is only 1325 ft . above the sea level, and there being few precipices, the whole surface is covered with vegetation. Dr. Hooker says, 'A low forest skirts all the shores, succeeded by a broad belt of brushwood, above whieh, to the summits of the hills, extend grassy slopes. On a closer inspection of the forest, it is found to be composed of a dense thicket of stag-headed trecs, so gnarled and stunted by the violence of the gales, as to afford an excellent shelter for a luxuriant undergrowth of bright green feathery ferns, and several gay-coloured herbs.' "The woods consist entirely of four or five species of trees, or large
shrubs, whieh are here enumerated in the order of their relative abundance, Metrosideros lucida, Dracophyllum longifolium, Panax simplex, Veronica elliptica, and Coprosma fotidissima.' For further information on the botany of these islands, see Hooker's Flora Antarctica. There are no land quadrupeds except the domestic pig in a wild state. It was introduced by Captain Bristow, and now is exceedingly plentiful. The land birds are tolerably numerous in individuals, but consist of few species, and these chiefly such as are common to New Zealand. Hawks, cormorants, snipes, penguins, gulls, and the albatross, are abundant. Insects are numerous and troublesome. The climate of the group is humid, and the mean temperature rather under that of Great Britain. Violent gusty winds are frequent. These islands possess several harbours, but the best is on the E. side of Auckland Island, and is named Rendezvous IIarbour, having a stream of water flowing into it. The upper end of this harbour is called Lawrie Harbour, which is completely land locked, and is suitable for vessels requiring to heave down or undergo extensive repair, the steep S. shore affording great facilities for loading and unloading; highest spring tides, about 3 ft . Another good harbour is called Sarah's Bosom; lat. $50^{\circ} 38^{\prime}$ S.; lon. $165^{\circ} 28^{\prime}$ E. The channel between Rose and Enderby's Islands might, in calm weather, be mistaken by strangers; but it is only fit for boats. At the N.E. cape of Enderby's Island are some strong whirlpools.

The Auckland Islands are frequently visited by French vessels, and by vessels from the U. States, for the purposes of refitting and refreshment, though hitherto much negleeted by our own. They are admirably situated for a whaling station, from their proximity to the fisheries, as well as to our colonies of Australia and New Zealand; and possess the great natural advantages of commodious harbours, and a plentiful supply of good water and wood. The Government of Great Britain, to whom they belong by right of discovery, have granted the exclusive possession of these islands to the Messrs. Enderby, by whom a company has been formed for carrying on from thence the S. sea whale-fisliery.-(Ross's Antarctic Expedition, 1839-43; U. States' Exploring Expedition.)

A UCUTTTA, one of the Laccadive Islands, off the Malabar coast; lat. $10^{\circ} 51^{\prime} \mathrm{N}$. ; lon. $72^{\circ} 17^{\prime} \mathrm{E}$. It is about $3 \frac{1}{2} \mathrm{~m}$. in length, and half a mile in breadth; is planted with cocoa-nut trees, and has a considerable population.

AUDE, a dep. in the S. of France, formed of part of Lower Languedoc, so called from the river Aude, which runs through it; bounded, N. and N.E. by deps. Herault and Tarn, E. by the Mediterranean, N.W. by Haute-Garonne, W. by Ariège, and S . by Pyrénées Orientales; greatest length, E. to W., about 76 m. ; breadth, N. to S., 50 m . ; area, $1,497,790$ ac., or 2340 sq . m. The surface presents three groups of mountains, the Montagne-Noire, or black mountains, a continuation of the Cevennes, on the N.; the Corbieres, on the E.; and the Pyrenees, whose N. slopes constitute nearly two-thirds of the whole department. Though generally mountainous, the country is traversed by a great longitudinal valley, extending from W. to E. (the upper part watered by the Fresquel, and the lower by the Aude), with many smaller valleys opening into it. The soil in the more elevated parts is dry and unfruitful, but in the lower districts it is fertile. It yiclds, according to the position of the locality, good crops of wheat, maize, oats, rye, and buckwheat, in quantities more than sufficient to supply the wants of the department. The vine and the olive, especially the former, are cultivated to a considerable extent. Salsola, or salt-wort, is gathered here, and exported in large quantities to Italy and elsewhere. Honey forms an important artiele of trade; that of Narbonne being esteemed the finest in France. The cultivable land, inchding meadows, vineyards, forests, \&c., occupies about two-thirds of the surface; the remainder is heath and uneultivated land. A considerable quantity of wine is produced. The white wines, in general, are considered superior to the red; but both the red and white wines of Limoux, particularly its Champagne du Midi, and the blanquette of Bages, are among the most esteemed. Great attention is paid to irrigation, and the meadows, both artificial and natural, produce abundance of furage for the cattle. Asses and sheep are numerous. A prodigious quantity of poultry is raised, and exported in large numbers; considerable quantities being sent to Spain. The ciimate is very variable; a good deal of rain

## aUGSBURG

falls in the S W. Even in summer, hail and snow are not unfrequent among the mountains. The hot winds, of which there are two, the Marin or Autan, from the S.E., and the Cers from the N.W., sometimes blow with a fury that oceasions great damage.

The mineral productions consist chiefly of copper, lead, and iron; also marble in great variety, and some coal and slate. On the coast, along the shore of the Mediterranean, are numerous shallow lagoons, called Etangs. The salines or salt-pits in the vicinity, eight in number, yield about $374,300 \mathrm{cwt}$. of salt yearly. The inhabitants carry on considerable manufactures, especially of woollen cloth (chiefly at Carcassonne, Castelnandary, and Limoux), a large quantity of which is exported to the Levant. The other principal products are flour, verdigris, paper, leather, glass, tiles, bricks, steel files, combs, and small articles of bijöutry, with some turnery and toys. Great facilities are afforded to trade by the river Aude, which traverses the dep. S.W. to N.E. ; by the Canal of Languedoc, which erosses it E. to W.; and by the Mediterranean. At its only port, La Nouvelle, in the Gulf of Lyons, between 100,000 to 140,000 qrs. of grain are annually shipped. Aude is divided into four arronds., 31 cans., and 434 coms. Pop. (1846), 289,661.-(Dict. Geo. et Stat.; Inglis’s S. of France; French Official Tables.)

AUDE [Latin, Atax ; Italian, Aldo], a river, S. of France, rising in the Etang de l'Aude, near the village of Angles, dep. Pyrénées Orientales, about 4 m . N.W. the town of Montlouis. Its whole course is less than 130 m . ; and for some part it runs nearly parallel to the Canal of Languedoc. It receives several tributaries, of which the principal is the Orbieu, and falls into the Mediterranean Sea.

AUDENARDE, or Oudenarde [Flemish, Oudenaerden], a fortified tn. Belgium, prov. Hainaut, $15 \mathrm{~m} . \mathrm{S}$. Ghent, and 20 m. N. Tournay, situated at the base of a hill in the valley of the Scheldt, which runs through it. It contains three churches, of which that of St. Walburge is as early as the 10 th century ; and a townhouse, a handsome Gothic structure, built in 1540 , and possessing a carving in wood by Paul Vanderschelden, which is regarded as a masterpiece, and said to equal anything of the kind that France or Italy has produced. Audenarde has courts of primary jurisdiction and of commerce, a college, free communal schools, an academy of design, two orphan houses, and several other benevolent institutions. Its principal trade is in linens; of which, on an average, 20,000 to 25,000 pieces are annually sold in its markets. ${ }^{*}$ It has also extensive tanneries and breweries, dyeworks, soapworks, saltrefineries, oilmills, and manufactures of cotton, ribbons, gloves, and tobacco. The celebrated battle which bears the name of Oudenarde, in which the French were signally defeated by the Duke of Marlborough and Prince Eugene, was fouglit under its walls. Pop. 5670.
aUdenhove (St. Maria), a tn. and com. Belgium, prov. E. Flanders, 9 m . E. Audenarde. It has some linen manufactures, breweries, and flourmills. Pop. 2425.

AUDIERNE, a tn. and com. France, dep. Finistère, on a bay of the same name, a little above the mouth of the Goyen, 20 m . W. Quimper. Its situation is picturesque, and it has a good harbour, with some trade in dried fish; but the whole coast, lined with steep rocks, is very dangerous, and so often the scene of shipwrecks, that many of the inbabitants live only by the plunder obtained from them. Pop. 1446.

AUDINCOUK'T, a vil. France, dep. Doubs, 4 m. S.E. Montbéliard, r. bank, Doubs. It is famed for its ironworks, which produce annually 3000 tons of pig, and more than 2000 tons of malleable iron, 20,000 cases of sheet-iron, and 500 tons of iron-plate. It has also a manufactory of spindles, a cotton spinning-mill, and a tannery. Pop. 2024.

AUDLEM, par. Eng., Cheshire ; 11,780 ac. Pop. (1841), 2827.

AUDLEY, par. Eng., Stafford; 8140 ac. Pop. (1841), 4474.

AUDRUICK, a tn. France, dep. Pas de Calais, 12 m . E.S.E. Calais, at the E. extremity of an agreeable and fertile plain; with oilmills, breweries, tanneries, and a salt-refinery. Pop. 1165.

AUE, the name of several small places in Germany, par-ticularly:-1, A tn. Saxony, circle of, and 12 m . S.E. Zwickau. It has an old townhouse, a knitting school, and a tin furnace and stamping-mill. In the neighbourhood are tin mines, beds
of porcelain earth, and stone quarries. Pop. 1130.-2. The name of several rivers of Germany, particularly of two in Hanover; the one of which joins the Aller on its 1. bank. near Cette, and the other falls into the Elbe a few miles below Horneburg.

AUERBACH.-1, A tn. Saxony, circle, Zwickau, bail. of, and 13 m. E. Plauen, on the Göltzsch. It has considerable manufactures of muslin, and plain and embroidered lace. It has also a ncedle-factory, a bell-foundry, and a paper-mill. Pop. 3612.-2, A pretty vil. Hesse Darmstadt, about 12 m S. Darmstadt, with mineral springs and baths, which contain a large quantity of iron, and are not much resorted to. It has a manufacture of clocks. Its castle of Fürstenlager, built in 1780, is the summer residence of the Grand Duke. Pop. 1600.-There are numerous other places in Germany named Auerbach, all of them small.

AUERS'IED'T, a vil. Prussia, dist. of, and $25 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Merseburg, on the fronticr of Saxe-Weimar. Pop. 437. It is only remarkable for the defeat of the Prussians by the French, October 14, 1806.

AUGELA, a tn. Tripoli ; lat. $29^{\circ} 15^{\prime} \mathrm{N}$. ; Ion. $22^{\circ} 0^{\prime} \mathrm{E}$. Routes from Egypt and the coast of Tripoli, which is about 150 m . distant, to Murzook, in Fezzan, pass through it.

AUGGUR, a tn. Hindoostan, prov. Malwa, 40 m . N.E. Oojein ; lat. $23^{\circ} 43^{\prime} \mathrm{N} . ;$ lon. $76^{\circ} 1^{\prime} \mathrm{E}$. ; between two artificial lakes, on a rocky height, 1598 ft . above the sea. It is surrounded by a stone wall, and contains a well-built native fortification, but is chiefly composed of mud houses, in 1820,5000 in number.

AUGHABEY, an important coal dist. of Ireland, on the N. border of co. Roscommon, Connaught. The quantity of coal has been estimated at from 3000 to nearly 5000 tons per acre. A railway connects the Aughabey colliery with the Arigna ironworks.

AUGIIAGOUR, par. Ire., Mayo; 55,048 ac. Pop. (1841), 12,235 .

AUGHALOO, par. Ire., Tyrone; 19,583 ac. Pop. (1841), 9867.

AUGHANAGH, par. Ire., Sligo ; 8839 ac. Pop. (1841), 2714.

AUGHANUNCHON, par. Ire., Donegal; 4012 ac. Pop. (1841), 1649.

AUGHAVAL, or OUGHEVAl, par. Ire., Mayo; $33,695 \mathrm{ac}$. excellent limestone abounds, and both lead and copper mines were formerly wrought here. Pop. (1841), 13,441.

AUGHAVEA, par. Ire., Fermanagh; 17,142 ac. ; contains quarries of excellent freestone. Pop. (1841), 1254.

AUGHAVILLAR, par. Ire., Kilkenny ; 5671 ac. Pop. (1841), 1997.

AUGHER, a market tn . Ireland, co. Tyrone, $15 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Dungannon, in a rich undulating valley, watered by one of the head streams of the Blackwater. It has a poor, though pleasant appearance, without any bustle, except on marketdays. In its vicinity is Augher Castle. Pop. (1841), 753.

AUGHMACAR'T, par. Ire., Qucen's co. ; 9601 ac. I'op. (1841), 3667.

AUGHNACLOY, a market tn . Ireland, co. Tyrone, 1. bank, Blackwater, 13 m . W.N.W. Armagh. It consists of one principal and three smaller streets. A few of the houses are of brick, and roofed with slate, but the greater part are thatched. There are here a R. catholic chapel, and places of worship for Presbyterians, Wesleyans, and Methodists; several public and private schools, and a convenient market-house. Market-day, Wednesday. Fairs for live stock on the first Wednesday in every month. Pop. (1841), 1841.

AUGHNAMULLEN, par. Ire., Monaghan; 30,710 ac. Pop. (1841), 18,219.

AUGIINISII, par. Ire., Donegal ; 9195 ac.; contains several extensive bleachfields. l'op. (1841), 4974.

AUGHRIM. See Aghrim.
AUGHTON.-1, A par. England, co. Lancaster; 4410 ac.; S. W. Ormskirk, on the Leeds and Liverpool Canal. Pop. (1841), 1560.-2, A par., co. York; E. Riding; 4200 ac.; N.N.W. Howden, on the Derwent river. Pop. (1841), 634. AUGSBURG [Latin, Augusta Vindelicorum], a city, Bavaria, cap. prov. Swabia and Neuburg, on a rising ground, in a fertile plain, at the angle formed by the junction of the Wertach and the Lech, 35 m. N.W. Munich ; lat. (St. Ulric's Tower) $48^{\circ} 21^{\prime} 42^{\prime \prime}$ N. ; lon. $10^{\circ} 54^{\prime} 16^{\prime \prime} \mathrm{E}$. (L.) It is sur-
rounded with walls and ditches, but not fortified; divided into the upper, middle, and lower towns, and intersected by four canals. Augsburg is the residence of a bishop, and the seat of a court of appeal. Although irregularly built, with close, narrow, and ill-paved streets, it contains many handsome edifices, and some elegant squares adorned with fountains. Most of the houses are old, large, and lofty; and many of them have carved, painted, and scrolled fronts, adorned with frescoes, the subjects of which are usually taken from Scripture, or the legends of saints. The finest street is Maximilien Strasse; distirguished by its length and breadth, its threo bronze fountains, and the townhall or Rath-haus, a civic palace, of Italian architecture, esteemed the finest in Germany. Adjoining the townhall are the Perlach tower, a lofty beltry, ascended by a

MAXIMILIEN STRASSE, TOWNHALL, AND PERLACI TOWKR, A UGSHERG From Prout's Sketches in France and Germany.
staircase of 500 steps; and the arsenal. Among the other remarkable objects are the bishop's palace, now used for Government-offices, where the Confession of Augsburg was presented to the Emperor Charles V. in 1530 ; the halle, a handsome commercial mart and storehouse; the public library; the acadeny of arts, founded in 1820; the cathedral, an irregular Gothic building, erected in the 15 th century, and containing a fine picture by Domenicheno ; and the church of St. Ulric, with a tower 350 ft . high, from which a fine view of the surrounding country is obtained, and in such immediate juxtaposition with a Lutheran church as to be apparently under the same roof. The city possesses a polytechnic institution, a Catholic seminary, a Protestant gymnasium, a gallery of paintings, besides an orphan asylum, and a saving's-bank; numerous educational establishments, and 15 churches, of which five are Protestant. The Benedictine abbey of St. Stephen, formerly a convent of noble ladies, is now appropriated to the education of youth. It comprehends a royal lyceum, a gymnasium, and a Latin school; the first having five professors, the second seven, and the last eight teachers. There is also a seminary attached to this institution, superintended by a director and two prefects, in which 54 students are educated. The town is surrounded by wooded alleys, promenades, and private gardens; and in front of the cathedral the Grand Parade is a pleasant place of public resort.

Augsburg has been long distinguished by its commercial spirit, and by the activity and industry of its inhabitants, and, although not now so important a place as formerly, is still the seat of extensive manufactures. The principal public works are four cotton factories, spinning and weaving, one of them having 808 power-looms and 40,000 spindles, and employing 1500 work-people; a flaxmill, silk-factory, machine-factory, paper-mills, brass foundry, and the military foundry, contain-
ing the priacipal cannon-foundry in Bavaria. Besides these, there are manufactories of articles in gold and silver, silver lace, coloured papers, ribbons, mirrors, carpets, chemical stuffs, with bleacheries and dyeworks. An extensive trade is done in printing, engraving, and bookbinding, and the celcbrated Algemeine Zeitung, the leading journal of Germany, started in 1798 , is published here. But the principal branches of business to which this city owes much of its modern importance, are banking and stock exchange operations; Augsburg, next to Frankfort, being one of the most influential money markets on the Continent. It is also the emporium of the merchandise, and the chief mart for the sale of the wines of Italy; Switzerland, and the S. of Germany; and hence has an extensive transit trade. Its mercantile establishments are above 200, and its annual circulation, in bills and merchandise, varies in value from $£ 3,000,000$ to $£ 4,000,000$ sterling. It is connected by a railway with Munich, and, in the opposite direction, with Nürnberg, Bamberg, and Saxony. Augsburg is a place of great antiquity, the Emperor Augustus having established a colony there about 12 years b.c. Ravaged by the Huns in the fifth century, it subsequently came under the supremacy of the Frankish kings, and was nearly destroyed in 788 , in the war of Charlemagne against Tassilo, Duke of Bavaria. After the division of the empire of the Franks, it became part of the dominions of the Duke of Swabia, and having acquired riches by its commerce, finally obtained its freedom from the Duke, by a purchase which was, in 1276 , confirmed by the Emperor. The city now reached the summit of its prosperity, and was, together with Nürnberg, the principal entrepot between N. and S. Europe, until towards the end of the 15 th century, when the discoveries of the Portuguese and Spaniards gave a new direction to the commerce of the world. Among its principal merchants in the 15 th and 16 th centuries, were the families of Fugger and Welscr. In 1550, 'a danghter of

the burgher Welser, Philippina, the most beautiful woman of her time, became Archduchess of Tyrol, by marriage with Ferdinand, son of the Emperor Ferdinand I. The patrician house of Fugger-the Rothchilds of the Middle Ages-carried on trade at the same time both with the E. and W. Indies in ships of their own, were proprietors of the richest mines in

## AULONA

Europe, and more than once replenished, from their own pri vate resources, the exhausted treasuries of the Emperors Maximilian and Charles V. They received from the former patents of nobility, and the privilege of coining money. In the following century (1619) the family numbered, in its five branches, 47 counts and countesses of the empire, all tracing their origin from a simple weaver of Augsburg. The name and the family are still numbered among those of the German noblesse; but many of its branches have died off, and the living descendants of the patrician stock are reduced in fortune and influence proportionately with the city from which they sprang.'-(Murray's Mandbook.) Augsburg early took a conspicuous part in the Reformation, with which, for a long series of years, its history is closely connected. Here the celebrated Confession which bears its name, and which was drawn up by Melancthon under the auspices of Luther, was, in 1531, presented to the Emperor Cliarles V. Here, in 1548 , that monarch promulgated his Interim, a futile attempt to suppress the Reformation by giving up two of the most obnoxious dogmas of Popery-communion in one kind, and the celibacy of the clergy; and more than all, here, in 1555 , was concluded the celebrated treaty which secured the Protestants in the full enjoyment of their rights and liberties. Augsburg is the birthplace of Holbein the elder, and other eminent artists. Pop., including 13,000 Protestants, 38,000.-(Murray's Handbook; Real Encyklopädie; Huhn's Lex. Deutschland.)

AUGS'T, or Aargau-Augst, and Basel-Augst, two vils. Switzerland, connected by a bridge over the Ergolz, at its junction with the Rhine, 6 m . E. Basel. Aargau-Augst, formerly Kaiser-Augst, is in can. Aargau, and has pop. 322. Basel-Augst is in can. Basel, and has pop. 231. Both of them occupy the site of Augusta Rauracorum, a Roman colony which was ravaged by the Huns in 450 . Some Roman remains still exist, and numerous coins, medals, \&c., have been found in the neighbourhood.

AUGSTHOLZ, or Augstholzbad, a bathing-place of considerable resort, prettily situated near the S . side of the Baldegger See, in the N.E. of can. Luzern. On a gentle rising ground in the neighbourhood, stands an ancient castle, once a commandery of the Knights of Malta, supposed to liave been founded in the 11 th century.

AUGUSTA, a vil., W. Australia, cap. co. Sussex, on Hardy's Inlet, Flinder's Bay; lat. $34^{\circ} 18^{\prime} \mathrm{S} . ;$ lon. $115^{\circ} 9^{\prime} \mathrm{E}$.

AUGUSTA, two towns, U. States:-1, Cap. of co. Kennebec, Maine. It lies on both sides the Kennebec river, 35 m . above its embouchure in the Atlantic, and at the top of the sloop navigation. The principal buildings are, the state-house, a handsome structure, with Doric portico of eight columns, situated on an eminence a little S. of the town; the U. States' arsenal, a large stone edifice on the E. side of the river; the State insane hospital, a fine granite building, with wings, and 70 ac . ground; the high school, and nine churches. Agriculture, manufactures, and commerce, are in a flourishing condition; tonn. in 1844, upwards of 3000 . Pop. of township (1840), 5314.-2, A city, Georgia, cap. co. Richmond, l. bank, Savannah, and 110 m . N.W. the city of Savannah. It is a regularly built, handsome town, containing a city hall, courthouse, arsenal, jail, \&c.; is connected with Charleston, Milledgeville, and various other places, by the Georgia Kailroad and branches, and has, by these means, and the navigation on the Savannah, a considerable trade, particularly in cotton and tobacco. Pop. (1840), 6403.Several other places in the U. States have the same name.

AUGUS'TENBERG, a small tn. Denmark, prov. Schleswig, isl. Alsen. It consists of one well-built street, and has a small harbour and dock. In the environs are a palace and park of the Duke of Augustenberg. Pop. 800.

AUGUSTINE (ST.), a city and seaport, U. States, E. coast, Florida; lat. $29^{\circ} 54^{\prime} \mathrm{N} . ;$ lon. $81^{\circ} 26^{\prime} \mathrm{W}$. (r.) It was formerly of more importance than now, a circumstance chiefly attributable to the badness of its port, which is shut up by a bar, having not more than 5 ft . at low water, and even in spring tides not more than 8 or 9 ft . A lighthouse on the N. end of Anastasia Island, with a fixed light, marks the entrance to the port. Previous to the acquisition of Florida by the U. States, the population amounted to 4000 or 5000 ; in 1840 , it was only 2459.

AUGUSTINE (St.).-1, A bay [called Isalare by the natives], S.W. coast, isl. Madagascar (into which falls the Dar-
month, or Onolahe river), visited by British, U. States', and French vessels, who purchase provisions for beads, gunpowder, muskets, rum, \&c., and supply themselves with indifferent water (Naut. Mag.) - 2, The N.W. isl. Lord Mulgrave's Archipelago, S. Pacific ; lat. $5^{\circ} 38^{\prime} \mathrm{S} . ;$ lon. $176^{\circ} 6^{\prime}$ E. (H.) - 3 , An isl. Carolines; lat. $7^{\circ} 24^{\prime}$ N.; lon. $155^{\circ} 55^{\prime} 23^{\prime \prime}$ E.4, A volcano isl., N. Pacific ; lat. $24^{\circ} 30^{\prime} \mathrm{N} . ;$ lon. $141^{\circ} 30^{\prime} \mathrm{E}$.; about $900 \mathrm{~m} . \mathrm{E}$. by S. of the Loochoo group. -5 , The most E . cape of S. America, in Brazil ; lat. $8^{\circ} 21^{\prime}$ S.j lon. $34^{\circ} 56^{\prime}$ W. (R.) -6, A cape, New Grenada, N.E. Cartagena ; lat. $10^{\circ} 14^{\prime} 6^{\prime \prime}$ N.; lon. $80^{\circ} 49^{\prime} 35^{\prime \prime}$ W.-7, A cape in the S.E. of isl. Mindanao; lat $6^{\circ} 4^{\prime} \mathrm{N} . ;$ lon. $126^{\circ} 13^{\prime} \mathrm{E} .($ R. $)-8$, A river, Labrador, falling into the river St. Lawrence in lat. $51^{\circ} \mathrm{N} .$, Ion. $59^{\circ} \mathrm{W}$.

AUGUSTINUSGA, a vil. Holland, prov. Friesland, 17 m . E. Leeuwarden. It is a scattered village, prettily situated in a wooded district, and has a Calvinistic cluurch (which, in 1580 , was burned and plundered by the Spaniards), and a school. The inhabitants are mostly engaged in agriculture and eattle-rearing. Pop. 600.

AUGUSTOW, a prov. and city, Russian Poland. The province is one of the eight woiwodies or palatinates into which Poland was formerly divided, and is the most N. part of the kingdom, lying next Russia Proper, between lat. $52^{\circ} 40^{\prime}$ and $55^{\circ} 5^{\prime} \mathrm{N}$. Area, about $7000 \mathrm{sq} . \mathrm{m}$. A large portion of its surface is occupied by marshes, lakes, and forests. It is divided into five circles, and contains 47 towns, 276 communes, and 155 parishes, cap. Suwalki. Pop. 310,000 .The town of Augustow is 20 m . S. Suwalki on the Netta. It was founded by Sigismund Augustus, in 1557, and has some woollen and linen manufactories, with a trade in horses and cattle. Pop. 3350.

AUKBOROUGH, par. Eng., Lincoln; 2540 ac. Pop. (1841), 528.

AULDEARN, a par. ( $6 \frac{1}{4} \mathrm{~m}$. long by $5 \frac{1}{4}$ broad) and vil. Scotland, Nairn. South the village, in 1645, the Marquis of Montrose defeated the Covenanters. Pop., vil. (1841), 351 ; par 1466.

AULENDORF, a market tn. Würtemberg, circle, Danube, 33 m. S.S.W. Ulm; on the Schussen ; eap. barony of same name. It is very old, and said to be of Roman origin. Close to it is the fine castle of the Counts of KönigseggAulendorf, containing a valuable library, and a finc collection of pictures. Pop. 980.

AULETTA, a tn. Naples, prov. Principato Citra, dist. La Sala, 36 m . S.E. Palermo; situated on a pleasant hill, at the base of which flows the Negro. It contains four monts-de-piété, and was founded by a Grecian colony. Pop. 2863.

AULLAGAS (Laquna de), a lake, Bolivia, in the valley of Desaguadero, which lies between two lofty ranges of the Andes, at an elevation of about $13,000 \mathrm{ft}$. Lake Aullagas receives, at its N. W. extremity, the river Desaguadero, which flows from the Lake of Titicaca, situated in the same valley, but at a greater elevation. The point at which the river falls into the lake is $12,280 \mathrm{ft}$. above sea level. The Laguna de Aullagas is intersected, towards its S. extremity, by the parallel of $19^{\circ} \mathrm{S}$. It is said to have no fish, and has no known outlet. The banks are inhabited by the Aullagas Indians, whence its name.

AULNE, a river, France, which, rising near Lahuée, in the chain of the Menez or Black Mountains, on the confines of dep. Cotes du Nord, first flows S. through dep. Finistère, till it meets and becomes part of the canal from Nantes to Brest. At Chateaulin it again assumes the form of a river, and, flowing W., falls into lrest harbour. Its whole course is about 70 m . Its chief tributaries are the Eleze, the Doufine, and the Hiere.

AULONA, Avlona, or Valona [ane Aulon], a tn. European Turkey, prov. Albania, 94 m. N.W. Janina; lat. (custom-house) $40^{\circ} 27^{\prime} 12^{\prime \prime} \mathrm{N}$. ; lon. $19^{\circ} 26^{\prime} 45^{\prime \prime} \mathrm{E}$. (1.) ; on a bay of same name, environed by hills terminating $s$. . in Cape Linguetta. It stands on a hill surrounded by a wall, and has on the S. a small fortress called Canina, built upon a steep rock. The streets have a dirty appearance; and thongh possessing several mosques, and a Greek church, Aulona, as a whole, has the appearance of an Italiar town. Unwholesome marshes in the vicinity, occasioning endemies, oblige the inhabitants, during the warmest season, almost to desert the place. The bay, protected at its entrance by the island of

Sasseno, forms a safe harbour; but being in general rocky, affords bad anchorage, except close to the town, and at its S. recess, named Porto Ragusano. The Turkish inhabitants manufacture arms, which are in much repute; and woollen stuffs; while the Christians, and a few Jews, are principally employed in commercial pursuits. The exports consist chiefly of salt, pitch from the mines of Selenitza, olive-oil, wool, gallnuts, and valonia; and from Italy it receives in return gun and pistol barrels, glass, paper, and Calabrian capotes. Aulona is the scat of a bishop of the Greek church. The country around produces excellent wine, of which, however, little is made; also tobacco, oil, and corn, all of good quality. The town was nearly depopulated by the plague in 1800. Pop. about 5000 .

## AULPS. Sce Aups.

AULT, a small seaport, France, on the English Channel, dep. Somme, 18 m . W.S.W. Abbeville; it has several cottonmills, manufactures of ironware, and is one of the principal places whence Paris is supplied with fish. Pop. 1371.

AULT-IIUCKNALL, par. Eng., Derby; 3730 ac. Pop. (1841), 678.

AUMA, a tn . Saxe-Weimar, principality of, and 7 m . S.E. Neustadt, on a small affluent of the Elster; has two churches, an hospital, some cotton and woollen manufactures, together with a dyework, tannery, brewery, and several mills. It has also six markets, chicfly for cattle. The town was at one time larger than at present, but has suffered much both by war and fire. Pop. 1355.

AUMALE [anc. Alba Marna], a tn. France, dep. Seine Inférieure (Normandy), 15 m. E.N.E. Neufchatel ; pleasantly situated in an extensive meadow, watered by the Bresle, and hemined in on all sides by richly wooded hills. It is ill built, and has a communal college, manufactures of serges, blondes, China ware, and coarse woollens ; worsted and fullingmills, and a bell-foundry; and a trade in cattle, cloth, leather, \&c. In 1592, Henry IV. of France was wounded on the bridge of this town, in an action with the troops of the League, and narrowly escaped being taken. Pop. 1697.

AUNSBY, par. Eng., Lincoln; 1250 ac. Pop. (1841), 117.
AUPS, or Aulps [Latin, Alpes, Villa Alpium], a small anc. tn. France, dep. Var (Provence), 13 m. W.N.W. Draguignan ; built on a plain, at the foot of a mountain. The streets are narrow and dirty; but the public square, in which the parish church stands, is handsome, and is adorned by a fountain of white marble, of which there are quarries in the district. It has tanneries, and some trade in corn. Pop. 2568.

AURAY [anc. Auraicum], a small seaport tn. France, dep. Morbihan (Bretagne), 17 m. S.E. Lorient; on a hill slope, at the bottom of a deep bay, into which the small river Auray falls; lat. $47^{\circ} 40^{\prime} 4^{\prime \prime} \mathrm{N}$. ; Ion. $2^{\circ} 49^{\prime} 28^{\prime \prime} \mathrm{W}$. (c.) Its larbour, which is excellent, and adorned with a fine quay, is deep enough to admit vessels of large burden; and its build-ing-docks appear to be fully employed. On the height occupied by the upper part of the town, stands the church of the Holy Spirit, an extensive Gotho-Arabic edifice of the latter part of the 13th century. Manufactures :-cotton thread, lace, tiles, bricks, \&c. Trade (coasting):-corn, fruit, cattle, horses, butter, honey, cloth, wine, wood, leather, wax, and fish, chiefly pilchards. About 6 m . from Auray is the isolated chapel of Sainte Anne, a celebrated place of pilgrimage, to which about 6000 devotces annually repair from all parts of Brittany, in the month of July. Pop. 3755.

AURE (VAL D'), one of the four valleys of Upper Armagnac, dep. Hautes-Pyrénées, France. This picturesque valley runs up into the Pyrenees, between the Val de Campan and the Val de Luchon, at the junction of the Nestes or torrents of Louron and Aure. It is fertile, and well cultivated, abounding in pasturages; and throughout, but especially in the upper part, presents scenery of surpassing beauty.

AURE, two rivers, France:-1, Dep. Calvados, affluent of the Drome ; total course, N.N.W., 20 m.-2, Dep. Eure-et-Loire, affluent of the Eure from the left, course E.N.E., 32 m .

AURICH, a tn. Hanover, cap. gov. and circle of same name, and of the fcrmer principality of E. Friesland; on the river, and 15 m. N.E. Emden, with which it is connected by a canal. It is walled, neatly built in the Dutch style, with a handsome market-place, near which stands the townhouse;
and is the seat of the provincial courts of justice and record, and also of a Protestant consistory. It contains three churches, a synagogue, grammar-school, gymnasium, four public libraries, a poorhouse, an orphan hospital, a female accoucheur seminary, several sawmills, tanneries, and distilleries, with manufactures of paper, tobacco pipes, and tobacco. Aurich has gained much by the opening of the canal. It has a considerable trade in cattle, and its horse-markets are well frequented. Pop. 4250.-The Government of Aurich is a low, flat tract of country, comprising about 1134 geo. sq. m. ; bounded, W. by Holland and the Bay of Dollart, N. by the N. Sea, E. by Oldenburg, and S. by the territory of Meppen. It is protected from inundation by artificial dikes, 24 ft . high, and extending nearly 100 m . On the coast of the N. Sea it is tolerably fertile, but in general it is a mere waste, consisting of barren noors and heaths, separated by tracts of sand. The inhabitants, who are mostly Protestants, employ themselves, in the more fertile districts, in agricultural pursuits, and in rearing cattle; in the less favoured parts, their chief occupation is herring-fishing, and commercial navigation. Pop. 152,400.

AURILLAC [anc. Aureliacum], a tn. France, cap. dep. Cantal (Auvergne); $269 \mathrm{~m} . \mathrm{S}$. Paris. It is agreeably situated in a valley, r. bank, Jourdanne; is well built, and walled. The houses are covered with slates, obtained from quarries in the vicinity; and the streets, though irregular, are wide and clean, being constantly irrigated by the overflowings of a large reservoir at the top of the town, into which two fountains pour their copious supplies. At the lower part of the town. along the side of the river, is the public walk called CoursMontyon, or commonly Le Gravier, at one end of which is an elegant bridge of three arches, over the Jourdanne; and at the other a beautiful fountain, surmounted by a column. Among the ancient buildings of Aurillac may be mentioned the castle of St. Stephen, which on the W. overhangs the town; the church of St. Gerand; that of Notre Dame, of the 13 th century, with a much-admired ceiling; and the college, an extensive pile of buildings, with a fine pavilion front, and containing a valuable library, and cabinet of mincralogy. Among modern buildings, the first place is due to the townhouse, adorned with busts of 12 of the principal writers of France; the prefecture, the theatre, the corn exchange, at the extremity of a square, which contains a fine basin of scrpentine, about 10 ft . in diameter; the hospital, the lunatic asylum, and the extensive market-place. Aurillac possesses a stud of excellent horscs, and a race-course, which, during the races, attracts numerous visitors from all the S . departments of France. Principal manufactures:-kettles and other utensils of copper, jewellery, woollen stuffs, carpets, blondes, lace, and paper. Tanning, brewing, and dyeing are likewise carried on, and a good trade in horses, mules, cattle, cheese, stockings, tapestry, leather, and wool. Pop. 8484.

AURIOL [Latin, Auriolum], a tn. France, dep. Bouches-du-Rhône, 15 m . E.N.E. Marseilles, in a valley watered by the Huveaune, on the banks of which are many agreeable promenades. The town is irregularly built; but the houses, among which the Hotel de Ville is conspicuons, have an ele gant appearance. Manufactures :-cloths, soda, bricks and red tiles, for flooring. It has also mills for spinning worsted and silk, distilleries, paper-mills, copper-works, and limekilns. In the vicinity are collieries, beds of gypsum and red ochre, and quarries of alabaster. Pop. 2971.

AURORA.-1, One of the Society Islands, S. Pacific ; lat. (N. end) $15^{\circ} 50^{\prime} \mathrm{S}$. ; lon. $148^{\circ} 11^{\prime} \mathrm{W}$. (R.) It rises abruptly from the sea, presenting, on all sides but the S., a perpendicular cliff worn into caverns. Its summit is crowned with trees and a luxuriant vegetation; including the cocoanut and bread-fruit trees. In the upper and interior part of the island, the scil is extremely rich, yielding great abandance of taro, sweet potatoes, melons, yams, and some tobacco. Pigs and poultry also abound ; as do crabs and fish. Aurora presents unequivocal marks of having been uplifted from the sea, which is of great depths; within 150 ft . of its cliffs, Commander Wilkes having found no bottom with 150 fathoms of line. Its inhabitants are represcnted, by the navigator just named, as a clieerful, amiable, happy, fine-looking race. Many of the natives can read and write well, and printed copies of several portions of the Scriptures are to be found amongst them. Pop. about 350.-2, One of the New He-
brides, S. Pacific; lat. (N. point) $14^{\circ} 56^{\prime} \mathrm{S} . ;$ lon. $168^{\circ} 6^{\prime}$ I. (R.), about 22 m . long and 4 broad; discovered by Bougainville in 1768 . It rises to a considerable elevation; is covered with a luxuriant vegetation; and has some beautiful cascades and coasts of easy access. It produces bread-fruit, coeoa-nuts, plantains, yams, and sugar-canes. The islanders are of a dark colour, go nearly naked, but are of a mild and peaceful disposition. $3, \mathrm{An}$ isl. Red Sea, betwixt Dhoba and Hassane Island; lat. $25^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $36^{\circ} 20^{\prime}$ E.

AURUNGABAD [sometimes called Almednuggur], a large prov. Deccan, or W. IIindoostan; bounded, N. by Goojerat, Candeish, and Berar; E. by Berar and Hyderabad; S. by Beeder and Bejapoor; and W. by the Arabian Sea. Length, 300 m . ; average breadth, 160 m . The greater portion of the province is an elevated table-land, of an average leight of 1800 ft . above the level of the sea. It is hilly and irregular, especially towards the W., where the Ghauts, crossing it from S. to N., attain a great elevation. In many places singularly shaped, roeky, isolated hills arise; affording admirable situations for the natives' forts or fastnesses. Of these, the most remarkable is that on which the fortress of Dowlatabad is built. Though the provinee has no consider able rivers, the soil is fertile, and the climate favourable to the production of various fruits. Rice is the principal crop and staple commodity; but the peach, strawberry, grape, nee tarine, fig, melon, and orange, are cultivated, and arrive at great perfection. Horses, hardy, but neither strong nor handsome, were formerly reared in great numbers for the Mahratta cavalry. Neither agriculture nor commerce are in a flourishing condition. The inhabitants are chiefly Hindoos about one-twentieth being Mahometans. The Mahratta language is that generally spoken; but the Hindoostanee and Persian are used among the higher elasses. Various architectural peeuliarities distinguish the religious edifiees from those usually found in upper Hindoostan. Since 1818, the greater part of the province has been subjeet to Britain. The pop. is scattered, and small in proportion to the extent of the country.-(Hamilton's East India Gaz.; Picture of India.)

AURUNGABAD, a eity, Hindoostan, cap. of above prov. 180 m . E.N.E. Bombay ; lat. $19^{\circ} 54^{\prime}$ N. ; lon. $75^{\circ} 33^{\prime}$ E. ; in a hollow, in the immediate neighbourhood of an extensive marsh, and of a large tank overgrown with rank aquatie vegetation; both of which, in conjunction with a very variable elimate, render the locality unfavourable to health. It is separated from its prineipal suburb by the Kowlah, across which there are two substantial bridges. When approached from the N., the view of Aurungabad is imposing; its large white domes with gilded points, and its lofty minarets, appearing to rise from amidst beautiful groves; the whole city, with its terraced houses, covering a space of about 7 m . in circum-
where visible. The principal street is about 2 m . long ; hav ing at one end a spacious quadrangle, and near it a handsome modern bazaar. The mosques, caravanseries, and other pub lie buildings, are of good and substantial construction, but, in point of architectural beauty, much inferior to those of Delhi and Agra. One of the most important edifices, and also in the best state of preservation, is the tomb or mausoleum, by Aurungzebe, to the memory of his daughter. Its domes are of white marble, and clustered like those of the Taje Mahal, but inferior in size, fulness, and splendour Originally a small village, Aurungabad, in 1634, became the seat of the Mogul Government, and was afterwards a favourite residence of Aurungzebe, from whom it received its present name, signifying 'the place of the throne.' When the Nizams became independent of Mogul authority, it continued their capital till the invasions of the Mahrattas forced them to remove to Myderabad. It is now the residence of a British political agent, and the head quarters of a battalion of the Nizam's army under British officers. Pop. (1823), 60,000.-(Hamilton's East India Gaz. )

AUSEJO, a tn. Spain, Old Castile, prov. of, and 23 m . S.E. Logroño, on the side of a steep hill. The parish ehurch, townhall, a small castle, an insecure prison, and a group of well-built mereantile and dwelling-houses, form the main body of the town. Manufactures:-coarse linen and oil. Pop. 2050.

AUSPIT'Z [locally named Hustopec], a tn. Austria, prov. Moravia, 20 m . S.S.E. Brïnn. It has a chureh with an aneient altar, a market-place, an hospital, and an almshouse A eonsiderable number of the inhabitants are weavers. The vicinity produces fruit and wine, and an active trade is carried on in grain and cattle. Pop. 3000.

AUSSA, a tn. Abyssinia, kingdom, Adel, l. bank, Hawash, near its confluenee with the lake of the same name, about lat. $11^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $41^{\circ} 40^{\prime} \mathrm{E}$. It was formerly capital of Adel, and long regarded as their principal seat of learning. The irruptions of hostile tribes put an end to its prosperity and independence, and it is now little else than one of the great encampments of the Dankali, and other tribes, where a perpetual fair or market is held, to which large quantities of salt from Lake Assal are brought for sale; and blue calico is in high demand for the caps worn by the married Bedouin females; zinc, pewter, and brass, or copper wire, are bartered for the produce of the soil. It has, however, still a population of from 5000 to 6000 . The inlıabitants are of a tawny eomplexion, with long hair.-The lake of Aussa is a short distance N.E. the town. It is about 14 m . in length, 7 in breadth, and, according to D'Héricourt, is upwards of 260 ft . deep. It overflows during the rainy season, and, when it recedes, leaves a fine deposit, like that left by the Nile.(Harris's Highlands of Ethiopia, vol. i. p. 182; Journals of Messrs I senberg and Krapf; D'Hé ricourt, Voy. dans Choa.)

AUSSEE, two towns, Austria :-1, In prov. Styria, in a mountainous district on the Traun, 2200 ft . above the sea, 53 m . S.S.W. Linz; lat. $47^{\circ} 37^{\prime} \mathrm{N}$. ; lon. $13^{\circ} 47^{\prime} \mathrm{E}$. It has manufactures of nails and ironware, and in its neighbourhood are found marble, alabaster, gypsum, pit-coal, salt, and sulphate of soda. It is particularly noted for the extensive and valuable salt mine in its neighbourhood, the produce of which is obtained partly in the form of rock-salt, and partly in the form of brine. The mine is divided into 11 stories or apartments for the reception of the brine, which is obtained by the admission of streams of water, and is conveyed in wooden pipes to Aussee, 4 m . distant. The annual produee is about 8270 tons. Pop. 1200.-2, In Moravia, cirele of, and 20 m . N.N.W. Olmütz. It is a place of great antiquity, with a church and a synagogue; and in the neighbourhood a palace of the Prinee of Lichtenstein, a splendid edifiee, with a fine park. Pop., of which 739 are Jews, 2000.
ference. It is surrounded by a stone wall with round towers, but is incapable of withstanding a regular assault. The streets are broad, some of them paved, and there are many large and good houses; but signs of rapid decay are every

AUSSIG, a vil. Anstria, cirele, Leitmeritz, in Bohemia, near the junction of the Bila with the Elbe, 42 m . N.N.W. Prague. It lies in the midst of gardens and vineyards, which produce a wine of some celebrity called podskaler. During
the Hussite struggle, it acquired considerable notoriety; and its old Gothic church, with a stone pulpit, a bust of John Huss, and a little Madonna, by the celebrated Raphael Mengs, who was born here, is an object of attraction to the antiquary. Pop. 1759.

AUSTELL (St.), a market tm. and par. England, co. Corriwall. The town is 13 m . N.N E. Truro, and 30 W . Plynouth, beautifully situated on the declivity of a hill. It consists of one principal street, and several smaller, branching from it irregularly, all tolerably straight, paved, well kept, and lighted with gas. The houses are chiefly stone, and in general substantially built ; and the town is well supplied with water. The places of worship are the parish church, adorned with a handsome tower, two district churches, and chapels belouging to the Wesleyans, Baptists, O'Brienites, Socicty of Friends, \&c. Other buildings of note are the new markethouse and townhall in one edifice, and the union poorhouse. The schools comprise a gentleman's boarding and day sehool for classics, mathematics, engineering, \&c., a large national school, two or three minor commercial schools, several ladies' schools, two boarding schools, and two or three dame schools. Coarse woollen cloth is manufactured here to a small extent. There are also two steam-engine manufactories, an iron-foundry in the town, and another at Charleston, $1 \frac{1}{2} \mathrm{~m}$. distant. A large trade is done in clina clay, and stone, exported from the ports of Charleston and Pentewan, for the supply of the Staffordshire potteries, and foreign countries. In the vicinity are a number of extensive and productive tin and copper mines. About 2 m . N.W. the town, there is a remarkable ancient tin mine, called Carelaze mine, a Cornish name, signifying a 'gray rock;' it is a vast excavation, about 1 m . in circuit, and 22 fathoms in perpendicular depth. No record exists of the period when it was first opened, but, according to tradition, it was worked more than 400 years ago. Market-day for corn and provisions, Friday. Several annual fairs.--The parish comprises 11,540 ac., of which 3121 are common or waste. Pop. of par. and tn. (1841), 10,320; (1851), 10,750. -(Correspondent in St. Austell.)

AUSTERLITZ.-1, A small tn. Austria [locally named Slawkow], prov. Moravia, on the river Littawa, $12 \mathrm{~m} . \mathrm{E}$. Brünn. It has a handsome chureh, with sculptures, and a palace with a library and good pictures, some of them by Titian and Rubens. It has also some manufactures, but the most remarkable circumstance connected with this town is the great battle of the same name, fought about $2 \mathrm{~m} . W$. on December 2, 1805, and in which Napoleon gained a decisive victory over the united forces of Austria and Russia. This battle was followed by the peace of Presburg, signed on the 26th of the same month. Pop. 2600, of whom 450 are Jews. -2, A hamlet, Holland, prov. of, and 7 m . E. Utreeht, so named by the French, after the vietory referred to in the preceding article. General Marmont built here, in honour of Napoleon, a pyramid of earth and turf, which still exists. Pop. 220.

AUSTIN, a city, U. States, cap. Texas, on the Rio Colorado, 37 m . above Bastrop, and 140 N.E. San Antonio. It was named after Moses Austin, the first projector of the colonization of Texas. In April 1839, three years after Texas had achicved its independence, Austin was selected as the permanent seat of government for the new state. In April 1840, Austin contained 400 houses and 1200 inhabitants, and since then the population has considerably increased. It is an incorporated town, according to the municipal system of the U. States. The public buildings are not elegant, but are well suited to their various purposes. Conspicuous among them is the president's house, situated upon a hill, and commanding an extensive and beautiful prospect. A Presbyterian church and a Methodist meeting-house have also been erected. In the spring of 1840 , two newspapers were published in the capital of Texas; which, like ancient Rome, is built upon seven hills, in a most picturesque and delightful situation. The streets are generally composed of gravel. Agate and cornclian, of the fincst quality, are found in great abundance about the city and neighbourhood. The Colorado Hills, about 4 m . off, contain extensive quarries of marble, limestone, and granite; and will for many years supply the adjoining country with timber. Pop. of town, exceeding 2500 ; of the municipality, 6186.--(Bonnell's Topography of Texas; Kennedy's Texas.)

AUSTIN (San Felupe de), a post tn., U. States, Texas, cap. Austin co., a place of some trade, on the Brazos river, 125 m. E.N.E. San Antonio de Bexar, and founded July 17. 1824.

AUSTRALASIA, a division of the globe of somewhat indefinite limits, but usually esteemed to comprehend the continental island of Australia, and an unascertained number of others, many of them very little known, lying between lon. $110^{\circ}$ and $180^{\circ}$ E., and from Papua or New Guinea, the furthest N . island of the division, to lat. $50^{\circ} \mathrm{S}$. It includes thus the islands of Australia, Van Diemen's Land, New Zealand, New Caledonia, the New Hebrides, the Mallicollo Islands, Queen Charlotte's Islands, the Solomon Islands, New Ireland, New Britain, the Admiralty Islands, Papua, and the Arru Islands, besides numerous other islands and island groups. The island of Timor, and those lying W. of it, though coming within the general boundary above indicated, belong to the E. or Indian Archipelago, called also Malasia. Australasia is estimated to have an area of $6,096,000$ geo. sq. m., and a pop. of $2,400,000$. It forms one of three portions into which some geographers have divided Oceania, the other two being Malasia and Polyncsia, and corresponds with the Melanesia of other geographers, who have divided Oceania into Malasia, or W. Oceania; Micronesia, or N. Oceania; Polynesia, or E. Oceania; and Melanesia, or S. Oceania.
aUSTRALIA, or New Holland, the largest isl. in the world, or rather a sea-girt continent, lying between the Indian and Pacific Oceans, S. of Asia; between lat. $10^{\circ} 39^{\prime}$ and $39^{\circ} 11^{\prime} \mathrm{S}$. ; and extending from lon. $113^{\circ} 5^{\prime}$ to $153^{\circ} 16^{\prime}$ E.; bounded, N. by Torres Strait, the Sea of Timor, and the islands of Papua, Timor, Flores, \&c.; E. by the S. Pacific; S. by Bass's Strait, Van Diemen's Land, and the S. Pacific; and W. by the Indian Ocean. It greatest length, W. to E., is 2400 m. ; its greatest breadth, N. to S., 1700 to 1900 m . Coast line, 8000 m . ; area, $3,000,000 \mathrm{sq} . \mathrm{m}$. It is divided into two unequal parts by the tropic of Capricorn, and has, consequently, both a temperate and a tropical climate. Although there are numerous spacious harbours on the coasts of Australia, there are few remarkable indentations; the principal are the Gulf of Carpentaria, on the N., and Spencer's Gulf, on the S.; the former extending inland 650 m ., with a breadth of 400 ; the latter extending 180 m . inland, and varying in breadth from 80 to 10 m . On the W. is Slark's Bay, and on the E. Harvey's Bay, neither exceeding 40 to 50 m . in length and width. A ridge of steep, but not lofty, mountains runs along a great portion of the E. coast, at a distance from the sea varying from 30 to 90 m .; while the S. coast, from Cape Leuwin to Spencer's Gulf, presents a low and sandy surface. The N. and W. coasts, so far as they have been yet explored, are also gencrally low, with some moderate elevations at intervals. The interior is also believed to consist of an immense plain, the hilly districts rising from it like islands.

The geology of Australia is remarkable for its simplicity and uniformity. The strike of the rocks and the direction of the principal chain of lills is, with one exception, the same throughout the country, namely N. and S. Tertiary rocks prevail on its S., N., and W. coasts, expanding in the S.E. into a vast tertiary plain, traversed by the Murray and Darling rivers. Other two immense tertiary plateaux oceur on the S. and the N. coasts; the former lining the great Australian Bight, and the latter the Gulf of Carpentaria, and both spreading horizontally for unknown distances into the interior. On the E. coast, palæozoic rocks, basalt, and granite occur in alternate patches along the whole coast from IBass's Strait to Cape Flattery, in lat. $15^{\circ} \mathrm{S}$. ; the last constituting the entire floor of the W. portion of New S. Wales, and extending far into the interior of the continent.

Colonies have been formed by the British at four different points of this great insulated continent, but none of these have been yet pushed further inland than from 150 to 200 m ., so that the interior of this vast country may still be considered a terra incognita. Some individual adventurers have indeed penetrated a considerable way into the interior, but their accounts contain little to tempt followers. Captain Sturt, one of the most recent explorators of the wilds and wastes of the interior regions of Australia, and who, in 1845, penetrated from Adelaide as far as lat. $25^{\circ} 33^{\prime}$ S., and lon $138^{\circ} \mathrm{E}$., describes the country he traversed as consisting of alternate sand-hills and flats, with no trace of vegetation as far as the eye could
reach. 'Passing the level country,' he says, 'we once more found ourselves among sand-ridges, perfectly insurmountable, and so close that the base of one touched the base of another; the whole country sand. The sand-hills are of a fiery rel, and ran, for miles and miles, in parallel rows, with points like the vanishing points of an avenue. I was at length brought up by a stony desert, that stretched beforo us in absolute boundlessness.' All accounts agree in ascribing this sterile and repulsive character to the interior of the country; nor is it much better on many parts of the coast, especially on the S., W., N., and N.W. Captain Stokes, who surveyed these shores in 1837-13, makes frequent remarks in his narrative on the flatness and sterility of the land. It would appear, indeed, that the best portions of Australia have been already located; these being chiefly confined, so far as known, to the S. and E. portions of the island, where there are large tracts of good land, available for the purposes of both the farmer and grazier. Here also the finest scenery is to be met with, composed of picturesque combinations of wood and water, rocky height and deep ravine, such as is rarely to be met with in any other part of the country.

Mountains.-The highest and most extensive mountainsystem yet seen in Australia takes its rise at Cape Wilson, the most S. point of that continent, and runs in a N. direetion through New S. Wales. These mountains, called by the natives the Warragongs, but by the settlers the Australian Alps, comprise three subdivisions-the Liverpool range; the Blue Mountains, commencing about 37 m . W. Sydney; and a third, stretehing beyond the parallel of $32^{\circ}$, which has not yet received any name. The Blue Mountains, so called from their assuning a beautiful blue colour when viewed from a distanee, present some very striking scenery. The heights of the precipiecs, and depths of the ehasms and ravines are tremendous. It appears,' says a writer in the Saturday Magazine, 'as if the earth, from the force of waters, or some violent convulsion, had all around subsided, or been washed away, leaving immense hollows and gulfs, ant exposing to view, to the depth of 2000 ft ., the very ribs of the mountains.' Dwarf trees, and a serubby underwood, which retain their verdaney.throughont the year, cover a great portion of these heights; the remainder consists of naked roek, destitute of all semblance of vegetation, and presenting a singularly dreary and inhospitable appearance. Though formidable from their character, the Llue Mountains do not attain any great height; the highest peak, Mount York, being no more than 3292 ft . The Liverpool rarge presents general features and characteristics similar to those of the Blue Mountains, though not quite so imposing. The highest peaks of this range have been variously estimated at from 4700 to 7000 ft . It presents, however, a number of points besides, from 2000 to 4000 ft . The preeipices and chasms are tremendous here also. 'Narrow, gloomy, and profound,' says Count Strzelecki, 'these stupendous rents in the bosom of the earth are ericlosed between gigantic walls of rock, sometimes receding from, sometimes frightfully overhanging the dark bed of the ravine, and its blaek silent eddies, or its foaming torrents of water.' Many of the highest summits of the Warrarongs, or Australian Alps, are covered with perpetual snow, and, though no measurements have been taken of thern, are believed, from this eircumstance, to reach a much greater height than any of those above named. One of the most remarkable elevations yet ascended by Luropeans is Mount Kosciuszko, which rises to a height of 6500 ft ., and commands a view extending over $7000 \mathrm{sq} . \mathrm{m}$., while immediately beneath the speetator yawns a gulf of 3000 ft . perpendicular depth. This range is continued N . by a series of low, but imperfectly known heights, to Cape York, on Torres Strait, thus forming a connected chain, at no great distance from the E. coast, the whole length of the island, from its most S . to its most N . point. Another range, commencing near the S. coast at Portland Bay, in lat. $3652^{\prime} \mathrm{S} .$, lon. $142^{\circ} 25^{\prime}$ E., after taking a N. course for some time, connects with the Australian Alps by a series of grassy hills. The first have been named by their dis coverer, Major Mitchell, the Australian Grampians; and the latter, by the same authority, the Australian Pyrences. In S. Australia oceurs another mountain-chain, running N. from Cape Jervis to the singular horse-shoe depression of Lake Torrens. Many of the mountains of Australia exhibit evidences of their being extinet volcanoes. Of these, the most remarkable are Mount Gamlier and Mount Lelaak, between the W. bank of
the Glenelg and Riveli Bay. Mount Jehank has five craters each about three-fourths of a mile in diameter, and all filled with water. So far as is known, however, there is no volcano in that country now in active operation, if a bituminous burning hill be excepted, belonging to a range called Wingen, which exhibits a red heat at the depth of about four fathoms, but las no erater, and diseharges no lava. The following are the elevations of a few of the highest known mountains of Australia; they all occur in New S. Wales-Mount Kosciusko, 6500 ft ; Mount Sea View, $6000 \mathrm{ft}$. ; Mount Lindesay, 5700 ft.; Momint Dargal, 5490 ft . ; Mount Canoblas, $4610 \mathrm{ft} . ;$ Mount Mitchell, 4120 ft ; Mount linnabar, 4100 ft ; Mount Bathurst, 4000 ft .

Rivers and Lakes.- $\Lambda$ scareity of fresh water, whether in the form of rivers or lakes, is one of the prevailing characteristics of Australia. Along a coast line of not less than 8000 m ., few rivers of any consilerable magnitude discharge themsel ves into the sea, most of them being absorbed before they reach it while on the S. coast there is not a single water-course to be found from l'ort Lincoln to King George's Sound, a distance of more than 1500 m . Want of water forms not only one of the chief complaints of all the travellers who have sought to penetrate into the interior of the country, but has, in several instances, been the cause of their abandoning their enterprise. Lakes are not scarce, but they are nearly all salt, as are also many of the rivers and springs. Long droughts, which dry up the channels of streams and arrest vegetation, and sudden and violent rains, which eause them to overflow their banks and inundate the surrounding country, are calamities to whieh the agrienlturists of Australia are much exposed. The floods, in particular, are extremely formidable and destructive, rushing down with an impetuosity which nothing can resist, and carrying off at one sweep the entire produce of the larvest. A still more remarkable characteristic of the rivers of Australia is, the circumstance of many of them terminating in marshes situated in the interior of the comntry, thus reversing the order observed in most other lands, by flowing inwards instead of towards the sca.

Rivers.- Imongst the principal known rivers of Australia, exclusive of those more recently diseovered, and to be afterwards mentioned, are the Hawkesbury River, the Richmond River, llunter's River, the Murrumbidgee, Murray, Lachlan, Maequarrie, and Darling. The Hawkesbury River rises in the Blue Monntains, and falls into the sea at Broken Bay, 30 m . N. of Port Jackson. The Riclimond River falls into the sea between 50 and $60 \mathrm{~m} . \mathrm{S}$. of Moreton Bay, and is navigable for small vessels about 70 m . from its mouth. Hunter's river also has its rise in the Blue Mountains, and is navigable for small crait of 30 or 40 tons hurden, for 50 m . from Newcastle, into the harbour of whieh it diseliarges itself. The Murrumbidgee has its origin m a range of mountains about 200 m . S. W. Sydney, in the parallel of $35^{\circ} \mathrm{s} .$, and under the meridian of $149^{\circ} \mathrm{E}$. It is subsequently joined by the Lachlan and Murray, aid ultimately enters the sea through the large marsh, or shallow brackish lake, called Alexandrina or Vietoria Lake, and the lagoon named Coorong. These large rivers are thus rendered useless as a means of communieation from the sea to the interior. The origin of the Murray is unknown, but it is supposed to le formed $\mathrm{k} y$ the junction of two small streams, called the llume and the Ovens, which have their rise in the Warragong Mountains. The Lachlan has its origin in the Cullarin range of mountains, in county Argyle, New S. Wales. The Maequarrie is tormed by the junction of the Fish and Campbell Rivers. This river also takes an inland course, and is finally lost in one of those vast internal marshes which form a feature of internal Australia. The Darling is supposed to be formed by the junction of numerous streams in the interior, to the W. of Moreton Bay. Its waters are perfectly salt, and the banks inerusted with the same substance. It falls into the Murray River 130 n. E. N.E. Adelaide. Besides the rivers described, there are, of lesser note, the Glenelg, Manning, Ilastings, Clarence, and Brisbane. The scenery along the latter streain is said, by Mr. Oxley, to be very beautiful, and the adjoining country well adapted for cultivation or grazing. The recent discoveries of Capt. Stokes have added five new rivers to those previously known, the Fitz-Roy, Vietoria, Adelaide, Flinders, and Albert, all situated on the N. and N.W. coasts. The two last fall into the fiulf of Carpentaria, within 50 m . of each
other. The seenery on the banks of the Albert is deseribed by Capt. Stokes in the most glowing terms. He ascended the river to the distance of 10 m ., and found it to be from 12 to 15 ft . in depth, with a breadth of about 200 yards. Some of the reaches, particularly that called Mope Reach, was found to present one of the most beautiful specimens conceivable of river seenery.

Lakes.-The lakes pessess ne characteristies of any interest, indeed hardly deserve the name, the larger of them being, in general, rather marshes than lakes, depending for their supplies of water on the rivers that flow into them, instead of being themselves the sources of rivers; the consequence is, that they are often so dricd up by absorption and exhalation, as to present the appearance of vast reedy swamps; and even when filled with water, more resemble submerged flats than lakes, with low muddy shores, so soft, and of such extent, as to render the water unapproachable. Sinall lakes are numerous in all the level portions of Australia, but they are all salt, as are also many of the largest, their muddy banks being incrusted with the same substance. An opinion at one time prevailed, and still prevails, though not now so general, that there was a vast lake in the interior of Australia-a theory apparently adopted to account for the inward flow of so many large rivers, whieh were supposed to discharge their waters into this inland sea. Of this opinion, for one, is Capt. Sturt. The idea was supported by the evidence of the natives in the vieinity of Swan liver, who asserted that there was such a lake; and, to give a notion of its magnitude, said that if a boy commeneed walking round it, he would be an old man before his task was completed. There seems now good reason to believe, that this accou:t either refers to one of the marshes alluded to, or is otherwise a gross exaggeration, and that the rivers which take an inland course diffuse themselves, as already mentioned, over vast flats, and finally disappear by being partly exhaled and partly absorbed by the sandy soil. Capt. Stokes is of opinion that the centre of Australia is a vast desert, into whieh all the waters that flow inland are poured, converting it, after heavy falls of rain, into an immense morass or lake, which eventually discharges its surplus waters slowly into the Gulf of Carpentaria. The largest of these swamps or lakes yet discovered, are those of Alexandrina or Vietoria, Jambeling, and Torrens. The first, as already mentioned, is traversed by the Murray. The Dambeling was diseovered in 1843 by Messrs. Lander and Lefroy. It is 15 m . long by $7 \frac{1}{2}$ broad, and is quite salt. It is situated 100 m. S.S.E. Beverley, in W. Australia, and is supposed to be the lake of which the natives in that part of the country speak in such hyperbolical terms. 'I'orrens lies inland from the head of Spencer's Gulf, in S. Australia. It is of a horse-shee form, and is said by. Ar. Eyre to be 400 m . in length, with an average breadth of 15 to 20 m ., but its real extent has not yet been determined. The sheres, aceording to the same authority, are composed of soft mud and sand, in many places coated over with an incrustation of salt, which glitters brilliantly in the sun. In the dry season, Torrens is merely a salt marsh.

Climate. -The climate of Australia, so far as regards the localities touched at, or occupied by Europeans, is, with some exceptions, extremely healthy. That of New S. Wales is particularly so, being perhaps the most salubrious on the face of the globe. The climate may be considered generally as very dry, particularly S. of the tropic of Capricorn, where the amount of moisture is abont equal to that of S . A frica, and the S . parts of S. America; whieh places it resembles, also, in its mean annual temperature. But here, years of unintermpted drought frequently oceur. N. of this tropie, considerably more rain falls; while at the N. extremities of the island, including Cape York Peninsula and Arnhem's Jand, the quantity is equal to that which falls in Ireland and the S. parts of England. It is, however, extremely irregular, and, though heavy, lasts only for a few hours daily. On the W. coast of Australia, S. winds prevail from October to the beginning of April, the commencement of the Austrailan winter, which is eppesed to our summer; June, July, and August being their winter months. In April, the S. winds are interrupted by violent gales from the N. and W., accompanied by heavy rain. On the N.W. coast the winds are more various, but the W. seems to prevail, especially during the months of September, October, November, and Deember. This eoast is exposed also to heavy squalls between E.S.E. and N.E. They are, however, generally of short
duration, and rarely take the mariner by surprise, giving ample warning of their approach by the gathering of heavy clouds and much lightning. On the N. ceast, the E. and W. monsoons blow with great regularity; the E . monsoon setting in generally about the beginning of April, and the W. in October. As might be expected, the temperature of Australia is various, being affected both by geographical pesition and local circumstances. In New s . Wales the average temperature of spring is $65^{\circ} 5^{\prime}$; of summer, $72^{\circ}$; of autumn, $66^{\circ}$; and of winter, $55^{\circ}$. On the N.W. coast, again, Capt. Stokes found the thermometer standing in the month of January at $98^{\circ}$ in the shade on shore, and fluctuating during the day between $98^{\circ}$ and $94^{\circ}$. Capt. Wiekham found the average range of the thermometer on this coast, between tho N.W. eape and the meridian of $120^{\circ}$ E., during the months of May, June, July, and August, to be, on board slip, $75^{\circ}$ in the middle of the day, and $60^{\circ}$ at night.

Mineralogy. - Granite, sandstone, limestone, coal, slate, potters' clay, and sand eminently adapted for glass-1naking, oceur abundantly. Beautiful marbles, suitable for statuary and other ornamental purposes, have also been found in New S. Wales. Copper, tin, and lead likewise abound; but all these metals have been thrown into the shade by the diseovery, in 1851, in New S. Wales, and in 1852 in Victoria, of numerous rich and extensive deposits of gold, eclipsing in productiveness even the previously umrivalled gold regions of California.

Tegetation.- There is mueh yet to learn regarding the vegetation of Australia, our knowledge of it being almost entirely confined to its coasts and maritime distriets. The verdure being perpetual, the forests never exhibit either the varied tints of autumn nor the soft freshness of spring, bitt wear continually a dull, monetoneus hue of olive-green. The flowers, too, are generally without perfnme, though there are several odorifereus plants that scent the air to a great distance; but many of the former are beantifully formed, and exquisitely tinted, although but slort-lived. The forests of Australia are often found differing considerably from each other in their general features and characteristics, and in the prevailing description of tree of which they are composed; some of them exhibiting an agrecable variety of scenery, but most of them having a gloomy and nelancholy appearance, and being difiicult to penetrate, owing to the quantity of scrubby underwoed with which they are choked up. 'Amid the apparent sameness ef the forest,' says Count Strzeleeki, 'may be often found spots teeming with a gigantic and luxuriant vegetation, sometimes laid out in statcly groves, free from thicket or underwood, sometimes opening on glades and slopes, intersected witl rivulets, earpeted with the softest turf, and which lack only the thatched and gabled cottage, with its blue smoke curling amongst the trees, to realize a purely European picture. Sometimes, again, the forest skirts an open country of hill and plain, graeefully sprinkled with isolated clumps of trees, covered with the richest tufted herbage, and enamelled with flowers of varied form and colour ; or it is lost in immense thickets, where innumerable flowering shrubs, and elegant interwoven ereepers, form Lowers as impenctrable and as picturesque as those seen in the forests of Brazil.' In New S. Wales, many of the forests take their names from the predominating trees, such as Stringy-llark Forest, IronBark Forest, \&e.; the former, a gloomy-looking tree, imparting to the woods a dreary and sombre character. Aeacias are extremely cominon, upwards of two hundred kinds having been found, all of them possessing a family resemblance, which distinguishes them from the acacias of the Old and the New World. The Proteas and Lanksias are almest peculiar to New Holland, and the Eucalyptus, Casuarina, and Norfolk Island pine are remarkable for their beauty, and afford valuable timber. The barks of several trecs abound in tanning matter, and large quantities lave been sent to Britain as a substitute for oak bark. Several of the acaeias afford a gum resembling gum-arabic. One of the most imposing trees of the Australian forest is the Eucalyptus glolulus, ealled by the settlers the gum-tree, which often attains a height of 150 ft ., with a girth at the base of from 25 to 40 ft . Most of the trees of this species shed their bark annually; the process is eurious. When the scason arrives, the old bark bursts, splits, and falls off, or is blown off by the wind as it lhangs dangling in the air, and the renovated tree stands forth shining, stem and branches, in a new bark of a
beautiful silvery liue. Nearly all the Eucalypti are called gum-trees, although one species only yields a pure gum, the exudations of some of the others being merely resins. Another species yields a substance which the colonists call manna; it is of two kinds-a pure white, and a pale yellow. It has the taste of a delicious sweetmeat, with an almond flavour; and is so luscious, that much cannot be eaten of it. This substance is mach sought after by the natives, who sometimes scrape from the tree as much as a pound in a quarter of an hour. It appears, however, to be by no means very plentiful. From Eucalyptus Gunni the colonists obtain, by incisions in the bark, a cool, refreshing, slightly aperient liquid, which ferments and acquires the properties of beer. The most remarkable and most beautiful tree of the Australian forest is the fern-tree, which grows to the height of 15 or 20 ft ., when it suddenly spreads out its enormous leaves, each 4 or 5 ft in length, in every direction. These leaves differ none in appearance from those of the common fern, except in size. Intermingling with the other trees of the forest, is seen, at intervals, the tall slender stem of the palm-tree, rising to a Leight of 70 or 100 ft . Palms, however, are limited to the N. and E. shores, where vegetation assimilates more to that of India than to the prevailing character of that of Australia. The lilyworts constitute a marked feature of Australian vegetation; among them are the Xanthoreas or grass-trees, with shrubby stems, somewhat resembling small palms. They bear tufts of long wiry foliage at their extremities, from the midst of which rise very long cylindrical spikes of densely compacted fowers like bulrushes, which furnish valuable fodder for all kinds of cattle; the base of the inner leaves of some species may be used as food, and the inner portion of the top of the trunk is eaten by the aborigines raw and roasted. In the more favoured regions of Anstralia, grasses are abundant and nutritious, presenting pasturages of great extent, and admirably adapted for the rearing of cattle. It is not a little remarkable, however, that notwithstanding the excellence of the climate, and the luxuriance of vegetation, Australia does not produce a single native edible fruit, if we except some insignificant berries, and a kind of chestnut lately discovered. But exotic fruits and vegetables are found to thrive well, and may now be had in New S. Wales in great abundance, and of excellent quality. The fruits comprise all those of the tropies, as well as those of colder climates, and include oranges, lemons, figs, bananas, guavas, pine-apples, \&c. Amongst the culinary vegetables are all those known in the gardens of Europe. Green pease are gathered in winter as well as summer, and the potato produces two crops in the year. Seed-time is from March to June; harvest in November and December. Every species of corn is cultivated with success in the settled districts. The vine, the olive, and mulberry, also thrive well. Tobacco, of good quality, is grown; but being unable to compete with the American, in point of cheapness, some attempts to cultivate it on a large scale were attended with ruin to the speculators. The oat, in a wild state, was met with on the W. coast of Australia by Capt. Stokes, who therefore supposes it to be indigenous to that country.

Zoology.-Of the class Mammalia, three orders are entirely wanting in Australia-the quadrumana, pachydermata, and ruminantia. There are thus none of the monkey tribe in that country; no elephants, rhinoceroses, hippopotami, nor deer; no native hoofed quadrupeds of any kind, nor any native ruminating* animals, all of the latter now there being of foreign introduction. Neither are there any lions, tigers, bears, wolves, hyenas, or any other wild beasts of prey. The native dnimals of Australia are mostly inoffensive; few of them being dangerous to man, either from natural ferocity or from the possession of venomous qualities. Of the ten or eleven

[^3]species of Carnivora that inhabit Australia, and its seas and rivers, one ouly is a land animal-the wild dog. Another is the alligator; the rest are marine mammals, belonging to the seal kind, and comprehending the sea-lion, sea-bear, \&c. As a set-off against the above large deduction from its zoology, Australia possesses several animals peculiar to itself, and of singular physiological structure. It has more than 40 species of marsupials, of which scarcely any congeners occur elsewhere. The largest of these, as well as the largest native quadruped, is that remarkable herbiferous mammal, the kangaroo, attaining at times the weight of 160 to 200 lbs . Its flesh is held in high estimation by the settlers, particularly the tail, which grows to an enormous size. There are many varieties of this singular animal, some of them very small, but beautifully furred; the smallest species is called the kangaroo rat; the largest are locally distinguished by the names of the forester, and the old man. It is said that the kangaroo is rapidly disappearing before the advance of civilized man. Opossums, similar to those of America, are numerous, taking up their abodes in the hollows of decayed gum-trees. Capt. Stokes met with a beautiful specimen on the N. coast, which he describes as being about half the size of a full-grown rat ; its colour and fur resemble the chinchilla. Next to the animals described, wild dogs are the most frequently met with; their appearance is wolfish, ears erect, and colour a reddish-brown. They do not bark, but sometimes yelp, like the common dog. When hard pressed by hunger, they devour each other and, being very destructive to sheep, are eagerly hunted by the settlers. One of the most remarkable animals of this island is the ornithorhynchus, an aquatic, egg-laying mammal, frequenting rivers and lakes, and their margins; with the beak of a duck, and a fur-covered body, in shape resembling that of an otter; length, from tip of beak to that of the tail, 13 inches. It swims well, and, indeed, seldom quits the water, as it crawls with difficulty on land. The foot of the male is armed with a spur like a cock's, through which passes a poisonous liquor, rendering the animal dangerous. Besides these quadrupeds, there are porcupines of two kinds, flying foxes, flying opossums, and flying squirrels, wombats, sloths, the porcupine ant-eater, \&c. Anstralia now possesses a large stock of the domestic animals of Britain, which thrive there remarkably well. The breed of horses is excellent. Horned cattle, sheep, and swine, also prosper, the first attaining a great size; while the slieep improve in fleece, and their flesh in flavour. Neither goats, asses, nor mules are reared to any extent.

The birds of Australia are numerous, and in great variety ; and comprelend many beautiful, and some remarkable kinds. Eagles, some very large, measuring 9 ft . from wing to wing; falcons, and various other species of lhawks and owls, are numerous; and so also are parrots, perroquets, and cockatoos, many of them of the most beautiful plumage. Pigeons of various species, and the most delicate and varied hues, frequent sundry parts of the island. Vultures are entirely wanting, as are likewise the common domestic fowls, there being nearly a total absence of the gallinaceous birds. All the tribes of usual singing birds are also absent. The largest Australian bird is the emu or cassowary, excelled in size by the African ostrich alone, and attaining a lieight sometimes of more than 7 ft ., 5 and 6 being the average. It is widely diffused over the S. parts of Australia, but is rapidly disappearing before the encroachments of civilized man. Bustards are not uncommon, some of them attaining a weight of from 15 to 18 lbs . A remarkable bird was met with on the N. coast by Capt. Stokes. 'The large tumuli,' says that intelligent navigator, 'noticed by Capt. King and others, and supposed to be raised by the inhabitants, are the works of a bird; some of these tumuli are 30 ft . long, and about 5 ft . high. The edifice is erected by means of the feet, which are remarkable both for size and strength, and a peculiar power of grasping; they are yellow, while the body is brown. Nothing can be more curious than to see them hopping towards these piles on one foot, the other being filled with materials for building.' They resemble moorfowl in appearance, though of smaller size. They deposit their eggs in these mounds, where they are hatched by the heat generated, in part, by decomposition, and from which they issue in a state of maturity, which renders them independent of parental tendance. This bird is gallinaceous, and the name which has been given it is Mfegapodius tumulus.

From the size of its nest, whieh is spoken of with astonishment by Capt. Cook, it was presumed to be a bird of enormous bulk. Birds of Paradise abound in the N. parts of Australia, where they are shot by the natives with blunt arrows, in order to avoid injuring their elegant plumage; they are then skinned and dried for sale. The most eominon birds belong to the honey-sucking family, and many of the warblers are unusally beautiful; the two most magnificent being the rifle bird, and the ring oriole. The spotted grossbeak, a splendid bird, and the menura lyra or lyre-bird, with its magnifieent lyre-shaped tail, are natives of this land of extrordinary natural productions. Quails are numerous, and supply the place of partridges to the sportsmen of the antipodes. The gigantic crane may frequently be seen on the borders of the rivers, lakes, or swamps, which also abound in ducks, teals, and widgeons, affording many a savoury dish to the hard-wrought settler. Other aquatie birds are, the peliean, goose, and that rara avis of the Latin poets-the black swan, a bird of the most stately form and graeeful carriage, to be seen in great numbers on the lagoons of New S. Wales.

The reptiles of Australia are pretty numerous, though only a few are dangerous. The most formidable is the alligator, which abounds in the N. They were seen in great numbers in the rivers Adelaide, Albert, and Vietoria, discovered by Capt. Stokes. Scrpents are numerous, and some of them extremely venomous. Those most commonly seen in New S. Wales are the diamond suake, the black, the gray, and the brown, the whip, and the yellow snakes. In the N. parts of Australia they are more numerous, of greater variety, and of larger size. The diamond snake, the largest of those named, attains a length of from 10 to 15 ft ., and girth of 13 to 15 inches; it is not venomous, but, owing to the size of its fangs, its bite is dangerous. It is beautifully marked, and obtains its name from being eovered with a series of diamondshaped spots, of various brilliant colours. The black snake, whiel varies in length from 3 to 5 ft ., is poisonous, as are also the gray, brown, and whip snakes; but the most deadly is the yellow snake, the bite of which is almost instantly fatal. This reptile is also the ugliest of the tribe; it has a large flat head, a malignant eye, and emits a strong, offensive fetor. Lizards and frogs are also numerons in various parts. Scorpions, centipedes, and tarantulas do not exist in sueh numbers as to eause inconvenience or discomfort to the settler.
The seas, rivers, and lagoons, abound in fish, of numerous varieties, and other aquatie animals, many of them peeuliar. Bream, nearly as large as the sea-fish of the same name, are plentiful in the rivers; and in the lagoons are caught enormous eels, some of them weighing 20 lbs . Cod-fish are abundant on the coast, and of a large size, being not unfrequently caught of the weight of 50,60 , and even 90 lbs . Whales and seals frequent the coasts and eoves. On the N. eoasts are extensive fisheries of trepang, mueh visited by native traders from the Indian Arehipclago. The seas are likewise frequented by several species of sharks, and by sea-serpents of great size. Insects are numerous, and in some respects resemble those of Africa and Asia. Loeusts are plentiful in some parts. Of bees there are three kinds, all destitute of stings. Ants are numerous, both in numbers and species, one kind being an inch long; and their hills attain a height of 13 ft ., with a width, at the base, of 7 ft ., gradually tapering to a point. Spiders are very large; and caterpillars, in some seasons, blight the finest erops.

Aborigines.-The Australian natives belong to the Papuan negro race, and are of a sooty brown or ehoeolate colour ; they are of rather less average height than Europeans, ranging from 5 ft .4 mehes to 5 ft .7 inches, and frequently falling below the lowest of these measurements; the head is small, the trunk slender, the arms and legs of a rounded and museular form, and the whole figure, in general, very well proportioned, but frequently marred by the protuberance of the abdomen. The lair, which they wear very long, is jet blaek, and for the most part lank and eoarse, though in some individuals it is soft and eurling; if attended to, it might be made ornamental to their persons, but, being utterly negleeted, it beeomes matted and greasy, the owners using it as a towel to wipe their hands with. The most remarkable feature, however, of the Australian savage is the eye, which is large, full, penetrating, and singularly eloquent, expressing the emotions and workings of the mind with vivaeity and energy. The women are not, in
general, so well formed as the men-a circumstance attributable in some measure to their being much employed in digging, and to the eustom of carrying their children on their shoulders. Both parents are fond of their offspring, and treat them with the greatest indulgence. Some of the points alluded to are illustrated in the aecompanying woodeuts, all representations

8. AUSTRALIAN ABORigines.-From Angac South Australia Illustrated.
of S. Australians. No. 1 is a warrior of the Mount Barker tribe; he is painted with narrow stripes of red ochre that reach quite round his body; his shield is made of bark. No. 2 is a woman of the Parnkallah tribe, Port Lineoln, with her ehild on her shoulders, as mentioned above. The little one holds on by the hair of its mother's head. No. 3 is a boy amusing himself with a reed spear. In this figure, the singular protuberance of the abdomen, for which the Australians are so remarkable, particularly when young, is very observable.

S. AUstikalian aborigines.-From Angus' South Ausiralla Illustrated.

No. 4 represents a man of the Nauo tribe from Coffin's Bay, W. of Port Lincoln. He wears a covering of emu feathers, with ornaments of shaved sticks in his hair, which is bound round with spun opossum fur; in his hand is a womera or instrument for throwing the spear. His breast is marked with deep incisions, eut horizontally aeross the breast; these are filled with clay, which prevents them healing, and renders them hard and horny, resembling tubes of gristle, which project from the skin, and produce a repulsive disfigurement of the body. No. 5 represents a woman of the Milmendura tribe, on the Coorong, equipped for travelling, with her net made of bulrush fibres and her rush-basket slung at her back; she is also provided with the digging stick or katta, and earries fire in her hand between two pieces of bark. Her garment is the eireular mat made of reeds, called paingkoout. No. 6 is a man
of the Milmendura tribe, wearing the sea-wced cloak, the most complete and perfect garment to be met with among the S . Anstralian natives. It resembles a coarse matting, the long ends of the grass-like weed forming a graceful fringe at the bottom of the garment. This dress is of rare occurrence, and only manufactured during the inclement season to protect the individual from the weather on exposed sheres. No. 7 is an old man of the Moorundi tribe, on the Murray. The form of the Australian is less massive than that of the African negro, but he is much more swift and graceful in his movements, and is much more agile and adroit; 'and when beheld,' says Count Strzelceki, 'in the posture of striking, or throwing his spear, his attitude leaves nothing to be desired in point of manly grace.' Their speech, meaning particularly the natives of New S. Wales, says the same authority, possesses all those felicitous combinations of syllables which constitute a highly sonorous and euphonious language. Both the physieal an I intellectual qualities of the Australian aboriginal have been rated much too low, the deseriptions hitherto given of him having been apparently from specimens found amongst the debased and degenerate races in the neighbourhood of Sydney, corrupted by the contact of civilization, which, instead of improving his condition, has taught him new vices, and reduced him from the independence of savage life to a state of starvation and beggary. In form he is by no means the miserablelooking creature he has been so frequently represented, neither are his perceptions nor intellectual capabilities at all so limited as they have been described. There is, as might be expected, great diversity, both as regards personal appearance and character amongst them; but we have the evidence of Capt. Stokes, and other recent writers, to show that both have been unwarrantably disparaged. The former, who circumnavigated Australia, and who thus came in contact with a great varicty of tribes, frequently speaks of them as being a fine race of men, and the tribes about Shoal llaven and the small S. ports, he describes as 'good-looking, useful fellows, of whom much may hereafter be mads.' A curious and interesting manifestation of native talent was found by this intelligent navigator in Depueh Island, on the N. coast; this was a series of drawings of animals, \&e., on the smooth surface of the rocks. 'Mueh ability,' says Capt. Stokes, 'is displayed in many of these representations, the subjects of which could be discovered at a glance. The number of specimens was immense, so that the natives must have been in the habit of amasing themselves in this innocent manner for a long period of time.' When to this the fact is added, that on the same coast, the canoes of the natives, according to the same authority, are neatly and artistically made, it is irrational to insist on entertaining a mean opinion of their capacity. In common with other savages, but perhaps in a higher degree than any, not excepting the red men of America, they possess singularly acute physical perceptions, which they exercise in a way that would appear to be incompatible with a very low condition of the intellectual facultics. Of their extraordinary sharpness of rision, Capt. Stokes records an interesting in-stance:-Two natives were employed to track the footsteps of the strayed child of a settler, a boy of six or seven years of agre, which they did for many miles, tracing the tiny footprints through brushwood, over fallen leaves, and large spaces of grass-covered ground, till the object of their search was found. Not the least interesting feature in this case was the joy which these poor savages expressed on discovering the strayed child. Capt. Stokes mentions another instance of their singular acuteness of vision, where a particular individual, a settler, was distingnished and named by a native from his footprint, subsequent inquiry confirming the accuracy of the recognition. In the following slightly abridged quotation from the same author, we have an account of an aboriginal whose conduct and bearing are alone sufficient to elevate the character of his whole race in the eatimation of civilized man :- 'We had just completed our surveying operations,'says Capt. Stokes, 'when two of the boat'a crew came to report a visit from one of the natives; they said their sable visitor came to them without any enticing, no offers of red or blue handkerehiefs, or some gaudy bauble that seldom fails to catch the eye of the savage, and without the slightest indication of fear. We hurried down to see this marvellously confiding native, whom we found coming up the hill; he met us with all the confidence of an old acquaintance. Ilis first act of civility was to show

Mr. Tarrant and myself an easy road to the beach; and I shall never forget, as he preceded us, or rather walked by our side, yielding the path, with natural politeness, to those he seemed to regard as his guests, liow wonderful was the agility he displayed in passing over the rocks, sometimes coming down the face of one almost precipitous without the least a]parent effort. Ilis height was about 5 ft .8 inelies, his forehead was reinarkably high, his perception very quick, and his utterance gentle and slow. Hlis extraordinary confidence in us commanded the respect of us all.' As already remarked, there is, however, great diversity in the characters of the different tribes, as well as in their social condition; while many of them are mild, intelligent, and inoffensive, some are fierce, vindictive, and generally in a state of the rudest harbarism. Of this deseription are the natives inhabiting the vicinity of Cape Villaret; these savages, unlike the more advanced tribes, who wear cloaks made of opossum skins, go entirely naked, with the exception of a coarse grass mat round the waist; their spears, also, are clumsy and ill-shaped. Neither is there now any doubt that the native Australians, or at least some of the tribes, indulge in cannibalism. Jlaydar says that he has on several occasions scen human flesh in their possession, and that he was told that they make a point of eating certain portions of their enemies killed in battle. Infanticide also is practised to a great extent, arising from the extreme difficulty the mother finds in rearing lier offspring.

They have several curious superstitious beliefs and observances. One of the most extraordinary of the former is, the belief that white men were their fellow-countrymen in a former state of existence. Acting on this belicf, a party of natives regularly visited a scttler twice a ycar on account of his resemblance to a deceased relative. On these occasions, the settler's kindred, as these poor savages thought themselves, travelled a distance of 60 m ., and had, besides, to pass through an enemy's country. The Australians have a superstitions horror of approaching the graves of the dead; they are averse even to speak of them, and when they do, it is always in a whisper. They stand, also, in great awe of the noises of the forest when agitated by a tempest. From the reports of the Commandant at the aboriginal settlement on Flinder's Island, it appears that the natives are making a gratifying progress towards civilization, and becoming expert in some of the industrial arts. 'In road-making,' says onc of these reports, 'they are complete adepts; they are fully equal, in this kind of labour, to the most experienced of the white men in the settlement, and for celerity of movement are greatly superior. In liusbandry they had also made great progress, preparing the ground for, and planting their own potatoes. Several of the younger male members of the establishment had been put to different trades, and were making rapid proficieney; one youth, who wrote a fair hand, was employed in the Commandant's office as a clerk or copyist, and another as a messenger. Nor were the females behind the males in aptitude. They had become expert needlewomen, and had attained great proficiency in the art of manufacturing French net. In regard to the domestic arrangements of their dwellings, they were found to be fully equal to a large majority of white women, and to many much superior. Their culinary utensils were kept clean, and were tastefully arranged; they washed their husband's linen, cooked, baked bread, and performed all the ordinary domestic duties of civilized life with judgment and propricty. Some of the more intelligent of the men were employed as police, and were found perfectly efficient in all respects. On one occasion, several of these aboriginal police were despatehed in searel of a conviet who had absconded; they diseovered him, brought him back to the settlement handeuffed, and eafely lodged him in the jail. Unfortunately, our relations to the aborigines are not all of this satisfactory character. Violence and bloodshed have marked the contact of the two races. The savage, driven from his lunting grounds, and deprived of subsistence, commits depredations on the flocks of the settler, who, in return, puts the savage to death when and wherever he meets with him; the latter retaliates by murdering the white man when opportunity offers, and a war of extermination is the result. From this fierce and sanguinary spirit, some of the most atrocious scenes have arisen that can well be conceived, the greater turpitude, and greater recklessness of human life and human suffering, being almost always with the whites. It is but pro-
per to add, that the British Government has ever shown the intmest anxiety for the protection and well-being of t!e native. The despatches of Lord Glenelg, while colonial secretary, to the governor, and other public officers of New S. Wales, are filled with injunetions to these funetionarics to use every means in their power to protect the native from the violence of the settlers, to conciliate him by ferbearance and gentle treatment, and to provide for his wants. The aborigines are declared to be British subjects, and as such entitled to the protection of the laws, and to all the rights and privileges pertaining thereto. The murder of a native to be considered in the same light as the murder of a white man, and the same consequences to attend the perpetration of the crime, by whomsoever committed. Acting on this principle of justice, seven men, all convicts and servants of settlers, were harged at Sydney in the year 1838, for the murder of 22 natives, men, women, and children, whom the ruffians led ont, tied together by a rope, to a solitary place, and assassinated, one after the other, burning the bodies afterwards.
The native Australians possess no regular habitations, being gencrally on the move in search of food; but some places along the coasts, where they can obtain a constant supply of fish and oysters, they construet such huts as those represented

in the accompanying woodcuts. No. 1 is a hut of the natives of Jervis Bay. New S. Wales. It is a superior structure to that which follows, bearing out the opinion held as to the greater intelligence of the aborigines of the E. parts of Australia. The rative at the door of the hut is procuring fire, by

Colonies.-The colonies established in Australia are, S. Australia, W. Australia, New S. Wales, and the settlement of Victoria, Port Philip or Australia Felix, and Cooksland or Moreton Bay. A scttlement, called N. Australia, was formed some years since, but was abandoned in 1847, after an outlay by the Government of opwards of $£ 15,000$.

There are two rival rontes to Australia, the E. and the W. The one by the Isthmus of Suez, and the other by the Istlimus of Panama. The latter is more direct, and shorter than the former by 1798 m. ; the distance by Suez and Singapore being $14,488 \mathrm{~m}$, while that via Panama is only 12,690 . The distance by the Cape of Good Hope to Sydney, is $13,880 \mathrm{~m}$.; being 1190 m . more than that by Panama, which is thus the shortest of the three.

Commerce, de.-The trade of Australia is still only in process of being developed, many articles not being yet produced in sufficient quantity to admit of extensive export. The commerce is, however, already considerable, and is rapidly extending; and, with the increase of population, becomes every year. more important to Pritain, whence the colonists derive their supplies of manufactured goods. Particulars respecting the commerce of Australia will be found in articles on the separate colonies. Here it may be noted, generally, that of late years. copper ore, goll, and wool have formed important items of export. After gold, wool is the staple commodity. The extraordinary increase, from 1830 to 1853 , in the quantity of this article produced in Anstralia, and exported to Creat Britain, is shown in the following table:-

| Year 1830 | 1810 | 1815 | 1851 | 1852 | 1853 |
| :--- | :---: | :---: | :---: | :---: | :---: |
| Lbs. $1,967,309$ | $9,721,423$ | $24,177,317$ | $35,802,831$ | $.37,567,523$ | $40,861,427$ |

Quantities of the Cuief Articies Exported from Australia into the United Kingdom in $1 \times 51-18: 3$.

History and Discovery.-The first account given of Australia was by Torres, a Spaniard, who passed through the strait that now bears his name, between Papua and Australia, in the year 1606 . Between this period and 1628 , a large portion of the coast line of Australia had been surveyed by various Duteh navigators. Between 1684 and 1690, Dampier explored a part of the IV. and N.W. coasts, to which diseovery had hitherto been confined; but, in 1770 , Cook extended it to the E. coast, which he carefully surveyed. IIe was followed by Bligh in 1789, who carried on a series of obscrvations on the N.E. coast, adding largely to the knowledge already obtained of this new world. Colonists had now arrived on the soil, and a penal settlement was formed (1787) at Port Jackson. Since then, various adventurers, beth by land and sca, lave been endeavouring, with more or less success, to increase the amount of information regarding both the interior and the coasts of Aus-
rubbing together two pieces of grass tree. The grass sticks are of two kinds, hard and soft. The soft piece is held firmly by the feet, whilst the hard one is rubbed between the hands, with the point inserted into the soft piece. No. 2 is a hut of the Milmendura tribe, built on the shores of the Coorong, a lagoon in S. Australia, S. aud W. Lake Alexandrina or Victoria. On these bleak shores, the huts are built facing the N.E., in order to shelter them from the prevailing S . and W . winds.
tralia. Amongst the former are, Mr. Oxley, Messrs. Howell and Hume, Capt. Sturt, Major Mitchell, Mr. Earle, Count Strzelecki, Capt. Gray, Messrs. Lander and Lefray, Dr. Leichardt, and Assistant-Surveyor Kennedy, who was murdered by the natives, when exploring the course of the Victoria, in 1848. Amongst the more eminent navigators, besides those already named, who have explored the coasts of Australia, are, Capts. King, Dass, and Flinders; and, in recent times, Capt.

Stokes, to the latter of whom we are, as the reader will have perceived, indebted for much of the newest and most interesting information contained in this article.-(De Strzelecki's Physical Description of New S. Wales and Van Dicmen's Land; Stokes's Discoveries in Australia, \&ic.; Dutton's S. Austràlia and its Mines; Government Returns regarding Australian Aborigines; Martin's British Colonial Library; James's S. Australia; Butler's Mandbook for Australian Emigrants; Sturt's Expedition into Central Australia, 1845; Jukes's Sketch of the Physical Structure of Australia.)

AUS'TRALIA FELiX. See Port l'mlip.
AUSTRALIA (Eastern), or New S. Wales, the E. part of Australia, S. of lat. $26^{\circ} \mathrm{S}$. , and E. of lon. $141^{\circ} \mathrm{E}$; bounded, N. by N. Australia, W. by S. Australia, S. by Bass's Strait, and E. by the Pacific; greatest length about $900 \cdot \mathrm{~m}$., and greatest breadth about 750 m . This large district is now divided into-1, Cooksland, or Moreton Bay, comprising the N. portion, S. to lat. $30^{\circ}$ S. -2 , New S. Wales proper, or the middle district, the oldest colony in Australia, from lat. $30^{\circ} \mathrm{S}$. to Cape Howe, lat. $37^{\circ} 30^{\prime}$ S.-3, Australia Felix, Port Philip, or Victoria, W. of Cape Howe, S. of the rivers Murrumbidgee and Murray, and E. of S. Australia. Sce New S. Wales, Cooksland, and Port Philip.

AUSTRALIA (North), that part of Australia lying N. of lat. $26^{\circ} \mathrm{S} .$, and E. of lon. $129^{\circ} \mathrm{E}$. ; bounded, N. by the Indian Ocean; E. by the Pacific, on which side it is fringed by the Great Barrier Reef (which see) ; S. by E. and S. Australia; and W. by W. Australia; greatest length, W. to E., about 1500 m. ; greatest breadth, N. to $\mathrm{S} .$, about 1000 m . On the N . shore is the immense Gulf of Carpentaria, about $400 \mathrm{~m} . \mathrm{sq}$. and in the W., the Gulfs of Van Diemen and Cambridge. Of this large tract of country comparatively little is yet known. Not a single permanent settlement exists upon it; the hot unhealthy Government station at Port Essington, on Coburg's Peninsula, Arnhem's Land, notwithstanding the great hopes that were formed of it, having been abandoned in 1849. For what is known respecting $N$. Australia, the reader is referred to the articles Arnhem's Land, Port Essington, Cape York, Carpentaria (Gulf of), Adelaide River, \&c.

AUSTRALIA (Soutn), a British colony, so called from occupying an extensive region on the S . shore of the Anstralian island continent, between lat. $26^{\circ}$ and $38^{\circ} \mathrm{S}$., and lon. $132^{\circ}$ and $141^{\circ}$ E., and bounded S. by the Southern Ocean, E. Victoria, N. unocenpied and almost unexplored territories, and W. Western Australia; area, $300,000 \mathrm{sq} . \mathrm{m}$. The coast, about 1500 m . long, is generally low and of desolate aspect, but is occasionally skirted by low sandhills, and towards its E. extremity rises into rocky cliffs of sandstone, covered with wood, and rising to the height of 600 ft . to 800 ft . It is lined by numerous islands, all small except that of Kangaroo, and is remarkable, particularly in the S., for the number and depth of its indentations, being penetrated from $S$. to N. by the large gulfs of Spencer and St. Vincent, separated from each other by Yorke Peninsula, and containing, on the S.W. shore of the former, the excellent harbour of Port Lincoln, and, on the E. shore of the latter, Adelaide, the rising capital of the colony. A large portion of the interior consists of stony barren tracts, often so completely destitute of vegetation as to present all the appearance of a desert waste, and apparently doomed, from the want of water, to remain for ever unfit for human habitation. Still, after deducting the waste, large tracts remain, some of tolerable fertility, covered with wood or scrub, or somewhat scanty grass, well adapted for extensive sheep-walks, and others of admirable fertility, capable of raising all kinds of grain and fruit.

The surface is traversed by several mountain-ranges, the highest summits of which scarcely, if it all, exceed 3000 ft . Of these, Mount Lofty, commeneing at Cape Jervis, which forms the E. entrance of the Gulf of st. Vincent, skirts the E. shore of that gulf for about 40 m ., attaining the height of 2334 ft ., and then continnes N. into the interior, where it seems gradually to descend, but its course has not been traced. Its principal summits are-lazor 13ack, 2992 ft ., in lat. $33^{\circ} 30^{\prime}$; immediately N. of it, Mountain Bryan, 3012 ft ., with its celebratel Burra-Burra mine; and still farther N., about lat. $32^{\circ} 40^{\prime}$, Black Rock Hill, 2750 ft . Ncar the head of Spencer Gulf Mount Lofty throws off an arm nearly at right angles, which, under the name of the Gawler liange, stretches nearly due
W., rising gradually as it proceeds, and makes a sudden bend N.N.W. Its extreme height appears to be about 2000 ft . It is singularly rugged and barren. On the l. bank, and near the mouth of the Murray, a range of moderately elevated heights proceeds S.S.E., skirting the coast to its extremity near Cape Northumberland. Throughout these ranges the existence of volcanic agency at a former period is everywhere apparent, and several distinct craters can be traced. The higher summits are usually composed of granite, sienite, porphyry, greenstone, and other igneous rocks. On the lower slopes slate usually prevails, but both on them, and at still bigher elevations, a ferruginous sandstone is largely developed. Among the mountains E. of Gulf St. Vincent primitive limestone, often in the form of a beautiful white marble, is very abundant. Throughout these formations, and more especia!ly in veins of quartz penetrating the clay-slate, a great variety of valuable minerals have been found, including copper, which has already been worked to a considerable extent, and yielded most profitable returns, argeutiferons lead, mangancse, zinc, and iron. Gold also exists, but has not yet been found in such abundance as to entitle S. Australia to rank as a gold-field.

Almost the only stream within the colony which deserves the name of river is the Murray, which enters the colony on the E., in lat. $34^{\circ}$, flows first circnitonsly W., and then S. into the extensive lagoon called Lake Victoria, communicating with Encounter Bay. Though the largest river of S. Australia, it would, in well-watered countries, rank as a comparatively insignificant stream, but its great importance here cannot easily be over-estimated, more especially since it has been ascertained that during the rainy season it is navigable by steamers through its whele course within the colony. Slmost all the other streams are, for the greater part of the year, merely chains of ponds. Lakes, both salt and fresh, are numerous, but scldom large. The shallow lagoon of Victoria or Alexandria has been already mentioned. The only other desersing of notice, as forming a remarkable physical feature, is Lake 'Torrens, a shallow basin, which curves from S. to N. in the form of a horse shoe, for at least 400 m ., with a breadth varying from 20 m . to 30 m .

The climate is hot, but salubrious, and has proved by no means trying to European constitutions. At Adelaide, in the summer months of December, January, and February, the maximum temperature is about $103^{\circ}$, the minimum about $65^{\circ}$. In July, the depth of the Australian winter, the maximun is $60^{\circ}$, and the minimum $48^{\circ}$. The surface being much more pastoral than agricultural, wool has hitherto been the staple product; but all the ordinary grain-crops, maize, and potatoes, grow well. The vine finds both a congenial soil and climate, and many varieties of fruit, including melons of uncommon size and quality, are becoming abundant. By far the most important export is copper, which, in the three years ending 5th January, 1854, amounted as follows:-Copper ore (1851), 4128 tons; (1852), 8582 tons; (1853), 2677 tons: regulus of copper (1851), 186 tons; (1852), 401 tons; (1853), 36 tons: copper unwrought (1851), 760 tons; (1852), 629 tons; (1853), 462 tons: copper partly wrought (1851), 219 tons; (1852), 372 tons; (1853), 581 tons. The great falling off in 1853 is accounted for by the greater attraction of the Vietoria gold-fields. The next most valuable export is wool, which, in the last of the above years, amounted to $3,339,743 \mathrm{lbs}$; the declared value of imports was $£ 1,182,455$. The revenue of 1851 was $£ 169,469$. In 1853 the population amominted to 70,000. For administrative purposes South Australia is divided into 11 counties. As a colony it was founded by the South Australian Company in 1834 , but not properly established till 1837.

AUSTRALIA (Western), in the most extended sense, that portion of Australia W. of lon. $127^{\circ}$ E.; bounded, E. by N. and S. Australia, and N., W., and S. by the Indian and S. Pacific Oceans. It lies luetween lat. $13^{\circ} 45^{\prime}$ and $35^{\circ} 10^{\prime} \mathrm{S}$.; lon. $112^{\circ} 40^{\prime}$ and $127^{\circ}$ E. Of this vast territory little is known. Its interior has never been visited, and even its shores have only been partially explored with any degree of minuteness. Its principal bays and gulfs are, Cambridge Gulf, King Sound, Exmouth Gulf, and Shark Bay, all on the N. and W. coasts, there not being a single gulf of any extent on the S. coast, as far as yet known. The principal capes aro-on the S.W., Cape Lecuwin; on the W., N.W. Cape;
and on the N., Capes Leveque, Voltaire, Bougainville, Talbot, and Londonderry. The coast is everywhere, but especially on the N. and N. W., fringed with coral reefs and islets. N. of lat. $18^{\circ} \mathrm{S}$. it is, as a whole, high, frequently rocky, and at times well wooded. From lat. $18^{\circ}$ to $26^{\circ} \mathrm{S}$., it is generally low, sandy, and mostly barren, though here and there rocky hills, patches of grass, and thiek mangroves are met with. The remainder of the coast, including the whole of the colony of W. Australia, is elevated, with some intervals of low sandy shore; in some parts it is barren, but in many it is well wooded. The only part of this portion of Australia known with any degree of aecuracy, is the colony above referred to.
W. Australia (Colony of ).-In a more restricted sense, the name W. Australia is applied to a British colony on the S.W. coast of Australia, founded in 1829, between lat. $30^{\circ} 30^{\prime}$ and $35^{\circ} 10^{\prime} \mathrm{S}$.; and lon. $115^{\circ}$ and $119^{\circ} 35^{\prime}$ E., occupying a space of 300 m . N. to S., and about 160 or 170 E. to W., with a coast line of about 600 m . Its first appearance is not very inviting; dull, green-looking downs, baeked by a slightly undulating range of hills, rising to nearly 2000 ft . high, are the chief natural features. It eonsists of 26 counties, mostly of pretty regular form, lying compactly together, and varying from about 40 to 70 m . in length, and from 30 to 45 in breadth. The land here generally is not remarkable for fertility, the entire territory containing, perhaps, a greater quantity of positively bad land than any other of the Australian colonies; but, with manure and proper cultivation, very good grain may be produced. The weight of the wheat hitherto grown has been more than 70 lbs . per bushel, and its quality generally as good as that of S. Australia. Soil, upon which sheep have been folded, produces on an average about 20 bushels per acre, but it might be mueh inereased. A great deal of barley is grown. Oats will not grow well, and the climate is unsuited to flax. The herbage is scanty, and the average soil would keep about one sheep to 5 ac.; but there is the advantage of a supply of water throughout the year, remaining in pools or lakes, sufficient for the pastoral system, and for the climate generally. The vine, fig, and olive, are beginning to be extensively cultivated in the colony. Grapes and currants of every species also thrive, and a great deal of wine has been made from the former for the consumption of the colony. The quantity of vineyard already planted is 290 ac . The live stock of the colony, in 1848 , was estimated at 116,570 head; but there is reason to believe that it much exceeds this, many of the settlers who had considerable flocks having refused to give returns, while others made ineorreet ones. With the exception of cinnabar, which has been found in masses on the surface of the ground, in various places, no metalliferous ores have yet been discovered within the colony. Coal of good quality has been found, and, from the reports of the geologist employed by the Government, it appears that fields of great extent may be calculated on. Very little trade is carried on from this colony to S. Australia or New S. Wales, but there is an active communication with Singapore and the Mauritins. To the latter place, the exports are sheep, bullocks, and potatoes. The principal export of the colony is wool. It has, however, a less average market-price in Britain than the wools of the other Australian eolonies, partly from its being less known, and partly owing to inferior care bestowed on getting it up, from want of labour, though, intrinsically, it is quite equal to any of them. Its production has greatly inereased, and there is a capacity of almost unlimited extension. The next most important artiele of export is sandal-wood, the markets for which are Singapore and China. In 1846, there were only 32 tons of this wood shipped from the colony; in the following year the quantity amounted to $370 \frac{1}{4}$ tons, and would have been much larger had the colonists possessed the means of eonveying the wood which had been felled to the port. There is likewise an available supply of shipbuilding timber, whieh grows quite close to the sea; it is analogous to Honduras mahogany, is of a great size, possesses the peculiar property of resisting the sea-worms, and is not apt to split or warp, while at the same time it is more easily worked than any other wood in Australia. It has been used in the colony for building small vessels, and also for rafters, \&c., in house-building, being impervious to the white ant. A ship-load was supplied to the Admiralty, under contract, last autumn (1848), and was very highly
approved of. It is confidently expected that when the value of this timber, the jarrah of the colonists, becomes more widely known, it will materially promote the progress of the colony, which hitherto has not been very rapid; while, in some respeets, there has been a positive retrogression. In 1853 the only item of export to the United Kingdom was wool, and that only to the amount of 24,059 lbs., though in 1851 it had attained the amount of $368,595 \mathrm{lbs}$., and in 1852 that of $327,696 \mathrm{lbs}$. The total imports in the same year, amounting to $£ 100,917$, consisted chiefly of haberdashery, beer and ale, cotton, woollen, and silk goods, iron, steel, hardware, and cutlery, leather, soap, and candles. In 1853 the quantity of land alienated was $1,332,303$ acres, and the quantity surveyed and open for settlement only 21,600 acres. In 1849 the tonnage entered was 7592 tons, and cleared 8145 tons; in 1850 the entered was 15,988 tons, and the cleared 14,748 tons. For administrative purposes the colony is divided into 32 counties. The government is similar to that of the other Australian eolonies. The most important part of the colony is the Swan River settl ment, founded in August, 1829, by Captain Stirling, who was appointed governor. Freemantle, at the entrance of the river, is the port ; and Perth, situated about 9 m . inland, in the county of the same name, is the capital and seat of government. It is a large straggling village, partly concealed by the abrupt termination of a woody ridge, and standing on a picturesque slope on the right bank of the river. Guilford and York are the other ehief plaees in the colony. The Swan River, like all the other rivers of Australia, is subject to sudden and tremendous floods, which inundate the cornlands in its vicinity, and sweep away all opposing obstacles with irresistible impetnosity. The number of aborigines is about 1500. A good feeling exists towards them, and many of them are employed by the settlers in menial capaeities, but they are fast decreasing. Pop. of colony (1851), 6967.

AUSTRALIAN ALP's, a mountain-range, Australia, in the colonies of Port Philip and New S. Wales, extending from lat. $38^{\circ}$ S.; lon. $146^{\circ} 30^{\prime}$ E., in a N.E. direction for about 200 m ., and forming part of the great Australian chain from Wilson's promontory to Cape York. Its highest peaks are, Mount Kosciusko or Wellington, 6500 ft .; Mount Dargal, $5490 \mathrm{ft} . ;$ and Mount Pinnabar, 4100 ft .

AUSTRALIAN GRAMPIANS, a mountain-system in Victoria or Port Philip, W. the Pyrenees, cos. Ripon and Dundas. The highest known peak, Mount William, is 4500 ft . above the sea level. This, the most W. system in the colony, has generally a N. and S. direction, and is composed of several ridges. From its N. slopes rise the Wimmera and Norton, which unite and flow N. to Lake Hindmarsh. From its W. and E. slopes flow the rivers Glenelg, Wando, Wannou, and Grange, which all unite into one stream, and fall into the sea in lon. $141^{\circ} \mathrm{E}$.

AUSTRALIAN PYRENEES, a congeries of mountains in Vietoria or Port Philip, N.W. Melbourne, cos. Talbot and Ripon, and comected W., by low ridges, with the Australian Grampians. The culminating peak, as far as known, is Mount Cole, rather more than 100 m . W.N.W. Melbourne. From their N. slopes rise the rivers Avoca and Yarrayne, the latter an aflluent of the Murray.

AUSTREY, par. Eng. Warwick; 2280 ac. Pop. (1841), 479.

AUSTRIA (Empire of) [German, Oesterreich or Ostreich -the Eastern kingdom]. The Austrian empire is one of the largest and most populons of the European states, situated nearly in the centre of the continent. It extends from about lat. $42^{\circ}$ to $51^{\circ} \mathrm{N}$. , or, exelusive of Dalmatia and the narrower part of Croatia, from about lat. $44^{\circ} 30^{\prime}$ to $51^{\circ} \mathrm{N}$., and from about lon. $8^{\circ} 30^{\prime}$ to $26^{\circ} 30^{\prime} \mathrm{E}$. ; comprising $258,000 \mathrm{sq} . \mathrm{m}$. or 45,000 more than Frauce. Its greatest length, from E. to W., is about 860 m . ; its greatest breadth, from N. to S., with the exclusions abovestated, is about 400 m .; bounded, S. by Turkey, the Adriatic Sea, and the independent states of Italy; W. by Sardinia, Switzerland, Bararia, and Saxony; N. by Prussia and Russian Poland; and E. by Russia and Moldavia. On the shores of the Adriatic, along the coasts of Dalmatia and Venetian Lombardy, lies its only sea frontage, extending, exclusive of islands, about 500 mm .

The Austrian empire is composed of a union of different states, some of them at one time forning independent kingdoms, inhabited by races of people differing from each other

Vol. 1.
in descent, language, eustoms, laws, and religion, held together as one empire, by being under one sovereign and one central government It is divided into 15 governments, correspond-
ing in a certain respect to the nationalities of which it is eomposed. The following table exhibits the name and area of these governments, with their population in 1850 :-

Arrangement of Provinces according to the Constitution of March 4, 1849, and Porulation in 1850, exclusive of Military.

As this article on the empire, as a whole, must necessarily be gencral, the reader is referred, for more specific notices of the provinces, to the separate articles on them throughout the work.

General Aspect.-Although presenting every variety of surface, the prevailing character of the Austrian dominions is mountainous, there being few districts where mountains are not found; while the plains do not oceupy more than a fifth part of the whole superfieies. The loftiest ranges, and the most extensively ramified, are found in Tyrol, Styria, lllyria, and the S. parts of Austria Proper. In some of these regions, the scenery is bold and romantic, and has been considered equal to that of Switzerland. The most extensive tracts of low or flat land occur in Selavonia and the S.E. and central parts of llangary; much of this level land is remarkably fertile, but it is met at various points by vast morasses and arid steppes. The prineipal valleys are found in Tyrol, Salzburg, Styria, and Illyria. Extensive plains stretch along the courses of the rivers, particularly the lo, the Danube, and the March. The 1 rincipal rivers of Austria are the Danube, the Elbe, the Save, the Drave, the Muhr, the March or Morawa, the Teiss or Theiss, and the Maros. The Danube, for upwards of 300 m ., is navigable for pretty large vessels, thronghout the whole Austrian territory; while all the ethers, most of them tributaries of the Danube, are navigable for vessels of smaller size. All of them abound in fish. The lakes are numerous; though these in the low lands, partieularly in the plains of Il ungary, are rather marshes than lakes, being collections of stagnant water with swampy margins. Those in the more elevated regions of Illyria, 'Tyrol, and the other mountainous districts, are pure lakes, surrounded witl wood and rock, and all the other attributes of pieturesque scenery. The finest lakes are to be found in Upper Austria; of which the principal are the Attersee, the Mondsee, the Traunsee, and several others. In Styria, the lakes are numerous but small.

Climate, and Vegetable Productions.- Austria lies between the isotherms of $60^{\circ}$ and $50^{\circ}$, and has a climate nearly as various as its surface. In some parts, as in llungary, the annual fall of rain is comparatively small ; while the W. and N.W. parts of the empire, in this respect, resemble the W. of England; and the alpine regions are probably the most rainy in Europe. The N. regions, between the 49 th and 51 st degrees of N. lat., have an average temperature resembling that of the N. of France. Between lat. $46^{\circ}$ and $49^{\circ}$ the heat is considerable; and between $42^{\circ}$ and $46^{\circ}$, which comprises the whele of S . Austria, it is still greater; the winter lasting two or three months only, and being, in general, extremely mild. In the first region, the principal products are wheat, barley,
oats, and rye; in the seeond, vines and maize are added; and in the third, olives. The produetive eapabilities of the soil, however, are by no means rendered available to their full extent. The quantity of land under cultivation is equal to that in Great Britain, but the produce, even where the soil is superior, is nearly a third less. The wines of Austria are poor, with exception of a few choiee kinds, ineluding the well-known Tokay; and none, therefore, but sueh descriptions are experted, and these in very limited quantity. A great portion of the worst wine is made inte brandy. The average produce of wine is about $3,200,000,000$ gallons, of whieh II ungary yields by far the largest proportion. The vineyards, by which the above quantity of wine is produced, oceupy $487,202 \mathrm{ac}$. The quantity of arable land is $52,433,382 \mathrm{ae} . ;$ producing, of wheat, maize, rye, barley, and oats, $60,260,666$ quarters. The forests cover more than an eighth part of the prodactive soil of the empire, and form no inconsiderable source of wealth. About half of the whole is in Mungary, including the Banat, Croatia, and Sclavonia, and in Transylvania. Much of it is of excellent quality, and well adapted for house and slip building, furniture, and for all other purposes. In general, however, owing to bad management, it is not nearly so nroductive as it ouglit to be.

Animals.-Wild deer, wild swine, chanois, foxes, lynxes, and a srecies of small black bear, are fonnd in many distriets, the fox and jynx being partieularly abundant. IIerds of a native breed of horses, of small size, roam wild over the plains of Hungary. All the domestie animals of England are known throughout the empire. Domesticated birds, especially ducks and geese, are abundant, and wild birds mere numerous than in any other part of Europe. Among the latter are wild geese, bustards, grouse, blackeocks, woodeocks, wild ducks, widgeon, teal, \&c.

Geology, Mineralogy, dec.- $\Lambda$ large portion of the comntries now eomposing the Austrian empire, was at one time submerged by the sea; particularly II ungary, where the general appearance of its vast plains, the nature of their soil, and, above all, the occurrence of fossil sea-shells, leave no room to doubt the former dominion of the ocean. Throughout all Austria the tertiary formation prevails, with a margin of the secondary formation, stretching to a greater or lesser extent into the surrounding countries, and diversified by patehes of igneous rocks of the tertiary and alluvial epochs. In mineral productions, Austria surpasses, probably, every other country in Europe; possessing, with the exception of platinum, all the metals. In Transylvania, gold is obtained in large quantity; and in IIungary, silver abounds. Copper and leed
mines exist in different parts of the empire. The repositories of iron are inexhaustible; but, from the high price of fuel, the quantity produced is far short of what it might be. Tin is raised in Bohemia, but in no other part of the empire. Quieksilver is obtained in many places; but the riehcst mine, not only in Austria, but in Europe, is that at Idria in Carniola. Calamine, zinc, cobalt, arsenic, autimony, chrome, bismuth, manganese, black tourmaline, alabaster, scrpentine, gypsum, black-lead, slates, and flint, abound in many of the countries of the empire, and eoal in almost every province. Salt, vitriol, alum, sulphur, saltpetre, and soda, are also among the mineral productions. In every part of the Austrian dominions, mineral springs are numerous. The preeious stones are the Bohemian carbuncle and IIungarian opal, both much esteemed; the chalcedony, ruby, emerald, jasper, amethyst, topaz, carnelian, chrysolite, and beryl. Marble, of every description and variety of colour, occurs in most of the provinces.

Industry, Commerce, Mincrals, \&e.-The quantity of gold obtained, in 1847 , was $56,467 \mathrm{oz}$; of silver, $867,607 \mathrm{oz}$. ; of quicksilver, 3351 cwts., of which about a third was converted into cinnabar; of tin, found wholly in Bohemia, only 42 tons, a quantity quite insufficient for the home consumpt, though apparently not on the increase. Copper is found principally in Hungary. The whole produce, in 1847, was 2770 tons, but, as in the case of tin, the quantity obtained is not equal to the home demand; zinc obtained, 294 tons. The produce in lead, in 1847, amounted to 3080 tons, antimony to 201 tons, cobalt to 144 tons, but the largest produce of the metals is iron, which was, in $1850,168,481$ tons. Cast iron is produeed ehiefly in the N. provinees of Styria, Carinthia, with Carniola, Bohemia, Moravia, and Iungary. In 1841 there were, of blast-furnaces and smaller smelting-works in operation, 226 ; eupola-furnaces, 32 ; iron and steel forges, 835 ; puddle-works, 15 , with 54 furnaces; plate-rolling works, 40, and 9 cast-steel furnaces. An important branch of the iron trade of Austria is the manufacture of rails for railways. Some years ago, however, Austria could not supply the demand for rails, and large quantities were imported. These importations have now greatly diminished, in consequence of an increase in the production. The quantity of coal produced in 1847, amounted to upwards of 685,499 tons, more than four times the quantity which was raised in 1833. The quantity of salt produeed in 1850 -rock, boiled, and bay salt-amounted to 275,320 tons. The far greater number of the Austrian mines belong not to private companies, but to Government. The following table exhibits a comparative view of the produce of the Austrian mines, in the years 1823, 1833, and 1847:-

Silk.-The textile manufaetures of Austria have considerably improved in extent of late years, but are still behind in regard to many important circumstances, including judicions selcetion of locality, subdivision of labour, and general man-
agement, which so largely contribute to the success of the English manufaeturing establishments. Amongst the textile manufactures, silk holds a conspicuous place, although coufined ehiefly to Vienna, Milan, Como, Prague, and Pesth. The first-named of these plaees consumes annually $600,000 \mathrm{lbs}$. of spun silk, or silk-tluread; the second, 180,000 ; and the last, 240,000 , making, in all, $1,020,000 \mathrm{lbs}$. The whole produce of the silk manufaetures of the Austrian empire amounts to abont $£ 3,500,000$, employing altogether, in the various processes, about 160,000 persons. The prineipal silk-producing provinces are Lombardy, Venice, Tyrol, the coast-lands, Hungary, and the military frontiers. The produce of the Italian provinees alone was estimated at $5,000,000 \mathrm{lbs}$. The silk-mills and silk-factories, in 1846, amounted in all to about 6850 .

Wool.-The woollen trade of Austria is also considerable. In 1843 the entire anuual produce of the empire was 771,875 ewts., of which II ungary produced nearly the one-half. The manufacture of woollen cloths is confined to Bohemia and Moravia chiefly; the other provinces do not produce suflieient to meet their own demands. The entire production of Austria in woollen cloth and walked stuffs may be reckoned at about $1,000,000$ pieces, value about $£ 4,500,000$. In the production of combed yarn, from which the finest description of goods is manufactured, the improvement has been considerable. In 1841, there were 14 mills for combed yarn, with 25,400 spindles, prodncing 88,258 cwts. The number of spindles may now be reckoned at 30,000 . The whole produce of Austria, in combed woollen stuffs, may be reckoned at 658,500 pieces. In the manufacture of shawls, and shawl-cloths, Austria is rapidly acquiring a ligh reputation. The prineipal seat of the manufacture is Vienna, where there are six faetories, which, together, produce annually about 400,000 pieces, value $£ 340,000$.

Linen. - In consequence of the large quantity of linen produced by private individuals throughout the various provinces of Austria, an approximation, by estimate, of the value of the whole quantity produeed, is all that can be attempted. This, founding on the best attainable clata, is about $£ 6,570,000$, employing 30,000 looms, and abont 500,000 weavers; and as each weaver requires 12 spinners, to supply the necessary quantity of yarn, there would appear to be three and a haif millions of individuals, or a tenth part of the whole popnlation of the empire, more or less employed in this branch of industry. Though machinery for flax-spinning has recently been introduced, this operation is still performed ehiefly by the hand.

Cotton.-The cotton-weaving of Austria is also upon the increase. Besides the handlooms whieh it employs, and which, in 1843, were estimated at 90.000 , numerous cotton-mills or factories have beenerected, ehicfly in Lower Austria and Bohemia, but partly also in Lombardy, the Tyrol, and other provinces. In 1848 the number, exclusive of those in Austrian Italy, Hungary, and Transylvania, was 168 , with $1,227,361$ spindles.

Cloth-printing. - In the printing of both woollen and cotton, and in 'Turkey-red dyeing, Austria has made, and is making, great progress. The quantity of cotton and woollen goods printed in 1841 was, together, $2,035,000$ pieces, value $£ 2,181,000$, of which about six-sevenths were cotton. 'To the number of pieces of printed cotton and woollen goods above given, there falls to be added 254,000 pieces of mixed fabric, produced in Lower Austria. The princijal establishments for Turkeyred dyeing are in the N. of Bohemia in Vorarlberg, Moravia, Galicia, Lombarly, Treviso in Venice, Stein in Carniola, and one or two other places. The united produce of the whole was, in 1841, $12,00 \mathrm{t}, 000$ pieces. The entire quantity of goods-cotton, woollen, and mixed fabrics-irinted in Austria, is rather more than one-fifth of that printed in England, nearly equal to that of France, upwards of one-fourth more than that of Russia, and more than double that of Prussia and Switzerland.

The whole cotton manufactures of the empire, ineluding spinning, weaving, and dyeing, may beestimated at $£ 4,500,000$; the number of hands employed, at 360,000 .

Distilling and Brewing.-Austria is somewhat remarkable for the number of its breweries and distilleries. Of the former, there are 3165 , which produce about $100,000,000$ gallons annually, consuming about 900,000 quarters of malt. The value of the beer produced in 1842 was stated at $£ 2,500,000$; the beer-tax amounting, in the same year, to $£ 650,000$. The whole quantity produced, however, only equals half that pro-
duced in Bavaria. The number of distilleries in Austria, exclusive of Hungary, Transylvania, the military frontiers, Austrian Italy, and Dalmatia, was in 1850, 14,937, producing 19,577,510 gallons of spirit, of which Galicia alone produced 11,791,141 gallons. In Galicia, Moravia, and Silesia, the distilleries work chiefly from grain ; but in Bohemia, Styria, and Austria Proper, large quantities of spirits are manufactured from wine-lees, plums, cherries, potatocs, \&c.

Austria had, in 1851, in addition to the sugar-refineries, which annually use abont half a million cwts. of colonial sugar, 123 solely employed on the sugar obtained from beetroot and potatoes. Of these there are 63 in Bohemia, 26 in Moravia, and 20 in Hungary; the remainder are scattered over the other crown-lands. In 1850, when the number of these refineries was only 82 , they used $3,090,000 \mathrm{cwts}$. beetroot, and $133,850 \mathrm{cw}$ s. potatoes, in producing $161,174 \mathrm{cwts}$. raw sugar. The competition with colonial sugar is maintained by means of a heavy protecting duty.

In addition to the general import and export trade, Anstria carries on-partly from its central position in the continent of Europe, and partly from its numerous navigable streams, excellent roads, and, in later times, its partially completed railway system-a very considerable amount of business in the transit of goods through her territory to other countrics. The transit duties vary from 2 kreutzers, or the 15 th part of a shilling, to 27 krentzers, or $10 \frac{3}{4} d$. per centner of $123 \frac{1}{\frac{1}{3}}$ lbs. The relative importance of these three branches of commerce will be perceived from the following table:-

Import, Export, and Transit Trade, in 1850.

| 1850 | 15,895,540 | 10,484,750 | 26,380,290 |

Both the exportation of wine, and the importation of raw cotton, have greatly increased of late years, the latter being, in amount, nearly twice what it was in 1831. In timber, a similar improvement lias taken place. The average annual exports between 1831 and 1840 was to the amount of abont $£ 250,000$; in 1844 it amounted to $£ 427,000$. This branch of trade suffers greatly from a want of suitable means of transport, and, until these are obtained, one of the most important sourees of the national wealth must remain comparatively unavailable. In the iron trade, there has been an improvement during the last 20 years, equal nearly to 400 per cent.; and on coals to 700 per cent. The exports, again, of linen goods, linen yarn, and flax, show a gradual falling off, the result of the advance of the cotton manufactures. The decrease, however, is limited chiefly to fine goods. In the regular increase in the importation of dye-stuffs, we have a marked indication of the progress of industry. The quantities of indigo and woad imported in 1844 were nearly one-third more than in 1840 and previous years, and in dye-woods the increase was ahont as much. The woollen manufactures of Austria are also improving, and the exports of the finer description of goods increasing. Nor do the imports of foreign wool indicate any falling off in the home produce, it being a coarse material from Russia and Turkey for the manufacture of cloths for the poorer classes.

The following table exhibits a comparative view of the total imports and exports of the empire in the years 1847 and 1850, and at the same time shows the chief localities from which they come or to which they are sent:-

| S. Germany........... | Imports from |  | Exports to |  |
| :---: | :---: | :---: | :---: | :---: |
|  | 1847. | 1850 | 1847. | 1850 |

The imports from Great Britain and Ireland include a great variety of articles, the more important of which are refined sugar, cotton mannfactures, cotton yarn and twist, woollen goods, fish, \&c. A considerable quantity annually enters Austria throngh Germany; what reaches it by sea will be seen from the following table:-
Declared Value of the Principal Articles of Baitisif and Iarsil Paoduce and Manufactures, Expoeted from the United Kingdon (through the ports on the Adriatic), to AUsTaIA, in $1 \times 31$ to $1 \$ 50$.

| 1810 | 497,407 | 1850 | 607,755 |

To carry on the foreign and internal commerce and trade of the empire, Anstria, in 1847, had 5799 vessels of all sizes; to:m. 241,768; employing 25,980 men. Of these, upwards of

500 are of large size, handsomely and strongly built. Besides these, there are a great number of lighters employed in loading and unloading vessels, of which Dalmatia alone has upwards of 2000 . The vessels built in 1850 were of larger size for forcign trade, 46 ( 16,120 tons), large coasters 20 ( 1456 tons), small coasters 65 ( 831 tons), and fishing-boats 308 ( 343 tons). The principal ports of Austria are Trieste, Venice, Chioggia, and Fiume, all in the Adriatic. The vessels that arrived at, and sailed from these ports, in 1844, with their tonnage, was as undernoted :-

Vessels entered in Austrian Ports in 1844.

Coins, Weights, and Measures.-In Austria, accounts are kept in gulden or florins of 60 kreutzers each, the value of the florin being $2 s$. sterling. The gold coins are double sovereigns, $£ 2,13 s .4 d$. each ; single sovereigns, $£ 1,6 s .8 d$.; and half-sovereigns, $13 s .4 d$. The principal silver coin is the rix-dollar, equal to two florins or $4 s$ sterling. The copper coin are groschen, grochels, kreutzers, and phennings or hellers. At Trieste, and at all the inland towns of the Austrian dominions, except those of the Lombardo-Venetian kingdom, the imperial dollar of two florins, the florin, and the 20 -kreutzer piece, called zwanziger, are the current coins. The Austrian centner, the weight by which all large quantities are rated, is $123 \frac{1}{2} \mathrm{lbs}$. avoirdupois. The metze ( $p$ lural, metzen), the largest dry measure, is somewhat more than the fourth part of an English imperial quarter; nine metzen making two quarters nearly. The eimer, the most generally used liquid measure, is equal to 14.94 English wine gallons. In long measure, the Vienna foot is equal to $12 \cdot 45$ inches English, the Viennaelle or aune, to $30 \cdot 66$ inches English. In superficial measure, the yoch of land is equal to 6889 English square yards, or 1 acre, 1 rood, $27 \frac{9}{4}$ poles.

Population, Religion, Education, dic.-The population of the Austrian empire consists of five distinct races; the German, Sclavonic, Magyar, Italian, and Wallachian. The respective numbers of these nations have been estimated as follows:-

| Sclavonians $\qquad$ |  |
| :---: | :---: |
|  |  |
|  |  |
| Magyars............................................................... $4,800,000$ |  |
|  |  |
|  |  |
| To these may be added | 36,457,000 |
|  | Jews..................... ${ }^{\text {a }}$ 475,000 |
|  |  |
|  | Total........... 87,060,000 |

The Germans, who constitute above one-fifth of the entire population, keep compactly together, occupying the archduchy of Autria, the N. half of Styria, a part of Carinthia, a small
portion of Carniola, the N. part of the Tyrol, and the N. and W. borders of Bohemia. There are, besides, about 1,200,000 in the Hungarian provinces. The Austrian population is increasing rapidly. This increase is great in all the provinces, but is most remarkable in Galicia and Dalmatia, being in the first, $1 \cdot 42$ per cent., and in the second, $1 \cdot 10$. As far back as 1827, the average annual increase of the population amounted to $1 \cdot 193$ per cent., or nearly doubling itself in 50 years. The ratio of increase is now much greater.

Religion.-The state religion of Austria is the R. Catholic, and next in numbers is the Greek church. Calvinism and Lutheranism are also professed by a large body of the people; the former mostly in Hungary and Transylvania, the latter in the German provinces, and in Galicia. The civil power exercises supreme control in all ecclesiastical matters, the emperor being in everything but the name head of the church; and as no sentence of excommunication, or other ecclesiastical edict, can be issued without the sanction of the crown, the Pope's direct authority in Austria is more limited than in some other countries.
$\ln 1851$, the numbers of the various confessions were as follows:-

$$
\begin{aligned}
& \text { Greek Catholics......... }{ }^{3,492,114} \\
& \text { Greek, not united........ 2,742,055 } \\
& \text { Protestants, Augsl)urg } \\
& \text { Confession........... } \\
& \text { 1,151,641 }
\end{aligned}
$$

Education.-The educational establishments of Austria are divided into eight classes:-1, universities ; 2, academies, including high, special, and art schools; 3, lyceums ; 4, theological institutions; 5, philosophical institutions; 6, gymnasiums; 7, particular institutions; 8, people's schools. The last, as forming the foundation of the whole system, fall first to be considered. In their nature they come near to our idea of parochial schools, every parish of the empire, almost without exception, containing one. They are divided into high schools (Haupt schulen), and elementary schools (Trivial und Mädehen sehulen). The former amount to 293, the latter to 17,511 , being the whole schools of this class throughout the empire, with the exception of those of Hungary, Transylvania, and the military frontiers, for which there are no returns. In the elementary schools, the education is strictly national. It consists only of the most necessary branches; and every individual between the ages of six and twelve, male and female, without distinction of rank or creed, is understood to be receiving it. To insure this, accurate registers are kept of all the children who have arrived at 'the school age,' and the priest and local functionaries of each parish are enjoined to see to their attendance. By the registers of 1842, the number of children of the school age was $2,595,563$, and the actual attendance throughout the empire (still with the exceptions above-mentioned) was $2,273,453$. Here the education ceases to be compulsory, but all for whom a superior or professional education is required are amply provided by the other classes of educational establishments. The leading statistics belonging to each class are given in the following Table:-

|  | Number. | Teachers. | Puplls. | Public Ex- <br> penditure. |
| :---: | :---: | :---: | :---: | :---: |
| Universities. | 9 | 419 | 15,794 | £66,941 |
| Academies. | 37 | 427 |  | 34,018 |
| Lyceums. | 81 | 817 | 4,880 | " |
| Theological Institutions.. | 77 | 348 | 3,747 | " |
| Philosophical Institutions | 78 | 303 | 5,511 |  |
| Gymnasiums. | 283 | 1,842 | 56,903 | 58,765 |
| Particular Institutions........ | 17,428 | 4,420 | - 53,233 |  |
| People's, or National Schools... | 17,511 | 37,233 | 2,273,453 | 279,512 |

Hospitals.-Out of the 63 cities and principal towns of Austria, 21 possess foundling-hospitals, with lying-in establishments attached. The number of foundlings received into these hospitals in 1833 was 14,897 , and in 1840, 17,410. From 1821 to 1840 there were in public keeping 986,345 children, with a yearly increase of numbers. The number of foundlings claimed is very small proportionally. At Laibach, 242 only were sought back in the course of 81 years, out of 5302 foundlings. In the Prague hospital, 2309 only were songht back from 1822 to 1841, out of 87,341 foundlings. In Milan, the proportion sought back was much greater, indeed remarkable, when the other cases are considered; it was 7623 out of 20,147 foundlings, or considerably more than a third.

Government, Revenue, Army, and Navy.-The whole legisLative authority is vested in the emperor, who exercises supreme control in all the provinces, excepting Ilungary and Transylvania. But a constant tendeney on the parts of the various states to resume their independence, and maintain their respective national distinctions, has the effect of tempering the exereise of this control, and thereby preventing what has been lately threatened-the dismemberment of the empire. The provincial states, whose business it is to reeeive and register the laws framed by the Emperor on finaneial matters, and to allocate or apportion the amount of supplics to be contributed by the different districts, meet onee a year, or oftener if necessary. The exeeutive government aets through councils or boards, each having a chancellor, who communicates with the provineial eonneils and with the cabinet. Hungary and Transylvania have each a separate chancery, and are governed by their own laws; as are, likewise, the Italian states. The nobles form a separate order in the state, and are so disproportionately numerous as to make the distinction appear ridiculous, the total number of nobility in the empire being no less than 400,000 , or one to every 90 inhabitants. Of these there are 259,648 in IIungary alone, or one for every 20 burghers. The privileges and prerogatives of these last are scriously detrimental to the national interests in various respects; those of the nobles of the other provinces are few and unimportant.

The Austrian Covernment has always been extremely reluctant to give any official account of its financial position or operations ; it is thus difficult to ascertain what these really are. In 1851 , the total income was $£ 22,325,203$; total expenditure, £27,842,047; deficiency, $£ 5,516,846$. The national debt, in 1841 , was $£ 115,745,042$; in $1852, £ 122,376,980$. The principal sources of revenue are a land-tax, a tax on consumable articles, customs on goods, and monopolies of salt, tobaceo, \&c.

The numerical strength of the Austrian army on the peace establishment is 400,481 , of which 48,842 are eavalry. The war establishment is 589,160 . During the last years of the peninsnlar war, the Austrian army amounted to 650,000 men. The period of service, in all but the Ilungarian regiments, is eight years. The military schools of the empire are the aeademy of enginecrs in Vienna; the military aeademies of Milan, Wiener-Neustadt, and of Waitzen; the military schools of Olmiitz and Grätz, with a variety of other schools and institutions, all laving reference to military purposes ; in several of them the pupils are educated at the publie expense.

The Austrian navy, which is under the management of a naval commandant at Venice, is small, eonsisting of, in 1852, six frigates, five corvettes, seven brigs, six galliots, with eleven steam-vessels and small eraft, and a Danube flotilla of gunboats, having 123 guns and cight howitzers; the whole force mounting 742 guns. Marine force 3215 , staff, artillery, and seamen, with six companies of marine infantry. The ehief naval station is Venice, where there is established an academy of naval cadets.

Laws, Literature, and Fine Arts.-The administration of justice is under the superintendence of the superior ministry of justice, at the head of which there are two presidents. It is divided into two senates, one at Vienna, and one at Verona. All trials are conducted with a degree of secrecy, and those of criminals scandalously protracted; years often elapsing before their trials are brought on, and years more before they are concluded. Sentence of death can be passed after confession only; a law which, whatever may be said of its humanity, must have a tendency to defeat the ends of justice.

Ifistory. - After the erection of the German empire in the ninth eentury by Charleınagne, that prince subdued the distriet on the S. bank of the Danube, to the E. of the river Ens, and converted it into a military frontier to repel the ineursions of the Huns, and other barbarous nations. It was then ealled Ost-reich, or the East country, from its relative position to Germany, but subsequently obtained the name of Lower Austria, and became the nuclens of the present Austrian empire. The governors of this district or province were appointed by the Emperors of Germany, to whom they were sulject, with the title of margrave [German, mark.graflord of the marches], whieh title was borne by their suceessors for three centuries after.

About the middle of the 12th century, Upper Austria was added to Lower Austria, and the title of margrave merged
into that of Duke. Soon after, Styria came by bequest to the Dukes of Austria, when the latter, for the first time, established the ducal residence at Vienna. Hitherto the Dukes of Austria had been of the house of Bamberg; but, in 1246, the male branch became extinct, when Rudolph of Hapsburg, Emperor of Germany, one of the ablest princes of his age, vested the suecession to the ducal throne in his son Albert and his descendants, and with this prince eommeneed the IIapsburg dynasty over Austria. Various accessions of territory by marriage, purehase, and inheritance, now rapidly inereased the extent of the ducal dominions, raising Austria from the rank of a mere provinee to that of an important state, and glving it a corresponding influence in the councils of Germany. Continuing to extend its limits, Austria finally became so mueh greater than any other state in the empire, that its Dukes were raised to the dignity of Emperors of Germany, the first so elevated being Albert II., who, in 1438, obtained the imperial crown, which has remained ever since in uninterrupted possession of the Hapsburg line of Austrian sovereigns. In the latter part of the 15 th century, Maximilian I., an Emperor of the Austrian line, married the daughter and heiress of Charles the Bold, Duke of Burgundy, and by her seeured further large accessions to the Austrian dominions, namely, the Netherlands, Franche Cointé, and Artois.

In 1521, Ferdinand I. married Anne, sister of Louis, King of IIungary and Bohemia, and succeeded to these states on the death of the latter, which oceurred in 1526, at the battle of Mohacz. The vast and continually-increasing power of Austria having exeited the jealousy, and her oppressive conduct towards the Protestants, the fears, of the other European nations, a war was the result, from its duration, 1618 to 1648 , known as the Thirty Years' War. It was a war between the R. Catholie princes of the empire, with Austria at their head, and Saxony and the Protestant states, aided by Sweden and France. The most distinguished generals of this war were Gustavus Adolphus, King of Sweden, on the part of the Protestants; and Wallenstein, the Austrian, on that of the R. Catholies. The Thirty Years' War ended in the treaty of Westphalia, which secured the independence of the different states of the Germanic empire, the free exercise of the Protestant religion, and, for a time, the tranquillity of Europe.

In 1740, the male line of the house of Hapsburg was brought to a close by the death of Charles VI., when the succession devolved on his daughter, Maria Theresa, who, with the aid of English sulosidies, successfnlly repelled attacks on her dominions by Bavaria, Saxony, and France. Regarding the possession of Silesia, she was less fortunate, however, in a contest with Prussia, to which it was finally ceded in 1763, after a war of seven years' duration. Maria Theresa was succeeded by her son, Joseph II., a well-meaning and enlightened prince. In 1804, Francis I. assumed the title of hereditary Emperor of Austria, and, two years afterwards, renounecd the title of Emperor of Germany. The late Einperor, Ferdinand I., born April 19, 1793, suceceded his father, Francis I., Mareh 2, 1835 ; married February 27, 1831, Anne, danghter of Victor Emmanuel, King of Sardinia. Abdieated, December 2, 1848, in favour of his nephew, Francis Joseph I, the present Emperor, who was born oll August 18, 1830. The political commotions of 1848 , by which the peace and prosperity of so many of the nations of Europe were wreeked for a time, extended to Austria, where a predisposition to revolt had long existed previously, being a neeessary consequence of the association of the jarring and ineongruous elements of which that empire is composed. In the year above naned, a spark from the revolutionary fires of Franee ignited the combustible materials, and in a short time Austria was in a blaze. Lombardy revolted. The Austrians were driven out of Milan, Veniec, and many other towns, by their disaffected inhabitants, who subsequently formed an alliance with Charles Albert, King of Sardinia, who then invaded the Austrian territory at the head of a large army; and for a time victory seemed to favour the Italians. In the following year, however, both the insurgents and their Sardinian ally were repeatedly defeated by the Austrian forees under Marshal Radetzky, and Lombardy was again brought under the Austrian sway. Taking advantage of this state of things, Ifungary also came forward with a demand for entire indepondence, assuming, at the same time, that supremaey on her own aecount over Croatia and Sc'avonia, which the two latter had hitherto sielded to her
morely as proxy for the monarchy. Austria resisted the demand, as threatening the dismemberment of the empire, when a short but sanguinary war was the consequence, which terminated in favour of the monarchy. This result, however, was owing, in part at least, to judieious concession, as well as to superiority in arms, as the following heads of the new constitution promulgated at Vienna, Mareli 7, 1849, sufficiently show : Granted-Full enjoyment of political and religious liberty; science and scientific instruction free; the general education of the people to be provided for by public institutions; every one to have free expression of opinion; the press to be relieved from censorship; the right of petitioning to belong to every one; citizens to have the right to assemble and to form associations if the object be lawful; individual liberty guaranteed; a man's domicile inviolable; the secrecy of private correspondence to be held saered.-(Aiiller's Statistisches Jarhrbuch; Paton's Servia; Thompson's Austria; Foreign Quarterly Review; Annual Register; Almanach de Gotha; Lyell's Geology; Parliamentary Papers.)

AUS'Tlila (The Archiduchy of).-The arehduchy of Austria, or Austria Proper, is the Incleus around which has grown the vast empire known as the Austrian dominions. In extent it is comparatively small, its area being only 10,909 geo. sq. m.; while the area of the eutire Austrian dominions is estimated at 195,662 geo. sq. m. It is bounded, N. by Boliemia and Moravia, S. by Salzburg and Styria, L. by IIungary, and W. by Bavarin; and is comprised between lat. $47^{\circ} 28^{\prime}$ and $49^{\circ} 2^{\prime}$ N., and lon. $12^{\circ} 45^{\prime}$ and $17^{\circ} 5$ E. It is divided into two provinces by the river Ens or Enns, which, flowing N., falls into the Danube about 2 m . N. the town of Enns, the line of separation N. the Danube running from a point on that river 4 m . W. $\mathrm{J}_{\mathrm{p}} \mathrm{s}, \mathrm{N} . \mathrm{W}$. to the Bohemian frontier. The province W. of the Enns, also called Austria above the Enns or Upper Austria [Oherosterreich], has Linz for its eapital; the W. boundary is formed by the Inn; area, 3485 geo. sq. m. The province E. of the Enns, also called Austria below the Enns, or Lower Austria [Unter- or Niederösterreich], has for its capital Vienna, the eapital also of the empire; area, 7424 geo. sq. m. E. boundary N. of the I)anube, the river Mareh; and S., the river Leitha, separating it from Ilungary. l3oth provinces are mountainous, and abound in beautiful and romantic scenery. The entire vale of the Danube, from Passau to Vienna, a distanee of not less than 130 m ., presents a continued series of the most picturesque views, equal, it has been asserted, to those on the farfamed Rhine; while the scenery on the Enns, and several of the other streams, has been considered but little, if at all inferior. The confines of the archduchy, on the S., are marked by a range of mountains, including a branch of the Norie Alps, which spreads its branches over the whole country S. of the Danube. The N. portions, again, are traversed in all directions by the Böhmerwald, or Bohemian mountains. Between these N. and S. mountain-ranges lie the vale and basin of the Danube, to which both provinces almost exclusively belong. The principal tritutaries of the Danube from the S. are the Inn, Traun, Enns, Ips, Traisen, and Leitha-all Alpine streams, and remarkahle for the green tinge of their watersand numcrous smaller streams; from the N. come the Krems, Kamp, Göller, Marel, \&c.; the last, after the Dauube, the largest stream pertaining to the province. The lakes, ehiefly eonfined to Upper Austria, are numerous, and remarkable for the beauty of their scenery. The principal are, the Gminindensee or Traunsce, about 7 m . long, and 2 broad at the broadest part; the Halstättersee, 5 m . long and about 1 broad; the Attersee, about 12 m . long and 3 broad; the Mondsee; the Lake of St. Gilgen, and an immense number of smaller lakes. Swamps and morasses of great extent are of frequent occurrence. The mineral wealth of the archduchy is not great. In Lower Austria there are some iron mines, while both provinces contain quarries of marble and freestone, slate, alum, and pottcr's clay; and eoal, alabaster, gypsum, rockerystal, garnets, beryls, topazes, and emeralds are obtained. A little gold and silver, copper, lead, and iron are found in certain localities; salt in the hills of Ischil; and sulphur in various quarters. The whole produce of the mines and furnaces of the archduchy amounted, in 1845 , to $£ 69,915$. Of this sum, $£ 27,153$ is the value of coal, found only in Lower Austria.

The climate of the archduchy varies with the level of the
different localitics, but neither the heat nor the cold is extreme, though the lower provinee is subjeet to sudden changes. The average annual temperature in Vienna is about $51^{\circ}$ Fah. The maximum heat does not exceed $97^{\circ}$, and the winter cold ranges between $10^{\circ}$ and $12^{\circ}$ below the freezing point. At Linz, the mean heat is $48^{\circ} 28^{\prime}$.

The soil is as various as the climate. In the hilly regions there is little eultivation, but eompensation is found in valuable forests. Agriculture, however, is on the whole in an improved and improving condition. The eultivation and general management of the vine, however, is still defective. The following table will give an idea of the productive superficies of the country, and of the extent to which its capabilities have been made available:-

Productive Supfrficies of the Arcinuchy.

| Aeres. | Aer |
| :---: | :---: |

Throughout the territory, fruits and kitehen vegetables of all sorts are produced in great abundance, and of excellent quality. In Lower Austria, a considerable quantity of wine is produeed, especially in the hilly districts around Vienna, where the quality is much superior to that obtained from the vineyards on the plains. Flax is cultivatcd to some extent; and, in Upper Austria, lops also. The valley of the Enus, and the plain of Tulla on the Danube, are the most fertile tracts, both yielding most luxuriant crops of corn. The woods and forests consist chiefly of beeeh, oak, maple, linden, clm, alder, pine, and fir. In Upper Austria, where pastures abound, the rearing of cattle is general ; and the horses bred in the S.W. parts of the province, are noted for their size. The numbers of horned cattle, horscs, and shcep, in both provinces, in 1842, was-

| 200,104 | 11orses...............119,123 |
| :---: | :---: |
| Cows.................599,592 | Sheep................. 839 |

In the mountainous regions goats abound. The lynx, wolf, and bear are also met with. Foxes, stags, decr, marmots, poleeats, squirrels, martens, hares, and wild fowl, are numerous. The lakes and rivers are well stocked with fish.

The commercial resources of the archduehy, and the aetivity and enterprise of its inhabitants, are greater, perlapls, than those of any of the other dominions of the empire; Lower Austria and Lombardy, with little more than a tenth of the population of the whole Austrian territory, engrossing about a third of its entire trade. Lower Austria, however, is partly indebted for this result to the possession of Vienna, the capital, and the largest, the most populous, and perhaps, also, the greatest manufacturing eity of the empire.

The quantity of spirits annually distilled in the archduchy is very considerable, being no less than $1,180,315$ imperial gallons; of which rather more than the half is made in Upper Austria. To produce this quantity of spirits, there are 7326 distilleries, but most of these are on a very small scale.

The quantity of wine produeed annually, amounts to $24,896,659$ imperial gallons, the produce almost entirely of Lower Austria, neither the elimate nor the soil of 1 ppper Austria being favourable to the vine. There are, in Lower Austria, seven sugar-refineries, and three manufactories of sugar from bect-root. Botli Austrias produce considerable quantities of iron and wool. In 1845, the amount of wool was $4,446,000 \mathrm{lbs}$. The produce of iron in the same year was small, not much exceeding 3000 tons; the greater part from Upper Austria. The manufacture of linen, though it has suffered greatly by the progress of the cotton manufactures, is still prosecuted to a considerable extent. Nipinning machinery has been lately introduced into the country; but flax is still spun almost exclusively by the hand, and forms a principal employment of the inhabitants of the mountainous districts. The quantity of linen manufactured in 1845, was 290,000 pieces of 30 ells each; value, $£ 150,000$; of which
quantity Upper Austria produced 90,000 pieces, and Lower Austria 200,000. The cotton manufacture is also considerable, and is rapidly increasing. In Lower Austria there are 40 factories, with abont 385,000 spindles; in Upper Austria, four factories, with 20,000 . Silk is likewise manufactured to a large extent, especially in Vienna; to a more limited extent in Neustadt and some other towns. The woollen manufactures have not been so prosperous ; although there are some large factories at Vienna, Rittersdorf, and other places; the supply, however, is not equal to the home consumption.

In Upper Austria, the saltworks afford employment to several thousand persons, the produce amounting annually to about 46,000 tons. The other manufactures are laces, ironware, and cutlery; tools, copper-ware, brasswork, jewellery, articles of wood, leather, porcelain, paper, glass, chemicals, beer, and spirits. In Lower Austria are numerous tanneries, bleachfields, and also printfields, at which 254,000 pieces of woollen and cotton goods are printed annually. The exports of Upper Austria consist principally of salt, timber, wood for fuel, yarns, linens, woollens, carpets, ironware, tools, cutlery, flax, cotton yarn, cotton stockings, cheese, beer, earthenware, mill and polishing stones, marble, and considerable quantitics of fruit.

The trade of the archduchy in 1845 , was as follows :-

The internal traffic is much facilitated by the excellence of the roads, the navigable rivers and canals, the steam navigation of the Danube, and by the introduction of railways, of which there are three in the archduchy.
Education is an object of anxious solicitude to the Government, which provides gratis instruction for all who cannot afford to pay for it. To secure an ample supply of teachers, numerous normal schools have been established in various parts of the country, particularly in Vienna, which furnishes from 1600 to 1700 teachers annually. Throughout the whole archduchy, every child must go to school for a certain number of years. A more questionable law enjoins that no person shall marry, or set up in any trade, who cannot produce a written certificate of attendance at school.
The inhabitants of Austria Proper are almost all Germans, and are an active, industrious, and good-natured people, living easily and contentedly, with a reasonable command, not only of the necessaries, but of the erijoyments of life. The peasantry, in general, are in comfortable circumstances; are kind, cheerful, and affable, simple in their manners, and perfectly contented with their lot. Pop. in 1845, Upper Austria, 851,288 ; Lower Austria, 1,415,695; together, 2,266,993; of which, perhaps, 50,000 or 60,000 are settlers from other parts of the Austrian dominions, and foreigners ; the remainder are nativeborn Germans.

AUSTRIAN ITALY. See Lombardy
AUTERIVE, a tn. France, dcp. Haute-Garonne (Languedoc), 18 m . S.E. Toulouse, r. bank, Ariege, which is here navigable, and is crossed by a bridge of brick. The chief occupation of the inhabitants is in making army-clothing. Pop. 2230.—There are other three places of the same name in France.

AUTEUIL, a vil. France, dep. Scine, at the entrance of the Bois de Boulogne, within 1 m . of the W. barrier, and properly only a suburb of Paris. It has several manufactorics, chicfly of printed stuffs, and soap; a considerable tannery, with some breweries, distilleries, \&c. A great number of elegant country mansions are in the neighbourhood. Auteuil is celebrated as the residence, in former times, of many literary persons of distinction, among whom are the poet Boileau, whose country-scat is still shown, and Moliere, whose house has been converted into a rustic temple, containing not only his bust, bnt also those of Boilcau, Fontaine, Corneille, and Racinc. Pop. 3313.-Two other places in France bear the same name.

AUTHIE.-1, A vil. France, dep. Somme, 7 m. E. Doullens. It has numerous manufactories of nails, and one of cotton yarn. Pop. 946.-2, A small river, France, which rises near the above village; for about 20 m . forms the boundary between the dcps. Somme and Pas de Calais, and, after a
course of about 55 m ., falls into the English Chanuel.- 3 , A vil., dep. Calvados (Normandy), not far from Caen.

AU'THION, a river, France, rising in dep. Indre-et-Loire flows W., and falls into the Loire on its r. bank, after a coursc of about 66 m ., for 18 of which, from Beaufort to the Loirc it is navigable.

AUTHORPE, par. Eng., co. Lincoln; 1390 ac. Po]. (1841) 117.

AUTOL, a tn. Spain, in Old Castile, prov. Logroũo, 8 m . S. by W. Caluhorra, on the side of a limestone hill, called Santiago, l. bank, Cidaco; and having a parish church, prison, hospital, and school. Pop. 2740.

AU'TOLIN de vilhaneuva, a vil. Spain, in Asturia, prov. Ovicdo, 2 m. N. Navia; on the sea-shore, at the embouchure of the Navia. It has a large parish church, an agricultural population, and is celcbrated for salmon and other fish. Pop. 2500.-(Madoz.)

AUTUN [anc. Bibracte or Augustodunum], a city, France, dep. Saone-ct-Loire (Burgogne), cap. of arrond.; picturesquely situated on a hill, at the foot of a lofty range of well-wooded mountains, l. bank, Arroux, 28 m. E.N.E. Chalôns-sur-Saone. It is the seat of a bishop, suffragan to the Archbishop of Lyons, and has courts of primary jurisdiction, and of commerce; also a communal college, two librarics, a collection of pictures and antiquities, a society of agriculture, sciences, and arts; two hospitals, and two ecclesiastical seminarics, with other institutions. The numerous remains of antiquity in and around Autun, render it a very interesting place. Part of the ancient walls are still standing, and are remarkable for their massiveness and solidity. Of the gates built by the Romans, two remain, the Porta Senonica, now called the Porte d'Arroux, surmounted by a gallery of the Corinthian order, and covered with ornaments of exquisite workmanship, in good preservation; and the Porta Lingonensis, now the Porte Saint André. A tower is also pointed out as having formed part of a temple of Minerva. In the old parts of the town are the ruins of an amphithcatre, and of several temples, the principal of which appears to have been that of Janus, a square building, of which three sides remain. The modern city is divided into three parts, the highest, the chateau or castle, being supposed to occupy the site of the ancient capitol. The cathedral of St. Lazare, a Gothic edifice, founded in the 11th

autun cathedral, Nurth side.- From Chapuy, Cathedralea Fruncaises
century, has a fine lofty spire, 325 ft . high, and a choir richly adorned with marble sculptures. Above the principal portal is a beautiful zodiac; while the tympanum exhibits a curious representation of the resurrection, and final judgment. In the square adjoining the cathedral is an Ionic fountain of great beauty. The quarter called La Ville contains the principal open space or square, named the Champ de St. Ladre,
which is planted with trees, and forms an agreeable promenade. There are several other public walks, particularly the Champ de Mars, a spacious square in the middle of the town, elevated upon a terrace. The houses of the third quarter, the Marcheau or Martiale Forum, of the ancient city, are mean and ill built, and the streets narrow and dirty. The river here is crossed by two bridges, d'Arroux and St. Andoche. Manufactures:-carpets, serges, cotton velvet, cloth, hosiery, and delftware. During the first Revolution there were here a cannon-foundry, and manufactories of otber kinds of arms. In the neighbourhood are some tanneries and paper-mills. Autun is the chief, if not the only place in France where a species of fabric called tapis de Marchau, used for bed-coverlets, horse-cloths, \&c., is made. The principal trade is in grain, wood, wine, hemp, leather, horses, and cattle. In the vicinity are iron and lead mines; and not far distant, the valuable coal-pits of Epinac and Creuzot. At the latter place are extensive iron furnaces. A kind of gray granite, and potter's clay, are also found in the surrounding district. Autun was a place of great extent and importance, even before the conquest of Gaul by Julius Cæsar, who makes frequent mention of it under the name of Bibracte, capital of the Edui. Talleyrand was Bishop of Autun at the breaking out of the great Revolution. Pop. (1846), 9098.

AUVERGNE, a prov. Central France, now merged into deps. Cantal and Puy-de-Dôme, and an arrond. of Haute Loire ; but still deserving of separate notice, because of its frequent use as a gcographical boundary, particularly in the numerous works, both popular and scientific, to which its interesting geologieal phenomena have given birth. The part of Auvergne to which these works specially refer, is an extensive plain, usually known by the name of the Limagne, stretching from S. to N. about 50 m ., with an average breadth of 20 m ., and an altitude above the sca of 1200 ft ., and bounded, E. and W., by two parallel ranges of gneiss and granite, about 3000 ft high. The surface of the plain consists of alluvial deposits, resting on a substratum of limestone, and is broken by numerous hills, which appear to have originally formed part of the same substratum, and been upheaved by volcanic agency. The best proof of this is in the fact that many of them are surmounted by a crest or cupping of basalt. To the W. of the plain the limestone disappears, and is succeeded by a plateau of granite, which, rising 1600 ft . above the valley of Clermont, must be 3000 ft . above the sea. This plateau forms the base of a long chain of volcanic cones and domes, which, to the number of 70 , form a zone of nearly 20 m . by 2 m ., and vary in altitude from 500 to 4000 ft . The highest of them, Puy-de-Dôme, is 4000 ft . above the sea. It is entirely composed of velcanic matter, and has a regular crater 1000 ft . in circumference, and 300 ft . dcep. The whole of the cones present the same general character-well-defined craters, enclosed by regular cones, on whose sides the lava currents may be traced as easily as on those of Vesuvius.(Dict. de la France; Lyell's Geology; Mantell's Wonlers of Geology.)

AUVERS-me-mamon, a tn. and com. France, dep. Sarthe (Maine), r. bank, Trulon, 22 m . S.E. Lard; on an acclivity, and built in the form of a square, the sides of which are occupied by houses, while an ancient church rises in its centre. The district around is watered by the Trulon, the Erve, and the Vaige. From the margin of those streams abrupt precipices arise, some of them crowned with the remains of old forts, and others of them in the form of fantastic peaks, which have a very picturesque effect. Pop. 2233.-Other three villages in France have the name of Auvers.

AUVILLARDS.-1, A tn. France, dep. Tarn-et-Garonne (Armagnac), 22 m . W. Montauban; on a height, l. bank, Garonne, with a port, and considerable trade. Manufac-tures:-porcelain, earthenware, woollen, hosiery, and hats. Pop. 1742.-2, Auvillards-sur-Saone, a vil., dep. Côte-d'Or (Burgundy). Pop. 521.

Kol. I.

AUXERRE [anc. Antissiodurum], a city, France, cap. dep. Yonne, 96 m . S.E. Paris, on the side of a hill, l. bank, Yonne, which here begins to be navigable. The situation is remarkably fine, and the air pure, but the town itself is in general ill built and dirty, with narrow, crooked streets. Its churehes constitute its chief attraction. The cathedral, dedi-

## aCXERRE.-From In France Pittoresque.

cated to St. Etienne, is a splendid Gothic structure, thongh still unfinished. Its interior is finely proportioned, and the windows, of stained glass, are exceedingly beautiful. The old episcopal palace, once regarded as among the finest of the kind in France, is now the Hotel de Prefecture. The abbey of St. Germain contains some curious crypts, one below another; in the lower are tombs of the early Counts of Auxerre.

Auxerre is the seat of a court of assizes, and of courts of primary jurisdiction and commerce. It has a communal college or high school, a museum of antiquities and natural history, a primary normal school, a public library containing 25,000 volumes and nearly $200 \mathrm{MSS} .$, an agricultural society, a theatre, a large foundling-hospital, baths, and a botanical garden. Over a gatehouse in the market-place is a curious old clock-tower. The principal manufactures are of woollen cloths, serges, druggets, hosiery, cotton yarn, hats, wine casks, blankets, violin strings, and earthenware; leather, red and yellow ochre, rouge, called de Prusse, and chalk. It has some commerce in hemp, leatlier, staves, bricks, and cattle; but the chief trade is in wood, and in the wines of the district, of which about 120,000 tuns are annually sent along the Yonne and Scine to Paris and Normandy. Of these wines the most noted is the white Chablis. Auxerre was the ancient capital of the Auxerrois or county of Auxerre, which now constitutes the principal part of the arrondissement of that name. Pop. (1846), 11,890.

AUXONNE [Latin, Asona, Aussona], a tn. France, dep. Côte-d Or (Burgundy), 18 m. E.S.E. Dijon, l. bank, Saône, here crossed by a beautiful bridge of 23 arches. At one extremity of the bridge is a bank or causeway, about $1 \frac{1}{2} \mathrm{~m}$. long, to give access to it during inundations of the river. Auxonne is a fortified place of the fourth class, well built, the seat of a court of commerce, and has a communal college, and a public library containing 4000 volumes; a castle, an arsenal, a cannon-foundry, and an artillery school has been formed on the ramparts. Manufactures:-woollen stuffs, serges, muslins, and hardware. Trade:-grain, flour, fruit, wine, brandy, iron, wood, and coal. Auxonne was the capital of a small sovereignty, separate from the duchy and county of Burgundy, the sovereigns of which took the title of Sires d'Auxonne. Pop. 2944.

AUXY-le-chateat, a small tn. France, dep. I'as de Calais (Artois), in a marshy country on the Authie, which intersects it, $30 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Arras. It has an old parochial church, tanneries, and four fairs. Pop. 2342.

AVA [Burmese, Angwa or Aingwa-Fish-pond; Sanscrit, Ratanapura-City of gems], a city, Burmah, of which it was formerly cap., l. bank, Irrawady, about 1 m . S. W. Amarapura, also formerly the cal. ; lat. $21^{\circ} 51^{\prime} \mathrm{N}$. ; lon. $95^{\circ} 58^{\prime} \mathrm{E}$. It
is divided into an inner and outer town, each surrounded by a brick wall and fosse; the circumference of the whole being about $5 \frac{1}{2} \mathrm{~m}$. The houses are, in general, mere huts thatehed with grass; but a few, belonging to persons of distinction, are of somewhat superior construction. The outer town is but thinly sprinkled with these wretched habitations, and some large quarters are entirely destitute of buildings. The inner town, about 1 m . in circumference, and forming the N.E. angle of the city, is chiefly occupied by the palace, finished in 1824; the Rung-dhau or hall of justice; the Lut-dhau or council-chamber ; the arsenal ; and the houses of a few persons attached to the court. Ava contains also some dilapidated monasteries. The bazaars, including one without the walls, are eleven in number; and were at one time well stocked with native commodities, goods from China and Laos, and British cottons, woollens, glass, and earthenwarc. The pop. in 1826 amounted to 25,000 or 30,000 , but is now much less. An earthquake, in 1839, destroyed every substantial building in the city. Since this event, the seat of government has been removed to Monchobo.

AVAL, the largest of the Bahrein Islands (which sec).
AVALON, a large peninsula, forming the S.E. part of Newfoundland, having Trinity Bay on the N., and Placentia Bay on the S., separated only by an isthmus of about 4 m . broad. The bays of St. Mary and Trepassey on the S., and Conception on the N., divide the district into three lesser peninsulas. It has also several smaller bays, with many excellent harbours. The Great Bank of Newfoundland lies E. of it.

AVALLON [anc. Aballo], a tn. France, dep. Yonne, cap. arrond., 26 m . S.E. Auxerre ; romantically situated in a fertile country, l. bank, Cousin, which here takes the name of the Voisin, on a bill of red granite, along the brow of which runs a broad terrace-walk, planted with lime-trees, more than 500 ft . above the bed of the river. It has well-built houses, broad and clean streets, an hospital, concert-hall, and parish church, an old edifice with a curious Romanesque portal; likewise a court of commerce, a communal college, and an agricultural society ; a theatre, and public baths. Manufac-tures:-woollen cloth, easks, staves, mustard, and paper. It has also some tanneries and fulling-mills, and a trade in grain, wine, eattle, and coals. Pop. 4896.

AVARES (Khanat of), a political division of E. Circassia, on the N. slope of the Caucasus, between the rivers Aksai and Koisn ; area, 2287 m . It is mountainous and sterile, inhabited by the Avares, a tribe of Lesghians, governed by a khan, and is nominally subject to Russia. The Avares are Mussulmans, and live by the chase and by plunder. To prevent their predatory incursions on the surrounding tribes, an annual sum is paid to the khan by Russia, and the rank of lieutenant-general is given him. Pop. 31,000 .

AVATCllA, a river, Kamtchatka, rising in a meadow at the foot of a volcano of same name; flowing E., and falling into the Pacific Ocean at the town of Petropavlosk, on the Thay of Avatcha. Its whole course is about 30 m .

AVATCHINSKAIA, a volcano, Kamtchatka; in lat. $53^{\circ} 15^{\prime}$ N.; lon. $158^{\circ} 50^{\prime}$ E.; height, 9055 ft . The last eruption of this mountain oecurred in 1827.

AVE, a small river, Belgium, rising in prov. Luxembourg, and, after passing Lomprez and Wellin, disappearing in a calcareous mountain, under which it continues its ccurse for nearly half a mile. After emerging, it passes $A$ ve and Auffe, and joins the Lesse.

AVEBURY, a vil. and par. England, eo. Wilts. The village is 6 m . W. by N. Marlborough, and consists of one principal street, badly kept; houses principally poor-looking rottages, built of stone from the neighbouring downs; supply of water abundant. The parish church is a fine old structure of Norman arehitecture. There are also a Baptist chapel and an Independent chapel in the village, a boarding-school, and a national school. The village occupies part of the site of a place of worship belonging, it is supposed, to the ancient Britons. It was enclosed by an extensive diteh and rampart, including double circles of large unhewn stones. On the neighbouring downs are numerous barrows or tumuli, one of which, called Silbury Hill, covers an area of upwards of 5 ac., and is 2027 ft . in circumference at the base, and 120 at the summit, with a perpendicular height of 170 ft . There are numerous other memorials of antiquity of a similar kind in the vicinity. Area of par. 5450 ac . P'op. (1841), 751.
aveiro, or Bragança Nova, a seaport tn. Pertugal, prov. Douro, on a bay of same name, formed by the estuary of the Vouga, 35 m. S. Oporto; lat. $40^{\circ} 38^{\prime} 24^{\prime \prime} \mathrm{N}$. ; lon. $8^{\circ} 37^{\prime} 45^{\prime \prime}$ E. (R.) Aveiro is situated in a flat, marshy comntry, which renders it very unhealthy. The old walls still remain, but the suburbs extend beyond them. It is a bishop's see, and contains four parishes, a cathedral, and four other churches, six monasteries, a college, and an hospital. The houses are small, and the people generally in poor circumstances. Aveiro has manufactures of earthenware, and salt is made in great quantities from the lagoons in the neighbourhood; but the quality is reckoned inferior to that produced at Setubal and Lisbon. The fishery is active, and the province is supplied with sardines chicfly from Aveiro; and besides salt and fish, a thriving trade is carried on in oil, wine, oranges, \&c. The oysters caught off the coast are reputed the best in Portugal. The entrance to the mouth of the river is marked by two lofty stone pyramids, each 70 ft . high. The port is wide and safe, but a shifting bar at the entrance renders the aid of a pilot indispensable. During spring-tides there are 15 ft . water on that bar; at neaps, from $7 \frac{1}{2}$ to 12. Pop. 4094.

AVEIRO, a tn. Brazil, prov. Para, pleasantly situated in a fertile comutry, admirably adapted for the growth of cacao and cotton ; r. bank, Tapajos, which is here navigable, and 70 m . above its embouchure in the Amazon. The inhabitants are chicfly Indians.

AVELEY, par. Eng. Essex; 3920 ac. Pop. (1841), 849.
AVELGHEM, a tn. and com. Belgium, prov. W. Flanders, dist. of, and 8 m . E. Courtray, containing saltworks, dyeworks, breweries, tobacco-factories, and oil and flour mills. Pop. 5295.

AVELLA, a tn. Naples, prov. Terra di Lavoro, dist. of, and 5 m . N.E. Nola; delightfully situated, and commanding a view extending to Naples. It has four parish churches. Close by are the ruins of the Roman Abella, celebrated by Virgil for its natural products. Pop. 6030.

AVELLINO, a tn. Naples, cap. prov. Principato Ultra, dist. Avellino, 29 m . E. Naples; situated at the foot of Mount Vergino, near the Sabbato. It is a fortified place, and the seat of a bishop, suffragan to Benevento, and of a civil and criminal tribunal, and contains a mean-looking cathedral, three parish churches, and a royal college. It stands on the declivity of a hill; the houses are in general well built, but the streets, though wide, are exceedingly irregular. It has a square, adorned with an obelisk, and possesses several agreeable promenades; but the public edifices, with the exception of a granary, are of the poorest description. It has some manufactories of maccaroni, of sausages, long celebrated; and of coarse cloth; also, several dyeworks, much favoured by the plentiful supply of soft water; it is likewise famed for its confectionery, and carries on an active trade in grain. The neighbourhood abounds in chestnuts and hazel-nuts. The latter were much prized by the Romans, and are still celebrated under the name of Avellino nuts. The town suffered a good deal by earthquakes in 1694 and 1731. At a short distance is the famous Val di Garzano, the site of the Furcee Caulince, where the Samnites compelled a Roman army to lay down their arms and pass singly under the yoke, B.c. 321. Pop. 15,586.

AVENBURY, par. Eng. Hereford; 3140 ac. Pop. 382.
AVENCHES [anc. Aventicum], a small tn. Switzerland, ean. Vand, about $3 \mathrm{~m} . \mathrm{S}$. the Lake of Morat, and 30 m . N.E. Lausanne, cap. of a detached dist., surrounded by Freiburg and the Lake of Neufchatel. The ancient walls, which had a circuit of several miles, may still be traced. A Koman tower, a Corinthian column, 37 ft . high, the remains of an amphitheatre, an aqueduct and baths, numerous inseriptions, and specimens of Mosaic work, are the chief relics of the former splendour of Aventicum. About a tenth of the ancient city is occupied by the modern town or village of Avenches, consisting of a few streets, and having an old chureh, a castle, and an institution for lunatics. The environs are beautiful and fertile. Pop. (Protestants), 1458.

AVENDALE, or AvoxdAle, a par. Scotland, Lanark, watered by the Avon; area, 32,000 ae., of which more than one-half is under cultivation. 1)rumclog, where Graham of Claverhouse was defcated by the Covenanters, in 1679, is in this parish. It contains a considerable town, called Strathaven
or Straven, by which name the parish also is sometimes designated. Pop. (1841), 6180.

AVENING, vil. and par. Eng. Gloueester, the former on an acelivity; area of par. 4660 ac. Pop. (1841), 2227.

AVENWEDDE, a vil. Prussia, prov. Westphalia, gov. of, and about 32 m. S.S.W. Minden, on the Dolke; with woollen and linen manufactures. Pop. 3322.

AVENZA, or Lavenza, a small tn., N. Italy, in the united duchies of Modena and Massa-Carrara, on the Gulf of Genoa, 1. bank, Avenza, near its mouth ; lat. $44^{\circ} 5^{\prime}$ N.; lon. $10^{\circ} 5^{\prime}$ E. It was at one time the principal place of shipment for the Carrara marbles; but in consequence of the gradual elevation of the coast, it is now 1 m . distant from the sea, and therefore no longer a shipping point. There is here a magnifieent castle, built by Castrueeio degli Interminelli. Avenza is the first town of the duehy of Massa, and the Modenese customhouse is stationed here.

AVEREEST, a vil. Holland, prov. Overijssel, 13 m . N.E. Zwolle, and 9 m . S.E. Meppel, r. bank, Reest. It has a ('alvinistic, a R. catholic chureh, and a sehool. Pop. about 1300 , ehicfly employed in agriculture and cattle-rearing.

AVERHAM, par. Eng. Notts; 2530 ac. Pop. 264.
AVERNAKÖE, an isl. Denmark, Little Belt, lat. (centre) $55^{\circ} 2^{\prime} \mathrm{N} . ;$ lon. $10^{\circ} 17^{\prime} \mathrm{E}$. It is of irregular form, about 5 m . long, varying from $\frac{1}{4}$ to $1 \frac{1}{2} \mathrm{~m}$. broad, and is separated from Björnöc by a deep channel ; but from Dreiöe and skaaröe by shallow water, not more than 6 ft . decp. Pop. 350 .

AVERNO [anc. Avernus], a celcbrated lake, Neapolitan States, oceupying the crater of an extinet voleano, about 9 m . W. Naples, dist. Pozzuoli, near the Mediterranean. It is between 1 and 2 m . in circumference, of a cireular shape, and abont 180 ft . deep in some of the deepest places. It is often referred to by the ancient pocts, especially by Virgil, by all of whom it is associated with everything gloomy and dismal. In ancient times the lake was surrounded with groves, whieh, excluding a free circulation of air, rendered the place extremely unhealthy, from noxious aecumulations of mephitic vapours. The aceount of Lueretius is, that birds could not fly over it without being suffocated; and Lyell secs no reason for discrediting it, though the spot has now become salubrious and checrful. The groves were cut down by Agrippa during the reign of Augustus, and a communication opened between Averno and the Lucrine lake, which was afterwards almost entirely displaced by an eruption in 1538 , whieh threw up from the midst of its waters a mountain, now called Monte Nuovo; but the outlet joining it to the Lake of Averno still remains. On the S.E. bank are the ruins of a temple of Apollo; and a little further W., the entrance into the subterraneous grotto of the Cumæan sybil. The surrounding heights are now elothed with vines, and retain none of their original gloomy character. It is still, however, resorted to for its vapour-baths, though its vicinity is unhealthy in summer.-(Lyell's Geology.)

AVEROE, an isl. Norway, off the coast of Romsdal ; lat. (centre) $62^{\circ} 57^{\prime} \mathrm{N}$.; lon. $7^{\circ} 25^{\prime} \mathrm{E}$.

AVERRI. Sce Waree.
AVERSA, a tn. Naples, prov. Terra di Lavoro, dist. Caserta, 9 m . N. Naples; on a delightful plain, covered with vines and orange-trees. It is a bustling and lively place, spacious, and well built; the seat of a bishopric, one of the richest in the kingdom; of a royal governor, and of a tribunal; and contains nine churches, several convents, a well-condueted foundling hospital, and a lunatic asylum, celebrated for the excellence of its system. Aversa is famed for its almondeakes, ealled torrone, which are in great demand in Naples, with which it communicates by a fine broad avenue. Aversa was built in 1020 , by Rainalph, a Norman chief. Andreas, of IInngary, was atrangled in a convent leere by some conspirators, Sept. 8, 1345. Pop. 16,15S.

AVES ISLANDS, or Bird Islands.-1, An isl., E. coast, Newfoundland; lat. $50^{\circ} 5^{\prime}$ N.-2, An isl. 60 m . N.W. Dominiea, and 51 W . Guadalupe.-3, A cluster of small barren, rocky islands, Lesser Antilles, about 100 m. E. by S. the Gulf of Venezuela, between the islands of Buen-Ayre and Roques; lat. $11^{\circ} 5 y^{\prime}$ N.; lon. $67^{\circ} 40^{\prime} \mathrm{W}$. (r.)

AVESNES, a small fortified $t n$., of the fourth elass, France, dep. Nord (Hainant), cap. arrond., on the Greater Helpe, 49 m . S.E. Lille. It is the seat of a sub-prefecture, and of a court of primury jurisdiction; and las a communal
college or high school, an hospital for old men, and an agricultural soeiety. The town is in general well built, and has a cathedral, surmounted by a tower, 300 ft . high; some courthouses, townhall, barracks, and a fountain, in the Place d'Armes. It has manufactures of coarse serge, hosiery, and soap, with several tanneries, breweries, brickworks, saltrefineries, and marble saw-works. A considerable trade is carried on in grain, fruit, hops, wood, cattle, ironware, slates, and cheese. Pop. 2827.

AVESNES-les-aubert, a ti. France, dep. Nord, 8 m . from Cambray. It has a chureh, cemetery, and manufactures of cambric, bricks, and oil. Pop. 2871.

AVES'TA, a tn. Sweden. See Afvestadt.
AVETON-GIFFORD, par. Eng. Devon; 1840 ac. Pop. 1057.

AVEYRON [anc. Teronius], a rapid river, Franee, giving its name to the dep. Aveyron. It issues from the springs of Veyron, among the Cevennes. Taking a W. dircetion, it passes Rhodez, Belcastel, and Villefranche; and beeomes navigable at Negrepellisse, about 20 m . above its embouchure in the Tarn, into which it falls, after a course of abuut $130 \mathrm{~m} .$, a little above Moissac. Its principal affluent is the Viaur.

AVEYRON, a dep., S. of Franee, formed of the ancient dist. of Rouergue, a subdivision of the prov. of Guienne; bounded, N. and N.E. by deps. Cantal and Lozère; E. and S.E. by Gard and Herault, which separate it from the Mediterranean; W. and S.W. by Lot, Tarn-et-Garonne, and Tarn; between lat. $43^{\circ} 41^{\prime}$ and $44^{\circ} 55^{\prime} \mathrm{N}$.; and lon. $2^{\circ} 50^{\circ}$ and $3^{\circ} 50^{\prime}$ E.; length, N. to N. about 96 m ., breadth, E. to W. 66 ; area, $2,137,664$ ae., or $3340 \mathrm{sq} . \mathrm{m}$. It is one of the most mountainous departments of France; traversed in the E. by branches of the La Margeride range, which unites the mountains of Auvergne with the Cevennes-its boundary on the S.E. Prolongations of the latter, and of the mountains of Cantal, cover the S. and N. parts. One long chain, called the mountains of Aubrac, extends nearly 30 m . in length, from 1. bank, Truyere, to the point where the Lot enters the department. These mountains are all of volcanic origin, and contain numerons grottocs and subterranean caves. Between Guiolle and tho village of Naves, they exhbit basaltic columns of various forms, and perpendicular rampart-like precipices of the most striking appearance. A group, called the Leveson, an offshot of the Cevennes, rises between the sourees of the Aveyron and the Tarn, and runs N.E. to S.W. throwing out several branches. Five considerable rivers traverse the department-namely, the Aveyron, after which the department is named, the Viaur, the Trayere, the Lot, and the Tarn. Of these, the only one navigable within the department is the Lot. The other streams of any conscquence are the Dourdon, the Lorgues, and the Dourbie. Dnring winter, which continues more than six months, the snow lies deep upon the mountains, the sides of some of which are covered with vast forests, principally of chestnuts. It is only in the W. that plains of any considerable extent are found. The soil is of three different kinds, varying with the different species of rocks, from the decomposition of which it has been produced-a calcareous earth in the limestone district, a rich, friable mould among the volcanic basalts, and generally a poor hungry clay, when primitive schist, quartz, and gneiss prevail. Agriculture is in a very defective state. In field labour, oxen are generally used. Throughout the N. distriets, oats and rye are mostly eultivated. In the W. cantons, besides these, a little wheat is raised, but this species of grain is more abundantly grown in the E., where the farms are often so large as to employ 25 yoke of oxen. Barley, maize, and buckwheat are also produced. Altogether, the grain raised is nearly sufficient for the consumption. The extent of arable land is $909,310 \mathrm{ac}$.; meadows, $303,790 \mathrm{ac}$; vineyards, 86,025 ac. Nearly a fourth part is waste land, and the remainder is oecupied with forests, orchard and garden grounds, \&c. There are few lakes, and no marshes. Tho wine produced is of inferior quality. In the distriet of Guiolle, eheese of excellent quality is made; but the best is produced in the village of Roquefort ; it is made from a mixture of ewe and goat milk, and is considered the finest in France. The quantity exported is from 30,000 to $36,000 \mathrm{lbs}$. ycarly. Considerable attention is paid to sheep-breeding, and about $1,400,000 \mathrm{lbs}$. wool are annually produced. In the more mountainous localities both sheep and cattle are very inferior.

Mules are reared for export to Spain. Wolves and foxes abound, and adders, lizards, and other reptiles are numerous. Aveyron is rich in coal, iron, and alum; the coal mines being among the most valuable in France. They are principally in the neighbourhood of the small town of Aubin, in the district lying between the Lot and the Aveyron. Here are also considerable ironworks ; and the burning mountain of Fontagnes, the coal of which having accidentally caught fire, has continued burning for centuries. It also possesses copper mines. Argentiferous lead, antimony, sulphate of iren, sulphur, fuller's earth, gypsum, and marble, are procured in large quantities. Manufactures :-silks, coarse woollen stuffs, common cloths, table-linen, silk thread, hosiery, china-ware, paper, leather, and glass. Some trade is carried on in grain, prunes, and other fruits; wool, cheese, hams, sheep, and mules; copper utensils, coal, alum, nails, staves, casks, \&c.

The inhabitants are, in general, well-behaved and industrious ; grave in their manners, but still of a cheerful disposition. In the greater part of the department, but especially in the district situated between the Lot and the Aveyron, the females begiat to work at an early age, and take part in all agricultural labours, however severe. Aveyron is divided into five arronds., 42 cans., and 274 coms. Its cap. is Rhodez, and other principal towns are Milhan, St. Affrique, and Villefranche. Pop. (1846), 289,661.- (Dict. de la F'rance; F'rench Official Tables.)

AVEZZANO, a tn. Naples, prov. Abrnzzo Ultra II., cap. dist.. on a beautiful plain near the lake Fucino, about 22 m . S.s.E. Aquila, surrounded by dilapidated walls, and believed to be founded on the ruins of the ancient Alba. It has 10 churches, and a large public square adorned by some handsome buildings, amongst which is a palace belonging to the Colonna family. Pop. 3166.
aVIANO [properly Pieve di Arrano], a vil. Venetian Lombardy, gov. Venice, deleg. of, and 30 m . W. from Udine, cap. of dist. Pop. 5000.

AVIEMORE, vil. Scotland, co. Moray, l. bank, Spey; 25 m . S.E. Inverness.

AVIGLIANA, a tn . Sardinian States, prov. of, and 20 m . E.S.E. Susa. Manufactures:-silk and coarse cloth. Pop. 3000.

AVIGLIANO, a tn. Naples, prov. Basilicata, dist. of, and 11 m . N.W. from Potenza, on the brow of a hill, part of which gave way in 1824, in consequence of long-continued rains, and destroyed a portion of the town. It has an elegant collegiate church, several convents, and a royal college. On the pasturage in the neighbourhood, the largest and finest oxen in the kingdom are raised. Pop. 9290.

AVIGNON [anc. Avenio], a city, France, cap. dep. Vaucluse, situated in a valley, l. bank, Khone, here broad, deep, and rapid, crossed by a wooden bridge, and also by a bridge of boats ; 403 m . S.S.E. Paris, and 53 N.N.W. Marseilles; lat. $43^{\circ} 57^{\prime} \mathrm{N} . ;$ lon. $4^{\circ} 48^{\prime} 38^{\prime \prime} \mathrm{E}$. ( L.$)$ It is a very ancient

AVICNON, Irom the North - Krom liuxhe Views in the South ol France.
larly from the Doms, a rock which starts up abruptly from the khone to a height of 180 ft ., a fine view is obtained of the rich surrounding country. The town is, upon the whole, well built, of large antique-looking houses; but the streets are narrow, crooked, ill paved, and extremely dirty. Avignon is the seat of an arehbishop, and has courts of primary jurisdiction and of commerce; a college, a primary normal school, a public library of 42,000 volumes, an Athenæum, a medical library, a museum of natural history, a collection of pictures and antiquities, a botanical garden, and a school of design; with an agricultural society, and an association called the A cademy of Vaucluse. Among its claritable institutions are a subsidiary infirmary of the Motel des Invalides at Paris for old and wounded soldiers, an orphan hospital, and a lunatic asylum. Many of the public edifices possess great interest. The cathedral, called Notre Dame des Dons, a building of great extent, is said to have been originally founded in the first ages of Christianity on the ruins of a heathen temple; and, after its destruction by the barbarians of the North, was rebnilt by Charlemagne. The richly-scnlptured Chapel of the Resurrection is considered a masterpiece. Several popes officiated in this cathedral, and Innocent VI., Urban V., and Gregory XI. were consecrated in it. The former palace of the popes, near the eathedral, now used as a barrack and prison, is a vast irregular Gothic structure, built at different periods, with walls of great thickness and height, and strong towers, some of them 150 ft . high. The chamber of the Inquisition, established here in the 13 th century, and several of the atrocious contrivances to subdue the minds by torturing the bodies of its victims, are still shown. The church of the Cordeliers, of which nothing now remains but fragments of the tower and sidewalls, was celebrated for containing the tomb of Petrarch's Laura. The charch was destroyed at the Revolution, when the tomb of Laura, with others, was broken open, and the contents scattered to the winds. Of the churches, those of St. Pierre and St. Martial are almost the only two now deserving notice. In the Place d'IIorloge are the Hotel de Ville, a semi-gothic edifice, originally a palace of the Colonna family ; the principal cafés, and the theatre, erected in 1824. An ancient stone bridge across the Rhone was destroyed by a flood in 1689 ; only four of its arches remain.

The silk manufacture is the principal source of employment at Avignon, and the rearing of silkworms is carried on extensively in the district. The city has also manufactories of velvet, woollen and cotton goods, hats, jewellery, \&c, with silk-dyeing establishments, a cannon-foundry, a type-foundry, ironworks, paper-mills, tanneries, \&c.; and a trade in wine, brandy, iron, cotton, wool, truffles, grain, and other articles, of which it is the entrepot for Lower Dauphiné, Provence, and all Languedoc. Its chicf manufactures, however, have been transferred to Lyons; the annual fair at Beaucaire has supplanted its market ; and it now depends chiefly on its olives, its vines. and the transit of goods upon the Rhone. The means of conveyance which Avignon possesses are very extensive. Numerous diligences run on the public roads which centre in it. Two steamers ply daily to Lyons, and two to Arles. The railway, connecting it on the one hand with Montpellier, and on the other with Marseilles, has been completed; while that which is to connect it with Lyons and the capital is in rapid progress. With such means of conveyance, it cannot be doubted that the improvement which is said to have commenced in the trade of Avignon, will soon become much more decided.

Avignon is supposed to have been founded by the Greeks who settled at Massilia, now Narscilles. After the Romans, it passed under the domination of the Goths, and other northern barbarians. In 730, it was taken by the Saracens, who possessed it till 737, when it was wrested from them by Charles Martel. After a variety of fortunes, during which it passed
city, of an oval form, built on a gently undulating surface, and surrounded by lofty walls, which are crowned with battlements, flanked with square towers, and adorned with handkonie gates. Along the ramparts is an excellent boulevard, planted with elms, from the lofty platform of which, particu-
to the Counts of Provence, it was sold by a Countess of that name, in 1348, to Clement VI., who, as its price, not only promised to pay her 80,000 crowns, but declared her innocent of the murder of her husband, of which she was almost universally belicved to be guilty. From that time Avignon con*
tinued to be possessed, for more than four centurics, by tho popes, of whom not fewer than seven reigned at it, besides three others, generally regarded as schismatic popes, who, on the deposition of Gregory XI., the last of the seven, set up their throne here, and maintained it for 40 years. The popes latterly governed Avignon by lcgates, the last of whom was expelled at the Revolution of 1791 . Pop. (1846), 26,185 .

AVIGNONET, a tn. France, dep. Haute-Garonne, 4 m . E.S.E. Villefranche, on the Lers, near the Canal of Languedoc. It has a considerable trade in cattle. The only remarkable event connected with it, is the summary vengeance which some Albigenses inflicted here, in 1242, on several priests and familiars of the inquisition. Pop. 1031.

AVILA, a prov. Spain, in Old Castile, cap. same name, near the centre of the peninsula, and bounded, N. by prov. Valladolid, E. by Segovia and Madrid, S. by Toledo and Caceres, and W. by Salananca; area, $4917 \mathrm{sq} . \mathrm{m}$. ; watered by the Alberche, Adaja, and several smaller streams. The prevailing formations are granite and mica. The N. portion of the province is, for the most part, flat and exposed, but adapted for tillage; that on the S . very rugged and mountainous. interspersed with fruitful valleys and verdant slopes. The principal mountain-ranges are the sierras de Gredos, Pidrahita, Villafranca, Villatoro, Avila, and Tiemblo; they are rocky and precipitous, covered with oak, pine, poplar, juniper, \&c. Silver, copper, lead, iron, coal, marble, and various other minerals are found in Avila, and to some extent wrought. The plains in the N. part of the province are stony and poorly cultivated, but prodnce good grain and flax ; the valleys of the S. portion afford rich pasturage, and abound in grapes, olives, mulberries, chestnuts, filberts, and other fruits. Sheep, goats, pigs, horncd cattle, \&c., are reared in considerable numbers. Cloth, linen, silk, paper, soap, earthenware, hardware, copper vessels, and leather are manufactured and exported. Avila possesses numerons benevolent institutions, and education is perhaps better attended to in it than in any other province of Spain; crime is proportionally rare. The people are honest, temperate, and cheerful, but reserved and ceremonious towards strangers. Pop. 132,936.-(Madoz.)

AVILA, a city, Spain, in Old Castile, cap. prov. of same name, 65 m . W.N.W. Madrid, on a hill 3069 ft . above the sea, at the foot of which runs the river Adaja; divided into three districts-San Nicholas, San Antonio, and San Francisco -and partially surrounded by a wall of polished granite, in good preservation, entered by nine gates, and formerly flanked with 88 towers. Before the invention of gunpowder, the place was considered impregnable. It has irregular, badly paved, and filthy streets; two large squares, containing the principal buildings, which, as well as the houses generally, are built of gray granite. Avila is the sec of a bishop; and has a Gothic eathedral, eight other churehes, a university, an endowed school, a school of arts, townhall, public storehouse, hospital, cemetery, and several convents. Two annual fairs; one held in June, for the agricultural and industrial produce of the country; the other in September, for horses, cattle, sheep, \&c. Pop. 4121.-(Madoz.)

AVILLES, a tn. and port, Spain, in Asturias, prov. of, and 17 m . N. Oviedo; lat. $43^{\circ} 35^{\prime} \mathrm{N}$. ; lon. $5^{\circ} 51^{\prime} \mathrm{W}$.; 4 m . from the sea, 1 . bank of the river Aviles, here crossed by a bridge called San Sebastian. The river at high water is navigable for vessels of the largest size up to the town. Aviles has somewhat regular, but convenient, well-lighted, paved, and drained streets; several squares, in some of which are some fine houses with arcades; an elegant guildhall, bnilt on 13 arches, and having a quadrangular tower; two churches, a townhouse, an hospital, several well-attended schools, a small theatre, the old palaces of the Marquises of Santiago and Ferrera, with numerous public and private fountains. Manufactures:copper vessels, lime, earthenware, glass, linen, damask, cambric, and drills; and bleaching is carried on. The commerce is active, and consists chiefly in the export of copper vessels, earthenware, and a considerable quantity of coals, obtained from the mine of Arnao in the vicinity. Pop. 5600.-(Madoz.)

AVINGTON.-1, par. Eng. Berks; 1100 ac. Pop. 93. -2 , par. Hants; 1820 ac. Pop. 204.

AVIO, a market tn. Austria, in the Tyrol, on the Adige, circle, Trent. It is the seat of a deanery; and has a castle, manufactures of silk and velvet, and flint quarries. Pop. 2780.

AVISE, a tn. Persia, in Kurdistan, on the Kherka, 72 in. S.W. Shuster. Pop. 8000 .

AVIZ [Latin, Avisium], a tn. and par. Portugal, prov. Alemtejo, dist. of, and 35 m . S.W. Portalegre, r. bank, Aviz, an affluent of the Zetas; chief place of the order of military knights of Aviz, founded in 1146 by Alphonso I., and the residence of the grand prior. It is surrounded with good walls, and defended by a castle; and contains a church, a convent of the order of Aviz, an hospital, and a poorhouse. Pop. 1415.

AVLONA. See Aulova.
AVOCA, or Ovoca.-1, A valley and river, Ireland, co. Wicklow, celebrated as the scene and subject of one of Moore's songs. The Avoca river traverses the parish of Arklow, and falls into the sea about half a mile below Arklow. It abounded at one time with salmon, but since the drainage of the Ballymustagh copper mines was led into it, the fish have entirely disappeared. 2 , A river, Australia Felix, which divides the districts of Wimmera and Westernport. There are a number of stations on its banks. It rises in the Australian Pyrences, flows N., and falls into Lake Bael; total course above 100 m .

AVOCH, par. Scot. Ross; 6198 ac. Pop. 1931.
AVOLA, or Aula, a seaport tn. Sicily, defended by a battery, prov. of, and 13 m . S. W. Syracuse, pleasantly situated on a wooded eminence, with a marine village on the beach. It is clean and regnlarly built, has a good trade in wine, corn, cheese, oil, honey, almonds, and fruit; and some sugar is made at the only cane plantation now remaining in Sicily. The adjacent country prodnces large numbers of cattle, many of which find a market at Malta. Game is abundant. Tunnies are caught a short distance from the town. Pop. 8500 .

AVON, the name of five rivers in England, two in Wales, three in Scotland, and two in Australia. Those in Scotland are sometimes called Aven; the name Avon or Even, according to Ireland, being common to rivers the course of which is easy and gentle. In Exgland are:-1, The Upper Avon, which rises in co. Northampton, passes Stratford-on-Avon, the birthplace of Shakspeare, and falls into the Severn at Tewks-bury--2, Lower or West Avon, which rises in co. Gloucester, and enters the Bristol Channel about 8 m . below Bristol.3, The Hampshire Avon, which falls into the English Channel at Christchurch Bay.-4, The Little or Middle Avon, rises in co. Gloncester, and falls into the Severn.-5, The AvonLlwyd or Torvden, which rises in co. Monmouth, and, after a course of about 15 m ., falls into the Usk at Caerleon, in the same county.-Those in Wales are, a river in co. Glamorgan, which falls into Swansea Bay; and another which rises in co. Merioneth, and falls into Cardigan Bay.-Those in Scotland are:-1, A tributary of the Spey, which has its source in Loch Avon, in the S.W. extremity of co. Banff.2, A stream which rises in Loch Avon, co. Ayr, and falls into the Clyde at Hamilton.-3, A river which, for nearly half of its course, forms the boundary between the cos. of Linlithgow and Stirling. It takes its rise in co. Dumbarton, and falls into the Frith of Forth a little W. of Borrowstonnnese, in co. Stirling.-Those in Australia are:-1, A river in W. Anstralia, rising in co. Grantham, about lat. $32^{\circ} 30^{\prime} \mathrm{S}$., from which it proceeds N. through the co. of York, and falls into the Swan river, at lat. $31^{\circ} 30^{\prime}$ S., co. Victoria.- $2, ~ A$ river, Australia Felix, on which there are several stations. It is a small affluent of Lake Banynong; lat. $36^{\circ} 25^{\prime} \mathrm{S}$.; lon. $142^{\circ} 42^{\prime}$ E.

AVRANCHES [anc. Abrince], a tn. France, dep. La Manche (Normandy), cap. arrond., 30 m. E. St. Malo, 1. bank, Seez, about 3 m . above its embouchure in the Atlantic, pleasantly sitnated on the extremity of an extended ridge, the summit of which is crowned with the ruins of the cathedral, which was built in the 11th century, and destroyed at the Revolution. Here Henry II. of England did penance in 1172, before two of the Pope's legates, for the murder of Thomas-áBecket. A flat stone, with a cup engraved on it, marks the spot; and is all, save a single broken pillar, that remains of the once magnificent cathedral. Avranches is the seat of a tribunal of primary jurisdiction; and has a high school, a public library of about 10,000 volumes, an hospital, a theatre, and a botanic garden.

From the latter, and from the public walk formed in what was formerly the garden of the bishopric, at the entrance to
the town, and various other points, the view obtained is said to be the finest in the N. of France. One of the most prominent objects is the remarkable peak called St. Michel. Manufactures:-lace, blondes, white thread, and wax candles. A small trade in grain, butter, cider, hemp, flax, and cattle is carried on. Avranches is a favourite residence of the English, on account of the beauty of its situation, the salubrity of the air, and the cheapness of living. The celebrated Huet, whose Demonstratio Evangelica is still regarded as one of the best works on the evidences of Christianity, was Bishop of Avranches. Pop. 7247.

AVRANCHIN [Abricatinus Pagus], an ancient dist. France, now comprised in dep. La Manche, and forming the arrondissements of Avranches and Mortain.

AWA.-1. A prov., tn., and cape, Japan, in the S. of isl. Niphon. The town Awa lies in lat. $34^{\circ} \mathrm{N} . ;$ lon. $140^{\circ} \mathrm{E}$., about $80 \mathrm{~m} . \mathrm{S}$. Jeddo. -2, A principality in the same island. $-3, A \mathrm{tn}$. Japan, cap. of isl. Sikoko.-4, A British fort in Bengal, Hindoostan, N. from Agra.-5, A market tn. Persia, prov. Irak, N.W. Sawa.

AWASI, or AwADS1, an isl. Japan, about 60 m . in circuit, off the $S$. coast of Niphon, between it and the E. coast of Sikoko, in lat. $34^{\circ} 30^{\prime} \mathrm{N}$.; lon. $134^{\circ} 30^{\prime} \mathrm{E}$. It forms a principality of the same name, has an area of 468 geo. sq. m., is high and hilly, has a stony and sandy soil, and yields cotton, but only sufficient for local consumption. From some of its lagoons, salt is gathered. On the coast is a town called also Awasl, besides which there are on the island the towns of Tsina, Mijwara, Mussima, and Jesima.

AWATCH1NSKAJA, an active volcano in Kamtchatka; lat. $53^{\circ} 15^{\prime} \mathrm{N}$. ; lon. $158^{\circ} 50^{\prime} \mathrm{E}$. It is 9055 ft . in height ; its last eruption took place in 1827.

AWE (Locin), a fresh-water lake, Scotland, co. Argylc, extending about 28 m . in length, from N.E. to S. W., with a breadth of about 2 m ., and communicating with Loch Etive by the river Awe, which, after a course of 7 m ., discharges its waters into the latter at Bunaw. It is very deep; and its sloping shores are well cultivated; but the horizon is closed by lofty mountains, from which fall many picturesque cascades, Ben Cruachan frowning over its N. end, and giving it a singularly wild and mountainous character. About 24 small islets are scattered over its surface, on two of which, Inishail and Fraoch-Elan, are some beautiful ruins. Near its N.E. end, likewise, is Traochcillan Castle, once the seat of the chief of the M'Naghtens; and about 4 m . E., close on its banks, is the beautiful ruin of Kilchurn Castle, once the residence, and still the property, of the Marquis of Breadalbane.

AWLINCOMBE, par. Eng. Devon; 1820 ac. Pop. 590.
AWRE, par. and vil. Eng. Gloucester, the former on a plain near the banks of the Severn. Area of par. 4120 ac. Pop. (1841), 1277.

AX, a small tn. France, dep. Ariege, 20 m. S.E. Foix ; picturesquely situated amidst mountains of granite belonging to the Pyrenees, at the intersection of three valleys, watered by the mountain-torrents of Ascou, Orgcix, and Merens, which, on their junction here, take the name of Ariege. It is celebrated for its hot sulphurous springs, varying in temperature from $113^{\circ}$ to $168^{\circ}$ Fals. There are two or three establishments of baths, and several hotels and hospitals, one of which has been constructed by the French Government for military patients. Near it is an ancient bath, established in 1200, called Basin-des-Ladres, or Leper's Basin. The inhabitants use these hot springs for various domestic and even culinary purposes. Ax lias some manufactures of woollen goods, and tanneries. Pop. 1991.- (Murray's Llandlook; Dict. de la France.)

AX, or Axe, two rivers, England, one of which has its source in the Mendip IIlls, in the remarkable cavern of Wokey hole, co. Somerset, and after being joined by the Chedder water, passes Axbridge, and flows into the Bristol Channel near the village of Uphill.-The other Ax rises near Chedington, co. Dorset, passes Axminster, and falls into the British Channel at Axmouth, co. Devon.

AXBRIDGE, a market tn. and par. England, co. Somersct, hun. Winterstoke. The town is 11 m . N.N.W. Glastonbury, and $120 \mathrm{~m} . \mathrm{S} . W$. London, on the banks of the Ax , under the Mendip Hills, and consists of three or four irregular streets. The church, which stands on an eminence, is a large and handsome Gothic structure, of great antiquity, and contains
some ancient monuments. There are, besides, chapels for Wesleyan Methodists and Particular Baptists, a guild-hall, a market-house, several schools, and some small charitics. Knit stockings are manufactured here, and are in some request. Market-days, Tuesday and Saturday. Four fairs annually for cattle. Area of par. 540 ac . Pop. (1841), 1045.

AXLL, a small tn. Holland, cap. can. of same name, prov. Zeeland, S. of the W. Scheldt, and $7 \mathrm{~m} . W$. Hulst. It is built in the shape of a parallelogram, and has a townball, a Calvinistic church, a school, two breweries, a saltwork, a lat manufactory, and two corn-mills. The inhabitants are chiefly cmployed in agriculture, and number 2200.

AXHOLME, a river isl., England, N.W. angle, co. Lincoln, formed by the rivers Trent, Idle, and Don, about 17 m . long, N. to S . and generally 5 m . broad, E. to W.; area, $47,800 \mathrm{ac}$. The soil is fertile, and large quantities of flax and hemp, rape and turnip-seed, are cultivated. In June 1747, the body of a woman was found 6 ft . deep, in a peatmoss in this island. The antique sandals on her feet, afforded evidence of her having been buried there for many ages; yet her nails, hair, and skin, slowed hardly any marks of decay. It contains seven parishes, Althorpe, Belton, Crowle, Epworth, Haxey, Luddington, and Owston, and has two market towns, Crowle and Epworth, the latter the principal town of the isle. Pop. (1841), 12,775.

AXIM, or Aksim, a tn. and dist. Ahanta, on the Gold Coast. The Dutch had a fort here called Fort Anthony, situated on the most W. promontory of Cape Three Points. The Portuguese founded the first settlement, but were driven from it by the Dutch in 1642. The landing is good, and the country well cultivated. The town, on a river of the same name, lies between Dixcove and Cape Apollonia; lat. $5^{\circ} 25^{\prime} \mathrm{N}$.; lon. $2^{\circ} 35^{\prime} \mathrm{W}$.

AXMINSTER, a market tn. and par. England, co. Devon. The town is 24 m. E. Exeter, on the S.W. side of a hill that rises above the river Axe; consists of five principal streets, somewhat irregularly laid out, with houses mostly of stone, and slate-roofed; is supplied abundantly with water, and well lighted with gas. The only public building worthy of notice is the parish church, a very ancient edifice, containing some interesting antique monuments. Its doorway is a fine specimen of Anglo-Norman. The other places of worship are, an Independent chapel, a Wesleyan chapel, and a R. catholic chapel. The educational means are, a national school, with a small endowment, in which about 120 boys and girls are educated; a school on the British system, and several private, dame, and Sunday schools. There are a news-room, several reading societies, and a few minor charities. Axminster was at one time celcbrated for its woollen cloth aud carpet manufactures; it had also an old established tape-factory; but none of these branches now exist in the town, the trade of which is entircly a retail one. Area of par. 6590 ac . Pop. 2860.

AXMOUTII, par. Eng. Devon; 4280 ac. Pop. 645.
AXUM, or Aksum [anc. Axuma or Axiomis], a tn. Abyssinia, kingdom, Tigré, now much decayed; situated about $10 \mathrm{~m} . W$. Adowa, and $110 \mathrm{~S} . W$. Arkeeko, near one of the sources of the Mareb, 7000 ft . above the level of the sca; lat. $14^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $39^{\circ} 0^{\prime} \mathrm{E}$. Modern Axum is a miserable village of about 600 huts, built in a small recess between two hills, at the N.W. end of a large and fertile valley, and is now worthy of notice only for its antiquities. Of these, the most celebrated is an obelisk, 60 ft . high, consisting of a single block of granite, highly ornamented in relief, and crowned with a representation of the ancient patera. It is of Grecian workmanship, and the only entire and erect specimen remaining of upwards of 50 , the rest lying in fraginents around. Probably the most ancient relic in the place is a sinall square cnclosure, with pillars at the corners, and a seat and footstool of granite in the centre, where the coronation of the kings of Axum took place. Axum was capital of a powerful kingdom, but we have no accounts of it previous to the commencenent of the Christian era, when it was a great commercial mart, carrying on an extensive trade, cspecially in ivory, by the port of Adule, Adulis, or Zulla. on the Red Sea. Its monarchs, who ruled not only the country of the Axumite,, but also part of Arabia, were of Greek origin, and used the Greck language, and for many centurics maintained their dominion unimpaired. -(Salt's Abyssiniu; Russell's Nubia and Abyssinia.)

AY (Pulo), or Pulo Way, one of the Banda Islands, Indian Archipelago; lat. $4^{\circ} 30^{\prime} \mathrm{S}$.; lon. $159^{\circ} 58^{\prime} \mathrm{E}$. It is one of the most beantiful and pieturesque of the Bandas, but is without water, the inhabitants depending on rain, or on supplies from the other islands. In common with the other islands of the group, it produces excellent nutmegs.

AY, or Ai (ST.), [Lat. Ageium], a tn. France, dep. Marne (Champagne), $12 \mathrm{~m} . \mathrm{S}$. Rheims; at the foot of a hill covered with vineyards, r. bank, Marne. It is celebrated for its white wines, which are considered the best of any in Champagne, and produced annually to the value of about $£ 75,000$. Besides its trade in wine, it has some distilleries and vinegar-works, and beds of fine clay for earthenware and porcelain. Pop. 3382.

AYACUCHO, a dep. Pern, between lat. $12^{\circ}$ and $15^{\circ} 30^{\prime} \mathrm{S}$., and lon. about $73^{\circ}$ and $76^{\circ} \mathrm{W}$. ; bounded, N. by dep. Junin, E. and N.E. by independent Indian tribes, S. and W. by the cordilleras, which separate it from Lima; greatest length, from N.W. to S.E., 275 m .; greatest breadth, about 160 m .; area estimated at 25,000 geo. sq. m. With the exeeption of the S.W. frontier, formed by the magnifieent range of the cordilleras, it consists eliefly of a series of plains, from one of which it derives its name. It is well watered by numerous tributaries of the Amazon, the largest of whieh, the Montaro, proceeds through the N . of the department in a course so tortuous, as almost to describe a circle. Ayaeucho is divided into the 10 provinces of Tajacaja, Iuanta, Huancavelica, Hnamanga, Aneo, Castrovixeyna, Cangallo, Andahuailas, Lucanas, and Parinacochas. Cap. Inamanga. Pop. about 180,000.

AYAMON'TE, a scaport tn. Spain, prov. of, and 80 m . W.S.W. Seville, on the l. bank, and near the mouth of the Guadiana, which here forms the boundary between Spain and Portugal. It stands on an aeelivity which slopes from N. to S., and is defended by two small batteries, of modern construction. The town consists of two parts, an npper and a lower, which have a very marked difference in their appearance; the former consisting of narrow and irregular streets, while those of the latter are regular and spacious, and lined with good houses, generally two, and sometimes three stories high. There are three publie squares, all with well-planted walks. The largest of these, San Franciseo, is adorned with a fine fountain. The chief public huildings are, two churehes, a townhouse, and prison; but none of them are deserving of notice. A yamonte lias a well-endowed hospital, and two endowed schools, in which only the humblest branches are taught. Boat-building and lace-making, once carried on to a great extent here, have greatly fallen off, though the latter still gives employment to a considerable number of females. The ehief oeeupation at present is fisling. Pop. 4675.

AYAR-NOR, a lake in Chinese Tartary, lat. $44^{\circ} 45^{\prime} \mathrm{N}$.; lon. $86^{\circ} 15^{\prime}$ E. It is of an oval form, and reeeives several streams, the ehief of which is the Loklon, but has no outlet. Greatest length, from E. to W., 35 m. ; breadth, $20 . \mathrm{m}$.

AYAS. Sce Aias.
AYASH. See Airasir.
AYCLIFFE (Gueat), par. Eng. Durham; 10,490 ae. Pop. 1372.

AYERVE, a tn. Spain, in Aragon, prov. of, and 20 m . N.W. Huesca, on a hill near the source of the Vadillo. It has ill-paved streets; two squares, connected by two lofty arches through the hereditary palace of the Marquis of Ayerve; two ehurehes, a townhall, an hospital, and two schools. Manu-factures:-linen, oil, and wine. Annual fair in September. Pop., including the adjacent hamlets of Anglis and Fontanellas, 2170.-(Madoz.)

AYLESBEAR, par. Eng. Devon; 3750 ae. Pop. 982.
AYLESBURY, market tn. England, co. Buckingham, 38 m . N.W. London; honses badly built, ehicfly of brick; water scaree; six principal streets, irregular, indifferently kept, but lighted with gas. It has two established churches, one of them, St. Mary's, an ancient eruciform strueture; one Independent, two Baptist, one R. eatholie, one Methodist, and some other smaller plaees of wosship; a national, British, archdiaconal, and other schools; a mechanies' institution, and numerous minor charities. Prineipal public buildings:-county-hall and market-house, handsome edifices; union workhouse and jail. Chief manufaetures:-silk throwing and weaving. Ducklings and tame rabbits bred in great numbers for the London market. Aylesbury returns two members to Parliament; constituency (1849), 1513. Pop. of tn. and
par. (1841), 5429.-There is a vale of the same name in eo. Buckingham, celebrated for its fertility.

AYLESBY, par. Eng. LineoIn; 2110 ac. Pop. 201.
AYLESFORD, a vil. and par. England, co. Kent. The vil. is $32 \frac{1}{2} \mathrm{~m}$. S.E. London, on the r. bank, Medway, over which there is a stone bridge of six arehes. The only manufacture is paper. Pop. par. (1841), 1344.

AYLES'TONE, par. Eng. Leieester; 3840 ac. Pop. 757.
AYLMER, a considerable lake in British N. America, immediately adjoining Clinton Colden Lake, with which it is connected by a small stream; about 80 m . N. from the N.E. extremity of Great Slave Lake; and intersected by the parallel of $64^{\circ} 15^{\prime} \mathrm{N}$., and the meridian of $109^{\circ} \mathrm{W}$. It is about 50 m . in length, and about 30 in breadth.

AYLMER'TON, par. Eng. Norfolk; 1460 ae. Pop. 289.
AYLSHAM, a market tn. England, co. Norfolk, on a gentle aeelivity rising from the river Burr, $10 \frac{1}{2} \mathrm{~m}$. N. Norwich. It eonsists of four prineipal streets, tolerably well kept, lighted with gas; houses of briek, and generally well built; supply of water ample, but not reckoned of the best quality. The chureh is in the decorated style. The other places of worship are, a Baptist chapel, and a Wesleyan and Primitive Methodist chapels. Aylsham was formerly celebrated for the manufacture of linen, sold under the name of Aylsham web. Subsequently, the manufaeture of woollen articles gave employment to many of the inhabitants; but since the introduction of machinery, all these branches of industry have ceased to exist. Corn now forms the only article of trade. Aylsham has a national sehool for boys, another for girls, and a third for infants; a commereial school, in conneetion with the Norwich Board of Education, for the sons of farmers and tradesmen ; a literary society, with a good and inereasing library; and several minor charitics. A cemetery with walks has been recently formed. Pop. (1841), 2448.

AYLTON, par. Eng. Hereford; 810 ac. Pop. 69.
AYMARGUES. See Aimargues.
AYMAUN, a small tn. and harbour, Arabia, W. coast of the promontory of Maeeta or Musendom, at the entrance into the Persian Gulf; lat. $25^{\circ} 25^{\prime}$ N.; lon. $55^{\circ} 33^{\prime}$ E. The houses are built principally of mud. The inlabitants depend for subsistence upon the pearl-fishery, the produce of whiel is between $£ 2400$ and $£ 3000$ annually. The eountry around is sterile, and fresh water scarce, being procured from wells three quarters of a mile distant, and which are often filled up with sand by N.W. gales. The anchorage off the town is bad, over a rocky bottom. Pop. of tn. 1000 to 1200.

A YMESTREY, par. Eng. Hereford; 7070 ae. Pop. 958.
AYNHO, par. Eng. Notts; 2330 ac. Pop. 662.
AYORA, a tn. Spain, prov. of, and 51 m . S.W. Valencia, in an extensive hollow at the base of an isolated limestone mountain. Its streets are, for the most part, straight, commodious, and clean, with wide well-paved footpaths. It has four squares, a parish church and a chapel of ease, a liandsome townhall, an unhealtlyy prison, two schools, an hospital, a large public granary, and a public batls. On the summit of the hill, where a part of the town onee stood, are the remains of an old eastlc. The inhabitants are chiefly employed in husbandry and expressing oil. Pop. 3786.-(Madoz.)

A YOT'T, two pars. Eng. Herts:-1, (St. Lawrence), 980 ae. Pop. 134.-2, (St. Peter), 1270 ac. Pop. 240.

AYR, a river, Scotland, Ayrshire, running a W. course of 30 m . tlurough the dist. of Kyle, dividing the co., to which it gives name, into two nearly equal parts, and finally falling into the Frith of Clyde below the town of Ayr. The species of claystone, known as the Water of Ayr. Stone, is found in its channel.

AYR, Ayrshire, or Airshire, an extensive maritime co. on the S.W. coast of Seotland, having somewhat of a creseent form; bounded, N. by Renfrewshire, S. by Wigton and Kirk eudbright, E. by the shires of Lanark and Dumfries, and W. by the Irish Channel. It is about 70 m . in length, with a breadth varying from 10 to 22 m ., but diminishing to 4 or 5 m . at its N . and S. extremities. Its coast line, which is about 75 m . in length, presents no deep indentations, but has several excellent harbours. The singular rock off the coast, known by the name of Ailsa Craig, belongs to the county, as does also the island of Little Cumbrac. Ayrshire comprises, altogether, $668,800 \mathrm{ae}$., of which about a half is supposed to be arable. The county was formerly, and is still popularly divided into the
three districts of Carrick, Kyle, and Cunningham. The first comprehends all that part of the county lying S. of the Doon; the second, the space between the Doon and the Irvine; and the third, the remaining part of the county $N$. of the Irvine, the smallest, but the most wealthy and populous of the three. The surface is irregular, and a large portion of it hilly. Of the latter description is the whole district of Carrick, the E. part of Kyle, and the N. extremity of Cunninghain. The other parts of the county are in general flat, and somewhat monotonous, with exception of the banks of the streams, which are remarkable for their picturesque beauty. The level lands are extremely fertile and well cultivated; but in the lower districts along the coast, the soil is mostly light and sandy, and less productive. Although, as above stated, a large portion of Ayrshire is hilly, it has no great elevations, the lighest suminits varying from about 1200 to 1900 ft . The principal streams are the Ayr, Stinchar, Girvan, Doon, Irvine, and Garnock, more than one of which have been rendered classic by the muse of Burns. There are several small lakes in various parts of the county, some of them well stocked with fish, but not otherwise remarkable. Fish are also plentiful on the coast, although not so abundant, it is said, as formerly.

The mineral riches of Ayrshire are very considerable, although in part but of recent development. Coal is abundant, especially in the middle and N. parts of the county, which may be considered as included in the great coal-field of Scotland. Extensive seams, also, of black-band ironstone have recently been discovered in various parts, and of so promising a character, as to render it extremely probable that Ayrshire will, at no distant day, become the great seat of the iron manufactures of Scotland. The principal ironworks already established in the county are those of Blair, Glengarnock, Eglinton, Muirkirk, Lugar, Kilmarnock, and Dalmellington; but others are from time to time being added. Plumbago is found in some localities in considerable seams; and lead, antimony, and copper are also met with, but in sinall quantity. Limestone and freestone abound. Mill-stones, of coarse granite, much esteemed for their hardness and durability, are quarried near the N. coast, in the district of Cunningham. The well-known whetstone, called Water of Ayr Stone, is found in the river Ayr. Marl, also, is procured in many places.

The climate of Ayr is moist, the average annual amount of rain falling near the centre of the county being 39 and 42 in .; lut it is by no means insalubrious. The agriculture of the county was in a miserable condition till about the middle of the last century, when it began to improve, and has since continued to make rapid progress. The principal grain raised is the oat; turnips are rapidly increasing, the quantity now raised being upwards of ten times that grown 15 to 20 years since. Potatoes, also, are universally cultivated. Flax is raised, and big or bere, but very little wheat. Lime is the common manure, but on the coast sea-weed is much used. Dairy-husbandry is extensively practised, the Ayrshire cows being celobrated as milkers. The well-known and much esteemed Dunlop cheese, so called from a parish of that name in the district of Cunningham, is produced in large quantities; but most part of the cheese made in the adjoining parishes, and even in the adjoining counties, is sold as Dunlop cheese. Great quantities of milk, also, are sent, in large tin cases, by railway to Glasgow. On the dry lands along the coast, a small white-faced brced of shecp, of indifferent quality, has long been maintained, but in the moors the native sheep are bred in great numbers; their wool is coarse and scanty, but the flesh is excellent. The horses of Ayrshire are of superior breed, being hardy, strong, and of large size. 'The arable farms are mostly small; average rent of land, about 11 s .3 d . per acre. There are several large estates, although there are also many of the middling and smaller class of proprietors. The roads throughout the county are now excellent, although in former times there was scarcely a practicable road in it. As already mentioned, iron is manufactured to a great extent, and is yearly increasing; its woollen manufactures are also extensive, particularly carpets, bonnets, and worsted shawls, which are produced in great quantities at Kilmarnock, Stewarton, and other towns. There are some considerable tanneries, and likewise several extensive cotton-works in different parts of the county; aud a great deal of yarn is spun for the Glasgow and Paisley manufacturers. Ayrshire needle-
work is also much esteemed, and has been long known and celebrated under that name; nor is the county less famed for its beautiful wooden snuff-boxes. The county is adorned with many elegant mansions, of which probably the finest and most picturesque is Culzean Castle, the seat of the Marquis of Ailsa, standing on the verge of a basaltic cliff, overhanging the sea, about 11 m. S.S.W. Ayr. Among the many interesting monuments of antiquity, may be noticed two enormous cairns of gray stones, one in the parish of Galston, the other, the larger of the two, in that of Norn. Nothing is known of the history of either. There are also traces of encampments in various parishes, supposed to be of Danish origin. On the coast of Carrick, about $13 \mathrm{~m} . \mathrm{S} . \mathrm{S} . \mathrm{W}$. the town of Ayr , is the ancient castle of Turnberry, in which Robert Bruce, King of Scotland, is said to have been born, and where he is known to have spent many of his youthful years. It was here that a fire, accidentally kindled, was mistaken by Bruce for an appointed signal, and caused him to cross the sea from the island of Arran opposite, to attempt the deliverance of his country. Dunure Castle, a tall empty tower occupying a commanding position on the coast, about $7 \mathrm{~m} . \mathrm{S} . \mathrm{S} . \mathrm{W}$. Ayr, is also an interesting relic of former times. Of the ecclesiastical ruins, the most interesting is the abbey of Crossraguel, in the parish of Kirk-Oswald, founded in 1244.

The chief towns are-Ayr, Kilmarnock, Irvine, Troon, Saltcoats, Largs, Ardrossan, Girvan, Ballantrae, Tarbolton, Mauchline, Beith, Dalry, Catrine, and Maybole. Ayrshire contains 46 pars., and returns one member to Parliament. Constituency in 1849, 4308. Annual value of real property in 1842-3, $\pm 531,319$. Pop. (1851), 189,858.

AYR, a seaport, royal and parl. bor. Scotland, cap. of above co., on a wide plain, l. bank, river Ayr, near its confluence with the Frith of Clyde, 30 m . S.W. Glasgow, and 40 by railway; lat. $55^{\circ} 27^{\prime} 54^{\prime \prime} \mathrm{N}$.; lon. $4^{\circ} 37^{\prime} 42^{\prime \prime} \mathrm{W}$. (r.) Two bridges, the 'Twa Brigs' of Burns, called, respectively, the Auld and New Brigs, the latter an clegant structure of five arehes, connect the town with the suburbs, Newton or New Town, and Wallacetown, both on the r. bank of the river. In the more modern parts of the town the streets are spacious, many of the shops elegant, and the houses handsome. Here, also, is one of the finest squares of which any provincial town can boast, called Wellington Square. All the principal strcets are well paved, lighted with gas, and kept remarkably clean. In the town and suburbs there are four established churches, two Free, two U. Presbyterian, a Reformed I'resbyterian, Original Seceder, Congregationalist, Episcopalian, and R. catholic. The other principal edifices are the Town's New Buildings, containing a suite of elegant assembly-rooms, and a public reading-room, the whole structure being finely set off by an elegant spire, 226 ft . in height; the county buildings, on the N.W. side of Wellington Square, after the model of the temple of Isis at Rome; and Wallace Tower, a handsome structure, 115 ft . in height, having, in a niche in front, an indiffer-ently-cxecuted statue of the hero. This tower occupies the site of an ancient one of the same name, in which, according to tradition, Wallace was confined. Between the town and the sea are the remains of a citadel erected by Cromwell, now called the Fort. The academy at Ayr has long been celebrated for the excellence of its system, and the ability of its teachers-a circumstance which lias tended in no small degree to promote the prosperity of the town, many families resorting to it for the education of their children. The number of scholars averages from 500 to 600 annually. The building is plain but commodious, and occupies a healthy situation. With exception of carpets, there are no manufactures of any extent in the town, which, on the whole, in a business point of view, is a dull place, depending greatly on the weekly markets and the county courts for its support.

The harbour of Ayr has two piers, which exfend into the sea upwards of 300 yards, one on the S . side of the river, and the other on the N. Further ont, there is a breakwater, recently constructed. The depth of water, in ordinary spring tides, is from 13 to 14 ft ., but at low water only 2 ft . The channel, however, is too narrow to admit vesscls drawing more than 12 ft . water, while the navigation is much impeded by a shifting bar of sand near the mouth, on which, at ebb tide, there is not more than a foot of water; but, in spring tides, there is 9 ft . at high water, and 7 in neaps, with a foot or two more with fresh S . winds. The shipping trade of $\Lambda \mathrm{yr}$ is
chiefly with Ireland, the principal exports being cotton, woollens, iron, coal, and whetstone. Imports:-grain, spirits, timber, slates, bricks, and lime. There is also a small foreign trade in hemp, mats, tallow, tar, iron, and pitch. The sea fisheries of Ayr were at one time very considerable, but have greatly declined of late years. Races are held here on a course about a mile $S$. from the town, and are generally well attended; and about 2 m. S. stand Burns's Cottage, Alloway Kirk, \&c. See Alloway.

The town of Newton-upor-Ayr, on the opposite bank of the river, is now generally ranked as a suburb of Ayr, although it is a burgh of barony, having magistrates of its own, and a peculiar and independent constitution. The principal street is of considerable length, but contains few handsome houses, while those in the other and older parts of the town are narrow, irregular, and straggling, and the houses of homely appearance; but towards the sea, several new and spacious streets have been laid out, and a number of neat villas erected. The only building of any note, exclusive of the churches, is the conncil-house. Handloom weaving and hand-sewing are carried on here to a considerable extent, especially the latter, the celebrated Ayrshire needlework, in which several huff dred females are employed. Newton-upon-Ayr has a joint interest with Ayr in the harbour, and supplies nearly all the coal shipped there. It has, likewise, some shipbuilding docks, rope-walks, and iron and brass-foundries. Although called New Town, the erection of the burgh dates as far back as the time of Robert Bruce. It is included within the parliamentary boundaries of the burgh of Ayr by the Reform Act, and thus forms a constituency with it, Campbelton, Inverary, lrvine, and Oban, in returning a member to Parliament. The terminus of the Glasgow and Ayr Railway is in this suburb. Wallacetown, mainly in the par. of St. Quivox, was formerly a vil. adjoining Newton-upon-Ayr, but is now so blended with it as to form one compact town. Its population consists almost entirely of colliers, artizans, and weavers. It also is within the parliamentary boundaries of Ayr. Pop. Ayr, 8264 ; Newton-upon-Ayr, tn. and par. 4482. Pop. of parl bor. 15,749 .

AYR (Newton-upon). See Ayr.
AYSGARTH par. and township, Eng. York, N. Riding; 79,980 ac. Pop. 5725.

AYSTON, par. Eng. Rutland; 1030 ac. Pop. 88.
AYTON.-1, (Great), par. Eng. York, N. Riding; 5740 ac. Pop. 1216.-2, par. Scot. Berwick; 7000 ac. Pop. 1784.

AZAMBUJA, a tn. and par. Portugal, prov. Estremadura, dist. Alemquer, 18 m . S.W. Santarem. It is situated on a fine and well-cultivated plain, and has an annual fair. Pop. 1640.

AZAMOR, a small tn., N.W. coast, Morocco, prov. Dukaila, on a sand-hill, 120 ft . above the sea, at a short distance from the 1 . bank of the river Um'er'-biegh; lat. $33^{\circ} 18^{\prime} \mathrm{N}$. ; lon. $8^{\circ} 15^{\prime} \mathrm{W}$. (n.) The walls, which are $1 \frac{1}{2} \mathrm{~m}$. in circuit, are in ruins, and the only defence remaining is a few guns, pointed seawards. The town is dull and lifeless, the streets narrow and filthy. Provisions, fish, vegetables, and fruit are, however, abundant, and of excellent quality. At the S.E. angle of the town is a suburb, containing a mosque and a sanctuary. The inhabitants carry on some trade in wool, which is shipped at Mazagan, a small port about 8 m . S.W.; a sand-bar at the mouth of the Um'-er'-biegh, and the rapidity of the current, rendering the approach to Azamor dangerous. The country around is open, and well cultivated, with many gardens, and extensive plantations of henna. Pop. 1000.

AZANI, an ancient Phrygian city of Turkey in Asia, pash. Anatolia, now in ruins, l. bank, Rhyndacus, $22 \mathrm{~m} . \mathrm{S}$ W. Kutaya. It was formerly a wealthy and magnificent city, as appears from the numerons and imposing relics with which it abounds, including a great quantity of shafts of columns, beautifully-worked capitals, entablatures, and the ruins of a noble temple and theatre. The columns of the temple are of the Ionic order, formed of a single block of marble, 28 ft . in length. Some of the Greek inscriptions on the walls refer to the reign of Hadrian. The modern village consists of a few straggling huts.

AZAUGHAL, a tn. Spain, Estremadura, prov. of, and 24 m. S.S.E. Badajoz ; in a valley, encompassed by three hills. Vol. I.

It has straight, well-paved streets, three squares, a parish church, townhouse, public storehouse, two schools, prison, barrack, and an hospital. Agriculture, domestic weaving, oil-pressing, and brandy-distilling, are the chief occupations. Pop. 2890 .

AZAY, several small tns. and coms. France:-1, Azay Brulé, a vil. and com., dep. Deux-Sévres. Pop. 1906. 2, Azay-le-Ferron, a tn. and com., dep. Indre (Berry), $16 \mathrm{~m} . \mathrm{N}$. Le Blanc; with a hot sulphurous spring. Pop. 1541.3, Azay-le-Rideau, a tn. agreeably situated on the Indre, dep. Indre-et-Loire (Touraine), $15 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Tours; with manufactures of leather and bombazines. Pop. 1219.-4, Azay-sur Cher, a vil. and com., dep. Indre-et Loire, 7 m . E.S.E. Tours, 1. bank, Cher. Some good red wines are made here, called vins du Cher. Pop. 1262.-5, Azay-sur-Indre, a vil., dep. Indre-et-Loire, 1. bank, Indre, at the confluence of the Indroy. Pop. 461.-6, Azay-sur-Thoué, a vil. and com., dep. Deux Sévres; with manufactures of linsey-woolsey and druggets. Pop. 1199.

AZCOITIA, a tn. Spain, Biscay, prov. Guipuzcoa, 20 m . N.W. Tolosa; in a verdant plain, 1. bank, Urola, at the base of the lofty mountain of Itzarriz. The town is in three divisions, and comprises a square, one principal and several other well-constructed and commodious streets, with wide foot-pavements. The townhouse, a fine edifice, with five arches in front; the parish church, a good specimen of Doric; and the school, are the only buildings worth notice. Chief employments:-agriculture, and the manufacture of iron nails and hardware. There are also some flourmills. The vicinity yields grain, fruits, especially cherries, chestnuts, and vegetables; also, some game and fish. Pop. 3795.-(Madoz.)

AZEITAO, or Villa Nogueira, a tn. and par. Portugal, prov. Estremadura, dist. of, and 6 m . W. Setubal ; on a small stream, which falls into the estuary of the Tagus. It has two churches, a cotton-factory, several dyeworks, and some trade in wood. Pop. 1590.

AZERBIJAN, or Aderbaijan [anc. Media Atropatene], a frontier prov. Persia, between lat. $36^{\circ} 10^{\prime}$ and $38^{\circ} 55^{\prime} \mathrm{N}$.; and lon. $44^{\circ} 20^{\prime}$ and $48^{\circ} 20^{\prime}$ E.; bounded, N. by trans-Caucasian I ussia, E. Russia and Ghilan, S. Irak-Ajemi and Ardclan, and W. Kurdistan ; length, from borders of Kurdistan to the Masula Mountains, 210 m . ; breadth, 185 m .; area, $25,285 \mathrm{sq} . \mathrm{m}$. Nearly the whole country consists of a succession of ligh mountains, intersected by deep and rugged ravines, which occasionally open into plateaux or extensive plains. Many of these are fertile, and partially cultivated. In the very centre of the province are the mountains of Sahend, rising to the height of 9000 ft . above the sea level; towards the E. of Tabreez, Mount Sevelan is between 12,000 and $13,000 \mathrm{ft}$. The principal rivers are the Aras or Araxes, on the N. border with its affluent the Karasu; the Kizil-Ozein, in the S., with its numerous affluents, which water the central parts of the province; the Jugatty, the Sosar-chai, the Aji, and the Salyan, which fall into the Lake of Urmiah. One of the most re markable features of Azerbijan is the great salt lake of Urmiah (which see). The best soils yield from 50 to 60 fold, when abundantly irrigated, by means of the many small rivers by which the province is intersected. The principal produce consists of wheat, barley, maize, ryc, flax, hemp, madder, dried fruits, cotton, tobacco, honey, grapes, wax, and wool ; and a considerable number of cattle, camels, horses, and sheep are reared. The chief articles of manufacture are velvets, silk stuffs, carpets, woollens, copper utensils, arms, and a little cutlery. There are very extensive tanneries; and the dressing of furs and skins is a general occupation. The province has some valuable mincrals, particularly iron, lead, copper, salt, saltpetre, and sulphur; and among the hills in the neighbour hood of Maragha is found a beautiful transparent white marble, much prized in Persia for paving baths and palaces; and in thin plates it is used for bath-windows.

The climate of Azerbijan is healthy, but extremely hot in summer and autumn, and intensely cold in winter; the latter being severely felt from the great want of fuel, the only substitute for which is dried cow-dung mixed with straw. The spring is temperate and delightful in the plains; but, on mountains destitute of wood, the snow lies for nine months in the year; and hailstorms are so violent as frequently to kill cattle in the fields. The province is divided into 12 districts; chief towns, Tabreez or Taurus, the capital ; Meanna or Mian-
nah, Ardebeel, Shebuster, Tasouj, Shar, Shelmast, Khoi, Urmiah, the birthplace of Zoroaster, and Maragha. The oppressive and exacting system of the Government tends much to depress the energies of the people; and, in 1832, a colony of no less than 40,000 Armenians left this province and settled within the Russian territories. Pop. 1,500,000; consisting of Persians, Turks, Armenians, and Jews.-(Kinnier's Geog. Memoir of the Persian Empire; Ouseley's Travels; Fraser's History of Persia, and Travels on the S. banks of the Cuspian Sea; Gcog. Jour., vol. iii. ; Col. Chesney.)

AZIMGHUK, atn. Hindoostan, prov. Allahabad, 60 m . N.N.E. Benares, and 400 m . N.W. Calcutta; lat. $26^{\circ} 3^{\prime}$ N.; lon. $83^{\circ} 4^{\prime}$ E. It was ceded to the British by the Nabob of Oude, in 1801. The inhabitants manufacture and export a considerable quantity of cotton goods.

AZIMNAGUR, a large dist. Hindoostan, prov. Bejapoor, S. the Krislma, about lat. $16^{\circ} \mathrm{N}$.; watered by the Gutpurba and Malpurba, but still to a great extent remaining in a state of nature. Chief towns:-Gokauk, Belgaum, and Shahpoor.

## AZINCOURT. See Agincourt.

AZMEIIIGUNGE, or Ajamda Ganj, a tn. Hindoostan, prov. Bengal, on the river Soormah, a tributary of the Bralsuиapootra, 225 m . N.E. Calcutta; lat. $24^{\circ} 31^{\prime}$ N. ; lon. $91^{\circ} 10^{\prime} \mathrm{E}$. It has an establishment for the construction of native boats, nnd a considerable inland trade.

AZOF (Sea of), [called by the Russians, More Asowskoe; Latin, Palus Maotis; Greek, Aíurn Maiñıs?, a large body of water in S.E. Europe, forming the N. subdivision of the Black Sea, with which it is connected by the Strait of Kertsch or lenikale [anc. Cimmerian Bosphorus] ; situated between the parallels of $45^{\circ} 15^{\prime}$ and $47^{\circ} 18^{\prime} \mathrm{N}$., and between the meridians of $35^{\circ}$ and $39^{\circ}$ E.; its length, S.W. to N.E. (from the Strait of Kertsch to the month of the Don), being 168 m .; its average breadth, about $80 \mathrm{~m} . ;$ and its area, about $14,000 \mathrm{sq} . \mathrm{m}$. The N. coast is, for the most part, bold and craggy, rising about 100 ft . above the water ; the E. coast, inhabited by Cossacks, is very low, chiefly sandy, and intersected with lakes and morasses; the W. coast is formed by the tongue of sand, called the Tongue of Arabat, which divides it from the Sibache More or Putrid Sea; while the Crimca, and the territory of the Cossacks of the Black Sea, form the S. shore, on which, here and there, are some lills, visible a considerable distance Its greatest depth, between Yenikalé and Bielosaria, on the N. side, is $7 \frac{3}{4}$ fathoms; and it diminishes considerably towards the Gulf of Don, several banks extending a great distance from the shore. The water is muddy, and, from the numerous rivers running into it, almost fresh. The Sea of Azof has no remarkable current, the strongest never running more than 1 m . an hour ; the navigation is generally stopped from November to March by ice. Perhaps no body of water of equal extent so abounds with fish; the principal fisheries are along the S. coast, between Cape Dolgava and the Strait of Yenikale, the sturgeon, sterlet, and other fish, from which are prepared, in large quantities, both caviare and isinglass. The extreme W. part of the Sea of Azof, called the Putrid Sea, is, during the greater part of the year, little better than a noxious quagmire, and, at all times, wholly useless for navigation. The Strait of Yenikalé is about 11 m. long, and 4 broad; though the navigable channel never exceeds 1 m . in breadth. A new island was raised in the Sca of Azof, in 1814, by volcanic eruptions. The chief towns on its banks are Taganrog and Marioupol, on the N. shore, and Kertsch, on the W. shore of the strait of the same name.

The commerce of the Sea of Azof has been much hindered, not only by the impossibility of navigating it during four months of the year, but also to the extensive activity of Odessa, which has deprived it of much of its trade. The following table, taken from the Journal of Austrian Lloyd's, 1847,
gives a comparative view of the foreign and coasting trade, both import and export, in 1845 and 1846 :-

Import Taade, 1845-6.

AZOF, or Azov, a decayed tn. Russia, gov. Ekaterinoslav, 1. bank, Don, abont 10 m . from its embouchure in the Sca of Azof; lat. $47^{\circ} 7^{\prime}$ N. ; lon. $39^{\circ} 26^{\prime} 5^{\prime \prime}$ E. (r.)

AZOGUES, or Azoques, a tn. Ecuador, prov. of, and 15 m. N.N.E. Cuenca; lat. $2^{\circ} 42^{\prime} \mathrm{S} . ; \operatorname{lon} .79^{\circ} 7^{\prime} \mathrm{W}$. The valley of Yunguilla, in which it is situated, is remarkable for its fertility. There are mines of both silver and quicksilver in the vicinity. Rubies are found in the sands of a stream which runs through the valley.

AZORES, or Western Islands, a series of islands, N. Atlantic Ocean, belonging to Portugal ; situated between lat. $36^{\circ} 59^{\prime}$ and $39^{\circ} 44^{\prime} \mathrm{N}$., and lon. $31^{\circ} 7^{\prime}$ and $25^{\circ} 10^{\prime} \mathrm{W}$. They are nine in number, and arranged in three groups; the N.W. being composed of the islands of Flores and Corvo ; the central group, about 114 m . S.E. from these, consists of Terceira,

St. George, Pico, Fayal, and Graciosa; and the third group, 69 m. S.E. trom the central, of St. Michael and St. Mary. St. Michael is the largest of all the islands, being 50 m . long, and from 5 to 12 broad. St. Mary is distant from it about 45 m . The Azores, all of which are of volcanic origin, seemingly of a late period, present a very rugged, though picturesque aspect, being lofty, precipitous, and generally of a conical form. The most remarkable of them is the Peak of Pico, a conical mountain, which shoots up to the height of about 7000 ft . Though presenting a very unpromising appearance from the sea, a closer inspection discovers these islands to be covered with the most luxuriant vegetation, vineyards, corn fields, groves of lemon and orange-trees; and rich open pastures, skirted by beautiful woods, meet the eye in every direction. The clinate, though somewhat humid, is delightful;
and, combined with the natural fertility of the soil, brings every sort of vegetable product to the utmost perfection. The sugar-cane, coffee-plant, and tobacco grow luxuriantly; and fruits and plants of all kinds, and from all countrics, could be here cultıvated with greater success than perluaps in any other part of the world. Unfortunately, however, the inhabitants have neither the energy nor intelligence necessary to turn the natural advantages of their position to the best account. They know nothing of gardening, and very little of the science of agriculture. Their implements are of the rudest description; and in sowing they throw the seed about at random, calculating on the bounty of nature for a rich return, in which they are never disappointed. The lupine, which grows to an extraordinary size in these islands, is one of its most valued productions. It is raised in great quantities, and the seeds, after being soaked in sea-water, to divest them of their bittcrness, constitute a favourite food of the poorer classes. The Azores produce annually upwards of 17,000 pipes of wine and brandy, and about 160,000 boxes of oranges and lemons; the greater part of which find their way to Britain, the remainder being divided between Brazil, Hamburg, and the U. States. They also export considerable quantities of coarse linen, salted pork, and beef. Their imports are, chiefly, from England, hardware, cotton and woollen stuffs, wearing apparel, \&c.; from the Brazils, rum, coffee, sugar, \&c.; from the U. States, fish, staves, timber, tar, oil, \&c.; from Portugal, salt, tea, images, crucifixes, indulgences, dispensations, relics, \&c. These last are sold openly in the shops, at high prices. The beasts of burden are asses and bullocks, and a few horses, but of a very inferior description. Sheep, goats, pigs, and dogs are numerous, the last two in excess. The lands are held under strict entail, and the farmer to whom they are leased is oppressed with every possible sort of exaction. The great hinderance, however, to the commercial prosperity of the Azores is their want of good harbours; the only tolerable port being that of Angra, in the island of Terceira, and even that is much exposed, and offers little safety excepting in the fine season. All the rest are open bays or roadsteads, affording liardly any protection whatever. The Azores, as already remarked, are of volcanic origin, and many tremendous evidences of the activity of the subterrancan fires have presented themselves at various times. In 1591, an earthquake, which continued 12 days, destroyed the town of Villa Franca in the island of St. Michael; and in 1808 a volcano rose up in the island of St. George, to the height of 3500 ft ., and became extinct after hurning with great fury for six days, and sending out a flood of lava which overflowed the island, and covered it with ruin and desolation. In this
stones, and again gradually disappeared. Fountains of boiling water also exist in many of the islands, affording further evidence of the presence of internal heat. One of the finest specimens both of the mountain-scenery of the Azores and their extinct volcanoes, is the Caldeira of Flores. Its stecp sides are clothed with box, cedar, and faya; while its crater, filled with water, forms a magnificent mountain-lake, deep and clear, and often covered with sca-gulls, whose cries awaken the echoes, and have a strange effect. The islands are politically divided into three departments, under a governor general and two lieutenant-governors; the seat of government being at Angra, in the island of Terceira. Both intelligence and morals are at an extremely low ebb amongst the people of the Azores, who are, besides, very bigoted. The lower classes are abominably filthy in their persons. Their best redeeming quality is temperance. The period of the first discovery of the Azores is not ascertained, but they were known, and several of them were laid down in maps, in the 14th century. Little, however, was known of them till about the year 1431 or 1432 , when a Flemish merchant of the name of Joshua Vanderberg, in a voyage to Lisbon, was driven by stress of weather on their coasts; having mentioned his discovery on his arrival at Lisbon, the Portuguese Government immediately fitted out an expedition, and took possession of them, giving them the name of the Açores, from the great numbers of hawks found on the islands; Açor being the Portuguese for hawk. They were at this period totally uninhabited, and without animals of any kind, excepting birds, which were numerous and various. A dangerous recf of rocks, on which the sea breaks heavily, has been recently discovered about midway between the islands of St. Michael and Terceira. It is in about lat. $38^{\circ} 16^{\prime}$ or $38^{\circ} 18^{\prime} \mathrm{N}$.; and lon. $26^{\circ} 41^{\prime}$ or $26^{\circ} 50^{\prime}$ W.; 35 m . N.W. of the N.W. point of St. Michael. The reef is supposed to have been thrown up recently by the agency of a submarine volcano; several islets having been formerly thrown up near the same spot, but, from being of arenaceous constitution, were soon washed away. The pop. of the Azores is reckoned altogether at 203,500. Terceira, 40,000; Santo Miguel or St. Michael, 80,000; Pico, 24,000; Fayal, 22,000; Flores, 14,000; Santo Jorge, or St. George, 10,000; Graciosa, 7500; Santa Maria, 5000; Coroo, 700.

## AZOV. See Azof.

AZPEITIA, a tn. Spain, in Biscay, prov. of, and 18 m . W.N.W. Tolosa, 10 m . from the sea, l. bank, Urola, at the N. base of Mount Itzarriz. Though rather a scattered town, yet near its centre, part of the ancient walls, with four gates of hewn stone, still exist; as do many old Moorish-looking houses, once highly ornamented, but now partly dilapidated. It has well-constructed and paved streets, and three squares, in the principal of which are the former convents of St. Domingo and St. Augustine, now converted into a primary school and public reading-room; in the same square bull-fights are held on the festival of St. Loyola. In the smaller squares are two townhouses, one of which is now used as a prison. The town also possesses two churches, one of which is of mixed Tuscan and Gothic architecture; several good fountains, and a public bath. Manufactures:-iron vessels, nails, and shoes, all of limited extent. In two marble-works, driven loy water-power, the marble, from the quarries of Mount Itzarriz, is cut. Ignatius Loyola, the founder of the order of the Jesuits, was born about a mile from Azpeitia, on the banks of the Urola, in a house which is still preserved within the marble walls of the convent that bears his name; and in the same locality, bearing also the name of Loyola, is a fine church in the Corinthian style, also built of marble. Pop. 5300. -(Madoz.)

AZREK (Bahr-el-), or Blue Nile, a river, archipelago, several rocks and volcanic islands have from time to time been thrust up from the bottom of the ocean. The last that appeared was in 1811, off the W. end of St. Michael. In June of that year, the crater of a volcano suddenly emerged from the sea, rose to the height of 300 ft ., raged furiously for some time, ejecting ashes, cinders, and
N.E. Africa, one of the two frincipal head-streams of the Nile It rises, under the name of the Dedhesa, in the Galla country, S . from Abyssinia , in an elevated district, about 73 m . $\mathrm{S} . \mathrm{W}$ Sokka, cap. of Encrea. It issues from a swampy meadow, and pursues a general N.W. course till it joins the Balur-el-Abiad or White Nile at Khartoom ; lat. $15^{\circ} 40^{\prime} \mathrm{N}$. ; lon.
$32^{\circ} 40^{\prime} \mathrm{E}$. Its largest tributary is the Abaí, which joins it about lat. $11^{\circ} \mathrm{N}$. See Nile.

AZUELA, a large river in S. America, Ecuador, prov. Quito. It rises on the E. slopes of the Cayambé, one of the loftiest summits of the Bolivian Andes, directly under the terrestrial equator, whence it flows E. and S.E. for upwards of 200 m. , when it assumes the name of the Ahuaricu, an affluent of the Napo, one of the tributaries of the Amazon.

AZUN (Val d'), a valley, France, dep. Hautes-Pyrénées, traversed by the Gave, and called, from its beauty. the Eden of the Pyrenees. It is intersected by the stream whence it is named, and opens out W. of the valley of Argelez, about

3 m. S.W. the town of that name, and extends up into the central chain, between the mountains called Pic du Midi d'Azun and Pic de Gabisos, and contains 10 considerable villages. It produces principally flax and millet. The heights are cultivated with care, and the lower parts afford excellent pasturage for numerous herds of cattle. At the extremity of the valley is the road leading to Spain.

AZURARA, a seaport tn. Portugal, prov. Entre Douro-e-Minho, l. bank, Ave, at its junction with the sea; the former separates it from Villa do Conde, of which it may be considered a suburb; lat. $41^{\circ} 20^{\prime} \mathrm{N}$. ; lon. $8^{\circ} 37^{\prime} 18^{\prime \prime} \mathrm{W}$. : 15 m . N. from Oporto. Pop. 788.

## B.

BAAGÖE, or BaAG, two small islands, Denmark:-1, In bail. Möen, between isls. Falster and Seeland, from which it is about equally distant; lat. (centre) $54^{\circ} 57^{\prime} \mathrm{N}$. ; lon. $12^{\circ} 4^{\prime} \mathrm{E}$.; about $3 \frac{1}{2}$ or 4 m . long, and about 2 m . broad at the broadest part. It is fertile, has a village named Bogöby, and about 1000 inhabitants.-2, In the Little Belt, between isl. Odense and the E. coast of Schleswig, in lat. (S. point) $55^{\circ} 17^{\prime} 42^{\prime \prime} \mathrm{N}$.; lon. $9^{\circ} 48^{\prime} 0^{\prime \prime} \mathrm{E}$. (r.), about 2 m . in length, and $1 \frac{1}{2}$ in breadth. It is fertile, and forms part of the par. of Assens in Fithnen.

BAALBEC, or Balbec [called by the Greeks, Heliopolis -the city of the sun], Syria, 40 m . N.W. Damascus, anciently a populous and magnificent city, now in ruins, and inhabited only by a few poor families; situated on a rising gronnd, near the N.E. extremity of the plain of Bocat or Bekka, between the leights of Libanus and Anti-Libanus. On an elevated platform, about 1100 ft . in length, from E. to W., and 700 ft . in width, from N. to S., the principal ruins, seen from a distance, tower like the ridge of a hill. The most remarkable ruin is that of the 'great temple,' which stands at the E. extremity, and occupies a circuit of more than half a mile. A handsome flight of steps leads to a Corinthian propylæum or portico, 260 ft . in length. This portico leads into a hexagonal court, 144 ft . in diameter, surrounded by chambers in ruins. From the W. side of this euclosure, a gateway and sloping ascent lead into a grand quadrangular court, 3.47 ft . long, by 317 ft . wide. It occupies the highest and central part of the platform, and is surrounded by apartments, some of them semicircular alcoves, 30 ft . in diameter, and others quadrangular, of larger dimensions, with light arched roofs. A kind of colonnade appears to have run
level with the hexagonal court already mentioned, are two vaulted parallel passages, running E. and W., and connected with a third passage running N . and S . The walls of these passages, and a scmicircular arch which rests upon them, are composed of large blocks closely fitted, and of admirable workmanship. Immediately to the $W$. is a space 283 ft . long, by 118 wide, once the site of a magnificent temple. It appears to have had a peristyle of Corinthian columns, 10 in front, and 19 on the sides. Six of them still remain, of exquisite proportions, and colossal dimensions. They are 7 ft . in diameter, and, with their pedestals, are 71 ft . high. The shafts consist of three pieces, beautifully fitted without cement. The whole height, including the entablature and a fine cornice above the columns, is nearly 80 ft . A little to the S . there is a smaller but more perfect temple, in the form of a quadrangle, 225 ft . by 118 ft ., with a peristyle of Corinthian columns, 45 ft . high, 19 ft . in circuit, and 9 ft . apart. They were surmounted by a bold cornice 7 ft . high, and connected with the wall by a stone ceiling finely sculptured. The entrance to this temple is through an exquisitely carved doorway, 26 ft . high by 20 ft . wide, with a staircase on each side leading to the summit. The interior, 118 ft . by 65 ft ., had niches on each side, and two screens, behund the innermost of which the object of worship is supposed to have been placed. The roof las fallen in, and the floor lies covered with a confused mass of sculptured fragments. The substructure of these monuments consists of poinderous hewn masses of such prodigious size, that one is lost in astonishment as to the mechanical means by which they could be removed from the quarry to their place. The largest of them is 67 ft . long, 14 ft . broad, and 9 ft . thick. Another, still nore gigantic, lies in the great quarry about three quarters of a mile from the town, almost separated from the rock preparatory to its removal. There are other intercsting ruins in Baalbec besides those alluded to, and the entire neighbourhood, for several miles round, is covered with them.

The history of Baalbec is very obscure, but there is evidence of its having been a place of importance in the time of Antoninns Pius, under the name of Heliopolis, and in all probability for ages before. It was the station of a garrison in the time of Augustus, and was then a great and wealthy city. By whom it was first founded, however, is unknown, neither has it been ascertained when its templez were erected. Although gradually declining through a long series of along the front of these apartments, supporting in its centre a structure of considerable extent, on which one of the altars of Baal is supposed to have stood. Beneath this court, and on a
years, its decay, latterly, was peculiarly rapid. In 1751, its population amounted to 5000 ; in 1835, it had fallen to 200. The whole town presents now a most wretched appearance.

The inhabitants manufacture white cotton cloth to a small extent, and have some dyeing-houses. There were also, until within these few years, several tanneries in the town. The pro-

PUSTICUM OF THE LITTLE TEMPLE, BAALBEC. Fiom Laborde, Voyage en Orient.
pcrty of the people consists chiefly of cows, with a few goats and sheep. Baalbec mules are much esteemed. Pop. (1835), 200.

BAAMBRUGGE, a vil. Holland, prov. of, and 12 m . N.W. Utrecht, l. bank, Krommen-Angstel, having a small Calvinistic chareh and two schools. Being on the main road from Utrecht to Amsterdam, there is considerable traffic through it. The inhabitants are chiefly engaged in cattlerearing, and in the cheese and butter trade. Pop. 700.

BAARL-1, An extensive dist. Baden, forming the chief part of the principality of Fiurstenburg. It lies in the Black Forest, partly in the Lake and partly in the Danube circle, and, besides numerous villages, contains 10 towns. It is very hilly, but a good deal of grain is grown on its lower grounds, while the higher yield excellent pasture. The horses reared on it are in high repute. A great many of the inhabitants are clockmakers.-2, BAAR, or BAR, a tn. Switzerland, can. of, and $2 \frac{1}{2} \mathrm{~m}$. N. Zug, on the road to Zuirich, in a fertile plain, 1380 ft . above the sea. The townhall is a handsome edifice, built in 1674. There is a large paper-manufactory here, and a considerable trade is carried on with the surrounding district. The vine is cultivated, and fairish wine produced. Pop. 2135.

BAARDWIJK, a pleasant vil. Holland, prov. N. Brabant, 10 m. E. Geertruidenburg, founded, say some, by the Danes, say others by the Longobards. It has a R. catholic and a Calvinistic church, a small almshouse for old men, a school, and a cornmill. Pop. chiefly agricultural, 1153.

BAARLAND, a vil. Holland, prov. Zeeland Island, S. Beveland, 14 m. S.E. Arnemuiden, in the middle of a fertile country and richly-watered meadows. It has a good-looking ehurch, with a lofty spire, a school, and a pop. of 500 .

BaARle, Baarle-Nassau, or Baal, a vil. Holland, prov. N. Brabant, 12 m . S.S.E. Breda, on the Belgian frontier, so closely connected with Baarle-Hertog in Belgium, prov. Antwerp, that the two in fact make but one village. Of two contiguous houses, one is frequently in Holland, and the other in Belgium, and some even being built exactly on the line of demarcation between the two countries, have the frontier mark on their gables and chimney-stalks. It has two churches, as many schools, two horse and cattle-markets, and an agricultural pop. of 500 .

BAARN, a vil. Holland, prov. of, and 12 m. N.E. Utrecht, pleasantly situated, and built round the large, old. but hand-
some church, which is adorned with a lofty spire. It is an old place and was formerly a town. Pop. 900 .

BABA, the name of several towns in different parts of the world, of two capes in Asiatic Turkey, and of two islands in the Asiatic Archipelago :-1, A tn. Turkey in Asia, on a shelving point of Cape Baba, on the Grecian Archipelago, immediately above the sea; lat. $39^{\circ} 30^{\prime} 5^{\prime \prime}$ N.; lon. $26^{\circ} 5^{\prime}$ E. It is ill built, and the houses mean-looking, being constructed of unburnt brick. It contains a mosque and a half-ruined castle, and was at one time celebrated for the manufacture of knives and sword-blades, which were held in high esteem by the Turks. This trade has now much fallen off, though a portion of it yet remains, the yataghans of Baba being still famous. The port, which is in front of the town, and formed of large fragments of rock, is capable of admitting small boats only. Large vessels, however, frequently anchor in the roadstead, under shelter of the cape, during the prevalence of N . winds. The inhabitants are occupied chiefly in pastoral pursuits, raising cattle, the pasturage both on the high and low grounds being excellent, and in growing valonia, which they export in large quantities. Pop. 4000.-2, A tn. Turkey in Europe, Upper Wallachia, 1. bank, Ketniste; lat. $44^{\circ} 5^{\prime} \mathrm{N}$. ; lon. $25^{\circ} 53^{\prime}$ E. Pop. 2000.-3, A tn. Turkey in Europe, prov. Trikala or Thessaly, r. bank, Salembria, and about 9 m . from its embouchure in the Gulf of Salonika, 14 m . N.N.E. Larissa. 4, A tn. Ecuador, dep. of, and $42 \mathrm{~m} . \mathrm{N}$. Guayaquil, at the N. extremity of Lake Sanboramban. Pop. 4000 .5 , and 6, Two capes in Asiatic 'Turkey, one on thic S. shore of the Black Sea; Iat. $41^{\circ} 20^{\prime} 54^{\prime \prime}$ N.; lon. $31^{\circ} 26^{\prime}$ E. (r.); the other, the Lectrum Promontorium of the ancients, on the E. shore of the Grecian Archipelago; lat. $39^{\circ} 28^{\prime} 12^{\prime \prime} \mathrm{N} . ;$ lon. $26^{\circ} 2^{\prime} 30^{\prime \prime} \mathrm{E}$. (r.); on the N. side of the Gulf of Adranyti. -7, An isl. in the Banda Sea, Indian Archipelago. See Babber.--8, One of the Aiou islands (which see).

BABABEG, Shuhbe-Babic, or Sheher-e-Babec, a tn . Persia, prov. Kerman ; lat. $29^{\circ} 53^{\prime}$ N.; lon. $55^{\circ} 3^{\prime}$ E. ; formerly a flourishing city, and the depôt of merchandise passing from Gombroon, on the Persian Gulf, into the interior, but now much decayed. It has four gates, and from each a long street leads to the market-place in the centre, the dome over which is said to be the largest in Persia. It is the residence of the deputy-governor of Kerman, and celebrated for its fruitgardens.

BABA-DAGH, a fortified tn. Turkey in Europe (Bulgaria), pash. Silistria, built by the Turkish Sultan, Bajazet; lat. $44^{\circ} 53^{\prime} \mathrm{N}$. ; lon. $28^{\circ} 40^{\prime} \mathrm{E}$. The streets are paved, but dirty; it has five mosques, two public baths, and a college; and carries on a considerable trade through the port of Kara Kerman, an outlet of Lake Rassein, on the Black Sea. Pop. 10,000.

BABAKANDA, a tn. Fellattah country, W. Africa; lat. $10^{\circ} 2^{\prime} \mathrm{N}$. ; lon. $2^{\circ} 55^{\prime} \mathrm{E}$. It contains a royal residence, in which the king or chief of the district frequently resides. Good crops of rice and other kinds of grain are produced in the vicinity; very large yams and edible bulbous plants are cultivated; and ginger is abundant. Cattle are plentitul, though of inferior appearance. The chief manufacture of the place is leather, and wretched sabres, which retain whatever bend is given them. Pop. 9000 or 10,000.-(Duncan's Travels in W. Africa.)

BABBER, or BABA, an isl., S. Moluceas, 69 m . W. Timor Laut; lat. (E. point) $7^{\circ} 52^{\prime}$ S.; lon. $129^{\circ} 53^{\prime} \mathrm{E}$. It is hilly, and in its W. end is the village Tepa, off which is good anchorage, during the E. monsoon, in 14 to 16 fathoms. The greater part of the island is covered with natural wood, and abounds in wild cattle, pigs, and goats. Very little of it is cultivated, the inhabitants raising their Egyptian wheat, cocoa-nuts, \&c., in the small fertile island of Wetang, lying W. of Babber. The people are poor, and are visited once a year by vessels from Banda, for the purpose of trading.

BABCARY, par. Eng. Somerset; 2450 ac. Pop. 465.
BABEL ISLAND, an isl. Bass's Strait, contiguous to the E. point of Great Island; lat. $39^{\circ} 57^{\prime}$ S.; lon. $148^{\circ} 20^{\circ} \mathrm{E}$. (R.)

BAB-EL-MANDEB [The gate of tears], the straits at the entrance to the Red Sea, from the Gulf of Aden, formed by approaching points of Arabia and Abyssinia, abuut 15 m . broad at the narrowest part ; and divided into two channels of unequal breadth, by the small island of Perim, lying near the Arabian coast; lat. (S. point) $12^{\circ} 38^{\prime} \mathrm{N}$. ; lon. $43^{\circ} 23^{\prime} \mathrm{E}$. (2.)

The E. or Little Strait, between Perim and the Arabian coast, about 3 m . in width, with from 9 to 14 fathoms' water, is the most frequented, notwithstanding the greater rapidity of its current, being free from shoals, and its moderate depth allowing anchorage. The W. channel, or the Greater Strait, between Perim and the Abyssinian shore, is about 12 m . wide, but much obstrueted by rocks and islets. At the narrowest part, Cape Bab-el-Mandeb projects from the Arabian coast, in lat. $12^{\circ} 41^{\prime} \mathrm{N}$. ; lon. $43^{\circ} 27^{\prime} \mathrm{E}$. (r.)

BAB-EL-MANDEB (Sea of). Sec Aden (Gulf of).
BABENHAUSEN.-1, A tn. Bavaria, cirele, Swabia, 1. bank, Günz, 34 m. S.W. Augsburg. It has a handsome palace, the residence of the Fugger family, the celebrated banker princes, and an agricultural population of 1711 . 2 , A vil. grand duchy of Hesse-Darmstadt, prov. Starkenburg, l. bank, Gesprenz, 19 m. S.E. Frankfort-on-the-Mlain. It contains an ancient castle, formerly the residence of the Counts of IIanau-Lichtenberg, now a military house of correction; and a Lutheran parish church, built in the 16 th century, with statues of popes and bishops; also a brickwork and a gluework. Pop. nearly all Lutherans, 1650.

BABIACORA, a tn. Mexico, state, Sonora, l. bank, Sonora, 50 m. S.S.W. Arispe.

BABINAGreDDA, a large vil. Austria, Sclavonia, dist. of, and about 30 m. E. Brod, between the morasses of Berava and Koniska. It contains a R. catholic parish church, and an old castle. Pop. 4185.

BABINGLEY, or Baburghley, par. Eng. Norfolk; 870 ac. The first Christian chureh in E. Anglia was ereeted bere. Pop. 54.

BABINGTON, par. Eng. Somerset; 600 ac. Pop. 163.
BABRAHAM, par. Eng. Cambridge; 2350 ac. Pop. 217

BABUAN, an isl. Sooloo Arehipelaco, about 20 m . N.E. Tawi-tawi; lat. $5^{\circ} 20^{\prime} \mathrm{N}$. ; lon. $120^{\circ} 4^{\prime} \mathrm{E}$.

BABUYANES, or BATANEs, a group of small islands, N. the island of Lnzon, and S. of Fcrmosa, between lat. $18^{\circ} 52^{\prime}$ and $19^{\circ} 36^{\prime}$ N.; and lon. $121^{\circ} 6^{\prime}$ and $123^{\circ} 12^{\prime}$ E., separated on the N. from the Bashee Islands by the Strait of Balintang. They consist of numerous rocky islets, and the five larger islands of Calayan, Claro, Babnyan, Camiguin, Dalupiri, and Fuga; some of which are volcanic. Camiguin, which is one of the largest of them, abounds in sulphur, and has a port called San Pio Quinto. The inhabitants of these islands, who are tall and well made, and have but an indifferent character for honesty, are not subjected to tribute, on account of their extreme poverty; only contributing a little tortoise-shell, and a small number of other articles. The natural produets are wax, ebony, bananas, and cocoa-nuts.(Mallat's Philippines.)

BABWOR'TH, par. Eng. Notts; 5490 ac. Pop. 577.
BABYLON, or BABEL, an anc. city, Assyria, cap. Chaldea, on a branch of the Euplrates, winich divided the eity into two parts. Although once the most famous eity in the world, so complete has been its annihilation that its very site has become matter of doubt. Rich, Niebuhr, and Rennel suppose it to have been near the modern town of Hillah, abont 48 m . S. Bagdad, containing about 12,000 inhabitants, chiefly Arabs and Jews, and the residence of a Turkish bey. According to Herodotus, the city was of a square form, each side measuring 15 m ., and of course the fonr sides 60 m . It was encompassed with walls built of burnt bricks, cemented with bitumen, 350 ft . high and 87 ft . thick, and with 250 towers, 100 gates of brass, and protected on the outside by a vast ditch filled with water, and proportioned in width and depth to the elevation of the walls. Streets, 50 in number, stretched across the city, interseeting each other at right angles, and terminating at the different gates. The river, traversing it from N. to S., was lined with quays of the same thickness as the walls, and crossed by bridges of great beauty and admirable contrivance, each about 200 yards long and 10 broad. The whole eity contaned 676 squares, each $2 \frac{3}{4} \mathrm{~m}$. in cireumference. It is difficult to conceive a more thorongh destruction than that by which Babylon has been overtaken. The city enelosed large tracts of pasture and arable land, sufficient to support the whole population during a long siege. Anrongst the ruins of Babylon, three mounds attraet particular attention. First, Birs Nemroud, or Nimrod's Tower (called by the Jews Nebuchadnezzar's Prison), the most remarkable and stupendous
mass of all the ruins. It is a huge oblong edifice, 762 ft . in circumference, situated about 6 m . S.W. of Hillah, on the W. bank of the Euphrates. It has been generally supposed to be a remnant of the great pile of Babel, but more properly belonged to the city of Birs, Bursif, or Borsippa, one of the quarters of the Babylon of Herodotus. Sccond, El-Kasr, the castle or palace, consisting of several ruined walls and piers, which face the cardinal points, and contain many caves and passages. These walls are 8 ft . thick; in some places ornamented with niches, and in others strengthened by pilasters and buttresses, built of fine-burnt brick, still perfectly clear and sharp, laid in lime eement, of such tenaeity that it is almost impossible to extract a whole brick.-(Rich.) Third, The Mujelibé, or the 'Overturned,' an extensive mound, of oblong shape and irregular height, also facing the four cardinal points. The clevation of its highest angle is 141 ft . Rich thinks that, in some respects, the Mujelibe corresponds to the accounts of the celebrated hanging-gardens of Pabylon; which, according to Strabo, formed a square of 400 ft . on each face, and stood upon the river, that supplied them with water. But, from the circumstance of skeletons and wooden coffins being found in this mass of ruins, it is conjectured to have been a great brick pyramid for the dead, and perhaps also used for an observatory. The surrounding country is a desert, ithhabited only by some wandering Arab tribes, and periodically subject to inundations. At one period, immense canals, intersecting the plain of Babylon, connected the waters of the Euphrates with the Tigris.-Besides the ancient capital of Chaldea, there appears to have been another city of the same name in Egypt, on the site of which old Cairo is built.(D'Anville's Gco. ; Rich's Memoir ; Rennel's Geo. of Herodotus; Porter's Travels; Mignan's Travels in Chaldea; Niebuhr, Voyage en Arabic.)

BABYLONIA, the name of an ancient kingdom, which comprehended a narrow tract along the Euphrates, extending about 154 m . from the modern town of Sheikh el-Shuyukh N.W. to the ruins of Babylon, and thence, in the same direction, 287 m . to Kalnch on the Khabur. Its E. boundary was Assyria, and thus it included the greater part of what was afterwards called Mesopotamia. The name Babylonia still remains, and is more particularly applied to the S.E. portion of the pashalic of Bagdad.

BABY PULO, three islands, Indian Archipelago [Pulo signifying 'island ']:-1, An isl., E. the N.E. entrance into the Strait of Sunda; lat. (W. point) $5^{\circ} 48^{\prime} \mathrm{S}$. ; lon. $106^{\circ} 17^{\prime} \mathrm{E}$. (r.) It is woody and bold, excepting at the E. end.-2, A small isl. off the S. W. extremity of Wetter Island, at the N. entrance of the Ombay Passage; lat. $8^{\circ} 5^{\prime}$ S.; lon. $125^{\circ} 40^{\prime} \mathrm{E}$. It is high and bold to approach on the W. side. The passage between it and Wetter is said to be unsafe.-3, A small isl. between the islands of Cerain and Booro, but mueh nearer the former than the latter; lat. $3^{\circ} 10^{\prime} \mathrm{S} . ;$ lon. $127^{\circ} 50^{\prime}$ E. The passage channel between Baby Pulo and Ceram is narrow, and fit for proas and small vessels only.

BaCALAR, or San Felipe de Bacalar [ane. Salumanca], a vil. Yucatan, on the N.W. extremity of a small lake of the same name, where it receives the San Joseph, about 86 m. N.N.W. Belize. It contains about 120 houses, inhabited chiefly by Indians, and is much frequented by English smugglers.

BACALHAO, an isl. off the S.E. coast, Newfoundland; lat. (N. point) $48^{\circ} 9^{\prime} \mathrm{N}$.; lon. $52^{\circ} 52^{\prime}$ W. (R.) It is lighl, nearly 4 m . long and $1 \frac{1}{2}$ broad, and is distant about 1 m . from the mainland, with a good channel between.

BACAMARTE, a vil. Brazil, prov. Parabiba, 16 m . from Campina-Grande. It lies in the hills of the same name, and its inhabitants are chiefly engaged in cultivating cotton.

BACCARA' ${ }^{+}$[anc. Burgaracum], a tn. France, dep. Meurthe, arrond. of, and 16 m. S.E. Luneville, on the Meurthe, whiel is here crossed by a bridge of nine arches. It is noted for its extensive manufaeture of crystal, which affords employment to upwards of 1000 workinen. The method of moulding crystal in imitation of cut glass was invented here, by M. Ishmael Robinet, in 1823. Bacearat has also manufactures of calicoes and cotton stuffs, tanneries, sawnills, and a chemical work, for the preparation of soda, muriatic acid, chloride of lime, manganese, \&c. An annual fair is held in July, for grain and eattle, and a considcrable trade is done in timber. Pop. 2794.

BACCHIGLIONE, a river, Austrian Italy, gov. Venice. It rises about 13 m. N. Vicenza, passes that city and Padua, tlowing S. and S.E., and falls into the Gulf of Venice in lat. $45^{\circ} 8^{\prime} \mathrm{N}$. ; lon. $12^{\circ} 17^{\prime}$ E., about 3 m . S. Chioggia, after a course of about 65 m .

BACHARACH, a tn. Prussia, prov. Lower Rhine, 1. bank, Rhine, $29 \mathrm{~m} . \mathrm{S}$. Coblentz. It is a place of great antiquity, surrounded by an old wall, flanked with towers, which have a picturesque effect. It is said to have been originally a Roman fort, and to take its name from a rock in the river, called Bacchi-ara [altar of Bacchus], which, though usually under water, becomes exposed in very dry seasons, and is then hailed as the harbinger of a good vintage. The chief things wortlyy of notice in Bacharach are the romantic remains of an old church, called Werncr's Church, on a steep acclivity above the town; and its wine, which, though produced in limited quantity, the only soil fit for it being confined to scattered patches among the rocks, has been celebrated for centurics. Besides the culture of the vine, a manufactory of morocco and common leather gives employment to the inhabitants, amounting to about 1900.

BACHIAN. See Batshian.
BACK STAIRS PASSAGE, the E. entrance into the Gulf of St. Vincent, S. Australia, formed by the E. end of Kangaroo Island, and Cape Jervis on the mainland. It is about 7 m . wide, and has some islands, called the Pages, at its entrance; but the passage is safe, with from 9 to 15 , and 17 fathoms.

BACK'S RIVER, the name now given, in honour of Capt. Back, to a river originally called the Thleweechodezeth or Great Fish River, British N. America, N.W. territory. It rises in Sussex Lake, near the N.E. extremity of Lake Aylmer, in lat. $64^{\circ} 15^{\prime} \mathrm{N}$. , and lon. $108^{\circ} 10^{\prime} \mathrm{W}$., and proceeds N.N.E., through a region of sand and granite, to lat. $65^{\circ} 30^{\prime}$ N., then turns suddenly $\mathrm{S} .$, and makes a long circular sweep towards the S.E., passing over numerous rapids. Near lat. $65^{\circ} 10^{\prime} \mathrm{N}$. and lon. $104^{\circ} \mathrm{W}$., it again turns N ., and enters Lakes Pelly and Garry; on emerging from which it is broken by a serics of falls and rapids, and resuming its original course of N.N.E., continues it to its mouth in a bay, supposed to be part of Boothia Gulf, lat. $67^{\circ} \mathrm{N}$.; lon. $95^{\circ} \mathrm{W}$. The whole tract through which the river flows is sometimes called Back's Land.

BACKERGUNGE.-1, A dist. Hindoostan, prov. Bengal, on the coast between the Ganges and the Brahmapootra, and including part of the del(as of these rivers, and having the Sunderbunds or Soondurbuns on the S.W. Tigers and alligators are numerous here, and attain an immense size. The district is in many parts exceedingly fertile, producing annually two abundant crops of rice, but is subject to destructive innudations; that which occurred in June 1822 destroyed 10,000 persons. It was much infested, also, by Dacoits or river pirates; but, by the perseverance of the British authorities, they have been almost wholly pat down. More than one-half of the inhabitants are Hindoos, the remainder Mahometans. Area, $3794 \mathrm{sq} . \mathrm{m}$. Pop. $733,800 .-2, \Lambda \mathrm{tn}$., same dist., 120 m . E. Calcutta; lat. $22^{\circ} 42^{\prime} \mathrm{N}$.; Ion. $89^{\circ} 20^{\prime}$ E.

BACKFORD, par. Eug. Chester; 3320 ac. Pop. 5506.
BACKNANG, a tn. Würtemberg, circle, Necker, 16 nı. N.E. Stuttgardt, on the Murr; contains a collegiate church, with the tombs of the first Margraves of Baden, and has manufactures of woollen and linen goods, and some tanneries. Pop. 3587.

BACKÖFEN, a market tn. Bohemia, circle, Bunzlan, 1. bank, Iser, 35 m . N.E. Prague. It is governed by its own magistracy, and contains a townhouse, two churches, and an hospital. In the Thirty Years' War, it was pillaged by the Swedes. Pop. 1010.

BACKWELL, or Bachwell, par. Eng. Somerset; 2750 ac. Pop. 1161.

BACOLOR, a tn., isl. Luzon, cap. prov. Pampanga, about 38 m. N.W. Manilla; in a plain, and near the river Pampanga, with which it has communication by means of a canal. It was the capital of the Philippines during the British invasion in 1762 . In December, January, and February, fover is prevalent. Pop. tn. and environs, 8548.

BACONO, a river, Venezuela, rises in a mountainous district, about 10 m . S.E. Truxillo; lat. $8^{\circ} 52^{\prime} \mathrm{N}$. ; lon. $70^{\circ} 20^{\prime} \mathrm{W}$. ; whence it flows S. aud S.E., to lat. $8^{\circ} 0^{\prime} \mathrm{N}$. ;
lon. $69^{\circ} 20^{\prime}$ W.; when, assuming the name of Guanaparo, it falls into the Portugnesa, in lat. $8^{\circ} 5^{\prime} \mathrm{N} . ;$ lon. $68^{\circ} \mathrm{W}$.

BACONSTHORPE, par. Eug. Norfolk; 1460 ac. P. 326.
BACQUEVILLE, a tn. France, dep. Seine-Inferieure, 11 m. S.W. Dieppe. It manufactures stockings, serges, and bed-ticking; and has some trade in cattle. Pop. 1494.

BACS, or BATsCh, a market tn., S.E. Hungary, co. BacsBodrogh, 27 m. S. Zombor, near the Mosztonga marsh; lat. $45^{\circ} 24^{\prime} \mathrm{N} . ;$ lon. $19^{\circ} 20^{\prime} \mathrm{E}$. It was formerly a royal free town, and the see of a R. Catholic and Greck bishop. The transit trade is considerable. Pop. 2770.

BACS-BUDROGIIER, a co., S. Ifungary, circle, beyond the Danube. It contains three free towns, nine market towns, and 96 villages; is one of the largest counties in the circle, and forms part of the great alluvial, often swampy, and consequently unhealthy tract, which lies between the Theiss and the Danube. It is bounded N. by the Franzens Canal, so called after the Emperor Francis. The soil is very fertile, and produces in abundance wheat, tobacco, and wine. The lakes are numerous, and teem with fish. From the largest of them, Lake Palics, large quantities of alkali are obtained. Fuel is scarce; and the only substitute possessed by the greater part of the population is cow-dung, mixed with straw. In this county is an entrenchment, attributed to the Romans, which is several miles long. Area, 3625 sq. m. Pop. nearly 500,000 .

BACTON, three pars. Eng.:-I, II ereford; 950 ac. P. 140. —2, Norfolk; 1730 ac. P. 513.-3, Suffolk; 2380 ac. P. 800 .

BACUP, a vil. and chapelry, England, Lancashire. The village, in a beautiful valley, 12 m . E. by S. Blackburn, and a station of the East Lancashire Railway, contains a church, two Baptist and two Methodist chapels, and a mechanics' institution. Here are brass and iron foundries, a large corn-mill, and three considerable dye-works; but the principal manufactures consist of cotton-spinning, aud power-Joom-weaving. Pop. 7279.

BADAGRY, a tn . of W. Africa, Bight of Benin; lat. $6^{\circ} 24^{\prime} 12^{\prime \prime}$ N.; lon. $2^{\circ} 53^{\prime} 15^{\prime \prime}$ W. (R.) ; 60 m . E. Whydah, and 315 m. E.N.E. Cape Coast Castle, on the inner side of a lagoon, two-thirds of a mile from the landing-place. Pop. 10,000 .

BADAJOZ [anc. Pax Julia; Arab. Beledaix], a tn. Spain, cap. prov. of same name, Estremadura, about 5 m . from the E. fronticrs of Portngal. It stands on a tongue of land formed

by the junction of the Rivillas and the Guadiana; the former enclosing it on the N. and E., and the latter on the N.W., where it is crossed by a superb granite bridge of 28 arches. Badajoz is a regular fortress, of remarkable strength. Formidable walls and bastions, with a wide and decp fosse, surround it on all sides; while a series of important outworks, placed partly on the tongue of land and partly on the opposite
banks of the rivers, adds greatly to its means of defence. The highest part of the site in the N., near the Rivillas, is occupied by an old Moorish castle, from which point the ground slopes gradually to the E., S., and W., and is intersected by numerons streets, which, though very indifferently paved, are in general spacious, clean, and lined with well-built houses, many of them of three stories, with balconied, and painted or whitewashed fronts, which have a cheerful appearance. As a whole, however, the town is said to be dull, and to lave few social attractions, beyond a fine promenade along the banks of the river. The principal building is the cathedral, begun in 1248, but possessed of no architectural merit. The façade, which is of a later date, is in the Græco-Roman style, with Ionic pillars, and a statue of the Baptist. The interior is adorned with some fine paintings by Mateo Cerezo and Luis Morales, the latter of whom, surnamed El Divino, was born here, and gives name to a street. In addition to the cathedral are four parish churches, two of which, the Conception and St. Augustine, also contain several paintings by Morales. The other principal buildings are the arsenal ; the military hospital, with beds for 220 patients; the college (seminario conciliar), well endowed, and provided with a full establishment of professors; the theatre, and the prison, a large building, very imperfectly ventilated.

Badajoz is the seat of a bishop, and at one time abounded in ecclesiastical establishments, many of which have been suppressed. Four nunneries, and some monasteries, still remain. As the eapital of the province, it is also the residence of a captain-general, and contains several courts and public offices. Its chief charity is the extensive and well-endowed Ilospicio de Nostra Señora de la Piedad, founded in 1757. The manufactures are of little importance, consisting of a few linen and woollen stuffs, ehina, and leather. There is some trade by the river, and a little transit by muleteers. The importance of Badajoz as a frontier fortress has subjected it to repeated sieges. Those which took place during the peninsular war are well known, particularly the last, in April 1812, one of the most murderous on record, in which the British prowess, so eminently displayed, was unhappily tarnished by the brutal scene:s which succeeded it. Pop. 11,715.

BADAJOZ, a prov. Spain, Estremadura, bounded, N. by prov. Cáceres, E. Cindad Real, S.E. and S. Cordova, Seville, and Huella, and W. Portugal ; area, $10,580 \mathrm{sq} . \mathrm{m}$. The surface is very mueh diversified. Numerous mountain-ridges, ramifications of the sierra Morena, traverse it in different directions, but between these, and along the banks of the rivers, are extensive tracts of rich alluvial soil, particularly one called Barros, which is celebrated throughout Spain for its remarkable fertility. The mountainous tracts are well wooded with oak, ash, and other trees; which are not only extensively used for fucl, but furnish good timber, while the acorns and the mast feed large herds of swine. Too much of the province is said to be devoted to pasture; and the parts under cultivation, owing to a very imperfect system of management, are far less produetive than might be expected, from their natural fertility. The chief river is the Guadiana, which traverses the province E. to W., and receives several tributaries within it. The mannfactures consist chiefly of soap, coarse linen, leather, and a few other articles of home consumption; the trade is chiefly internal, and as yet insignificant, though a great addition is anticipated from a railroad which is intended to connect Badajoz with Seville. The mines registered within the province amount to 84 ; among which are one of gold, 10 of silver, and several of cinnabar or quicksilver. The greater proportion, however, are of lead and eopper, though many even of these have ceased to be productive. The elimate, particularly in the lower districts, is both hot and damp, and intermittent fevers are very prevalent. The province, for administrative purposes, is divided into 15 districts ; and, ecelesiastically, forms a diocese of same name, whose bishop is suffragan to Santiago. Pop. 336,136.

BADAKSHAN. See Budukshan.
BADALONA, a tn. Spain, in Catalonia, prov. of, and 7 m . N.F. Barcelona; in a fertile plain, l. bank, Besos, near its embouchure in the Mediterranean Sca. It has two squares, an ancient parish church, two sehools, several fountains, and a ruined convent, of the order of St. Jerome, burned in the late war. Cotton-weaving and silk-dyeing are carried on, agricultural produce is exported, and, besides husbandry,
the inhabitants are engaged in fishing and seafaring. Pop. 5000.

BADAUMY, a hill-fort, Hindoostan, prov. Bejapoor, 55 m. N.E. Darwar ; considered one of the strongest forts in India; lat. $15^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $75^{\circ} 49^{\prime}$ E. It was taken by the British, under Sir Thomas Manro, in 1818, although it had previously successfully resisted the efforts of an entire Maharatta army. The neighbourhood presents an extraordinary assemblage of huge disconnected rocks, piled on each other, and scattered about in the wildest confusion.

BADBY, par. Eng. Northampton; 2370 ae. Pop. 624.

BADEBORN, a tn. Germany, duchy of Anhalt-Bernburg, dist. of, and about 5 m . from Ballenstädt. It is a tolerably well-built thriving place, and has two gates. Pop. 1210.

BADEN (Grand Duchy of), the seventh state of the Germanic Confederation, in the S.W. corner of Germany, be tween lat. $47^{\circ}$ and $49^{\circ} \mathrm{N}$., and lon. $25^{\circ}$ and $27^{\circ} \mathrm{E}$.; bounded, N. by Hesse-Darmstadt and Bavaria, E. by Würtemberg and an interjected portion of Hohenzollern, S. by Switzerland, and W. by France. It is of very irregular form, and lias no proper natural boundaries. On the W., and part of the s., its contour is defined by the Rhine; but in other direetions it is much indented and mixed $u p$ with other states. It may be described as a long stripe of land stretching N.E. to S.W., narrowest at the centre, widening considerably towards the N., and much more towards the S. base. The line through its centre, and forming a slight curve, with its convexity E., is about 175 m . Its breadth varies from 13 m ., where it is narrowest, a little to the N . of Baden town, to 85 m . Its area, owing to its extreme irregularity, is not easily caleulated; but, according to the latest measurements, is 4456 geo. sq. m., subdivided into four cereles, viz., the Lake Circle in the S.E., and the eircles of the Upper, the Middle, and the Lower Rhine, in the S., W., centre, and N., respeetively. The surface is ocenpied as follows:-Arable land, $2,179,375 \mathrm{ac}$; meadows and pastures, $993,795 \mathrm{ac}$; wood, $2,234,850 \mathrm{ac}$. ; vineyards, 127,780 ac.; gardens, $89,930 \mathrm{ac} . ;$ waste, $31,700 \mathrm{ac}$. The remainder is oceupied by water, buildings, streets, roads, \&c.

Physical Features.-Baden is decidedly mountainous, being traversed to a considerable extent by the lofty plateau of the Schwarzwald or Black Forest, which, commencing in the circle of the Upper Rhine, between Basel and Waldshat, proeceds in a N. direction, forming, by its W. side, the range of romantic precipices whieh bound the valley of the Rhine, while its E. side slopes much more gradually. Its highest points are the Feldberg, 4675 ft . in height; the Belchen, 4642 ft . Blössling, 4380 ft . ; Hochkopf, 4333 ft . ; Köhegarten, 4039 ft . Hochfürst, 4000 ft ; and the Fanlenfürst, 3553 ft . Another range, of no great elevation, though somewhat precipitons, called the Heiligenberg, attains its greatest height in the vicinity of Heidelberg. In addition to these ranges, are the two smaller groups of the Kaiserstuhl and the Odenwald. The former has an isolated position, and appears to have at one time belonged to an island. Its greatest height is about 1916 ft . The Odenwald is usually regarded as a continuation of the Black Forest, with which it merges imperceptibly, and, stretehing N. into Bavaria and Hesse-Darmstadt, flattens down by a series of gentle slopes, and disappears. The nucleus of the Black Forest and Meiligenberg consists of gneiss and granite, usually overlain, S.W. by Jura limestone, E. by red sandstone, which often forms extensive traets, and occasionally appears in isolated masses, and N.E. by Alpine limestone. The Kaiserstuhl is evidently of volcanic formation. The Odenwald is composed, for the most part, of red sandstone. In the W., however, there is some gneiss, granite, and sienite; and in the S., Alpine and shell limestone. These mountains are intersected by valleys of more or less extent, which, occasionally eutting the Black Forest transversely, reach its E. side. In the S., the valleys are generally short, with a rapid declivity towards the N.W. In the N. they are much longer, and have, in general, a mueh more gradual descent.

Rivers and Lakes.-Baden belongs entirely to the basins of the Rhine and the Danube; the former draining the far larger portion of the surface, while the latter occupies only a small portion of the S.E. corner, where it takes its rise, and inerely runs the few first miles of its mountain course. The torrents which rush down the steep sides of the Black Forest, lastening into the Rhine, are almost without number; but its chief affluents within Baden are the Neckar, Kinzig, Pfinz, Alb, Murg, Elz, Weissen, and Wutach. Baden abounds in lakes. A considerable part of the Lake of Constance, and the whole of the Uberlingersee and Zellersee, belong to it, with a great number of others, which, though small, are by no means inconsiderable.

Minerals and Mineral Springs.-The variety of minerals is very great, but the number of those which exist in such quantity as to be workable to profit is comparatively small. Gold is still occasionally washed from the sands of the Rhine, and the Black Forest contains numerous veins of silver, which, in earlier times, were extensively wrought, and maintained several silver furnaces. Copper is still produced from the mine of IIerrensegen, cobalt near Wittich, manganese near Eisenbach, lead in the Münster valley, and calamine near Wiesloch. These, however, are all surpassed in value by the iron mines, which are worked to the number of 30 , and employ 15 smelting furnaces. In addition to these, may be mentioned coal, rocksalt, gypsum, alabaster, marble, whetstones, alum, sulphur, potters' and porcelain clay, oclire, and occasionally garnets and agates. In mineral springs, Baden is particularly rich. The number of them has bcen estimated at 70, and of these not a few are of great celebrity, attracting to the different watering-places to which they have given rise, crowds of visitors from all parts of the world.

Climate and Vegetable Productions.-The climate of Baden varies, of course, with the nature of the surface. While in the valleys and plains all the ordinary fruits are coming to maturity, cold winter blasts are often felt among the mountains; and there are even ravincs on the sides of the Feldberg from which the snow seldom entirely disappears. Some observations seem to indicate, that in the region of the Feldberg the scasons are becoming colder, and that the formation of glaciers upon it is by no means impossible. In the Black Forest the grape no longer ripens, and on the lofticst summits of the Feldberg ordinary pincs and larches have ceased to thrive. Even a few hundred fect above the base, they begin to be scraggy and stunted. The summit now exlibits only patches of grass and Iceland moss, while its lofty sides are chiefly occupied by the alpine rose and bilberry. The open valleys of Gaden, in the S., are much warmer than in the N. The E. side, and also the Odenwald, are cold, lying exposed to the blasts of the Swabian Alps, and extensive tracts of table-land, where as yet the labours of the husbandman have done little to mitigate the natural rigour of the scasons. The finest climate of Baden, and, indeed, of Germany, is in the valley of the Rhine. Here winter is short, and spring early; the heats of summer are tempered by evaporation from the river and the lakes; the fields are covered with rich crops, and all the ordinary fruit-bearing plants and trees, particularly the vine and the chestnut, grow in luxuriance. Indeed, the vegetation throughout Baden is peculiarly rich, and manifests itself especially in the magnificent forests which line many of its valleys, and clothe its mountain sides, furnishing supplies, both of fuel and excellent timber, which are almost inexhaustible. The mean annual temperature of Baden, taken at Mannheim, is $51^{\circ} 40^{\prime}$; at Carlsruhe, $51^{\circ} 48^{\prime}$. At Freiburg, which is in the ncighbourhood of the Black Forest, and lies exposed to alpine blasts, the temperature is somewhat lower: One peculiarity in the climate of Baden is the frequency of hailstorms in the district of the Kaiserstuhl, and the hurricanes which proceed from the direction of Strasburg.

Agriculture.-Baden is quite an agricultural country, the arable land occupying rather more than a third of the whole surface. The annual produce of grain is estimated at $1,390,125$ quarters, of which rather more than one-half is spelt or German wheat; about one-fifth oats, one-ninth barley, and rather more than one-ninth rye. Large quantities of potatoes are grown throughout the country, and hemp of excellent quality; tobacco and hops in particular districts. The culture of green crops attracts a good deal of attention, and the soiling of stock is generally practised; but though scarcely a patch of land on Vol. I.
which any crop can be raised is allowed to lie waste, and the collection of manure is never lost sight of, the science of agriculture cannot be regarded as far advanced. The operations of the field are often performed in a very slovenly manner, the implements are clumsy in the extreme, and bullocks, and even cows, are employed to do much of the work. The rearing of cattle forms an important occupation, but superiority of breed is too often regarded as a matter of secondary consequence. Numerous herds of goats and swine are fed in the Black Forest. The rearing of bees is duly attended to ; that of the silkworm exists, but has not as yet made much progress. In regard both to quantity and quality, few countries are richer in wine than Baden. Vineyards occupy a comparatively large extent of its surface, and several of the wines, both white and red, produced in them, rank in the first class. Baden has long been famous for its fruits, among which may be mentioned extensive orchards, or rather forests of apples, pears, chestnuts, and particularly the cherries and plums of the Black Forest, from which are obtained the liquors which, under the name of Kirschwasser and Zwetscligewasser, are universally known and esteemed.

Manufactures and Trade.-Of neither of these has Baden much to boast. The whole number of families engaged in occupations immediately connected with the woollen, cotton, and linen manufactures, has bcen estimated not to exceed 200. The working of the minerals enumerated above, affords much more extensive occupation; but perhaps the most important manufacture is that of wooden clocks, confined chiefly to the districts of the Black Forest, and, connected with it, the making of musical boxes, and other musical toys, in which extraordinary skill and ingenuity are displayed, and for which prices, amounting from 12,000 to 15,000 florins ( $£ 1000$ to $£ 1250$ ), have been obtained. The chief trade of Baden is derived from its forests. Timber of the finest quality, much of it adapted for shipbuilding, is transmitted to Holland by the Rhine, and by way of Basel, to Switzerland and France; both of which also take large quantities of charcoal. The only other articles of trade deserving of notice are wine, particularly the Markgräfler, Klingelberger, and Staufenberger; liqueurs especially Kirschwasser; hemp, tobacco, and fruit. Salt is exported in considerable quantities to Rhenish Prussia and Switzerland.

Population and Moral Statistics. -The last regular census of the population of Baden was taken in 1839, and gave a total amount of $1,277,365$, apportioned among the four circles into which the country is divided in the following mamer:-

| Lake Circle . ........ | $\begin{gathered} \text { A rea } \\ \text { ingeo. } \\ \text { sq. } \mathrm{m} \end{gathered}$ | Bailhwicks. | ParIshes. | Population Classifited. |  |  |  | Total Populathon. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  |  |  |  | Protestants. | R. Cx. thohes. | Mennons. | Jews. |  |
|  | 984 | 18 | 376 | 7,951 | 173,6^8 | 43 | 1,348 | 182,979 |
| Upper Rbine Circle. | 1248 | 18 | $4 \pm 8$ | 94,195 | 238,482 | 87 | 8,613 | 336,377 |
| Middle Rhine Circle | 123: | 21 | 388 | 151,70S | 260,334 | 286 | 6,011 | 427,339 |
| Lower Rhine Circle | 993 | 22 | 383 | 147,991 | 171,370 | 913 | 10,996 | 330,670 |
|  | 4456 | 79 | 1594 | 401,845 | 852,824 | 13:8 | 21,368 | 1,277,365 |

At the date of this census, and for some time previous, the average annual increase of the population of Baden was about 8500. Aecordingly, in 1842, allowing for this increase, the total population was estimated at $1,290,146$. At present (1850) it cannot be less than $1,300,000$. From the above Table, it appears that the proportion which Protestants bear to R. catholics is barely one to two, while the Jews muster unusually strong. The races which inhabit Baden are chiefly two, the Allemanni and the Franks; the former occupying the territory from the Murg to the Rhine, and the latter the territory to the N. of the Murg. The language corresponds to this territorial division; the Allemannisch prevailing in the liigh country, particularly in the valley of the Wiese, and in tolerable purity, though frequently intermixed with Swabian and Frankish. It is spoken with the least adulteration in the Black Forest, whose inhabitants have a character differing decidedly from that of the inhabitants of the valley of the Rhine. The native of the Black Forest is lively, industrious, of an ingenious and somewhat speculative turn, lience fond of trade, and rather too fond of law; in general religious, but apt to allow his belief to degenerate into superstition. The natives of the Rhine valley are of more mixed character, and differ greatly from cach other. Hence the inhabitant of

Brisgau is easily distinguished from that of Old Baden; who, in his turn, is as easily distinguished from the inhabitant of the Baden palatinate. In general the inhabitants of Baden are robust and lealtly, with some tendency to corpulence; which, however, is said to be less common than formerly. In the more sceluded parts of the country, their manners are primitive and their morals pure; but, on the whole, their character in this respect is not the lighest, and contrasts unfavourably with that of their Swiss neighbours. Education is very generally liffused, and the means employed for the purpose deserve honourable mention even in Germany. The general charge of public instruction is committed to a beard called Oberstudienrath. Every village has at least one primary, and every town a grammar school. Parents are obliged to send their children to the schools, and continue them there for a certain period, or till a certain degree of proficiency is attained. Of a higher order than those already inentioned are numerous seminarics, called real schools, Latin sehools, pædagogiums, gymnasiums, and lyceums. At the head of the whole are the two universities of Ilcidelberg and Freiburg, both of great antiquity, and entitled to an honourable place among the most distinguished universities of Germany. In addition to very complete courses of classics, literature, and science, the former has a Protestant, the latter a 1 . catholic faculty of theology. In regard to religion, the course of which France has set the example is followed. There is no proper religious establishment, but every form of religious belief is protected, and, where the adherents are of any numerical importance, directly recognized.

Government. - Baden ranks as the seventh state in the Germanic Confederation. It has one vote in the ordinary deliberative assemblies, and three in what is called the plenum. The government is a constitutional monarchy, founded on a liberal representative basis. In its present form it was established in 1818, being voluntarily conceded by the Grand Duke. The states are composed of two clambers. In the upper sit the princes of the Grand Dueal family, the nobles and barons, the Protestant and R. catholic bishops, 14 deputics from the landed gentry, eleeted for eight years; two deputies from the universities, elected by the professors, for four years; and eight individuals nominated by the Grand Duke, at will, from any class. The lower clamber consists of 63 deputies, elected for eight years; 22 by 14 privileged localities, and the remainder by 41 electoral districts. The members of this chamber, while actually sitting, are allowed about $8 s .6 d$. per day. The executive belongs entirely to the Grand Duke, who appoints his ministers and councillors, and all the leading functionaries and judges. The supreme civil and criminal court has its seat at Mannheim, but the capital of the grand duchy is Carlsruhe. The military quota which Baden furnishes to the Germanic Confederation is 10,000 men. The ordinary standing army, including officers, is about 15,000 men. In 1845 , the public revenue was about $£ 1,275,730$; and the expenditure, $£ 1,207,470$. In 1843 , the public debt was $£ 2,547,500$.

History.-The hereditary possessions of the llouse of Baden extend over little more than a fourth of its present territory. The reigning family dates its listorical origin from Berthold, surnamed the Bearded, Count of Thurgau and Brisgau. The Emperor Henry III., to securc or reward his services, allowed him to assume the name of Duke of Zähringen, and gave him the expectancy of the dukedom of Swabia. Ilis grandson Herrman succeeded to his domains in the end of the 11 th century, and is the proper founder of the House of Baden. He took the title of Margrave, and died in 1130. On the death of the Margrave Christopher I. in 1527, two lines were formed by his sons Bernard and Ernest; by the former that of Baden-Baden, by the latter that of Baden-Durlach. Both lines became united in 1771, in the person of the Margrave Charles Frederick, who obtained considerable accessions of
territory, and the title of Elector. At the dissolution of the Gernan empire he received additional accessions of territory, and died in 1811; succeeded by his grandson Charles, who married Stephanie, an adopted daughter of Napoleon, ard shared largely in the favours of that dynasty. Shortly after griving the constitution of 1818 , he was succeeded by his uncle Lewis; who, dying in 1830, made way for his half-brother Leopold, the reigning Duke. Baden has had its share in the recent insurrections which have taken place in Germany. On May 13, 1849, a popular assembly, held at Offenburg, passed a series of violent resolutions, inter alia, dissolving the chambers, and convoking a constituent assembly. Military insubordination also began to appear, and manifested itself so strongly at Carlsruhe that the Grand Duke quitted it, and withdrew into Alsace. Ultimately, by the aid of Prussian troops, but not without a severe engagement with the in surgents, the insurrection was put down, and matters again returned to their former state.-(Huhn's Lex. Deutschland.)

BADEN, or BaAden [commonly Baden-Baden; ane. Civitas Aurelia Aquensis], a tn. and watering-place, grand duchy of Baden, circle, Middle Rhine, 18 m . S.S.W. Carlsruhe, one of the most beautiful localities of Europe. It is built in the form of an amphitheatre, on a spur of the Black

DADEN:-From Pernot, Vaynge dans le Graud Duche de Bade.

Forest, overhanging a valley, tlirough which runs the little stream Oosbach. The houses are, in general, old and high; the streets, with one exception, narrow and crooked, and nearly all steep and hilly. The finest buildings lie along the river, but there is not a single handsome square. The edifices most deserving of notice are the new palace, standing on an isolated height above the town, on the site of a Roman temple and baths, and surrounded by fine gardens; the palace, and near it the less extensive but prettier villa of the Duchess Dowager Stephanic; the town church, containing the tombs of 14 members of the margraviate house of Baden, and altarscreens painted by Lill after Guido Reni ; the spital churelı, an old Gothic building now used by the Protestants, and in which also the English service is regularly performed; and the museum of antiquities, built in the form of an old Grecian temple. Baden is the chief place of a bailiwick, and contains the different public offices belonging to it. It has also an excellent hospital, a poorhouse, and savings' bank. Its chief manufactures are linen, ropes, and pottery. Baden has been celebrated, from the remotest antiquity, for its thermal baths, which made it a favourite resort of the lomans. The springs are at least 13 in number, and the temperature of each, though uniform in itself, differs from that of the others. The hottest, and, at the same time, most copious of the springs, is the Ursprung. It has a temperature of $153 \frac{1}{2}^{\circ}$ Fah., and yields about 40 cubie ft . of water per minute. The chicf ingredients of the water are saline, with some muriatic and carbonic acid, and small portions of silex and
tho oxide of iron. It is clear, has a slightly salt and animal taste, and deposits a kind of chalk sinter. Its chief efficacy is in serofulous, catarrhal, and rheumatic affections. The old vaulting over the Ursprung is of Roman construction; and in the museum are many Roman remains, found in and about the locality. The annual number of visitors, said to be of a more mixed character than formerly, is estimated at 20,000. July and August are considered 'the season.' On the banks of the On, opposite the town, is the Conversa-tious-haus, with its promenade and gardens. It also contains gaming saloons, with a café-restaurant, theatre, and readingroom. The parties who hold the tables on lease from the Grand Duke, pay a heavy sum for the odious privilege. The manufactures of the town are insignificant; they include ropemaking, pottery, and leather-dressing, to a small extent. Light wares of wood, glass ornaments, trinkets, toys, \&c., are sold, in a kind of fair held upon the promenade, to attract visitors; but, upon the whole, Baden-Baden must be considered merely as a place of fashionable resort, and which is losing its once great respectability. Resident pop. 4343.

BADEN [anc. Therme Cctice and Austriacce], a tn. Lower Austria, gov. and circle, Vienna, from which it is distant S.W. $15 \mathrm{~m} ., \mathrm{l}$. bank, Schwöchat, at the foot of the Styrian Alps. It consists of a nucleus and seven suburbs; and has numerous hot sulphurous springs ( $84^{\circ}$ to $99^{\circ}$ Fah.), used both for bathing and drinking, and resorted to annually by thousands of invalids and others. The finest baths are those of the Saucrhof, the Frauenbad, and the Carolinenbad. They are, for the most part, 'society baths' (Gesellschafts or Vollbäder), in which the bathers, male and female, in ample dressing-gowns, mix promiscuously, and walk about up to the neck in the steaming water. They are efficacious in cutancous diseases, gout, and rheumatisn, resembling in their effects the springs of Aix-laChapelle. Baden was almost wholly destroyed by fire in 1812, but has been rebuilt with increased architectural beauty. The chief modern buildings in the town and neighbourhood are the Weilburg, the handsome chateau of the Archduke Charles, in the valley of St. Helen; the palace of the Archduke Anthony; the Sauerhof, a military hospital, with baths for 400 soldiers; the church of St. Augustine, the only one in the town; the townhall, theatre, an hospital, founded in 1815 ; and several other charitable institutions. There is a park and public promenade, much frequented, and in the environs the scenery is highly picturesque. The dyeing of yarn, cotton-spinning, and the manufacture of silk, velvet, and muslin, are carried on to a limited extent. Pop. 4800.

BADEN [anc. Thermce Helvetica], a tn. and dist. Switzerland, can. Aargau. The town (Ober-Baden or Baden-im-Aar$g a u$ ) is 12 m. N.E. Aarau, in a narrow defile, 1. bank, Limmat, which is here crossed by a wooden bridge. It is the seat of a district court, and has a townhall, a handsome R. catholic church, a convent, monastery, hospital, and house of correction, and is celebrated for its hot sulphurous baths. The hottest springs have a temperature of $116^{\circ} \mathrm{Fah}$. The Romans had a castle at Baden, called the Castellum Thermarum; and during the Middle Ages there was a fortress here, where the Dukes of Austria frequently resided, the ruins of which still exist. From 1426 to 1712 , Baden was the seat of the federal diet of the Swiss cantons, and the residence of the foreign ambassadors. The treaty of peace between France and the empire was signed here, Sept. 7, 1714. The town has some trade in wine. Pop. 1844.

BADENOCH, a dist. Scotland, Inverness, about 35 m . in length, and 28 in breadth; bounded, E. by cos. Elgin and Aberdeen, S.W. by Athole and Lochaber, and N. by Nairnslire. The name is derived from a word signifying bushy, the country having been originally covered with natural forests, many of which still remain. Though, like all mountainous districts, possessing some fertile spots, the country may be generally described as barren, poorly cultivated, and thinly peopled, but abounding in beautiful and picturesque Alpine scenery. In this district is situated, at an elevation of 1200 ft . above the level of the sea, Loch Spey, the source of the river of that name, one of the largest in Scotland. The lake is surrounded by the Corryarik Mountains, from which descend the torrents by which it is principally supplied. Badenoch, in days of old, was a lordship of the Cummins, of which family was the Red John Cummin, slain in the church at Dumfries, in 1306, by Robert Bruce. The Cummins, who
were long the most powerful family in Scotland, ruled here with absolute sway, planting numerous strong fortresses over the country to support their authority. Bruce subsequently annexed Badenoch to the earldom of Moray, but it was afterwards bestowed, by Robert II., on his son, Alexander, Earl of Buchan, a man of a disposition so ficrce and ruthless, that he was called the 'wolf of Badenoch.' The issue of the latter failing, the lordship of Badenoch fell into, and remained with the Crown till 1452, when it was bestowed on the Earl of Huntly. Badenoch was long the property of the Gordon family, but is now in other hands. It was the birthplace of M'Pherson, the translator or author of Ossian's poems, who also died there, on Feb. 17, 1796; his body being afterwards carried up to Westminster Abbey, where it was interred. In this district, also, in the parish of Alvie, is Kinrara Housc, the beautiful and favourite residence of the celebrated and accomplished Duchess of Gordon, who died there, and who was there buried by her own desire.

BADENWEILER, a vil. grand duchy, Baden, circle, Upper Rhine, 15 m . S.S.W. Freiburg, celcbrated for its baths, used in rheumatic, hysterical, and hypochondriacal affections. They are insipid, tasting like lukewarm water, and have a temperature of $82^{\circ}$ Fal. They were known to the Romans, whose baths were discovered in 1784, and are regarded as the most perfect out of Rome. They are 324 ft . long by 100 broad, and consist of four large and eight small baths, with vapour-bath, anointing and dressing-rooms, \&c. Two altars lave been found, the one bearing the inscription Diance Abnobse, and the other containing traces of the name of Diana. The wine called Markgräfler, the best which Baden prodnces, grows in the neighbourhood. Pop. exclusive of visitors, 300.

BADESWUR, or BADDESSUR, a small but neatly built tn. Hindoostan, prov. Orissa, presidency, Bengal, picturesquely situated on the r. bank, Mahanuddy, 32 m. S. W. Cuttack; lat. $20^{\circ} 17^{\prime} \mathrm{N} . ;$ lon. $85^{\circ} 25^{\prime} \mathrm{E}$. It consists of one broad strcet having a row of gardens up the centre, with trellis work coverings, over which beans and other creeping esenlents and flowering plants are trained, forming one continued bower; at intervals there are fantastic, and sometimes taste-fully-constructed vases made of pottery, in which the tulsí plant is reared. There are also several wells in the town, with terraces round them; the houses are all elevated on plinths, with narrow ledges projecting beyond the walls, on which the people sit in fine weather, and the thatch projects considerably, so as to admit of the rain falling clear. There is a mart here for grain, iron, cotton cloths, silk dhotis, ironmongery, \&c., which are both manufactured and brought from the neighbouring places. In the vicinity are somo ancient temples, and a hill of volcanic appearance, which rises abruptly from the river to a height of 300 ft .-(Journal of the Asiatic Society of Bengal.)

BADGENDON, or Baddington, par. Eng. Gloucester; 990 ac. Pop. 172.

BADGER, par. Eng. Salop; 980 ac. Pop. 137.
BADGEWORTH, par. Eng.Gloucester; 1730ac. P.903.
BADGEWORTH, par. Eng. Somerset; 1470 ac. P. 321.
BADIA, a tn. Austrian Italy, gov. Venice, prov. of, and $15 \frac{1}{2}$ m. W.N.W. Rovigo, r. bank, Adige, near the source of the Adigetto. There is here a fine bridge over the Adige, and in the town are several monasteries, a college, a manufactory of earthenware ; considerable trade in corn, flax, silk, hides, firewood, and iron, is carried on. Pop. 3400.

BADIA CALAVENA, a tn. Austrian Italy, gov.Venice, prov. of, and 12 m. N.E. Verona; cap. dist., in which are several quarries of fine marble. Pop. 2000.

BADIA SAN SALVADORE. See Abbadia.
BADIA TEDALDA, a tn. and com. Tuscany, prov. of, and 23 m. N.E. Arezzo, on a skirt of the Alps near the l. bairk, Marecchia; well built, commanded by a small castle, and having a fine square, parish church, and an ancient abbey of the Benedictines. The greater part of the inhabitants are shepherds or husbandmen, subsisting chiefly on chestnuts. Pop. 2074.

BADINGHAM, par. Eng. Suffolk; 3390 ac. Pop. 864.
BADLESMERE, par. Eng. Kent; 820 ac. Pop. 122.
BADLEY, par. Eng. Suffolk; 1050 ac. Pop. 83.
BADMINTON (Great), par. Eng. Gloucester; 1450 ac. Pop. 552.

BADOLATO, a tn. Naples, prov. Calalria Ultra, dist. of, and 22 m. S. Catauzaro, on a hill about 2 m . from the sea. Fop. 3394.

BADONG, a vil., S. W. part isl. Bali, Indian Archipelago, about 9 in . from the coast, with markets twice a week, attended often by 3000 people.

BADONVILLER, a tn. France, dep. Meurthe, arrond. of, and 21 m. S.E. Luneville, on the Blette. Metallic moulds for the glassworks at Baccarat are manufactured here, besides large quantities of awls and prickers, with some cotton goods and hosiery. There are here, also, tanneries, breweries, and potterics. Pop. 2090.

BADONY, two pars. Ireland:-1, Badony, or Baulony Lower, Tyrone; 47,921 ac. Pop. 7784.-2, Badony, or Badony Upper, Tyrone; 38,208 ac. Pop. 5822.

BADRACHELLUM [Sacred mountain], a tn. Hindoostan, in the Deccan, prov. Hylerabad, 1. bank, Godavery, about 100 m . from its embouchure in the Bay of Bengal, and 165 m. E. by N. from the city of Hyderabad ; lat. $17^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $81^{\circ} 0^{\prime} \mathbf{E}$.

BADSEY, par. Eng. Worcester; 1770 ac. Pop. 497.
BADSWORTH, par. Eng. York, W. liding; 4320 ac. Pop. 750 .

BADULLA, a tn. and fort, isl. Ceylon, 35 m . S.E. Kandy, 1. bank, Komene; lat. $6^{\circ} 45^{\prime \prime}$ N.; lon. $81^{\circ} 15^{\prime}$ E. It stands at an elevation of 2100 ft . above the level of the sea, and is surrounded by mountains. The town is insignificant, and the fort, now unoccupied in consequence of the unhealthiness of of the situation, is inconsiderable, thongh possessing a good barracks and hospital. The surrounding country is fertile, and though 40 m . from the sea, is favonrable to the growth of the cocoa-nut tree.

BADWELL-ASH, or Little Ashifield, par. Eng. Suffolk; 2000 ac. Pop. 458.

BAELEGHEM, a vil. and com. Belgium, prov. E. Flanders, 10 m. S. Ghent, having manufactories of linen, cotton, tobacco, and candles; also breweries. Pop. 2932.

BAELEU. -1, A tn. and com. Belgium, prov. Antwerp, on the Great Nethes, 14 m . S.E. Turnhout. Here are a manufactory of coarse woollens; a distillery; oil, malt, and corn-mills. Pop. 3262.-2, A vil. and com., prov. Liège, $5 \frac{1}{2} \mathrm{~m} . \mathrm{N}$. Verviers, with stone quarries, limeworks, and a paper, a cloth, a thread, two corn, and four fulling mills. Pop. 2041.

BAENA, a tn. Spain, in Andalusia, prov. of, and 24 m . S.S.E. Cordova, r. bank, Marbella. It has hilly though tolerably good streets, two principal and two smaller squares, four parish churches, a town and court-house, ladies' college, several well-attended schools, two hospitals, a prison, public storehouse, riding-school, numerous convents, and a palace of the Counts of Altamira. Portions of the old walls, and the remains of a castle, still exist. Manufactures :-linen, woollen, and cotton fabrics, tiles, bricks, and earthenware, and there are some tanneries, and oil and corn-mills, in the place; still a considerable number of the inhabitants are engaged in agricultural pursuits. Large quantities of grain and oil are exported to Malaga, and the trade with the interior is extensive. An annual cattlc-fair is beld. Pop. 12,944.

BAEPENDI, a tn. Brazil, prov. Minas Geraes, 180 m . W.N.W. Rio de Janeiro, on a streamlet of same name. It has a church, townhouse, and prison; its district well watered, and here and there well wooded, is in general fertile, and yields good tobacco, which is extensively cultivated. Millet and beans are also grown for local consumpt, and a considerable quantity of pigs are reared for the Rio de Janeiro market. Pop. tn. and dist. 9000 .

BAESRODE, a tn. and com. Belgium, prov. E. Flanders, on the Scheldt, about 5 m . E. Dendermonde; with breweries, oil and corn-mills, and a building dockyard. Many of the inhalitants live by fishing and seafaring. Pop. 3085.

BAEZA [anc. Beatia], a tn. Spain, in Andalusia, prov. of, and 22 m . E.N.E. Jaen, cap. dist. of same name, about 3 m . N. of r. bank, Guadalquivir, agrceably situated on a height called Loma de Ubeda, amid rich and well-watered plains. When seen from a distance, it ; numerous churches and monasteries, many of them of Gothic architecture, and its lofty steep-roofed houses, present a very striking appearance. At one time it had a double enclosurc of turreted walls, but of these only a few fragments now remain. The streets, though
not straight, are in general spacious and well paved; and the houses, mostly of two or three stories, are built of a fine sandstone, quarried in the neighbourhood. This sandstone, by exposure to the air, becomes dark, and gives the towi a sombre hue. Of the three public squares which Baeza con tains, the largest is the Plaza de la Constitucion. The houses, which line two of its sides, have a range of porticoes; and its interior is beautifully laid out, being both planted with poplars and adorned with a fountain of white and black marble, with several jets. The principal edifices are the cathedral, now united to that of Jaen, an irregular edifice, erected at different times, and in different styles of arclitecture; the university, one of the finest edifices of the town, though as a literary institution it has been suppressed; and the old monastery of St. Philip de Neri. Baeza contains nine parishes, and three monasteries; is the seat of several distriet courts, and possesses a seminary (seminario conciliar), in which both theology and philosophy are taught; an economical society, and several endowed schools, chiefly for elementary instruction. The principal manufactures are cloth, leather, and soap. The dycworks of Baeza were once celebrated, but have greatly fallen off. The annual fair lasts a fortnight. The celebrated sculptor, Gaspar Becerra, was born here in 1520. Pop. 10,851.

BAFFA [anc. Paphos], a seaport tn., S.W. coast, island of Cyprus; lat. $34^{\circ} 47^{\prime} 18^{\prime \prime \prime}$ N.; lon. $32^{\circ} 24^{\prime} 30^{\prime \prime} \mathrm{E}$. (r.) It occupies the site of the celcbrated Paphos of antiquity, where Venus is fabled to have landed after her birth, having sprung from the froth of the sea near this island. She was worshipped by the inhabitants, and lad 100 altars at Paphos; hence her titles of Cyprian and Paphian Queen. The numerous ruins of palaces and churches everywhere to be met with, bear evidence of the splendour of the ancient town, and present a striking contrast to the squalor and wretcheduess of the modern one, which consists of an assemblage of miserable houses, with a few Greek chusches and mosques. In the neighbourhood are a number of excavations made in the rocks, and inhabited by Turkish families. Beautiful crystals are found in the rocks near Baffa, called Baffa diamonds. The country around is fertile, yielding large crops of corn, besides cotton and silk. The bay is large, but shallow, and unsafe. Pop. 1000.

BAFFIN'S, or BYLOTS BAY, a large gulf or inland sea, communicating with the N. Atlantic, by Davis Strait, N.E. coast, America, between lat. $68^{\circ}$ and $78^{\circ} \mathrm{N}$., and lon. $52^{\circ}$ and $80^{\circ}$ W., extending S.E. to N.W. about 950 m ., with a mean breadth of about 280 m . It was first explored by Baffin in 1616, and more fully by Capt. Ross, in 1818, and Capt. Parry in 1819. It is of great depth in many places, but of extremely unequal bottom, the ascertained depths varying from 200 to 1050 fathoms. Its shores are rocky and precipitous, attaining a height, in many places, of 1000 ft ., backed by ranges of lofty mountains, covered with perpetual snow. In this dreary and barren region there is hardly any vegetation; the little there is, consists chiefly of mosses, lichens, and ground berries. The coasts are rendered remarkable by the presence of prodigious numbers of high, sharp, conical rocks, so artificial in form and appearance, that they are called monuments. Both sides of the bay are indented by numerous sounds, creeks, and inlets, few of which, however, have been yet explored. It abounds in black whales, of a large size, and in seals, the capture of which employs a number of British vessels. The principal land animals are bears, black foxes, hares, and walruses. Birds-ptarmigans, terns, gulls, eider ducks, auks, and petrels.

BAFFIN'S ISLANDS. -1 , Three small barren uninhabited islands, E. shores, Baffin's Bay, and so called by Capt. Ross. They are in lat. $74^{\circ} 4^{\prime}$ N.; lon. $58^{\circ} \mathrm{W}$. (r.) 2, A small isl. Fox's Channel, N. branch of Hudson's Bay. It lies S. of Melville peninsula; lat. $65^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $83^{\circ} 29^{\prime}$ W. (r.)

BAFFO, a considerable tn. Mahee country, a district of Dahomey, W. Africa. It is situated near the Fellattah frontier, at the foot of one of the Kong mountains, and is ornamented with a variety of trees-silk, cotton, sycamore, ash, acacia. From being in the hill country, the climate here is more temperate than in other localities of Dahomey. The country around is well watered; and some of the streams are impregnated with iron, others with magnesia. The land pro-
duces four crops of Indian corn each year, and two of Guinea corn. Tanarinds, grapes, figs, cashew and kolla nuts, \&c., abound. There is a good, though small, breed of cattle, but no horses. Sheep and goats, as well as guinca-fowl of various kinds, partridges of a large size, and pigeons, are plentiful; and venomous serpents numerous. Pipe-clay is abundant in some of the valleys. The market is well supplied with all articles of native consumpt. The inhabitants, who manufacture a little cloth, are literally slaves, but live at peace since they were brought under the sway of the King of Dahomey. -(Duncan's Travels in W. Africa.)

BAFING, or BLACK RIVER. See Senegal.
BAFLO, a vil. Holland, prov. Groningen, 15 m . N.W. Appingedam; in a well-cultivated district, and having a church and school, and in the vicinity a rye-mill. Pop. 600.

BAFRA, a tn. Asiatic Turkey, pash. Room, r. bank, Kizil-Irmak, 13 m . above its junction with the Black Sea. It has a bridge, and two mosques. Flax and rice are raised in great abundance in the neighbourhood. Pop. 2000.

BAGAGEM, a river, Brazil, prov. Goyaz, an affluent of the Maranhão. It rises in the serra Viadcira, flows W.N.W. and falls into the Maranhão about 20 m . above the junction of that stream with the Tocantins, after a course of about 160 m ., in lat. $13^{\circ} 30^{\prime} \mathrm{S}$. ; lon. $49^{\circ} 5^{\prime} \mathrm{W}$.

BAGARIA, a vil. Sieily, 11 m . E.S.E. Palermo, with the mansions of wlose nobility it is adorned, that of the Prince of Palagonia being the most distinguished. Pop. 4000.

BAGBOROUGI (WEst), par. Eng. Sonmerset; 1900 ac. Pop. 449.

BAGDAD, a pash. Turkey in Asia, of a triangular form, stretching N.W. from the bead of the Persian Gulf, in about lat. $30^{\circ}$ to $38^{\circ} \mathrm{N}$., and lying between lon. $40^{\circ}$ and $48^{\circ}$ E. ; bounded, S.W. by the Arabian desert, E. by Persia, and $N$. by the pashalics of Van and Diarbekir. It is thus about 630 m . long, and about 450 at its greatest breadth, traversed by the Euphrates and Tigris, which afterwards unite and enter the Persian Gulf in a single stream. This pashalic is usually divided into three portions, that E. of the Tigris, that W. of the Euphrates, and that lying between these two rivers. The first is fertile; the second flat
 and sandy, without herbage and without water, excepting along the immediate banks of the river, the overflowings of which form productive rice-grounds; the third is now a complete desert, though anciently one of the richest and best cultivated territories of the old world. This result proceeds almost solely from the wretched government of the Turks. The better cultivated and more fertile portions of the province, produce large crops of wheat, barley; rice, and maize, with a good deal of tobacco, hemp, flax, and cotton. Near the towns and villages, to which nearly all agrieultural efforts are confined, great quantities of fruit are grown, particularly dates, which are reckoned of a superior description, and form an important article of subsistence. Melons, cucumbers, and onions are also abundant, and of excellent quality. Among the wild animals are lions, hycnas, jackals, wolves, gazelles, hogs, and hares. There are not many lions, but jaekals are both numerons and troublesome. The domestic animals are horses, asses, mules, buffaloes, camels, and dromedaries. The horses are of small size, seldom exceeding 14 hands high, but are held in much esteem on account of their beauty, docility, and capability of enduring fatigue. The most numerous and most useful, however, of the domesticated animals, is the camel. As beef is not used as an article of food, oxen are raised solely for the yoke. The wild birds are black partridges, snipes, wild doves, and, on the lakes and marshes, wild geese, ducks, widgeons, and pelicans. Ostriches are found in the deserts. The only domestic birds bred are the common fowl and pigeons, neither geese, turkeys, nor ducks being domesticated. The province is only partially subject to the Porte, the Arabs being sole masters of the country from Bagdad to the Persian Gulf. The Arab
slicikhs or chiefs are bound to furnish the pasla with a certain number of troops, and a certain annount of tribute; but these eontingents are very irregularly paid, often evaded altogether. The population of the pashalic, consisting of Turks, Arabs, Kurds, Turkomans, Armenians, and Jews, has been estimated at $1,300,000$.

13AGDAD, a large and celebrated city, Asiatic Turkey, formerly cap. of the empire of the khalifs, now cap. pash. of same name; on the banks of the Tigris, about 190 m . above its junction with the Euphrates; lat. $33^{\circ} 19^{\prime} 50^{\prime \prime} \mathrm{N}$. ; lon. $44^{\circ} 22^{\prime} 38^{\prime \prime}$ E. (L.) The city stands on both banks-twothirds being on the left, and the remainder on the right-of the river, which is here abont 620 ft . wide, the communication being maintained by a long, narrow, and very inconvenient bridge of boats. It is of an irregular oblong form, and about 3 m . in circuit, and, as seen from a little distance, has a strik ing appearance, being surrounded by formidable-looking walls of furnace-burnt bricks, strengthened with round towers, and mounted with cannon. A forest of palm and date-trees growing around and within the city, adds to the picturesque effect. The interior, however, disappoints the high expectations which a distant view is calculated to excite. A large portion of the ground within the walls is unoccupied; and the bricks of which the houses are built are mostly old, being dug out of the ruins of former edifices, and hence rounded, chipped, or otherwise disfigured. The streets are narrow, unpaved, and extremely filthy; and the houses, built of burnt bricks of a yellowish-red colour, generally consist of two stories above
the ground, or rather underground flat. They have seldom any window to the street, and the doors are all strong, and iron-clenched. A few of them, however, are enlivened by a sort of oriel or projecting window, admitting light to a sittingroom, in which the various members of the family meet, and visitors are received. Here the males may be seen smoking, and occasionally the females peeping through the half-closed lattice. The houses consist of a range of apartments opening into a square or inner court, with one or two subterraneous rooms called serdabs, in which the inhabitants seek shelter during the day from the intense heat. The bazaar, built by Dawd Pasha, is one of the finest in the East, and is well supplied with home and foreign manufacture; but the other ones are inean struetures, though sufficiently spacious, and generally well stocked. The shops are poor and dilapidated, the whole indicating neglect and decay. There are about 100 mosques in the town, although not more than 20 or 30 are deserving notice. They differ from, and are in general inferior to, thoso of other Mahometan cities; still, some of them have a very gay appearance, their domes and minarets being covered with glazed tiles, of various colours, but chiefly green, white, yellow, and black, arranged in a kind of mosaic work, with considerable taste, and so as to reflect the rays of the sun with brilliant effect. The caravanseries and baths are mostly mean establishments. Bagilad was formerly a place of extensive trade, having been for many ages the great emporium for the commerce of all the surrounding countries; but it has of late years much declined, in consequence, principally, of the rapacity of the Government, and its unwillingness or inability to protect the property of tho merchants from the Arabs, and
in part from the interruptions caused by plague, war, and inundation. Another great cause of decline is, that Persia no longer receives her chief supplies from Bagdad, but obtains them in the N. provinces, via Trebizonde, from Great Britain and Constantinople ; and on the S. direct from India and the Persian Gulf. The yearly trade between Aleppo and Bagdad, at present, seldom exceeds one caravan of 700 to 1000 camels; that between Damascus and Bagdad, one of 1200 or 1500 camels. The chief imports of this trade are cotton twist, calicoes, shirtings, prints, imitation shawls, woollen cloths, and dyes. The returns, independently of remittances in specie, in which the greater part is paid, are Persian tombak, galls, buffalo-hides, East India indigo, pearls, Cashmere shawls, some Mokha coffee, gums, myrrh, \&c. Bagdad has few manufactures. The principal are red and yellow leather, both of which are much esteemed; and a kind of plush, of rich and beautiful patterns, which is much used by the Turks for eovering cushions and sofas.

The climate of Bagdad is intensely hot in summer; but, on on the whole, salubrious, although subject, during part of the summer, to a hot wind, known by the name of Samicl, which is said to feel as if it had just passed over the mouth of a limekiln. Rain rarely falls later than the beginning of May, or earlicr than towards the end of Scptember, after which it continues for a time to fall copiously, though the winter on the whole is dry. So far from considering the excessive heat of summer unhealthy, the natives assert, that if it does not attain its usual intensity, sickness is sure to prevail. It has been observed that the plague visits Bagdad every ten years. A tremendous visitation of that calamity took place in 1831, when the city was nearly depopulated, upwards of 4000 dying daily for several days continuously, out of a population of about $60,000!$ To add to the horrors of the scene, the Tigris overflowed its banks, inundated the lower part of the eity, causing the destruction, in one night, of 7000 houses, which, falling with an almost simultaneous crash, destroyed 15,000 persons.

The population of Bagdad is exceedingly mixed, consisting of Persians, Turks, Armenians, Arabs, and Jews; and as they all dress after the fashions of their respective countries, the varicty of costume displayed in the streets and bazaars is very striking. The natives are said to be the ugliest people in the Turkish empire-a circumstance in part owing to the effects of a cutaneous disorder to which they are subject, and which leaves disfiguring marks on the countenance. The only women in Bagdad who exbibit any part of the face are the Arab females, whose dress consists of a wide chemise of red or blue cotton, and whose faces, arms, \&e., are tatooed in a manner exceedingly disagreeable to a European eye. The handsomest women, and the least disfigured by art, are the Georgians and Circassians; but all ranks and classes stain the hair and the palms of the hands with henna, the last so deeply, that they are said to resemble those of a sailor covered with tar. The Turkish women, when they go abroad, are enveloped in large sheets of checked-blue linen, which give them a shapeless appearance, their legs being, at the same time, enclosed in large jack-boots of yellow leather, and their faces covered with a thick blac'. horse-hair veil. Two other striking features of this far-famed eastern eity, are the immense numbers of singularly ugly negro slaves and white donkeys, that throng the streets. Both are in great request; the latter so much so, as to bring often from $£ 40$ to $£ 50$ each. Only a very imperfect approximation can be made to the actual population. It once exceeded 100,000 . Fontanier makes it as low as 30,000 . The probable namber daes not exceed 65,000 .

BAGE, a vil. Brazil, prov. São-Pedro-do-Rio-Grande, near Piratini, on the $S$. frontier of the province. It has a church, and about 2000 inhabitants.

BAGE, name of two vils. France, dep. Ain, about 3 m . distant from each other, and 15 m. N.W. Bourg :-1, Bagé le-Chatel, agreeably situated on a hill, in the midst of a fertile plain, and possessing some manufactures of cloth, leather, and carthenware; and a trade in agricultural produce, particularly poultry. Pop. 740.-2, Lagé-la-Ville, a large vil., can. Bagé-le-Chatel. Pop. 2069.

BAGH, or Buar, a tn. Beloochistan, dist. Cutch Gundava; lat. $28^{\circ} 35^{\prime}$ N.; lon. $68^{\circ} 8^{\prime}$ E.; r. bank, Naree, and not far from the celebrated Bolan Pass. 1t is surrounded by a ruinous mud wall. The houses, about 2000 in number, are
of the same material, and wretehedly built. It has a large roofed bazaar, well supplied with wares. Adjoining the town is an extensive cemetery, containing some remarkable tombs; and near it, a large mosque. In dry weather, water is extremely scarce, the stream of the Narce becoming then exhausted, while the water in the tanks and wells is brackish and unwholesome. The neighbouring country, when properly irrigated, is fertile in grain. The elimate is sultry.

BAGHTCHECHSERAI. Sce BAKhtscinssarai.
BAGINTON, par. Eng. Warwick; 1480 ac. Pop. 245. BAGLAN, par., S. Wales, Glamorgan. Pop. 548.
BAGLANA, or bihagelana, a dist. Hindonstan, prov. Anrungabad; extremely lilly, with many fertile plains inter spersed. It is one of the original Mahratta countries, and remained under the sovereignty of that tribe until the fall of Peshwa in 1818.

BAGLEN, or Bagaleen, a prov. island of Java, S. coast; bounded, W. by Banjoemas, N. by Samarang, E. by Kadoe and Djocjokarta, and S. by the Indian Ocean. It lies between lat. $7^{\circ} 10^{\prime}$ and $8^{\circ} 11^{\prime} \mathrm{S}$., and lon. $109^{\circ} 25^{\prime}$ and $110^{\circ} 5^{\prime} \mathrm{E}$.; is mountainous, but fertile, generally of volcanic formation, and has lime in its S. parts. The prineipal mountains are Sindoro, about $10,432 \mathrm{ft}$. high; and Praauw, about 8202 ft ., both in the N. of the province, and both volcanoes; the former an active one. Besides these, several other lower heights have craters. The principal streams are the Ambal and Bogowonto, both falling into the Indian Ocean. The atmosphere generally is clear, and, from the height of the ground, the heat is seldom greater than $80^{\circ}$ Fah. Lice, Egyptian wheat, tobacco, sugar, and coffee, are the principal prodncts. Buffiloes are plentiful ; and in the woods tigers, panthers, boars, apes, and numerous kinds of birds abound. On the coast the edible lirds' nests are found.

BAGNA, or BAGNi, a tn. Turkey in Europe, prov. Roumelia, sanjak of, and 40 m. S.S.W. Sophia, 1. bank, Moritza, at the $\mathrm{S} . \mathrm{W}$. extremity and near the base of the mountain range that separates the provinces of Bulgaria and loumelia. It is surrounded by an embattled wall, outside of which are some thermal spring baths. Pop. about 1000.

BAGNA CAVALLO, a tı. Papal States, 29 m . S.S.E. Ferrara, on the Seno. It has some silk-mills; and large quantities of hemp are grown in the surrounding district. P. 10,669.
baGNa LUUKA. See Banjaluka.
BAGNALs'TOW N, a tn. Ireland, eo. of, and 10 m . S. Carlow; agrueably situated on the Barrow, over which there is here a liandsome bridge. The sessions-house is on an ele, vated site, and has an elegant Ionie portico. The town has a fever-hospital, a dispensary, and a R. catholie chapel. Many persons are employed in the quarrying and dressing of granite for building, and of Carlow flag; both of which abound in the district, and are shipped down the Barrow to Waterford, Dublin, \&c. Pop. (1841), 2225.

BAGNAN, or BAGUAN, a small isl. Indian Archipelago, off the N.E. coast of Borneo, from which it is distant about 25 m . ; lat. $6^{\circ} 8^{\prime}$ N.; lon. $118^{\circ} 30^{\prime}$ E. (r.)

BAGNARA.-1, A seaport tn. Naples, prov. Calabria Ultra, 17 m. N.E. Reggio, at the N. entrance of the Strait of Messina. It has a considerable trade in wood and tar. Excellent muscat wine is produced in the vicinity. This town is supposed to be the Portus Orestis of the aneients. Pop, 3175.-2, A tn. and castle, Papal States, 20 m . W. Ravenna, r. bank, Santerno. Pop. 2440.

BAGNAREA, a tn. Papal States, 15 m . N. Viterbo; on a hill. It is the seat of a bishop. 1'op. 2733.

BAGNERES-de-bigorre [anc. Aquensis Vicus, Aqua Bigerronum], a celebrated watering-place, France, dep. Hautes Pyrénées, cap. arrond. of same name, at the entrance of the valley of Campan; l. bank, Adour, 13 m . S.S.E. Tarbes. Its site is one of the most romantic in the Pyrences. Wrell-cultivated slopes surround it on all sides, and are terminated in the distance by a mountain-range, the most conspicuous summit in which is the peak of Midi. The town is well built, and contains several good squares, and numerous spacious, handsome streets. The houses are all whitewashed, and many of them have doorposts, lintels, and window-sills of a blue marble, which abounds in the neighbourhood. One of the worst evils by which Bagnères suffers, is a bright glare and sultry stifling heat; but this is considerably allayed by copious streams drawn from the Adour, and made to circulate
in almost every street. Bagnères owes its chief celebrity to its baths, which are sulphurous and saline, and have a temperature varying from $87^{\circ}$ to $123^{\circ}$ Fah. There is also in the vicinity a chalybeate spring, said to be almost the only one in the Pyrenees. The bathing establishment, called Fracasti, is very complete, and is the largest and most handsome building of the town. It stands at one of its extremitics, immediately under Mount Olivet, and is approached by a long avenue of poplars, winding through a verdant valley. The inhabitants depend chiefly on the baths, almost every house receiving lodgers; but the manufactures are of some importance. The chief of these is the crape known by the name of Crêpe-de-Bareges, and a fine woollen gauze, almost as fine as lace, woven into shawls and scarfs. A great propertion of the females, young and old, are employed in knitting. Bagnères has also extensive marble-works, dyeworks, tanneries, and paper-mills. Pop. 6401.

BAGNERES-de-luchon, a tn. France, dep. Haute Garonne, arrond. of, and 21 m. S.W. St. Gaudens. It is one of the principal watering-places of the Pyrenees, and derives its celebrity from its sulphurous thermal waters, said to be beneficial in rheumatic complaints; are used chiefly as baths. The town is situated in the picturesque valley of Luchon, surrounded on all sides by hills covered with natural wood. The main street forms a splendid avenue, at the W. end of which the large bathing establishment is placed. The neighbournood exhibits some of the most interesting scenery of the Pyrences; and as horses can be procured for a trifle, equestrian excursions are the chief amusements of the visitors, who are most numerous in the months of July and August, at which period the place is very gay. Chocolate, of good quality, is made here. The winter lasts seven or eight months. Resident jop. 2415.

BAGNES (VAL DE), a valley, Switzerland, can. Valais, about 25 m . in length. It commenees at St. Branchier, a little below Orsieres, and follows the course of the Dranse upwards to Chable, stretching thence, in a S.S.E. direction, to the glaciers of Chermontane. In the year 1545 , the village of Bagnes was destroyed by an inundation, caused by the stoppage of the Dranse at a glacier until its waters had aceumulated. In 1818, a similar stoppage of the Dranse took place at the glaeier of Getroz, and the water formed a lake no less than $1 \frac{1}{2} \mathrm{~m}$. long, 700 ft . wide, and at one part 200 ft . deep. Attempts, partially successful, were made to cut a channel through the ice, so as to drain the lake gradually, but the barrier at last gave way, and a deluge of $500,000,000$ of eubic feet of water was let loose, in the space of half an hour, to sweep through a tortuous valley. A flood five times greater than that of the Rhine at Basel filled the bed of a mountainstream. All the bridges on the Dranse were swept away, even that of Mauvoisin, which stood 90 ft . above the ordinary level of the river; houses were destroyed, many lives were lost, and the fertile pastures were converted into a desert of gravel. The valley contains several hamlets, and about 9000 inhabitants.-(Forbes's Travels through the Alps.)

BAGNI, or Bagno di Lucca [anc. Balnea Corsennce et Villce], a tn . and com. duchy of Lucea, 12 m . N. the city of Lucea, r. bank, Lima, here crossed by a bridge. In the Town there are a handsome parish church, an English chapel, municipal buildings, theatre, several public libraries, and five bathing establishments. The waters, whieh are much used, contain sulphate of magnesia, carbonate of lime, alum, and iron, and their temperature varies from $112^{\circ}$ to $129^{\circ}$.-The commune yields graiu, oil, wine, and great quantities of fruits and vegetables; has forests of chestnut and beeeh; and feeds a considerable number of cattle and sheep. Pop. 8834.

BAGNI, or St. Giuliano [anc. Thermee Pisance], a tn. and com. Tuscany, prov. of, and 4 m. N.E. Pisa, at the W. base of Mount Pisano, on which stands the ancient chapel of St. Ginliano, whence the town derives its name. The town is well constructed and clean, and much resorted to by the citizens of Pisa on account of the reputed efficaey of its thermal baths. The establishments for the accommodation of bathers are extensive and well regulated. The waters are clear, inodorous, and saline; temperature, $107^{\circ}$. In Mount Pisano marble is quarried; and in the vicinity are the remains of a magnificent ancient Roman aqueduct, the Aque Calide Pisunorum of Pliny. Pop. 11,183.

BAGNO, a small fortified tn. and com. Tuscany, prov. of,
and 38 m . E. by N. Florence, near r. bank, Savio. It has an ancient and handsome church, municipal buildings, and a noble old edifice used as a bathing establishment. The thermal baths are much frequented; temperature of water, $108^{\circ}$ to $110^{\circ}$.-The commune is fertile towards the river its mountains are covered with forests of pine, chestnut, beech, and oak, the fruit of which feeds numerous swine; eattle, shecp, and goats are reared to some extent. Five anuual fairs are held; one of which, in the spring, is the most extensive and best attended cattle fair in Tuscany. Pop. 6887.

BAGNO a aceua [anc. Bagni di Casciani], a vil. Tuscany, prov. Pisa, S.S.E. Lari on the Era, celebrated for its thermal, sulphureus, and carboniferous waters, of a temperature of between $97^{\circ}$ and $98^{\circ}$ Fah. They are clear and inedorous, but liave a sharp acid taste. Pop. 1285.

BAGNO A mipuli, a tn. and com. Tuscany, prov. of, and 4 m. E. by S. Florence, having a parish church with a few fine pictures, and a townhouse. The vicinity is very fertile, and the low meadows towards the river Arno, N. of the town, afford food for numerous cattle and sheep. Pop. 13,189.

BAGNOLI, a tn. Naples, prov. Sannio, 8 m . S.W. Trivento, on the slope of a hill. It has five churches, an abbey, and an hospital. Pop. 4379.

BAGNOLO.-1, A tn. Naples, prov. Principato Ultra, $8 \mathrm{~m} . \mathrm{S}$. W. St. Angelo de Lombardi, on the declivity of Mount Calvello. It has a fine collegiate church, and several convents. Pop. $4500 .-2$, A tn. Austrian Italy, gov. Milan, cap. dist. of same name, prov. of, and $7 \mathrm{~m} . \mathrm{S}$. by W. Brescia, on the high road from that city to Cremona. Pop. 2646.——The nistrict is fertile, and feeds a considerable number of cattle. Pop. 15,895.-3, A tı1. Sardinian States, prov. Salazzo, 1. bank, Grana, at the foot of the Alps. Pop. 2000.

BAGNOLS, or Bagnols les Bains, a vil. France, dep. Lozère, on the Lot, 10 m . S.E. Meude, on a slope near 1. bank, Lot, and deserving of notice for its bathing establishment, which is very complete, and mueh frequented. The springs, which are thermal, having a temperature of $111^{\circ}$ to $113^{\circ}$ Fah., rise in a narrow valley. The water, on first issuing, is limpid, and free from smell, but after it has run some distance emits an odour of sulphuretted hydrogen. It is not disagreeable to the taste, but has a kind of soapy, unctnous feel. lt is used both internally and externally, and is said to be very efficacious in scrofulous and similar affections.

BAGNOLS [anc. Balnea], a tn. France, dep. Gard, arrond. of, and 15 m . N.E. Uzes, r. bank, Ceze, and of some celebrity for its wines. It is on the whole an ill-built town, with narrow streets, but has one fine square, adorned by two fountains, and surrounded by a balustrade. The college also is a good building. The chief products of the manufactures of Bagnols are coarse cloth, serges, and spun silk. It has also distilleries, tanneries, and dyeworks. Pop. 3803.-Four places in France, in addition to the two already mentioned, have the name of Bagnols.

BAGNONE, a th. and com. Tuscany, prov. Pisa, 7 m . S.E. Pontremoli, at the S . base of Mount Orsajo. It contains a large square, parish elurch, and eastle. The inhabitants are chiefly engaged in tillage and rearing cattle, for which four yearly fairs are held. Pop. 4855.

BAGOLINO, a tn. Austrian Italy, gov. Milan, prov. of, and $24 \mathrm{~m} . \mathrm{N}$. by E. Breseia, 2 m . N.W. lake Idro, l. bank, Caffaro, laving a fine church, an hespital, and extensive ironworks. Hardware, coarse eloths, and serge are manufactured here, and an aunual cattle-fair is held in July. In the vicinity are the sulphurous thermal springs of St. Giacomo. Pop. 3599.

BAGSHOT [formerly, Holy Mall], a vil. and chapelry, England, co. Surrey, hun. Woking, 10 m . S.s.W. Windsor. Pop. 1071. It gives its name to an extensive heath in the neighbourhood, once famous for the numerous highway robberies committed on it. The heath is now much reduced in extent, considerable portions of it having been enclosed and cultivated. Along its borders are numerous handsome villas.

BAGTIIORPE, par. Eng. Norfolk; 710 ac. Pop. 78.
BAGULCO'T.-1, A subdivision of the dist. of Darwar, Hindoostan, prov. Bejapoor, presid. Bombay, including the pergunnahs Bagulcot and Bedaumy; length, 54 m .; breadth, 44 m. ; area, $1230 \mathrm{sq} . \mathrm{m}$. It is badly supplied with water, there being few springs and a defieiency of rain, the annual amount rarely exceeding 26 inches. On this account, the vil-
lages are built mostly on the banks of rivers. The primeipal language is Canarese. Pop. about $100,000 .-2$, A tı., cap. of above subdivision, 125 m. N.E. Goa, and the residence of the principal merchants and bankers of the district. Pop. 7523.

BגGUR, a dist. Hindoostan, now attached to the provs. of Malwa and Goojerat.

BAMADURI'OOR, two towns, India:-1, A tn., prov. Goojerat, 20 m. S.E. Banda, and 81 m. N.N.E. Surat ; lat. $22^{\circ} 11^{\prime} \mathrm{N}$. ; lon. $73^{\circ} 46^{\prime} \mathrm{E} .-2$, A tn., prov. Malwa, dist. ('hendaree; lat. $24^{\circ} 15^{\prime} \mathrm{N}$. ; lon. $78^{\circ} 4^{\prime} \mathrm{E}$.

BAHAMA (Grand), one of the principal islands of the Bahama group, 57 m. E. from the coast of E. Florida; lat. (W. end) $26^{\circ} 41^{\prime} \mathrm{N}$. ; lon. $79^{\circ} 0^{\prime} \mathrm{W}$. (k.) ; about 70 m . long by 9 broad; healthy and tolerably fertile, but thinly inhabited. Pop. 454 males, and 356 females ; chiefly employed in raising Indian corn, and other agricultural pursuits.

BAHAMA ISLANDE, or LUCAYOs, a group of about 500 islands, belonging to Great Britain, many of them mere rocks, lying N.E. Cuba, and E. of the coast of Florida, the gulfstream of which passes between them and the mainland. They extend from the Grand Bahama or Mantanilla Cays, in lat. $27^{\circ} 31^{\prime}$ N., and lon. $79^{\circ} 5^{\prime} \mathrm{W} .$, to the Mouchoir Bank, in lat. $21^{\circ} \mathrm{N}$., and lon. $70^{\circ} 32^{\prime} \mathrm{W}$., a distance of upwards of 600 m . Generally speaking, they present a flat appearance, and are mostly long and narrow. They are formed of calcareous rock, which, by retaining the moisture, is found well adapted to the growth of various kinds of fruits. Of the whole group, not more than 12 or 14 are inhabited; and some of the largest are either altogether uninhabited, or but thinly peopled, while others, again, are almost unexplored. The climate, though rather hot, the thermometer varying from $80^{\circ}$ to $90^{\circ}$ in summer, is healthy, and, with moderate care, well suited to Enropean constitutions. Though generally sterile, some of the islands produce oranges, limes, lemons, esculent vegetables, maize, and ground provisions, for the consumption of the inhabitants, and a little cotton for exportation. The general wild vegetation of the Bahamas is a cluse growth of trees, comprising the Madeira, horse-flesh mahogany, mastic, lignum vitæ, pigeon, alum, dyewoods, \&e., with an entangled underbrush. Numbers of cattle are reared on the islands, and the hog and agouti are found wild in the woods. In the more S. islands, there are natural salt-ponds, of great value, the cultivation of which is increasing, but is capable of much further improvement. Turtles abound on the shore, and are an article of export. In 1850 the total exports amounted to $£ 69,385$, and the imports to $£ 124,486$. In 1851 there cleared outwards 373 vessels, tomnage 36,914 , navigated by 2356 seamen; and there entered 363 , tonuage 36,038 , navigated by 2266 seamen; and there were built 13 vessels, tonnage 494 . In 1851 the revenue of the colony amounted to $£ 26,105$, and the expenditure to $£ 25,068$, of which sum $£ 1650$ were for educational purposes. The schools supported by the government are 21 in number, attended by 1857 scholars, besides which there are several private schools. There is also a library and museum, partly supported by government. The colony is divided into 13 parishes, and contains nine Episcopal churches, and 11 Episcopal chapels, a Presbyterian church, six Methodist, and several llaptist chapels. The seat of government is Nassau, island of New Providence; one of the largest, and, from its geographical position and natural advantages, the nost important of the group. Here also is the headquarters of the troops. The legislature consists of a governor and council, appointed by the erown, and a house of assembly. The present inliabitants are composed of two classes, residents and wreckers; the former are chiefly the descendants of American royalists, great numbers of whom repaired to these islands, with the remains of their property, at the close of the American war. The wreckers, as their name implies, follow as a calling the occupation of rescuing the erews and cargocs of shipwrecked vessels-a calamity excecdingly frequent in these intricate and dangerous seas. They are licensed by the governor, are excellent sailors, and prompt and intrepid in danger. Their vessels, well adapted for the purpose, are small flat-bottomed sloops, which they manage with great skill. They receive a salvage on all property rescued from the waves. The gambling life of a wrecker has, however, much militated against agricultural pursuits, against the real advancement of these islands, and against the comfort and in terests of the inhabitants. Much has been done to promote
education in the Bahamas; numerous schools having been established and chiefly supported by the colonial government, and also, to a great extent, by the Wesleyans. San Salvador, one of the islands, was the first land fallen in with by Columbus on his first voyage, in 1492. At this period, the larger of the Bahamas were densely peopled by a mild and inoffensive race of Indians, whom the Spaniards removed to Hispaniola to work the mines, or act as divers in the pearl-fisheries of Cuinana. By this crucl proceeding, the race became entircly extinct in the course of about 14 years. The Bahamas now remained uninhabited for nearly a century and a half, when they were colonized by the English (1629), who were, in turn, expelled by the Spaniards. They subsequently changed masters repeatedly, but were finally ceded to the British in 1783. The principal islands are Grand Bahama, Great and Little Abaco, Andros Islands, New Providence, Eleuthra, San Salvador, Great Exuma, Rum Cay, Watling lsland, Long Island, Crooked Island, Acklin Island, Atwood Cay, Maricuana Island, Great and Little Inagua, and the C'aricos Islands. The entire pop, in 1845 amounted to 26,500 ; according to the census of 1851 it had increased to 27,519 .

BAHAR, or BEHAR, an extensive prov., a dist., and tn., Ilindoostan, presideney of Bengal. The province, of very irregular outline, is situated between lat. $22^{\circ} 49^{\prime}$ and $27^{\circ} 20^{\prime}$ N.; lon. $83^{\circ} 1^{\prime}$ and $87^{\circ} 14^{\prime}$ E.; bounded, N. by Nepaul, W. by Allahabad, Oude, and Gundwana, S. by Gundwana, and E. by Bengal ; area, about 50,000 sq. m. The Ganges, flowing W. to E., divides it into two nearly equal parts; the N. consisting partly of the extensive alluvial tract along the 1. bank of the Ganges, and stretching N. to the forests of Nepaul and Morung; the S. consisting partly of a similar tract along the $r$. bank of that river, and an extensive mountainous tract commonly called Nagpoor, from the diamond mines it was supposed to contain. The province of Bahar is divided into six districts or zillahs, and is, in respeet of natural advantages, one of the nost highly favoured in II indoostan. Its elimate is temperate and healthy, though subject, particularly towards the centre, and during the hot season, to a parching W. wind, succeedcd, however, towards evening, by a cool breeze from the $E$. The cold season among the hills is singularly bracing to European constitutions. At sunrise during that season, the temperature ranges between $35^{\circ}$ and $40^{\circ}$, and often, in the course of the same day, reaches $75^{\circ}$ Fah. The province is well watered. In addition to the Ganges, which traverses it centrally, it possesses the Sone, the Gundach, the Caramnassa, and the Dewah, with almost innumerable smaller streams. The soil, particularly in the plains, is of remarkable fertility. In the tracts S. of the Ganges, irrigation is usually effected by means of wells, from which the water is drawn by a lever and buckets; in other parts, by damming up the streams. The chief products are oplium (the staple commodity), indigo, sugar-cane, rice, wheat, maize, cotton, flax, sesamum, ginger, pepper, tobacco, betelleaf, and a variety of flowering plants, from whicl essences are made. There are, besides, considerable numbers of cattle reared. The manufactures consist of cottons (once a staple of great importance, but now almost entirely superseded by English imports), carpets, essences, as rose-water, and otto of roses; oils, refined sugar, saltpetre, hides, soap, carthenware, and paper. The natives of Bahar excel the Bengalese in stature and plyysical strength, and in general have better houses, many of them in the towns being two stories ligh, but they fall below them in cleanliness, domestic cconomy, and moral propricty. Intoxication is nearly universal, and religion is mocked in the persons of a degraded and dissolute priesthood. The capital of Bahar is Patna. At a remote period of Hindoo history, Bahar seems to have been the seat of two independent sovereignties, that of Magadha or S. Bahar, and Mithila (Tirhoot) or N. Bahar. There are no Buddhists here, although Gaya, the birthplace of Buddha, the great prophet and legislator of E. Asia, is within the limits of the province. Bahar was transferred to the British in 1765 . Pop, (one-third Mahometans) 9,101,492.

The discrict occupies the central portion, bounded N. by the Ganges, E. by 13haugalpore, S. by Ramghnr and Bhaugalpore, and W. by shahabad; greatest length, N.E. to S.W., 165 m . ; breadth, 68 m . ; area, $5694 \mathrm{sq} . \mathrm{m}$. The greater jart of the country consists of a rich alluvial plain, bounded on the N. by the Ganges, is level and highly cultivated,
although barren isolated hills are of frequent oecurrence, particularly in the centre of the distriet. None of these, however, attain a greater elevation than 700 ft ; but in the S . parts, there are hills of nearly twiee that height. The principal rivers besides the Ganges, are the Sone or Golden river, the Punpun, the Phalgu or Fulgo, the Saeri, and the Panelane, with their numerous branehes. About 500 sq. m. are covered with woods and thickets, consisting of palms, bamboos, mangoes, pomegranates, fig-trees, apple, and other fruit-trees. Hot springs and voleanic substances are met with in various places. The principal wild animals are black bears, spotted tigers, badgers, ichneumons, jackals, squirrels, foxes, hares, dogs, and monkeys; porpoises, alligators, and fish abound in the Ganges; birds are numerous, but all songless. The climate is on the whole healthy, though the heats of spring are excessive, and the E. and W. winds hot and parching. The ehief productions are wheat, barley, maize, and rice, about a fourth of whieh, of superior quality, named bismati, is in great demand in the markets of Caleutta. The lands near the Ganges yield two crops a year. Crueiferous plants, ginger, capsicum, turmeric, coriander, linseed, sesamum, potatoes, and legumes, are also extensively cultivated, together with many other kinds of suceulent vegetables ; cotton, sugar-cane, tobacco, betel-leaf, safllower, and indigo, are likewise eultivated to a greater or less extent. Poppies are grown in great quantities in garden land earefully watered, generally along with onions, garlie, and coriander. The manufactures consist of cottons, carpets, blankets, paper, soap, leather in many shapes, bricks, coarse earthenware, \&c. There are six great places of pilgrimage in this district, and 200,000 pilgrims have been known to visit one of them called Gaya in a year. The chief towns of the district are Gaya (the eapital), Bahar, Shorgotty, Daudnagar, Urwul, \&e. The villages are numerous, consisting of mud-built honses, huddled together without regard to regularity or comfort. It is divided into twenty-eight pergunnals. Pop. $2,500,000$, of whom about a fourth are Mahometans.--The Town is in the above district ; lat. $25^{\circ} 13^{\prime} \mathrm{N}$. ; lon. $85^{\circ} 35^{\prime} \mathrm{E} . ; 40 \mathrm{~m}$. S.E. l'atna, 265 m . N.W. Calcutta. It is a large straggling place, built chiefly around a ditch marking out the boundary of the ancient city, which, though now nearly deserted, must have been a place of importance, and was probably the eapital both of the district and province. The best part of the town consists of a long, narrow street, roughly paved with bricks and stones, but presenting, altogether, a wretehed appearance. In the centre are the remains of a massive stone building, roofed with a number of small domes, having its interior divided into as many cells, resembling the Patan mosques of the upper provinces. The environs are well eultivated, and improved by irrigation. Pop. about 25,000 .

BAHAWULPOOR, Bhawulpoor, or Doadpootra, a thinly-peopled prineipality, N.W. Hindoostan, between lat. $27^{\circ} 41^{\prime}$ and $30^{\circ} 25^{\prime} \mathrm{N}$. ; lon $69^{\circ} 30^{\prime}$ and $73^{\circ} 58^{\prime}$ E.; bounded N. and N.W. by the Pumjab, from which it is separated by the rivers Gharra, Punjnud, and Indus; W. by sinde; S. and S.E. by the Jesselneer, and Beckaneer; and E. by Sikh territories of Patiala; length, N.E. to S.W. about 300 m .; breadth, about 100 m . at the broadest part. Along the rivers forming the N.W. boundary, the soil is fertile, producing cereals, tobaceo, indigo, and sugar, and in this district are situated all the important towns in the principality, Bahawulpoor, Ahnedpoor, Seedapoor, and Oeh. The remainder of the territory to the S.E. is nearly wholly ineluded in the Great Indian desert ; and consists of arid sand covered with the prickly pear, and saline plants. In some spots, however, a scanty vegetation is met with, supplying food to the herds belonging to nomadic tribes frequenting these localities. The domestic animals are the camel, reared in great numbers in the desert ; the buffalo, the cow, the gaddi or short-tailed sheep, the goat, \&e. Poultry is plentiful. West, near the rivers, wild fowl are so alundant that, according to Masson, a goose may be had for a halfpenny, and two or three ducks for the same sum. Many of the inhabitants are Juts and Belooches (Mahometans), but the majority are Hindoos. The manufactures, carried on almost entirely by the latter, consist chietty of silken girdles and turbans, and a speeies of cottons called coongees, of remarkably fine texture. The merehants, also llindoos, manifest a considerable degree of enterprise, and carry on an extensive trade, chiefly in articles of European

Yol. I.
manufacture, received by way of Beckancer, and the desert of Ajmeer. The merchants of Bahawulpoor are not unfrequently seen in Balkh and Bokhara, and sometimes even in Astrakhan. Bahawulpoor is governed by a khan, whose military force consists of about 2500 regular troops, with about 4000 of a heterogeneous class. Chief tus.-Bahawulpoor (the cap.), Alimedpoor, Ooeh, and Khanpoor. P. estimated at 600,000 .

BAHAWULPOOR, eap. above principality, about 2 m . from the Gharra, 55 m . S.S.E. Mooltan, and 330 m . W.N.W. Delhi ; lat. $29^{\prime \prime} 32^{\prime} \mathrm{N}$. ; lon. $71^{\circ} 40^{\prime} \mathrm{E}$. It is a place of considerable antiquity, and had walls, indications of which may still be traced along the public walk. The houses, chiefly of kiln-burnt bricks, are much mixed with gardens, which give them an isolated and straggling appearanec. The whole is encireled by groves of date and pipal-trees. The only public buildings deserving of notice are the palaces of the khan, though in appearance they are not very attractive residences. The manufactures are numerous, and some of them costly. They consist chiefly of silk stuft's and coongees. The trade also is extensive. lop. about 20,000 .

BAIIIA, the name, with various affixes, of a number of bays in different parts of the world:-1, Bahia de Todos-osSantos, see All Sain's' Bay.-2, Bahia Blanca, a bay in S. America, Buenos Ayres; lat. $38^{\circ} 59^{\prime}$ S.; lon. $61^{\circ} 40^{\prime}$ W. (r.) -3, Dahia IIonla, a bay on the N.W. coast of Cuba; lat. $22^{\circ} 59^{\prime}$ N.; lon. $83^{\circ} 13^{\prime} \mathrm{W}$. (r.) - 4 , Bahia Honda, a bay on the S.W. coast of Guatimala ; lat. $7^{\circ} 43^{\prime} 30^{\prime \prime}$ N.; lon. $81^{\circ} 31^{\prime}$ W. (r.) -5, Bahia Honda, S. America, Venezuela, at the extremity of the promontory forming the W . side of the gulf of the latter name; lat. $12^{\circ} 19^{\prime} \mathrm{N}$. ; lon. $71^{\circ} 48^{\prime} \mathrm{W}$. (r.)

BAHIA, a maritime prov. Brazil, eap. Bahia, bounded, W. and N. by Pernambueo, from which it is separated by the Rio São Francisco; N.W. by Sergipe; E. by the Atlantic; and S. by Espirito Santo, from whieh it is separated by the Rio Mucuri or Mnenry, and Minas Geraes, towards which it is bonnded by the Rio Pardo and the Rio Gurutuba, the latter flowing W. to the Sio Francisco, and the former E. to the ocean. It is comprehended between lat. $9^{\circ} 20^{\prime}$ and $16^{\circ} 35^{\prime} \mathrm{S} .$, and lon. $37^{\circ} 20^{\prime}$ and $44^{\circ} 50^{\prime} \mathrm{W} . ;$ estimated area, $222,168 \mathrm{sq} . \mathrm{m}$. , divided into 13 districts. The province of Bahia is traversed S. to N. by a mountain-range, under various names, Almas, Chapada, \&e., at a distance of rather more than 200 m . from the sea, forming the water-shed between the rivers that flow E. to the Atlantie, and those that flow W. to the Rio São Francisco. Numerons offsets of this main ehain traverse the province in varions directions, causing the course of the rivers to deviate less or more from their general direction of E. or W. Gold and copper are rare, but mines of silver exist, though they have not been wrought, on account of the presumed small quantity of the precious metal in them; iron, granite, and different kinds of clays are abundant in certain localities, as are also limestone, saltpetre, whetstone, and rockcrystal. The prineipal streams flowing to the Atlantie are, the S. boundary river, the Rio Grande do Belmonte, the Contas, Patipé, Itapicaru, and the Paraguassu, whielı falls into the Bahia de Todos os-Santos. Besides those named there are numerous others, reaching the ocean either directly or indirectly. The Paramirim and the Remedio are the prineipal streams flowing W. to the Rio São Franciseo, but besides them there are numerous ethers of less note. Though hilly, the province has also extensive plains, and is thronghout well watered; but, from the limited population, and the agriculturists always preferring the sea-shore or the margin of the rivers, a large portion is still uncultivated. The principal agricultural products are sugar, cotton, tobacco, and coffee, mandioca, rice, beans, and maize. Its supplies of sheep and cattle are drawn from othes provinces. Among its plants and their produets are, Brazilwood of several kinds, cedar, gum elemi, and copal, dragon's blooü, jalap, ipceaenanha, and saffron. The oranges, mangoes, and numerous other fruits are excellent. This provinee sends 14 deputies to the general assembly, and seven senators to the upper chamber. Its own provincial legislative assembly is composed of 36 deputies, who are paid both during the session and its prorogations, and receive, besides, an indemnity proportioned to the distance they lave to travel. The revenue of the province for the financial year 1849-50, was estimated at about $£ 74,000$ sterling. Besides Bahia, the eapital, the principal towns are Jacobina, Cachocira, Caravellas, San Francisco, Ilheos, \&e. Pop. about 800,000 .

BAIIIA, or São Salvador, an important maritime city and seaport, S. America, empire of Brazil, cap. prov. of sanu name, beautifully situated in an elevated position on the W. side of a spit of land forming the E. side of the entrance

to the Bahia de Todos-os-Santos or All Saints' Bay, immediately within Cape St . Antonio, on which is a revolving light, 140 ft . above the sea level, in lat. $13^{\circ} 0^{\prime} 42^{\prime \prime} \mathrm{S} . ;$ lon. $38^{\circ} 31^{\prime} 42^{\prime \prime}$ W. (r.) It lies 800 m . N.N.E. Rio de Janeiro, and is the seat of the only archbishopric in the empire. Nothing can be finer than the view of Bahia when seen at a short distance from off the sea; one part towers above another, and the whitened houses and red-tiled roofs contrast magnificently with the rich foliage interspersed between. It is composed of two parts, the upper (alta) and lower (baixa). The lower or shore town (Rua da Praya) consists of a single narrow, badly-paved, dirty street, with a gutter in its centre, following the sinuosities of the shore, and in all about 4 m . long, from the suburb of Bomfim to the loeality called Gamboa. The buildings (of stone) are high, and, though old, have a cheerful exterior; those nearest the shore projecting considerably into the sea. A wide space in this street is used as a market-place; and near it is the exchange, no way remarkable for architectural beauty, but worthy of attention for having been construeted of the best native materials. In this part of the city dwell the mercantile agents, and here the great business bustle exists, the streets being continually thronged with pedlars, carriers, \&c., inereased in consequence of the difficulty of using earriages or sledges of any kind, from the unevenness of the ground. lecent alterations have, however, greatly improved the appearance of the lower town, into which omnibuses have been introduced. Here likewise are situated the custom-house, those stores or magazines called trapiches, for merchandise of all kinds; the granary, the arsenal, and the shipbuildingyard. One of the most note-worthy edifices in this part of Bahia is the large church of Coneeicão or Conception, built of stones brought cut and ready from Lisbon. The upper town lies at an elevation of several hundred fect above the lower town; and the streets connecting the two parts are consequently very steep, following, in some instances, the zigzag course of ravines, and in others slanting aeross the hillslope. This is the larger, finer, and more populous part of the city. Ilere the wealthier classes dwell, and here are situated
the most important public bnildings. The general aspect of the upper city is antique. It is built on the crest of the hill and composed principally of one or two principal streets, which, in their direction, follow the outline of the hill, as the liua da Praya follows that of the shore, and in all about 6 m . long. These streets are well paved, more, however, with the view of preserving them from injury by rain, than for the furtherance of locomotion, which, indeed, in Bahia, except for footpassengers, appears to be a secondary consideration; the inequality of the ground rendering the use of wheeled-carriages almost impracticable. Rome is not built on so many hills as Bahia, whieh, according to one writer, is so irregular in its surface, as to give it the appearance of having been thrown up by an earthquake. The wealthier elass progress through the streets in a sort of litter or palanquin, called cadeira; and sugar, cotton, and coffce are borne along in bags on the heads of the negroes, or in bulkier packages, hung by slings from poles, supported on the shonlders of slaves. On one of the most commanding heights of the city is placed the finely-wooded public promenale (Passcio mublico), from which a magnificent view of the ocean is obtained; it overlooks, likewise, the eity and bay, towards which latter it is bordered by a steep preeipice, protected by an iron railing. A marble monument, to commemorate the landing of Don John VI., the first royal governor of Brazil, decorates the promenade. The city is divided into ten parishes, each having its own church, the most important of which is the cathedral, São Salvador; but numerous other places of worship are seattered through the city; so much so, that it exceeds every other city in the empire for the number and the sumptuousness of its churehes. Many of these are attached to monasteries and convents; which, witb their inmates, are, in like manner, more numerous here than elsewhere, and all in the most excellent state of repair. Such are the convents of Benedictines, Carmelites shod and unshod, Franciscans, Capuchins, \&c. Among the churches attached to the religious houses, that of Nossa Senhora da Piedade is a large important Spanish edifice. Bahia is abundantly provided with public buildings. Besides those

hospice de nossa senilora da piedade.
From Rugendas, Vojage Pittoresque duns le Bresil.
mentioned as being in the low town, the more important are the governor's palace, a large quadrangular edifice, of 600 ft . on each face; the archiepiscopal palace, communicating with the eathedral ; the mint, foundry, courthouse, prison, a public and a military hospital, orphan seminary, theatre, and granary. These are all stone, and mostly solidly-construeted buildings, but none of them possessing especial pretensions to architcctural beanty or elegance. The suburbs of Bahia are beautiful, Vietoria hill being peculiarly so. Here are situated the finest houses and gardens of the city, the residences of the principal British merchants, and the English cemetery. At the Campo do forte do São Pedro is an English Protestant chapel. In 1811, a public library was established in the city; which likewise has a surgical sehool and an agricultural society, an excellent collegiate institution, 16 primary schools, and a normal school, besides several private sehools. The upper
town has some printing-presses, and is the scat of the manufactures of the place, consisting of tobacco, glass, brandy, \&c.

Alternate land and sea breezes render the elimate of Bahia pleasant, though the temperature ranges between $75^{\circ}$ and $85^{\circ}$ Fah.

The harbour of Bahia is one of the best in America, and suitable for vessels of any size. The bay which forms it is much more extensive than the celebrated bay of Rio de Janeiro. The harbour is defended by seven forts, and at its entrance is a lighthouse. War vessels lie in front of the city, S.E. of fort São Marcello; merchant vessels lie further N.W., towards fort Montserrat. The commerce of Bahia consists chiefly in the export of sugar, cetton, tobaeco, rum, and other articles of native product; but it has fallen off considerably since the revolution of 1837, and does not appear even now to be recovering itself. One considerable branch, the importation of slaves, has been materially curtailed by the activity of British cruisers, and by the withdrawal of British credits of money, consequent upon repeated losses from seizure of the slave vessels. The whale-fisheries of this city were once the greatest in the world; and a considerable number of whales are still caught in the neighbouring seas, and brought in here for flensing and boiling. Notwithstanding the fetid effluvia diffused by the decaying animal matter, the capture of a whale is the oceasion of general triumph in Bahia. 'Hundreds of the people, the coloured especially, throng round to witness
the monster's dying struggles, and to procure portions of his flesh, whieh they cook and eat. Vast quantities of this flesh are cooked and sold in the streets. Nuubers of swine also fcast upon the carcass of the whale.'

The following table of the vessels cleared and entered at the port of Bahia, 1840 to 1847 , shows that the number of vessels and the amount of tonnage has fluctuated considerably, and on the whole has decreased:-
Statement of the Number and Tonnage of Vresels, belonging to various Nutions, Entered and Cleared at the Port or Bahia, in each year from 1840 to 1847.

| $\begin{aligned} & \text { Years. } \\ & 1840 \end{aligned}$ | Entered. |  | Cleared. |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Vessele. | Tons. | Vessels. | Tons. |
|  | 767 | 109,261 | 764 | 112,075 |
| 1841 | 1061 | 138,026 | 936 | 139,350 |
| 1842 | 297 | 69,312 | 282 | 70,010 |
| 1843 | 286 | 67,280 | 301 | 73,419 |
| 1814 | 300 | 70,111 | 288 | 71,709 |
| 1845 | 378 | 89,347 | 367 | 90,883 |
| 1846 | 411 | 98,533 | 369 | 91,861 |
| 1847 | 335 | 76,230 | 335 | 78,537 |

A similar gencral result of decrease in the exports is exhibited by the following table, notwithstanding the evident increase in some important articles :-

Statement of the Quantities of the Principal Articles of Domestic Produce exported from the Port of Baila to various countries, in each year, from 1843 to 1846.

| Years. | Sugar. |  |  | Cotron. |  | Coyree. | Tobaceo. |  |  | Hides. | Plassava. | Tapioca. |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: | :---: |

| 1846 | 67,565 | 1332 | 3425 | 10,913 | " | 20,443 | 2674 | 57,631 | 18,678 | 125,634 | 38,802 | 471 |

The imports consist chiefly in manufactured artieles; and possessing no returns for the port of Babia alone, we present the following table of the imports of the province, which are evidently on the increase :-
Stathient of the Valee of the Imports into the Province of Ballia, from various Countrics in each year from 1840 to 1846.

| 1810 | £952,858 | 1814........ £1,070,996 |
| :---: | :---: | :---: |
| 1841 | 844,298 | 1843........... 1,241,121 |
| 1812 | 910,690 | 1816........... 1,431,548 |
| 1843 | 1,009,264 |  |

Bahia de Todos-os-Santos, or All Saints' Bay, was discovered in 1503, by Americus Vespucius. In 1510 , a vessel commanded by Diogo Alvares Corrêa, was wrecked near the entrance of the bay, and every one, himself excepted, was murdered by the Tupinambas Indians. Having secured a musket, and saved some powder and ball, Corrêa soon aequired unbounded influence over the Indians, who knew nothing of fire-arms; and in process of time, he married Paraguassu, daughter of the head chief, Itaparica, whose name was given to the large island in front of the city. He now began a settlement, which he named São Salvador, subsequently recognized by the Portuguese Government as the eapital of the Brazilian empire, and residence of the Governor-general, the first one, Thomaz de Souza, landing in 1549. From this time it continued to inerease rapidly in size and importance, but underwent many vicissitudes of fortune, having been taken by the Dutch, and, even after reverting to its original possessors, it cuffered from the attacks of its former captors. It continued to be the capital till 1763 , when the viceroyalty was transferred to Rio de Janeiro. In 1808, Don John, the first member of the royal family who came to Brazil, landed as stated above. IIe was pressed to make his eourt at Bahia, the eitizens promising to erect him a magnifieent palace. The wide mouth of the bay, and the difficulty of effectually fortifying the harbour, formed a weighty objection to the city as a residence for royalty. The Prince-regent, therefore, resolved to pass on to Rio de Janeiro; but, before the fleet weighed anchor, he communicated to Count de Ponte, the governor, that celebrated document the Carta Regia, by which the ports of Brazil were thrown open to the commeree of all nations. The first printingpress was established in 1811, and the first sugar-mill was introduced from England in 1815. At the Portuguese re-
volution in 1820 , Bahia was plunged into the horrors of civil war, from which it was freed in 1823. It had a small revolution of its own in 1837, whieh did great danage to the prosperity of the city, but was soon suppressed by the supreme Government. Pop. about 120,000.-(Diccio. Geo. Imp. Brazil; Kidder's Brazil; Gardner's Travels in Brazil; Purliamentary Papers; Private Information.)

BAHIA-NEGRA, a lake, Brazil, prov. Matto-Grosso, r. bank, Paraguay, on the contines of Bolivia; lat. $20^{\circ} \mathrm{S}$. lt is about 20 m . long by about 7 broad. Its waters are of a dark colour, whence its name Negra (black), and flow S. to the Paraguay 35 m . below Nova Coimbra.

BAHLINGEN, or Balingen.- 1 , A tn. Würtemberg, circle of the Black Forest, valley of the Eyach and Steinach, 25 m . S.S.W. Stuttgardt. It has two churehes, one of them containing the tomb of Count Frederiek von Zollern. It earries on an aetive business in the manufacture of woollen stuffs, hosiery, and leather; has also several breweries and distilleries, and a considerable trade in grair. Pop. 3230. -TThe district of Bahlingen has a pop. of 32,000 , in 31 parishes. It lies along the Swabian Alps, the highest summit of which, Oberhohenberg, 3369 ft . above the sea level, is within it.-2, A vil. grand duchy of Baden, cirele of the Upper Rhine, 11 m. N. W. Freiburg. Pop. 1750.

BAHN, a tn. Prussia, gov. Stettin, circle, Greifenhagen, r. bank, Thue, 22 m . S. Stettin. It is walled, and contains 2000 inlaabitants, who live by agriculture and the manufacture of straw bonnets.

BAHREIN, a group of three islands, in a deep bay, on the $S$. side of the Persian Gulf; to the largest of which, exelusively, Europeans give the name of Bahrein, and the natives, Awal or A val (i.e., the first) ; close to it is Mahragh; while Arad adjoins the mainland to the S.E. Arab geographers, on the other hand, apply to the whole of this tract of coast the exprcssive name Bahrein, which signifies 'the two waters,' that is, the salt and the fresh water ; the distinguishing peeuliarity of this coast being the number and copiousness of the fresh-water springs whieh gush forth from the bottom of the sea along the shore. To this abundance of good water is attributable the comparatively dense population of the coast, which is, in general, sterile and forbidding. Some villages have pumps in the sea; but the chief supply of fresh water,

BAİKAL
both for the mainland and the islands, is furnished by divers, who, on reaching the bottom, hold their goatskins open over the springs, and are quickly carried up by the ascending current. A wal extends about 25 m . in length N . to S ., with an average breadth of 8 m. ; its N. extremity, where stands the capital town Manama, with a good-sized harbour for vessels of moderate size, being in lat. $26^{\circ} 12^{\prime} \mathrm{N}$. ; lon. $50^{\circ} 40^{\prime} \mathrm{E}$. A ridge of low hills runs through the island N. to S. About a fifth of the island is under cultivation, and being well irrigated, is extremely fertile; producing, besides wheat, barley, and dates, a great variety of tropical fruits. This is the centre of the Persian Gulf pearl-fishery, which is carried on with the greatest alvantage on the banks in a moderate depth of water. The diving commences in June, but becomes more productive in the three following months, when the temperature of the sea increases. Bahrein is said to own 3000 boats engaged in this business, besides 150 vessels of larger size. The annual value of the fishery has been variously estimated at from £ 90,000 to five times that amount; perlaps the lowest estimate is intended to represent what accrues to the fishermen, who are always kept in debt to their employers, and extremely poor. Manama, being much resorted to by foreign merchants, is well provided with ample caravanseries, and boasts also of a handsome mosque. Its population may amount to 5000 . It is supposed that there are 40,000 inhabitants in A wal, and 20,000 in the other islands. Bahrein was occupied by the Portuguese in the 16th century; but, in 1622, they were expelled by the Persians. These, after many contests with the Arabs, finally withdrew from the island in 1790. Subsequently, the Waháby extended their sway over the islands as well as the coast; but since 1819 their power has been extinct, and the peaceful fisherman is now protected by British cruisers.

BAIIR-EL-ABIAD. See Abiad (Bahr-el-.)
BAHR-EL-AZREK. See Azrek (Bahr-el-.)
BAIA, a celebrated watering-place of ancient Italy, W. shore of the Bay of Naples, and 8 m . W. the city of same name. This Campanian Brighton, once the place where the wealthy Romans had their country-seats, is now deserted. Its great attractions were its hot springs, and its picturesque situation, on a beautiful bay, sheltered by surrounding hills from the violence of the winds. The strip of land, however, that lay between the hills and the sea was too narrow for the numerous mansions with which it was crowded, and men ' who possessed half a province clsewhere, contended here for a single acre.' Those who could find no room on the bank, built into the sea. But, on the decline of Rome, Baix fell into decay; its villas and palaces were deserted, and the dikes and other contrivances by whieh the sea was held back being neglected, the waters resumed their ancient territory, overwhelming the mansions of the voluptuous Romans. The temple of Jupiter Serapis is the most celebrated monument of antiquity in the neighbourhood of Baix; and has recently acquired great additional interest in the eyes of the geologist, from the unequivocal evidence which it affords of great alternating changes in the rclative level of sea and land in the surrounding district, two of them since the Christian era, and each exceeding 20 ft . The evidence of this important fact is derived chiefly from three pillars, still standing, which, at the height of 23 ft . above high-water mark, exhibit perforations by lithodomi and other marine animals; of course, proving incontestably that at the time when these perforations were made, the pillars must, up to that height at least, have been subnerged.

BAiBOUTT, or BAinourt, a tn . Asiatic Turkey, pash. of, and $61 \mathrm{~m} . \mathrm{W}$. by N. Erzeroom, r. bank, Tehorak, on the road between Erzeroom and Trebizonde. It is irregular and ill built; occupying the base of an insulated hill, on the summit of which is an ancient castle fortified by an outer wall, which descends far down the hill. The castle was one of the strongholds belonging to the Genoese, who were permitted by the sovereigns of Armenia to establish a line of fortified stations through their kingdom to the fronticr of Persia. The ruins,
which cover a considerable extent of ground, display much beantiful masonry; while the numerous towers, of all forms, with which the walls are strengthened, are remarkably well built.

The fall of snow at Baibout, in winter, is so great, as to

interrupt all communication with the neigbouring villages for several montlis together. Cow dung, baked in the sun, constitutes the fuel of the poorer classes, who can afford no other. The inhabitants are described as a stout, active, hardy race, and of mild and civil manners. Pop. 3000.

BAlERSDORF, or Bayersdorf, a tn. Bavaria, circle, Middle Franconia, dist. Erlangen, 14 m . N. Nürmberg, on the railway between that city and Bamberg, and on the Ludwig Canal. It contains a parish church, a synagogue, and the ruins of the palace of Scharfeneck; and has a copper-work and numerous needle-factories. P'op. 1546, of whom 440 are Jews.

BAÏKAL [Russian, Swiatoje More-Holy Sca], an extensive alpine lake, Siberia, gov. Irkutsk, betwcen lat. $51^{\circ}$ and $56^{\circ} \mathrm{N}$., and lon. $103^{\circ}$ and $110^{\circ} \mathrm{E} . ;$ greatest length, measured through its centre, from N.E. to S.W., about 380 m. ; averaze breadth, from 30 to 40 m . ; area, 11,200 geo. sq. m. It has somewhat the form of a crescent, with its concavity towards the W., and is surrounded on all sides by lofty moun-tain-ranges, intersected usually by dark precipitous ravines, but sometimes, also, by wider valleys covered with pines. These mountains often rise up precipitously in fantastic peaks from the shore of the lake, and appear to be continued as precipitously beneath its surface-in some parts, a depth of 100 fathoms; in others, no bottom has yet been found. The prevalence of volcanic rocks, and the violent twisting and upheaving of the more regular strata by their agency, together with the thermal springs which abound in the neighbourhood, seem to jastify the belief generally entertained, that the bed of the lake is the crater of an extinct volcano. This belief derives additional support, from the fact that volcanic agency is still active throughout the surrounding country. Scarcely a year elapses without an earthquake. The level of the lake is 1420 ft . above that of the sea-an elevation which, taken in connection with the cold mountainous region in which it lies, accounts for the long period during which it continucs frozen. Snow usually begins about the end of August. Shortly after, winter sets in, and the lake begins to be frozen-only partially, however, as the whole surface is seldom frozen over before the middle of December. Thereafter it continues so, and may be traversed on sledges till the end of April. The lake reccives the drainage of a vast extent of country, not fewer than 200 streams pouring their water into it. Of these the most important are the Selenga and the Bargousin, which both join it on its E. shore; and the Upper Angara, which falls into its N. extremity by four mouths. The only outlet is the Lower Angara, a tributary of the Yenisei, which brings Lake Baikal into communication with the remotest parts of W. Siberia. Though both a broad and a rapid river, the water which it carries off has been estimated at less than a tenth of that which the lake receives. The lake has no
islands at any considerable distance from its shores, but numbers of them situated near the mouths of the principal streams, and formed, probably, by their deposits. The largest of all, Olkhon, not far from the middle of the W. coast, is above 40 m . long by about 15 broad, but, with exception of a little pasturage in its interior, and a few birches, pines, and brushwood along its rocky sides, is, as its name in Mongolian implies, completely barren. Lake Baïkal abounds in fish, particularly sturgeon and sterlet, salmon, salmon trout, omoul, and a very remarkable fish called kalamenka, which, though only from 4 to 6 inches long, is a mere mass of fat, and is often thrown up dead upon the shores in immense shoals. Seals also, though naturalists are very much puzzled to know how they got there, are very numerous; and, at certain seasons, the air is perfectly filled with flocks of swans and ducks. The shores of the lake are thinly peopled, and are occupied chiefly by the Tunguses and Bouriats; the latter the more numerous, and almost all employed in the fisheries, which are of considerable commercial importance. Sturgeon is caught in large quantities throughout the summer, and salted, and, together with the caviare and isinglass obtained from it, is largely exported; but the most important fishery is that of the omoul (Salmo migratorius), which, though rather capricious in its habits, generally appears in vast numbers between August and September. The kalamenkas are seldom taken alive, but furnish large quantities of oil, which finds ready purchasers among the Chinese. The situation of the Iake makes it the channel of a considerable traffic, particularly between the E. and W. During the frozen season, sledges laden with goods are continually passing and repassing, while a considerable number of small vessels, of a peculiar construction, are similarly employed during the summer months. An enterprising merchant was lately employed in building a stcam-vessel, which, in all probability, has been completed, and is now navigating the lake.-(Erman; Ritter ; Marost, Nouv. Annal. de Voyages; Ernst Hofmann.)

BAILEN, or Baylen, a tn. Spain, in Andalusia, prov. of, and 20 m. N.N.E. Jaen, in a mountain district, on the high road from Madrid to Seville. It has spacious streets, three well-paved squares, a large Gothic church, townhall, five schools, an hospital, prison, public storehouse, cemetery, a castle, and a palace of the Counts of Benevente. The inhabitants are engaged in manufacturing linen, glass, bricks, tiles, soap, expressing oil, distilling brandy, and in agrivulture and cattle-rearing. A mine of antimony is wrought in the vicinity. On July 19, 1808, Bailen was the scene of the first victory in the peninsular war, gained by the Spaniards over the French. Pop. 4976.

BAILIEBOROUGHI, a small market tn. and par. Ireland, co. of, and 15 m . S.E. Cavan. The town, though a sequestered place, is well built, has a respectable appearance, and the markets are well attended. It possesses an established church, two R. catholic chapels, two Presbyterian meeting-houses, several schools, a bridewell, and a large union workhouse. Bailieborough Castle, an extensive and handsome edifice, stands about $1 \frac{1}{2} \mathrm{~m}$. from the town. Pop. of tn .1203 . Area of par. 12,416 ac. Pop. 6984.

BAillQUE, Penitencia, Marriatuba, or Aripoke, an isl. Brazil, prov. Para, in the mouth of the Amazon, 40 m . S. Cabo Norte, near the embouchure of the Araguari ; lat. (N. point) $1^{\circ} 4^{\prime} \mathrm{N}$. ; lon. $49^{\circ} 56^{\prime} \mathrm{W}$. (r.) It is about 20 m . long by 3 or 4 broad, about 10 m . from the shore, has a village, and about 100 Indian families.

BAILLEUL [anc. Baliolum], a tn. France, dep. Nord, arrond. of, and 10 m . E. Hazebrouck. It is situated on an eminence, and generally well built. The houses are mostly built in the Flemish style. Large numbers of cattle graze the rich meadows around the town. Manufactures:-various kinds of thread, lace, cloth, linen and cotton goods, \&c. There are also here a sugar-work, a pottery, several brewerics, and some oil-mills. A considerable trade in corn, cattle, cheese, and other agricultural produce, is carried on. Pop. 5988. Bailleul is the name of several other small towns in France.

BAIN, a tn. France, dep. Ille-et-Villaine, arrond. of Redon, 18 m . S. Rennes, formerly an episcopal see, and a place of some note in the province of Brittany. Manufactures:woollen stuffs. Trade:-cattle. Pop. 1249.

BAINS (Les), two watering-places, France:-1, Called also Amelie-les-Bains (which see).-2, Bains, or Bains-les-Bains,
a neat tn., dep. Vosge. (Lorraine), arrond. of, and 16 m. S.W. Epinal, in a fine valley, traversed by the streamlet Bargnerot, which shortly after joins the Coney. The thermal springs here have been known since the Romans invaded Gaul, although little use was made of them during the Middle Ages. What is called the Old Bath was constructed in 1713 , and the New Bath in 1750 . The springs, which are 10 in number, have a temperature varying from $93^{\circ}$ to $122^{\circ} \mathrm{Fah}$. The baths are used principally for chronic affections, rheumatism, indigestion, and female complaints. The bathing establishment is very complete. Bains has forges, and a work for making sheet-iron for tinsmiths. Pop. 1505.-Two places in France, in addition to the above, have the name of Bains.

BAINTON, two pars. Eng.:-1, Bainton (St. Andrew), York, E. Riding; 3280 ac. Pop. 452.-2, Bainton (St. Mary), Northampton; 960 ac. Pop. 161.

BAIRAMITSH, a tu. Asiatic Turkey, pash. Anatolia, 55 m . S.W. Beja, and $25 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Adramyti; lat. $39^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $36^{\circ} 25^{\prime} \mathrm{E}$. It is regularly built. Roman antiquities abound in the vicinity.

BAIRDSTOWN, a post township, U. States, cap. Nelson co., Kentucky. Contains a courthouse, jail, market-house, church, a bank, an academy and school, both well attended; and a R. catholic scminary, founded in 1819 , called the College of St. Joseph, under the direction of the R. catholies, with a president, and 13 professors or teachers. Pop. (1840), 1492.

BAIREUTH, or Bayreuti, a tn. Bavaria, circle, Upper Main, on the Red Main, 41 m . N.E. Nürnberg. It lies in a pleasant district, among rich meadows, at the foot of the Fichtel Mountains. It is partly surrounded by old walls, and has some pleasant promenades. The houses are lofty, and well built of hewn stone; the streets spacious, well paved, and occasionally adorned with fountains. It contains the palace of Duke Pius of Bavaria, an opera-house, a riding. school and gymnasium, seven churches (six Protestant and one R. catholic), a synagogue, a public library, and some benevolent and charitable institutions. Principal manufac-tures:-stoneware and porcelain, tobacco-pipe heads, parchment, liner, and cottons. There are also in the town a papermill, a factory for playing-cards, works for cutting marble and glass, a sugar-refinery, a bell-foundry, tanneries at which both white and red leather are prepared, and several breweries. In the neighbourhood are three palaces, Fantasie, Sanspareil, and Hermitage. The first is surrounded by gardens, well laid out in terraces and alcoves, which are a favourite resort of the inhabitants of Baireuth. In the last are shown the apartment and bed of Frederick the Great. In a cemetery at the entrance of the town, is a monument erected by the King of Bavaria to the celebrated writer, Jean Paul Frederick Richter, who died here in 1825 . Pop. $17,000$.

BAIRRO, two vils. Brazil, prov. São Paulo :-1, Four m. N. São Sebastião; lat. $23^{\circ} 45^{\prime} \mathrm{S}$. It has a convent of Franciscans; and its inhabitants, all Indians, are occupied in fishing. The women manufacture some clay vessels.-2, Bairro-das Silveiras, on the N.E. fronticrs of the province, near the town of Lorena, in province Rio de Janeiro. It has a church; and around it the ordinary necessaries of life are cultivated, and likewise some coffee, which is sent to Rio de Janeiro. Pop. 2000.

BAISE, or BAyze, a river, S . of France, rising in dep. Hautes-Pyrénées, flowing N., and falling into the Garonne near Aiguillon, dep. Lot-ct-Garonne, after a course of 99 m . It las been rendered navigable, by means of locks and sluices, from its confluence with the Garonne to Nerac, a distance of between 10 and 15 m .

BAISY-TIIY, a vil. and com. Belgium, prov. Brabant, arrond. Nivelles, remarkable as the birthplace of Godfrey of Bouillon, the leader in the first crusadc. The inhabitants live by agriculture, brewing, distilling, oil and soap-works. Pop. 2234.

BAIXAS, a vil. France, dep. Pyrénées-Orientales, in a fertile valley which produces wine of good quality, about 6 m . N.W. Perpignan. In the neighbourhood are marble quarrics, and a celebrated grotto, called the IIermitage of St. Catherine, romantically situated in the heart of a little valley, surrounded by barren rocks which overhang the Gly. Pop. 1960.

BAJA, a market tn. and lordship, Hungary, co. BacsBodrogh, 92 m. S. Pesth, near 1. bank, Danube. It is the seat of the courts of justice for the county; lias a Greek and
a R. catholic church, a synagogne, and a Franciscan monastery, important markets, and a brisk river-trade. Here is the beautiful chatcau of Prince Grassalkovics. Pop. 14,834 .

BAJADA, a considerable tn. and river-port, La Plata, cap, state Entre Rios, l. bank, Parana, about 10 m . S.E. Santa Fe, and $238 \mathrm{~m} . \mathrm{N} . \mathrm{N} . \mathrm{W}$. Buenos Ayres. The bustle and animation which prevail here, present a curious and striking contrast to the solemn silence, interrupted only by the cries of birds, and particularly the chúá, which reigns on the banks of the Parana, above and below the town. I'rovisions are here abundant and cheap. Pop. 6000.

BAJADORE, or Boxeador (Cape), in the isl. of Luzon, about 20 m . from its N.W. extremity ; in about lat. $18^{\circ} 32^{\prime} \mathrm{N}$.; lon. $120^{\circ} 39^{\prime} \mathrm{E}$.

BAJIBO, or Bajıebo (Old and New), two towns, W. Africa, on the Niger, on opposite banks; lat. $9^{\circ} 31^{\prime} \mathrm{N}$. ; lon. $4^{\circ} 25^{\prime}$ E. ; about 47 m . below Boussa, where Park, the celebrated African traveller, was killed. At this town, Lander met with very large canoes, having a but in the middle, which contained merchants and their whole families.

BAJMOCZ, or BoJnitz, a market tn. IIungary, cap. list. of same name, co. Neutra, on the Nyitra, 72 m . N. by E. Komorn. It is surrounded with walls; and contains a parish church and a castle. The German colonists here annually prepare several thousand saddle-trces for the cavalry regiments, and a great variety of wooden articles are made both in the town and its environs. Pop. 890.

BAJOUR, or BAJoor, a dist. and tn. Afghanistan, N.E. extremity of that kingdom, and on the S. side of the HindooKoosh. The district, which consists of a plain, or rather spaeious valley, lies between lat. $34^{\circ} 45^{\prime}$ and $35^{\circ} 10^{\prime} \mathrm{N}$., and lon. $71^{\circ} 5^{\prime}$ and $71^{\circ} 35^{\prime} \mathrm{E}$., and is about 25 m . long and 15 broad. It is enclosed by mountains, nearly inaccessible from their steepness, and covered with dense forests, inlabited by numerous wild beasts. The plain is very productive, and is occupied by an Afghan tribe, called Turcolaunee, about 70,000 or 80,000 in number, who are ruled by a chief of considerable power. The district contains inexhaustible stores of the finest iron ores. _The Town of Bajour, cap. of the dist., supposed to be the Bazira mentioned by the historians of Alexander, is in lat. $34^{\circ} 50^{\prime}$ N. ; lon. $71^{\circ} 30^{\prime}$ E. ; 130 m . N.E. Cabool, and 170 m . N.N.E. Ghuznce. Pop. about 5000.

BAKEL, a large, well-built, and thriving vil., W. Africa, in the lower Galam country, l. bank, Senegal; lat. $14^{\circ} 54^{\prime}$ N.; lon. $12^{\circ} 14^{\prime} \mathrm{W}$. Here the French have a factory, which is tolerably well fortificd, and has a garrison of about fifty black soldiers. The surrounding territory is very fertile, but also very unbealthy; serpents, alligators, and lizards abound in the environs; and there are clouds of mosquitoes. The factory of Bakel, which is a dependency of the colony of St. Louis, was established in the year 1819. The people are a simple, coutented race, have partially adopted European attire and habits, and show some tincture of French politeness.-(Raffencl's Afrique Occidentale.)

BAKEWELL, a market tn. and par. England, co. Derby. The town occupies chiefly the bottom, and one aeclivity of a valley, between Buxton and Matlock, 10 m . from the former and 12 from the latter, and consists of four prineipal streets, generally kept in good order; lighted with gas, and amply supplied with water; houses well built, eliefly of stone. The parish church is a fine old Gothie strueture, and contains many interesting monuments; and the places of worship for Independents, Wesleyans, \&e., are some of them handsome edifices. The educational means are an endowed grammar school, a national and British school, and a few parish schools. Bakewell likewise possesses a dispensary, clothing society, and a mechanics' institute. The only trade is marble-cutting, which is carried on to a considerable extent, the workmanship being reckoned of a superior description. In the immediate vicinity there is a cotton-mill, erected by the late Sir Richard Arkwright. The chalybeate baths of Bakewell, formerly celebrated, have been lately re-established by the Duke of Rutland. Market on Friday; four fairs annually. The parish comprises $43,020 \mathrm{ac}$., chiefly hilly ground. I'op. of par. (1841), 10,363; of tn. 1976. -(Local Correspondent.)

BAKIIMONT, a tn . Russia, gov. of, and 130 m. E. Ekaterinoslav, cap. dist. of its own name; a region of steppes. Here some coal is mined, and there is a brisk traffic in horses
and cattle The town, founded in 1708, was once fortified and flourishing. Pop. 4000 .

BAKIITEGAN, a salt lake, Persia, prov. Fars, about 12 m. S.E. Shiraz. Its dimensions do not seem to be accurately ascertained; some authorities giving it a length of $60 \mathrm{~m} .$, while Kinneir, in his Geographical Memoirs of the Persian Empire, gives it about that measure of cireumference. During summer the lake is nearly dry, and its bottom becomes enerusted with a remarkably fine salt, muel estecmed throughout the province.

BAKHTIYARI MOUNTAINS, a range of mountains in S.W. Persia, stretehing N.W. and S.E. between, and parallel to, the rocky range of Awa and Laristan. None of thcse mountains, or rather ridges of rocky hills, are more than 1000 ft . above their base. The Bakhtiyari Mountains are inhabited by a wild and lawless tribe, who do not hesitate to rob strangers, though not incapable, at times, it is said, of a savage hospitality. They are represented also as a brave and lardy race. They live in villages of about 20 to 30 honses each, in nooks of the mountain, wherever they can get water and grass; and some establish themselves in caves, of remote and dangerous access. They calculate their numbers, with their dependencies, at 28,000 families.

BAKHTSCHISSARAI, or Bagtche-Serai, an anciont tn. Iussia, gov. Taurida (Crimea), on the Tschouronk-Su, 15 m . S. W. Simferopol. It is the capital in which the khâns or Tartar sovereigus of the Tauridian peninsula long held sway, as deputies or tributaries of Turkey, before Russia established herself in the Crimea. Baklitschissarai is an interesting place, and is pronounced, by Dr. E. D. Clarke, 'one of the most remarkable towns in Europe.' The 'Tartar impress is still strong upon it. It stands at the bottom of a narrow valley, hemmed in by prceipitous rocks, and watered by a small rivulet, by no means of the most limpid appearance, and consists almost cutircly of a single street, built along the side of this rivulet, and lined with bazaars and workshopa, in which the Tartar toils, in primitive simplicity, in the produetion of articles of the very same form and quality as furnished by his forefathers two centuries ago. The town contains several mosques, which are usually embosomed anong trees, and whose minarets rise ligh above the houses, and is adorned with numerous fountains. The Karaim Jews, a peculiar seetion of that people, earry on a consilerable trade in common stuff goods, mercery, and colonial produce. The old palace of the klhâns, a singular edifice, is in good repair, and even suitably furnished. It stands in the centre of the town, and is enclosed by high walls. A bridge gives aceess to the principal court, which is spacious, planted with Lombardy poplars and lime-trees, and ornamented with an elegant Turkish fountain, shaded by willows. The buildings present all the usual irregularity of Eastern mansions; but the wide galleries, brilliant painting, pavilions, of a make so light that they scem hardly to belong to the body of the edifice, and a profusion of great overshadowing trees, produce an effect seldom obtained by systematic regularity. It first became the residence of the khâns in the year 1475. In the 16 th century, their domination extended not only over the entire Tauridian peninsula, but the contiguous territory, W., N., E., and S., from the banks of the Danube to the foot of the Caucasus; but their rule, continually shaken by Russian invasions and influence, from the year 1736 downward, ceased altogether in 1783, when the country was ineorporated with that empire. The number of houses in the town exceeds 2000, inlabited by about 10,000 persons; the majority of Tartar blood, the rest Russians, Grecks, Armenians, and Jews.(Demidoff; Hommaire de Hell.)

BAKIR-kUREH-si, a small tn. Turkey in Asia, pash. Anatolia; lat. $41^{\circ} 47^{\prime}$ N.; lon. $33^{\circ} 51^{\prime}$ E., about 15 m . from the shores of the Black Sca; situated in a deep hollow, surrounded by lofty mountains, the most remarkable of which is called Bakir Sultan. It consists of about 200 houses, of which only one half are substantially built, the remainder are the dwellings of poor miners, and often ruinous and untenanted. It contains, however, a handsome mosque. The district around was at one time famous for its copper mines, but they have long since been abandoned.

BAKONYER-wALD, a forest covered mountain-chain, IIungary, co. Vesprim, N. Lake Balaton or Platten. It is one of the last offsets of the Noric Alps, running S.W. to N.E.,
nearly 60 m . long; culminating point, about 2089 ft . high. The hills are covered with excellent timber, consisting chiefly of lime, oak, and beeeh. Immense herds of swine, known by the name of Bakonyer, are fed in it; and large quantities of oil are extracted from the beech mast. The burning of wood for potash, by which great havoc had been made in the forest, is now under proper regulation. Game is very abundant

BAKU, or Badku, a seaport tn. Russia, cap. of the khanate of Shirvan, in Caucasia, S. shere of the peninsula of Apsheron, W. coast, Caspian Sea, of whieh it is one of the most frequented perts; lat. $40^{\circ} 21^{\prime} 20^{\prime \prime} \mathrm{N}$. ; lon. $49^{\circ} 51^{\prime} 6^{\prime \prime} \mathrm{E}$. (г..) The walls of the town were formerly washed by the Caspian, but they are at present about five yards distant from it ; the sea, however, has gained upon the land in other places, the ruins of ancient buildings being found at the depth of upwards of 18 ft . It stands on a declivity, the summit of which is crowned by the palace of the former khans; is defended by a double wall and deep ditch, constructed in the time of Peter the (treat, and has two strong forts, under whose protection vessels can anehor in from four to six fathoms water, within 80 yards of the shore, in a spacious road, sheltered from all quarters. The town is ill-built, streets narrow and crooked; the houses sinall, with flat roofs eoated with naphtha. The Virgin's Tower is the most striking object in the place. There are, however, several spacious mosques, public squares, marts, and earavansaries; a Greek and an Armenian chureh, and some Tartar schools. The chief exports of the town and neighbourlood are naphtha, salt, and saffron; in return for which it receives, ehiefly from Persia, raw silk and cetton, rich carpets and shawls, rice, \&c.; and from Eurepe, all kinds of ironware and cutlery, eotton, linen, and woollen manufactured goods, thus beeoming an entrepot throngh which an important trade is carried on between the E. and the W. The adjacent island of Salian has important fisheries. Pop. 5500.
The peninsula of Apsheron is celebrated for its mud volcanoes and naphtha springs, the latter yielding, annually, upwards of 4000 tons. Near these springs is the Arteeh-gah, or Field of Fire, nearly half a square mile in extent, and from which inflaumable gas is continually escaping. In aneient times, it was held in the lighest veneration by the Guebers or Parsecs, and frequented by thousands of pilgrims. They have still several temples here, and many of them spend their days in wership and in penitential exereises so severe, as often to cost them their lives.
The jurisdiction of Baku extends over 32 villages, with 19,000 inhalitants, of whem 1000 are Turkomans. The khanate of Baku was formerly attached to Persia, Lut wrested from it by liussia about 1723 ; restered in 1735 , but retaken in 1801 by the Russians, to whom it now belongs.

BAIKU, or Bakowa, a vil. Moldavia, on the Bistritz, near its confluence with the Sereth. It was formerly a flourishing place, but has now fallen into utter decay, retaining only a very small trade in eattle, corn, salt, and wood. It contains the ruins of a cathedral, having at one time been the residence of a catholic bishop.

BALA, a market and assize tn., N. Wales, co. Merioneth, on a plain at the efflnx of the river Dce from the N.E. end of Lake Tegid, 18 m . W. by S. Langollen. It censists of one straight, wide street, ehiefly of well-built stone houses. It has an Episcopalian elapel, a Welsh Calvinistic Methodist ehapel, and chapels for Wesleyans and Independents, all plain buildings; a selhol comnected with the Welsh Methodists, and orie with the Independents, both for educating young men for the ministry. Woollen stockings and flannels are manufactured here to a small extent, and there is a considerable trade in butter and cheese. Tilie spring assizes, and the winter and summer quarter-sessions for the county, are held here, and the county court for the recovery of debts. Tegid or Bala Lake, near which the town is situated, is the largest in Wales, being from 12 to 13 m . in cireumferenee; it abounds with trout, carp, and pike. Pop. (1841), 1255.- (Local Correspondent.)

BALABAK, or Balabac, an isl. Indian Archipelago, between the N. of Bernee and Palawan; lat. (middle) $7^{\circ} 59^{\prime}$ N.; lon. $116^{\circ} 56^{\prime}$ E. (R.), about 20 m . long; yields ebony, sago, honey, and wax, which, along with the fish caught on the coasts, are purehased by Chinese traders. Pep. 300 . S. of this island, and N. of Balambangan and Banguey, is the Ralabak Passage.

Balabalagan. See Paterxosters (Little).
BALAGHAUT [above the Ghaut], a dist. Hindoestan, presid. Madras, between lat. $13^{\circ} 15^{\prime}$ and $16^{\circ} 20^{\prime}$ N.; lon. $75^{\circ} 40^{\circ}$ and $79^{\circ} 20^{\prime}$ E.; the territory aequired by the E. India Company, under treaty with the Nizam, in 1800, and since subdividel into the districts of Bellary, Cuddapal, and Kurnool; bounded, N. by the rivers Krisha and Toombudra, and comprising the conquests of the Nizam, acquired by the treaties of Seringapatan and Mysore, in 1792 and 1799. There are nolarge rivers in the country, exeept the Krislua and Toombndra, whieh mark its N. boundary. The soil is in general, good, consisting either of a black loain, or of a red gravelly mould. Dreughts are frequent, and rains uncertain; yet much mischief is done oceasionally by inundations in September and October. Balaghaut is net well wooded, its forests baving been eut down by the numerous armies by which it has been traversed. Only a few clumps are still found, chiefly among the hills. When this distriet was eeded to the British, it had 50,258 tanks and wells. Indigo, cotton, sugar, betelleaf, and tobaceo, are raised. Neat eattle, shcep, and goats are reared in great numbers. Diamond mines exist in several places, especially in the E. and central divisions, from which the Gelconda merchants are supplied, the country so called not producing any.
Balaghaut once formed part of the Hindeo empire of Bijanagur; after the fall of the Delhi dynasty, it was broken into several independent states, was conquered by Myder between 1766 and 1780, and in 1800 ceded by the Nizam to Great Britain. Area, 28,669 sq. m. Pop. (1836-37), 2,176,003.

BALAGUER, a eity, Span, Catalonia, prov. of, and 13 m . N.N.E. Lerida, r. bank, Negre, here cressed by a stone bridge. The city is surrounded by stene walls, with six gates, and has tolerably good, though rather dirty streets, one grand and several smaller squares, a parish and several conventual ehurehes, a townhouse, collcge, two schools, an hospital, two reservoirs, and, at the N. side, on the top of a commanding hill, a eastle, flanked with four towers, of considerable strength, and in good preservation. The inhabitants, though ehiefly agricultural, manufacture hempen fabrics and shees, express oil, and distil brandy. Three fairs are held annually, in Mareh, September, and December. Pop. 4642.

BALAKHNA, a tn. Russia, gov. of, and about 20 m . N.W. Nijni-Novgorod, cap. dist. of same name, r. bank, Volga, where it is joined by the Usola. It was formerly surrounded by wooden walls and tewers, which were destroyed by fire; but it still has a rampart of earth, with a deep fosse. It contains 15 churches and a convent, and has a considerable trade, chiefly in grain. Its salt springs are no longer used. Pop. 3500.
balaklava, or Balaclava, a tn. Russia, on the Black Sea, gev. Taurida, dist. of, and 38 m. S.S.W. Simferopol; lat. $44^{\circ} 29^{\prime} \mathrm{N}$. ; len. $33^{\circ} 34^{\prime} 40^{\prime \prime} \mathrm{E}$. It has a good, but little-frequented port, completely sheltered by lofty hills. The general appearance of the town, perehed upon heights, is very pieturesque, though it is composed ehiefly of a single street, with half-deserted shops, and of houses mostly in a ruineus cendition, and is surrounded by a half-fallen wall. It has a fortress, placed immediately above the liarbour, on an almost inaccessible rock, and is inhabited chiefly by Greeks, who have a handsome church here ; and, though rather indolently disposed, occupy themselves with fishing, particularly that of mackerel. The trade is of very little censequence, but the hills in the neighbourhood contain marble, which is oceasionally worked, and a good deal of timber is shipped. The wine and melons of the district are excellent. Balaklava is the port of the Lystrigonians, at which Ulysses is said to have tenched; and the deseription of it given by Hemer is so graphic and correct, that Dubois de Montpereux says (Voyage autour du Cancase), that were he to give a description of the Bay of Balaklava, lie could not do better than borrow that of the old poet. Under the domination of the Genvese, it was called Cembalo, a modification of the ancient appellation (Symbalon), given it by Arrian. In the environs is a wooden Greek convent, built, it is believed, on the site of the celebrated aneient temple of Diana Taurica. A number of churehes and mesques, in ruins, attest the aneient magnificence of the town. Pop. abeut 2000.

BALAMBANGAN, a fertile, uninhabited isl., Indian Archipelago, $15 \mathrm{~m} . \mathrm{N}$. Borneo; lat. (\$.W. point) $7^{\circ} 12^{\prime} \mathrm{N}$. ;
lon. $116^{\circ} 50^{\circ}$ E. ; 15 m . long, and 3 broad. Wood, of various fine sorts, and fresh water, are plentiful; the sea around abounds with fish, and two gool harbours afford anchorage for large vessels. A settlement was formed here, in 1774, by the E. India Company, with a view to the spice trade; but, in the following year, it was treacherously destroyed by the Sooloos; and a sceond one, formed in 1803, was soon after abandoned.

BALANGA, a tn., isl. Luzon, cap. prov. Bataan, W. side, Bay of Manilla, near the embouchure of a small river. It is esteemed healthy, and is the residence of the alcalde. Pop. tn . and dist. 68505.

BALARUC-Les-bains, a small tn. and watering-place, France, dep. Herault, 15 m . S.W. Montpellicr. The spring, which is saline and thermal, was known to the Romans, who formed aqueducts and built a temple on the spot, and has long been celebrated for its efficacy in cases of paralysis. An hospital has been erected for poor and military patients, whose expenses are defrayed by the public. Enamelled rings are made here. Resident pop. 595.

BALASORE [Valeswara], a seaport tu. IIndoostan, presid. Bengal, prov. Orissa, dist. Cuttack, of which it is the chief port ; lat. $21^{\circ} 28^{\prime} \mathrm{N}$.; lon. $87^{\circ} \mathrm{E}$. (r.) ; $130 \mathrm{~m} . \mathrm{S} . \mathrm{W}^{\prime}$. Calcutta, situated in a very populons district, on a low dreary plain, deformed by numerous unsightly ridges and ant-hills, near the muddy banks of the Bura lsalany, and considered unhealthy during the rainy season. It is a long straggling town, with a few brick houses, inhabited by merchants carrying on an inconsiderable traffic with Calcutta, and was formerly a flourishing town, having Portuguese, Dutch, and English factories, but is now greatly decayed. It has dry docks, in which vessels drawing 14 ft . water can be admitted at spring tides, bnt is chiefly frequented by Maldive vessels, salt-boats, and a class of sloops that carry rice to C'alcutta during the cold season. The Mallivians arrive at Balasore during the S.W. monsoon, bringing with them coir, oil, and all the other produce of the cocoa-nut tree, which is their grand staple; cowries, salt fish, turtle-shell, \&c., which they exchange for rice, sugar, cutlery, hardwares, cloths, silks, cottons, tobacco, \&e., returning home during the N.E. monsoon. Pop. about 10,000 - (Pegg's Orissa Mission.)

BALASSA-GYARMATII, a market tn. Hungary, co. Neograd, l. bank, Eipel, 40 m. N.N.E. Pesth, in a beautiful and fertile district, where large crops of wheat are grown. In the neighbourhood are the ruins of an old castle, belonging to the Balassa family, and celebrated for its repeated heroic defences against the Turks. A congress, for peace between the Turks and Austrians, was hell here in 1626. Pop. 4580.

BALATON (Lake of), or Plattensee, ifungary, 55 m . S.W. Pesth; length, 50 m .; breadth, 3 to $10 \mathrm{~m} . ;$ depth, 39 ft .; area, about $390 \mathrm{sq} . \mathrm{m}$. It reecives the water of 32 rivulets, of which the Szala is the largest, and communicates with the Danube by the rivers Sio and Sarviz. It abounds with fogacs, a snecies of perch.-Balaton, by itself, or with an additional term, is the name of several villages in Hungary.

BALAYAN, a bay, isl. Linzon, prov. Batangas, opposite the N . end of Mindoro Island, about 9 m . long by 6 broad. A village of same name lies a little way $N$. of the bay.

BALBEC. See Baalbec.
BALBR1GGAN, a tn. and seaport, Ircland, co. of, and 18 m. N.N.E. Dublin; lat. $53^{\circ} 36^{\prime} 42^{\prime \prime}$ N.; lon. $6^{\circ} 10^{\prime} 42^{\prime \prime}$ W. (r.) It consists of one long, and some smaller strects; houses generally of stone or brick, and thatched. It contains a neat church, with a handsome spire, a large R. catholic, and a small Methodist chapel, and has a national, a mixed, and an infant school, a charitable institution, called the Balbriggan Irotestant Benevolent Society; public baths, and a dispensary. It is much resorted to in summer for sea-bathing. Various branches of cotton manufacture were formerly carried on here, and a good deal of embroidery; but, excepting weaving, which sti!l exists to a small extent, the other branches have nearly, or altogether ceased; hosiery, however, for which the town has been long famous, still thrives. Balbriggan has likewise some coasting trade; exports corn and tlour, and imports coals. The harbour has a pier, or quay, of about 600 ft . in length, with a lighthouse at the head, at which vessels of 200 tons can discharge. Pop. 2959.- (Local Correspondent.)

BALCARRY, a small seaport, Scotland, on the W. side of the entrance to Auchincairn lBay, Solway Frith, co. of, and

10 m . E.S.E. Kirkcudbright ; lat. $5 \cdot 1^{\circ} 47^{\prime} \mathrm{N}$. ; lon. $4^{\circ} 49^{\prime} \mathrm{W}$. It is safe and commodions.

BALÇAS, or BAlsas, a river, Brazil, rising in the serra Corvados, which separates Maranham from Goyaz; flows, with many windings, N.E., and falls into the Parnaiba or Paranahiba, lat. $7^{\circ} 15^{\prime} \mathrm{S}$. ; lon. $45^{\circ} 10^{\prime} \mathrm{W}$., after a course of upwards of 200 m ., for 80 of which it is navigable for canoes or the balsas, whence the river is named, and which are used by the Indians.

BALCOMBE, par. Eng. Sussex; 6050 ac. Pop. $15 \pm 2$.
BALDEGG, a vil. Switzerland, can. of, and 19 mn . N. Luzern, on the lake of same name, which stands about 1400 ft . above the sea, is about 3 m . long, and 1 m . broad, and contains various kinds of fish. Baldegg is famous for its old castle, which was once an important fastness.

BALIDERNOCK, par. Scot. Stirling; 4 m . long by 3 broad. Pop. 972.

BALDERTON, par. Eng. Notts ; 4050 ac. Pop. 899.
BAL1) HEAD, several promontories, eapes, or headlands, in various parts of the world:-1, A cape, Australia, S.W. coast, forming the S.W. entrance into King George's Sound; lat. (S. point) $35^{\circ} 7^{\prime} \mathrm{S}$. ; lon. $118^{\circ} 1^{\prime} \mathrm{l}$. (r.) $--2, \mathrm{~A}$ licadland, U. States, Mainc; lat. $43^{\circ} 13^{\prime}$ N.; lon. $70^{\circ} 34^{\prime} 30^{\prime \prime}$ W. (n.) - 3, A headland, S.W. extremity of Smith's Island, off the coast of N. Carolina; lat. $33^{\circ} 51^{\prime} \mathrm{N}$. ; lon. $78^{\circ} 0^{\prime} \mathrm{W}$. (k.)

BALDUNGAN, or lialvonoan, par. Irel. Dublin; 858 ac. Pop. 118.

13ALDOCK, par. and market tn. England, co. of, and 14 m . N.N.W. Hertford, in a valley near the source of the Rhea; regularly built. Malting and brewing are carried on, and a considerable quantity of straw-plait is made. The old lioman road, Ickneild Strect, passes along the N . side of the town; and, in the vicinity, on the S. side, are vestiges of both Roman and Danish camps. Area of par. 200 ac. Pop. 1807.

BALDON, two pars. Eng. Oxford:-1, Baldon-Marsh, 570 ac. Pop. 360.-2, Dalklon-Toot, 2010 ac. Pop. 269.

BALDOYLE, vil. and par. Irel., co. of, and 6 m . N.E. Dublin. The neat and lively-looking village is resorted to in the summer months as a watering-place, and has little trade except fizhing. Area of par. 1236 ac . Pop. 1100.

BALDRASIIANE, Bahlyrasilane, Syngenstown, St. Johnstown, par. Irel. Antrim and Londonderry; 6361 ac. Pop. 1658.

BALE, or BAitifley, par. Eng. Norfolk; 710 ac. Pop. 229.
BALEARIC ISLANDS, a group of islands in the Mediterrancan, off the coast of Spain, to which kingdom they belong, between lat. $38^{\circ} 40^{\prime}$ and $40^{\circ} 5^{\prime} \mathrm{N} . ;$ lon. $1^{\circ}$ and $5^{\circ} \mathrm{E}$. They consist of Majorea, Minorea, Ivica or Ivisa, Formentera, and Cabrera (which see). Strabo ascribes their first colonization to the Phenicians. They afterwards fell successively into the hands of the Carthaginians and Romans, by whom they were almost depopulated. About 423 A.D., they were scized on by the Vandals; in 790 , by the Moors; subsequently, they were alternately in the hands of the Moors and Christians, and, finally, were annexed to the crown of Aragon by James I., in 1229 , since which time they have continued under Spanish domination. These islands are divided, ecelesiastically, into three bishoprics, namely, Majorea, Minorea, and Ivica or Ivisa. The language of the lower orders is a compound of Catalan, Greck, and Aralic, with a mixture of Syrian, Phenician, and Gothic. Pop. 253,000.-(Madoz and Mellado.)

13ALFEIGHAN, par. Irel. Meath; 1617 ac. Pop. 152.
BALFRON, a tn. and par. Scotland, Stirling. The town, pleasantly situated near the Entrick, 15 m . N. Glasgow, is built of a reddish sandstone; well supplied with water from springs; has two churches, an Established and a United Presbyterian, neither of them of much architectural pretension; and three schools. The inhabitants are nearly all employed in handloom-weaving, for the Glasgow manufacturers; and in a cotton spinning factory, which employs about 100 workers. The parish is about 11 m . long by 3 broad. Pop. of tn. and par. 1970.

BALFROOSII, or Balfurush [Barfurush-the mart of burdens], a commercial city, Persia, prov. Mazanderan, 98 m . N.E. Teheran; lat. $36^{\circ} 33^{\prime} 15^{\prime \prime}$ N.; lon. $52^{\circ} 51^{\prime} 27^{\prime \prime}$ E. (土.) ; on the Bawool or Bahbul, here crossed by a stone bridge of eight arches; about 12 m . from its port, Mushedisir, on the Caspian Sea. The town, which is open, and of considerable extent, is built in the midst of a forest ; streets straight, wide,
but mostly unpaved and dirty; houses chiefly of brick, and scattered over a vast extent of surface; bazaars and caravansaries numerous. A good trade in silk and cotton is carried on; and the iron found in the adjacent district of Amol is worked here. Chief imports:-iron and naphtha. The inhabitants are principally merchants and mechanics, and moolahs or learned men. Balfroosh is celebrated for its schools or colleges, about 30 in number. Pop. estimated at about 150,000 ; according to Fraser (in 1822), 200,000.(Fraser's Travels on the S. banks of the Caspian Sea; London Geog. Journal, vol. viii. p. 104.)

BALGACH, a vil. and par. Switzerland, can. of, and 11 m . E. St. Gall; contains both a Protestant and a R. catholic church, two Protestant schools, and one R. catholic, and a wellendowed infirmary, not only for this parish, but also those of Marpach and Rebstein. Balgach has also a chalybeate spring; and in the neighbourhood, on a slope clad with vines, stands the fine modern castle of Grünenstein. Pop. 1395.

Balharliy. See Bellary.
BALI, an isl. belonging to Holland, Indian Archipelago, between lat. $8^{\circ} 3^{\prime} 30^{\prime \prime}$ and $8^{\circ} 53^{\prime} 30^{\prime \prime} \mathrm{S}$., and lon. $114^{\circ} 26^{\prime}$ and $115^{\circ} 40^{\prime} \mathrm{E}$. ; bounded, N. by the sea of Java, and S. by the Indian Ocearl. Separated W. from Java by the Strait of Bali, $1 \frac{1}{2} \mathrm{~m}$. wide, and E. from Lombok, by the strait of same name. Greatest length, 85 m. ; greatest breadth, 55 m. ; area, about $1700 \mathrm{geo} . \mathrm{sq} . \mathrm{m}$. Bali, in shape, bears some resemblance to a triangle, and has been divided into the following districts:Bleling, occupying the whole of the N. coast; Djembrana on the W.; Tabanan, Mengoel, Gianjar, and Klongkong, on the S.; Karang Assam on the E.; and Pajangang and Bangli in the centre. The surface is chiefly occupied by a series of volcanic mountains, of great height, stretching W. to E., and attaining their culminating point in Agoeng, a volcano of $11,326 \mathrm{ft}$., which, after long quiescence, became active in 1843. It lies in the continuous line of volcanic action, which stretches in an irregular curve from the Aleutian Isles, through Sambawa, Java, and Sumatra, to the Bay of Beugal. Bali, as might be anticipated from its locality, has had its full share of subterranean disturbance. In particular, in 1815 an earthquake took place, when a mountain near Bleling was broken into fragments, and suddenly disappeared; while both a large lake from the interior, and the sea, burst in and inundated a space of about 6 m . in extent, drowning more than 1200 persons. The part of Bali not consisting of volcanic rocks, appears to be of a recent calcareous formation. This is particularly conspicuous in the S., where a plateau several hundred feet above the level of the sea, abuts on the coast, and forms the precipitous cliff of chalk well known to sailors under the name of Taffelhoek or Table-Point. Notwithstanding the mountainous nature of the surface generally, Bali has several extensive and well-watered valleys, in which immense quantitics of rice are grown. Coffee is cultivated on the higher grounds, but the quality is inferior. Cotton thrives well. The island is well wooded; but the most important tree, in all respects, is the cocoa, which forms whole forests. The principal animals are cattle and buffaloes, of which some are exported. The horses are small and shabby, but are said to be of a much hardier nature than their appearance indicates. Swine, goats, and monkeys abound; and in the N. and W. of Bleling and Djembrana, tigers are not uncommon in the mountains. Immense flocks of wild fowl, particularly ducks, are seen in every quarter. The inhabitants, whose origin is unknown, are a handsome race, much taller and better made than the Javanese. They are of a yellow copper colour, and have regular features. In many, the excessive use of opium and other vices have produced premature decay. Their submission to their princes or chiefs is unbounded, and no degree of ill usage from them provokes a murmur. In lomestic life everything bespeaks the savage. The female is first carried off by violence, then becomes her husband's slave. The upper and lower part of the body is uncovered, and the only dress is a piece of cotton cloth, to which, on occasions of ceremony, such as a visit to the prince, a kind of mantle, called a sabak, is added. The villages usually consist of large squares, surrounded by mud walls, within which the cottages, also of mud, covered with reed, but without any window, are arranged. Employments of every kind are carried on in the open air; artizans sitting on a bench outside, with which every hut is provided. These Vol. I.
villages have populations varying from 500 to 3000 . The dwellings of the princes are of a much superior description, being generally built of well-cemented bricks, and surrounded with substantial walls, with gates. The prevailing religion is Hindooism. Education, collfined chiefly to reading and writing, is by no means general. Some of the Brahmins, however, cultivate science; and the princes, and other chiefs, have good schools for their children. The manufactures are very trifling. Every family has its loom, worked by the females, and employed in producing some ordinary cotton stuffs. Pottery is confined to the making of gods, and a few domestic implements. Both in the working of iron, particularly steel, and the making of trinkets from gold, considerable progress has been made. The chief articles made for consumption are salt from sea water, and black sugar from a kind of date. The commerce of Bali, with the neighbouring isles of the Archipelago, is considerable. The chief exports are rice, tobacco, and oil ; and the chief imports coarse British cottons, and opium. Pop. 700,000.

BALI-BADONG, a petty state, S. angle, isl. Bali. It is wholly a plain, all cultivated, and yielding plentiful crops of rice, large quantities of which are amually destroyed by multitudes of rats, whose overpowering numbers the natives have not found means to withstand. The crops sometimes fail, and the inhabitants, 130,000 in number, are frequently subjected to all the horrors of famine.

BALISAKLERY, Ballisakeery, or Ballysakeery, par. Irel. Mayo; 12,692 ac. Pop. 6034.

BaLize. See Belize.
BALK, a vil. Holland, prov. Friesland, 10 m . S.S.W. Sneek, in a bushy place near the Lake Slot (Slotermeer). It has a R. catholic, a Calvinistic, and a Baptist church, a school, and council-hall. Many French familics came here after the revocation of the Edict of Nantes, whose descendants may be traced in the names of many of the country people. Agriculture is the principal employment, but there is likewise a deal of trade done in wood, obtained from the neighbouring forests of Gaasterland. Pop. 1000.

BALKAN [anc. Hcemus], an extensive range of mountains, Europe, Oriental alpine system; and, when understood in its largest sense, extending in an irregular curve from the Adriatic to the Black Sea, between lat. $42^{\circ}$ and $44^{\circ} \mathrm{N}$., and lon. $16^{\circ}$ and $28^{\circ}$ E. More properly, however, the W. part of the range belongs to the Dinaric Alps, and the true Balkan or Hæmus begins near the sources of the Lepentz, lat. $42^{\circ}$ N., and lon. $21^{\circ} \mathrm{E}$., where the first great bifurcation of the range occurs, the one branch proceeding S. and forming the Pindus, while the other, or Balkan range, proceeds E., commencing with the name of Tchar-dagh, and taking in succession the names of Ghoubotin-dagh, Mount Argentaro, Egrisondagh, Ghiustendil-dagh, Codja Balkan, and Emineh-dagh or the Balkan of the Turks. This range, particularly towards the E., has been very imperfectly explored; and the heights assigned to its loftiest summits are only conjectural. The average height of the range does not exceed 5000 ft ., and in the E., towards the Black Sea, is far lower than this; but in more than one summit of the Tchar-dagh, the limit of perpetual snow is understood to be attained, while on the tops of Dokimi and Peristera, near Mezzovo, the snow scarcely ever melts. Calculations, founded chiefly on this fact, give to Doubnitzka [anc. Scomius], a height of 8500 ft ; to Mount Orbelus, near Sophia, 8000 ft .; and to Mount Scardus, the culminating point of T'char-dagh, and probably of the whole Balkan range, 9700 ft . The S. side of the Balkan consists of argillaceous schist, and is much more precipitous than the N. side, which is calcareous. The chain is broken across by numerous ravines of terrifie appearance, so deep and narrow that daylight is almost excluded. There are, however, several practicable passes, the best and most frequented of which, known by the name of Trajan's Gato, leads from Bazardjik, in the N. of Roumelia, to Sophid, in the S.W. of Bulgaria. Numerous rivers take their rise in this range. Those on the N., the principal of which are the Bosna, Morava, and Iskar, belong to the basin of the Danube, with the exception of a few small streans, which proceed E., and pour their waters directly into the Black Sea. The chicf rivers on the S. side are the Vardar, the Struma or Karasu, and the Maritza. These all fall into the Archipelago. The Balkan range is well wooded, and is understood to be rich in minerals. To the
S. of Ghiustendil, in the district of Caratova, silver mines are known to exist, and rich beds of iron appear in almost every quarter; but the Turks neglect to turn them to account. (Orographie de l'Europe.)

BALKH, a city, khanate of, and 260 m . S. Bokhara, cap. prov. of same name, on a fertile plain, 1800 ft . above the sea; on the Adirsiah or Balkh river, about 17 m . above its junction with the Amou; lat. $36^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $67^{\circ} 20^{\prime} \mathrm{E}$. It was anciently named Bactra, and was long one of the most flourishing cities of the East, and the emporium of the trade between India, China, and W. Asia. On account of its antiquity, it is still called 'the Mother of Cities,' and is said to have been built by Kyamoors, the founder of the Persian monarchy. The remains of the ancient city extend over a circuit of about 20 m ., and consist chiefly of fallen mosques, decayed tombs, and three colleges of handsome structure; none of the ruins, however, being of an age prior to that of Mahometanism. The modern town, merely a large village, is surrounded by a mud wall, which excludes the ruins on every side for about 2 m . In the citadel or ark, on the N. side, a white marble stone is pointed out as the throne of Cyrus. The climate is not disagreeable, but the water is bad; soil, of a marshy nature, and in appearance not unlike pipe-clay, very fertile; crops good, the wheat grows as high as in England; and the fruits, particularly apricots, are rich. The river Balkh, which has its source in the mountains of the Hindoo Koosh, gives its name to the city and province; and water from it is distributed by aqueducts and canals, which, frequently overflowing, leave the ground marshy. Snow is brought from the mountains about 20 m. S., and sold in the strects. The travellers Moorcroft and Guthrie are buried outside the town. Pop. about 2000, chiefly Afghans, and a few Arabs.-The province lies between lat. $35^{\circ} 20^{\prime}$ and $37^{\circ} 20^{\circ}$ N., and lon. $63^{\circ}$ and $69^{\circ}$ E., exterding about 250 m . E. to W., and 110 N. to S.; area, $30,100 \mathrm{sq} . \mathrm{m}$. ; bounded, N. by the Oxus or Amou, E. by Bndukshan, S. by the mountains of the IIindoo Koosh, and W. by the desert on the N. of Khorasan. The country slopes gently towards the Oxus, in which direction there are great facilities for irrigation; and the soil is generally rich and productive, as is proved by the great population which it once maintained. In the S . and E. the country is mountainous, but has some fertile valleys. This province formed, during several ages, a powerful and independent state. It is now subiect to the Khan of Bokhara. Pop. estimated at about $1.000,000$--(Burnes's Bokhara ; Jour. Roy. Geog. Soc., vol. iv.)

BALL, or Ballagh, a vil. and par. Irel. Mayo, E.S.E. Castlebar. Here are the remains of a round tower and ancient church; area of par. 5509 ac. Pop. 1934.

BALLACHULISH, a ferry, Scotland, cos. Argyle and Inverness, across Loch Leven, an arm of Loch Linnhe, 10 m . S.S.E. Fort-William. Loch Leven lies nearly E. and W., and the ferry is about a quarter of a mile across. On both sides there is an inn, and on the N. side a few scattered crofters' houses, part of the male inhabitants of which are employed at the well-known slate quarries on the S . side of the loch, about 2 m . E. the ferry, where a small village has risen, with an Established church, and an Episcopalian, and a R. catholic chapel. The excavations, each of which is called a quarry, are 60 to 70 in number, every one employing four hands.

BALLAGHADIREEN, a tn. Irel. Mayo, 14 m . N.W. Tulsk; has a mean and uninviting appearance; and a barrack. Pop. 1342.

BALLAGHM()ON, par. Irel. Kildare ; 2178 ac. P. 308.
BaLLANE, or Bullane, par. Irel. Galway; 1729 ac. Pop. 445.

BALLANTRAE, a vil., harbour, and par. Scotland, co. Ayr. The village, 59 m . S.W. Glasgow, r. bank, Stinchar, half a mile from its mouth in the frith of Clyde, has a neat church, regular steam communication with Glasgow several times a week, a valuable salmon-fishery employing about 16 boats, and is frequented during summer as bathing-quarters.

The Parish is about 10 m. sq. Pop. 1651 ; (vil.), 256.
BALLAS, a tn. Upper Egypt, l. bank, Nile, about lat. $26^{\circ} \mathrm{N}$.; lon. $32^{\circ} 42^{\prime}$ E. ; celebrated for its earthen jars, called, from the name of the town, Ballasee, which are used all over Egypt for carrying water. Large rafts made of ballasee jars are frequently floated down the Nile, to be disposed of in the markets of the metropolis.

BALLATER, a vil. Scotland, co. of, and 36 m. W.S.W. Aberdeen, 1. bank, Dee, celebrated for its much-frequented chalybeate springs; houses well-built, streets regular; surrounding scenery bold and picturesque. There is here a Free church. The wells are distant abont $1 \frac{1}{2} \mathrm{~m}$. from the village, at a place called Pannanich, where there is a lodging house and baths of various kinds. Pop. 379.

BALLAUGH, a par. and vil. Eng. Isle of Man, 7 m . S.W. Ramsey. Pop. 1516.

BALLEE, or BALly, par. Irel. Down; 6428 ac. P. 2255.
BALLEEN, par. Irel. Kilkenny; 2559 ac. Pop. 837.
BALLENSTAD'T, a tn. duchy of Anhalt-Berniburg, on the Getct, at the foot of the Lower Harz Mountains, 48 m . S.S.E. Brunswick. It has an hospital, manufactures of linen, and dyeworks. In the vicinity is a castle, the residence of the Duke, on a commanding situation, surrounded with fine gardens. Pop. 4000.

BALLENY ISLES, a group of five volcanic islands, Antarctic Ocean, of which the central one is in lat. $66^{\circ} 44^{\prime}$ S.; lon. $163^{\circ} 11^{\prime}$ W. (r.) Two of the islands are small and low, the other three are of considerable size and elevation, the highest, Young Island, rises in a beautiful peak to a height of about $12,000 \mathrm{ft}$. They are covered with snow and ice, and are walled in with stecp precipitous cliffs, without any appearance of inlet or harbour. In oue of the islands there are two active volcanoes.

BALLIBAY. See Ballybay.
BALLINA, a market tn. and river-port, Ireland, co. Mayo, on both banks of the Moy, the town itself being on the l. bank, and the suburb Ardnaree, with which it is connected by two bridges, being on the r. bank, about 5 m . above its mouth in Killala Bay, where there is a bar with 3 to 5 ft . water at low tide. The general appearance of the town is rather pleasing; one excellent street runs parallel to the river. Most of the other streets lie at right angles, and consist chicfly of poor cabins and cottages, intermingled with a few better buildings. The town contains an ancient parish church, a handsome IR. catholic chapel, and a courthouse. The retail and provision trade of Ballina is considerable; it has also a little coasting and foreign trade. The number of vessels entered coastwise in 1847 was 103 , tonn. 6151 ; cleared the same year, 29 , tonn. 1978; foreign entered, 7 , tonn. 957 ; cleared, 10 , tom. 1895. The river Moy is navigable for vessels of 200 tons to within 1 m . of the town, where there is a good quay. The exports are chiefly corn, meal, provisions, hides, feathers, \&c. The town is a great resort of anglers in the summer season, the fishing in the Moy being excellent. The lallina Union contains an area of $149,320 \mathrm{ac}$., and a pop. of 51,980 . The value of property rated in the Union, amounts to $£ 43,228$. The workhouse affords accommodation for 1554 inmates. Pop. (1841), 5313.

BALLINABOY, par. Irel. Cork; 7973 ac. Pop. 2749.
BALLINACARGY, a small post t . Ireland, co. Westmeath, 5 m . E. by S. Colehill, on the Royal Canal. It is a thriving and clean town, surrounded by a fertile district. Pop. (1841), 483.

BALLINACARRIG, par. Irel.Carlow; 2605 ac . Pop. 692.
BALLINACLOUGH, two pars. Irel.:-1, par. Tipperary; 3869 ac. Pop. 1152.-2, par. Limerick; 1092 ac. Pop. 630.

BALLINACOR, par. Irel. Wicklow; 17,449 ac. P. 1359.
BALLINACOURT'Y, two pars. Irel.:-1, par. Galway ; 6293 ac. Pop. 3407.-2, par. Kerry; 5318 ac. Pop. 1472.

BALLINADEE, par. Irel. Cork; 8334 ac. Pop. 3038.
BALLINADRIMNA, par.Irel. Kildare; 4285 ac. P. 1501.
BALLINAFAGH, par. Irel. Kildare; 4155 ac. Pop. 929.
BALLINAHAGLISH, two pars. Irel.:-1, par. Mayo; 12,659 ac. Pop. $5397 .-2$, par. Kerry ; 3006 ac. Pop. 2147. BALLINAHINCH.- 1 , A vil. Ireland, co. Down, 8 m . E. Dromore; has a parish clurch, and two Presbyterian mecting-houses. In the neighbourhood is a much-frequented chalybeate spring. Pop. 911.-2, A barony on the coast of co. Galway, the S. part abounding in singularly wild, romantic, and magnificent scenery, but mostly uncultivated ; it is the name, likewise, of a lake, rivulct, bay, and village, in the same barony.-3, A river, otherwise called Annacloy, co. Down.

BALLINAKILL, a tn . and several pars. Ireland:-1, A market tn . Queen's co. 52 m . S.W. Dublin, in a fertile plain,
on a tributary stream of the Nore. It contains a modern parish church, with a tall spire. Pop 1540.-2, par. King's co.; 6761 ac. Pop. 1079.-3, par. Waterford; 1877 ac. Pop. 639.-4, par. Galway and Roscommon; 17,578 ac. Рор. 4998.-5, par. Galway; $49,053 \mathrm{ac}$. Pop. 7928.-6, par. Galway; 5221 ac. Pop. 1762.-7, par. Sligo; 4590 ac. Pop. 1906.

BALLINAKILTY, par. Irel. Galway; 5221 ac. P. 1762.
BALLINAMARA, par Irel. Kilkenny; 3839 ac. P. 915.
BALLINAMOND, par. Irel. Limerick; 1498 ac. P. 587.
BALLINAMORE, a market tn . Ireland, co. Leitrim, $12 \frac{1}{2} \mathrm{~m}$. N.W. Carrick-on-Shannon, well built, clean, and thriving; has a church, a R. catholic chapel, some schools, a bridewell, and small session-house. The market is well attended. Pop. 946.

BALLINAMUCK, a vil. Ireland, co. of, and $11 \frac{1}{2} \mathrm{~m}$. N.N.E. Longford. Remarkable only as having been the scene of the capture of the remainder of the French army, under General Humbert, by Lord Cornwallis, Sept. 8, 1798.

BALLINARD, par. Irel. Leinster; 1442 ac. Pop. $91 \varepsilon$.
BALLINASCREEN, par. Irel. Londonderry; 32,492 ac. Pop. 8384.
isallinaslaney, par. Irel. Wexford ; 2646 ac. Pop. 1061.

BALLINASLOE, a market tn . Ireland, cos. Galway and Roscommon, on both sides the Suck, crossed here by bridges and causeways, about 6 m . above its junction with the Shannon, $15 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Athlone. The town, chiefly the property of Lord Cloncarty, is neatly built, the streets wide and clean; has a parish church, an elegant structure, with an octaisgular spire; R. catholic and two Methodist chapels, infantry barracks, and Iunatic asylum for the province of Connaught; a prison, and union workhouse; several public and private schools, and a horticultural and an agricultural society. The town contains three tanyards, four flour-mills, manufactories of hats and coaches, and an extensive establishment for curing bacon; in the vicinity are good limestone quarries. It is the head quarters of the Galway constabulary police; and petty sessions are held every Wednesday and Saturday in the courthouse. Branches of several banks have been established here. Near the E. end of the town are the remains of a castle, estecmed one of the strongholds of Connaught in the reign of Elizabeth. Ballinasloe communicates both with the river Shannon and with Dublin by canal, and is, consequently, a great thoroughfare both for goods and for passengers, partaking thus largely in the transit trade. It is, however, chiefly noted for its great wool-fair and cattle-market. At the former, held annually on July 13, the amount of wool sold has considerably decreased of late years. The cattle-fair, the largest and most important in Ireland, commences on the 5th and ends on the 9 th of October. On an average, 12,000 head of black cattle, and 90,000 sheep, are annually brought to this fair. Pop. (1841), 4934.

BALLINAULTIG, par. Irel. Cork; 4842 ac. Pop. 1404.
BALLINCALLA, par. Irel. Mayo and Galway; 15,195ar. Pop. 2165.

BALLINCOLLIG, a vil. Irel. Cork, 5 m . W.S.W. Cork, on the river Bride, near its confluence with the sea; a cheerful place, with a barracks, police station, and the ruins of an ancient castle. Along the river are several extensive powdermills. Pop. 1287.

BALLINCUSLANE, par. Irel. Kerry; 39,740 ac. P.5701.
BALLINDERRY, two pars. Irel.:-1, par. Antrim;

10,891 ac. Pop. 5679.-2, par. Tyrone and Londonderry; 8178 ac. Pop. 3362.

BALLINDOON, par. Irel. Galway; 20,033 ac. P. 5615. BALLINEEN, vil. Irel. Cork, 5 m . E. by N. Dunmanway, on the Bandon River. Pop. 670.

BALLINGADDY, par. Irel. Limerick;5999ac. P.1761.
BALLINGARRY, a tn . and four pars. Irel. :-1, Tn. and par. Limerick, 4 m . S.E. Rathkeale. The town is small, but tolerably clean, and has a church, R. catholic chapel, several schools, and a dispensary. Pop. 1690. Area of par. 17,732 ac. Pop. 8679.-2, par. Limerick; 6114 ac. Pop. 2834.-3, par. Tipperary; 6683 ac. Pop. 1962.-4, par. Tipperary; 13,714 ac. Pop. 7062.

BALLINGHAM, par. Eng. Hereford; 950 ac. Pop. 149.
BALLINGLY, par. Irel. Wexford; 765 ac . Pop. 221.
BALLINGRAY, or Balgray, par. Scot. Fife, $3 \frac{1}{2} \mathrm{~m}$. long by $1 \frac{1}{2}$ broad. Pop. 436.

BALLINLANDERS, par. Irel. Limerick; 7717 ac . Pop. 4000.

BALLINLOGHY, par. Irel. Limerick; $2340 \mathrm{ac} . \mathrm{P} \cdot 115 \mathrm{~s}$.
BALLINOE, par. Irel. Cork; 7716 ac. Pop. 2566.
BALLINROBE, a tn. and par. Ireland, co. Mayo. The town stands on a gentle acclivity on the Robe, about $2 \frac{1}{2} \mathrm{~m}$. from its embouchure in Lough Mask, and 25 m . N.N.W. Galway. It consists of two principal streets, and three or four smaller, all much improved of late; houses of stone, but not particularly well built; the court-house, however, is a good substantial structure. Water is obtained wholly from the river. In the town there are a parish church, and three chapels, one of which is R. eatholic; an excellent schoolhouse, in connection with the Clurel Education Society, but at present (1850) disused for want of funds. Ballinrobe has no manufactures; and its trade in corn, potatoes, and pigs, formerly considerable, has greatly fallen off, in consequence of the failure of the potato crops. But as the Robe is now in course of being rendered navigable, and a canal being cut between Lough Mask and Lough Corrib, thus opening up a water communication between Ballinrobe and Galway, it is expected that the trade of the place will rapidly improve. There is little agricultural employment here. Pop. of tn. about 3000 , of which about 1000 are employed on the drain-age-works. Area of par. (in cos. Mayo and Galway) 26,903 ac. Pop. 11,150.-(Local Correspondent.)

BALLINTEMPLE, four pars. Irel. :-1, par. Wicklow; 4087 ac. Pop. 1114.-2, par. Tipperary; 4208 ac. Pop. 656.-3, par. Cork; 2660 ac. Pop. 1742.-4, par. Cavan; 10,658 ac. Pop. 5341.

BALLINTOBBER, two pars. Irel.:-1, par. Roscommon; 6352 ac Pop. 2616.-2, par. Mayo; 22,966 ac. Pop. 7199.

BALLINTOY,par.\&vil. Ircl.Antrim; 12,754ac. P.4816.
BALLINURE, two pars. Irel.:-1, par. Wicklow; 7404 ac. Pop. 1718 .-2, par., with vil. of same name, forming part of the tn. of Ballyclare, Antrim; 8540 ac. Pop. 3549 .

BALLINVOHER, par. Irel. Kerry; 16,661 ac. P. 3579.
BALLON, a small tn. France, dep. Sarthe, 15 m. N. Le Mans, on a rising ground, 1 . bank, Orne. It consists of a principal and several lateral streets, and has manufactures of coarse linens and serges. Its old castle, of which only one large tower and a few turrets now remain, was of some consequence in the wars between the English and French in the early part of the 15 th century. Pop. 1075.

BALLON, par. Ircl. Carlow; 3700 ac. Pop. 1524.

BALLY [a town], a prefix very common in Irish topography. The following table comprises all the parishes in Ireland having this prefix, excepting such as are noticed in
conjunction with towns or villages of the same name, of suffcient importance to require a separate article, which will ko found in their place elsewhere-

BALLYAGIRON. See Agherton.
BALLYBAY, a market tn . and par. Ireland, Monaghan. The tn . is 55 m . N.W. Dublin; has a thriving appearance; numerous new and good houses having been recently erected; possesses a neat church, and two chapels for Presbyterians, Wesleyans, and R. catholics; several schools, a public library, and dispensary; considerable manufacture of linen fabrics, and in the vicinity are some bleachgreens. There has been a great increase in the trade and population of the place within the last few years. Cattle-fairs are held in January, April, July, and October. Area of par. 8741 ac. Pop. (1841), 6606 ; of tn .1768.

BALLYBOFEY, a tn. Ireland, Donegal, on the Fin, 14 m . W.S.W. Lifford; has a union workhouse, and a pretty extensive retail trade with the surrounding districts. Pop. 782.

BALLYCASTLE, a small seaport $t n$. Ireland, co. Antrim, beautifully sitnated in a valley, head of bay of same name, W. of Fair Head, 43 m . W. by N. Belfast; lat. $55^{\circ} 12^{\prime}$ N. ; lon. $6^{\circ} 5^{\prime} \mathrm{W}$. It consists of one principal and several smaller streets; houses well built, chiefly of sandstone; supply of water ample. It has two established churches, one of them having a handsome spire; a Presbyterian meeting-house, R. eatholic chapel, and an infant school. In the vicinity are coal mines and iron smelting-works. Pop. 1697.- (Local Correspondent.) -Ballycastle is also the name of a small maritime tn. Mayo. Pop. 798.

BALLYCLARE, a small market tn. Ireland, Antrim, $2 \frac{1}{2} \mathrm{~m}$. S.W. Ballinure, on the highroad from Antrim to Larne. It has a church, R. catholic chapel, and Presbyterian and Methodist meeting-houses. Linen is manufactured here. General fairs are held in May, July, August, and November. Pop. (1841), 847.

BALLYCOTTON BAY, Ireland, co. Cork, 12 m . N.E. from the entrance into Cork harbour; bottom smooth and even, of fine sand and clay, perfectly clean, and the holdingground good; lat. $51^{\circ} 50^{\prime} \mathrm{N}$; lon. $7^{\circ} 55^{\prime} \mathrm{W}$.

BALLYFERRIS POIN'T, a headland, Ireland, E. coast, co. Down ; lat. $54^{\circ} 39^{\prime} \mathrm{N} . ;$ lon. $5^{\circ} 34^{\prime} \mathrm{W}$. A dangerous reef stretches from this point into the sea; and a little S . from it there is another still more formidable, called Scalmartin.

BALLYGAWL,EY, a market tn . Ireland, co. Tyrone, $3 \frac{1}{4}$ m. N.N.W. Aughnacloy; tolerably well built ; has a clean and thriving appearance; and a neat modern church, R. catholic and Presbyterian chapels, some schools, a dispensary, brewery, and an extensive distillery. Manufactures :-linen and gloves, to a considerable extcnt. Fairs are held here in June, Scptember, and November. Pop. 881.

BALLYHAISE, a market tn. Ireland, co. of, and 3 m . N.N.E. Cavan, on the Aunalee. It is a clean and improving
place, with a handsome market-house, and some considerable corn-mills. Pop. 704.

BALLYJAMESDUFF, a market tn. Ireland, co. Cavan, 5 m. N.W. Virginia ; has a church, R. catholic chapel, places of worship for Presbyterians and Wesleyans, several schools, and a dispensary. Fairs are held in May, July, October, and December. Pop. 1071.

BALLYLONGFORD, a tn. and harbour, Ireland, co. Kcrry, at the head of a creek, S . side of the Shannon, 37 m . W. by S. Limerick. The harbour has 16 ft . water at high tides, and is capable of being much improved. Large quantities of corn and turf are conveyed lience by lighters to Limerick. Pop. 1143.

BALLYMAHON, a market tn. Ireland, co. Longford, 10 m. N.W. by N. Athlone, on a declivity near the Inny, here crossed by a fine bridge of five arches; consists chiefly of one long and spacious street ; has a church, a handsome R. catholic chapel, market-honse, dispensary, two distilleries, some malthouses, and manufactures of linen, frieze, linsey-woolsey, leather shoes, nails, \&c. Several well-attended fairs are held during the ycar, that in May being reckoned the best cattle fair in the central counties, except Ballinasloe. Pop. 1229.

BALL YMENA, or Ballymenagh, a market tn. Ireland, co. Antrim, $22 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. by N. Belfast, on a gentle acclivity. It consists of 15 streets, mostly straight and well kept; the houses, in general, substantial, but old-fashioned, with their gables to the street ; amply supplied with both river and well water, and lighted with gas. Contains an elegant townhouse, an Episcopal church, four Presbyterian meeting-houses, one Wesleyan, one Methodist, and a R. catholic chapel. Schools, unusually numerous for a place of this size; they arethe district school for the diocese of Down and Connor, district national model school, two classical and mercantile schools, 'Guy's' free national school, national femalo and industrial school, two boarding-schools for young ladies, a parochial school, a Methodist chapel school, and aeveral others of less note. The principal trade of the town is in brown linens, and linen yarns; the manufacture of which is carried on to a great extent. There is also a brewery. In the vicinity are a flax spinning-mill, and 16 bleachfields. Three weekly markets are held-two for country produce, and one for linen cloth, cattle, horses, \&c. Pop. (1841), 5152.-(Local Correspondent.)

BALLYMONEY, a tn. and par. Ireland, co. Antrim. The town is 38 m . N. by W. Belfast, on an acclivity with a S. inclination; consists of four main streets at right angles, and four smaller; houses generally well built, some of stone and others of brick; well supplied with both spring and river water, and lighted with gas. It has a court-house, lately erected; bridewell, and union workhouse; one Establislicd,

## BALTIC SEA

and four Presbyterian churches; one Unitarian Remonstrant, and one R. catholic chapel; a national, and three private schools. Manufactures:-linen, tanning, brewing, and chemical stuffs. The trade in linen and flax is considerable; there being a market for these articles on the first Thursday of every month, and alternate markets, fortnightly, for pork, bntter, and grain. Area of par. 21,923 ac.; pop. 11,727. Pop. of tn. 2490. - (Local Correspondent.)

BALLYMORE, a tn. and par. Ireland, co. Kildare, $3 \frac{1}{2} \mathrm{~m}$. S.W. Blessington, on the Liffey, here crossed by a handsome bridge, near the celebrated waterfall Poul-a-Phooka. It containz a church, R. catholic chapel, the ruins of an ancient and once strong castle, and several schools. Area of par. 4203 ac. Pop. 2129.

BALLYMOTE, a small tn. Ireland, co. Sligo, 12 m . N.W. Boyle, near the river Owenmore. it has a church, R. catholic chapel, several schools, bridewell, dispensary, and, in the vicinity, the ruins of an extensive castle and small abbey. Linen is manufactured to some extent ; and several fairs for cattle and general merchandise are lield. Pop. 839.

BALLYNAKIL. See Aghart.
BALLYQUINTIN POIN'T, a well-known cape, Ireland, co. Down, forming the N.E. entrance into Loch Strangtord; lat. $54^{\circ} 20^{\prime}$ N. ; lon. $5^{\circ} 25^{\prime} \mathrm{W}$.

BALLYRAGGET, a tn. and par. Ireland, co. Kilkenny, 1. bank, Nore, 10 m. N.N.W. Kilkenny ; has a barrack, but nothing else deserving of notice. Pop. 1577. Area of par., 5270 ac. ; pop. 2694.

BALLYSADARE, a small tn. and par. Ireland, co. Sligo. The town is situated $4 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Sligo, at the head of Ardinglass Bay, near the cataracts of the Owenbeg and Arrow ; the waters of which propel several extensive corn-mills. It has a church, two R. catholic chapels, and some storehouses; area of par. 16,025 ac. ; pop. 7822 . Pop. of tn. 869.

BALLYSHANNON, a tn. and seaport, Ireland, co. of, and 11 m . S.S.W. Donegal ; lat. $54^{\circ} 30^{\prime} 12^{\prime \prime} \mathrm{N}$. ; lon. $8^{\circ} 11^{\prime} 42^{\prime \prime}$ W. (R.) on the Erne, about 1 m . from the S.E. shore of Donegal Bay. The river flows through the town from E. to W., and divides it into two parts, connected by a bridge of 14 arches. The larger portion is on an acclivity, the other, partly on low, level ground, and partly on a rock of considerable elevation. The town comprises eight streets, most of them straight, and all tolerably well kept; houses generally well built, some of brick, but many of stone, and slated; supply of both river and spring water ample. On a commanding eminence in the N . part of the town, stands the Episcopalian clurch, a handsome structure in the Elizabethan style. The other places of worship are two R. catholic, a Presbyterian, and two Methodist chapels. There are in the town a classical school, an infant and four other schools, and a destitute sick society. Distillation, leather-dressing, and salt, tobacco and rope manufacturing are carried on, but to a very small extent. The trade of the port is very inconsiderable, its imports being confined to some building matcrials; it had formerly a considerable export trade in corn, but this has entirely ceased since 1846. The harbour is fit for small vessels only, having, at low water, not more than $3 \frac{1}{2} \mathrm{ft}$. on the bar. The population is chiefly employed in agricultural labour, but a considerable portion, also, in salmon-fishing during the season, and in the salt works. Pop. (1841), 4307. -(Local Correspondent.)

BALMACLELLAN, par. Scot. Kirkcudbright, 12 m . long by 5 to 8 broad. Pop. 1134.

BALMAGHIE, par. Scot. Kirkcudbright, 9 m . long by 7 broad. On an island formed by the Dee, in this parish, are the ruins of the ancient castle of Threaves, formerly a stronglold of the redoubted Douglases. Pop. 1252.

BALME, a vil. France, dcp. Isère, about 20 m . from Tour-du-Pin, remarkable for an extensive stalactitic grotto, with a lake in it, regarded as one of the wonders of Dauphiné. P. 850.

BALME (Col DE), a celebrated pass, Pennine Alps, Savoy, on the frontiers of can. Valais, leading from the valley of Trient into that of Chamouni. Its highest point is 7218 ft . above the level of the sea. It forms the boundary between Savoy and Valais, and presents many magnificent views of wild and picturesque scenery.

BALMERINO, par. Scot. Fife, about $3 \frac{1}{2} \mathrm{~m}$. long, and $2 \frac{1}{4}$ broad, contains the ruins of Balmerino Abbey, founded Ly Alexander 11., in 1229.. Pop. 993.

## BALMORAL. See Aberdeen (County).

BALONNE, a river, N. Australia; the upper part of the stream is inferior only to the Murray, in breadth and depth. The banks are thickly peopled by natives. It was discovercd by Sir 'T. L. Mitchell, who fell in with it in lat. $28^{\circ} 35^{\prime} 38^{\prime \prime}$ S., and lon. $148^{\circ} 25^{\prime} \mathrm{E}$.

BALOOCLIIsTAN. See Beloochistan.
BALOU, a vil., W. Africa, Galam country, 1. bank, Senegal ; lat. $14^{\circ} 44^{\prime}$ N.; lon. $12^{\circ} 16^{\prime} \mathrm{W} . ;$ built on a rocky site, and having several islets in the river opposite to it, which obstruct its navigation.

BALQUHIDDER, par. Scot. co. Perth, about 18 m. long, and from 6 to 7 broad. It abounds in romantic scenery, and contains some of the highest mountains in Scotland, one of which, Benmore, is nearly 4000 ft . above the sea. In the caverns of another of its rocky and romantic heights, called Craigruigh [the King's rock], King Robert Bruce concealed bimself for some time, after his defeat at Dalry. Pop. 871.

BALRAHAN, or Balrain, par. Irel. Kildare; 3374 ac. 1'op. 485.

BALROTHERY, par. Irel. Dublin; 6885 ac. Pop. 4881.
BALSAMO, a com. and vil. Austrian Italy, gov. and prov. of, and $7 \mathrm{~m} . \mathrm{N}$. Milan, comprising a church, and public square; in the vicinity are several palaces and country-seats. Grain, fruits, and vegetables are grown, and excellent wines produced. Pop. 4935.

BALSCADDAN, par. Irel. Dublin; 3948 ac. Pop. 1074.
BALSHAM, par. Eng. Cambridge; 4402 ac. Pop. 1271.
BALSOON, par. Irel. Meath; 1269 ac. Pop. 340.
BALTA [formerly, Jozefogrod], a tn. Russia, gov. Podolsk, cap. dist. of same name; on the Kodyma, 115 m . N.N.W. Odessa. It is well built, contans several Greek churches, and has some general trade. Its suburb, on the S. side of the river, a tributary of the Bug, was once in the Turkish territory, but is now in the Russian government of Kherson; most of the town, or N. portion of the place, was once in the Poland of earlier times. Pop. 7500.

BAL'I'A, a small isl. and harbour, Scotland, co. Orkney and Shetland. The IsLand is 40 m . N. Lerwick, lat. $60^{\circ} 44^{\prime} 24^{\prime \prime}$ N.; lon. $0^{\circ} 47^{\prime} 42^{\prime \prime}$ W. (R.) It is wortly of notice only for having been the locality chosen, in 1817, for the trigonometrical survey of Great Britain, for determining, in this high latitude, the variation in the length of the seconds' pendulum. - The harbour is on the E. coast of the island of Unst., the most N . of the Shetland group ; lat. $60^{\circ} 45^{\prime} \mathrm{N} . ;$ lon. $0^{\circ} 47^{\prime} \mathrm{W}$. It is safe and commodious, of easy access, and completely protected by the small island of Balta, which lies at the mouth of it.

BALTANAS, or Valtanas, a tn. Spain, Leon, prov. of, and 14 m . W. by N. Valencia, at the head of an extensive valley; has regularly-built but badly-paved streets, a large square, two churches, a townhall, poors'-hospital, unwholesome and insecure prison, endowed school, public storehouse, ducal palace of the Abrante family, and several baths and fountains. Pop. chiefly agricultural, 2575.

BALTEAGH, or BALLYdAiGH, par. Irel. Londonderry; 11,506 ac. Pop. 3371.

BALTIC (The), or Baltic Sea [Latin, Mare Balticum; German, Ost See], an internal sea in the centre of N. Europe, between lat. $53^{\circ} 30^{\prime}$ and $65^{\circ} 40^{\circ} \mathrm{N}$., and lon. $10^{\circ}$ and $30^{\circ} \mathrm{E}$., enclosed by the shores of Denmark, Sweden, Russia, Prussia, and Mecklenberg, and communicating with the Kattegat by three passages-the Sound, the Great Belt, and the Little Belt. Its greatest length from N.N.E. to S.S.W., is nearly 900 m . Its breadth is very irregular, and varies from 40 to 200 m . Its arca, including the three gulfs of Bothnia, Finland, and Riga, has been estimated at 160,000 sq. m., and its basin, which receives the drainage of more than a fifth of the surface of Europe, is at least, $900,000 \mathrm{sq} . \mathrm{m}$. Its largest volumes of water are derived from the S., where it receives the Oder and the Vistula; and the E., where it receives the Niemen, the Düna, and the Neva; but these supplies are probably exceeded in accumulated amount by the almost innumerable torrents which flow down from the N. and N.W., and are fed by the vast reservoirs of the Norwegian mountains. The shores of the Baltic, proceeding from the Little Belt in the W., and along the S. and E., as far as Dome's Point, at the entrance to the Gulf of Riga, are flat and sandy and even towards the N., where the coast assumes a rocky
character, the beach seldom attains a height of 50 ft . The sea itself seems to partake of the character of its shore. It shelves very gradually, presenting scarcely any harbours which vessels of above 300 tons can enter. Its depth nowhere exceeds 167 fathoms; and, in general, is not more than 40 or 50. Owing to the general flatness of the coast, the Baltic is much more exposed than inland seas usually are to distant influences. The warm moisture accumulated over the Atlantic, and wafted along by the prevailing west wind, meets with no interruption till it arrives at the Baltic, when it encounters the keen blasts of the Ural Mountains, and of the steppes extending to the N. of the Caspian Sea, and is precipitated in heavy falls of rain or snow, which materially affect the composition of the water of the Baltic, and reduce the quantity of salt contained in it to little more than a half of that contained in the water of the N. Sea. According to experiments apparently performed with the greatest accuracy; of 3 lbs . of water taken from each, that of the N. Sea yielded 747, that of the Baltic, only 389 grains of salt. This comparative freshness of the water of the Baltic, and shallowness of its bed, disposes it to freeze easily; and hence, though it rarely happens that extensive portions of it are entirely frozen over, its shores usually begin to be covered with ice before the end of December, and the navigation of its harbours thereafter, continnes interrupted till the beginning of April. The shallowness of the water along the shores of the Baltic is obvious, owing, in a great degree, to the immense quantities of mud and sand deposited by rivers and torrents, the number of which has been estimated at 250 ; but it was early suspected that other causes were in operation, and the Swedish naturalist Celsius, followed by the more celebrated Linnæus, maintained, that the water in the Baltic was gradually subsiding, at the rate of about 3 ft . in a century. A more philosophical opinion, now more generally adopted, is, that the bed and the surrounding shores, are gradually rising. Scientific measures have been adopted, for the purpose of determining the point; but, until the result is known, it is still a question whether the amount of alluvial deposit is not of itself sufficient to account for the phenomenon. The Baltic has no proper tides. Its surface is of too limited extent to feel the solar and lunar influence directly; and the passages which connect it with the ocean are too narrow to communicate the changes of level, which the tides produce on the ocean surface. There is, however, a slight irregular change of level in the Baltic, of which no very satisfactory account has yet been given. The fishing of the Baltic is not of much importanee. The herring, which used to visit it in shoals in the 14th and 15 th centuries, is now only met with in individual specimens ; but, along the Swedish coast, especially in the Gulf of Bothnia, a fish called straemling, and very much resembling the herring, though smaller, is caught in great numbers; and, besides, a large home consumption, is extensively exported. The other fish which abound most are, the salmon, sturgeon, turbot, and flounder. Near the islands of Gothland and Aland, a considerable number of seals are killed. One of the most celebrated productions of the Baltic is amber. It is often thrown on the $S$. eoast after N. W. and W. winds, and is also dug up in a few plaees, about 200 ft . inland from the beach.

BALTIMORE, a small tn. or vil. and seaport, Ireland, co. Cork, S. coast ; lat. $51^{\circ} 29^{\circ}$ N.; lon. $9^{\circ} 22^{\prime}$ W. (r.); 53 m . W.S.W. the city of Cork, on the E. shore of the harbour of same name. It contains a handsome church with a lofty square tower, a school-house, and dispensary. On the summit of a rock, rising over the pier, stands the picturesque ruins of the ancient castle of Baltimore. The harbour, which lies about 4 m . N.E. of

Cape Clear light, is very convenient for ships bound either E. or W. The entrance, in whieh there are from 12 to 14 fathoms, lies between Baltimore Point, on the E. side, and Sherkin Island or Fort Point, on the W. Small vessels may ride, two or three cables'length to the N.N.W. of Baltimore town, in 10 or 11 ft . at low water, quite slieltered from all winds. The number of vessels registered at the port in 1847, was 120 ; tonn. 3926. Entered in the same year, 357 ; tonn. 16,803 . Cleared, 153 ; tonn. 9466. The prineipal exports are-slate, copper ore, and agricultural produce ; imports-timber, iron, coal, salt, and general merchandise. There was a considerable fisliery here some years since, but it is now much fallen off. In the beginning of the 17 th century, Baltimore was plundered by the Algerines, who carried away 200 prisoners to Algiers, most of whom were English settlers. The population of the town, together with its prosperity, is rapidly declining. Pop. (1831), 459 ; (1841), 168.

BALTIMORE, a city and port of entry, U. States, Maryland, cap. co. of same name, N. side of the Patapsea, 14 mm .

above its embouchure in Chesapeake Bay, 42 m . N.E. Washington; lat. (Battle Monument $39^{\circ} 17^{\prime} 24^{\prime \prime} \mathrm{N}$.; lon. $76^{\circ} 37^{\prime} 30^{\prime \prime}$

W. (R.) It is the third city of the U. States in population, and the fifth in extent of commeree; pleasantly situated on a bay, on slightly undulating ground. The streets are spa-
cious, regularly laid out, generally at right angles, with a few, here and there, running diagonally; rendering the ground-plan not quite so like the squares of a draught-board as that of many other towns in the U. States; they are well paved, the side walks being laid with red bricks, placed diagonally. The houses are, for the most part, built of red brick, with marble or granite basements, and have a neat and substantial appearance. A small river, called Jones's Falls, over which there are three handsome stone bridges, and four of wood, intersects the town. The principal public buildings are the city hall, a plain building, three stories high; the court-house, two stories high; the state penitentiary, the various buildings of which, with gardens and walks, occupies four acres of ground; the county prison, a neat structure, with embattled towers; and the house of refinge. There are, besides, two handsome monuments, the Washington Monument and the Battle Monument the former 163 ft . high, surmounted by a statue of Washington; the latter, which was erected in commemoration of the successful defence of the city against an attack of the lbritish, in September 1814, is 52 ft . high, with a statue on the top, emblematical of the city of Baltimore; the names of those who fell in the battle are inscribed on the column in letters of gold. The city is well supplied with water, both by pipes and public fountains; there being several of the latter in various parts of the city, tastefully enclosed by circular railings, and covered by small open temples composed of a dome supported by columns. Besides the public buildings and other objects already enumerated, Baltimore contains two museums, two theatres, a custom-house, an hospital, in which there is an excellent collection of anatomical preparations in wax; and several other benevolent institutions; an exchange, five market-houses, 14 banks, 104 places of public worship, of which the Episcopalians have twelve, R. Catholies eleven (including a handsome cathedral), Presbyterians eleven, Lutheran eight, Baptists five, Methodists 43; a public library, a lunatic asylum, an observatory, four universities and colleges, with 395 students; 50 schools, with 173 teachers, and 9081 scholars, of whom 3783 in primary schools. The harbour is excellent, and of easy access, though sometimes obstructed by ice. It consists of three divisions-the first 600 yards wide, with 22 ft . water; the second 12 ft . deep at the entrance, increasing at the upper end to 15 ft ; the third or inner harbour, which penetrates to the centre of the city, has a depth of 10 ft ., and admits vessels of 200 tons; those drawing more lie at wharfs near Fell's Point, a little way further down.

The commerce of Baltimore is extensive, including most of the trade of Maryland, and a portion of that of the W. states. It is the greatest tobacco and flour market in the U. States; there being upwards of 60 flour-mills in its immediate neighbourhood, each capable of producing 32,000 barrels in a year. Cotton, coal, lumber, coffee, hides, guano, grain, \&c., are included in its trade; the department of provisions alone being estimate at $£ 1,600,000$ annually. The total imports in 1851 amounted to $£ 1,448,792$, and the exports to $£ 1,253,233$. In 1852 the total number of vesscls that entered the harbour, exclusive of bay craft, was 1889 ; and the same year there cleared for foreign ports 583 vessels, tonnage 147,570 , being a considerable increase since 1846, when the total vessels entered were 476 , tonnage 106,149 , and cleared 541 , tonnage 123,821. There are also a nuuber of establishments for the manufacture of cloth, cotton, paper, powder, iron, copper, glass, steam-engines, \&c. In a large locomotive establishment liere, 100 engines are manufactured annually. Its supply of periodical literature is also ample; consisting of numerous daily, weekly, and semi-weekly newspapers, and magazines or journals. By means of the extensive railway system of the U. States, Baltimore has easy communication with the most important places in the Union. Pop. (1850), 169,054.

BALTINGLASS, a market tn. and par. Ireland, co. Wicklow. The town is 28 m . S.S.W. Dublin; pleasantly situated in a vale on both banks of the Slaney, which is here crossed by a stone bridge of three arches. It consists of four principal streets and several smaller, and contains some good houscs, but is gencrally ill built and straggling. There are here the ruins of an ancient abbey, called Baltinglass Abbey, founded between 1148 and 1151, for Cistertian friars. In the vicinity are several calico printing-works, bleachgreens, and a flour-mill. A savings'-bank was established here in 1823. Area of par. 6383 ac. ; pop. 4436 . P'up. of tn. 1928.

BALTONSBOROUGH, or Baltonsbury, par. Eng. Somerset; 2700 ac. Pop. 718.

BALU ISLAND, an isl. Indian Ocean, Gulf of Martaban, at the embouchure of the Sulween or Thanluyn river, which separates Burmah from Siam. It is 17 m . long, and 8 broad, extending from lat. $16^{\circ} 14^{\prime}$ to $16^{\circ} 31^{\prime} \mathrm{N}$. It is moderately elevated, and said to be very fertile.

BALVASH, or Poolvash Bay, Isle of Man, S. end of the island; lat. $54^{\circ} 7^{\prime} \mathrm{N} . ;$ lon. $4^{\circ} 45^{\prime} \mathrm{W}$. The bay is spacious, and affords good anchorage and shelter.

BAMBA, prov., W. Africa, kingdom, Congo; bounded, N. by the Coanza, S. by the Loz, and W. by the Atlantic; lat. $6^{\circ} 12^{\prime} \mathrm{S} . ;$ lon. $14^{\circ} 30^{\prime} \mathrm{E}$. It is one of the largest and richest districts in Congo, possessing mines of salt, silver, copper, lead, and iron, and a fishery of cowries. The cap. of the prov. bears the same name, and is about 90 m . S. St. Salvador.

BAMBARRA, an extensive country in the interior of W. Africa, but whose boundaries have not been exactly ascertained. Its lat. is given by Rennell, $12^{\circ}$ to $15^{\circ} 22^{\prime} \mathrm{N} . ; \operatorname{lon} .15^{\circ} \mathrm{E}$. to $5^{\circ} 20^{\prime} \mathrm{W}$. The greater part of the country is level, or slightly undulated, and is traversed by several rivers of considerable size, including the Joliba or Niger, which flows through its entire length, from S.W. to N.E. The W., and lesser portion of it, is hilly, but the general aspect of the country is beautiful, resembling, it has been said, the central distriets of England. The climate, in the N. parts, is intensely hot, though hardly so oppressive as in some of the adjoining countries. In the S. parts it is more temperate. The rainy season commences in June, and terminates in November, its termination being generally followed by a dry N.E. wind, which is reckoned healthful by Europeans, from absorbing the superabundant moisture. Vegetation is various and luxuriant. Rice, maize, millet, yams, cotton, water-melons, French beans and onions, are raised in great abundance; and, in the rainy season, cabbages, carrots, and turnips. Considerable quantities of tobacco, also, are grown in some districts, and in some the indigo plant grows spontaneously. Fruit-trees, however, are scarce, the most numerous being the pistachio, and the shea or butter-tree, the kernel of whose fruit yields a grayish butter, that will kecp sweet for twelvemonths without salt-a great advantage in a country where the latter is extremely scarce, and consequently dear. The huge baobab, with several other trees, common to other parts of Africa, abound here. The pastures are extensive and rich, maintaining numbers of horned cattle, sheep, goats, and horses, the latter of a superior breed. The wild animals, with the exception of monkeys, are those of tropical Africa, lions, tigers, wolves, panthers, elephants, \&c. Birds, of a variety of species, are numerous, especially in the marshes, which are resorted to by pelicans, egrets, puffins, ducks, teals, and other aquatic fowls.

The rivers abound with fish, which form the principal subsistence of the natives living on the banks of the Joliba, and other streams. Alligators, too, are numerous, but not, generally, of a very dangerons kind. Venomous reptiles, however, swarm, and are held in much dread by the natives. Of the mineral wealth of the country little is known, but the mountains are said to be rich in gold. The aborigines of Bambarra are of the Mandingo family, their language, habits, and appearance being precisely the same. They are represented as a kind and humane people, inferior to some of the other negro races in refinement and ingenuity, but greatly superior to them in the kindlier feelings and sympathies of humanity. The men manufacture articles in gold and iron, and tan and dress leather, and make gunpowder; the women spin, weave, and dye a soft coarse cloth, much prized for its durability, and beautiful blue colour. In these commodities, to which may be added ivory, they carry on a pretty extensive trade with various more remote kingdoms, importing, in return, salt and European merchandise. The country, generally, is but thinly peopled, the bulk of the population congregating in towns and villages. Some of the towns are thus very crowded, containing, many of them, not fewer than 30,000 inhabitants. Though having a king, the country is in reality governed by a number of petty independent chiefs, who often go to war with one another. The Bambarras are superior to their neighbours in the art of war, and their assistance is often invoked, to turn the scale in the frequent wars that are waged around. Such assistance is usually granted, on condition of
tribnte being paid them, and they are said to be, in general, faithful to treaties. The religion of the natives consists simply in the acknowledgment of a Supreme Being, and a future state; a few are Mahometans, and a few practise Fetichisın. Polygamy is common. Amongst the marriage laws of the country is one of a sigular nature. Should a woman refuse to become a wife, and afterwards contract a marriage with another person, she may be seized by the first suitor as a slave. A remarkable feature in the moral character of this amiable, though primitive people, is the extraordinary love of children for their mothers-a trait often touchingly displayed. Pop. estimated at $2,000,000$.

BAMBERG, a tn. Bavaria, circle, Upper Main, beautifully situated at the foot of a range of slopes clothed with orchards, hop-gardens, and vineyards, and traversed by the Regnitz, the branches of which divide the town into three districts, and give it a form very much resembling the letter $K$. The communication between these districts is maintained by seven bridges, one of them an elegant suspension bridge, about 250 ft . long and 30 broad. The town is surrounded with walls, and well built. Its handsome houses, spacious, well-paved, and well-lighted streets, together with the pleasant walks and the gardens of the environs, make it one of the finest towns, and most delightful residences in Bavaria. Among the public buildings of note are the Dom Kirche or cathedral, a fine structure, in the Byzantine style, founded in 1004, and containing, among other intcresting monuments, the curious and richly-sculptured tomb of the emperor Henry II., and his empress, Cunigunda; the church of St. Janles, founded in 1073, and remarkable for its handsome portal and frescoed dome; St. Gangolph's Church, with two towers, and a fine altar-screen, executed by celebrated masters; the upper parish church, or St. Mary's, a handsome Gothic building of a quadrangular form, containing several fine paintings and sculptures, and the Jesuit church of St. Martin's, a massy structure, in which beauty and grandeur are happily combined, and to which is attached a library, particularly rich in MSS. To these buildings may be added the old Benedictine monastery, occupying the height called St. Michael's Mount, and now converted into a workhouse; the old palace of the bishops of Bamberg, the theatre, and the townhall, completed in 1476,

and restored in 1756. The educational and literary institu tions comprise a lyceum, in which full courses of divinity and philosophy are given by eight professors, assisted by other teachers, and attended by 700 pupils; a normal school, a mechanies' institute, a drawing academy, and a royal library, containing about 56,000 volumes; a museum of natural his-
tory, and a cabinet of natural and experimental philosophy There are also surgical, anatomical, and other medical schools, attached to the general infirmary, founded (1789) by Bishop Frank Ludwig, of Erthal, and possessing a capital of upwards of $£ 30,000$. The principal manufactures of the town are of porcelain, gloves, jewellery, wax, tobacco, starch, musical instruments, marble wares, \&c. Large quantities of gardenseeds, and of liquorice, are raised in the vicinity; of the latter, about $50,000 \mathrm{lbs}$. are annually sent abread. 'The beer of Bamberg is in much repute throughout the surrounding country, and the demand for it is so great, as to employ upwards of 60 breweries. The environs abound in picturesque scenery. Pop., exclusive of military, 19,312, of whom 400 are Jews.-(Huhn's Lex. Deutschland.)

BAMBOUK, a country in the interior of N. W. Africa, in the angle formed by the Falémé and the Senegal, S. of the latter river, E. of Bondou, and N. of Wooli and Dentilca, in from lat $12^{\circ} 30^{\prime}$ to $14^{\circ} 30^{\prime} \mathrm{N} .$, and from lon. $10^{\circ} 30^{\prime} 15^{\prime \prime}$ to $12^{\circ} 15^{\prime} \mathrm{W}$. Its precise extent has not been ascertained, but is supposed to be about 140 m . in length, by 80 to 100 in breadth. It is, on the whole, a mountainous district, and in some parts rugged. though attaining no great elevation; the highest points never exceeding 600 ft . above the general level of the land, while the ordinary heights are about 300 ft . The higher regions are sterile, being composed mostly of naked rock, but the valleys and plains are remarkable for their fertility, and for the luxuriance, or rather exuberance of their vegetation; every sort of plant and tree attaining the most gigantic dimensions. Amongst the latter, the enormous baobab, the calabash, and tamarind, with a great variety of acacias and palm-trees, all of which reach here the utmost limits of their growtl, and fruitfulness. The rich soil produces likewise in abundance, and almost without culture, maize, millet, cotton, water-melons, and an immense variety of leguminous plants. The low lands, which are subject to inundation, yield large crops of rice of the finest description. With all this fertility, however, Bambouk is one of the most unhealthy places on the face of the globe, and is wholly uninhabitable by Europeans. The rainy season, which lasts for four months, commences about July or August, flooding the Iow lands, and causing the rivers to overflow their banks, adding to the fertility of the soil, but greatly increasing the insalubrity of the climate. Immense herds of wild oxen and cows rove through the forests, or feed on the rich pasture of the plains. Lions and elephants are also numerous, and birds and insects of all descriptions, while the rivers swarm with crocodiles of the most formidable kind. But the most remarkable feature of Bambouk is its rich gold mines. The principal onc, an insulated hill of 3000 paces in circumference, and about 300 ft . high, is at the distance of about 1 m . from the large and wealthy town of Natakoo. The soil of this hill is almost wholly auriferous, every cubic foot containiug gold in the shape of lumps, grains, or spangles. It is perforated with deep holes or pits in all directions, the greatest quantities of gold being found at the greatest depths. There are numerous other noted gold mines in Bambouk; those of Kenieba were were visited by Mr. Raffenel in 1843-44, who found them not extremely rich, and wrought, as might be expected, in the rudest manner possible. These mines being considered common property, are open to any of the inhabitants of the adjacent villages who choose to work in them. Most of the gold found is given to the Moors in exchange for salt-a scarce and much coveted commodity in this part of Africa, as in many others. Bambouk is densely peopled. The natives are Mandingoes, and so notorious for their ferocity and cruelty, as to be esteemed the type of barbarism. They profess the Mahometan religion, but disregard some of its nost important observances, amongst others, as to the use of wine and intoxicating liquors, drinking to excess of a description of the latter made from millet and honey. They are indolent and voluptuous, and prefer the less laborious employment of searching for gold, to cultivating the fertile lands with which they are surrounded. Bambouk was at one time, during the 15 th century, in the possession of the Portuguese, who had been tempted by its gold mines to invade the country. They do not appear, however, to have held it long. Many of them fell in quarrels amongst themselves, many by debauchery and disease, and the miserable remnaut by the weapons of the natives, who, when their numbers were reduced, rose against them, and massacred
them all in one day. The ruins of ancient Portugnese forts and houses are still to be seen in the country.

BAMBROUGH, or BAMborough, a vil., par., and castle, England, co. Northumberland, on the coast. The village, about 11 m. S.E. by S. Berwick-on-Tweed-lat. $55^{\circ} 37^{\prime} \mathrm{N}$. ; lon. $1^{\circ} 42^{\prime}$ W.,-is beautifully situated near the sea, and was anciently a royal borough, and important market town. It fell latterly into decay, but is again improving. Close by the village is the ancient castle of Bambrough, a residence of the Earls of Northumberland, and famous in English story. It stands majestically on the summit of a stecp rock, which projects into the sea, and rises perpendicularly to the height of 150 ft . above low-water mark. The keep, a lofty square structure, is of Norman architecture, and is the most ancient part of the building. The date of the present structure is uncertain, but it is said that a fortress was erected here as early as the sixth century. In 1095, it was taken from the Northumberland family by William Rufus, and remained in possession of the crown till about the middle of the 15 th century, soon after which it ceased to be considered a fortress of importance. The castle, latterly, fell by purchase into the hands of Lord Crewe, Bishop of Durham, who, at his decease, in 1720 , left a large property to be applied to charitable purposes. From this source a binevolent establishment has been formed at Bambrough, for the succour of shipwrecked seamen, the education of children, and the relief of indigent persons. As part of the arrangement, ships' stores of all sorts are kept in the castle, while various expedients are adopted in stormy weather to aid distressed vessels. Thirty girls are here educated, clothed, and boarded gratis. There are also two free schools, a good library, and a dispensary.--The parisil contains 21 townships, and three chapelries; area, 25,100 ac Pop. 4237.

BAMIAN, or Bameean, an ancient tn. and celebrated valley in Afglianistan. The town is situated on the slopes of an isolated hill situated in the latter, 52 m. N.W. Cabool ; lat. $34^{\circ} 17^{\prime}$ N. ; lon. $68^{\circ} 8^{\prime} \mathrm{E}$. The valley is about 1 m . broad and very fertile, and is bounded on each side by nearly perpendicular steeps. On the S. side, are several passes varying in height from 9000 to nearly $13,000 \mathrm{ft}$. The town and its vicinity throughout, indeed the whole extent of the valley, is crowded with relics of antiquity of an extraordinary description, including colossal idols, and vast caves excavated in the face of the living rock. Two of the idols are upwards of 130 ft . in height, and the caves so numerous as to extend in continued series for 8 miles. It is not known by whom these gigantic works were executed, although many more or less plausible conjectures have been hazarded on the subject

BAMMAKOO, a tn., W. Africa, Bambarra, 186 m . S. W. Sego, l. bank, Joliba, important for its commerce, especially in salt

BAMOO. See BHamo.
BAMPOORA, or Ihampoora, a tn. Hindoostan, prov. Malwa, on the Rewa, 1344 ft . above the sea level; lat. $24^{\circ} 33^{\prime} \mathrm{N}$. ; lon. $76^{\circ} \mathrm{E}$. The fort of Bampoora is unfinished, but the walls are well built, and enclose a palace, also un finished, erected by order of Jeswunt Row Holear, of whom it contains a statue in white marble. The city and pergunnahs attached formed part of the dominions of Mulhar Row Holcar. Pop. 20,000.-(LIamilton's East India Gaz.)

BAMPTON, several towns and parishes, England :-1, A market t . and par. Devon. The town, situated in a valley, on the river Batheram, an affluent of the Exe, about 20 m . N. Exeter, consists of two principal strects, irregular, but well kept; houses, stone and slate, but indifferently built ; spring water abundant. It has a church (an ancient, but neat structure), and a Baptist chapel ; several schools, including a national one for 50 boys and 50 girls; also two or three minor charities, by one of which 25 boys and 25 girls are clothed yearly. At one time, the serge trade was carried on here to a considerable extent, but has declined since the introduction of machinery. The chief business of the place consists in stone-quarrying and lime-burning. Bampton is noted for its fairs for sheep and cattle, particularly that held on the last Thursday of October. Area of par. 8130 ac. Pop. 2049 ; of $\mathrm{tn} .1275 .-2, \mathbf{A} \mathrm{tn}$. and par. Oxford. The town is 16 m . by road W. by S. Oxford, and 70 W.N.W London; houses neatly built; supply of water ample. The town was celebrated in former times for its manufacture of leather jackets,

Vol. I.
gloves, \&c. Area of par. 10,250 ac. Pop. 2734.-3, A par. Westmorland; area, 10,390 ac. Pop. 579.

BAN-de-La-roche, a valley, France, dep. Vosges, cclebrated as the scene of Oberlin's labours. It lies among the mountains of the Vosges, and is enclosed by a number of rounded schistous hills, some of which are 1000 ft . above the meadows below. The soil is naturally sterile, and the climate is severe. Winter sets in about the beginning of October, the snow lies deep, and seldom melts away before the middle of May, leaving at the utmost only five months of tolerable weather. Half a century since, this valley was a barren desert, inhabited by a few poor ignorant peasants. By the labours of a single Christian philanthropist, roads were made, treesplanted, schools erected, a better system of agriculture introduced, and the moral habits of the people so much improved, that manufactures established themselves here, from no other motive than that of obtaining work-people whese conduct was so exemplary. The chief establishment is a cotton ribbon factory. At the entrance of the vallcy, in the churchyard of the quiet village of Fonday, is the tomb of Oberlin, a plain stonc, with his name engraved, and an inscription bearing in terms equally true and touching, ${ }^{6} \mathrm{He}$ was 60 years the Father of this district.'

BAN, or Banowicz, a lordship and market tn. Hungary, S.E. Trentschin, 64 m. N. Komorn, on a height, near an affluent of the Neutra, with nine annual markets, and an extensive trade in cattle, wool, and iron. Pop. 2660.

BANAGIIER.-1, A market tn. Ireland, King's co., 42 m. E. Kildare, on elevated ground, l. bank, Shannon, here crossed by a handsome new bridge of 60 elliptical arches, with a navigable opening of 40 ft . It consists chiefly of one long, narrow street; has a church, R. catholic chapel, royal endowed and national schools, and small infantry barracks ; a considerable trade in corn and provisions, and large horse and cattle fairs. Pop. 2827.-2, A par. Londonderry; 32,475 ac. Pop. 5810.

BANAL-MILITÄRGRENZE, in Austria, a division in the S.E. of Military Croatia, between the rivers Save, Kulpa and Una, subdivided into the two nearly equal districts of Banal-Grenz-Regiment I., and Banal-Grenz-Regiment II., each with an area of $400 \mathrm{geo} . \mathrm{sq} . \mathrm{m}$. The former las Glina for its capital, and consists of the free military community of Petrinia and 130 villages; the latter consists of the free military community of Costainicza or Kostainiza and 143 villages. The whole Banal is lilly, but tolerably fertile, producing all kinds of corn and pulse, also maize, flax, hemp, and madder. Banal was taken from the Turks by Leopold I., and secured to Austria, by the peace of Carlowitz, in 1699. Pop. 119,600.

BANANA ISLANDS, a group of small islands, N.W Africa, off the coast of Sierra Leone, near Cape Shilling; lat. $8^{\circ} 8^{\prime} \mathrm{N}$. ; lon. $13^{\circ} 11^{\prime} 42^{\prime \prime} \mathrm{W}$. (k.) The largest is 4 m . long and 1 broad. They are extremely fertile, have abundance of watcr, and are so comparatively healthy, that the European residents of Sicrra Leone, from which they are little more than 30 m . distant, frequently resort to them for the bencfit of their health. Good anchorage off the islands in 5 fatloms. All inhabited.

BANANAL.-1, Two villages, Brazil. The one in prov São Paulo, on the road from the city of that name to lio de Janeiro, in the district of Areas, and near the r. bank of the Paraiba. In the vicinity, coffee and sugar are extensively cultivated, and large quantities of poultry are reared for the Rio de Janeiro market. The other vil. is in prov. Rio de Janeiro, on a streamlet of the same name, an affluent of the Paraiba from the right, and navigable for about 5 m . It has a church and sugar-mill.-2, A river isl. Brazil, called also Santa Anna, formed by the river Araguia. It lies in the N.E. corner of prov. Matto-Grosso, is 200 m . long by about 35 broad, covered with vast forests, and has in its centre a navigable lake, said to be about 90 m . long by about 30 broad. The soil of the island is extremely fertile. The name Bananal was given it from the remarkable increase in the banana-trees planted there by the discoverers in 1773.

BANAT, a large prov. Austria (cap. Temeswar), bounded, N. by Hungary, W. Hungary and Sclavonia, S. Servia, E. Wallachia and Siebenbürgen or Transylvania. It consists of the three counties of Temes, Torontal, and Krasso, and two military districts, called the German Banat and the WallachoIllyrian Banat. Greatest length, from E. to W., 120 m .; greatest breadth, from N. to S., $98 \mathrm{~m} . ;$ arca, 5720 gco. sq. m.

## BANBRIDGE

## BANDA

It is very compact, in form approaching a square; bounded by the Danube, Theiss, and Maros, on all sides except the E., where it becones hilly. With this exception the surface is flat, and on the W. is partly covered with swamps. The other rivers, besides those mentioned, are the Temes, which traverses the province almost centrally; the Nera, the Karasch, and the Alt Bega, so called to distinguish it from the Neu Bega, a canal about 85 m . long, and wholly within the province. Taken as a whole, the Banat is one of the most fertile districts in Europe. Its wheat has long been famous for the great quantity and excellence of the flour it yields; while its maize frequently gives 24,48 , or even 60 returns. The vine is extensively planted, and great attention is paid to the rearing of the silkworm. Good cotton also is grown. Live stock is abundant, and of good breed. Rearing horses particularly engages the attention of the German colonists. The whole territory is well wooded, and game abounds. Immense flocks of water fowl frequent the marshy districts; and the rivers, particularly the Theiss, teem with fish. The mincrals hitherto have not been considered of very much importance, but an extensive coal field has been recently discovered. The inhabitants belong to various races. Magyar villages prevail in the N., Scrvian in the W., and German colonies both in the W. and S. There are also several settlements of Bulgarians and other races, but the mass of the population is Wallachian. Pop. nearly $1,000,000$.

BANBRIDGE, a market tn . Ireland, co. Down, 22 m . S.W. Belfast, on the Bann, which flows through, and divides it into two portions, one of which occupies a rising ground on the 1. bank of the river, the other a sloping space on the r. bank. It consists of four streets; houses chiefly stone, and well built; well supplied with water, but not lighted. The only buildings of any note are the church, in the Gothic style; three Presbyterian meeting-houses, Episcopalian, R. catholic, and Unitarian chapels, and a large union workhouse, with fever hospital attached. There are five or six schools; one of which is in connection with the Church Education Socicty, two in connection with the National Board of Education, and several private schools. A literary institute has been lately established, where monthly lectures are delivered on literary and scientific subjects. The principal manufactory is that of linen, which is carried on to a great extent both in the town and neighbourhood; where are also several bleaching establishments. Pop. 3324.-(Local Correspondent.)

BANBURY, a parl. bor. and par. England, co. Oxford. The town, situated in a valley, on the Cherwell, 22 m . N. Oxford, consists of several spacious streets, well paved and lighted; water abundant. The church, a modern erection, with a tower 133 ft . high, has an ungainly exterior, but is well fitted up within. Independents, Particular Baptists, and Wesleyans, have each a neat and commodious place of worship; and there are small chapels, also, for Primitive Methodists, Calvinistic Dissenters, and Unitarians; a R. catholic chapel, lately built, and a Friends' meeting-house. It has four schools (a charity, national, British, and infant), and numerous charitable institutions, supported by voluntary contribution; a mechanics' institute, subscription library, theatre, townhall, and jail. Manufactures:-plushes, girth, and other webbing; celebrated also for its cakes, which have been famous for upwards of two centuries, and for its ale. An extensive trade in cattle, corn, and all kinds of provisions. Returns a member to the House of Commons. Registered electors (1849), 538. Area of par. 3150 ac . Pop. 7366.
banca, banka, or Bangka, a large isl. Indian Archipelago, belonging to Holland, between Sumatra and Borneo, celebrated for its tin. It lies between lat. $1^{\circ} 30^{\prime}$ and $3^{\circ} 7^{\prime} \mathrm{S}$., and lon. $103^{\circ} 9^{\prime}$ and $106^{\circ} 54^{\prime}$ E.; is of irregular shape, and about 108 geo. m. long, by 64 broad at its N. end, the broadest part ; area, 4340 sq. m.; separated W. from Sumatra by the Strait of Banca, about 14 m . broad; and E. from the island of Biliton by Gaspar Strait. It has several considerable bays, of which the most important are Muntock and Claba; and is liilly, but none of its elevations much exceed 2000 ft . The ligher hills are granite, the lower of red ferruginous earth. In black alluvium betwcen these latter are found the tin deposits, discovered first by chance in 1710, and rarely more than 25 ft . below the surface. Only a small portion of the island, in the N. end, near the capital Minto or Muntock, has yet been explored for this metal; the yield of which, in 1844,
reached 4189 tons. The Banca tin is the best obtained in the Indian Archipelago, and said to be equal, or nearly so, to that obtained in Britain. Besides this metal, the island yields iron, lead, copper, silver, and arsenic ; rock-crystal and amethyst; and, in the W. part, there are beds of lignite. The hills are covered with valuable timber, particularly red-wood (hematoxy$\left.l_{0 n}\right)$; resinous trees are in great numbers, those furnishing gum elastic, and the myrtaceæ, forming whole forests. Though vegetation is very vigorous, the soil and climate of Banca are not favourable to cultivation; the former being too stony and dry for the latter, which, during August, is so hot, that all the leaves of the trees are dried up; still, were the numerous streams by which the island is intersected turned to the purposes of irrigation, with the same attention that they are appropriated to the washing of tin, excellent agricultural results might be obtained. Among the vegetable products may be named dragon's blood, sassafras, nutmegs, benzoin, sago, cassia, \&c. The fauna of this island includes three species of apes, and the Galeopithecus marmoratus, all common to Sumatra; Stenops tardigradus, Pteropus funereus, Viverra Indica, Sus vittatus and verrucosus, Cervus russa, and Moschus kantchil. Neither tigers, bears, nor large pachyderms are to be found in the island, of which probably the most formidable animal is the alligator, which infests the rivers in great numbers, and is exceedingly audacious, attacking boats without hesitation. The birds are nearly similar to those found in Java and Su matra. Banca is inlabited by Malays, Chinese, and a small number of Bengal Cipays, and a still smaller number of Bugis from Celebes. The Chinese, numbering 18,000 , are the only laborious race in the island, one of them doing as much work as any three of the others. The climate on the higher grounds is esteemed tolerably healthy; but on the lower grounds, and along some parts of the coast, which are swampy, fever, of a very dangerous kind, is so prevalent, that Dutch soldiers think no greater misfortune can befall them than to be ordered to Banca. Pop. (1840), 35,000.-(Van der Aa; Tcmminck's Coup d'ceil; Davidson's Trade and Travels in the Far East.)
-2, A small island group at the N.E. point of Celebes, separated from that island by a narrow strait of same name. The largest island, whence the group takes its name, is in lat, (E. point) $1^{\circ} 43^{\prime} \mathrm{S}$. ; lon. $125^{\circ} 12^{\prime} \mathrm{E}$. (r.) It is about 7 m . long, well inhabited, and produces lemons, cocoa-nuts, breadfruit, ratans, tortoise-shell, \&c.
bancallan, or Bancallang, a large and populous tn., W. coast, isl. Madura, Indian Archipelago; lat. $7^{\circ} 2^{\prime} \mathrm{S}$.; lon. $112^{\circ} 43^{\prime}$ E.; cap. of the isl., and of the dist. of same name with a fort and palace; in the latter of which the sultan of the island resides. The Dutch have a residency here, and a considerable trade is carried on.

BANCIIORY.-1, (Devenick, or Davinick), a par. Scotland, partly in co. Aberdeen, and partly in that of Kincardine. Pop. 2736.-2, Banchory-Ternan, another par. wholly in the latter co.; area, $21,307 \mathrm{ac}$. Pop. 2241. The affixes in both cases are the names of saints. The etymology of the word Banchory is unknown.

BANDA, a gov. or prov., Dutch possessions, Indian Archipelago, composed of the Banda Islands, the E. part of isl. Ceram, and the isls. Keffing, Ceramlaut, Kisser, Gorum Key, and Aroo.

BANDA, a Moluccan island group, belonging to Holland, Indian Archipelago, in the Banda Sea, S. Ceram, between lat. $3^{\circ} 50^{\prime}$ and $4^{\circ} 40^{\prime}$ S.; lon. $129^{\circ} 38^{\prime}$ and $130^{\circ} 2^{\prime}$ E. The group consists of the inhabited islands of Great Banda or Lonthoir, by far the largest, about 12 m . long by 2 broad; Banda Neira, Pulo Rhun, l'ulo Ay, Gocnong Api, a volcano, and Rosingyn; and of the uninhabited islands of Kapal, Pisang Sjethan, and Vrouwen. They are all of volcanic origin, covered with a thick stratum of garden earth, admirably adapted for the cultivation of the nutmeg, which is, however, limited to the three more important islands, Great Banda or Lonthoir, Banda Neira, and Pulo Ay, the cultivators being partly slaves and partly convicts, together comprising upwards of three-fifths of the total population of the group. The amual produce is upwards of $400,000 \mathrm{lbs}$. of nutmeg, and above $130,000 \mathrm{lbs}$. of mace. Besides these articles, some trade is done in the oil obtained from the nuts of the Canarium commune, a tree which here attains great perfection. When fresh, the oil is used at table; when stale, for burning. Other vegetable products of these islands, which are all well wooded, are cocoa nuts, sago,
pisang, and the ordinary tropical fruits. Wild cattle are found on some of them, especially on Rosingyn, where they are hunted by the officers of the garrison. Wild goats, sheep, and pigs are also found. The most remarkable birds are four kinds of pigeons, Columba perspicillata, aenea, javanica, and diademata; and some species of muscicapa and nectarinia. The two species of pigeons first named are very destructive to the nutmegs, which they eagerly scek, and swallow whole; and, after digesting the fleshy substantial envelope, they vcid the nut or kernel in a state fit for germination. In like manner, also, they, and species of the genus Buceros, swallow and void the fruit of the clove-tree, and of the Canarium commune. To birds such as these, capable of long-sustained flight, has nature committed the diffusion of the aromatic plants over the Archipelago.
The harbour, which is beautiful, well-sheltered, and easy of access, lies N. the island of Great Banda, and between it and the islands of Banda Neira and Goenong Api, all of which approach close to each other. It is defended by several forts, of which the more important are those of Belgica and Nassau on Banda Neira, and IIollandia on Great Banda. On the for-

BANDAH, a tn . Hindoostan, prov. of, and 94 m . W. by N. Allahabarl, presid. Calcutta, cap. dist. of S. Bundelkhund, r. bank, Cane; lat. $25^{\circ} 31^{\prime}$ N.; lon. $80^{\circ} 20^{\prime}$ E. A few ycars ago, this town was an unimportant village, but is now a large and bustling town. Its cotton is proverbially excellent.

BANDIT'TI, a small isl. Indian Archipelago, Strait of Lombok; lat. (S.E. point) $8^{\circ} 51^{\prime} \mathrm{S}$. ; lon. $115^{\circ} 29^{\prime} \mathrm{E}$. (n.) about 13 m . long by abont 10 broad.

BANDOLS [anc. Bandolum], a vil. France, dcp. Var (Provence), about 10 m . from Toulon, occupying a lovely spot on the shores of the Mediterranean, and enjoying a climate in which frost is scarcely known, where the orange grows in the open air, and artichokes, green peas, and the early crops of less favoured climates, are gathcred in the dead of winter. Pop. 1814.

Bandon, or Bandonbridge, a tn. Ireland, co. of, and 20 m . S.W. Cork, on both banks of the Bandon, a beautiful stream celebrated by Spenser as 'The pleasant Bandon crowned by many a wood.' There are several good streets in the town, straight and well kept; houses of stone from a quarry in the vicinity ; generally well built, lighted, and amply supplied with water. There are two parish churches, two R. catholic chapels, two Methodist chapels, one Scotch church, and one Unitarian meetinghouse. The other principal public buildings are the corrthouse, mar-ket-house, and savings'-bank, none of which are worthy of note in an architectural point of view; and a small barrack, where one troop of horse, and a company of foot, are accommodated. There are two good classical schools, besides two parochial schools in connection with the Church of England, two national, and one Methodist school, for the instruction of the lower classes. Bandon was, about 25 years ago, a flourishing manufacturing town, but hardly a vestige of its former prosperity now remains. Between 3000 and 4000 persons were then
mer of these islands is the governor's residence, and the small village or town of same name, the houses in which are built chiefly of wood, and roofed with leaves, on account of the frequent earthquakes to which the group is subject, caused by the island Goenong Api, which rises 7880 ft . above the sea, and is one of the most active volcanoes in the Indian Archipelago. It forms an immense cone, increasing in size with each eruption, and is covered with luxuriant vegetation to the limit where the lava, by becoming cold, ceases to flow; but down through the vegetation to the sea, are to be seen the courses of lava torrents, filled with half burnt-up trees. At the foot of the mountain, cocoa-nut, and other fruit-trees of tropical countries, flourish; and its only inhabitants are a few families, natives of Timor. The proximity of this volcano subjects the Banda Islands to the ravages of frequent eruptions, and of frequent earthquakes, some of which have been very destructive. The strongest recorded were those of 1598,1615 , 1632, 1691, 1711, 1749, 1798, and 1820; but the most fatal in their consequences, those of $1629,1683,1686,1743$, and 1816. So terrible were the ravages of the eruption and earthquake of 1691, that all the more wealthy inhabitants fled the islands, and emigrated to Amboina, Ternate, \&c., and only through the firmness and courage of the governor, Coyet, was the total abandonment of the establishment prevented. Goenong Api likewise renders the climate very insalubrious. The annual deaths in the group are one in 21 . Several of the islands have no fresh water. Pop. of the whole gronp in 1840, 5081, of whom 2183 were slaves, and 1029 convicts.-(Van der Aa; Temminck‘s Coup d'ceil; Jour. Ind. Archip.; Stokes's Discoveries in Australia.)

## Banda oriental. See Uruguay.

BANDA SEA, Asiatic or Indian Archipelago, the space of sea enclosed by the islands of Booro and Ceram, on the N.; Timor and the Scrwatty Islands, on the S.; Timor Laut, Larat, and other small islands, on the E.; and the Flores Sea, on the W.
employed in weaving, cotton-spinning, \&c., but these, and all other branches of industry, with the exception of distilling and porter-brewing, carried on by two distilleries and two breweries, have wholly disappearcd, the largest cotton-mill in the place having been converted into an auxiliary workhouse. Bandon is one of the most remarkable towns in the S. of Ireland. Peopled originally by a colony of English Protestants, it has been always distinguished for its loyalty and strictly Protestant character. Indeed, so strictly Protestant was it at one time, that, until about the period of the Union, no R. catholic would be permitted to live within its walls. It returns a member to the House of Commons; constituency in 1850, 396. Pop. 9049.-(Local Correspondent.)

BANDONG, a tm. Java, 75 m . S.E. Batavia. It has an agrecable aspect, but, in consequence of the vicinity of morasses, is unhealthy. The hills around are clothed to a considerable height with coffee plantations, and the lower grounds are covered with rice fields.

BANEC, or Bannec, a small isl. France, S. Cape Finistère, between Ushant and the mainland; lat. $48^{\circ} 2 y^{\prime} 7^{\prime \prime} \mathrm{N}$. lon. $5^{\circ} 1^{\prime} 42^{\prime \prime} \mathrm{W}$.
bañeras, or Baneres, a tn. Spain, Valencia, prov. of, and 28 m. N. by W. Alicante, r. bank, Vinalapo; tolerably well built, has a parish church, a townhouse, two schools, an hospital, prison, and three public fountains. The inhabitants, though chiefly agricultural, manuaiacture caps, blankets, and winter clothing. Pop. 2236.

BANEZA (LA), a tn. Spain, prov. of, and 28 m. S.W. Leon, at the head of a valley, r. bank, Sucrto, here crossed by a wooden bridge. It has straight and tolerably good strects, one principal and three smaller squares, two parish churches, four chapels, one Latin and three other schools, a townhouse, prison, extensive hospital, storehouse, \&c. Pop. 2308, chiefly agricultural, but also manufacturing coarse cloth and ticking, hats, tiles, bricks, leather, and earthen-

## BANGKOK

BANFF, a co. Scetland, bounded N. by the Moray Frith, S. and E. by the co. Aberdeen, and W. by cos. Moray and Inverness ; extreme length, about 67 m. ; breadth, very unequal, averaging about 12 m .; area, 647 sq . m ., or 414,080 ac. The general surface is mountainous, the county centaining some of the highest mountains in Britain; Cairngorn, celebrated for its topazes, rising 4060 ft above the level of the sea; Benrinnes, 2763 ft . (according to the late Government survey); Corryhabbie, 2558 ft ; Kneckhill, 2500 ft ; and Cabrach, 2377 ft . The N. side of Benmacdui, the highest of all the Scottish mountains, is also in this county. These mountains generally consist of a nucleus of granite, overlain by gneiss, quartz rock, and mica schist, succeeded by clayslate, and old red sandstonc. At Portsoy, near the coast, there is a bed of serpentine, known by the name of Pertsoy marble; and in different places iron and lead have been discovered. Tewards the E. the mountains gralually slope away, and leave along the coast a level tract, which extends about 30 m ., and has a fertile soil, which is well cultivated, and produces large and early crops. In the interior there is comparatively little arable land, but many fertile valleys between the hills and mountains well adapted for grazingthe principal dependence of the farmer, as the coldness and humidity of the climate render the harvests precarious, and always late, being seldom completed before the end of October. Agriculture has made considerable progress in the county, but there is still ample room for improvement. The farmsteadings are in general substantial, the fields well enclosed, and large tracts of waste land are brought every year under cultivation. The principal rivers are the Spey, remarkable for its rapidity, and for the value of its salmen-fisheries, which, for some miles from its mouth, yield a rent of from $£ 8000$ to $£ 10,000$ a year to the Duke of Richmend, who is now proprietor; the Deveran, whose salmon-fisheries rent at $£ 2000$ a year; the Avon, the waters of which are so singularly transparent, and consequently so deceptive as to depth, that it is extremely dangerous for strangers to attempt to ford it. Salmon were abuudant in this river in former times, but they are now scarce; it is still, however, an excellent trouting stream, and for this sport is preferred by anglers to the Spey. There are, besides these, the smaller streams of Livet, Fiddich, Isla, and Conglass, the first giving its name to the Glen so celebrated for its whisky. The Isla is another fine trouting stream, and the scenery on its banks beaptiful. The principal lakes are Lochavon, 3 m . long and 1 broal; and Lochbuilg, upwards of 1 m . long, and about half a mile broad, both in the parssh of Kirkmichael, and both abounding in trout. Game of all kinds abounds in the county. Its most valuable minerals are marble, limestone, marl, granite, freestone, slate, rock-crystals, and topazes. Its manufaetures are few and unimportant, comprising several breweries, tanneries, and ropeworks. Its commerce is confined to the coastingtrade, through the medium of the ports at Banff, Macduff, Portsoy, and Gardenstown, where oats, butter, salmon, \&c., are shipped, and coals, iron, and timber imported. The principal productions of the county are cattle, corn, and fish. The white fisheries along the coast occupy from 100 to 120 boats. The herring-fishing is also extensive. The county is divided into districts, and includes 24 parishes, but only one town of any consequence, namely, Banff. It returns one member to the House of Commons; constituency in 1849, 826. Pop. (1851), 54,171 .

BANFF, a seaport tn. and royal bor. Scotland, cap. above co., 121 m N. by E. Elinburgh, and 39 m . N.W. Aberdeen ; lat. (N. pier) $57^{\circ} 40^{\prime} 18^{\prime \prime} \mathrm{N}$.; lon. $2^{\circ} 31^{\prime} 30^{\prime \prime} \mathrm{W}$. (r.) ; situated at the influx of the Deveran, across which is a fine bridge of seven arches, into the Moray Frith; it is separated into two parts, one of which lies partly on the lower extremity of a plain on the river side, and partly on a declivity; the other portion, called the Sea Town, stands on an clevated ridge, terminating abruptly within a shert distance of the sea. Betwcen these two, and beautifully situated on a projecting point, stands the castle. The houses are, for the most part, irregular in size, but the streets are generally straight and wide, and are kept remarkably clean; one of them, under different names, is more than half a mile in length. The town centains a gaswork, a comunodious market-place in a centrical situation, and public baths, all of modern erection. It has Established, Free, United Presbyterian, Independent, Episcopalian, and
R. catholic places of worship; a literary society, and scientific institution; several benevelent institutions, several well-conducted educational institutions, and feur branch banks. The public buildings of note, besides churches, are the townhouse, adorned by an elegant spire; and an academy. The harbour is situated on the W.extremity of a circular bay, at the opposite extremity of which are the town and harbour of Macduff. It censists of an old basin partly sanded up, and now suitable only for vessels of very limited draught of water; and of a new basin formed by a pier and breakwater, built in 1816. Vessels drawing 12 ft . water can enter the new basin at high water of ordinary neap tides; drawing 15 ft . at spring tides. The herringfishery of the port was at one time very considerable, there being about 70 boats employed in it in the year 1819; but, in 1848 , the number had fallen off to 22 . The number of vessels registered in 1847, was 114 ; tonn. 9396 ; mostly employed in carrying grain, herrings, salmon, live cattle, and cured pork, to London, Leith, Aberdeen, and other places in the S . There is also a small foreign trade, occasional voyages being made to Sweden, Russia, and Helland, for iron, deals, hemp, and flax. Of the few and limited manufactures in the town, the principal are a foundry, and some small manufactories of repes and sails, chiefly for home use. The town was erected into a royal burgh by Robert II., in 1372; afterwards cenfirmed by James VI. and Charles II. In 1645, the town was 'pitifully plundered ' by the Marquis of Montrose, by which the iuhabitants were reduced to a state of absolute beggary, as set forth in their humble supplication to the high court of Parlianent, in 1647; the copy of which is indorsed, 'Supplicatione, Tewn of Banff Bodies, 1647.' Parliament granted the petitioners their own excise as a means of relief. James Sharp, the celebrated Archbishop of St. Andrews, was bern in Banff castle in May 1613; and James Macpherson, the notorious Highland outlaw, was executed here on November 16,1700. Banff suffered by the great inundations of 1829 and 1835 , there being, on these occasions, 5 or 6 ft . of water in some of the streets. The town is geverned by a provost, four magistrates, and 17 councillors, all elected by the $£ 10$ constituency. The parliamentary constituency, in 1849, amounted to 218 , Banff uniting with Elgin, Cullen, Inverury, Kintore, and Peterhead, in sending a member to the House of Commons. Pop. of tn .5309 ; of par., exclusive of bor., 3958.

BANGALORE [Bangalura], a fertified tn. Hindoostan, Mysore, 70 m . N.E. Seringapatam, 190 m . W. Madras; lat. $13^{\circ} \mathrm{N}$. ; lon. $77^{\circ} 40^{\prime}$ E.; built on a plateau 3000 ft abeve the sea, and much resorted to by Europeans, on acconnt of its salubrious climate, the thermemeter ranging between $82^{\circ}$ and $57^{\circ} \mathrm{Fah}$. The cypress and vine grow luxuriantly; and apples, peaches, and strawberries are raised in the gardens. The houses are in general two stories high, well built of red earth, and roofed with tiles. The principal bazaar is spacious and handsome, ornamented with rows of cocoa-nut trees. Tippoo Saib's palace, built of mud, in the Saracenic stylc, is an impressive structure, used occasionally by the rajah for public entertainments. The fortress, detached from the town, was of great extent and strength; but it is now in ruins, having been destroyed by Tippoo Sultan, when he found that it was not impreguable. The cantonment is about 2 m . from the town; and contains a large barracks, numerous shops stocked with European manufactures, a public library and assembly-room, and a handsome race-stand. From its central position, Bangalore is of consıderable importance, both politically and as a trading station. Its merchants carry on a traffic with every part of S. India; chiefly in sugar, salt, betel-nut, metals, spices, dye-stuffs, raw silk, and cotton wool. The silk goeds manufactured here are of a particularly strong description. The cotton bought at the weekly markets is spun by poer women of all castes, except the Brahmin. Bangalore was founded by Hyder Ali; in 1791, it was taken by Lord Cornwallis. Pop. 60,000.

BANGIL, a tn. Java, 23 m . S. Soorabaya, having good houses, many of them large stone buildings, and a spacious, roomy market-place, well supplied with provisions, and much frequented.
bangka. See Banca.
BANGKOK, or Bankor, an extensive city, cap. of the kinglem of Siain, extending for 3 or 4 m . on both sides of the Menam, 15 m . above its embouchure in the Gulf of Siam,
and 45 m . S. Yuthia or Siam, the former capital; lat. $13^{\circ} 58^{\prime} \mathrm{N}$.; lon. $100^{\circ} 34^{\prime} \mathrm{E}$. (r.) The river is deep enough for vessels of 350 tons, but there is a bar at its mouth on which the depth at low water is never more than 6 ft ., and at no time exceeds 14 ft . The city properly consists of three parts-the town itself, the floating town, and the royal palace. The first stands on a rich tract of alluvial land, low, but not marshy, and intersected by tributary streams, and winding creeks and canals, so that almost all intercourse is by water. Owing to the daily tides, and the annual inundations to which the town is exposed, the houses, which are mostly of wood, and many of them wretched hovels, are built on piles, and elevated above the water level. There are no regular streets, and each house has a small canoe or boat for its use. The floating town occupies the channel of the river, opposite to the town itself, leaving a considerable opening in the centre. The floating houses are of an oblong form, constructed of boards, and resting on rafts of bamboos, moored to the bank, in rows of cight, ten, or more in depth; they are occupied principally by Chinese, and provided with a covered platform, on which merchandise, fruits, rice, earthenware, dried fish, and fresh pork, are exposed for sale. The king's palace is on an island, from 2 to 3 m . in length, but of inconsiderable breadth, separated from the land by a narrow arm of the river, and is surrounded by high walls. Numerous temples, conspicuous by their tall spires and glittering gilding, are scattered through
built here of the teak and other timber furnished by the Siamese forests. The Clinesc and their descendants compose nearly three-fourths of the inhabitants. The remainder consists of Siamese, natives of Cambodia, Burmese, Peguans, Malays, and natives of Laos. Total pop. estimated at between 350,000 and 500,000.- (Crawfurd's Erbassy to Siam; Hamilton's East India Gaz.; Singopore Free Press.)

BANGOR, a city, port, and par., N. Wales, co. Carnarvon, at the head of Beaumaris Bay ; lat. $53^{\circ} 13^{\prime} \mathrm{N} . ;$ lon. $4^{\circ} 6^{\prime} \mathrm{W}$.; beautifully situated at the entrance of a small valley which opens upon the Laven Sands, opposite to, and about $2 \frac{1}{2} \mathrm{~m}$. S.E. Beaumaris, on the railway to Holyhead. It consists chiefly of one narrow crooked street, nearly 1 m . in length, and several smaller, lighted with gas, and abundantly supplicd with water; houses substantially built of stone. The principal buildings are the cathedral, a finely-situated and handsome structure, chiefly in the later style of English architecture, 214 ft . in length, breadth of body and side aisles, 60 ft . ; an Episcopal palace, deanery house, free school, market-house, assembly-rooms, and infirmary. The other places of worship are a Baptist, Independent, R. catholic, two Calvinistic, and two Wesleyan chapels. Bangor has likewise a free grammar, national, British, infant, and two boarding schools, an infirmary, dispensary, and a set of alms-houses for. six poor old single men. The principal trade is in slate, brought by railway from quarries about 7 m . distant, which employ upwards of 2000 men; chimney-pieces, tomb-stoncs, ridge-slates, writing-slates for schools, \&c., are manufactured from slate in the town. The only other trade carried on is shipbuilding. The scenery around Bangor is exceedingly pleasing and picturesque, and in many parts characterized by features of striking grandeur. The town is, on this account, much frequented by strangers, no fewer, it is said, than 50,000 visiting it annually. Bangor is one of five parliamentary boroughs returning together one member to the House of Commons. Marketday Friday; four fairs annually. Area of par. 6000 ac. Pop. of tn . and par. (1841), 7232; bor. alone, 5030 , now (1850) estimated at 6000 . -(Local Correspondent.)

BANGOR, par., N. Wales, co. Cardigan. Pop. 210.

BANGOR-monachorum, Bangor-is-ycoed, par., N. Wales, cos. Flint and Denbigh. Pop. 1257.

BANGOR, a tn., seaport, and par. Ireland: co. Down. The town, situated on an acclivity, the city. The principal one is of a pyramidal form, and is surmounted by a spire 200 ft . high. The palace, temples, and honses of a few chiefs, are the only edifices of brick and mortar, roofed with timber, and covered with red tiles. Fires are in consequence frequent. There are a R. catholic bishop, and three R. catholic churches, at Bangkok, and about 1000 R. catholics, either converted natives, or descendants of Portuguese settlers. The trade of Bangkok is considerable. The imports into the port, in the year 1846, amounted to about $1,130,000$ ticals ( $£ 120,000$ ), and the exports to $1,500,000$ ticals (about $£ 160,000$ ); this amount comprehending the trade with Singapore, Bombay, Batavia, Palembang, and England, but not the direct junk trade with China, which is very large, but of which no estimate can be obtained. The import duties are levied, not with any regard to the value of the goods, but upon the tonnage of the vessels entering the port. They act, therefore, alnost as a prohibition, especially on cotton manufactures, which hold the most important place in the trade. Principal exports:-sugar, pepper, lac, ivory, aromatic wood, and fine wood for cabinet-work; tin, hides, cotton, rice, salt fish, edible nests, \&c. Chief imports:-porcelain, tea, mercury, dried fruits, silk and silk goods, nankins, paper, and other Chinese manufactures; Indian printed goods, British cotton goods and woollens, British glassware, and opium. The commerce with the interior is also important. There is a considerable manufacture of tin vessels by the Chinese settlers; who are also workers in iron and leather, tanning and preparing large quantities of deer, ox, and buffalo hides for exportation. Vessels of 300 tons burden, and a great number of large junks, are
S. side of Belfast Lough, 4 m . N. W. Dona-
ghadee, lat. $54^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $5^{\circ} 35^{\prime} \mathrm{W}$., consists of one principal and several smaller strcets, all clean and well kept; houses of stone, but some of them so old and dilapidated, as to give a very unfavourable appearance to the town. There are many neat buildings, however, along the shore, which are let in the summer season as bathing quarters, Bangor being much resorted to for this purpose. It has an Episcopal church, a small Methodist, and a R. catholic chapel, and two Presbyterian churches, one of which is an elegant structure, and finely situated near the centre of the town; several well-conducted mercantile and mathematical schools, two cotton spinning-mills, and some trade in importing coals. The male part of the population is chiefly employed in fishing; the females in hand-sewing, in all its branches. Bangor takes its name from one of the earliest religions houses built with lime and sand-Bangor, i.e., White wall; built in 555 ; destroyed by the Danes in the 12 th century, and rebnilt by Malachy O'Morgair, primate of Armagh-part of the walls are still standing. In this town and parish are six Presby. terian churches; 9500 inhabitants, of which upwards of 9000 are Presbyterians, descendants of Scotch settlers in the reigns of Elizabeth and James I. Hamilton the poet, and correspondent of Allan Ramsay, was a native of Bangor, and Moore contends that this, and not Bangor in Wales, was the birthplace of Pelagius. Pop. of tn. 3500.-(Local Correspondent.)

BANGOR, a city and pert, U. States, cap. co. Penobscot, Maine, at the head of the navigation, r. bank, Penobscot river, 60 m . from the sea; lat. $44^{\circ} 47^{\prime} 50^{\prime \prime} \mathrm{N}$.; lon. $68^{\circ} 47^{\prime}$ W.; 68 m. E.N.E. Augusta, and 230 N.E. Boston; occupies
a pleasant and commanding situation, affording a fine view of the river and surrounding country. The buildings, both public and private, are neat, and many of them elegant. It has seven churches-a Congregational, Episcopal, Baptist, Methodist, Lutheran, Universalist, and K . catholic; two academies, 25 schools, a courthouse, and three banks. There is here also a theological seminary, called 'The Maine Charity School.' It is under the direction of the Congregationalists, has three professors, 43 students, 139 alumni, and 7000 volumes in its libraries. The harbour is spacious, of easy access, and capable of floating vessels of a large class, the tide rising 17 ft ; but it is not open in winter. The principal article of trade is lumber, brought down the river Penobscot in large quantities, 1200 vessels, of about 100 tons each, being employed in this trade during the navigation scason. There are, besides, 100 vessels engaged in the coasting trade, 50 in foreign commerce, and about 20 in the fisheries. It enjoys regular communication with Portland and Boston, by steamers, for eight montlis in the year. Tho city is governed by a mayor, seven aldermen, and 21 com-mon-councilmen. Pop. (1840), 8627.

BANG-PA-KUNG, a river, Siam, having its sources in the mountains which separate Siam from Cambodja, about lat. $14^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $102^{\circ} 15^{\prime} \mathrm{E}$. ; whence it flows in a S.S.W. direction towards the Gulf of Siam, into the N.E. corner of which it falls near Bang-pa-soe, lat. $13^{\circ} 30^{\prime} \mathrm{N} . ;$ lon. $101^{\circ} 7^{\prime}$ E. Its entire length is about 200 m ., and in size it is said not to be inferior to the Menam.

BANG-PA-SUE, a th. Siam, cap. of a dist. fertile in rice and sugar, near the mouth of the Bang-pa-Kung; lat. $13^{\circ} 30^{\prime}$ N.; lon. $101^{\circ} 13^{\prime} \mathrm{E} . ; 47 \mathrm{~m}$. E.S.E. Bangkok. It is a considerable town, containing several thousand inhabitants, and surrounded with a wooden stockade.

BANGUEY, a small isl. in the E. seas, near Balambangan lying off the N . extremity of Lurneo; lat. $7^{\circ} 19^{\prime} \mathrm{N}$. ; lon. $117^{\circ} 6^{\prime}$ E.; abounds in turtle.

BANIIAM, par. Eng. Norfolk; 3710 ac. Pop. 1165.
BANHO, a tn. and par. Portugal, prov. Beira-alta, dist. of, and about 10 m . from Viseo; on the Vouga, which is here crossed by a fine stone bridge of 10 arches. It has thermal springs, which were used by the Romans, and are so copious as to be capable of turning a mill. Pop. 650.

BANIAK. See Banjack.
BANIAS.-1, A vil. Syria, near the source of the river Banias, a tributary of the Jordan, $47 \mathrm{~m} . \mathrm{S}$.W. Damascus. This place, once the important city of Paneas, is now mean and insignificant, though many existent ruins, amid the finest scenery, attest its past grandeur. The relics of its Saracenic citadel, which once crowned the adjoining hill, still include foundation walls 10 ft . thick.-(Robinson's Researches in Palestine.) - 2, A small tn. Syria, coast of, and 53 m . N. Tripoli; with ruins of ancient Baneas.

BANJACK, Baniak, or BanJkh, an island group, Indian Archipelago, W, coast, Sumatra, 16 in number, yielding nothing but birds' nests and trepang; lat. (S.W. island, W. point) $2^{\circ} 8^{\prime} \mathrm{N} . ;$ lon. $97^{\circ} 14^{\prime} \mathrm{E}$. (R.) The principal island, Banjack, from which the group is named, lies opposite the month of the river Singel, and is about 18 m . long by 7 broad; lat. (S. point) $2^{\circ} 2^{\prime} 30^{\prime \prime}$ N.; lon. $97^{\circ} 15^{\prime} \mathrm{E}$.

BANJARMASSIN, Banjermassing, or Bandjirmasing [from Bandjar, inundation, Massing, frequent; or, according to others, Banjer, water, Massin, salt], once an extensive empire occnpying the S.E. corner of Borneo, upwards of 350 m . long and 270 broad, now all ineluded in the Dutch province of the S. and E. coasts of the island. The supremacy over this extensive tract has been ceded to Holland from time to time, so that now the Sultan of Banjarmassin reigns over only a small portion of his former empire, and even in governing that remnant, which he does in a manner absolutely, he owns the Dutch as his suzcrain. Ilanjarmassin, as arranged by treaty of 1846 , comprehends the tract of conntry bounded W. by the river Banjar or Barito, and Bekoompai; E. by the Mcratoos Mountains, the loftiest summit of which is 5905 ft . high. The two boundaries converge and unite N. at Mount Loeang, about lat. $1^{\circ}$ S.; lon. $115^{\circ} 45^{\prime}$ E., and S. about 8 m . S.W. Martapoora; area, estimated at 5946 sq. $m$. The Sultan resides in Martapoora, about 17 m . S.E. the town of Banjarmassin, which is the seat of the Dutch governor. The country appears to be generally flat,
and well-watered by numerous streams, of which the Banjar is navigable for a considerable distance inland. The soil is exceedingly fertile, bearing a spontaneous vegetation of great richness and variety. Amongst the products are dragons' blood, wax, pepper, benzoin, rattans, rice, and cotton ; birds' nests, iron, gold, and diamonds, large and fine. The gold is found at a depth of 15 to 20 ft . Good coal in abundance is found in the S.E., on the river Riam. In the N., at Nagara and Margasari, famed steel blades and other kinds of armour are manufactured, and excellent proas are constructed. The population is meagre for the extent of country, being estimated (1846) at not more than 120,000.- (Van der Aa; Temminek, Coup d'eil; Moniteur des Indes.)

BANJALUKA, a sanjak and tn. Turkey in Enrope, prov. Croatia. The town stands on the Verbas, which here separates Bosnia from Croatia, in lat. $44^{\circ} 45^{\prime} \mathrm{N} . ;$ lon. $17^{\circ} 12^{\prime}$ E. It is strongly fortifed, and contains a citadel, a number of mosques, several colleges, baths, and bazaars, and a manufactory of gunpowder. Pop. 7000.

BANJARMASSIN, a tn. Borneo, Dutch cap. of above territory, on an arm of the Banjar, about 14 m . above its mouth. The houses, being exposed to daily inundations of the river, are built on piles, elevated 3 ft . above the level of the marshy ground, and communicate with each other by means of a plank, which serves the purpose of a street. A large number of the houses are built on rafts, the front next the river being used as a shop or stall on which wares are exposed for sale. On market-days, the water is covered with skiffs, having a single individual in each, moving about selling vegetables, \&c. The people are continually on the river, all necessarles being purchased at these floating markets, and all business being done on the water. In every respect it is a floating town, possessing neither carriages nor horses; the only animals reared being pigs, goats, ducks, geese, and fowls. The houses of the European functionaries, the goverument buildings, and the fort, are built partly of stone and partly of wood. The fort Tatas is surrounded with palisades, and contains the resident's house, the magazines, and barracks. Exports:-pepper, benzoin, bezoar, ratans, dragons' blood, birds' nests, iron, and straw mats, very artistically made; and imports :-rice, salt, sugar, opium, coral,Chinese porcelain, silk, cutlery, gunpowder, \&c. The navigation of the Banjar is obstructed by a bar at its mouth, in lat. $3^{\circ} 32^{\prime} \mathrm{S} . ;$ lon. $114^{\circ} 42^{\prime}$ E. (R.), on which there are 11 to 16 ft . of water at high tide.

BANJOEMAS, a dist. or prov. and tn. Java. The District lies near the centre of the island, between lon. $108^{\circ} 35^{\prime}$ and $110^{\circ}$ E., and has a sea-board, towards the Indian Ocean, of about 35 m . It is chiefly of volcanic formation; consists in greater part of an extensive valley, watered by numerous streams, and is one of the richest and most fertile provinces in Java; producing rice, Turkish wheat, sugar, coffee, indigo, \&c. The climate, especially on the S. coast, is very changeable; still Banjoemas is not esteemed unhealthy. Pop. 316,063. -The town, cap. of prov., lies 22 m . from the coast, at the opening of the valley above referred to; lat. $7^{\circ} 33^{\prime}$ S.; lon. $109^{\circ} 20^{\prime} \mathrm{E}$. It is tolerably well built, is the residence of the governor, and contains a fort and garrizon. The inhabitants carry on a considerable trade, and are extremely frank and hospitable. Pop. 9000.

BANJOEWANGI, a tn., E. coast of Java, prov. Bezoeki, cap. of dist. of same name, on the Strait of Bali. It has a fort, and only one stone house-the governor's residence. It is an exceedingly unhealthy place. The lofty mountains landward prevent the wind from clearing the atmosphere, so that the heat is very great. In the vicinity are several volcanoes; the loftiest, Idjeng, about 15 m . N. W., is $10,170 \mathrm{ft}$. high.The disteict is the most E. portion of Java, and in greater part uncultivated, and covered with wood. A range of lofty mountains, several of them active volcanoes, shut it out from the rest of Java. The soil, mixed with lime, is naturally so fertile, that this is estcemed the most beautiful district in the island, but, at the same time, one of the most unhealthy. It was formerly used as a place of banishment; the convicts being employed in clearing the ground of trees, and in bringing it under cultivation. The coffee raised here is estcemed equal to Mokha; and many other products are of the greatest excellence. On the coast, near the capital, are some pearl-fisheries. Banjoewangi was formerly a small state, governed by its own chiefs. under the protection of the Prince of Bali.

## banka. See banca.

BANKEL, an isl. in the Asiatic Archipelago, at the entrance into the Bay of Tolo, E. coast, Celebes; lat. $2^{\circ} 20^{\prime}$ S.; lon. $122^{\circ} 50^{\prime}$ E. (r.)

BANKS'S ISLANDS.-1, A group of islands in the S. Pacific Ocean, about lat. $13^{\circ} 53^{\prime} \mathrm{S} . ;$ lon. $168^{\circ} 45^{\prime}$ E. (r.), named after the celebrated botanist, Sir Joseph Banks, as have also been various other islands, points, capes, peninsulas, straits, \&c., in different parts of the world.- 2, A group of islands in Spencer's Gulf, S. Australia, lat. $35^{\circ} 18^{\prime} \mathrm{S}$. ; lon. $136^{\circ} 55^{\prime}$ E. (R.)-3, An isl. in Torres Strait, in lat. $10^{\circ} 12^{\prime}$ S.; Ion. $142^{\circ} 19^{\prime}$ E. (r.)-4, Cape (West), S. Australia, Bonny Land; lat. $37^{\circ} 53^{\prime}$ S.; lon. $140^{\circ} 24^{\prime}$ E. (r.) - 5 , Banks's Land, British America, Arctic Ocean, the westernmost land seen by Parry; lat. $74^{\circ} 0^{\prime}$ N.; lon. $117^{\circ} 0^{\prime}$ W.-6, Banks's Peninsula, New Zealand, S.E. coast, isl. New Munster; lat. (extreme point) $43^{\circ} 54^{\prime}$ S.; lon. $173^{\circ} 1^{\prime}$ E. (r.)-7, Banks's Strait, the channel formed between the N.E. end of Van Diemen's Land and the Furneaux Islands.-8, A bay on the W. side of Albemarle Island, one of the Galapagos group, S. Pacific Ocean; lat. $0^{\circ} 9^{\prime} \mathrm{S} . ;$ lon. $91^{\circ} 30^{\circ} \mathrm{W} .-9$, A cape, isl. Baranov, King George III. Archipelago, Russian America.

## BANMO. See Bhaso.

BANN (Upper and Lower), two rivers in N. of Ireland. The first rises in a plain called the Deer's Mcadow, and sometimes the King's Meadow, in the mountains of Mourne, co. Down, about 8 m . E. Newry. After flowing a distance of 38 m. , in a N. direction, it falls into Lough Neagh, near the Ban-foot ferry, in co. Armagh. It is navigable by boats of 50 tons burden.-The Lower Bann is the outlet of Lough Neagh. It runs past Toome, and expands into Lough Beg, winding through a rugged country; and afterwards flowing by Portglenone in Antrim, and Kilrea in Londonderry, forming the boundary of the two counties; passing Coleraine, it falls into the Atlantic Ocean, 4 m . below that town, after a course of nearly 40 m . A bar at it3 mouth renders the navigation at the entrance to the river difficult in rough weather; but, on ordinary occasions, vessels of 200 tons can proceed as far up as Colerainc bridge. At that town occurs a fall of the river, called the Salmon Leap, and above it are one or two rapids. By means of the Newry navigation, the Upper Bann is made subservient to the opening of a commanication from Lough Neagh to the Irish Sea; and, if the Lower Bann were rendered navigable throughout, a safe communication would be opened from the Irish Sea to the Atlantic.
$\mathrm{B}_{\mathrm{a}}$ NNA, a river, S. Guinea, having its sources in a mountainous region, about 80 m . from the coast. It flows in a W.S. W. direction, and falls into the sea in about lat. $3^{\circ} 30^{\prime} \mathrm{S}$.

BANNALEC, a tn. and com. France, dep. Finistère, 19 m . E. Quinper; noted for its wrestling-matches, held annually in September, and which attract multitudes of spectators. The Breton wrestlers are celebrated for their strength, and scarcely less so for the singularity of their costume. A considerable trade is done here in cattle, horses, and poultry. During the wars of the League, a bloody battle was fought under the walls of Bannalec, between the leaguers and the royal trcops. Pop. 4372.

BANNINGHAM, par. Eng. Norfolk; 770 ac. Pop. 329.
BANNOCKBURN, a vil. Scotland, co. of, and 2 m. S.E. Stirling, on both sides of the Bannock, which divides it into two parts, called, respectively, Upper and Lower Bannoekburn. It is amply supplied with water, and both the private dwellings and public works are lighted with gas. It has three churches (Established, Free, and United Presbyterian), and four schools, well taught, and well attended. Bannockburn has been long celebrated for its woollen fabrics, consisting chiefly of tartans, tartan shawls, carpets, and hearth-rugs. All the tartan worn by the Highland regiments in the British army, has been made here for the last half century. The chief kinds of carpeting are Brussels, three ply, and Venetian. In Bannockburn moor, not far from the village, is an extensive coal-work, employing upwards of 100 workmen, who bear a high name for intelligence and moral character. A school has been established for the miners' children. This village, however, is still more celcbrated for the decisive battle of the same name, fought in its vicinity, between the English forces under Edward 1I., and those of the Scotch under Robert Bruce, by which the independence of Scotland was fully and finally secured, the former having been defeated with great
loss. This memorable battle was fought on Monday, June 24, 1314. The English army amounted to 100,000 men, the Scotch to about 30,600 . The best authorities represent the loss of the English on this occasion, in the battle and pursuit, to have been $30,000 \mathrm{men}$; while that of the Scotch is alleged to have been about 8000 , An interesting memorial of the conflict still remains at a short distance S.W. from the village of St. Ninianz, on the position occupied by the Scottish army. This is a large picce of granite, with a hole in it, in which was planted the Scottish standard, called 'Bored Stone,' from its having been pierced or bored for the reception of the pole of the standard. It is now protected by an iron grating from the depredations of the relic-hunter. Pop. 1987.

BANOLAS, a tn. Spain, Catalonia, prov. of, and 10 m . N. by W. Gerona; tolerably built; has four squares, a parish church, chapel, town-hall, hospital, Latin, and two other schools, and three public fountains. The inhabitants manufacture cotton fabrics of all kinds, oil, and paper; but most of them are engaged in agriculture and cattle-rearing. Thres annual fairs are held. Pop. 4600.

BANOS [baths], by itself, and with affixes, the name of numerous towns and villages in Spain, of which the following are the most important:-1. Baños, $a \mathrm{tn}$. Andalusia, prov. of, and 24 m . N. by E. Jaen; on the skirt of the sierra Morena; has indifferently-built streets, stecp, but well paved; a parish church, several chapels, a school, hospital, storehouse, and cemetery. The inhabitants are employed in agriculture and cattle-rearing. In the vicinity are mines of antimony, and thermal springs; from the baths attached to which last, the town derives its name and importance. Pop. 1770.-2, Baños de Cerrato, or de rio Pisuerga, a tn. Leon, prov. of, and 6 m . S. Palencia, between the rivers Carrion and lisuerga. It is ill built, has a small square, handsome Gothic parish church, chapel, townhall, prison, school and storehouse, and cemetery. Near it are baths, esteemed efficacious in various disorders. Pop. 272.-3, Baños de Ebro, a tn. Old Castile, prov. of, and 15 m . W. by N. Logroino, r. bank, Ebro; tolerably well built, and possessing a church, townhouse, prison, school, and storehonse. The baths are much frequented in the summer season for cutaneous affections. Pop. 331.-4. Baños, a vil. Estremadura, prov. Caceres, 30 m . W. Palencia, at the base of the hills which divide Estremadura from Leon. The baths are much resorted to for rheumatic complaints. Pop. 1636. -(Madoz.)

BANSBEREA, a considerable tn. Hindoostan, prov. Bengal, 1. bank, Hooghly, and $3 \frac{1}{2} \mathrm{~m}$. N.W. the town of that name. Within its limits are comprised two aljoining villages; and near it, to the N., are ruins of stone buildings of Mahometan structure.

BANSWARRA, a tn. Ilindoostan, dist. of Bagur, prov. Goojerat, eap. of a small native state, under British protection, 117 m . N.N.E. Baroda; lat. $23^{\circ} 34^{\prime}$ N.; lon. $74^{\circ} 32^{\prime}$ E. It is an agreeable place, surrounded with gardens, and contains some handsome temples, and a respectable bazaar. At a short distance from the town is a pool of water, with a stately flight of steps, overhung by palms, peepuls, and tamarindtrees; and beyond it, on the crown of a woody hill, are the towers of a large castle, formerly the palace of Banswarra.

BANTALLAN, an isl. Indian Archipelago, one of the smallest of the Plilippines, at the N. entrance of the strait between the islands Negros and Zebu; lat. $11^{\circ} 0^{\prime}$ N.; lon. $123^{\circ} 20^{\prime}$ E.

BANTAM, or Batan [rebellions people], a prov. Java, occupying the whole W. end of the island; bounded, N. by the Java sea, W. by the Strait of Sunda, and S. by the Indian Ocean, about $88 \mathrm{~m} . \mathrm{N}$. to S . in its greatest length, and as much in its greatest breadth. It is of very irregular outline, Cape Java or Java Head forming a high rocky peninsula, and is indented by the extensive bays of Bantam, Pepper, Welcome, \&c. The coast, in many parts, is difficult of access, but everywhere it abounds with fish. Bantam, inland, is mountainous, and has several extinct and two active volcanoes, Pulo Sarie, and Karang; the latter, the loftiest summit in the province, is 6069 ft . high Many of the mountains are wooded to the top, and among them warm sulpliurous springs are numerous. The N. part of the province is flat, in some places marshy, in others sandy, and in many insalubrious. Health is supposed also to be injured, on the S. coast, by the strong winds from the Indian Ocean. The climate of
the interior mountainous country is bracing and healthy, in proportion to the clevation. Here the thermometer does not rise so high, and is much more steady than on the coast, where sudden and great changes of temperature are frequent. Bantam, though fertile, is less so than some of the neighbouring provinces; and its fruits are not esteemed so highly as those of Batavia. Pepper was long the principal artiele of culture; but now, rice is the main artiele of produce, for the raising of which the numerous marshes throughout the province render it peculiarly well adapted. Coffee, cotton, indigo, and sugar, are also extensively eultivated; batatas and cocoa-nuts are produced in great quantities, and tobacco to a small extent. The rearing of cattle, buffaloes of large size, and goats, is a principal means of support; the latter are sent extensively to the market at Batavia. Of wild animals, tigers, rhinoeeroses, serpents, and apes, are plentiful; and pigs are superabundant.

Though sprited in hunting the tiger, the inhabitants are effeminate, voluptuous, and jealous in the highest degree; false, revengeful, and indolent. Still they manufacture coarse cotton eloths, striped and lozenge figured, much esteemed as an article of dress, and extensively sold to the natives of the interior, and to the neighbouring islanders. They prepare, also, yarn from the fibres of the pine-apple, pottery-ware, excellent mats of bulrushes and bamboos, and fine chalk, extensively used by Europeans throughout the Indian Arehipelago for plastering and whitewashing houses, and by the natives themselves, for various purposes. The religion is Islamism. The principal towns are Bantam (the capital), and Serang.

Bantam at one time formed an independent kingdom, under a sultan of her own; and though, from the time the Duteh obtained full supremacy in Java, they held a certain sway over it, still it was not till the beginning of the present century that it was incorporated formally with their possessions, and placed directly under their government, the then reigning sultan being bauished to Amboina. Pop. (1838), 362,242.-(Van der Aa.)

BANTAM, an old and celebrated tn. Java, cap. former kingdom, and present prov. of same name. It is beautifully situated on the bay and river of the same name, and backed by lofty picturesque mountains; lat. $6^{\circ} 1^{\prime} 42^{\prime \prime} \mathrm{S} . ;$ lon. $106^{\circ} 10^{\prime} 42^{\prime \prime}$ E. (r.) The river Bantam divides into three arms; the centre one of which, not very deep, passes through the town, the other two bounding it right and left. The houses, chiefly of reeds plastered with clay, roofed with leaves, and each one surrounded by a bambou enclosure, and thus separated from one another, are so embosomed among cocoa-nut trees that it is somewhat difficult at first to suppose one's self in a town. The Sultan's paiace, and the Dutch forts-Spelwijk and Diamant-are in ruins; and the only building of note is the mosque or temple, surrounded by a lofty wall, and adorned with a small tower or minaret. In the W. part of the town is the Chinese quarter; and beyond it, at some little distance, are situated the dwellings of the Europeans. Towards the shore, fishermen live in miserable huts, and behind them are some salt-pans. In consequence of the numerous mud banks on the shore, and the pent-up position of the place, Bantam is one of the most unhealthy spots in Java, frequently being the whole day so enveloped in thick mist, that nothing can be seen from the roads but the mere outline of the bay. A few miles from the town the atmosphere is found to be quite clear.

Bantam is one of the oldest and most famous towns in the East, and, at one time, was the prineipal mart of the Duteh; but its trade has now been transferred to other channels. It was at one time 2 m . long, but, by fire, as well as the loss of trade, it has been reduced both in size and appearance.-The bay is about 8 m . E. to W., by about 5 or 6 m . N. to S ., from the island of Panjang, at its mouth, to the town of Bantam. Several islands are scattered over its surface, of which Panjang is the largest. Formerly the bay was deep and the anchorage good, and it was frequented by numerous and large vessels, but, from the increase of the mud deposits, it has become much shallower, so that even small vessels reach the town with difficulty.-(Van der Aa.)

BAN'TRY, a seaport tn. Ireland, co. Cork, at the head of Bantry harbour, near the N. end of Bantry Bay, E. side, 54 m . W.S.W. Cork ; lat. $50^{\circ} 40^{\prime} 48^{\prime \prime} \mathrm{N}$. ; lon. $9^{\circ} 27^{\prime} 12^{\prime \prime}$
W. (R.) It consists of two parallel strcets, irregularly and indifferently paved; some good houses, but the greater portion squalid huts, imparting to the town altogether a very mean appearance; and contains a parish church (a plain modern building), a R. catholic chapel, and a Wesleyan meeting-honse. It has little trade, and no manufactures, although it had formerly a considerable amount of both. The scenery around it is of the most pieturesque deseription. Pop. 4082.-The bay, remarkable at once for its natural beauties, and its natural advantages, although the latter are turned to little account, is large, safe, and commodious for vessels of any size. The water is deep close to both shores, no rocks or shoals in the way but such as may be easily avoided, and the stream of tide is scarcely sensible in any part of it. The points of land forming the entrance into Bantry lBay are, Crow Ilead on the N.W , and Sheep's Head on the S.E.; the latter in lat. $51^{\circ} 33^{\prime}$ N. ; lon. $9^{\circ} 27^{\prime} 4^{\prime \prime} \mathrm{W}$.

BANWELL, vil. \& par. Eng. Somerset; 4970 ac. P. 1819.
BANYA-FELSÖ, a mountain village, Hungary, cirele, Thither-Theiss, co. Szathmar, 5 m . E. Banya-Nagy. It contains a parish chureh (R. catholic), a Greek, and a Reformed church. Pop., consisting of mixed races, 4720.

BANYA-NAGY [anc. Rivuli Dominarum], a mountain tn. Hungary, co. Szathmar, 93 m . E. Debreesin, and not far from the borders of Transylvania. It has gradually risen from a mere mountain village to the rank of a town, and carries on a considerable trade in wine, fruit, and earthenware. The inhabitants suffer much from a want of good water, though there are springs in the neighbourhood whieh, it is said, might be brought into the town at very little cost. Four yearly markets are held here. Pop. 5500.

BANYU WANG1. See Banjoewangi.
BANYULS-sur-mer, or Banyuls-la-maiso, a vil. France, dep. Pyrénées-Orientales, arrond. of, and $20 \mathrm{~m} . \mathrm{E}$. Ceret, in a small bay formed by the Mediterrancan, near the frontiers of spain. It was a place of some military importance in the Spanish war, and the scene of several encounters. An excellent red wine, of a deep colour and great strength, called Rancio, from its resemblance to a spanish wine of that name, and a rieh sweet winc, known by the name of Grenache, are grown in this district, which, in addition to its wines, has also a trade in grain. Pop. 1357.

BAOL, a state of W. Africa, Senegambia, having the state of Sin on the S., of Kayor on the N., the Jaloff territory on the E., and the Atlantic on the W. Its N. boundary is about 35 m . S.S.E. Caje Verde, the parallel of $14^{\circ} 30^{\circ} \mathrm{N}$. passing nearly through its centre.

BAPAUME, a tn. France, dep. Pas-de-Calais, 14 m . S.S.E. Arras, regularly built, and fortified after plans of Vauban. The inhabitants were formerly obliged to use water of bad quality, but, in 1723, an artesian well was sunk in the vicinity, and an abundant supply obtained. Fine woollens and ealicoes are made here, and cambric is extensively manufactured in the vicinity. Bapaume has also spinning-mills, saltworks, soapworks, and tanneries. Pop. 2973.-TThe name of a large manufacturing village in the neighbourhood of Rouen, on the top of the long and steep hill of Cantalen, is pronouneed in the same way, but spelled Bapeaume.

BAPCHILD, par. Eng. Kent, 1080 ac. Pop. 338.
BAR, a tn. Ilindoostan, prov. Bahar, presid. Bengal, r. bank, Ganges; lat. $25^{\circ} 28^{\prime}$ N.; lon. $85^{\circ} 50^{\prime}$ E. It is meanly built, but is of large extent, and has a considerable trade. Pop., including Masurgunge, 26,000.

BAR [formerly $l i 6 w$ ], a tn . Rnssia, gov. Podolsk, 68 m . N.E. Kamenetz, on the Kow. It is defended by a citadel, built on a rock, and contains several churches, and a monastery. Bar is famous for the confederation, formed here Feb. 29, 1768, by the Polish nobles, Pulaski, lotocki, and Krasinski, against the Russians. Pop. 3000.

BAR-le-duc, or Bar-sur-ornain, a tn. France, cap. dep. Meuse, 125 m . E. by S. Paris. It was formerly fortified, and had a eastle, but which, with the fortifications, is now in ruins. The modern Bar is composed of an upper and a lower town. The former, situated on an eminenee, on which it rises in the form of an amphitheatre, is the aristocratic district. It commands a fine view, is well built, and has several elegant mansions. The lower town extends into the valley traversed by the Ornain, which is here crossed by three stone bridges. It is a busy active place, with many shops, manufactories,
warehouses, and places of bnsiness. The strects are wide, and well laid out; in particular, those of Rochelle and the Capuchins, which are lined with a double row of lime-trees, but the public buildings are of an inferior description. The church of the upper town contains the monument of Rene de Chalons, Prince of Orange, who was killed in 1544, at the siege of St. Dizier. It consists of an altar of black marble, into which a white marble skeleton, of almost hideous appearance, has been inlaid, and was executed by Richier, a pupil of Michael Angelo. The clief manufactures are cotton yarn, cotton and woollen stuffs, printed calicoes, and coloured handkerchicfs. The preserved fruits and confectionary, as well as the wines of Bar, are in great repute. In the environs are ironworks and stone quarrics. Fir and oak planks are also prepared, and sent to Paris. Pop. 12,673.

BAR-sur-aube [Barrum ad Albam], an anc. tn. France, dep. Aube, 29 m. E. Troyes, agreeably situated, r. bank, Aube, here crossed by a bridge; at the foot of the St. Germain mountain, in a valley, surrounded with picturesque hills covered with vineyards. In general it is badly built, and the streets inconveniently laid out. It has two ancient churches, one of which is of large dimensions, and an bospital, founded in the 11 th century. On the neighbouring mountain of St. Germain are the remains of a camp, said to liave been occupied by Attila. Calicoes, waxcloths, nails, brandy, and vinegar are manufactured here; and a considerable trade is done in corn, wine, wood, hemp, and wool, is embarked on the Saône, and forwarded to Lyons and the S. of France. In 1631, above three-fourths of the inhabitants of Bar-sur-Aube were carried off by the plague. In 1814, a hotly contested action was fought here between Napolcon and the allies. Pop. 4134.

BAR-sur-seine, a tn. France, dep. Aube, 19 m. S.E. Troyes, r. bank, Seine, which is here a small limpid stream, and is crossed by an elegant stone bridge. It is walled, well built, and very clean, with streets regularly laid out; and has manufactures of paper, cotton, hosiery, cutlery, and some tanueries. Its prineipal trade is in corn, wine, brandy, hemp, wool, and leather. Pop. 2162.

BARABA, a steppe, Siberia, govs. Tobolsk and Tomsk. It is a vast plain, formerly a sea, between the rivers Irtish and Obi, which constitute its N., W., and E. boundaries, while the Altaï Muuntains bound it on the S., about 400 m . in length, and about 300 in breadth. This great expanse of flats is full of swamps and salt lakes, but is in many parts fertile; and a considerable portion has been brought under cultivation by colonists settled there by the Russian Government. Bears and wolves abound, as well as domestic poultry and cattle. The horses are small, but so vigorous and nimble, that there is no part of Siberia where one is conveyed from place to place with such celerity as here.-(Cochrane's Journey through Russia and Siberian Tartary.)

BARACOA.-1, A harbour, N.E. end of Cuba; lat. (eutrance) $22^{\circ} 20^{\prime} 50^{\prime \prime} \mathrm{N}$. ; lon. $74^{\circ} 21^{\prime} \mathrm{W}$. The opening is clear, but exposed to heavy swells.- 2, A tn. situated on the S.E. point of the harbour, and between the two anchorages of Baracoa and Molasses ${ }^{6}$ beach. It is inhabited chiefly by pilots.

Barahat, or Baramatit, a tn., N. Hindoostan, cap. Gurwal ; lat. $30^{\circ} 45^{\prime}$ N.; lon. $78^{\circ} 22^{\prime}$ E. ; on the N.W. bank of the Ganges; once a place of some importance, afterwards an insignificant village, but again rising into importance; a station for pilgrims visiting Gangoutri.

BARAITCHE, or BERAITCH, a tn. and dist. Mindoostan, prov. Oude. The town stands in a pleasant situation, 64 m . N.E. Lucknow, 68 m. N.W. Oude; lat. $27^{\circ} 38^{\prime} \mathrm{N}$. ; lon. $81^{\circ} 35^{\prime} \mathrm{E}$. It is a place of great antiquity, and is described by Abu Fazel, in 1582, as a large eity. The N. part of the district is covered with dense torests; but towards the river Goggra, the country is open, fertile, and tolerably well cultivated. Many of the old Patan race are found scattered over the district, and one of their chiefs has still the title of Khan of Baraitche.

BARANCA (Nueva), a tn. New Granada, at the junction of the Mahates with the Rio Magdalena, 45 m . S.E. Cartagena. It is a thriving place, and the point of cmbarkation of goods and travellers from Cartagena going up the Magdalena. and of tleharkation for those coming down that river.

BARANELL(), a tn. Naples, prov. Samnio, 5 m . S.W. Campo-Basso. Pop. 2663.

Vol. I.

BARANYA, one of the best peopled countics of IInngary, forming part of the circle beyond the Danube, and lying between that river and the Drave. It has an area of nearly 1500 geo. sq. m. The surface is generally flat, and, where under cultivation, very fertile, yielding, in abundance, corn, wine, fruit, and fodder ; but about a half of the whole is covered with forests. Great numbers of cattle are reared. The county is divided into six districts, containing one royal burgh (Fünfkirchen), one municipal town, 11 market towns, and 337 villages. Pop. 285,000.

BARATARIA, an isl., bay, and lake, U. States, Louisiana, N. coast, Gulf of Mexico. The island is small, lics at the entrance of Barataria Bay; lat. $29^{\circ} \mathrm{N} . ; \operatorname{lon} .90^{\circ} \mathrm{W}$. ; is a strong military position, and affords a safe and commodions harbour for merchant vessels and small ships of war.-The bay, 37 m . S. New Orleans, is surrounded by a flat marshy country, and was formerly much resorted to by pirates.The lake, a little W . of the bay, is about 30 m . long, and 8 m . broad.

BARBA, a river, Guatimala; rises in lat. $14^{\circ} 48^{\prime} \mathrm{N}$. ; lon. $84^{\circ} 45^{\prime} \mathrm{W}$., and falls into the Caribbean Sea, by two branches, one terminating near Beaver's Island, the other several miles to the E. of it; the embonchures of both being nearly on the parallel of $14^{\circ} \mathrm{N}$. The entire course of the river is about 90 m .

BARBACENA, a city, Brazil, prov. Minas Geracs, 150 m . N.W. Rio de Janciro, on the top of two hills in the serra Mantiqucira, about 3500 ft . above the sea; lat. $21^{\circ} 22^{\prime} \mathrm{S}$.; lon. $45^{\circ} \mathrm{W}$. It enjoys a mild climate; has broad straight strects, the two principal ones are paved, and have a footpath on either side; the houses are low, and have gardens in the rear. The parish church is in the middle of a large square, in which the two principal streets meet, and there are, besides, in Barbacena three other churches, a townhall, prison, and primary school. The chief occupations are extracting gold, and exporting large quantities of cotton and coffee to Rio de Janeiro. Pop., tn. and dist., including three parishes besides that of Barbacena, 12,000 .

BARBADOS, an auriferous river, Brazil, prov. MattoGrosso, which falls into the I'araguay, on its r. bank, lat. $15^{\circ} \mathrm{S} . ;$ lon. $57^{\circ} 30^{\prime} \mathrm{W} .$, after a S.E. course of 120 m .

BARBADOS, or Barbadoes, the most E. of the Caribbee Islands, standing apart from that chain at about equal

distances ( 78 m. E.) from St. Lncia and St. Vincent. Its capital, Bridgetown, situated at the S.W. corner of the island, is in lat. $13^{\circ} \pm^{\prime} 12^{\prime \prime} \mathrm{N}$. ; lon. $59^{\circ} 37^{\prime} \mathrm{W}$. (R.) Barbalos is 21 m . 41

## BARBADOS

in length, 13 in breadth, and 55 in circumference, excluding the sinuosities of the bays, and contains about $166 \mathrm{sq} . \mathrm{m}$., or $106,470 \mathrm{ac}$. It is nearly encircled by coral reefs, which in some places extend 3 m . to seaward, and render the navigation dangerons. It has no mountains, nor any very elevated sum. mits, the highest, Mount Hillaby, being only about 1145 ft . above the level of the sea. The surface, however, is mueh diversified, and often picturesque, presenting, on a small scale, a succession of valleys, hills, table-lands, cliffs, gorges, and ravines, some of the latter exhibiting perpendicular walls of 150 ft . The low lands are of limited extent, and are confined to the N., S., and S.E. parts of the island. About a seventh part of l3arbados consists of tertiary sandstones and limestones, rising to considerable heights; the remainder is covered by raised coral reefs, divided by vertical walls of coral rock, some of them nearly 200 ft . high, into six terraces, indicating as many periods of upheaval. In the lowest of these terraces, 15 or 20 ft . above high water, Indian hatehets have been found, showing that the last movement had taken place within the human period. With exception of the most minute forms of organie life, marine bivalve and univalve shells, no fossil remains of any kind have been hitherto discovered in the rocks which compose the island. It is not supposed that Barbados possesses any of the precious metals. Bituminous coal is found in many places, and is used as fuel in furnaces. Petroleum, potter's elay, and ochres, yellow and brown, also abound. The clays, which are more or less mixed with silicious matter, were formerly extensively used for the preparation of earthenware, and the ochres are sometimes employed as paints by the labourers. There are also several mineral springs on the island, but no streams deserving the name of rivers; although some are so called; they are mere streamlets, excepting during the tropical torrents, when they become impassable. The productive soil of Barbados is of a reddish brown hue on the higher table-land; in the low lands it is black, and somewhat reddish in the parts where it is shallow. This black mould is the best suited for the growth of the sugar-cane. It is considered one of the healthiest islands in the W. Indian Archipelago; for, being open to the sea breezes, and cultivated throughout, injurious miasmata are unknown. The most delightful months in the year are January and February; the hottest, July, August, September, and October, when the heat is extremely sultry and oppressive. The heaviest rains fall in November and December. Barbados is subject to hurrieanes and thunder-storms of the most violent character. One of the most destructive of the former on record, occurred on October 10, 1780, when 4326 persons perished, and the colony was damaged to the extent of £1,320,564 sterling. Land-slips have frequently occurred by which houses and growing trees have completely changed their positions. There are now no woods or forests in Barbados, these having been all cut down to make way for agrieultural operations. The indigenous mammalia coniprise only the Barbados monkey, the racoon, both auimals nearly extinet, though formerly so numerous as to be objects of legislative enactment for extirpation; an indigenous mouse, and two specics of bats. The list of birds is also extremely meagre; the number of indigenous species amounting only to 11 , of which the Barbados blackbird is the most conspicuous. The island is now much infested with wild dogs -the progeny of the domestic animals imported from Britain, chiefly by the labourers. These have turned wild, and have increased so rapidly as to commit the most serious ravages in the sheeppens. A dog-law has been introduced for their destruction, but hitherto without entire success. The cattle used in the island are chiefly imported from Porto Rico, Angostura, and the Orinoco; the horses mostly from the U. States. An extraordinary mortality, amounting to 25 per cent, prevails here among the latter, causing a large annual importation of these animals. Barbados possesses an unusual portion of cultivable soil. Ont of the $106,470 \mathrm{ac}$. which its area contains, no fewer than 100,000 are under cultivation, 40,000 of which are annually planted in sugar canes; the remainder being either appropriated to provisions, or used as pasture. The cultivation of the natural pasture grasses, however, seems to be neglented for that of sugar ; the best descriptions of the former having been eradicated by the progress of the latter, leaving only the hardiest and worst. There is also much room for improvement in some of the agricultural departments. 'Few
things strike a stranger more, on his arrival at Barbados, than the bad state of the working cattle, and sceing 10 , and some. times 12 , weak oxen drawing in a waggon. The same numher are put to the plough. The eattle are generally of a small breed, and much out of condition, which seems attributable both to the scareity of sufficient food, and to the want of shelter from the sun and rain.'-(Governor Reid's Report, May 24,1848 .) The account given by Mr. Menry Dummet, a native of Barbados, and a large proprietor there, is somewhat different, and, generally, suggestive of other inferences. In his evidence before the select committee on sugar and coffee planting, in Mareh 1848, he states, 'That mules and horses are generally employed, and have nearly superseded eattle; that the cultivation of the island, particularly that of the sugar-cane, is perfect, and that improvements of every nature are eagerly sought after and adopted.' 'The staple articles produced in the island for export, are sugar, arrowroot, aloes, and cotton. Fustic, logwood, rum, indigo, and tobacco, were formerly exported in considerable quantities, but the cultivation of the last two has been long since entirely abandoned; rum does not remunerate, and fustic and logwood are now raised in small quantities only. The greatest quantity of sugar the island ever produced was in the year 1838, when 32,500 hogsheads were exported; latterly the quantity has been much less, rarely exceeding 25,000 or 26,000 hogsheads, and often considerably below that amount. Notwithstanding this great decrease, the general trade of the island, judged of by the following table, appears to be on the increase :-

Trade and Navigation or Barbados.

|  | Commerce. |  | Shipping. |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| Years. | Imports. | Exports. | Outward. |  | Inw |  |

| 1846 | 631,267. | 773,405 | 90,310 |  | ...93,330 |  |

The trade with Great Britain has always been, and continues to be, the most important, surpassing in amount the whole commerce of Barbados with all other parts of the world. More than three-fourths of the exports go to Great Britain, principally sugar molasses, cotton, and aloes; the remainder to the other W. India islands, the British N. American colonies, the U. States, and various other foreign parts. The chief imports from Great Britain, amounting to more than a half of the whole trade, consist of corn, flour, manure, salted meat, rice, spirits, refined sugar, tea, wines, and miscellaneous goods. All British manufactures, or articles of British growth, are free of colonial duty. The number of vessels belonging to the colony in 1843 was 41 , tonn. 1778 ; of these, 12 were above 50 tons. The revenue of the island, chiefly derived from the exports and imports, from duty on brandy and gin, and from surplus tonnage and crown duties, amounted, in 1845 , to $£ 57,751,2 s .9$ d. ; the expenditure, to $£ 52,347$, 19 s .3 d ., of which the expenses of the civil establishment absorbed $£ 34,571,10 \mathrm{~s} .10 \mathrm{~d}$. Both income and expenditure appear to be on the decrease. The moral condition of the lower classes in the island is far from leing satisfactory, although it is said to be improving. This, however, does not appear to be the case from the report of Governor Reid, who, in his despatch of May 24, 1848, says, "That the number of marriages contracted, does not show the progress making in this respect (social order), and that marriage is too often contracted in order to obtain legal powers over younger women. Illegitimate ties with a plurality of women,' he adds, 'are maintaining many social evils in the $\mathrm{W}_{\text {. }}$ Indies, which Government should strive to diminish.' The condition of the agricultural population of Barbados, which is estimated at 45,000 , seems, on the whole, to be tolerably comfortable. A labourer's pay, with a cottage, is about 10 d . per day; without, from $1 \mathrm{~s} .0 \frac{1}{2} d$. to $1 s .3 d$. nine hours work, but working only five days in the week, Saturday being a holiday, or employed in the cultivation of his provision-grounds, which, favoured by the chmate, yield so abundantly, that a single day's labour is sufficient for a week's subsistence. The local government of Barbados consists of a governor-in-chief, assisted by a council. The governor has the title of Excellency, and is invested with the chief? civil and military authority. The council have, hy courtesy,
while in the colony, the title of Honourable, and consists of 12 members, who are appointed by mandamus of the sovereign. The house of assembly is composed of 24 delegates, elected annually, two for each parish, and two for the city of Bridgetown, by the body of the people. The governor may, at any time, of his own authority, aljourn, prorogue, or dissolve the assembly. The courts for the administration of civil justice are, the courts of ehancery, of common pleas, of exchequer, of ordinary, of admiralty, of error, and of escheat. For the administration of criminal justice, there are the court of grand sessions, and the court of admiralty sessions. An efficient police force was established in the island in 1835 . In 1846, the militia of the island amounted to 1733 men, including officers, \&e.; but the usual number is from 1000 to 1100 , the year named having been one of political exeitement. The island is divided into 11 parishes, and has 11 parish churches, and 32 chapels, ehapel-schools, or licensed places of worship. There are in the island, besides, four missionary stations belonging to the United Brethren, the congregations of which amount altogether to 3911 individuals; eight chapels and four meeting-houses belonging to the Wesleyan Methodists, the united congregations of which amount to 5380 persons; and a Jewish synagogue, one of the handsomest buildings in the West Indies, although the congregation numbers only 70 persons. There are but few $R$. Catholics on the island, but there is a priest stationed there, chiefly in consequence of the military, amongst whom there are always many of that persuasion. The whole chureh aecommodation of the island comprises 13,800 sittings, for a population of about 123,000 . Of the schools of the island generally, Governor Reid, in the despatch previously referred to, reports unfavourably. ILe says, he found them in a very low state, and not at all suited for the wants of the colony; but that means were being taken for their improvement, and for increasing the number of branches tanght. The schools for the education of the poor are 59 in number; in which, between 3000 and 4000 children are educated. There are also Sunday-schools attached to nearly all the churehes and chapels. Some of the public schools are supported by parochial grants; the children being, in some cases, maintained and clothed, as well as instructed. At the head of the edncational establishments of the island, stands Codrington College, founded by Col. Codrington, a native of Barbados, who died in 1710. The building was begun in 1716, and was finished in 1721. It is beautifully situated on the E. side of the island, at the distance of about 14 m . from Bridgetown; and has a disposable annual revenue of $£ 3610$; expenditure in salaries to professors, schoolmasters, \&e., £2510. Neither booksellers nor pnblie libraries are so numerous in the island as might be desired; of the former, there are only two, and of the latter, there were none till 1847, when one or more were established, through the instrumentality of Governor Reid; previously, however, several libraries belonging to private associations, ineluding a clerical library, were in existence. The benevolent and charitable institutions are numerous, and on a scale highly creditable to the Christian feeling of the inluabitants. The principal institutions of this kind are, the general hospital, opened in 1844, with accommodation for 77 in-door patients, and a lunatic asylum. There are, besides, a large and commodious alms-house in Bridgetown, and a long list of minor charities, supported by voluntary contribution. There are several literary and agricultural societies, and five weekly newspapers; one of which, the Barbados Mereury, has existed for upwards of 114 years.

There are several small towns on the island, but the principal is Bridgetown, which was erected into a city in 1842. (See Bridoetown.)
The early history of the island is involved in unecrtainty, and the events of the settlement variously related. It would seem, however, to have been known to geographers in the early part of the 16 th century, as appears from a manuscript chart of the world preserved in the British Museum, and believed to have been executed previous to the year 1536, where it is slown in correct relative position to the other Caribbee Islands, under the name of Bernados. No settlement, however, was made in Barbados till 1625, when Sir William Courteen, a merchant of London, established a colony there, although it had been visited 20 years before by an English vessel, ealled the Olive Blossom, the first ship from
that country, it is supposed, that had ever touched its shores. It has remained in the possession of the British ever since the founding of the settlement in 1625.

The population of Barbados is the most dense of any spot of land in the world, and is believed to be fast inereasing. At present it is about 122,198 , which gives 734.8 individuals to each sq. m., being nearly three times that of England, Wales, and Ireland, and nearly eight times that of Scotland.-(Schomburgk's Barbados; Parliamentary Reports, \&c.)

BARBARA SAN'A.-1, A small isl., channel, and tn. California. The ISRAND is in lat. $33^{\circ} 23^{\prime} \mathrm{N} . ; \operatorname{lon} .119^{\circ} 2^{\prime}$ W. (r.) The channel is the narrow passage between the island of Santa Cruz and the mainland, the S . entrance of which is erossed by the parallel of $34^{\circ} \mathrm{N}$. The rown lies at the head of the pert or harbour of San Felipe, 230 m. S.W. San Franciṣco; lat. $34^{\circ} 24^{\prime} 12^{\prime \prime}$ N.; Ion. $119^{\circ} 41^{\prime}$ W. (r.) -2, A port, N. end of the isl. Campana, W. coast, Patagonia; lat. $48^{\circ} 2^{\prime}$ S. ; Ion. $75^{\circ} 30^{\prime}$ W. (R.)

BARBAREEN, a small tn. and seaport, Ceylon, W. coast, dist. of, and $3 \frac{1}{2} \mathrm{~m} . \mathrm{S}$. Cultura; lat. $6^{\circ} 28^{\prime} \mathrm{N} . ;$ lon. $80^{\circ} 3^{\prime} \mathrm{E}$. Most of the hous 3s are covered with tiles. It has manufaetnres of cordage and iron, is a port of entry and export. The principal artiele of commerce is cocoa-nuts, of which large quantities are produced in the vicinity.- (Ceylon Gazetteer.)

BARBARY [anc. Barbaria or Berberorum Terra], the most N. general division of N. Africa; bounded, N. by the Mediterranean, E. by Egypt, S. by the Sahara or Great Desert, and W. by the Atlantic Occan. Its length, from Es to W., is about 2600 m . ; its breadth, from N. to S., varies from about 140 to about 550 m . It comprises the empire of Marocco and Fez on the W., the French colony of Algeria, and the regeney of Tunis in the centre, and the regeney of Tripoli, including Barea and Fezzan, on the E. Its different parts were known to the ancients under the names of Manritania, Numidia, and Africa Proper. Its superficial extent bas been estimated at 650,000 to $700,000 \mathrm{sq}$. m . The name has given rise to some dispute, but is probably derived from Berber, the designation given by the Arabs to its ancient inhabitants, who were called Berbers, and whose deseendants, forming a large portion of the general population, still inlabit the mountains and valleys of the Atlas. (Sce Algeria, Barca, Fez, Fezzan, Marocco, Trimoli, and Tunis.)

BARBASTE, a tn. France, dep. Lot-et-Garonne (Condomois), elose on the edge of the Gestise, 4 m . from Norac. The town, which is well built, and has a cotton-mill, numerous vinegar-works, and several cork-factories, lies at the termination of the ancient road commonly called Cæsar's road or Tenarèse, whieh crossed the river by a bridge, at a point a little below that where a Gothic bridge of seven arehes now stands. At one extremity of this bridge stands a large square building with walls of great thickness, and flanked at each of its corners by a square turret, which terminates in a point. This edifice, and the mills attached to it, having been the property of Henry IV., sometimes procured for him the sur name of the 'Miller of Barbaste.' Pop. 1715.

BARBASTRO, a eity, Spain, Aragon, prov. of, and 28 m. E.S.E. Huesca, in a mountain distriet, occupying a declivity, at the top of which stand the prineipal buildings and older parts of the town, and at its base runs the river Nero, erossed by two bridges of stone, and one of wood. The city has straight, well-made, and paved streets, several squares, a cathedral, parish church, college, Latin, and three other schools, townhouse, session-house, eeclesiastical court-house, extensive hospital, two prisons, several convents, with churches attached, two palaces, a theatre, and bull-ring. In the vicinity are fine gardens and promenades, adorned with luxuriant trees and elegant fountains. It also possesses philosophical, agricultural, commercial, and other literary and beneficent associations. The manufactures of Barbastro have greatly declined, consisting only of hats, hardware, cutlery, shoes, and ropes; and a little trade is carried on in horned eattle, horses, and mules, reared in the vicinity; and two annual fairs are held. Pop. 6175.

BARBERINO-mi-mugello, a tn. aud com. Tuseany, dist. of, and 16 m. N. by E. Florence, on the Sieve. Straw hats are made here in large quantities. In the vicinity is the royal villa of Cafaggiola, the ancient residence of the Medici. Pop. 9399.

BARBERINO-di-val-D'ELSA, a tn. Tuscany, prov. of, and 14 m . S. by W. Florence, commanded by a castle. The Barberini family, to which Pope Urban VilI, and several cardinals belonged, derived its name from this town. Excellent cheese, called 'di Lucardo,' is prepared here. I'op. 725.

BARBEN'I'ANNE, a tn. France, dep. Bouches-du-Lhône, about 4 m . S. Avignon, at the eonfluence of the khône and Durance, in a wine and fruit district. The town, on the slope of a hill, surmounted by the ruins of an old castle, is well built, and has a fine promenade. The inhabitants, who are remarkable for their liveliness and love of dancing, are engaged exclusively in the culture of the ground, and more especially in that of vines and olives. Pop. 1831.

BARBEZIEUX, a small tn. France, dep. Charente, 20 m S.W. Angoulême. It is tolerably well built, and pleasantly sitnated in a wine and grazing district. Trade:-principally in agricultural produce. It has also some manufactures of coarse hempen cloth, and extensive tanneries. There is a mineral spring in the vicinity. Pop. 2335.

BARBONA, a tn. Austrian Italy, gov. Venice, prov. of, and 20 m . S.S.W. Padua, l. bank, Adige, containing a parish church and an oratory. Pop. 2500.

BARBUDA, one of the Caribbean or W. India Islands, belonging to Great Britain, 27 m . N. of Antigua, of anı oval form, 15 m . long, S.E. to N.W., and 8 m . broad; lat. $17^{\circ} 33^{\prime} \mathrm{N}$.; lon. $61^{\circ} 43^{\prime} \mathrm{W}$. (r.) It is low, level, and fertile, well covered with woods, stocked with deer and various kinds of game. Some dangerous reefs extend off the island. The climate is healthy, and the air so mild and pure, that invalids from other islands resort bere for the benefit of their health. The island is a proprietary of Government, the only one in the W. Indies, and belongs to the family of Codrington. It prodnces, in great abundance, corn, cotton, pepper, and tobacco, but no sugar. It has no harbour, but a roadstead on its W. side.

BARBY, a to. Prussian Saxony, gov. of, and 14 m . S.S.E. Magdeburg, 1. bank, Elbe. It is walled, and well built, has an old castle and three churches, with manufactures of linen and cotton, soapworks, breweries, and distilleries. Pop. 3400.

BARBY, par. Eng. Northampton; 3700 ac. Pop. 640.
BARCA, a dist., N. Africa, forming the E. division of the regency of 'Tripoli; between lat. $26^{\circ} 30^{\prime}$ and $33^{\circ} \mathrm{N}$., and from lon. $20^{\circ}$ to $25^{\circ} 30^{\prime}$ E. ; length, N. to S., about 500 m. ; greatest breadth, E. to W., about 400 m . All ancient writers, with exception of Herodotus, represent this country as a desert, and this representation was generally believed even in modern times; but it is now ascertained, that though that part of it next the Libyan desert, which bounds it on the S., is almost barren, the sides and summits of the hills in the E. and N. portions are fertile; both containing cultivated fielle, which yield luxuriant crops, and large tracts of excellent pasturage. A little way inland, an extensive plateau, broken by a range of hills, lies parallel with the coast. The atmost height of these hills does not exceed 1800 ft . The whole of this tract is thickly wooded, and covered with exeellent soil. Among its vegetable productions are the pine, palm, date, fig, and olive, and a great variety of flowering shrubs, ineluding roses, laurestinas, honeysuckles, \&c. The prineipal cercals cultivated are Indian millet and oats. There are no rivers which contain water at all seasons, but a great number of mountaintorrents, that pour down the ravines to the W., S., and E., and are soon lost in the sands; amidst which, however, are found the two oases of Aouljelah and Syouah. The domestic animals, camels, horses, oxen, asses, sheep, and goats, are numerous, and form the chief wealth of the inhabitants, who are Bedouin Arabs. Beasts of prey, such as hyenas, jackals, \&c., and all sorts of noxions insects, also abound. Barea, so called from the Greek Focr: $\boldsymbol{n}$, once contained two wealthy Greck colonies, one of the same name, and the other called Cyrené; and was regarded as one of the chief granarics of the African coast. The Romans succeeded the Greeks ; and the remains of temples, aqueducts, and other great public undertakings, together with the discovery of numerous (ireek and Roman coins, whose inscriptions identify them with the country, slow at once the importance to which it hall attained, and the amount of civilization introduced. All this, however, has long passed away, and the Arab is again sole master of the country. The seat of the fabulous Hesperian gardens was placed here. Pop. estimated at $1,000,000$.

BARC'ELONA, a prov. Spain, one of the four subdivi-
sions of Catalonia, bounded, N.E. by prov. Gerona, S.E. by the Mediterrancan, S.W. by Tarragona, and N. W. by Lerida; arch, 3905 sq. m. It is generally moutainous, especially the N. portion, being traversed by offsets from the Pyrences ; the highest peak, the Turon de la Loma, on the confines of Gerona, is covered with perpetual snow. The mountains are mostly well wooded, and attord fine timber for ship and house building. One of the most remarkable objects in this province, perhaps in Europe, is an cnormous mass of rock-salt near Cardona, betwcen 400 and 500 ft . above the river Cardener, and nearly 4 m . in cirenmference, equally celebrated for the purity of the mineral and for the brilliant effect of the sun's rays on its crystal pyramids. The plains and valleys, watered by the Llobregat, Besos, Tordera, and numerous other streams, all falling into the Mediterranean, are fertile, and yield good erops of wheat, rye, barley, and other grain, fruits and vegetables, with abundance of oil and wine; and the rich meadows depasture numerous focks. The climate is variable, cold, and rough in the uplands, but mild, salubrious, and clear in the lowlands, especially on the coast. Game abounds, and wolves and bears are sometimes met with in the wilder parts of the mountains. The manufactures are considerable and various, consisting of woollen, cotton, linen, and silken fabries; hats, glass, soap, cutlery, ribbon, earthenware, gunpowder, cocoa, stockings, gloves, and brandy; tanneries, dyeworks, and bleaelifields are numerous. Education in Barcelona is, perhaps, better attended to than in any other provinee in Spain; benevolent institutions of various kinds, as well as schools for the instruction of the rising generation, being generally found in all towns of any importance. Probably in some measure owing to these advantages, crime (with exception of smug(ling) has of late years been considerably on the decrease. Top. 533,695.-(Madoz.)

BARCELONA, a seaport tn. Spain, cap. prov. of same name, Catalonia, 312 m . E.N.E. Madrid; lat. (Mole light) $41^{\circ} 22^{\prime} 36^{\prime \prime}$ N.; lon. $2^{\circ} 11^{\prime}$ E. (1.) It is semicircular in its general outline, and is both surrounded by walls and defenoed

$\begin{aligned} & \text { at Plaza del Pulacic. } \\ & \text { b Governor's Palwe. }\end{aligned}$
c Kovernars
nishop's Puluce.

${ }_{k}$ La Rambla.
by a citadel, which forms its N.E. boundary. It is not strong, however, in itself, being commanded by the fort of Montjoi, occupying a height of that name in the S. The possession of this fort neeessarily secures that of the town and eitadel
also. Barcelona is divided into two nearly equal parts by a finely-planted promenade, called La Rambla, running N.N.W. from the shore. The N.W. division forms the old, and the S.W. division the new town, the former consisting chiefly of sarrow, crooked, ill-paved streets, while those of the latter are more spacious and regular. To the E. of the town, and S. of the citadel is the extensive suburb of Barcelonetta, laid out with great regularity, built chiefly of brick, and oecupied by sailors, and other seafaring people. Many of the houses of Bareclona itself are also of brick, but most of them, particularly in the new town, are of hewn stone, several stories in height, and of an imposing appearance. In recent times, great improvements have been made. Gas has been introduced, and extensive sewers have been constructed. Fountains of the finest water are found in every quarter, and in addition to La Rambla, already mentioned, the Muralla de Tierra and the Muralla del Mar, form almost unrivalled promenades. The principal public edifice is the catledral, which stands in the highest part of the old town. Its origin dates from the first agez of Christianity, but its present form of Gothic architecture appears to belong to the end of the 13th century. It is approaehed by a lofty flight of steps, and surmounted by two towers. It is by no means an elegant structure, and part of it, particularly its portal, remains unfinished. There are numerous other churches, several of them ancient and handsome, but scarcely entitled to a separate notice. One of the most remarkable buildings of Barcelona is the Palacio de la Deputacion, where the Cortes of the province used to hold their sittings. It is in the Greco-Roman style, and is now called the Audiencia, being occupied by the courts of law. The records of Aragon and Catalonia are kept in it. some of them are of the ninth century, and the whole collection is said to be one of the most interesting of the kind in
of cotton and woollen goods manufactured in one year, has: been estimated at $£ 440,000$, and the number of shoes annually exported at 700,000 , value $£ 70,290$. Its other chief exports are iron, copper, fire-arms, cork, fruit, wincs, and brandies. Its principal imports are Baltie timber, wax from Africa, stock fish from Newfoundland in British bottoms, Swedish iron, Styrian steel, Riga and Petersburg hemp, copper and iron ware from Germany, and various artieles of French and Italian manufacture. The following table exhibits the amounts of the exports and imports of the port from 1841 to 1846 , along with the number of vessels entcred and cleared :-

| Years. | Entered. |  |  | Clrared. |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
|  | V-sscls. | Tonnage. | Value of Cargo | Vessels. | Tonnage. | Value of Carga, |
| 1841 | 6184 | 206,730 | 14,433,832 | 5803 | 189,873 | E3,968,457 |
| 18.12 | 3667 | 189,117 | 3,651,750 | 2872 | 147,269 | 3,007,4 ${ }^{14}$ |
| 1843 | 2551 | 224,411 | 2,672,858 | 2610 | 225,960 | 2,076,560 |

The trade of Barcelona has greatly fallen off from what it used to be in former times, more especially the decrease of intercourse with Britain is very marked. Half a century ago, many hundreds of British vessels entered the port in the courso of a year; in 1841 the number was 57 , which, in 1846, hal increased again to 90 ; the tonnage, at the same dates, being respectively 7469 and 15,080 . Amongst the causes assigned for this decay in the trade with Britain are, the non-importation of English hardware, the German being now preferred on account of its greater cheapness; the falling off of the traffic in Newfoundland fish, which has passed almost entirely into the hands of the Swedes and Norwegians; and, lastly, an all but total cessation of the cotton trade with England, the Catalonians now importing their cotton themselves direct from Pernambuco. The main part of the trade now is coasting; the number of Spanish vessels entered in 1846 was 2925 ; cleared, 3271 ; and for the preceding years the proportion was similar. The principal trades in the town are shoemakers, tailors, braziers, armourers, cutlers, carpenters, embroidercrs, silk-weavers, cabinet-makers, and turners. The port of the city is commodions, but obstrueted by a bar, which will not allow of vessels entcring that draw more than 12 ft . water; large ships are, therefore, obliged to anchor outside. On the mole, which is 400 fathoms in length, there are a lighthouse, two batteries, and two redoubts.
Barcelona is said to have been founded by the Carthaginians under IIamilcar Barca; hence its name. After the fall of Carthage, the Romans first beeame its masters, then the Goths, who possessed
existence. Of modern buildings, the principal are the customhouse, the exchange, the theatre, and the prison. The conventual establishments, though many of them have been suppressed, are still nominally 22 . The principal educational establishment is the university, which, though it had almost fallen into complete decay, has lately been revived, and promises again to become worthy of its early fame. At present its chief functions are performed by the colleges, in which a complete course in the arts and sciences is given. In connection with it are numerous schools, in which elementary education is provided for all classes. Theological education is given chiefly in the Seminario Conciliar, while there are several separate establishments specially set apart for the study of medicine. Charitable and beneficent institutions are numerous; the chief being the Casa de Caridad, Casa de Misericordia, and the hospital of the Holy Cross. Among literary institutions, may be mentioned four public libraries and two museums, the Aeademy of Belles Lettres, and the Royal Academy of Arts and Scienees, \&c.
Barcelona is the seat of various manufactures, the principal of which are silks, woollens, flowered cottons, calicoes, lace, and shoes; and it also has a foundry for cannon. The amount
it, with the rest of Catalonia, till the year 714, when it was conquered by the Saracens. In 805, it was retaken from them, and governed by French viceroys. In 874, it became an independent earldom, and maintained its independence till the annexation of Catalonia to the crown of Aragon in the 12th century. In 1714, it was besieged by the Duke of Berwick, for Philip V. of Spain, and taken, after a defence equalling in desperate valour thatof Saragossa in more modern times.

In 1786, when the population was a third less than now, the number of monks in the city was 1212; of secular priests, 1216; and of nuns, 654 . Pop. (1842), including Barcelonetta, 121,815.-(Madoz; Parliamentary Papers.)

BARCELONA (New), a tn. and port, Venezuela, at the mouth of the Neveri, on the Caribbean Sea; lat. $10^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $64^{\circ} 47^{\prime}$. W. The houses are mostly of mud, ill constructed, and poorly furnished. The streets are unpaved, and, in wet weather, extremely filthy; while, in dry, the dust is intolerable. Its harbour and shipping are protected by a fortress, called El Morro de Barcelona, situated on a hill which rises to about 400 ft .above the level of the sea. In 1847, the number of vessels entered was 27 ; tonn. 3241 ;-eleared, 39 ; tonn. 4497. Barcelona is a most unhealthy place, from the
excessive heat and moisture of the air. The country around however, is extremely fertile. The chief trade of the town is in horned cattle, jerked beef, and hides; and of agricultural produce, in indigo, annotto, cotton, and caeao. Pop. (1807), 15,000 , half whites, and half mulattoes and negroes.

BARCELONE'TA, a tn. Venezuela, 105 m . S.S.E. Angostura, 1. bank, Paraguay. Pop. about 2000.

BARCELONE'TA. See Bafeelona.
BARCELONETTE, a tn. France, dep. Basses Alpes, on the Italian frontier, 30 m . N.E. Digne. It stands in the middle of the valley of same name, here $1 \frac{1}{2} \mathrm{~m}$. broad. The two principal streets, the houses of whiek are lined with a rew of arcades, cross each other at right angles, and have sinaller strects, laid out in regular order, opening into them. Most of the houses have their windows as much as possible to the S., with very small openings to the N., on account of the extreme severity of the cold when the wind blows from the mountains. At the end of the main street, towards Italy, a landsome square, planted with trees, forms an agreeable promenade, and round it are placed the barraeks, courthouse, prison, and other public bnildings. Snow falls heavily in winter, during which, the arcades already mentioned form convenient and sheltered pathways. Like most frontier towns, Barcelonette has suffered by war, having been burit no fewer than seven times. It is now, however, perhaps the prettiest of all the French towns in the Alps. Silk, serges, and small drapery are mannfactured here, and as it is the central point where the inhabitants of the valley dispese of their produce, and purchase their honseliold and other articles, the Saturday market has the appearance of a fair. The vallcy of Barcelonette formerly belonged to the Counts of Provence, subsequently to Savoy, but is now in France. The people have always been noted for their love of liberty, and, at the close of the 18 th century, when an attempt was made to revive feudal exactions, which had previously been abolished, the measure was abandoned on account of the clanour it created, the mountaineers willingly paying a sum of 100,000 livres (about $£ 4000$ ) for exemption from seignorial claims. Pop. of tn .1905.

BARCELLOS.-1, A tn. and par. Portugal, prov. Minho, ehief town of dist. of same name, r. bank, Cavado, here crossed by a handsome stone bridge, $27 \mathrm{~m} . \mathrm{N}$. Oporto. It is surrounded by walls, flanked with towers; and has broad and straight streets, lined with well-built houses; contains two churches, two monasteries, an hospital, a poorhouse, and a grammar-school ; stands in a rich and well-eultivated district, and has several important fairs. Barcellos is said to lave been founded by IIamilcar, the father of Hannibal, 250 years B.c. Pop. $3900-2$, A tn. Brazil, prov. Para, r. bank, Rio Negro; lat. $1^{\circ} \mathrm{S} . ;$ lon. $63^{\circ} \mathrm{W}$. It has a church; and, at one time, was the residence of the chief of the district of Rio Negro. Now it is inhabited by Indians, and by a few people, partly fishermen, agriculturists, and merchants.-3, A vil. Brazil, prov. of, and 100 m . S.S.W. Bahia, advantageously situated on the river Marahu. It has a church and primary school, and its inhabitants are chiefly engaged in agriculture.

BARCHESTON-with-Wh.LıNGTON, par. Eng. Warwiek; 1620 ac. Pop. 193.

BARCHFELI), a market tn. Hesse-Cassel, prov. of, and 33 m. N.E. Fulda, r. bank, Werra. It contains a palace, a castle, a ehurch, a stamp-hall, and has four yearly markets. Pop. 1600 .

BARCOMB, par. Eng. Sussex; 5280 ac. Pop. 1028.
BARD, or Barna, a vil. and fortress, Sardinian States, Piedmont, 1. bank, Doire, 22 m . E.S.E. Aosta. It stands on a lielght at the S. entrance of the valley of Aosta, and, in 1800, after a siege by the French, was taken and razed. It lias since been rebuilt.

BARDEL, a tn. Japan, Bay of Totomi, in the S.E. of the isl. of Niphon. It is a place of some note, and has both a considerable general trarle and fishing.

BARDENIBERG, a tn. Rhenish Prussia, prov. of, and 5 m . N.N.E. Aix-la-Chapelle. It has a R. Catholic parish church, and three yearly markets. Coal is worked in the neighbourhood. Pop. 1290.

BARDFIELD, thrce pars. Eng. Essex:-1, Bardfield (Great), 3400 ac. 1'op. 1120.-2, Barlfield (Little), 1970 ac. P. 375.-3, Bardfield-Saling, or Little Saling, 1510 ac. 1'. 381 .

BARDI, a tn. and com. Italy, duchy of, and 30 m . S. by
E. Piacenza, l. bank, Ceno, commanded by a castle situated on a hill S . the town, erected in the ninth century. In the vicinity are forests of chestnut, beech, and oak, and abundant pasturage for cattle. Two anmual fairs are held. Pop. of tn. 720; com. 7314.

BARDIA, an isl. Gulf of Siam, E. coast, Lower Siam, opposite the embouchure of the Tayung; lat. $10^{\circ} 50^{\prime} \mathrm{N}$. ; lon. $99^{\circ} 50^{\prime}$ E. (r.) It is 20 m . in length, 10 m . in breadth, very lofty, and is separated from the mainland by a channel about 2 m . in width.

BARDNEY, par. Eng. Lincoln; 5490 ac. Pop. 1192.
BARDOLINO, a vil. Austrian Italy, gov. Venice, 15 m . N.W. Verona, having a small harbour on the E. margin of Lake Garda, 7 m. N. Peschiera. Near this village, at the famous battle of Rivoli, Janaary 1797, the French under Bonaparte defeated the Austrians under Alvenzi. Pop 1320.

BARDONNECIIA, or Bardonnfehe, a vil. Sartinian States, Piedmont, prov. of, and 18 m . W. Susa, on a streamlet of same name, a tributary of the Doria. It lias some trade in cattle. Pop. 1000.

BARDOWICK, a vil. IIanover, prov. of, and 4 m . N. Luncburg, on the Ilmenau. It is a very ancient place, and has a cathedral chureh. The chief employments are field and garden culture and linen-weaving, and some trade is done in seeds. Pop. 1400.

BARDSEY, par. Eng. York, W. Riding; 2780 ac. P. 469
BARDSEY, an isl., N. Wales, co. Carnarvon, in the Irisl, Sea, at the N. point of Cardigan Bay; lat. $52^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $4^{\circ} 48^{\prime}$ W. (r.) ; about 2 m . long and 1 broad, called in Welsh Juys Eulli [the island of the current], from the violence of the stream in Bardsey Sound. On the S.E. side is a small harbour, capable of admitting vessels of 40 tons burden. There is a lighthonse on the island, with fixed and revolving lights, 129 ft . above the sca. The inhabitants are chiefly employed in fishing and agriculture. Pop. 90.

BARD'T, or BARTH, a tn. Prussia, prov. Pomerania, on the Binnensce or Gulf of Ribnik, a large lake communicatins with the Baltic, 17 m . W. Stralsund; lat. $54^{\circ} 21^{\prime} \mathrm{N}$. ; lon. $12^{\circ} 42^{\prime} \mathrm{E}$. It is old, but tolerably well built ; has manafactures of soap, candle, and tobacco; and, by means of its harhour, which is good, and its commmication with the Baltic, carries on a considerable commeree. Pop. 4400.

BARDWELL, par. Eng. Suffolk; 3320 ac. Pop. 826.
BAREGES, or Barneges [anc. Valletria], a watering place, France, dep. Hantes-Pyrénées, 22 m . S. Tarbes, on the Gave de Bastan, celebrated for its hot sulphurous springs. The narrow valley of Barèges contains 18 villages, perehed, like eagles' nests, high up in the mountains, or on little plateaux, formed by the debris that has fallen from them, and affording a few acres of ground for cultivation. The village of Bareges is composed of a single tolerably spacious strect, of about 60 good houses, intended principally for the accommodation of the visitors to the baths. It is a dull-looking place, but some of the wildest scenery of the Pyrenees is in the neighbourhood and the roal that passes up the valley from Pierrefitte and Luz is considered an extraordinary effort of engineering skill. From Juve to September the place is crowded with invalids sometimes to the number of 800 , besides the soldiers in the military hospital. The remainder of the year is winter, but snowfalls in summer are not uncommon. There are six springs, varying in temperature from $82^{\circ}$ to $111^{\circ}$. Their principal ingredient is sulphuret of sodium, with portions of carbonate, muriate, aud sulphate of soda; azote, sulphuretted lydrogen, and animal matter. They seem principally beneficial in rheumatic complaints, cutaneous affections, ulcers, old wounds, and contractions of the muscles or tendons. The inhabitants are remarkable for their skill in knitting, and many articles of dress are very tastefully got up. The ladies dresses called barèges, take their name from this place.

BAREILY, a dist. Ilindoostan, Delhi, between lat. $28^{\circ}$ and $29^{\circ} \mathrm{N}$. ; bounded, N. by the Kumaon hills, W. by the Ganges, E. and S. by part of the Oude territory, and S., S.W., and N.W. by Furruckabad, Alighur, and Mooradabad; area, $6900 \mathrm{sq} . \mathrm{m}$. The soil is well watered by numerons small streams. To N. of Rampoor, the Kosila is navigable during the rainy seasons, and serves to float down large timber. In summer the heat is intense; but in winter, with $N$. winds, the thermometer falls below $30^{\circ}$ Fah.. and water freezes in the tents. The surface, in general, is level, and the soil excellent:
date-palms, bananas, walnut, apple, and pear trees, vines, \&c., are plentiful. Sugar and grain are grown everywhere, and, together with rice and cotton, bring the highest prices. The chief imports from the lower provinces are chintzes, salt, coarse sugar, cottons, cutlery, cheap trinkets, and coral beads. From the hilly eountry, and even from Thibet, goods are transported on the backs of goats. The Rohillas or Patans, of this district, are a tall and handsome race of men, and comparatively fair and well-featured. The tribe of Bungaries (carriers and bullock-drivers), are estimated at 14,000 , all Mahometans. Bareily formed part of Rohilcund previous to the conquest of that country, in 1774, by the British. In 1801, it was coded to the East India Company by Vizier shuja-ud-Doolah, Nabob of Oude.

BAREILY, a tn. Hindoostan, cap. of above dist., on the united streams of the Jooah and Sunkra; lat. $28^{\circ} 38^{\prime} \mathrm{N}$. ; lon. $79^{\circ} 20^{\prime}$ E.; 131 m . E.S.E. Delhi, and 148 m . N.W. Lucknow. The site of Bareily is elevated and pleasant; the principal street is nearly 2 m . long, and the houses, although mostly of one story only, are well built; in some other parts of the town, the houses are mere huts or hovels. There are here several mosques, and an old fort in ruins; the eivil and military servants of the E. India Company live in cantonments S. of the town, where a new and strong quadrangular citadel, surrounded by a diteh, has been built. The articles manufactured here, wholly by the Mahometans, are ehiefly warlike cutlery of all kinds, such as swords, daggers, \&c., also bows and arrows; saddles, and horse trappings; fine carpeting, embroidery, and jewellery. Bookbinding and engraving; shoemaking, tailoring, tanning aud dressing leather, and all the minor trades from pursuing which the IIindoo is prohibited, are likewise carried on by them. The brazen water-pots of Bareily are much valued, as well as the cabinet-work, painted black, varnished, and adorned with a yellow pigment, in imitation of gilding. Bareily possesses 131 Persian and Hindoo schools, and some hundreds of seminaries, pretty well attended, besides an English college, teachers of medicine, \&c. A native school, under the auspices of the Company, had, in 1811, about 70 Hindoo scholars. Bareily is the head-quarters of a civil establishment and circuit court, to which nine other districts are subordinate. The lands in the neighbourhood are but 8 ft . above the waters of the Ramgunga, and are annually inundated. Pop. (one-third Mahometans),65,796.-(Hamilton's East India Gaz.; Parliamentary Papers.)

BARENTIN, a tn. France, dep. Scine-Inferieure (Normandy), r. bank, Austreberte, about 10 m . N.W. Rouen, with manufactures of bandkerehiefs and calicoes, cotton, paper, and oil mills. There is also a mill for spinning flax, which has 500 spindles. Pop. 2278.

BÄRENTSWEJL, or B̈̈ßETSCHWE1L, a vil. and par., can. of, and 16 m. E.S.E. Zürich, on a height near a strean of same name, which traverses the parish, and is here crossed by a stone bridge. The elrurch is new and handsome, and possesses a fine chime of bells. The greater part of the inliabitants are employed in spinning and weaving silk. P'op. 3462.

BARETOUN (Al), [ane. Parctonium], a tn. Egypt, on the Mediterranean, on the borders of the desert of Barca; lat. $31^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $27^{\circ} 30^{\prime} \mathrm{E}$. It is now, perhaps, better known by the name of Port Mhaddra or Berek Marsa. Its harbour is good, and enables it to carry on a considerable trade.

BARFLEUR, a seaport th. France, dep. Manche (Normandy), 15 m . E. Cherbourg; lat. $49^{\circ} 40^{\prime} 6^{\prime \prime} \mathrm{N}$.; lon. $1^{\circ} 15^{\prime} 30^{\prime \prime}$ W. (n.) It is situated on the peninsula of Cotentin, in the English Chanuel, and has a harbour so small, so encumbered with rocks, and every way so ill adapted for the purposes of navigation, that the only wonder is, not how it sloonld now have ceased to be, but how it ever could have heen, a port of any consequence. Accordingly it deserves notice at present solely on account of interesting historical associations. In the 12th century, Barfleur was more frequented than any other port of Normandy; and, after the Norman conquest, it was the principal point of communication with England, and it was on one of the roeks near the port that William, only son of Henry I., was shipwreeked in 1120 , and perished, with several members of the royal family, and 140 young English noblemen. In the 13 th century, Normandy was annexed to France, when the trade of Barfleur was transferred to Cherbourg. In 1346, and again in 1405, Barfleur was pillaged by the English.

At the close of the 16 th century, the fortifications were destroyed by command of Henry 1 V . of France. Small vessels only can now enter the harbour, but there can be no doubt that it admitted vessels of considerable burden during the Middle Ages. It has two lighthouses, with fixed lights, neither of which can be seen from any great distance at sea. The little traffic now carried on is in flax, hemp, butter, oysters, and fish. Pop. 1185.

BARFORD, six pars. Eng.:-1, par. Norfolk; 940 ac. Pop. 417.-2, par. Warwick; 1490 ac. Pop. $849 .-3$, Barford (Great), par. Oxford; 1180 ac. 1op. $370 .-4$, Barford (Great), par. Bedford; 2830 ac . Pop. 814.-5, Barford (Little), par. Bedford; 1190 ac. Pop. 190.-6, Barford (St. Martin), par. Wilts; 2290 ac . Pop. 569.

BARFRENTON, or Barston, par. Eug. Kent; 360 ac. Pop. 125.

BARGA-de-garfagnana, a tn. and com. Tuscany, dist. of, and 25 m . N. Pisa, near the l. bank of the Lerchio. It has a handsome collegiate chureh, and a powder manufactory. Beautiful jasper is found in the vicinity, and chestnut forests cover the mountain sides. Pop. 7194.

BARGE, a tn. Sardinian States, Piedmont, prov. Saluzzo, at the foot of Mount Monbracco; 1. bank, Grandon, 28 m . S.S.W. Turin. It has a communal college, manufactures fire-arms, and carries on a brisk general trade. Slates are quarried in the neighbourhood. In 1808 it suffered greatly from an earthquake. Pop. 7000.

BARGOUZINSK, a tn. Siberia, gov. Irkutsk, cap. dist. of same name, 30 m . above the month of the Bargousine, which, after a course of about 200 m ., falls into the E. side of Lake Baïkal. In its neighbourhood are thermal baths, and the bitter lakes from which the purgative salt of Siberia is obtained.

BARIIAM, three pars. Eng.:-1, par. Huntingdon; 700 ac. Pop. 107.-2, par. Kent; 4480 ac. Pop. 1151.-3, par. Suffolk; 2520 ac . Pop. 576.

BARIIOLME, par. Eng. Lincoln; 1230 ac. Pop. 165.
BARI, a vil., isl. Sardinia, near the E. coast, prov. Lanusei, 55 m . N.N.E. Cagliari. It is very unhealthy; but has a small harbour, at which some corn and wine are shipped. Pop. 1500.

BARI (Terra di), a prov. Naples; bounded, N. and N.E. by the Adriatic, N.W. prov. Capitanata, S.W. and S. Basilicata, S.E. Otranto; greatest length, from N.W. to S.E., 80 m .; average breadth, about 34 m .; area, 1290 geo. sq. m1. In the S. and S. W. it is traversed by an offset of the Apennines; but the province, as a whole, is perliaps the most fertile and best cultivated in the kingdom. It has three lakes, and numerous mountain-torrents; but the only river of the least consequence is the Ofanto; and even it is almost confined in its course to the N.W. frontier. The principal products are corı, flax, tobacco, cotton, wine, olives, and capers. Large numbers of sheep, goats, swine, and asses are reared. Tho principal manufacture is salt. Some saltpetre also is obtained. Bari takes its name from its capital. Pop. 426,000 .

BARI [anc. Barium], a seaport tn. Naples, prov. and cap. of Terra di Bari ; W. shore, Adriatic, 50 m . N. W. Taranto; lat. $41^{\circ} 7^{\prime} 42^{\prime \prime} \mathrm{N} . ;$ lon. $16^{\circ} 52^{\prime} 30^{\prime \prime} \mathrm{E}$. (r.) It stands on a small promontory, and is defended by walls and a castle; streets in general narrow, and houses badly built. The eathedral is a handsome structure, with a tower upwards of 260 ft . high. Other public edifices are, the eclebrated priory of St. Nicholas, founded in 1087, and still resorted to by pilgrims; the royal lyceum or academical school, with 16 professorships of sciences, letters, law, and medicine; the college, founded in 1817, for the education of the nobility; the diocesan seminary, several parish churches and convents, an orphan institution, two hospitals, an arsenal, with extensive magazines for grain, and a mont-de-pieté. Bar1 is the seat of a criminal and civil court, and of an arehbishopric, metropolitan to the sees of Bitonto-et-Ruvo and Conversano. It has manufactures of cotton and linen goods, hats, silk, soap, and glass. The aqua stomachica di Santa-Scolastica, so generally used as a liqueur throughout the kingdom of Naples, is prepared here in great perfection. The port is small, and almost choked up with sand, bat the roadstead affords good anchorage-ground. Trade, principally with Venice, Trieste, and the coasts of Dalmatia. Exports:wine, grain, almonds, oil, and cotton, produced in the surrounding district. Bari, under the Romans, was governed
by its own magistrates. On the fall of the empire, it passed first into the hands of the Saracens, and afterwards into those of the Northmen, who becamo masters of Apulia, and fixed their government in this town. It was thrice taken and destroyed, and thrice rebuilt on the same site. Pop. 21,373.

BARIGIANO, a tn. Naples, prov. Abruzzo Ultra I., 11 m. S.W. Aquila. Pop. 2000.

BARILE, a tn. Naples, prov. Basilicata, 4 m . S.S.E. Melfi, agreeably situated on a hill. It was founded by a Greek colony of the Lower Empire, and the rites of the Greek church were practised so late as the 17 th century. It has three clurches. Pop. 3730.

BARLMA, a headland and river, British Guiana. The former is the extreme N.W. point of that territory, on the s.E. side of the estuary of the Orinoco; lat. $8^{\circ} 36^{\prime} \mathrm{N} . ;$ lon. $60^{\circ} 40^{\prime}$ W. (R.) The river, after a course of about 60 m ., almost precisely parallel with the coast, falls into the estuary of the Orinoco a little further up than point Darima.

BARJAC.-1, A tn. France, dep. Gard, 17 m. F. Alais, at the foot of the Cevennes; with a cold mineral spring; and in the neighbourhood a quarry of excellent stone, for building or sculpture. Pop. 1748.-2, A tn., dep. Lozère. Pop. 1028.

BARJALS, a tn. France, dep. Var, 9 m . N.N.W. Brignolles. It is well built, and the environs are singularly picturesque. The chief products of Barjals are nongat, a kind of cake, made of almonds and honey, for which there is a great demand; vermicelli, glue, and earthenware. It has also a refinery of wax, paper and fulling mills, tanneries, and distilleries. Its trade is in oil, brandy, figs, raisins, and olives. Pop. 3181.

BARKA. See ВURKA.
BARKBY, par. Eng. Leicester; 2290 ac Pop. 849
BARKEHDIEH, a populous vil., W. Africa, Danga country, on the Senegal; inhabited by a warlike and agricultural tribe, called Daliankes, whose chief resides herc.

BARKHAM, par. Eng. Berks; 1450 ac. Pop. 248.
BARKING, a tn. England, co. Essex, l. bank, Roding, about 2 m . above its junction with the Thames, and 7 N.E. London ; consisting cbicfly of one principal street; houses mostly of brick, and generally well built; well lighted, but badly supplied with water. It has a parish church, a handsome structure, with a lofty tower, and containing some ancient monuments; a Wesleyan and an Independent chapel, and a meeting-house belonging to the Plymouth Brethren, a national, infant, and Plymouth Brethren schools, a mutual improvement society, a friendly society, and a parochial lending library. No manufactures; but the fishing trade is carried on to a great extent. There is a convenient wharf at Barking creck, which is navigable to Ilford for vessels of 80 tons. Pop. (1841), 8718.

BARKING, par. Eng. Suffolk; 3010 ac. Pop. 1879.
BARKOUL, or Tcian-Si, a tn. and lake, Mongolia, prov. W. Kansuh, on the N.N.W. margin of the desert of Gobi. The Town is in lat. $43^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $94^{\circ} \mathrm{E}$. ; a little S.S.E. from the lake, and about 38 m . N. the important town of Kamil or Hami. Sarkoul has a considerable trade in provisions and clothing, and is governed, along with several other towns and settlenzents around it, partly by Chinese officers, and partly by the chieftains of the various tribes. The country around is cultivated to a small extent.--The LAKE is from 10 to 15 m . in length, and about half that breadth.

BAI:LETTA, a seaport tn. Naples, prov. Terra di Bari, cap. dist. of same name, W. shore, Adriatic, 33 m . N. W. Bari ; lat. (telegraph) $41^{\circ} 19^{\prime} 18^{\prime \prime} \mathrm{N}$. ; Ion. $16^{\circ} 17^{\prime} 30^{\prime \prime} \mathrm{E}$. (k.) it is a fortified place of the fourth class, and is surrounded by a fingle wall. The strects are wide, and well paved; the houses
high (of stone), and in general well built. In the market place is a colossal bronze statue, about 18 ft . high, supposed to represent the Emperor Heraclius. The cathedral is a fine Gothic edifice, the nave of which is supported by antique granite columns. There are several other churches, convents for both sexes, an orphan institution, a college founded liy l'erdinand IV., and a theatre. The harbour is formed by a mole running out from the shore. It admits of small vessels only, but good anchorage-ground is found in the roadstead. The port is defended by a citadel, part of which is falling to ruins. (lose by is a lazaretto. Barletta has a considerable trade in grain, wine, almonds, and the other productions of the country, which are exported to the different ports of the Adriatic. The Neapolitan Government have some extensive saltworks about 3 m . from the town. The sea-fishery forms an important branch of industry. A great corn-market or fair is held annually in Novemher. I'op. 19,929.

BARLEY, par. Eng. Hertford; 2700 ac. Pop. 792.
BARLING, par. Eng. Essex; 1240 ac. Pop. 326.

BARMEN, a manufacturing tn. Rhenish Prussia, circle, Flberfeld, dist. Düsseldorf; situated in the valley of the Wupper, 27 m . N.N.E. Cologne. It is in fact a continuation of the town of Elberfeld, to which it is united by a bridge, and with which it forms one uninterrupted strect of $6 \mathrm{~m} . \mathrm{m}$ length; and it is composed of an agglomeration of numerous places of different names, now constituted a town. Its situation is healthy and picturesque, but the town itself is dirty, and not prepossessing. The staple manufactures are ribbons and tapes, which are very widely diffused. Silk is likewise manufactured, with cotton and linen fabrics, linen and cotton thread, velvet, lace, steel and plated articles, hardware, chemical products, and earthenware, with establishments for calicoprinting, which have long been famous for the excellence of the dye called Turkey-red. The town is surrounded by kitchen-gardens, the cultivation of which employs many persons. It contains four churches, one of which, the Protestant church, is a very handsome building; a high school, a deaf and dumb asylum, exchange, two banks, a police court, and a commercial tribunal. The district in which the united towns of Elberfeld and Barmen are situated is the most populous, the most industrious, and most thriving in the Prussian dominions. Pop. (1846), 34,932.

BARMING, par. Eng. Kent; 1210 ac. Top. 534.
BARMOUTII, or Abermaw, a small seaport tn., N. Wales, co. Merioneth, 8 m . W. Dolgelly; lat. $52^{\circ} 44^{\prime} \mathrm{N}$.; lon. $4^{\circ} 2^{\prime} \mathrm{W} . ;$ at the mouth of the Maw or Afou; built on steep and unequal gromed, at the foot of a lofty mountain. The houses rise in successive terraces aloove cach other, and are reached by steps cut in the rock. The town is much frequented in summer for sca-bathing; and some trade is done in flamnel and hosiery; and tanning and shipbuilding are also carried on to some extent. Its chief exports are timber, bark, copper, lead, \&c.; imports:-corn, flour, coals, limestone, lides, and groceries. It contains several dissenting chapels. Pop. (1841), 1930.

HARMS'TED'T, a market tn. Demmark, Molstein, co. Ranzau, 19 m . N.N.W. Hamburg. Besides agriculture, the main employment is shoemaking, for export, over llamburg to America. In the middle of the town is a good marketplace. Four annual fairs are held, one of which, for oxen, is important. Pop. 1700.

BARMSTON, par. Eng. York, E. Riding; 2180 ac. Pop. 254.

BARNACK, par. Eng. Northampton ; 44-10 ac. Pop. 860.

BALNALRD CASTLE , a tn. and par. England, co. Durham. The Town is on an eminence rising abruptly from the Tees, $22 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. by S . Durham. From the prineipal street, which is about 1 m . in length, two or three smaller ones, and numerous lanes, diverge. The main strects are macadamized in the middle, and pitehed at sides with pebbles, and all are lighted. The better class of houses are of frcestone, and many of them handsome; but those of the working classes are overcrowded and ill ventilated. Manufactures :-two extensive thread-mills, and four large carpet-manufactories.

Barnard Castle has a national school, which was attended, in 1849, by 295 scholars- 181 boys, and 114 girls; a dispensary, and several charitable societies. A well-attended market is held on Wednesdays. The greater portion of the working population are of the manufacturing class, most of themi being employed in the thread-mills and carpet manufactories. Their moral condition is represented as being extremely low. The ruins of the castle, which stand between the N. extremity of the town and the river, form an imposing object. They enclose an area of abont $6 \frac{1}{2}$ ac. Portions of the walls stand on the verge of a cliff, which rises precipitonsly from the bed of the river Tees, to the height of 70 ft ., commanding an extensive view of the beautiful valley of Teesdale. The castle was originally built about the year 1178, by Barnard Baliol, grandfather of John Baliol, king of Scetland. Pop. (1841), 44552.-(Local Correspondent.)
barnardiston, or Barniston, par. Eng. Suffolk; 1520 ac . Pop. 217.

BARNARD, a group of islands, N.E. coast, Australia, within the Great Barrier Reef, extending in a straggling direction for 6 m ., to the S . of Double Point ; lat. $17^{\circ} 40^{\prime} \mathrm{S}$.; lon. $146^{\circ} 30^{\circ}$ E., about 30 m . from the shore.
barnaul, or barnaulskoi Zavod, a considerable mining tn. Siberia, gov. of, and 230 m . S.W. Tomsk, on the Barnaulska, near its influx into the Obi; lat. $53^{\circ} 20^{\prime} \mathrm{N}$. ; lon. $83^{\circ} 26^{\prime} \mathrm{E}$. It is well built, and contains regular and spacious streets. The chief cdifices, besides the churches, one of which is Lutheran, for the use of the Germans employed about the mines, are, the chancery offices for the mines, the commandant's residence, the stores and barracks, and the public mart, all built of wood. There is also a mining sehool, an observatory, a public library, and a museum of antiquities and natural history. It is the seat of the court of directors for the whole of the mines of the Kolyvan line, including the silver mines on the Obi, and the mines of the Altaï Mountains. Exclusively of the lead mines in the vicinity of the town itself, large quantities of that metal are here smelted from the Smeinogorsk or Schlangenberg [Morntain of serpents] mines, and also all auriferous silver ores. There are lime and brick kilns here, a bell-foundry, two tile manufactories, glassworks, and a mint for copper coin. Pop. (1850), 9920.

BALNEGA'T INLET, U. States, New Jerscy, 70 m. S. New York. On the S. side is a fixed light, in lat. $39^{\circ} 45^{\prime} 54^{\prime \prime}$ N ; lon. $74^{\circ} 7^{\prime} \mathrm{W}$. (r.)

BARNES, par. and vil. Eng. Surrey; 820 г.. Pop. 1461.
Barnet, Chipping, or Market Barnet, a th. and par. England, co. Hertford. The town is $11 \frac{3}{4} \mathrm{~m}$. N. W. London; pleasantly situated on the summit of a hill, and consisting of one principal strect upwards of 1 m . in length. Some of the houses have a respectable appearance, but many of them the reverse; water scant. It has a church, a venerable structure of the 15th century; an Independent clapel, a free school, a national school, an hospital for six elderly women, several alms-houses, and other minor charities. Races, and a large cattle and horse fair, held in Scptember. The cattle consist chiefly of small black cattle from Scotland. Barnet is celebrated for the battle fought near it in 1470, between the Earl of Warwick and Edward IV., in which the former was defeatod and slain. A column commemorates the event. Area of par. 1440 ac . Pop. (1841), 2485.-Barnet is the name of other three parishes in England:-1, Barnet (East), 1Iertford; 1630 ac. Pop. 598.-2, Barnet-Friarn, or Friarn Barnet, Niddlesex; 1330 ac. Pop. 849.-3, Darnet-by-leWold, Lincoln; 1630 ac. Гop. 679

BARNEVELD, a vil. Holland, prov. Gellerland, 18 m . N.W. A rnhem, in a fertile district surrounded by sand hills, and having a Calvinistic and a beautiful 1. Catholic chureh, some good schools, and an alms-honse for oll I men and wonicn. It has numerous markets and fairs for horses and cattle. Pop. 1400.

BARNSLEY, a market tn. England, co. York, W. Riding, 12 m . N. Sheffield, partly on the summits, and partly on the slopes of two lills, having three principal streets, generally well kept; houses substantially built of stone, but a good many also of brick; well supplied with water, and lighted with gas. The only edifices of note, exclusive of the churches, are the commercial buildings, including the post-office; the commercial news-room, mechanics' news-room and library, the latter a substantial Ionic structure; and the theatre, now converted into the mechanies' hall. There are two churches in Barnsley, one of which, St. George's, is a handsome building, in the decorated Gothic style; and nine chapels for various religious demominations, including Wesleyans, Independents, Baptists, R. Catholics, \&c.; also a Friends' meeting-house. It likewise has a free grammar, national, two boarding, two public, several day and infant schools, connected with the church and with the various dissenting bodies, and four female seminaries ; a mechanics' institute, restored in 1847; a church institute, established in 1847; and a Franklin club, composed chiefly of working men. Linen, in a great variety of fabrics, is the staple manufacture of Barnsley. These fabrics include damasks, drills, ticks, huckabacks, sheetings, shirtings, dowlasses, towellings, ducks, drabbets (a thick and warm fabric), plain and fancy hollands, \&c. There are five factories in the town, the largest of which contains 350 looms. Hand-loom weaving is still extensively carried on. The other works are, a wire manufactory, a patent stay manufactory, four ironfoundries, four dycing establishments, and seven bleachfields. In the vicinity are three stone quarrics, a number of coal mines, and several beds of ironstone. The market, which is toll-free for all kinds of grain, is on Wednesday; and there is also a market for provisions on Saturday ; fairs for cattle and horses in May, October, February, and September. In January 1850, a branch from the Lancashire and Yorkshire Railway, near Wakefield, was opened to this town. Barnsley is improving greatly, and increasing in size and population. Pop. (1841), 12,310; now (1850) estimated above 14,000.(Local Correspondent.)

BARNSLEY, par. Eng. Gloucester; 2050 ac. P. 305.
BARNSTABLE, a seaport tn., U. States, Massachusetts, cap. co. of its own name, 63 m . S.E. Beston; on a harbour at the bottom of Cape Cod Bay, neatly built, and has a considerable trade, besides extensive fisheries. There is a bar with 6 or 7 ft . water at the mouth of the bay. Between 50 and 60 fishing vessels belong to the port ; the tomn. of which, in 1840 , was 56,556 . It has two academies and 22 schools. Pop. (1840), 4301.-The county includes the whole of Cape Cod. The inhabitants depend for subsistence chiefly on cod, mackerel, and other fisheries; the greater number of the male population are sailors. Pop. 32,548 .

BARNSTAPLE, a port, market tn., and par. England, co. Devon. The town is situated on r. bank, Taw, where it receives the Yeo, and is crossed by a handsome bridge of 16 arches, 34 m . N.W. Exeter. It has been much improved and enlarged during the present century, and now extends about 1 m . in length, including its suburbs-Pilton and Newport. It consists of two principal and a number of smaller streets; the larger of which are generally straight, flagged, paved, well kept, and all lighted; houses mostly of stone, and the more modern weil built, supply of water ample. The princepal civic buildings are-the guildhall, a spacious and handsome Grecian edifice, the new fish-market, the borough prison and bridewell, and the hiue coat schools. The churches are, the parish church, a large ancient Gothic structure, said to have been rebuilt in 1318, but enlarged and altered at subsequent periods; Holy Trinity church, in the perpendicular style, having an elegant tower 133 ft . high ; St. Mary Magdalene, a handsome building, with a tower and spire, together

115 ft . high ; Pilton parish church, an ancient Gothie structure with an embattled tower; and five chapels for Independents, Baptists, Wesleyans, \&c. It has also four large national schools, several Sunday, private, boarding, and day schools, a grammar, blue-coat, and girls' charity school ; an infirmary, dispensary, and several sets of alms-houses, besides a number of minor charities; likewise a literary institution, established in 1845 ; a museum, two reading-rooms, a musical socicty, a farmers' club, and horticultural and agricultural societies. The manufactures consist of wool stapling, lace-making, malting, paper-making, tanning, shipbuilding, stocking-weaving, brush and rope-making, \&c. There are also two potteries; and in the neighbourhood several serge and blanket-mills. Some of these branches of industry are carried on to a great extent. The trade of the port is considerable, and its foreign trade increasing. The number of vesocls registered here for the year ending December 31, 1847, was 89 ; tonn. 5010 . Vcssels entered for the same year, 1032 ; tonn. 46,932 ;-cleared, 418 ; tonn. 21,585. Chief exports:-grain, wool, bark, leather, paper, \&c. Imports:-coals, timber, iron, groceries, spirits, porter, frecstone, \&c. There are four commodious quays, at which vessels of 100 to 200 tons load and unload; and the river is navigable for barges and small craft for 3 m . above the town. Barnstaple is governed by a mayor, recorder, six aldermen, and 18 councillors. It returns two members to the House of Commons. Registered electors (1849), 781. Area of par. 1096 ac. Pop. of tn. (1850) about 11,000.

BARNSTON, or Birnston, par. Eng. Essex; 2770 ac. Pop. 197.

BARNVILLE-sur-mer [anc. Crociatonum portus], a small tn . and scaport, France, dep. Manche, 15 m . W.S.W. Valognes. It has an ancient and curious Roman church, and carries on considerable trade in agricultural produce, with Guernsey, Jerscy, and Alderney. Pop. 1205.

BAINWELL, two pars. Eng.:-1, Barnwell-all-Saints, or King's Barnwell, par. Northampton; 1680 ac. Pop. 140 . -2, Barnwell St. Andrews, par. Northampton; 1740 ac. Pop. 282.

BARNWOOD, par. Eng. Gloucester; 1150 ac. P. 383.
BARO , a river, Africa, which rises in the country of the Wallegas, S.W. of A byssinia, near lat. $8^{\circ} \mathrm{N}$., in an extensive plateau, in which the Dedhésa, Gándji, Naso, and Gódjeb, all, like the Baro itsclf, tributarics of the White River or true Nile, have their source. The course of the Baro is not explored, but the natives represent it as a very large river, the valley of which is inhabited by Shankalahs, and frequented by herds of elephants.-(Geo. Jour. vol. xiii., xvii.)

BAROACH, or Broach [anc. Barygaza - water of wealth], a tn. Hindoostan, Bombay presidency, prov. Coojerat, cap. dist. of its own name, on the Nerbudda [anc. Namadus ], 25 m , from its embouchure in the Gulf of Cambay ; lat. $21^{\circ} 46^{\prime} \mathrm{N} . ;$ lon. $73^{\circ} 24^{\prime} \mathrm{E} . ; 42 \mathrm{~m}$. N. Surat ; a poor, mean-locking, unhealthy town, with narrow and dirty streets; but in the vicinity are numerous dilapidated mosques and mausoleums, indicating its former importance. The river is here 2 m . broad, very slallow, but abounding in fine fish, especially carp. A considerable trade is carried on with Bombay and Surat in raw cotton, grain, and seeds. There is here a pinjrapole or hospital for animals, supported by voluntary donations, and by taxes on marriages, mercantile transactions, \&c. About $£ 1000$ are annually raised for this purpose. Baroach was taken by storm by the British in 1772, and since 1803, along with the district, has remained part of the British dominions. Pop. about 33,000.-The district has an area of $1600 \mathrm{sq} . \mathrm{m} .$, and is one of the most populous and best cultivated in the W. of India, yielding large quantities of excellent cotten. Pop. (one-fourth Maliometans), 229,500 .

BARODA, a city, Hindoostan, cap. dist. of same name, and of the Guicowar's dominions, and the station of a British resident and a body of troops; lat. $22^{\circ} 20^{\prime} \mathrm{N}$. ; lon. $73^{\circ} 25^{\prime} \mathrm{E}$.; $240 \mathrm{~m} . \mathrm{N}$. by E. Bombay. It stands on marshy ground, l. bank, $V$ iswamitra, and is surrounded by a double wall of mud, with round towers at irregular intervals, and several double gates. Two spacious streets, which cross each other at right angles, divide the town into four equal parts. In the market-place is a square pavilion, with three bold arches on each side, and a flat roof, adorned with seats and fountains, and is a Mogul building, like everything else in this city having the smallest
claim to grandeur or elegance, the Mahratta structures being mean and shabby. Baroda was a large and wealthy town during the reign of Aurungzebe, and is still considered one of the richest cities of its size in India. Here is a stone bridge over the Viswamitra, remarkable as being the only one in Goojerat; and some singular wells with grand flights of steps. Pop. in 1818 estimated at 100,000 .-The District has an arca of about $12,000 \mathrm{sq.11}$. ; yielding sugar-canes, tobacco, indigo, corn, legumes, opium, hemp, flax, and cotton, the last being a staple commodity. Deer, hares, partridges, and other game are numerous.

BAL()N, or Noessa-Baron, an isl., S.E. coast, Java; lat. (centre) $8^{\circ} 30^{\prime}$ S.; lon. $113^{\circ} 25^{\prime} \mathrm{E}$.

BARONSTOWN, par. Irel. Loutls ; 2209 ac. Pop. 967.
BAKOS, or Baroos, a tn. Sumatra, W. coast ; lat. $2^{\circ}$ N.; lon. $98^{\circ} 25^{\prime}$ E., near the mouth of a small river. There is here a good harbour, to which much of the produce of the island of Nias is brought, such as batatas, rice, beans, fowls, \&c., and exchanged for stcel, iron, tobacco, coral, and cotton goods. The district round Baroos was formerly a kingdom or petty state here, of the same name. It produces excellent camphor, benzoin, and some gold.

BARQUESIMETO, a tn. Venezuela, cap, prov. of same name, 92 m . W.S.W. Valencia; lat. $9^{\circ} 54^{\prime} 35^{\prime \prime} \mathrm{N}$. ; lon. $69^{\circ} 12^{\prime} 27^{\prime \prime}$ W. (L.) Previous to the great earthquake of 1812, the town was well built, having straight and wide streets, a handsome parish church, a rich convent of Franciscans, and an hospital. It is now but a wreck of what it was. It has several schools and higher seminaries. Pop. 10,000 to 12,000 .-The province lies between lat. $8^{\circ} 47^{\prime}$ and $10^{\circ}$ $46^{\prime} \mathrm{N}$.; and lon. $68^{\circ} 30^{\prime}$ and $70^{\circ} 30^{\prime} \mathrm{W}$., and is bounded N . by the Caribbean Sca; area, 12,312 geo. sq. m. Agriculture and cattle-rearing are the chief occupations. The principal products are wheat, coffee, cacao, maize, and indigo. Pop. (1825), 85,557 ; (1839), 122,755.

BARR, a tn. France, dep. Bas Rhin (Alsace), $9 \mathrm{~m} . \mathrm{N}$. Schelestadt, agrecably situated at the foot of the Vosges; tolerably well built, and las a good square. Near Barr, on the mountain of Hocnburg, are the cas ${ }^{+1}$ e of Landsperg, and the convent of St. Odila, founded in 622, by Odila, daughter of Attic, Duke of Alsace. Part of a Roman wall, called by the inhabitants the Pagans' vall, in some places 10 or 12 ft . high, and from 6 to 9 ft . broad, is also still to be seen there. The trade of Barr is principally in woollen stuffs, manufactured in the town. The dyeing establishments employ almost 800 workmen. Barr has also several mills, among others spinning, tan, and oil mills, driven by water-power, and some trade in wine and brandy. Pop. 3585.

BARR, two vils. and a par. Scotland:-1. A vil. and par. Ayr, the former 18 m . S. W. the town of Ayr, picturesquely situated on an angle formed by the water of Gregg and the river Stinchar. The most of the houses occupy an acclivity, and have been built without regard to order; but the whole village has a clean and neat appearance, and is well kept. The inhabitants are mostly employed in handicraft and agricultural labour, and in muslin-weaving for the Glasgow manufacturers. Their social condition is excellent, there having been no criminal action against any inhabitant of the parish for 30 ycars. In August 1849, the lower part of the village was nearly swept away by a sudden flood from the neighbouring heights, supposed to lave proceeded from the bursting of a water-spout. Area of par., stated to be about $100 \mathrm{sq} . \mathrm{m}$. or $64,000 \mathrm{imp}$. ae. Pop. 959.-2, A small vil., co. Argyle, dist. Cantyre, about 13 m. N. Campbelton.

BARRA [a bar], the name, with different affixes, of various places in Brazil:-1, Barra-das-Velhas, a considerable vil., prov. Minas Geraes, r. bank, Rio São Francisco, where it is joined by the Rio das Velhas; lat. $16^{\circ} 50^{\prime} \mathrm{S} . ;$ lon. $45^{\circ} 20^{\prime} \mathrm{W}$. It is situated in a vast plain, annually inundated by the two rivers which fertilize it. In this plain are salt deposits, from which the province is supplicd. The village has two churches, and is rather unhealthy. Gold-washing, peltry trade, and agriculture, employ the 3000 inhabitants of the vil. and dis-trict.-2, Barra-do-Rio-de-Contas, a flourishing tn., prov. Bahia, agreeably situated, r. bank, Rio de Contas, at its embouchure in the Atlantic; lat. $14^{\circ} 22^{\prime} \mathrm{S} . ;$ lon. $39^{\circ} \mathrm{W}$. It has a municipal hall, prison, church, primary school, and a good port for coasters. Two rivulets hard by are estcemed excellent for tempering steel. In the district a considerable quan-
tity of mandioca and cacao are cultivated for export to Bahia. Pop. (tn. and dist.), 3000.-3, Barra-do-Rio-São-João, a hamlet, prov. Rio de Janeiro, at the mouth of the Rio São João; and having a chureh and primary school. Sawing planks from timber cut in the neighbouring forests, is the principal business of the place. The port is commodious, and has 12 to 15 ft . of water. In winter, fever is prevalent in the district, arising from numerous marshes, with which it abounds. Pop. 4000.-4, Barra-do-Rio-Grande, a tn., prov. Bahia, at the junction with the Rio Grande and the São Francisco. It was formerly in prov. Pernambuco, but in 1820 was annexed to prov. Bahia. It has a church, and a primary school; its district is generally sterile, producing only salt, in the procuring aud transportation of which the most of its 4000 inhabitants are employed.-5, Barra-do-RioNegro, also called Rio Negro, an ancient tn., prov. Para, 1. bank of the river after which it is named, near its junction with the Amazon. It has a church, and is the depository of various kinds of produce brought down the Rio Negro and its affluents; and in it are three Government establishments, under Government superintendents, for making piassava cordage, cotton cloth, and earthen tiles.-6, Barra-Longa, or São José, a vil., prov. Minas Geraes, 45 m . S.W. Pilla-Rica or Ouro-Preto, on the Rio Gualcho, across which there is here a bridge. The village has a church, and 5000 inhabitants, mostly agriculturists.-7, Barra-SIansa, a vil., prov. Rio de Janeiro, on a river whence it is named, an affluent to the right of the Parahiba. It has a church, and sugar-mill. The inhabitants of town and district are about 6000 , and chiefly engaged in cultivation of coffee.-(Diccio Geo. Imp. Brazil.)

BARRA, a large vil. Naples, 4 m . E. the town of Naples. It produces silk, and contains many country houses belonging to the inhabitants of the metropolis. Pop. 5000.

BARRA, a petty state, N.W. Africa, at the mouth of the Gambia, r. bank, extending about 54 m . along the coast, with a breadth of about 42 m . It is in general well cultivated, and contains a number of considerable villages, with some fine forests. The palm, banyan, and fig trees are also plentiful. Horses are scarce, but asses are numerous, as are also wild buffaloes. The greater part of the population is composed of Mandingoes, a fine race; the women stout, active, and pretty; the males tall, and well made, and of a more intellectual cast of countenance than is usual amongst negroes. They are also more refined, and of a more amiable and benevolent nature than the natives of the neighbouring kingdoms. In commercial transactions they are shrewd, sharp, and wary. A principal branch of industry is the manufacture of salt, large quantities of which are exported; maize, cotton stuffs, ivory, gold dust, \&c., being taken in exchange. Their laws are mild, just, and in general fairly administered. They are all rigid Mahometans, and strict observers of the laws of the prophet. Pop. estimated at 200,000 . The capital, BarraInding, lies on the coast, at the mouth of the Gambia, about 7 m . N.E. Bathurst, and has some trade in the articles above noticed.

BARRA, or Bartay Islands, a group of upwards of 20 islands, forming a par. of same name, W. coast, Scotland, co. Iuverness, forming part of the chain known by the name of the Outer Hebrides. About 10 of these are inhabited, and the others uged as grazings. The principal island, from which the group is named, is about 12 m . in length, varying in breadth from 6 to 3 m .; its N. point is in lat. $57^{\circ} 2^{\prime} \mathrm{N}$. ; lon. $7^{\circ} 34^{\prime}$ W. (r.) It is much indented by bays and arms of the sea, particularly on the E. side. On the W., with exception of two or three sandy bays, it is defended from the billows of the Atlantic by a barrier of huge rocks, excavated by the action of the sea into vast caves and fissures, the latter of appalling depth. Gneiss is the universal formation of these islands, but of an unusually refractory nature, undergoing little change from the action of the atmosphere, and everywhere displaying a singular aspect of obstinate durability ; while the difficulty with which it decomposes, imparts to the surface of the island a naked and barren appearance. The climate, like that of all the W. islands of Scotland, is variable and fluctuating, but mild and healthful. Notwithstanding its unpromising look, Barra contains a great deal of fine pasturage in the hollows and valleys; while the hills, which are of considerable height, afford excellent grazing to their very summits. The island, and parish in general, being better adapted
for grazing than agriculture, the latter has not made much progress, although the adoption of improved implements has enabled the small farmers to turn their ground to much better account than formerly. The black cattle raised in Barra are much esteemed; and for rearing sheep it is considered one of the best places in the Highlands, although it is but lately that a regular sheep stock was introduced there. The chief part of the lands is let to small tenants in crofts, from year to year-a system under which no improvement can of course be expected. For the most part the inhabitants are miserably quartered, their bouses being composed of loose stones and earth, and having neither windows nor chimneys, a round hole in the roof, and one or more holes on each side of the house, supplying their place. Their habits are uncleanly, and their houschold furniture generally of the most wretched description. Their ordinary food consists of barley-meal, potatoes, milk, and fish. More ardent spirits are said to be consumed in this island than in any place of the same extent in the W. isles. The manufacture of kelp employs a great many hands, old and young, for about two months in the year, but the pay is miserably small, the commodity itself having fallen to about a fourth of the former price. Few of the natives can cither read or write. The coasts abound in fish, including ling, cod, tusk, hake, turbot, flounders, and herrings, the latter fiequently visiting the island in immense shoals; but the inhabitants, unfortunately, are in such a state of poverty, that they cannot provide themselves with the tackling necessary to enable them to take the utmost advantage of the wealth on their shores, perhaps not equalled, certainly not exceeded, in any other part of Scotland. As it is, there are from 20 to 30 boats of 3 tons each, with five men to each boat, employed in fishing. They carry the cod and ling they take, in a dried state, the latter being lighly esteemed, to Glasgow and Greenock. Shell-fish are also abundant on the shores of Barra; lobsters, crabs, \&c., and cockles in immense quantities. In scarce seasons the inhabitants live in a great measure on cockles, boiling them with milk, and thus making them into a kind of soup, which they consider wholesome and nutritious. There are four fresh-water lakes in the island, of from half a mile to a mile in length, all abounding in trout and eels. The ruins of several religious houses, apparently of very old date, exist in Barra, the more remarkable of which-two churches, said to have been built by the monks of Icolmkill-are at a place called Killbar. There are also numerous ancient watch-towers distributed over the islands; and on every lake there is a dun or fort, supposed to lave been built by the Scandinavians. Many Druidical circles are also to be met with. The ancient castle or stronghold of the MacNeils, the former proprietors of Barra, a rude and lonely mansion, stands in the middle of a beautiful bay, upon a small rock, which is entirely covered by the sea at high water. It is of an irregular form, strongly built, and about 60 ft . high, with a square tower in one corner, rising many feet above the adjoining walls. Here the MacNeils, in times of old, maintained the state and authority of sovereign princes, ruling with despotic sway, and mimicking the pomp and dignity of royalty. The names of the larger islands, of which the parish is formed, are Watersay, Sanderay, Pabbay, Mingalay, and Bernera to the S., with several others of lesser size, uninhabited, to the E. and N.E. Mingalay and Bernera are remarkable for their lofty rocks, one on the former being 1400 ft . perpendicular above the sea. To these rocks the natives resort for sea-fowl and their eggs. The most prevalent winds here are the S.W. and N.W., the former often blowing with such extraordinary violence, as to sweep away the sandy soil with its vegetation, leaving only naked rocks behind. Pop. of par. 2363, of whom about 2000 are R. Catholics.

BARRACKPOOR, a military cantonment, Hindoostan, presid. Bengal ; l. bank, Hooghly, 10 m. N.N.E. Calcutta. The site is beautiful, and the climate salubrious. Near this village is the palace of the Governor-general of India, the park around which is 4 m . in circumference. The cantonment is a large military village, with bungalows for the European officers and the other white inhabitants, who are attracted thither by the beauty and healthfulness of the place, and by its vicinity to the Governor's residence. Races are held here in the cool season.

BARRADA, a river, Syria, pash. Damascus; it rises near Ain-el-IIawra-Ujmt, flows S. along the Anti-Libanus, and
then, turning S.S.E., proceeds in a tortnous conrse through a rich valley, bordered alternately by bold roeks and wooded hills. On approsching Damaseus, it is divided into two branches, one of which passes along the N. side of the city, while the other is diverted into eight different channels, for watering the city and irrigating its gardens. The former branch is supposed to be the Pharpar, and the latter the Abana, of ancient times. The branches shortly after unite, and the trunk receiving two tributaries, enters the marshes and lake of Bahr-el-Merdj-Atibe.-(Chesney.)

BARRAFRANCA, a tn. Sieily, valley of Caltanissetta, dist. Piazza. Pop. 5800.

BARRAGH, par. Irel. Carlow; 13,297 ac. Pop. 3742.
BARRAMAML, or Barra-Maul, a subdivision of prov. Salem, Mindoostan, presid. Madras. Sce Salem.

BARRAUX, a vil. France, dep. Isère, 21 m. N.N.E. Grenoble. On an eminence, contiguous to the village, stands fort Barraux, a place of considerable strength. The inhabitants are chicfly engaged in agriculture. Nearly opposite, across the Isère, stand the mouldering turrets and shattered walls of Bayard, the birthplace of the famous chevalier 'Sans Peur et sans Reproche.' Pop. 2029.

BARRAX, a tn. Spain, New Castile, prov. of, and 20 m . W. by N. Albacete; in a plain, at the foot of the sierra de Alcaraz. It has clean streets, a square, parish chureh, townhouse, with prison attached; two schools, a storehouse, and a cemetery. The people are engaged in tillage, raising grain and saffiron, and as muleteers. Pop. 2361.-(Madoz.)

BARRE, several townships, U. States:-1, In Massachusetts, co. Woreester; the soil fertile, and well adapted for grazing. It contains one academy and 13 sehools. Pop. 2751. -2 , In Vermont, co. Washington; with four churehes and 15 sehools. Yop. 2126.-3, In New York, co. Orleans; containing several villages, two academies, and 34 schools. Pop. 5539.-4, In Pennsylvania, co. Huntingdon; with 10 schools. Pop. 2225.

BARREA, a vil. Naples, prov. Abrnzzo Ultm II. ; on a hill, r. bank, Sangro, 19 m. S.S.E. Salmona. Benedetto di Virgilio, a poet of some name, was born liere. Pop. 1150.

BARRLAII, a tn. Hindoostan, prov. Goojerat, cap. of a small prineipality, 80 m . E.N.E. Cambay; lat. $22^{\circ} 44^{\prime}$ N.; lon. $74^{\circ} \mathrm{E}$. It stands in a narrow valley, near the Pannah, a tributary of the Mhye, and is neatly built; many of the houses are of brick. The district is wild, and covered with jungle, extending for a space of almost 40 m . wholly uncultivated, and inhabited by a few nomadic and predatory Bheels.

BARREGES. Sce Bareges.
BARREL-OF-BUTTER ISLAND, a skerry or small rocky islet, Scotland, Orkney, off the S. end of Pomona, deriving its name from the circumstance of the tenant paying the proprietor a barrel of butter, as rent for the privilege of killing seals on it, the only thing of value it produces.

BARREN ISLANI), the name of several islands in varions parts of the world:-1, An isl., S.W. entrance into Bass's Strait, one of the Hunter group; lat. $40^{\circ} 32^{\prime} \mathrm{S} . ;$ lon. $144^{\circ} 48^{\prime}$ E.-2, An isl., S.E. entrance, Banks's Strait, one of the Furneaux islands; lat. $40^{\circ} 23^{\prime} \mathrm{S}$. ; lon. $148^{\circ} \mathrm{G}^{\prime}$ E. (r.) - 3 , A group of 7 or 8 islands, Mozambique Channel, W. eoast, Madagasear; they are small, and low, with white sandy beaches, and shrubs on them. Some of them have reefs and breakers projecting to a considerable distance, and are extremely dangerons: they lie between $17^{\circ} 50^{\prime}$ and $18^{\circ} 35^{\prime}$ S., lon. $43^{\circ} 32^{\prime}$ and $43^{\circ} 55^{\prime}$ E.-4, An isl. in the Bay of Bengal, about 55 m . E. from Middle Andaman Island; lat. $12^{\circ} 16^{\prime} \mathrm{N}$.; lon. $93^{\circ} 54^{\prime}$ E. (r.) It is a voleano, 1848 ft . high, and may be seen from a distance of 36 to 40 m . It is of small extent, covered with trees, except near the erater. It was not generally known that this voleano was in an aetive state until 1791, since which time it has eontinued so, and is subject to violent eruptions. The erater is very large when eompared with the extent of the island. - $5, \mathrm{~A}$ small isl. in the S. entrance of the Malayan or China Sea, between Borneo and the Malay Peninsula; lat. $1^{\circ} 29^{\prime} \mathrm{N}$. ; lon. $106^{\circ} 28^{\prime} \mathrm{E}$. (r.) -6 , A small isl., sometimes called Rocky Island, on the l. coast of China, in the Tong Hai or Eastern Sea; lat. $30^{\circ} 43^{\prime} \mathrm{N}$.; lon. $123^{\circ} 8^{\prime}$ E. (R.) -7, An isl. of Russian America, at the S. entrance into Cook's Inlet; lat. $58^{\circ} 53^{\prime} \mathrm{N}$. ; lon. $151^{\circ} 26^{\prime} \mathrm{W}$. (r.)

BARRENJUEY I'OIN'T, New S. Wales, co. Cumber land; it is a rocky peninsula, joined to the mainland by a

Harrow isthmus; bounded by the sea on the E., and Pittwater, an inlet from Broken Bay, on the W.; lat. $33^{\circ} 37^{\prime} \mathrm{S}$. . lon. $151^{\circ} 25^{\prime} \mathrm{E}$.

BARRHEAD, a large manufacturing vil. Scotland, co. Renfrew, in the vale, and on the banks of the Levern, 7 m . S. W. Glasgow ; consisting chicfly of a row of houses on either side of the publie road to Irvine. The more modern houses, mostly occupied by the working classes, are neat and commodious. The most elegant building is the clapel of ease, in the Norman style, conneeted with the Fstablished chureh; besides which, there are a Free and a U. Preshyterian chureh, and a R. Catholic chapel. Numerous extensive factories line either bank of the Levern. In the village and its vieinity there are four spinning-factories, with about 80,000 spindles; and two weaving factories, nine bleacheries, seven printfields, a flour-mill, an iron-foundry, and a machine-shop, employing in all about 5000 liands. The railway to Barrhead, opened 1849 , has greatly inereased the prosperity of the place. Pop. (1841), 5337 ; now (1850), estimated at 8000.-(Local Correspondent.)

BARRIE, par. Scotland, Forfar; on the German Ocean, N. of the Frith of Tay, having two lighthouses, which form the leading lights for vessels entering the Tay. Pop. 2124.

BARRIER REEF (The Great) ; this reef, called emphatically the Great Barrier Reef, from its vast extent, is situated off the N.E. coast of Australia. It commences with Breaksea Spit, in lat. $24^{\circ} 30^{\prime} \mathrm{S} . ;$ lon. $153^{\circ} 20^{\prime}$ E.; and extends to Bristow Island, on the coast of Papua, in lat. $9^{\circ} 15^{\prime}$ S.; lon. $143^{\circ} 20^{\prime}$ E., being a distance, in a straight line, of about 1260 m . It stretches along the coast at a mean distance of about 30 m ., being in some places not more than 10 or 15 m . from the land, at cthers upwards of 100 . This prodigious reef is wholly composed of coral, and rises in general precipitously from a very great depth, no bottom having been reached in some places on the outer side of the barrier with a line of 285 fathoms. 'If laid dry,' says Mr. Jukes, 'it would be found to have a considerable resemblance to a gigantic and irregular fortification; a steep glacis, crowned with a broken parapet wall, and carried from one rising ground to another.' In sailing from Sydney, through Torres Strait, vessels have their choice of two tracts, called, respectively, the Inner and Outer Routes. In taking the former, they enter within the Barrier Reef at its S. extremity, and ran up to the northward along shore. This passage, although narrow and intricate, is safe, with good anchorage the whole of the way, the depth being generally about 12 fathoms; and it is protected also from the violence of the sea by the reefs themselves. The outer route has not yet been surveyed, and is only known roughly by having been traversed by whalers and merchant vessels. It has not, of course, the advantages of the inner passage, being exposed to the open sea, and laving a depth of water which preeludes all possibility of anchoring. Several vessels having been lost on these reefs, in consequence of there having been no chart to point out their dangers, or to indicate the openings by which, when taking the Outer Ioute, they might steer through the reefs for Torres Strait, Capt. Blackwood was despatched by the Admiralty, in H. M. S. Fly, in the year 1842, to survey the Barrier, and to lay down such channels between the outer and inner seas as offered a secure passage. This has been done, and several eligible openings marked, together with a very complete series of soundings. On Raine's Islet, lat. $11^{\circ} 35^{\prime}$ S. ; lon. $144^{\circ} 5^{\prime}$ E. ; which marks the best passage through the reef, a beacon has been raised 40 ft . high, and 30 ft . diameter at the base. It is built of stone quarried in the island, and wrought into square blocks. -(J. 13. Jnkes's Narrative of the Surceying Voyage of 1I. M. S. 'Fly.')

BARRIGA NEGRA, a tn. and dist. Uragnay or Banda Oriental. The town is $85 \mathrm{~m} . \mathrm{N} . \mathrm{L}$. Monte Video. Large herds of cattle are reared in the district, many of the estates into whieh it is divided having from 60,000 to 200,000 head.

BARRINGTON, four pars. Eng.:-1, par. Cambridge; 2129 ac. Pop. 533.-2, par. Somerset; 1520 ac. Pop. 531. -3, Barrington (Great), par. Berks and Gloncester; 2580 ac. Pop. 553.-4, Barrington (Little), par. Gloucester; 1780 ac. Pop. 208.

BARROSA, a vil. Spain, S.W. coast, Andalusia, prov. of, and 16 m. S.S.E. Cadiz. To the E. of the village, on a knoll of the same name, was fought (March 5, 1811) the well-
k nown battle in whieh the British, when shamefully abandoned by the Spaniards, gallantly repulsed an attack by a superior force of French under Vietor, and took two of their eagles.

BARROW, a large and important navigable river, Ireland, prov. Leinster ; it rises at the foot of Gleubarrow, in the Slieblibloom mountains, on the borders of the King's and Queen's counties, a few miles W. Portarlingfon; and, after a generally S. eourse of about 90 m ., joins the Snir in forming the estuary called Waterford harbour. It is navigable to New Ross, a distance of 25 m . from the sea, for vessels of 200 tons; and above that town for barges to Athy, where a branch of the Grand Canal joins it. Its principal tributarics are the Nore, the Greece, and the Blaekwood river.

BAlROW, nine pars. England:-1, Suffolk; 2810 ae. Pop. 995.-2, Chester; 2620 ac. Pop. 663.-3, Salop; 2290 ac. Pop. 383.-4, (Gurney), Somerset; 2130 ac. Pop. 303.-5, (North), Somerset; 970 ac. Pop. 140.-6, (South), Somerset; 580 ae. l'op. 140.-7, (on-Trent), Derby ; 4040 ae. Pop. 641.-8, (upon-Inmber), Lincoln; 4620 ac. Yop 1662.-9, (-upon-Soar), Leicester; 7950 ae. Pop. 5782.

BARROW STRAIT, the eonneeting ehannel between Baffin's Bay on the E. tlirough Lancaster Sonnd, and the Polar Sea on the W.; between lat. $73^{\circ} 45^{\prime}$ and $74^{\circ} 40^{\prime} \mathrm{N}$.; from 30 to 45 m . in breadth. The coasts are rocky, rugged, and sterile, and the water of great depth, frequently upwards of 350 fathoms, while often no soundings at all ean be found. Icebergs of immense size are met with in this Strait. Whales abound there also, as in Baffin's Bay, whieh it quite resembles in all other respects. The strait was diseovered in 1616 by Baffin, but Capt. Parry, who visited it in 1819, gave it its present name, atter the late Sir John Barrow.

BARROWBY, par. Eng. Lincoln; 4010 ac. Pop. 799.
BARROWDEN, par. Eng. Rutland; 1530 ac. Pop. 658.
BARRY, a vil. and par., S. Wales, co. Glamorgan, 9 m . S.W. Cardiff. Pop. (1841), 104.-There is a sinall isl. of the same name in this parish, abounding with rabbits, and having an area of about 300 ac .

BARS.-1, A co. Hungary, eircle, Hither Danube, length from N. to S. about 45 m ., average breadth from W. to E. 18 m. ; area, 784 geo. sq. m . Towards the N. the surface is generally lilly, but in other directions it eonsists for the most part of rich alluvial plains or valleys, watered by numerous streams, of whieh the principal are the Gran, Nitra, and Sitra. It is rich in corn, wine, and eattle. Its minerals, once important, are understood to be nearly exhausted; but some gold is still obtained. It possesses ehalybeate springs and thermal baths. The eap. is Aranyos-Maroth. Pop. (ehiefly Selavonian and German), $133,000 .-2$, The name of four small places, Hungary; three of them in the above eo. on the Gran, in the vicinity of the town of Leva, and one in co. Sümegh, on the Drave.

BARSAC, a tn. Franee, dep. Gironde, 23 m . S.E. Bordeaux, l. bank, Gironde, in a distriet celebrated for its white wines. The best vineyards are above the town; these produee a wine similar to Sauterne, having only a little less flavour, and rather more spirit. Pop. 1701.

BARSHAM, four pars. Eng.:-1, par. Suffolk; 1470 ae. Pop. 250.-2, Barsham (East), par. Norfolk; 1230 ac . 1'op. 240.-3, Barsham (North), par. Norfolk; 710 ae. Pop. 89. -4, Barsham (West), par. Norfolk; 1380 ae. Pop. 86.

BARSÖE, an isl. Denmark, Schleswig, in the Little Belt, bail. Apenrade, about 2 m . long by 1 broad; lat. $55^{\circ} 7^{\prime} \mathrm{N}$.; lon. $9^{\circ} 32^{\prime}$ E. A large portion of the E. side of the island forms a perpendicular limestone wall; which, being undermined by the sea, causes Barsöe to become gradually less. On it is a small village.

BARS'TON, par. Eng. Warwiek; 1990 ac. Pop. 392.
BAR'TAN, or Bartin, a tn. Asiatic Turkey, pash. Anatolia, built at the junction of two rivers, the Kojahnás and the Ordeiri, and near where the united streams fall into the Black Sea; lat. $41^{\circ} 46^{\prime} \mathrm{N}$. ; lon. $32^{\circ} 10^{\prime} \mathrm{E}$. It is surrounded by a ruinous wall, and consists of about 650 houses, and is built on two low hills of cretaceous limestone. The houses, on aceount of the marshy character of the surrounding country; are all built of two stories, the upner one of which alone is inhabited. For the same reason the streets are carefully paved with large limestone slabs. It has 12 mosques, five khans, and four baths, and carries on a lively trade with

Constantinople, from whieh it imports various kinds of merchandise, sending, in exehange, hemp, fruit, and building timber. Small vessels only can come to the town, there being but 7 ft . water on the bar. Pop. 10,000 .

BARTEN, a tn. Prussia, cirele, lastenberg, duehy of E. Prussia; on the Siebe, $47 \mathrm{~m} . \mathrm{S} . \mathrm{E}$. Königsberg; with a chureh, and a linen, horse, and eattle market. Pop. 1637.-Other five villages in Prussia have the same name.

BARTENHEIM, a vil. France, dep. Haut-Rhin (Alsace), 15 m . from Alt-kireh, near the Neuf-Brisaeh Canal. P. 1865.

BARTENSTEIN, a tn. Prussia, circle, Rastenberg, duehy of E. Prussia; on the Aller, 34 m . S.S.E. Königsberg; with woollen manufactures, tanneries, and more espeeially potteries. Pop. 4000.

BARTFA, or Bartfeld, a free tn. IIungary, co. Saros, 156 m. N.E. Pesth; on a rising ground, near the banks of the Tepla and Lauka. It is one of the oldest towns in Hungary, and is well built; has several R. Catholie churches, a Lutheran chureh and sehool, a Francisean monastery, military academy, hospital, theatre, paper-mills, potteries, forges, \&c. In the publie square stands the townhall. Some acidulous chalybeate springs and baths, near the town, are much frequented. In the neighbourhood a meteoric ironstone was found, weighing nearly 2 ewt. The trade in wine, hemp, linen eloth, and woollen yarn, is considerable. Pop. 5200.

## Bart'il. See Bardt.

BARTHOLOMEW (St.) -1, One of the W. India leeward islands, belonging to Sweden, in lat. (centre) $17^{\circ} 50^{\circ}$ N.; lon. $62^{\circ} 52^{\prime}$ W.; having the isl. of St. Martin N.N.W., distant about 12 m. ; and St. Christopher S.S.L.L., distant about 30 m . It is about 8 m . long, varying from 2 to 3 in breadth; area, about $25 \mathrm{sq} . \mathrm{m}$. It is of irregular shape, and deeply indented by numerous small sandy bays, separated by bold and steep rocky acelivities, of moderate heiglit. In the interior it is hilly, but its loftiest elevations do not reach 1000 ft . The island is, in most parts, barren and sterile; but the numerous little valleys are well eultivated, and vegetables are at all times to be obtained. It produces also a little cotton, sugar, tobaceo, and indigo; but its only exports are cattle, and some salt. The trees of the island comprise lignum vitæ and iron-wood. Water is scaree, the inhabitants being obliged to depend for their supplies almost wholly on rain. The only harbour, Le Carenage, a safe and commodious one, and much frequented, is on the W. side of the island. Close by is Gustavia, the prineipal town, inluabited by a mixed population of Swedes, English, French, Danes, and Americans. It is a thriving place, having a considerable eommerce with the neighbouring islands in general supplies, which may be obtained there at all times. This island was settled by the Freneh in 1648, and was ceded by them to the swedes in 1784, with whom it still remains. The slaves on this island were emancipated by a deeree of the Swedish Government, dated October 9, 1847, on which oecasion the negro population framed an address of thanks to the King of Sweden. The population is estimated to be between 8000 and 9000 , of which two-thirds are black.-2, An isl. of coral formation in the N. Pacific Ocean; lat. $6^{\circ} 35^{\prime}$ N.; lon. $148^{\circ} 47^{\prime}$ E.; it is low, covered with cocoa-nut trees, and inlabited by a lightcomplexioned race.

BARTON-UPON-huminer, a th. and par. Eng., co. Lincoln. The rows is pleasantly situated, on r. bank, llumber, 33 m . N.N.E. Lincoln; has two ancient churches, and Wesleyan, Calvinist, Primitive Methodist, and R. Catholic chapels; an endowed charity sehool, several alms-houses, and other charitics. Trade principally in corn, flour, malt, coal, and bones for manure. liope and sacking are manufactured; and there are corn-mills, breweries, tanneries, petteries, \&c. Area of par. 6710 ac. P'op. 3475.

BARTON-UPON-HWEL, a township, England, co. Lancaster, 5 m . W. by S. Manchester, on beth sides the Irwel, here crossed by the Bridgewater canal, and on the Liverpool and Manchester railway. It has a neat church, Methodist, Independent, Unitarian, and R. Catholic clapels; several schools, and manufactures of calicoes, nankeens, iron and steel. It includes the village of Patricroft (which see). Pop. 10,865.

BARTSCH, a river, l'russia, which rises in gov. Posen, near the frontiers of Poland. It first takes a N. course, then turning E. passes Adelnan, and at Meletsch becomes navigable. Here it turns to the S., and proceeds in a circuitous course till it is joined by the Orta. From this its course is W.N.W., till it falls into the Oder, 8 m . E. of Glogan.

BARVAS, a vil. and par. Scotland, isl. Lewis, co. Ross. The village is situated at the mouth of a small river of the same name, ou the N.W. coast.-The parisir, in the N. part of the island, is 12 m . long by 7 broad. Pop. 2040.

BARWELLL, par. Eng. Leicester; 3950 ac . Pop. 1607.
BARWICK, three pars. Eng.:-1, Barwick-with-Stafford, par. Somerset; 920 ac. Pop. 446-2, Barwick, or Berwick-in-the-Brakes, par. Norfolk; 890 ac . Pop. 32.-3, Barwick, or Berwick-in-Elmett, par. York, W. Riding; 8030ac. Pop. 2275.

BAS, or BATz, a small isl. France, in the English Channel, N. coast of dep. Finistere, 15 m . N.W. Morlaix. It is $2 \frac{1}{4} \mathrm{~m}$. long, and nearly 2 broad; has three villages, four batteries, and two forts. The spring from which the iuhabitants derive their sole supply of water, is below high-water mark. No trees grow on the island. The channel between the island and the mainland is a tolerable refuge for ships. A revelving light stands on an elevation, 223 ft . above the level of the sea, in lat. $48^{\circ} 44^{\prime} 48^{\prime \prime} \mathrm{N}$. ; lon. $4^{\circ} 1^{\prime} 30^{\prime \prime} \mathrm{W}$. (r.)

BASCHURCH, par. Eng. Salop;10,270 ac. Pop. 1491.
BASECLES, a tn. and com. Belgium, prov. Hainaut, on the road, and nearly half-way between Tournay and Mons; with extenisve lime and marble quarries, and a considerable export of agricultural produce and cattle. Pop. 2661.
base mlan. See Basilan.
BASEL, or Basil [French, Basle, Bäle], a can., N. W. corner of Switzerland, the 11th in the Confederation, between lat. $47^{\circ} 21^{\prime}$ and $47^{\circ} 37^{\prime}$ N., and lon. $7^{\circ} 29^{\prime}$ and $7^{\circ} 48^{\prime}$ E.; bounded, W. by France, N. by Baden and can. Aargau, E. by Aargau, and S. by cantons Soleure and Bern. Its shape is so very irregular, as to make it almest impossible to give an average length and breadth; but its area is 140 geo. $\mathrm{sq} . \mathrm{m}$. The surface in the S. is mountainous, being intersected by portions of the Jura range, which in a manner isolates the canton from the rest of Switzerland; but the N. part is flat, lying along the banks of the Rhine. The whole canton belongs to the basin of that river, and is watered by a great number of its affluents, the clief of which are the Ergolz and Birse. The lighest summit is about 2500 ft . The forests are considerable, and consist of oak, ashl, pine, and fir. The soil, where it admits of cultivation, is fertile, and produces good crops, particularly on the borders of the Rhine, and in the valleys of the Ergolz and the Birse; but the corn raised does not much exceed what is necessary for the consumption of the inhabitants. Wine of good quality, the best being Schweizerblut, and fruit, are also produced. In the mountains, where the pasturage is excellent, cheese and butter are made to a large extent, and many cattle are reared. The only minerals wrought are sandstone, limestone, a little coal, and scme iron. Salt is obtained
from salt springs. Manufactures employ the greater part of the population. Ribbon-making in particular had become an important branch of industry as early as the commencement of the 17th century, and was greatly extended by the influx of French Protestants, on the revocation of the Edict of Nantes. It occupied 1238 looms in 1754 , and has since increased to such an extent, that the number of persons employed by the ribbon manufacturers of Basel, in this and the neighbouring cantons, is about 15,000 ; and the value of the ribbons produced varies from $£ 480,000$ to $£ 600,000$ annually. The patterns were formerly imported from France; but the manufacturers now employ dranghtsmen, whe furnish the designs. The U. States take about a half of the whole, and the greater part of the remainder goes to Germany. England was at one time a considerable purchaser, but the great improvements in the manufactures of Coventry have almost entirely excluded those of Basel. Other manufactured articles are, silk thread, tape, sarsanets, leather, paper, cotton thread, some cotton goods, tobacco, and hardware. The commeree of the canton is extensive and flourishing; its exports including-in addition to the staple of ribbons already mentioned-leather, paper, tebacco, hardware, and agricultural produce, particularly wine, fruits, cattle, butter, and cheese. Its imports are colonial produce, silk, cotton, salt, leaf-tobacco, metals, iron, copper, and steel. The position of the canton between France, Germany, and Switzerland, procures for it an extensive transit trade, facilitated by the Rhine, and by the railways on either side that river. Its contingent to the army was 918 men, and its war contribution 34,425 francs ( $£ 1377$ ). It was divided into six Bezirk or administrative divisionsBasel, Liestall, Sipaeh, Waldenburg, Berseck, and Unterer Bezirk. Since 1833 , this canton has been definitively divided into the twe cantons of Basel Country (Basel-Landschaft), and Basel City (Basel-Stadt, Basle-Ville), Basel Country comprising the whole territory of the old canton, with the exception of the town of Basel, its suburbs, and three communes on the r. bank of the Rhine, which together constitute the canton of Basel Town. Both cantons are pertions of the Swiss Confederation, but have only a single vote between them-an arrangement attended with the awkward result, that when they are not agreed they neutralize each other, and the vote is lost.

BASEL [French, Basle or Bûle], one of the most extensive towns in Switzerland, cap. formerly of the whole can. of Basel, but now, since the subdivision of that can., cap. only of the can. of Basel Town. It is 43 m . N. Bern, pleasantly situated on the Rhine, which is here crossed by a wooden bridge, supported partly on stone piers. The river divides the town into twe parts-Gross Basel or Great Basel on the left bank, and Kilcin Basel or Little Basel on the right bank; lat. $47^{\circ} 34^{\prime} \mathrm{N}$. ; lon. $7^{\circ} 36^{\prime} \mathrm{E}$. Basel is surrounded by walls, and is tolerably well built; streets irregular but clean, and plentifully supplied with fountains. The cathedral, built by Henry II. in 1019, has a tower 200 ft . high, and is one of the finest churehes in Switzerland. It contains the tombs of Erasmus, Ecolampadius, Bernouilli, and Anne, wife of lundolph of Hapsburg, mother of the line of Austrian princes. In a corner of the square in which the cathedral is situated, is the public library, containing 50,000 velumes, with many important manuscripts, an interesting collection of paintings and drawings by Holbein, and a number of antiquities from Augst, the site of the Roman Augusta Rauracorum. Behind the cathedral is a terrace, about 60 ft . above the level of the river, planted with chestnut trees, and commanding a fine view of the Rhine, the town, and the hills of the Black Forest. The arsenal contains the armour worn by Charles the Bold at the battle of Nancy. The university, founded in 1459 by Pope Pius II., and re-organized, in 1817, with 24 professors, was the first great seminary for the advancement of learning established in Switzerland. It once enjoyed a high reputation, and numbered Erasmus, Bernouilli, and Euler, among its professors; the two latter were natives of Basel. The town has also a normal school, a gymnasium with 12 professors, an clementary polytechnic school, a theological institution, a school of practical agriculture, and the Erasmus college. The library of the theological institution contains 20,000 vols.; and a special library attached to the betanical garden is said to be the richest of the kind in Europe. As a commercial and manufacturing town, Basel is the most important in Switzer-
land. This is partly to be attributed to its position on the frontiers of France and Germany, a few miles below the spot where the Rhine becomes navigable, and at the termination of the French and German railways on either side the river,

Batanes. That portion of them formerly called N. Bashees, as will be seen from the following extract, is supposed to have no existence, at least in the position in which they are usually laid down, lat. $21^{\circ} 9^{\prime}$ N.; lon. $122^{\circ}$ E.:- ${ }^{6}$ The following morning we found ourselves close off Yámi or the nerthernmost of the Batanes group, and were fortunate enough to effect a landing on a detached islet, and obtain its position. This enabled us to efface from the chart the islets termed N. Bashees, which have no existence in the pesition assigned to them, nor in the visual radius from the mast-head position of the Samarang, 108 ft . above the level of the sea. The channel between the two northernmost islands is safe, and carries soundings, but too deep for ancherage, as well as the bottom being rocky. The position of the islet lying off the S. extremity of Yámi, is in lat. $21^{\circ} 5^{\prime} \mathrm{N}$. ; lon. $121^{\circ}$ ऽ5 $4^{\prime}$ E.' See Batan and Batanes.-(Sir E.Belcher's Voy., Samarang, vol. i. p. 310.)

BASHK1RS, a peculiar people inhabiting the plains adjoining
which naturally renders it the entrepot of the commerce of Switzerland with France, Germany, and the Low Countries. Its ribbon manufactories are extensive (see preceding article); and it also produces paper, silks, gloves, leather, jewellery, printed cottons, and turnery ware. About a quarter of a mile beyond the gates a cross is erected, to commemorate the battle of St. Jacob, fought in 1444 , when 1600 Swiss attacked a French army of twenty times their number, commanded by the Dauphin, afterwards Louis XI., and for 10 hours kept it in check; nearly all the Swiss fell, not more than 10, according to some accounts, escaping alive. This exploit first spread the fame of Swiss valour, and led to the enrolment of the Swiss body-guard of France. The vineyards near the field of battle produce a red wine called Schweizerblut [Swiss blood], esteemed the best in the canton. Down to the end of last century (1795), the clocks of Basel were kept an hour in advance of those in other places of Europea singular custom, the origin of which is unknown. The treaties of peace, between France and Spain, and France and Prussia, were signed here, July 22, 1795. Pop. 21,601, almost all Pretestants.

BASELE, a tn. and com. Belgium, prov. E. Flanders, on the Scheldt, 12 m. N.E. Termende. The chief church is handsome, and contains some good paintings; and in the immediate vicinity is an old Gothic castle of the 13 th century, surrounded with a fine domain laid out in modern style, with a lake and suspension bridge. In the commune are large brickfields, producing frem 60 to 70 million bricks annually. Many of the inhabitants gain their living by making sabots or woodell shoes. Pop. 4918.

BASELICE, a tn. Naples, prov. Sannio, 18 m . S.E. Campoliapo, on the deelivity of a mountain. It has an hospital, and two monts-de-piété, established to portion poor girls on their marriage. Pop. 4406.

BAS-en-basset, a tn. France, dep. Haute Loire, 11 m. N. Yssengeaux. Overlooking the town is the pieturesque ruin of the castle of Rochebaron. There are here manufactures of blonde lace, ribbens, and earthenware. Pop. 1080.

BASFORD, par. Eng. Notts; 2720 ac . Pop. 8688.
BASHEE ISLANDS, a group of islands, Indian Archipelago, N. of the Philippine Islands, and between lat. $20^{\circ}$ and $21^{\circ} 20^{\prime}$ N., and lon. $121^{\circ}$ and $122^{\circ}$ E.; discovered, in 1687 , by Dampicr. They were so called, by their discoverer, from the name of an intoxicating liquer which is much drunk there. Bashee is a thick yellow fluid, of a sub-acid taste, between that of cider and toddy, and is not very potent in its effects. They are hilly, and produce sugar-canes, plantains, bananas, puinpkins, yams, and vegetables; abundance of goats, hogs, and good horses. These islands are now frequently called
the S. Uralian Mountains, on the confines of Europe and Asia, between the parallels of $52^{\circ}$ and $55^{\circ} 30^{\prime} \mathrm{N}$., and the meridians of $58^{\circ}$ and $63^{\circ} \mathrm{E}$. The origin of these people is extremely obscure ; their language, which differs but little from that of the Tatars of Kasan, seems to connect them with the Turkish race, while in looks and features they are said to bear a stronger resemblance to the Finnish tribes. It is not improbable that they are the descendants of Bulgarians, Nogays, and other Tatar adventurers who settled in the Uralian valleys, partly expelling, partly mixing with, and absorbing the original Finnish population. In the 13th century, the travellers Carpini and Rubruquis point ont in this quarter the country of Bascart or Pascatir, which they entitle Great IIungary. The Ostiaks on the river Obe, have the tradition that their nation came from the S.W., that is, from the S . Ural. The tradition of the Bashkirs is, that they left Bulgaria towards the end of the 16th century. They are now ealled, by their Tatar neighbours, Ueshtak (Ostiak) or strangers, so that all circumstances tend to show that, in occupying the territories, they succeeded also to the names of the original Finnish race. It is true that the name Bash$k i r$ is usually explained from the Turkish language; some suppose it to be a corruption of Bash-kurt [a bee-head], which is explained to mean a keeper of bees. Others endeavour to make the word signify shaven heads; but these etymologies, ingenious as they may be, fail to reconcile the comparatively recent and evidently Turkish origin of the present Baslikirs, with the mention of Pascatir, in the 13th century, in connection with the IIungarian or Finnish name.

As to physical characters, the Bashkir may be said to belong to the rudest and most uncouth Mongolian type. He is of middle height, very musenlar and strong; his eyes are small, his month large, his face flat and broad, and widened still further to the view by the projeetion of enormous ears. He has black hair, and an olive complexion. The Bashkirs may be justly called the Bedonins of the N. They are indolent on foot, but indefatigable on horseback; and being habitually intent on pillage, these bold horsemen and expert archers long proved extremely troublesome neighbours to the Russians. In 1741, however, they were completely subdued, and being placed, at a subsequent date, on the same footing as the Cossacks, they were obliged to furnish 3000 cavalry to the general service of the empire. They are allowed to choose their own chiefs-their Starshiman and Attaman (IIetman) -who govern each a volost or canton, assisted by a Russian seeretary bearing the title of Tsemskoi Ispraonik. The Bashkir guards are armed with spear, bow, and arrows, and so expert are they in the use of the latter weapons, that it has not been thought worth while to supply them with fire-arms. The Bashkirs are, at the present day, the only people within

## BASILAN

the limits of the Russian empire who still cling to their ancient nomadic labits. During half of the year at least, they live under trees or tents; as winter approaches, they return to their villages-for each encampinent owns a group of wooden houses at the borders of some wood-they send forward the women to exorcise the fixed, and, to their senses, gloomy dwellings, and thus settle for a few months with their droves and flocks around them. In spring, again, with different feelings, they hurry to the open plains, and encamp in small companies. The women milk the cattle, make cheese, weave cloth, and prepare felt for tent coverings; the men drive the mares, tend the cattle, fish, and hunt with hawks. Their falconry is suecessful, and hawks trained by them feteh good prices in the Kirghiz steppes, and in Persia. With abundance of mares' milk, mutton, and honey, to say nothing of game and wild fruits, devoil of care, and always on horseback, the Bashkirs lead a singularly happy and healthful life. Their wealth consists chiefly in droves of horses. A rich man will possess 2000 or 3000 mares, and there are few so poor as not to have a score. Their bee-hives are also extremely numerous; honey, and, still more, wax, constituting chief articles of their export trade with the Russians. The Baslukirs are Mahometans, but of the most illiterate kind; they assemble round their priest or mollah to pray in an open enclosure, having $n o$ covered mosques. They do not bury their dead in consecrated ground, but in the plain. The Bashkirs avoid as muell as possible the towns and mines, and readily sell to the Russians the right of mining on their estates; nor have they villages anywhere on the mountains, except near the pass of Slatoust. At that point, the line of their usual haunts erosses the Uralian chain, extending N.E. to the Isset, and S.W. to the Bićlaya, the Samana, and the Ural. Their territory S.W. Slatoust, is of the finest kind, well watered, wooded, and abundantly fertile; but these equestrians think only of pasture, and rever of their own accord engage in agricultural pursuits. They do not go beyond Ekaterínburg on the one side, nor Orenburg on the other. In 1770, they reckoned 27,000 families or probably about 160,000 souls; in 1838 , they had increased to 195,000 ; of whom about 20,000 were in the government of Perm, the remainder in that of Orenburg.

BASILAN, or Baseelan, one of the largest islands of the Sooloo Arehipelago, off the S. W. extremity of Mindanao, from which it is separated by the Strait of Basilan, about 15 m . broad, a safe channel, though having irregular tides; lat. (E. point) $6^{\circ} 41^{\prime}$ N. ; lon. $122^{\circ} 17^{\prime}$ E. (R.) It is abont 42 m . in length by 6 average breadth. It is low towards the coast, but mountainous in the centre; produces bananas, sugarcane, and riee. Its coast abounds with fish; hogs and deer run wild, and in the depths of the forest elephants are met with. Basilan is a favourite resort of pirates, particularly of a daring and active race calling themselves Illanos, a distinct people, who inhabit the line of coast comprised within the bight of the bay of that name in the island of Mindanao.-(Journal of the Asiatic Society of Bengal.)

BASILDEN, or BAsildon, par. Eng. Berks; 3120 ac. Pop. 812.

BASILICATA, a prov. Naples, bounded, N. by provs. Prineipato Ultra and Capitanata, N.E. Bari, E. Otranto and Gulf of Taranto, S. Calabria Citra, S.W. the Mediterranean, W. Prineipato Citra ; greatest length, from N. to S., 95 m ., greatest brealth, from E to W., 65 m .; area, about 2464 geo. sq. m. It lies almost wholly on the E. side of the Appennines, and its numerous streams, the ehief of which are the Sinno, Agri, Salandrella, Basento, and the Bradano, flow E. into the Gulf of Taranto. The valleys in whieh these rivers flow, slope gradually in the same direction till within 10 m . of the coast, when they sink down into a low plain. Here the fertility is great, and abundance of corn (principally maize), wine, flax, hemp, liquorice, and tobacco, are produced. Many of the hilly parts are planted with olives, and the more monntainous distriets afford excellent pasturage, on which great numbers of sheep, goats, and swine are reared. The capital of the province is Potenza. Pop. 469,000.

BASING, par. Eng. I Lants; 4970 ac. Pop. 1172.
BASINGSTOKE, a tn. and par. Eingland, co. Hants. The town, pleasantly situated near the source of the Loddon, 18 m . N.N.E. Winehester, consists of several streets lined with well-built houses, paved, amply supplied with water, and lighted. A handsome new townhall was erected here in 1832,
containing a spacious market for corn, a ball-room, and other apartments for public purposes. Basingstoke has a church, a fine Gothic structure erected in the time of IIenry VIII.; two Dissenting eliapels, and a Friends' meeting-house ; a bluecoat and national school united, a British day-sehool for boys and girls, supported by the Society of Friends, and several Sunday-schools ; a meehanics' institute, with good library, and numerous charities founded by private persons. A considerable trade is carried on in corn and malt, which is mneh faeilitated by the favourable position of the town as regards the means of transport. Area of par. 3970 ac. Pop. 4066.

BASINGTHORI'E-with-westby, par. Eng. Lincoln; 920 ac. 1'op. 137.

BASLE. See Baser.
BASLIC, par. Irel. lioscommon; 15,396 ac. Pop. 3608.
BASOU1AA, a tn. Iindoostan, Malwa, on an affluent of the Betwal, ; lat. $23^{\circ} 53^{\prime} \mathrm{N}$.; lon. $78^{\circ} \mathrm{E}$., containing about 2000 houses.

BASQUE PROVINCES [anc. Cantabria], a territory of a nearly triangular shape, in the N. of Spain, formed by the three provinces Alava, Guipuzcoa, and Biseay, which contain unitedly an area of about $4863 \mathrm{sq} . \mathrm{m}$. It is bounded, N. by the Atlantic, E. by France and Navarre, S. by Old Castile, and W. by Santander, between lat. $42^{\circ} 25^{\prime}$ and $43^{\circ} 28^{\prime} \mathrm{N}$. ; and lon. $1^{\circ} 44^{\prime}$ and $3^{\circ} 20^{\prime} \mathrm{W}$. These provinces are very mountainous and picturesque (see Alava, Biscay, and Guipuzcoa), and in language, manners, costume, and government, differ materially from the rest of Spain, each having a separate constitution. The privileges enjoyed by these provinces are not merely political; for they have free trade in salt, tobacco, \&c., on which a heavy duty is paid by the rest of Spain, and freedom from conscription. The Basques generally are honest, simple, and primitive, attached to musie and dancing, and remarkably fond of the bagpipe; with kindness they are easily managed, but are sullen and revengful if treated with severity. In person they are of the average height, remarkably well built, muscular, and capable of enduring great exertion; they make the best sailors in Spain, and are industrious and skilful in mercantile pursuits. They are a brave people, much addieted to smuggling, and eminently fitted for the desultory manner of guerilla fighting, by which they have so long preserved their independence. The name Basque is derived, by Humboldt, from Basoa, a forest, whence Basocoa, belonging to a forest; other antiquaries derive it from Bassoco, a mountaineer. The nation is, as far as history informs us, the first that took up its abode in Spain, though its origin is doubtful. Ilumboldt imagines that the inhabitants are the modern representatives and descendants of the ancient Iberi, and, according to the Basque historians, the Vascones, so called by the Romans, hat settlements in France, Italy, and Ireland. Be this as it may, it is evident that the Basque nation has at different periods held the greater part of Spain in subjection, and successfully resisted all attempts to deprive it of its liberties and privilegres. Pop. 373.149.

BASS (THe), a remarkable insular trap rock, Scotland, co. Haddington, at the mouth of the Frith of Forth; lat. $56^{\circ} 4^{\prime} 42^{\prime \prime} \mathrm{N}$. ; lon. $2^{\circ} 38^{\prime} 12^{\prime \prime} \mathrm{W} . ; 2 \mathrm{~m}$. from the coast of E. Lothian, and 3 m . from N. Berwick. It is of a circular form, about 1 m . in cireumference, rising majestically out of the sea to a height of 420 ft . On being closely approached, its aspect is tremendous, from its lofty preeipitous walls of rock, and the immense excavations which the sea has opened all around, one of which, running N.W. and S.E. may be taken in calm weather. The rock is inaecessible, except on one flat shelvy point to the S.E. There is a spring of water on its summit, whose superficies has been guessed at 7 ac., and where a few sheep also are grazed, which bring a high price, Bass mutton being considered a delicacy. Solan geese, and other sea fowl in myriads, cover its rocks, and keep flying around it in elouds. On the N.E. side, the water is of great depth, but shallow on the S . Among the several rains on the island, of historical interest, are the remains of a fortalice, commanding the landing-plaee, capable of accommodating upwards 100 men, and which had been accessible only by ladders or buckets and chains, and the ruins of a chapel, about half-way up the acclivity of the rock. The Bass was purchased by Government after the Revolution, and its castle, long sinee demolished, converted into a state prison, in which various leaders of the Reformation were confined. It was the last
place in Britain that held out against William III., its gallant defenders, a small band, yielding only when they had no longer a means of snbsistence. This singular rock anciently belonged to a family of the name of Lauder, whose head was styled, Lauder of the Bass.

BASSA, BAFFA, or Buffa, a harbour, Grain Coast, coast of Guinea, between the Capes of Mesurado and Palmas, in about lat. $7^{\circ} \mathrm{N}$. ; lon. $10^{\circ} 20^{\prime} \mathrm{W}$. , and distant from the former between 70 and 80 m . The neighbouring country abounds in fruits, especially oranges, lemons, and bananas. Cattle, sheep, and goats are also reared in great numbers, affording ample supplies to vessels resorting to the harbour.

BASSAIN, a tn. Burmah, cap. prov., 1. bank, Bassain river, one of the mouths of the Irawady, 99 m . W. Rangoon; lat. $16^{\circ} 50^{\prime} \mathrm{N}$. ; lon. $94^{\circ} 45^{\prime} \mathrm{E}$. It is considered the third port in the empire; has a greater depth of water than Rangoon, but is less centrally situated for trade. Pop. (1826), 3000.

BASSALEG, par. Wales, Monmouth; 6290 ac. P. 1731.
BASSAM (Grand).-1, A river, W. Africa, the embouchure of which is on the $S$. part of the Ivory Coast, where the French have a settlement. Its chicf affluent, the Acka or Ackba, which comes from the $\mathbf{N}$., is said to approach near one of the arms of the Niger. $-2, \mathrm{~A} \mathrm{tn}$. near the mouth of the ahove river, and cap. of a district of same name; lat. $5^{\circ} 20^{\prime}$ N.; lon. $3^{\circ} 30^{\prime} \mathrm{W}$. It is a place of some trade, and exports a considerable quantity of gold.

BASSANO, a tn. Austrian Italy, gov. Venice, 15 m . N.E. Vicenza, 1. bank, Brenta, here crossed by a beautiful stone bridge, connecting the town with its suburbs on the opposite side of the river. Bassano is surrounded by walls, is well built, and well paved, having marble footpaths. It has 30 churches, four nunneries, two hospitals, a gymnasium, schools, and several benevolent institutions; a mont-de-piété, and barracks; works for spinning silk and bleaching wax, tanneries, manufactures of woollen cloth, straw hats, and copper utensils; and likewise a printing establishment, founded 1663, which, at one time, employed 50 presses, and more than 1000 persons, but is now much fallen off. Paper-mills are attached to it, and also a school of engraving, by which Bartolozzi, Volpato, and other distinguished engravers, largely benefited. The trade of Bassano consists chiefly of silk, the produce of its own territory ; cloth, timber, iron, corn, wine, and cattle. In the vicinity a great quantity of charcoal is made, which is sent to Venice. The country around is studded with villages, and abounds in vines and olive-trees, which last here reach their N. limit of growth. Bassano is the birthplace of Francesco, Giacomo, and Leonardo da Ponte, the fatliers of the Venetian school of painting, and of Aldus Manutius, the celebrated printer of Venice. On September 9,1796 , the Austrians, under Wurmser, were here defeated by the French under Bonaparte. Napoleon, when Emperor, created his secretary, Maret, duke of Bassano. Pop. 10,000.

BASSAR (Al), or El-KAsR-Kebir, a tn. Marocco, 85 m . S.S.W. Tangier, r. bank, Luccos or Louklios. It has goodlooking houses, roofed with tiles in the European style, 14 mosques, a large number of shops, and a market. Pop. 5000.

BASSAR PULO, a small isl., Asiatic Archipelago, N. coast Ceram, a little W. of the entrance into Sawa Bay ; lat. $2^{\circ} 45^{\prime}$ S. ; lon. $129^{\circ} 10^{\prime} \mathrm{E}$.

BASSAS DA India, an isl. Mozambique Channel; lat. $22^{\circ} 22^{\prime} 30^{\prime \prime} \mathrm{S}$.; lon. $40^{\circ} 24^{\prime} 15^{\prime \prime} \mathrm{E}$. (r.) The name of Baxos da India, given it by the Portuguese discoverers, it still bears in all European charts except our own. It is of a circular shape, about 3 or 4 m . in diameter, highest towards the N., bnt generally flat; and on the W. has a white sandy beach, without any appearance of shoals or rocks. It is of easy access, is well wooded, and the shores abound in turtle.(Horsburgh.)

BASS STRAIT, the passage between Van Diemen's Land and Australia, abont 150 m . in length, and 120 to 140 in breadth. It is much obstructed by islands and coral recfs, and is, on this account, a rather dangerous navigation. The prevailing winds are from the W . The tide rises from 8 to 12 ft ., and runs at the rate of $1 \frac{1}{2}$ to $3 \frac{1}{2} \mathrm{~m}$. per hour. The soundings vary from 35 to 42 fathoms. The strait is called after Mr. Bass, a surgeon, by whom it was explored while on a seaiing voyage from Port Jackson.

BASSEE (La), a small tn . France, dep. Nord, 14 m . S.W. Lille, on the canal of same name, that forms the water Yol. I.
communication from the Denle to St. Omer, Dunkirk, and Calais. Bonnets, soft soap, and pottery, are made here. There are also spinning-mills for wool and cotton, oil-mills, tanneries, and a saltwork. The trade is principally in grain, seeds, wine, oil, butter, fruit, cattle, pigs, wood, and coal. Pop. 2248.

BASSEIN, a seaport tn. Hindoostan, presidency Bombay, prov. Acrungabad ; lat. $10^{\circ} 22^{\prime} \mathrm{N}$. ; lon. $72^{\circ} 54^{\prime} \mathrm{E} . ; 30 \mathrm{~m}$. N. Bombay, and separated from the island of Salsette by a narrow channel. It was fortified by the Portugucse in 1531, and remained in their possession until captured by the Mahrattas, in 1750. Here the treaty was signed, December 31, 1802, between the Peshwa and the British Government, which annililated the federal empire of the Mahrattas; since which it has belonged to the British. A considerable part of the rural population of the district are R. Catholics. To the N. and N.E. of the town are extensive forests of teak, from which the dockyards of Bombay are supplied.

BASSENTHWAITE, par. Eng. Cumberland; 6930 ac. Pop. 536.

BASSERSDORF, a vil. and par. Switzerland, can. of, and 8 m . N.E. Zürich, pleasantly situated in an open valley. It has a church and two schools. The inhabitants are engaged partly in agriculture and partly in manufactures. Pop. 825.

BASSES (Great and Little), the former, called Ramanpaaj by the natives of Hindoostan, is the name of a ledge of rocks nearly 1 m . in extent, off the S . end of the island of Ceylon; lat. $6^{\circ} 11^{\prime} \mathrm{N}$. ; lon. $81^{\circ} 36^{\prime} \mathrm{E}$. It is elevated but a few feet above water, and the sca breaks over it with great violence in stormy weather. There is a safe channel between it and the main, which is about 9 m . distant. About 21 m . N.E. by E. of the Great Basses, is the ledge of rocks called the Little Basses; lat. $6^{\circ} 24^{\prime} 30^{\prime \prime}$ N. ; lon. $81^{\circ} 54^{\prime}$ E.

BASSETERRE, two tns. West Indies:-1, Cap of isl. St. Christopher's; is situated at the mouth of a small river, S. side of the island; contains about 800 houses, a spacious square, and a church, and is defended by three forts. The district of Basseterre contains $17 \mathrm{sq} . \mathrm{m}$., with a population of 6620; and is divided into two parishes--St. George's, and St. Peter's, the former of which sends four, the latter two members to the Assembly. The vale of Basseterre is beautiful, and well cultivated.-2, The cap. of isl. Guadalonpe, lies near the S. end of the island, and consists of one principal long street, stretching along the sea-shore. Defended by Forts-Royal and Matilda. The anchorage is unsheltered, and exposed to a constant swell.

BASSIGNANA, a tn. Sardinian States (formerly fortified), prov. of, and 7 m . N.E. Alexandria; r. bank, Po, not far from the mouth of the Tanaro. Pop. 4000.

BASSINGBOURNE, par. Eng. Cambridge; 4235 ac. Pop. 1774.

BASSINGHAM, par. Eng. Lincoln; 1940 ac. P. 792.
BASSORA. See Bussorah.
Bistad, or Batsta, a market and fishing tn. Sweden, bail. of, and 58 m . N.W. Christianstad, on the Kattegat; lat. $56^{\circ} 26^{\prime} \mathrm{N}$. ; lon. $12^{\circ} 49^{\prime} \mathrm{E}$. It has a tolcrably good harbour, and carries on some seafaring business with Malnö Ystad and other places.

BASTELICA, a tn. France, dep. Corsica, arrond. of, and 15 m . E.N.E. Ajaccio ; on the Prumetta, chief place of canton. Pop. 2528.

BASTIA, a seaport tn. France, N.E. coast, isl. Corsica, 55 m . N.N.E. Ajaccio; lat. $42^{\circ} 41^{\prime} 48^{\prime \prime}$ N.; lon. $9^{\circ} 27^{\prime}$ E. (1..) It is the wealthiest and most populous town in the island, is built in the form of an amphitheatre, amid olive, orange, and citron gardens, and has a fine appearance from the sea; but on a nearer approach, the houses are found to be mean, the streets narrow, though well paved with a kind of marble jasper. Several of the churches are handsome, with rich gilding and marble sculptures, resembling the churches of Italy. The finest is that of St. John the Baptist, which is of large size, and highly decorated. This town is the seat of the royal court of appeal for the island, of a court of commerce, and of an inspector-general of forests. It has a royal college, a royal school of hydrography, a theatre, a public library, with 6000 volumes, and is the residence of consuls from most of the European states. The staple of Bastia is leather. Its numerous tanneries prepare, on an average, annually, 5000 to 6000 bullock-hides, 1000 calf, and 6000
sleep-skins. The other manufactures consist of soap, wax eandles, liqueurs, and stilettoes, which are highly esteemed by the Italians. The trade is chiefly in wine, oil, leather, goats' hair, and coral. Coral-fishing, also, is carried on to some extent. A considerable trade is done in wine, oil, figs, pulse, grain, oak-bark, and fruit; and there is regular communication by steam with Toulon. Of late years, Bastia has greatly increased in importance, and has become a centre of most extensive traffic between France, Sicily, Italy, and the Levant. The former incommodious port is (1850) in process of being replaced by a new one, which will enclose a surface of 26 ac., one-half of which will present a depth of 19 ft ; and a quarter, 26 ft . It will be protected by a mole, and form an excellent harbour of refuge. Before the annexation of Corsica to France, Bastia was the capital of the island. l'op. (18.16), 12,571.

BAS'TIDE-de-serou, a neat little tn. France, dep. Ariege, 8 m . N.W. Foix ; situated or the Arizo, here crossed by a stone bridge of a single arch. There are in the vicinity a remarkable grotto, and a copper mine, no longer worked; and a worsted, and some saw mills. Tiles, pottery, and hosiery are made here. Pop. 1107.

BASTIDE-rouairoux, a tn. France, dep. Tarn, 23 m. from Castres; well built, has some dyeworks, and cloth manufactories. Pop. 1496.

BASTOGNE, a tn. and com. Belgium, prov. Lnxembourg; in a plain, on the high road between Namur and Luxembourg, from the latter of which it is about 32 m . N.W. It has two churches, four chapels, a small seminary, and an hospital. Its fortifications were demolished by the French in 1688. Tanneries, and the knitting of worsted stockings, employ a great part of the inhabitants. There is also an important trade in grain and cattle. Bastogne is famous for its hams. Pop. 2220.

BASTON, par. Eng. Lincoln; 3520 ac. Pop. 765.
BASWICH or Berkswici, par. Eng. Stafford; 6200 ac. Pop. 1438.

BATAAN, a prov. Philippines, isl. Luzon, forming a peninsula, W. side of the Bay of Manilla; to the N. it is bounded by prov. Zambales. It is poor, and little cultivated, yet produces the best sugar in the Philippines, and very good indigo, but scarcely enough of rice to supply the wants of the people. The country is frequently inundated, and the roads rendered impracticable in the rainy season. The province is traversed by lofty mountains, which are well covered with valuable wood; but the streams by which it is watered are generally small, and only to be navigated by native boats; they abound, however, in fish, which forms a staple article of food to the inhabitants. Pop. 37,010.

BATAC, or Batag Island, Asiatic Archipelago, N. coast, Samar, one of the Philippines; lat. (N. point) $12^{\circ} 43^{\prime} \mathrm{N}$. ; lon. $125^{\circ} 5^{\prime} \mathrm{E}$. (k.) Inside of this island is the port of Palapa, having 5 and 6 fathoms water, accessible by two channels, one on each side of Batac.

BATALIIA, a tn. and par. Portugal, prov. Estremadura, dist. of, and 7 m . S. Leiria, on the Lis. The Dominiean convent here, was founded by King John I., in commemoration of a vietory over the King of Castile, near Aljubarrota, in the year 1385. This convent, in the Norman Gothic style, is one of the most splendid buildings in Europe. An Irislıman, named Hacket, was the arehitect. It was intended as the royal bury-ing-place for the Kings of Portugal, but the sepulchre of the Braganzas is now at Belem. The town has some trade in salt, and an important annual fair, which lasts eight days. Pop. 1062.

BATALIN, or Bataling, a small isl. Asiatic Archipelago, S.TV. Cape Talyabo, on the E. coast of the island of Celebes; lat. $1^{\circ} 30^{\prime} \mathrm{S}$. ; lon. $123^{\circ} 50^{\prime} \mathrm{E}$. (r.)

BATAN, an isl. Indian Archipelago, the principal of the Batanes group, belonging to the Philippines; lat. (cathedral of San Domingo) $20^{\circ} 27^{\prime} 30^{\prime \prime} \mathrm{N}$.; lon. $121^{\circ} 59^{\prime}$ E. (r.) It is about 12 m . long by about 4 broad, covered with rich vegetation, and is mountainous, the lighest peak being 5000 ft . high, and apparently an extinct volcano. It yields in abundance, yams, sweet potatoes, maize, onions, garlic, rice, grain, \&c. Cattle, pigs, goats, shcep, and poultry, wood and water, are plentiful. Batan has three convents. The Alcalde resides in the Casa Real, San Domingo, in the bay of same name, in which good anchorage and shelter are to be found. IIe has
jurisdiction over the Babuyanes; the Batanes proper, in most British maps named the Bashees (all of which see).

BATANES, a group of islands, Indian Arehipelago, belonging to the Philippines. They lie N. of the Babuyanes, but in British maps are usually called Bashees. They consist of six islands, Batan (which see), Bayat, or Ibayat, or Orange Island, Saptang, Cherre, Bashee, and Dampier, all off the N . end of the island of Lazon, between lat. $20^{\circ}$ and $21^{\circ} 20^{\prime} \mathrm{N}$. The Babuyanes, in some authorities, are named Batanes. (See Bashee.)

BATANG ISLAND. Sce Battang.
BATANG PASSA and BATANG LOBO.-1, Two fine streams, Sumatra, affluents of the Rokan or Rakan, which falls into the Strait of Malacca, at Tanah Pooti.-2, Batang IIari, a considerable stream, Sumatra, an affluent of the Jambi, which falls into the China Sea, N.W. the island of Banca.3, Batang Godis, a considerable stream, Sumatra, but not navigable. It falls into the Indian Ocean, on the W. coast, opposite the island of Niha or Nias.

BATANGAS, a prov. and tn. Plilippines, isl. Luzon, S. Manilla. The province is intersected by lat. $14^{\circ}$ N., and bounded S . by the Mindoro Strait; it is composed principally of plateaux and fertile meadows, variegated with beautiful and fragrant flowers, yielding ample food to innumerable humming birds and bees, the latter producing large quantities of honey. The mountains of this province, among which are four peaks of considerable elevation, are well wooded on the W., but have scarcely any vegetation on the E. side. They are said to contain iron and some gold. The principal rivers, all small, are the Baytigbug, Obispo, Gemil, Daccan, Caon, and Bonbon. This last flows from the lake of the same name, otlierwise called Taal, and falls into the Bay of Balayan; it abounds in excellent fish. Lake Bonbon or Taal, lies near the centre of tho province, and is abont 12 m . long by about 10 broad. It is deep, full of fish, and in its centre is a small island, in the middle of which is the crater of a still active volcano. At the bottom of this crater and in the midst of flaming vents, is a small lake, the waters of which, as analysed by the ehemist Lopez, are composed of sulphuric acid. This lake is sufficiently large and deep to be navigated by small boats, and round its edge is a flat space sufficiently broad to form a carriage way. It has no communication with the large exterior lake. Tho province is subject to earthquakes. It grows excellent coffce, indigo, maize, a little pepper, fine cotton, legumes, fruits, cacao, and wild nutmegs. Its pastures are good, and feed beautiful flocks, cattle, and horses. Some little cotton spinning and weaving are carried on; and fishing supports a considerable number. Commerce:-chiefly with Manilla, in the various articles of native produce already enumerated, but more especially in cattle, the flesh of which is lighly esteemed. The province is reckoned healtly, and the people are affable and laborious. Pop. 180,937.-The Town, cap. of the prov., lies on the bay of the same name, 1. bank, Calumpang, 58 m . S. Manilla : lat. $13^{\circ} 45^{\prime} \mathrm{N}_{\text {. }}$; lon. $121^{\circ} 5^{\prime} \mathrm{E}$. (r.) It was founded in 1581 , is large, built with tolerable regularity, has spacious streets, an elegant royal house, the dwelling of the Alcalde, with several elegant private houses. It is well situated for trade, the large bay on which it lies, about 10 m . sq., opening into the Strait of Mindoro, which is the track of a great number of vessels. Pop., tn. and dist. 17,380.-(Mallat's Philippines.)

BATANTA, an isl. Indian Archipelago, off the N.W. end of Papua; lat. (W. end) $0^{\circ} 58^{\prime} \mathrm{S}$. ; lon. $130^{\circ} 30^{\prime} \mathrm{E}$. It is separated S. from the island of Salawatty by Pitt's Strait, and N. from Waygin, by Dampier Strait. It was formerly under the king of Tidor, but is now under the Dutch. It is inhabited by Malays and Papnans.

BATAVANAN, an isl. Indian Archipelago, S.E. coast, Luzon, a little E. of the bay of St. Miguel, in lat. (N. point) $14^{\circ} 11^{\prime} \mathrm{N} . ;$ lon. $123^{\circ} 30^{\prime} \mathrm{E}$. (1..)

BATAVIA, a coast prov., N. W. end, isl. Java, cap. same naine, bounded, E. by Krawang, S. by Buitenzorg, W. by Bantam, and N. by the Java Sea; length, about 50 m . ; breadth, about 20 ; area, 880 sq. m. Along with Buitenzorg, it formed at one time the native kingdom of Jaceatra. This province is in general flat, the ground rising a little in the S., and is not so fertile as other parts of Java, arising doubtless from the scarcity of water in many localities. Rice in moderate quantities, coffee, and pepper are grown; excellent fruit and

## Batavia

good vegetables in superabundance are cultivated, and a considerable number of cattle, horses, and pigs are reared. Sea and river fish are plentiful, and so are likewise crocodiles. Pop. (1845), 281,143.

BATAVIA, a large important commercial tn. Java, cap. not only of that island, but of all the Duteh possessions in the East. It lies near the N.W. end of Java, in a spacious and beautiful island-studded bay; lat. (observatory) $6^{\circ} 8^{\prime} \mathrm{S}$. ; lon. $106^{\circ} 50^{\prime}$ E. (R.) It is composed of two portions, the old, called Jaccatra by the natives, situated in a marshy flat near the sea, and intersected by the Tjiliwong or Great River, and sundry canals; and the new suburban portion, extending over the higher grounds to a distance of several miles inland, the respective sections of this latter portion being called Rijswijk, Noordwijk, Molenvliet, Tanabang, Koningsplein (King's Plain), and Weltevreden. In these suburban portions are the dwellings of the Europeans, who no longer inhabit the old town, on aecount of its well-known insalubrity, so great, that instances are on record of fever being taken from sleeping in
it one night only. Much has been done, however, to improve public bealth in Batavia; marshes have been drained, and into the stagnant canals eurrents of water have been led, so that now the sanitary condition has been much ameliorated. In consequence of the desertion of the Europeans, many houses in the old town present a very dilapidated appearance, rendered all the more melancholy by the white stone of whieh they are built. Still it is the business part of the town. The principal warehouses and offices of the Europeans, together with the Java bank and the Exchange, are all collected into one long street, which, from nine A.M. till four P.3r., presents a very busy scene; but in the evening, after business hours, when the merchants have returned to their dwellings in the suburbs, it is as still as before it was animated. The principal buildings in the old town are, the Stadhuis or townlall, the Lutheran and Reformed churehes, the exchange, the cus-tom-house, and the Chinese hospital, none of them having any pretensions to arehiteetural beauty. On the W. side of the Great River, is the Chinese quarter, inhabited exclusively by

TiJE TOWN AND PORT OF BATAVIA.-Afti Ganueras.
natives of the celestial empire, who form an important and industrious portion of the population of Batavia. T'his quarter is so Chinese in outward appearance, as might almost lead to the supposition that a section of Canton had been transported to Java. In smaller matters, the Chinese are governed by their own laws, administered by native officers, usually respectable merchants, appointed to the duty by the Duteh Government. The suburbs, inhabited by the Europeans, present more the appearance of a garden than a town, each house being built apart from its neighbour, and surrounded by cocoanut trees, bananas, \&c., whose shade imparts a dclightful fresliness to the apartments. Here are located the Governor's house, the general hospital, William's church (Willemskerti), the society of arts and sciences, and the museum of that soeiety, containing an extensive collection of Malay and Hindoo deities, and having a reading-room attached to it. The Government offices are united in a large building, at one of the extremities of Waterloo plain, formerly called Weltevreden, and in the same plain are loeated the R. Catholic chureh, and an excellent primary school. Elsewhere throughout the town there are several other schools, a Mahometan mosque, several Chinese temples or pagodas, and a theatre. Batavia, in common with the other two principal towns of Java, possesses an orphan court, eharged with the administration of all successions not expressly exeluded by testamentary deed. This court has agents in all the towns over which it has jurisdiction.

The streets of Batavia have footpaths on either side, reserved for the use of freemen natives, or Chinese. Slaves must either walk on the unpaved centre, or if on the footpath, get out of the way of any freeman they may chance to meet. Faropeans never walk. So strict is etiquette in-this respect, according to Dumont d'Urville, that if a European, either from choice or necessity, should walk on his feet in the streets, he nust necds be followed by a carriage.

Batavia is the depôt for the produce of all the Dutch pos-
sessions in the E. Scas. Of the three articles most in demand for European consumption, coffee, pepper, and sugar, the two former are entirely monopolized by the Dutch Government. Spices are brought from the Moluceas; coffee and pepper, camphor, benzoin, edible birds' nests, and eleplaants' teeth, from Celebes and Sumatra; gold dust and diamonds from Borneo; tin from the government mines in Banca; tortoiseshell, bees'-wax, dyewoods, \&c., from Timor, Sumbawa, and the other islands to the E.; tea, nankin, porcelain, mother-ofpearl, borax, tobacco, and paper, from China; and opium, drugs, patna cloths, \&c., from Bengal. A valuable trade is also carried on with Japan; but since the establishment of the British in Singapore, the Dutch trade with India, China, and Siam, has considerably decreased. T'o these importations, ice from Ameriea has recently been added, large quantities being now yearly brought to Batavia, to India, and to various islands of the Indian Archipelago. The prineipal exports are rice, coffee, sugar, pepper, and arrack. The Dutel ships from Europe seldom proceed further than Batavia, to which place the produce of the other possessions is bronght in Dutch country ships, a fine elass of vessels, for the most part owned, officered, and commanded by British subjects.

The bay forms an open but secure roadsteal, of great beauty, and may be entered by the largest vessels. It contains a number of islands, many of them named after towns in Holland. On Onrust is the naval arsenal, well fortified; on another is a convict establishment; on a third, an hospital; and on a fourth, warehouses.

The chicf articles of native consumption are rice, fish, and salt, the two latter monoplized by the Government. Near the town are extensive works for making salt from sea-water, but the produce is disposed of at the Government stores at about seven times its real value. The whole of the fish brought to Batavia is, in the first instance, sold wholesale by a Government auctioneer to the rich Chinese fishmongers, who retail
it at a large profit. The markets are well supplied with fruit and vegetables. The principal sorts are mangosteens, durians, and shaddocks, the three prime fruits of Java; pine apples,

soursops, rambutans, rose applcs, guavas, dookoos, limes, lemons, melons, pomegranates, and sixty different kinds of plantain and banana. Poultry is plentiful and cheap, but turkeys, pigeons, and wild fowl are, in general, scarce, and butcher meat is dear.

Batavia originally was merely a commercial station. It received from the Dutch its present name in 1619, and in 1723 it liad risen to be a considerable town. Iit 1811 it was taken from the Dutch by the British, but was restored by the treaty of 1815. The population is very mixed, consisting of Dutch, English, and Portuguese, and their descendants, 2800 ; Javanese, chiefly of Malay extraction, 80,000 ; Chinese, 25,000 ; Moors and Arabs, 1000 ; Slaves, 9500 . Total pop. (1832), 118,300.-(Temminck's Coup d'oil; Van der Aa's Nederlanden; Earl's Eastern Seas; Haussmann, Voy. en Chine, Inde, et Malaisie; Dumont D'Urville, Voy. autour du MIonde.)

BATAVIA, a township and post vil., U. States, cap. co. Genessee, New York, 40 m . E. Buffalo. It has three academies, and 22 schools. The post village contains a court-house, jail, county clerk's office, five churches, and a female seminary. Pop. (1840), 2000.-There are several other places of this name in the United States.

nath, aruey church, cheap street, de., from the Oange Grove.
the most interesting features of the city. The most important schools are the grammar college, grammar school, blue-coat charity school, and the national school. The principal charitcble and literary institutions are, the Bath general

## BATHURST

hospital, the united hospital, and several dispensaries, two literary and scientific institutions, and a mechanics' institute. There are no manufactures of any consequence in the city, nor any trade beyond the retail business of a fashionable place of residence.

The famous thermal springs to which Bath owes its celebrity, are three in number, yielding, respectively, 128, 120, and 112 gallons per minute, their temperature ranging from $112^{\circ}$ to $116^{\circ}$ Fah. The waters have been analyzed by various chemists, the results of whose investigations exhibit considerable discrepancies, inducing the belief that the ingredients vary both in kind and proportion, at different times. The following analysis of water taken from the large spring that supplies the Grand Pump-room, was made by the German chemist, Walcker:-

The accommodation provided for bathers at the varions bathing establishments is of the most complete and elegant description. The King's bath, one of the most extensive, is 60 ft . long by 41 ft . wide, is filled daily to the height of 4 ft . 7 in ., and contains more than 314 tons of water ; the Queen's bath, adjoining, is 25 ft . square. The new royal private baths, of which there are seven, contain, each, 14 hogsheads of water, and the tepid swimming bath, 670 , being 62 ft . long, and 23 ft . wide. Salubrity of climate, beauty of scenery, and abundance and chcapness of markets, in all of which respects it is unequalled by any other city in the kingdom, are the other leading attractions of Bath. It is not now, however, so popular a place of resort for the fashionable world as it was in former times, but still contains a great number of gentry, who have been induced, by its numerous advantages, to make it a permanent place of residence.

Bath was founded by the Romans, and called by them Aque Solis. Amongst the remains of that people discovered there, were some baths, exceeding in elegance, it is said, those of the present day. These baths were found about 20 ft . below the present level of the soil. The city owed much, if not all, its early celebrity and prosperity, to the singular personage known by the name of Beau Nash, who came to reside there in 1703, and who, from the zeal and tact he displayed in arranging and conducting the balls, assemblies, and other amusements of the town, was unanimously voted master of the ceremonies-a position which he occupied undispnted for about half' a century. Nash died in 1761, and was buried with great pomp in the Abbey church. Anstey, the author of the New Bath Guide, in which the follies and vices of that fashionable resort are so eleverly satirized, was a native of this city. The corporation of Bath consists of a mayor, 14 aldermen, and 42 councillors. Jointly with Wells, it is the head of a diocese, and returns two members to the House of Commons. Registered electors, in 1850, 3059. Pop. (1850), estimated at 60,000 .-(Local Correspondent.)

BATH. -1, A seaport tn., U. States, Maine, co. Lincoln, of which it is one of the principal commercial towns; pleasantly situated, W. bank, Kenebec river, 12 m . from the ocean. Shipbuilding is carricd on here to a great extent; in 1840, to the amount of abont $£ 44,000$. The tonnage of the port, in the same year, amounted to 64,035 tons. It contains three churches, five academies, and 20 schools. Pop. (1840), 5141. -2, A co. Virginia, having nine schools, and a pop. of 4300. -3 , Several towns and townships, the largest of which is the cap. of co. Steuben, state of New York, whicb has a courthouse, jail, five churches, one bank, a female seminary, and 26 schools, with two weekly newspapers, and a pop. of 4915.

BATHFORD, par. Eng. Somerset; 2030 ac. P. 1099.
BATHGATE, a tn. and par. Scotland, co. Linlithgow. The town is situated on an acclivity, and near the base of a ridge of hills, 19 m. W. Edinburgh, and 25 m . E. Glasgow, on the Edinburgh and Bathgate Railway. It comprises an old and new town; the former consisting of several narrow, crooked, and very dirty lanes; the latter of several principal streets, on a regular plan, straight and spacious, with broad footways. The houses are almost all of stone, and, in the new part of the town, are well built. The town is lighted with gas, and abundantly supplied with excellent water, chiefly from springs. It has a parish church, a Free church, and two U. Presbyterian churches, all very plain buildings. The schools are, the parish school, and the well-known academy, a handsome structure, erected in 1832-34, situated on a rising ground a little E. of the town. The principal manufactures are ginghams and pulicates, mostly for exportation; but, during the last few years, the weaving of the finer sorts of worsted plaids and shawls has been carried on to a limited extent. Except at times when trade is depressed, there are about 530 hand-loom weavers employed on fabrics of the former, and about 30 on fabrics of the latter description. The weavers are mostly all employed by large mercantile houses in Glasgow. There are, besides, a distillery, a brewery, and three grain-mills. A number of the females are employed in tambouring; and a good many hands are engaged in the coal and ironstone mines in the neighbourhood.

On the low grounds, a little S. of the town, the remains may still be traced of a castle, in which Walter, High Steward of Scotland, resided, and in which he died, 1328. Bathgate was erected into a free burgh of barony in 1824. The length of the par. is $7 \frac{1}{2} \mathrm{~m}$. ; its greatest breadth 4 m. ; area, $11,214.6 \mathrm{ac}$. Pop. of tn . and par. (1841), 3928.-(Local Correspondent.)

BATHURST.-1, An English settlement, W. coast, Africa, at the E. end of the small isl. of St. Mary, at the mouth of the Gambia; lat. $13^{\circ} 28^{\prime} \mathrm{N}$. ; lon. $16^{\circ} 32^{\prime} \mathrm{W}$. The principal street, called Wellington Street, faces the river, and consists of warebouses and private dwellings, built of stone or brick, and roofed with slates or shingles. The houses consist of one floor, raised from the ground on brick pillars; have verandahs, and large open apartments, and are approached by a long flight of steps. They are, in general, commodious, and have a landsome appearance. The other parts of the town are composed chiefly of African huts, with small gardens on each side. The market is held under a long open shed, and is thronged by individuals of various tribes, and with people from the different neighbouring kingdoms. Provisions are plentiful; beef, mutton, poultry, fish, milk, and butter, being brought into the town by the natives in great abundance. At a short distance from Bathurst is a spacions hospital for liberated Africans. The English settlers are chiefly merchants, who deal in gum, becs'-wax, hides, ivory, and gold, receiving, in exchange for these articles, the cloths and cutlery of England. Bathurst settlement was established in 1816.-2, A tn . Cape Colony, co. Albany, 20 m . S.S.E. Grahan's Town.-3, A dist. Upper Canada, of a triangular form, with its base stretching along the r . or S. bank of the Ottawa ; area, $1700 \mathrm{sq} . \mathrm{m}$. The surface is generally level or of but moderate clevation, covered with lofty forest trees. The soil, in this and the adjoining districts, is, in some situations, marshy, but, in gencral, fertile; average valuc of cleared land, $£ 2,0 s .7 \mathrm{~d}$. per ac.; wild, $6 s .8 d$. In 1848 , there were $41,659 \mathrm{ac}$. under crop; of which 16,083 were wheat, 16,359 oats, and 4767 potatoes. The remainder comprised barley, ryc, pease, maize, and buckwheat. The agricultural produce of Bathurst, for 1848 , includes also $158,693 \mathrm{lbs}$. maple sugar. Live stock in the same year:-cattle, 22,329 ; sheep, 36,416 ; hogs, 13,375. Dairy produce:-butter, 303,730 lbs. ; cheese, 9573 lbs . The principal manufactures of the district are, fulled cloth, linen, and flannel; of the first of which, upwards of 33,000 yards are manufactured yearly; of the second, about 2000 yards; and of the third, upwards of 71,000 yards. Bathurst comprises the counties of Lanark and Renfrew, cap. Perth. It sends one member to the legislative assembly. Pop. (1848), 29,448.-(Canadian Almanac, 1849-50; Bouchette's British N. America.) 4, A tn. and bay, New Brunswick; the latter in lat. $47^{\circ} 37^{\prime} \mathrm{N}$. ; lon. $65^{\circ} 45^{\prime} \mathrm{W} .-5$, A cape, Arctic Ocean; lat. $70^{\circ} 36^{\prime} \mathrm{N}$. ; lon. $127^{\circ} 35^{\prime} \mathrm{W}$. (r.) 6 , An iuland co., New S. Wales, 65 m . in leugth and 40 in breadth;
area, $1,190,400$ ae. It consists, in general, of broken tableland; ; in some places forming extensive downs or plains without a tree. This is one of the most flourishing counties in New S. Wales, and its resourees, as a fine-woolled sheepfarming distriet, considerable. The live stock is estimated (1849) at 3131 horses, 27,166 head of horned cattle, 853 pigs, and 236,033 sheep. Being the most W. county of the colony, it labours under several disadvantages-distance from markets, and want of easy aceess to the coast, from which its nearest point is distant about 90 m . These drawbacks operate unfavourably on its agricultural interests, compelling the settlers to confine their attention to the rearing of sheep. Pop. of co. 4391, of which 2799 are males.-Bathurst, the cap. of the co., is situated, r. bank, Macquarrie, 100 m . N.W. Sydney, to which there is a carriage road. It contains 364 houses, and is built mostly of stone or brick. Pop. of tn. (1848), 1883.-7, An isl. Australia, N.W. coast, separated from Melville Island by a narrow channel called Apsley Strait; lat. $11^{\circ} 19^{\prime}$ S.; lon. $130^{\circ} 16^{\prime} \mathrm{E}$. (n.) The island is of a triangular shape, each side measuring about 40 m . The N.W. coast is generally low, and lined with mangroves; the other sides are more elevated, and sometimes abrupt, forming cliffs or clay banks. The W. end is sandy and barren, but in all other parts it is covered with wood, ehiefly the red gum and papyrus ; presenting one mass of dark green foliage, which inparts to the island a gloomy and forbidding appearance. Cockatoos abound. Captain Stokes found rocks containing iron; these roeks, he adds, had a strange appearance, being heaped together in the form of a whirlpool ; the ground beneath appeared quite hollow.-8, A bay, Australia, N.E. coast ; lat. $14^{\circ} 7^{\prime}$ S.; lon. $144^{\circ} 10^{\prime}$ E.; having Cape Melville on the E. side of its entrance, and Flinder's Islinds on the W., the distance between these two points being about 15 m . The bay runs inland about $6 \mathrm{~m} .-9$, A lake, New S. Wales, co. Argyle, from 3 to 5 m . in diameter. - $10, \mathrm{~A}$ harbour, Van Diemen's Land, S. coast, a braneh of Port Davey, extending about 9 m , to the E., having several islets in it, with coves or indentations on cither side. The entrance by Port Davey is in lat. $43^{\circ} 18^{\prime} \mathrm{S}$.; lon. $146^{\circ} 1^{\prime} \mathrm{E}$.

13ATHWICK par. Eng. eo. Somerset; 630 ac. P. 4972.
BATICALO, a tn. and seaport, E. side, isl. Ceylon, cap. dist. of same name; on an island, about $3 \frac{1}{2} \mathrm{~m}$. in circumference, called by the natives Puliantive, close to the land lat. $7^{\circ} 42^{\prime} 30^{\prime \prime} \mathrm{N}$. ; lon. $81^{\circ} 42^{\prime} \mathrm{E}$. (r.) Being embosomed in cocoa-nut trees, it presents a very pleasing appearance. It is protected by a small square fort, and is chiefly occupied by Dutch burghers and natives. It has one Protestant chureh, two R. Catholic churches, and several places of worship for Mahometans and heathens. Baticalo was the first port visited by the Dutch on their first voyage to Ceylon, in May 1602.(Ceylon Gaz.)

BATIGNOLLES- monceaux, a com. on the N.E., and properly a suburb of Paris. In 1814, it was an open unoccupicd space which the Prussians, under Bliieher, used as their camp. It is now eovered with handsome buildings, and has a pop. of 19,380 .

BATINDAII, or Bemtinideir, a large tn. Hindoostan, in Rajpootana; lat. $30^{\circ} 12^{\prime} \mathrm{N}$. ; lon. $75^{\circ} 7^{\prime} \mathrm{E} . ; 75 \mathrm{~m}$. N.N.W. Ilissar. The surrounding country abounds in exeellent pas tures, and is famous for its breed of horses.

BATISCAN.-1, A seigniory, Lower Canada, co. Champlain, 60 m . long and 6 broad; comprises three parishes, St. Stanislaus, St. Genevieve, and St. François. Timber grows here in abundance, but a great part of the seigniory is cleared, and agriculture extensively pursued as an oceupation. Pop. 2700 -2, Two rivers, N. America, the one falling into the St. Lawrence about 2 m . S. Batisean, and the other into the river St. Maurice.

BATLEY, a tn. and par. England, co. York, W. Riding, in a valley, 2 m . N. Dewsbury. The tn . consists of two parallel streets, straiglt, and well kept; honses of stone and brick together, and rather irregularly built. The supply of water is indifferent, but the town is well lighted with gas, and is rapidly increasing and improving. Batley has a parish church, an ancient fabrie, in the early English style, zeveral clapels, for Wesleyans and other dissenters; a free grammar sehool, national, free girls', an acalemy, with several minor and Sunday schools; a literary society, called the Batley Literary and Mental Improvement Society, and several benefit
societies. The principal manufactures are those of heavy woollen cloths, such as pilot, beaver, kersey, army and frieze clotls, as well as blankets and carpets. This is a very important place, as regards the above trade; it may fairly be considered the seat and certre of it. There are 8 or 10 large woollen mills in the valley, in the compass of about 1 m ., besides as many others in various parts of the town. The ruins of Howley Hall, which stand on an enninence overlooking the town, form an object of some interest. Area of par. 6390 ac.; pop. 14,278. Pop. of tn. (1841), 7076; (1850), about 10,000. -(Local Correspondent.)

BATON ROUGE (EAst), a tn., U. States, Louisiana 1. bank, Mississippi ; on a bluff or high land, 85 m . N.W. New Orleans. It is limited almost to one street, and contains a court-house, jail, penitentiary, four churches, one college, three aeademies, and tliree sehools. Pop. (1840), 2269

BATOUANI, a tn., S. Africa, E. end of Lake Ngami, where the river Zouga emerges from it; lat. $20^{\circ} 46^{\prime} \mathrm{S}$. ; lon. $24^{\circ} \mathrm{E}$. Batouani is inhabited by people of the same name.(Jour. Roy. Geo. Soc., 1850.)

BATOUM, or Batum, a seaport tn. Turkey in Asia, pash. Trebizond, E. shore, Black Sca, 4 m . N. from the mouth of the Tchorak; lat. (Cape Batoum) $41^{\circ} 39^{\prime} 24^{\prime \prime} \mathrm{N}$. ; lon. $41^{\circ} 37^{\prime}$ E. (r.) It is irregularly built, contains a bazaar, situated on the W. side of the bay, close to the sea; about 60 shops, several coffee-houses, khans, and a mosque, all built of wood. It is a safe port, being well sheltered, with deep water, and capable of containing a great many ships of large size. It has, however, little trade, excepting with Trebizond, in coasters which import chiefly British manufactured goods. The country around is fertile in fruits, corn, and rice. The W. side of the bay is considered unhealthy, especially from July to Oetober; the E. the reverse, having none of the marshy ground around it, which is the souree of the insalubrity of the other. Pop. 2500.

BA'TSFORD, or Battesfond, ןar. Eng. Gloucester; 980 ac. Pop. 79.

BATSHiAN, Batchan, Bacman, or Batjan, a Molluca isl. Indian Arelipelago, W. coast, Gillolo, about 57 m . long by 5 to 20 broad; lat. (fort Barneveldt) $0^{\circ} 37$ ' S.; lon. $117^{\circ} 36^{\prime} \mathrm{E}$. (r.) It is of volcanic formation, mountail.ou: , and pieturesque; produces large sago and cocoa palms, gool rice, and the best cloves in the Mollucas; but the culture of these last is not attended to. It has some warm sulphurous springs. On the coasts, fish are very plentiful. The island is governed by the Prince of Batshian, a vassal of the Sultan of Ternate. The principal town or village is Batshian, on a narrow neek of land near the centre of the island. It contains about 200 native houses or huts, and a school, the teacher of which, on Sabbaths, preaches in a neat little Christian chureh, which stands about lalf-way between the town and the Dutch fort, Barneveldt, distant about 1 m . About half of the 1100 inhabitants of the town are Christians. In 1707, the island was nearly depopulated by small-pox.

BATTA, or Battak, a dist. Sumatra, extending from the Battu Barra river on the N.N.W., to the Rackan on the S.S.E., and occupying the entire breadth of the island, which is here comparatively narrow. It is divided into six prineipal distriets, and, according to Dutch anthorities, into three small kingdoms. The centre of the territory is occupied by extensive plains, in the midst of which is a considerable lake. On its S.W. side it is traversed by the Diri Mountains, a portion of the eontinuous range which runs parallel to the S.W. coast of the island, throughout its whole length. On this side, therefore, the land is high near the shore, and sometimes thickly wooded. The soil is in general fertile, and better cultivated than that of some of the S. districts, though water is not over abundant. Batta distriet is inhabited by a peculiar race of people, differing widely, in many respeets, from those occupying the other parts of the island. They are muscular, square built, and strong, rather below the stature of the Malays, and having fairer complexions. Their dress is commonly of a sort of cotton eloth, manufaetured by themselves; thick, harsh, and wiry, of various colours, and worn round the middle, with a searf over the shoulder. The women, who are treated as slaves, are far from being attractive, either in manner or appearance. The Battas, although they do not seem to be naturally either of a ferocious or zangninary disposition, are accused of camibalism, but with the usual palli-
ation that it is practised as a species of ceremony, and not from any inherent love for human flesh. In other respects, they seem to be a sufficiently amiable sort of people, with a general tendency rather to good than evil. The houses are built with frames of wood, with the sides of boards, and usually consist of a single large room, which is entered by a trap-door in the middle. The ordinary food of the lower class of people is maize and sweet potatoes. Amongst their delicacies are horse-flesh, and the flesh of a small black dog, which they fatten and eat. Toddy or palm-wine, they drink copiously at their feasts. Polygamy is practised, each wife occupying a different part of one large room, but being no otherwise separated. Their religion is at once peculiar and unintelligible. The natives of the sea-coast exchange their benzoin, camphor, cassia, and small quantities of gold dust, for iron, steel, brass wire, and salt. These they barter again with the more inland inliabitants, for the products and manufactures of the country, particularly the home-made cloth. The Government of the Batta country, although nominally in the hands of three or more sovereign Rajas, is effectively divided into numberless petty chiefships.

BATTAGLIA, a small tm. Austrian Italy, gov. Venice, 9 m . S.W. Padua, on the canal of Monsclice, at its junction with the canal of the Battaglia. It is celebrated for its hot sulphurous springs and baths, $158^{\circ}$ Fah., to which crowds of foreigners resort every year. The promenades along the banks of the canal are charming, and a great source of enjoyment to visitors. Pop. 3000.

BATTAHAN, a dist., W. coast, Sumatra, Dutch prov. of Padang, with vil. of same name, 12 m . S. Natal, at the mouth of the river Battahan. The district yields gold, which is sent for sale to Natal.

13ATTALAH, or Bettala [Tatala], a large tn. Punjab, in a vast open plain, 26 m . N.E. Amritser ; lat. $31^{\circ} 48^{\prime} \mathrm{N}$.; lon. $75^{\circ} 6^{\prime} \mathrm{E}$. It is surrounded by groves of mango trees, and tanks of water. All kinds of fruits prized by Europeans grow here in abundance; it is considered the healthicst place in the Punjab.

BATTAM, or Batane, an isl. Indian Archipelago, W. entrance into the Strait of Singapore, and distant from the island of that name, 13 or 14 m . E.S.E.; lat. $1^{\circ} 5^{\prime}$ N.; lon. $104^{\circ} 0^{\prime} \mathrm{E}$. It is about 28 m . long by 8 broad, and contains a good harbour, called Boolang Bay, which has been lately much frequented by American ships trading with Singapore, who, by discharging and receiving their cargoes there, avoid the dues exacted at the latter port. It is surrounded by rocky islets, and is scparated from Bintang island by a narrow strait.

BATTERSEA, a par. and vil. England, co. Surrey, in a low situation, r. bank, Thames, across which there is here a wooden bridge, connecting it with Chelsea on the opposite side. A great portion of the parish is laid out in market gardens, the produce of which is sent to the London market. The parish church is a neat brick building, and contains, amongst other interesting monuments, one to the celebrated Lord Bolingbroke, sculptured by Roubiliac. Area of par. 3020 ae. Pop. 6887.

BATTICE-José, a tn. and com. Belgium, prov. of, and 12 m. E. Liège. From 300 to 400 looms are employed in weaving clotl. A great deal of butter, and still more of checse, known by the name of Limburg, are exported. Pop. 4490.

BATTICOTTA, a vil. and par. Ceylon, in Jaffna; the former contains a seminary, established by the American missionaries, into which native youths only are admitted. There is here, likewise, a Bible association. Pop. of par. and vil. 6841, all Malabars.-(Ceylon Caz.)

BAT'TISFORD, par. Eng. Suffolk; 1340 ac. Pop. 520.
BATTLE, par. and vil., S. Wales, Brecon. Pop. 176.
BATTLE, a market tn. and par. England, co. Sussex. The town, in a valley nearly encircled by wooded hills, 7 m . N.W. ILastings, consists chiefly of onc irregular street, in which there are many old-fashioned buildings, is well supplied with watcr, and lighted with gas. The chureh is aneient, and contains some fine specimens of painted glass, and numerous antique monuments. There are places of worship, also, for Baptists, Wesleyans, Swedenborgians, and Unitarians, and an endowed and charity schools. Battle has been long celebrated for the manufacture of gunpowder. Tanning is likewise carried on to a considerable extent. Interesting
remains of the ancient abbey, built by William the Norman, still exist, including the gateway, a beautiful specimen of the decorated English style. The town was anciently called Epiton, but changed to its present name after the battle of IIastings. Market-day, Thursday; three fairs annually. Area of par. 7880 ac. Pop. 3032.

BATTLEFIELD, par. Eng. Salop; 850 ac. Pop. 64.
BATTLESDEN, par. Eng. Bedford; 1140 ac. Pop. 179.
BATTUECAS, or Batuecas-las, two remarkable valleys in Spain, prov. Salamanca, in the midst of high and rugged mountains, on the berders of Estremadura. They are difficult of access. Spanish tradition had peopled these wild and lonely glens with demons, and other supernatural beings; but the establishment of a Carmelite convent there, in 1599, tended to put an end to this absurd belief. The principal valley is 3 m . long, and 2 broad. On the summit of the lighest mountain, by which it is overhung, is a chapel dedicated to the Virgin, which is visited by immense numbers of people on the 8th of every September. State prisoners were sometimes sent to this dreary region. The romance of 'Las Batuceas,' by Madane de Genlis, is founded on a story which represents these valleys as having been discovered in the 16 th century by two fugitive lovers.

BATU, an isl. Indian Archipelago, W. coast, Sumatra, immediately S . of the equator; 40 m . long, and 10 average breadth; almost entirely covered with wood. It is rich in sago, cocoa-nuts, and birds' nests; and is inlabited by a tribe from the island of Nias, who pay a yearly tribute to the Raja of Baluaro, a small fortified village in the interior, belonging to a different tribe, whose number is never allowed to, exceed 100 .

BATURINF, a tn. Russia, gov. of, and 78 m . E. Tschernigov; pleasantly situated on a hill, near the Seïm, a tributary of the Desha. It contains a handsome chateau, belonging to the Counts of Rasumowski ; a convent, and eight churches. The inhabitants depend chiefly on agriculture, and several yearly markets. Baturin was once the residence of the hetmans of the Cossacks; and had a fastness, which, on the revolt of the celebrated Mazeppa, in 1708, was demelished. Pop. (1849), 1399.

BATURITE [formerly Montemor Velho], a tn. Brazil, prov. Ceara, 95 m . S. W. Aracaty, in the serra Baturite. It has a church, school, and electoral celleges. The inhabitants of town and district, 2200, are engaged in cultivating and gathering cotton, and in rearing cattle. The serra of Baturite or Botarite, runs S.W. to N.E., with a considerable curve; total length, about 150 m . It is fertile, and well peopled.

BATURSKA-WOLA, a vil. Austria, Galicia, circle, and 9 m . N.W. Bochnia; on the Vistula. Pop. 2260.

## BATZ (Isle of). See Bas.

BATZ, a fishing tn. France, dep. Loire-Inferieure (Brittany), amidst salt marshes, on the shores of the Bay of Biscay, and about 22 m . W. Sevenay. The houses are well built of granite, with lofty windows and slated roofs. The inhabitants are chicfly engaged in fishing, for which their locality and little harbour are well adapted; they are remarkable for their cleanliness, which is especially manifested in the carefully waxed floors and furniture of their houses, and for a curious costume peculiar to themselves, and transmitted without change from generation to generation. The object most worthy of notice is the church, whose square belfry, surmounted by a cupola, about 170 ft . high, is an important landmark for vessels, in passing two very dangerous reefs at the entry of the Loire. A variety of curious shell-work is made here. The chief trade is in fish, herrings, and pilchards; corn, hay, flax, and salt of the finest quality obtained from the salt marshes. Pop. 1286.

BAUBELTHOUAP, an isl. Pacific Ocean, the largest of the Pellew group; lat. (N. extremity) $7^{\circ} 49^{\prime} \mathrm{N}$. ; lon. $134^{\circ} 52^{\prime}$ E. (R.), forming the N.E. part of the chain; it is about 24 m . in length, and on its W. side there is a high hill, from the summit of which both extremes of the chain may be seen.

BAUCO, a tn. Papal States, 6 m . W. Frosinone. P. 3000.
BAUD, a tn. France, dep. Morbihan, 20 m. N. W. Vannes; having some trade in grain, cattle, hemp, butter, and honey. Pop. 1082.

BAUDOUR, a vil. and com. Belgium, prov. Hainaut, 7 m. W. Mons. The district is noted for its pottery. It
has also two salt-refineries, two breweries, an oil and two com mills.-The commune is watered, on its E. extremity, by the ILaine, and traversed by the canal from Mons to Condé. A large part of its surface is covered by a morass. Pop. 2946.

BAUERWTTZ, or Baborou, a tn. Prussia, gev. of, and 34 m. S. Oppeln, circle, Leobschutz, l. bank, Zinna. It contains a R. Catholic church, a chapel, castle, townhouse, and lospital ; is the seat of several public offices, and some manufactures of linen and earthenware. Pop. 2300.

BAUG, a tn. Hindoostan, prov. Malwah, at the confluence of the Guirna and Wangerry, 92 m . E. Baroda; lat. $22^{\circ} 22^{\prime} \mathrm{N}$.; lon. $74^{\circ} 49^{\prime} \mathrm{E}$. It stands on horizontal beds of sandstone, at the base of a range of hills, in a valley, on the road between Malwah and Goojerat by the Oudipoor pass, and is famous for its smelting furnaces and forges. About $3 \frac{1}{4} \mathrm{~m}$. S. the town are four extraordinary cave temples, cut out of the solid rock, and snpposed to be of Buddhist origin, though there is no record of the existence of Buddhism in the district. Their walls are sculptured with mythological representations, which, with a single exception, apparently of modern date, have no resemblance, to those of the Brahmins. I'op. 5000.

BAUGE, a tn. France, dep. Naine-et-Loire, 19 m . E.N.E. Angers; agreeably situated in a valley near the Couesnon, which is here crossed by a handsome stone bridge. Some of the houses are good; but the town is, in general, very irregular. An old castle, built by Foulques Nerra, still remains in good preservation, and the hospital is one of the best in the department. Coarse cloth and woollen stuffs are made here. The trade is principally in cloth, wood for carpentry, and cattle. Pop. 3107.

BAUGHURST, par. Eng. Hants; 1020 ac. Pop. 528.
BAULEAH, a tn. Hindoostan, presidency Bengal, 1. bank, Ganges, 20 m . N.E. Moorshedabad. It is a large place, and of some commercial importance; has a spacious factory; and is the residence of a commercial officer of the E. I. Company.

BAUMBER, or Bamburgir, par. Eng. Lincoln; 3200 ac. Pop. 371.

BAUME, the name of several places in France, espe-cially:-1, Baume les Dames [anc. Balmea], an anc. tn. France, dep. Doubs. It is well built, and pleasantly situated, r. bank, Doubs, in a hollow surrounded with vine-clad hills, and close to the canal that connects the Rhone and the Rhine. The principal buildings are the parish church, which is large and handsome, and the spacious hospital. Previous to the Revolution of 1798 , there was here a celebrated Benedictine convent, to which only nuns who could exlibit proof of nobility were admitted. This convent was founded in the fifth century, and was patronized by the kings of Burgundy. Hats are manufactured here to a considerable extent; and in the environs are glassworks, ironworks, tanneries, paper-mills, \&c. Pop. 2211.-2, Baume les Messicurs [formerly Baume les Moines], a tn. France, dep. Jura, $6 \frac{1}{2} \mathrm{~m}$. N.W. Lons-de-Saulnicr. It has a maguificent church, and was formerly noted for its large monastery of Benedictine monks. The neighbourhood
is very rugged and precipitous, and much visited by travellers for its romantic scenery. Pop. 771.

BAUMELAN, or Bauman. See Baman.
BAUNTON, par. Eng. Gloucester; 1310 ac. Pop. 187.
BAURE, Bacrus, or Baures, a river, Bolivia, rising in Lake Guazamire ; lat. $15^{\circ} 18^{\prime} \mathrm{S}$. ; lon. $62^{\circ} 30^{\prime} \mathrm{W}$. ; flowing N.W., and falling into the Itenez or Guapore, on its l. bank, on the frontier of Brazil, after a course of about 300 m .

BAU'TSCII, a tn. Austria, Moravia, circle Prerau, 23 m . N.E. Olmuitz. It has a parish church, and its own magistracy. Pop. (German), about 2500.

BAUTZEN, or Buddissin, a tm. Saxony, cap. Upper Lusatia, r. bank, Spree, 32 m. E.N.E. Dresden. It is well built, with large massy houses, broad, straight, well-paved streets, and suburbs adorned with beautiful gardens. It was formerly defended by a strong castle, which is now in ruins. The public buildings of note are, the royal palace of Orlenburg, now used as public offices; the cathedral, a large structure, built in 1213, with a very lofty spire; a R. Catholic chapter-house, a townhall, and public library; a gymnasium, a normal school, with a number of churches, hospitals, and other charitable institutions. It has considerable manufactures of tobacco, woollen, cotton, linen goods, and hosiery, with iron, powder, and paper-mills; copper and wire works, dyeworks, tileworks, bleachfields, brewerics, distilleries, and tanneries. About 7 m . E. by S. from Bautzen is Hochkirch, the scene of a great battle fought in the Seven Years' War, 1746. Near the town is the scene of another sanguinary conflict, the battle of Bautzen, fought between the French under Napoleon and the allies, May 21 and 22, 1813. Pop. exclusive of garrison, 8676 .

BAVARIA [German, Baiern; French, Bavière], a kingdom of Central Europe, in the S. of Germany, composed of two isolated portions of unequal size. The larger portion, comprising about seven-eightlis of the monarchy, is included between lat. $47^{\circ} 19^{\prime}$ and $50^{\circ} 41^{\prime}$ N., and lon. $8^{\circ} 53^{\prime}$ and $13^{\circ} 50^{\prime} \mathrm{E} . ;$ bounded, E. by Bohemia and the areliduchy of Austria, S. by Tyrol, Vorarlberg, and Lake Constance, W. by Würtemberg, Baden, Hesse-Darmstadt, and Hesse-C'assel, N. by the states of Ducal Saxony, the principalities of Reuse, and the kingdom of Saxony. The smaller portion, the Pfals or Palatinate, lies W. from the main portion of the kingdom, and separated from it by Wiurtemberg, Baden, and HesseDarmstadt. It is included between lat. $48^{\circ} 57^{\prime}$ and $49^{\circ} 50^{\prime}$ N., and lon. $7^{\circ} 6^{\prime}$ and $8^{\circ} 31^{\prime}$ E. ; and is bounded, E. by the Rhine, which separates it from Baden, S. by France, W. by the Prussian Rhine provinces, and a portion of Saxe-Coburg, and N. by Hesse-Darmstadt.

Bavaria is estimated to contain an area of $29,657 \mathrm{sq} . \mathrm{m}$ and is divided into eight circles (kreise), which were formerly named after the rivers that watered them; but an edict of Nov. 29, 1837, gave the circles new names and new boundarics. The following table shows the new and old names of the circles, with their area and population, at the present time:-

| Circles (Kreise). |  | $\begin{aligned} & \text { Area, } \\ & \text { Sq. m. } \end{aligned}$ | $\begin{aligned} & \text { Population. } \\ & \text { 1849. } \end{aligned}$ | Top. per | Chief Towns. | Population. |

Mountains.-Bavaria is a hilly rather than a mountainous country. A large portion, more especially S. of the Danube, is a plateau country of considerable elevation, and indeed, the whole of the main portion of the kingdom may be described as an upland valley, averaging about 1600 ft . above the sea level, intersected by numerous large streams and ridges of low bills. On all sides it is surrounded by hills of a greater or less altitude, either quite upon the frontier or only at small
distances from it. The whole S . frontier is formed by a branch of the Noric Alps, offsets from which project far into the S. platcau of Bavaria. Besides numerous peaks which this range contains, varying from 4000 to 8000 ft . high, the following may be named as being above the latter number:-the Zugspitze, 9675 ft . high ; the Watzmann, 8732 ft ; the IIochvogel, 8475 ft .; the Mädlehorn, 8650 ft . Passing along the valley of the Inn and across the Danube, we come to the Bohemian
fronticr, formed by the Böhmerwald Mountains, running S.E. to N.W., and lowering down at the valley of the Eger. The highest peaks in this range, are the Rachel, 4743 ft ., and the Arocr, 4848 ft . Crossing the Eger, we meet with the Fichtelgebirge, presenting the Schneeberg, 3450 ft . high; and the Ochsenkopf, 3341 ft . W. from this range, and along the frontier of the Saxon ducal territories and Hesse-Cassel, run hills of moderate elevation, under various names, Frankenwald, Rhöngebirge, \&c., no peaks of which attain an clevation of more than 3148 ft . The W. mountain boundary of the $\mathrm{Ba}-$ varian valley is formed $N$. of the Main by the Spessartwald range, and in the kingdom of Wïrtemberg by the Alb (which see). The only note-worthy interior ranges are in the N.W., the Steigerwald; and in the N.E., running in a S.W. direction from the Fichtelgebirge, the Franconian Jura; a low limestone range, containing numerous remarkable stalactitic caves. The Pfalz or Palatinate, is traversed S. to N. by the N. extremity of the Vosges, the highest peak in this locality being Donnersberg, 2137 ft . high.

Lakes.-The lakes of Bavaria are neither very numerous nor of very great extent, though many of them present exccedingly picturesque scenery. The larger are all situated on the upper part of the S. platean; the smaller within the range of the Noric Alps. The most remarkable of the former are, Lake Ammer, about 10 m . long by $2 \frac{1}{2}$ broad, 1736 ft . above the sea; Lake Wiirm or Starnberg, about 12 m . long by 3 broad, 1899 ft ; and Lake Cliem, 9 m . long by 9 to 4 broad, 1651 ft . above the sca. Of the smaller, the more remarkable are, Lake Tegner, about 3 m . long, 2586 ft . L Lake Walchen, 2597 ; and various others, upwards of 2000 ft . above the sea level. Most of the lakes are well supplied with fish.

Rivers. - Bavaria belongs wholly to the basins of the Danube and the Rhine, with exception of a very small portion in the N.E. corner, which through the Eger appertains to the basin of the Elbe. The river Danube intersects the main portion of the kingdom W. to E. nearly in the centre, and before it enters the Austrian dominions at Passau, where it is still 925 ft . above the sea, it reccives on its r . bank the rivers Iller, Lech, and Isar, which have their sources in the Noric Alps, besides numerous smaller streams; and on its l. bank, the Wornitz, Altmühl, Naab, and Regen, besides other lesser streams. The Main traverses nearly the whole of the N. part of this portion of the kinglom from E. to W., and is navigable for steam vessels from Bamberg to the Rline. Its principal affluents are the Regnitz, and the Saale. In the Palatinate there are no streams of any importance, the Rhine being merely a boundary river.

Climate-If we except the valley of the Rhine, and the valley of the Main in Lower Franconia, Bavaria, even including the Palatinate, in comparison with other German States, is a cold country. The average temperature of the year is about $47^{\circ}$ Fah., the same as the E. coast of Scotland. Winter, $30^{\circ}$; spring, $47^{\circ}$; summer, $63^{\circ}$; and autumn, $47^{\circ}$.

Soil and Vegetation, dec.-Bavaria is cne of the most favoured countries in Germany, in respect of the fruitfulness of its soil, due no doubt in a considerable degree to the undulating nature of the country, to the numerous streams by which it is watered, and to being nearly wholly composed of Jura limestone. In the plains and valleys the soil is capable of producing all kinds of crops, bnt not until lately were the natural advantages of the country turned to good account. Ignorance and idleness opposed a barrier to improvement, which it took the utmost efforts of an enlightened Government, aided by the general spread of education, to remove. At length a spirit of agricultural enterprise pervades the kingdom, improved methods of cultivation have been introduced, and large tracts of waste land have beell reclaimed and brought under the plough. The principal erops are wheat, rye, barley, and oats; but in some districts rice, spelt, maize, and buck-wheat, are also raised. To these productions of the soil may be added potatoes (the culture of which is yearly increasing), tobacco, and fruit, of which large quantities are grown in the valleys of the Main and the Rhine. In the circles of Mittelfranken and Schwaben-Neuburg, the hop plent is cultivated to a considerable extent, the quantity varying from 30,000 to $40,000 \mathrm{cwt}$. per annum ; and the vine in the circles of Pfalz and Unterfranken. The latter produces the Franconian wines; the best wines of the former are produced near Deidesheim and Wachenheim. The celebrated Steinwein and

Yol. 1.

Leistenwein are the produce of the S. slope of the Marienberg, near the town of Würzburg. The forests of Bavaria, composed chiefly of fir and pine trees, cover nearly a third of its entire surface, and yield a large revenue to the state; much timber being annually exported, together with potashes, tar, turpentine, and other products peculiar to these wooded regions.

The principal mineral products are, salt, coal, and iron. The first is a royal monopoly, and produces a considerable revenue; the latter are not wrought to nearly the extent they might be, though a considerable number of ironworks and coal mines are in operation. Black-lead is found in several places, and pretty largely exported, especially to America, where it is used for making crucibles. Porcelain clay, of the finest quality, likewise abounds in some localities, the best being obtained in the district of Wunsiedel in the Upper Main.

In the rearing of cattle and shcep, the Bavarians are still far behind. Notwithstanding the extent and excellence of their pastures, the stock, generally, is of inferior quality, and inadequate to the home consumption. Improvement in these respects, however, is now in progress, through the instrumentality of agricultural and veterinary schools, which were established a fow years since, and which distribute prizes to encourage the breeding of stock. Swine are reared in great numbers in all parts of the country, and poultry and wild fowl are abundant. The wolves and bears with which the forests of Bavaria were at one time infested, are nearly extinct.

The manufactures of Bavaria are singly very unimportant, being mostly on a small scale, and conducted by individuals of limited capital. The principal articles manufactured are coarse linens, woollens, cottons, leather, paper, glass, carthen and ironware, jewellery, \&c., but the supply of the first three articles is inadcquate to the home consumption. Of leather, paper, glass, and ironware, pretty large quantities are exported. The optical and mathematical instruments made at Munich, are the best on the Continent, and are prized accordingly. But the most important branch of manufacture in Bavaria is the brewing of beer-the universal and favourite beverage of the country. There are upwards of 5000 brewing establishments in the kingdom, which have been calculated to supply on an average, about 20 gallons a year to every individual of the population. The beer is neither so strong nor so swect as Scotch ale; but is of more delicate flavour, and forms a pleasant and wholesome beverage. It is not only consumed in immense quantities in the country, but is sent to all parts of Germany. A large portion of the industrial population maintain themselves by weaving linen, and by the manufacture of articles in wood (some of which are of beautiful workmansliip), and by the felling and hewing of timber. Notwithstand. ing its favourable geographical position, and other natural advantages, the trade of Bavaria is very limited. The whole amount of import, export, and transit duties collected in 1843, did not much exceed $£ 200,000$. Principal exports:-corn, timber, wine, cattle, sheep, hogs, butter, salt, iron, leather, glass, hops, fruit, beer, \&c. Imports:-sugar, coffee, cotton, rice, tobaceo, drugs, copper, oil, spices, dye-stuffs, silk, and silk goods, lead, \&c.

From its position, Bavaria enjoys a considerable portion of transit trade, much facilitated by the good roads that traverse the country in all directions. The means of communication have recently been greatly angmented, by the completion of the König Ladwig (King Louis) Canal, which connects the Main at Bamberg with the Altmühl, a short distance above its embonchure in the Danube, thus establishing direct water communication through the Rhine, between the German Occan and the Black Sea. By the railway from Munich through Angsburg, Nürnberg, and Bamberg to Hof, Bavaria is conneeted with the railway systems of N. and W. Germany. Several other railways are contemplated, but the only one yet opened is that from Augsburg to Kaufbeuren.

Education and Art.- The department of education is under the superintendence of the 'Superior Board of Education and Ecclesiastical Affairs.' A complete system of inspection is established throughout the country; the reports of the inspectors, including not only the number and proficiency of the scholars, but also the conduct of the teachers, the state of the buildings, and the nature and extent of the funds available. It is necessary in Bavaria, before admission can be obtained into any higher school, to have passed a satisfactory examinanation in the lower school. Not only must all candidates for
offices under the state pass examinations, but examinations are held of apprentices in trade, who wish to become masters, and even of officers in the army on promotion. The total of both sexes receiving instruction in 18.14 , was $1,038,203$, or about 1 in 5 of the whole population. There are three universities in Bavaria; two of which (Mïnchen and Wiirzbnrg) are R. Catholie, and one (Erlangen) Protestant. In the first, there were, in 1847, 1471 students; in the second, 521 ; and in the third, 364. There are also several lyeea, a number of gymnasia, numerons Latin, normal, and polytechnie sehools, besides academies of arts and sciences, fine arts, hortienlture, \&c. The eapital, Mumieh, contains a library of 600,000 volumes, including 16,000 MSS.; several scientific and literary institutions, academies, and national societies, and extensive collections of works of art.

Bavaria enjoys the honour of having originated a seliool of painting of a high order of merit, known as the Nürnberg sehool; founded, about the midlle of the 16 th century, by Albert Diirer, a native of that town, whose works are little, if at all, inferior to those of his great Italian contemporaries. Hans IIolbein, who excelled Dürer in portrait, though far behind him in historieal painting, is elaimed by Bavaria, but neither the precise locality nor date of his birth are known with certainty; Augsburg, Basel, and Griinstadt being severally named as the one, and the dates 1495 and 1498 as the other. To these celebrated names have to be added those of the eminent seulptors Kraft and Viseher, both also Bavarians; the former born about 1435 , and the latter about the middle of the same century. The masterpiece of the latter distinguished artist is the bronze shrine of St. Sebaldus in Niirnberg, esteemed a marvel of art, for beauty of design, and delieaey of workmanslip. The most eelebrated of Kraft's works is the remarkable tabernaele in stone, affixed against one of the columns of the choir of the chureh of St. Lawrence, also in Nürnberg. The restoration of Bavarian pre-emineney, in modern times, in conneetion with the fine arts, is, in a great measure, if not entirely, owing to Lonis, the late sovereign of that kingdom; whose love of art, and liberal patronage, have rendered the capital one of the most celebrated seats of the fine arts in Europe.

Religion.-There is no predominant churel in Bavaria, but the prevailing religion is the 12 . Catholie, professed by $3,000,000$ out of abont $4,500,000$. The principal portion of the remainder are Lutlierans, Reformed, and Jews. Although, however, Catholicism be the religion of the state, all others are free; and all citizens, whatever their creed, are equally admissible to the same publie functions and employments, and possess the same civil and politieal rights. The Artieles of the Coneordat coneluded with the Pope, are subordinate in their application to the fundamental law of the state. 13y an ordinance of Louis, late King of Bavaria, females are prohibited from pronouneing any monastic vow until after having passed their 33d year. The ceremony of taking the veil must always be performed in presence of a lay commissioner, intrusted with the power of interrogating the person about to withdraw from the world. The dioceses of 13avaria are, Munich, an arelabishopric, with 20,000 florins (£1666); Bamberg, also an arehbishoprie, with 15,000 florins ( $£ 1250$ ); Augsburg, Ratisbon, and 1Ierbstadt, bishopries, with 10,000 florins ( $£ 833$ ) each ; Passau, Eiclıstadt, and Spires, Dishopries, with 8000 florins ( $£ 666$ ) each. The dean at Munich has 4000 (£333), at Bamberg, 3500 ( $£ 291$ ), in the first set of bishopries, 3000 ( $£ 250$ ), and in the second, 2500 florins (£208) a year; and the dignitaries called propositi, who rank between the bishop and dean, have the same as the dean. The eanons' ineomes vary from 1400 (£116) to 2000 florins (£166). These salaries are paid by Govermment. In Bavaria, marriage between individuals having no capital cannot take place without the consent of the prineipal persons appointed to superintend the poor institutions, who, if they grant such liberty where there are no means of supporting the ehildren that may spring from such marriage, render themsel ves liable for their maintenance. The law is apparently intended to prevent improvident marriages, for whieh it seems certainly better adapted, than for the promotion of morality.
l'eople.-In personal appearance, the Bavarians are stout and vigorous, well adapted to bear the fatigues of war, and are in general considered as good soldiers. They are indolent, addicted to drinking and to immoral practices, but are brave,
patriotic, and faithful to their word. Their manners and eustoms, towards the close of the last century, were deseribed as coarse in the extreme, and strongly marked with the super stitious bigotry of their religious creed; but since the more general diffusion of knowledge, a great change for the better has taken place. The peasantry are elad in long loose suuffcoloured coats, lined or edged with pink, and studded in front with elusters of silver or white metal buttons, thrown open to display a smart waiseoat of various and brilliant colours; their liats are ornamented with artificial flowers. Many of the Bavarian females are handsome, lively, and graceful. They dress smartly, and display much taste in their attire. Some of them wear blaek silk handkerehiefs tied tightly round their heads, deeorated with flowers or ribbons; some caps of silver or gold tissue, and all having their hair neatly braided. German is the language ehiefly spoken by the Bavarians; lut they have never been conspicuous for the enltivation of their native tongue.

Money, Weights, de.-The Bavarian eurreney is the same as that of Frankfort, Wiurtemberg, \&e. Aecounts are kept in florins and kreutzers. The most common Bavarian silves coins are:-

> Pieces of 3 kr ., of which 20 make a florin.
> Prussian coins are very common throughout N . Bavaria.

The prineipal linear measures are the fuss $=\cdot 058005$ Eng. foot; elle $=-911378$ Eng. yard; and klafter $=6$ fuss. Eaeh of these measures, multiplied by itself, gives the square measure of the same name. The principal dry measure is the schiffel $=$ $\cdot 764688$ Eng. quarter. The basis of the liquid measures is the moass or maasskanne $=\cdot 235307$ Eng. gallon. The eimer (wine measure) is $=60$ maasskannen, but the eimer (beer measure $=64$ masskannen. The prineipal weights are the pfund $($ pound $)=1 \cdot 23459$ Eng. lb., and the centner $=123 \cdot 45$ Eng. Ibs., or about $11 \frac{1}{2}$ lbs. more than the English ewt.

Constitution.-Bavaria is an integral part of the Germanie Confederation, the domains inalienable, the crown hereditary. The executive is in the hands of the king. The legislature consists of two chambers, one of senators, and one of deputies; the former composed of prinees of the royal family, the great officers of the state, the two arehbishops, the heads of certain noble families, a bishop named by the King, the president of the Protestant General Consistory, and any other members whom the King may ereate hereditary peers; the latter, of members chosen, one to every 7000 families, or 35,000 persons. The qualifications are, that the candidate have completed his 30th year, that he be a free and independent eitizen, that he be a member of the Romish or Reformed church, and pay taxes on property of the value of $£ 765$ at the least. The members are chosen every six years, unless dissolved by the King, and are generally convened once a year, but are bound to assemble at least once every three years. Each of the eight circles or provinees has a provincial government, consisting of two boards, one for the management of the police, schools, \&e., and the other for the management of financial affairs. The national budget exhibits a favourable state of matters, the receipts considerably exceeding the expenditure. The full war complement of the army is about $57,000 \mathrm{men}$; the contingent furnished to the German Confederation, 35,800 . The army is raised by conscription, every man, excepting the nobility and elergy, being liable to serve after the completion of his 21st year. The period of service is six years, and no Bavarian can settle or marry, or accept of any definite appointment, until he has fulfilled his military liabilities.

Ilistory. - The Bavarians are descended of the Boii, a Celtic tribe, who subdued the native inhabitants, and took possession of the country about 600 years before the Christian era. The Boii were in turn conquered by the liomans, who retained the territory till the fall of the empire, when it was overrun by the Ostrogoths and Franks. The sovereignty of Bavaria was subsequently assumed by Charlemagne, and on the death of that monareh, the kings of the Franks and Germans governed it by their lieutenants, who bore the title of Margrave, afterwards converted into that of Duke, and latterly (1623), into that of Elector. In 1070, Bavaria passed into the possession of the family of the Guelphs, and in 1180 , it
was transferred by imperial grant to Otho, Count of Wittlesbach. On the extinction of the direct line of that family in 1777, the Elector Palatine, Charles Theodore, added the Palatinate. and the duchies of Juliers and Berg to the Bavarian dominions. In 1799, Charles Theodore died without issue, and the Sulzbach branch of the line of the palatinate became extinct with him. The Duke Maximilian Joseph of DeuxPonts came into possession of all the Bavarian territories. The peace of Luneville (Feb. 9, 1801) put an end to the renewed war, and its most important article-the cession of the left bank of the Rhine to France-essentially affected Bavaria. Whilst it lost all its possessions on the left bank of the Rhine, and also the lands of the palatinate on the right bank, it obtained, on the other hand, by an imperial edict, an indemnification, by which it gained, in addition to the amount lost, a surplus of $2109 \mathrm{sq} . \mathrm{m}$., and 216,000 inhabitants.

The political importance of Bavaria, with respect to Austria as well as to France, was more fully displayed in the war of 1805. When Austria resumed hostilities against France, she required the Elector of Bavaria to nnite his troops with the Austrian army, and refused to allow him to remain neutral, ' which (as the Emperor Francis wrote to the elector, Sept. 3, 1804) France herself only would suffer as long as she should find it expedient.' Bavaria, however, did not find it accordant with its own interests to place itself entirely in the power of Austria. At the beginning of the war, the Elector joined the French with about 30,000 troops, and the peace of Presburg annexed to his dominions $10,595 \mathrm{sq} . \mathrm{m}$., and $1,000,000$ inhabitants, and conferred on him the dignity of King; in return for which, he ceded Wïrzburg, which was erected into an electorate, in the place of Salzburg. The King of Bavaria, like the rulers of Wiirtemberg and laden, now assumed sovereignty over the lands of the nobility of the empire within his borders. When, in 1812, the war between France and Russia broke out, Bavaria sent anew its whole proportion of troops to the French army. Insignificant remains only of the 30,000 Bavarians returned in the spring of 1813. Maximilian Joseph, notwithstanding this sacrifice, placed fresh troops nnder the command of Napoleon as the protector of the confederation of the Rhine, when the new campaign was opened, near the close of April. This army also suffered great losses, but distinguished itself with its wonted bravery, under the command of Marshal Oudinot. It suffered particularly in the battles of Luckau and Grossbeeren (1813). In 1805, Bavaria was raised, by the treaty of Presburg, to the rank of a kingdom, with some further accessions of territory, all of which were confirmed by the treaties of 1814 and 1815. In 1848, the discreditable conduct of the King of Bavaria, in maintaining an open liaison with a wandering actress, who had assumed the name of Lola Montes, but who was in reality the eloped wife of an Englishman, and whom he had created a Bavarian countess, by the title of Gräfin von Lansfeldt, had thoroughly alienated the hearts of his subjects, and quickened that desire of political change which had previously existed. In this spirit the people, carly in March 1848, demanded the immediate convocation of the Chambers, the liberty of the press, that judicial trials should be public, that an electoral reform should be granted, and that the army should take an oath to observe the constitution. The King having refused to convoke the Chambers before the end of May, the people flew to arms, attacked and captured the arsenal after a short engagement. They subsequently marehed against the royal palace, the military refusing to charge them, although commanded to do so. In this predicament, the King, finding further resistance useless, yielded to all the demands of the people, who now returned their arms to the arsenal, and afterwards dispersed quietly. Fresh tumults, however, occurred, and on March 21, King Louis announced his resignation of the sceptre to his son, the crown prince Maximilian, the second of that name who has filled the throne of Bavaria. Bavaria contains several very ancient and venerable cities, formerly free towns of the empire, such as Augsburg, Katisbon or Regensburg, and Nürnberg, in their day of prosperity, centres of wealth and commercial activity, created and fostered by the extensive carrying trade overland from Italy and the East, to the Baltic, and to the great cities of the Netherlands. Nor less remarkable were the Episcopal cities, Würzburg and Bamberg, once capitals of ecclesiastical principalities, but now siill furtber reduced than the imperial towns.

Pop. (1849), 4,519,546.-(Berghaus; Huhn ; Parliamentary Papers; Annual Register, \&\&c.)

BAVAY [anc. Bagacum], an anc. tn. France, dep. Nord, arrond. of, and 15 m. N.N.W. Avesnes, of considerable military importance in the time of the Romans. It contains the ruins of an aqueduct, amphitheatre, and fortifications, and has manufactures of glass, earthenware, hardware, agricultural implements, hosiery, and leather. The inhabitants are also engaged in agriculture and rearing cattle. Pop. 1605.

BAVERSTOCK, par. Eng. Wilts; 710 ac. I'op. 194.
BAVISPE, a tn. Mexico, prov. Chihualua, in a mountainous district, near the source of a river of the same name. It used to be classed as one of the Spanish presidios or small forts, built as a protection against the wild Indians.

BAWBURGH, par. Eng. Norfolk; 2070 ac. Pop. 404.

BAWDRIP, par. Eng. Somerset; 1780 ac. Pop. 425.
BAWDSEY, par. Eng. Suffolk; 2640 ac. Pop. 469.
BAWSEY, par. Eng. Norfolk; 1090 ac. Pop. 28.
BAWTRY, a market tn. England, co. York, W. Riding, on a plain on the Idle, 9 m . S.S.E. Doncaster. It consists of two principal streets, straight, and well kept; lighted with gas, and amply supplied with water; houses, chicfly of brick, plastered or stuccoed ; and contains a parish church, a Mcthod ist and an Independent chapel, several Sunday-schools, and a day-school. It has some trade in corn, oak-timber, and stone, which is sent chiefly to London and Hull. The Idle is navigable to the town for small vessels of about 24 tons. Pop. (1841), 1083.-(Local Correspondent.)

BAXTERLEY, par. Eng. Warwick; 850 ac. Pop. 228.
BAY, a lake, isl. Luzon, S. of Manilla. It is of very irregnlar form, but measures above 30 m . both in length and breadth. There are several small islands in it, of which the largest, named Tatin, is about 11 m . long by half that width at its broadest part. It receives the waters of several rivers, but has only one outlet, the Passig, which falls into the Bay of Manilla, at the town, after a course of about 18 m . The lake is deep in many parts, though gencrally not more than about 16 fathoms; it contains vast quantities of fish, of which daily supplies are sent to the Manilla market. Game is abundant on its shores; fowls of various kinds, and crocodiles in immense numbers, frequent its banks and waters.-(Mallat's Philippines.)

BAY OF ISLANDS, a large and commodious harbour, N.E. coast, New Ulster [native name, Eaheinomauwe], the most N. of the New Zealand Islands; about 90 m . S.E. North Cape ; lat. (E. point, Cape Brett) $35^{\circ} 10^{\prime} \mathrm{S}$. ; lon. $174^{\circ} 22^{\prime} \mathrm{E}$. (R.) It is of easy access; and, with exception of one rock, called the Whale-rock, the position of which is well ascertained, there are no hidden dangers. It is studded with islands, whence its name, and contains a surface of water of about $10 \mathrm{~m} . \mathrm{sq}$. Near the middle of the W. side of the bay is the opening of Kororareka harbour, a secure but shallow port ; better adapted to merchant shipping than to the use of men-of-war. Within the line from Cape Pococke to Cape Brett, between which is the entrance into the bay, there is not more than 30 fathoms of water; and everywhere, excepting elose to the rocks, the bottom is soft and tenacious, affording secure anchorage. The view on all sides is pleasing, exhibiting everywhere an appearance of fertility, but is without any grand, or remarkable features. The bay has been the resort of whalers for many years.-(Surveying Voyages of Adventure and Beagle ; Parliamentary Report.)

BAYAMO, or San Salvador, a tu., E. part, isl. Cuba, 60 m. N.W. Santiago, near l. bank, Cauto, a small stream that falls into the bay called the Canal of Bayamo. It lies in lat. $20^{\circ} 40^{\prime} \mathrm{N} . ;$ lon. $76^{\circ} 55^{\prime} \mathrm{W} . ;$ and carries on a good trade. Pop. variously stated from 7500 to 14,000 .

BAY $A N$ or Bain, Khara-Coola, a lofty mountain-range in Asia, on the N.E. border of Thibet, a branch of the Kuenlun, stretching N.W. and S.E. between the sources of the Hoang-Ho and the Yang-tse-Kiang, two of the largest rivers in China.

B $\Lambda$ YAS [auc. Baiae], a tn. Syria, pash. Alcppo, a little to the S. of the river Deli Chái, and 15 m . N. Iskenderoon. It contains a castle, khan, bazaar, batlis, and numerous ruins. There are several villages in its neighbourhood, situated amidst groves of orange and palm trees.-(Chesney.)

BAYAZID, or Bayezeed, a tn. Turkey in Asia, pash. of, and 140 m. S.E. Erzeroom; S.W. Mount Ararat, from the base of which it is separated by a lava-covered plain 10 m . in width; lat. $39^{\circ} 24^{\prime} \mathrm{N}$.; lon. $44^{\circ} 20^{\prime} \mathrm{E}$; governed by a pasha of two tails, appointed by the pasha of Erzeroom. It is situated on the deelivity of a rugged eminence, the summit of which is fortified, and surrounded by a wall and ram-

Stothard, for the London Society of Antiquarics. There are several manufactures in the town, ineluding lace of superior quality, ealicoes, serges, table linen, cotton yarn, and hats ; and tanning and dyeing are carried on. The porcelain manufactory, established in 1812 , continues to maintain its reputation. It employs about 60 workmen, and the artieles produced are stronger, and stand heat much better than the Limoges porcelain, although the latter is of a purer white. A considerable trade is carried on in horses, cattle, pigs, poultry, fish, and butter, of which latter article large quantities are sent weekly to Paris, either fresh or slightly salted. The All-Saints fair, whieh lasts two days, is devoted to the sale of horses. Bayeux is of high antiquity, having existed previously to the invasion of Gaul by the Romans. Pop. 9106.

BAYFIELD, par. Eng. Norfolk; 780ac. P. 21.

BAYLEHANI, par. Eng. Suffolk; 830 ac. P. 275.
BAYLEN. See Bailen.
BAYONNE, a seaport tn. France, dep. Basses Py rénées; lat. (cathedral) $43^{\circ} 29^{\prime} 30^{\prime \prime}$ N.; lon. $1^{\circ} 28^{\prime} 3 u^{\prime \prime}$ W. (R.) It is advantageously situated about 4 m . from the sea, at the confluence of the Nive and Adour. The former divides the town into two nearly equal parts, called Great and Little Bayonne, connected by the Mayou and Paneeo bridges. Both parts are surrounded by ramparts, flanked with bastions and broail deep ditches, which can at any time be filled with water. Four gates form the entrances to the town. As a fortified place, Bayonne ranks in the first class. Great Bayonne extends along the l. bank, Nive, and contains the old eastle; Little Bayonne stretches along the r. bank of the same river, and the l. bank, Adour, and contains the new castle, whieh is flanked by four towers. A third quarter, properly a suburb of the town, although it does not belong to it, nor even to tho same department, is situated on the r. bank, Adour. It is called St. Esprit, and belongs to the department of Landes, communicating with Bayonne proper bya handsome wooden bridge across the Adour. In St. Esprit is situated the citadel, whiel commands the town of Bayonne, the port, the surronnding district, and the approach from the sea. Bayonne is an agreeablo town, built in the Spanish fashion, and presenting a different appearance from the generality of French towns. The houses have lattice-windows and balconies, over which cloth blinds are extended. The shops are open in front like booths, and the Grande Place resembles a Spanish square in all its principal features. The inhabitants are remarkable for the animation and gaiety of their manner, and have an appearance of lightheartedness that contrasts strongly with the more solemn demeanour of their Spanish neighbours. The town is well and substantially built. The main street, through which the high road to Spain passes, contains several handsome edifices. Tho other streets are narrow, and appear to be more confined than they really are, from the height of the houses, which are generally of three or four stories. The Place Grammont, which opens, on one side, on the Nive, and on the other on the Adour and the harbour, is embellished with some fine buildings, amongst which are the custom-house and theatre. This square is tho great resort of both the busy and the idle. The only remarkable publie building in Bayonne, besides those named, is tho eathedral, a small but elegant Gothic structure. Its arsenal is one of the best and most eomplete in Franee. The military hospital, also, is of considerable extent, being eapable of accommodating 2000 invalids. On the bank of the river is an agreeable promenade, carefully kept. On one side is a row of houses painted in various colours, and on the other a noble quay. An avenue of trees oceupies the intervening spaee. A little lower down the river are the dockyards, which are very commodious, and well adapted for the construction both of ships of war and merchant vessels. The walks along the river are mueh frequented, and present a picturesque variety of costume. The women of Bayonne are celebrated for the elegance of their figures. Their attractions have become almost proverbial in France. The harbour of Bayonne is eneumbered by a bar across the mouth of the Adour, but, when entered, it affords every seeurity. The rise of flood tide is 13 ft ., of neap tide, $8 \frac{1}{2} \mathrm{ft}$. In 1849 , the number of vessels that entered the port was 728 , of which 59 were British; cleared the same year, 726 , of which 43 were British.

Bayonne has an exchange, and schools of commerce and navigation. The chief products consist of Andaye brandy, liqueurs, chocolate, ropes, cordage, glass, and refined sugar. It has a chamber of commerce, and carries on an important trade, not the least portion of which is by smuggling, into Spain. The chief exports are resins, woollen cloths, serges, linens, dyed silks, drugs, cream-of-tartar, wines, brandy, \&c. The chief imports are fine Spanish wool, liquorice root and juice, wines, iron, cocoa, olive-oil, millstones, \&c. Bayonne prides itself on never having been taken by an enemy, and its motto is, Nunquam polluta. The bayonet, a wellknown military weapon, was invented here, and derives its name from the town. Pop. (1846), 13,850.

BAYPOOR, a seaport tn. Hindoostan, in Malabar, presid. Madras, 7 m . S. Calicut ; lat. $11^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $75^{\circ} 52^{\prime} \mathrm{E}$. Tippoo Saib new named this place Sultanpatnam, and intended to make it a commercial emporium. Teak ships of 400 tons are built here, and teak tar is extracted from the chips and sawdust.

## BAYREUTH. See Baireutir.

BAYSWATER, a hamlet, England, co. Middlesex, in the immediate W. vicinity of London, of which it may now be considered a suburb, being only $3 \frac{1}{2} \mathrm{~m}$. from St. Paul's, on the Uxbridge road, on a plain adjoining Kensington gardens. The houses are tolerably well built, principally of brick, the fronts faced with composition; many of them are in the villa style, and some of them spacious aud handsome residences; well lighted with gas, and water abundant. It contains a church, Episcopal and Wesleyan chapels, and several schools, including three ladies' schools, and one connected with the Weslcyans.-(Local Correspondent.)

BAYTON, par. Eng. Worcester; 1960 ac. Pop. 468.
BAYVILL, par., S . Walcs, Pembroke. Pop. 130.
BAZA [anc. Basti], a city, Spain, Andalusia, prov. of, and 53 m. E.N.E. Granada, in a valley N. the sierra Baza. It has ill-arranged, and, for the most part, crooked and narrow streets, three squares, a collegiate, and two parish churches, townhall, hospital, college, four elementary schools, civil and ecclesiastical prisons, numerous public fountains, fine gardens, and promenades. Mannfactures:-hats, linen fabrics, earthenware, and gypsum. The environs yield wine and hemp; sheep, cattle, and mules are reared; and an annual fair is held in September. Baza is famed in early Spanish listory, more especially in that of Granada. In 1489, it was taken from the Moors by the Spaniards, after a siege of nearly seven months. In 1810, the French, under Marshal Soult, here defeated the Spaniards under Generals Blake and Freire. Pop. 10,133.

BAZADOIS (The) [anc. Vasates], France, one of the districts into which prov. Guyenne was divided, and now included in deps. Gironde and Lot-et-Garonne. Its capital was Bazas.

BAZARUTA, a gronp of islands, Africa, off the coast of Sofala, just beyond Cape St. Sebastian. They extend in a chain to the N., and, approached from the S., appear like one island. Their N. extremity, forming the cape of the same name, lat. $21^{\circ} 31^{\prime} \mathrm{S} . ;$ lon. $35^{\circ} 33^{\prime}$ E., has a recf projecting from it, which is covered at high water. On the W. side of the N. island there is a cove called Punga Bay, with from 7 to 9 fathoms water, but lined by shoals on each side. There a slip might find shelter from E., S., and W. winds, and procure wood and water.-(Horsburgh.)

BAZAS [anc. Cossio], a tn. France, dep. Gironde, 33 m . S.S.E. Bordcaux ; on a rocky eminence, at the foot of which flows the Beauve. It is surronnded by agreeable promenades, and by ruined walls, the only remains of its ancient fortifications. The houses are generally badly built; the only edifice possessing any architectural interest is the cathedral, a Gothic structure, erected in the 13 th or 14 th century. It is small, but well proportioned, and remarkable for the number and lightness of its columns, for the purity of its style, and for the delicacy of the principal façade, which is ornamented with numerous statues and sculptures. In the principal porch is a font for holy water, in which, by a curious optical effect, the whole vault of the cathedral is reflected. Some saltpetre, glass, and leather are manufactured; and a considerable trade is carried on in agricultural produce, and wood for fuel, carpentry, and shipbuilding. Pop. 2325.

BAZZANO, a tn. Papal States, 14 m . W. Bologna, on the Samoggia. Pop. 2937.

BEACHAMPCON, par. Eng. Bucks; 2110 ac. P 248. BEACIINGSTOKE, BEECHingstoke, or BirchamStoke, par Eıg. Wilts; 740 ac. Pop. 1913.

BEACHY HEAD, a promontory, England, coast of Sussex, between Hastings and Seaford, about $1 \frac{1}{2} \mathrm{~m}$. S. Eastbourn ; lat. $50^{\circ} 44^{\prime} 24^{\prime \prime} \mathrm{N}$. ; lon. $0^{\circ} 12^{\prime} 42^{\prime \prime} \mathrm{E}$. (R.) It is the highest headland on the S. coast of England. In 1828, a revolving light of the first class was erected here, 285 ft . above the level of the sea, visible in clear weather from a distance of 28 m .

BEACONSFIELD, a tn. and par. England, co. Bucking. ham. The town stands on an eminence, 23 m . W. by N. London, and consists of four principal streets, which meet in a spacious market-place in the centre. The houses are in general well built; water abundant. The church is a handsome ancient structure, in the Norman style, of stone and flint, with tower and spire. It contains the remains of Edmund Burke, and of Waller the poct, both of whom were interred within its precincts. Beaconsfield has likewise Independent, Wesleyan, and Presbyterian chapels; a free school, and some small charitics. Area of par. 3710 ac. Pop. 1732.

BEAFORD, par. Eng. Devon; 3760 ac. Pop. 713.
BEAGH, par. Irel. Galway; 14,581 ac. Pop. 5751.
BEAGLE, Bank, Island, and Reef:-1, An extensive coral sand-bank, N.W. coast, Australia, N. N.W. Buccaneer Archipelago; lat. $15^{\circ} 19^{\prime} \mathrm{S}$. ; lon. $123^{\circ} 35^{\prime} \mathrm{E}$. (n.) It is about 4 or 5 m . in length N.W. and S.E., having part of it dry.-2, An isl., coast of S. Australia, about 60 m . N.N.W. from the entrance into Spencer's Gulf; lat. $34^{\circ} 49^{\prime} \mathrm{S} . ;$ lon. $134^{\circ} 49^{\prime}$ E. (R.)-3, A reef, in Bass Strait; lat. $39^{\circ} 41^{\prime} \mathrm{S}$. ; lon. $147^{\circ} 42^{\prime}$ E. (R.)

BEAKESBOURNE, or Lyvyngsbourne, par. Eng. Kent; 1200 ac. Pop. 332.

BEAL, a vil. and headland, Ircl. co. Kerry, S. side of the estuary of the Shannon, 6 m . W.N.W. Ballylongford. Near the village is an old castle.

BEALINGS, two pars. Eng.:-1, Bealings (Great), par. Suffolk; 830 ac . Pop. 377.-2, Bealings (Little), par., W. of the former; 410 ac . Pop. 322.

BEAMINSTER, a th. and par. England, co. Dorset. The town is situated in a fertile valley, on the Birt, 14 m . N.W. Dorchester ; bouses, in general, good modern buildings; streets well paved and lighted with gas; water abundant. The church, built on an eminence on the S. side of the town, is a stately structure, with a well-proportioned tower nearly 100 ft . in height. The Wesleyans and Independents have chapels each; and a new chapel of case is now (1850) in course of erection. There is an endowed school, several daily and Sunday schools, and an alms-house for eight aged persons. Principal manufactures:-sailcloth, iron, tin, and copper wares; market-day, Thursday. The town was almost entirely destroyed by fire on three different occasions; first, in 1644 ; again, in 1684; and o third time, in 1781. Area of par. 4350 ac. Pop. 3270.

BEAR, or Bere Island and Haven, Ireland, Bantry Bay, co. Cork. The ISLAND, which is about 5 m . long and from $1 \frac{1}{2}$ to 2 broad, is situated on the N.W. side of the bay. Its loftiest summit, 897 ft . high, is in lat. $51^{\circ} 37^{\prime} 30^{\prime \prime} \mathrm{N}$. ; lon. $9^{\circ} 52^{\prime} 12^{\prime \prime} \mathrm{W}$. (R.)-The Haven, situated between the island and the mainland, is spacious and well sheltered, and has sufficient depth of water for large ships. It has two entrances, one at the E., the other at the W. end of Bear Island. Berehaven has recently been pointed out as well adapted for a naval and transatlantic packet station.

BEAR ISLANDS.- 1 , An isl., N. Ocean, about 315 m . S. Cape South, in Spitzbergen; lat. $74^{\circ} 30^{\prime}$ N. ; lon. $20^{\circ} 0^{\prime}$ E. (R.) -2 , Three islands in Hudson's Bay, one in lat. $54^{\circ} 24^{\prime}$ N. ; lon. $80^{\circ} 50^{\prime}$ W. (R.) ; another in lat. $54^{\circ} 32^{\prime} \mathrm{N}$.; the third in lat. $54^{\circ} 46^{\prime}$ N.- 3, A group of islands in the N. Polar Sca, off the N.E. coast of Siberia, between lat. $70^{\circ}$ and $70^{\circ} 30^{\prime}$ N. ; and lon. $164^{\circ}$ and $168^{\circ} \mathrm{E}$.

BEAR LAKE (The Great), an extensive sheet of fresh water in the N.W. part of N. America, on the Arctic circle, between about $65^{\circ}$ and $67^{\circ} 32^{\prime} \mathrm{N}$. lat.; and under the 20th degree of W. lon. It is of irregular shape, and measures 170 m . N. to S. and E. to W. Its depth has not been ascertained, but where tried, no bottom was found with 270 ft . of line. The water is remarkably transparent, and appears of

## BEAUFORT

a light blue colour. It abounds with fish, particularly with a kind known by the name of 'the herring salmon of Bear Lake.' The Bear Lake river flows from it to the Mackenzie river.

BEARN [anc. Pagus Bearnensis], an anc. prov. France, now constituting the department of the Basses Pyrénées, with the exception of the arrond. of Bayonne, and part of that of Mauleon. Pau was the capital ; the other towns were Lescar, Oléron, Nai, Orthez, Navarrens, Morlaas, St. Jean, Pied de Port, St. Palais, Sauveterre, Pontac, and Sallies.

BEARN (Cape), a promontory, France, dep. Pyrénées Orientales, on the Mediterranean; lat. $42^{\circ} 31^{\prime} \mathrm{N} . ;$ lon. $3^{\circ} 7^{\prime} 30^{\prime \prime}$ E. (R.) Its summit is formed by Mount Bearn, on which a lighthouse of the first class has been erected, 751 ft . above the level of the sea, visible from a distance of $14 \frac{1}{2} \mathrm{~m}$.

BEARSTEAD, par. Eng. Kent; 640 ac. Pop. 605.
BEAS, or Beyas [anc. Hyphasis], one of the great rivers of the Punjab, having its rise at the Ratanki Pass, on the S . side of the Santch Mountains, a branch of the Himalaya system, in lat. $32^{\circ} 21^{\prime} \mathrm{N}$.; lon. $77^{\circ} 22^{\prime} \mathrm{E}$. ; where the former attain an elevation of $13,300 \mathrm{ft}$. From this point, the Beas flows generally in a $S$. dircction for about 50 m ., when it turns W. and N.W., till it reaches the E. margin of the Punjab, a distance of about 90 m ., when it proceeds S.S.W. for 75 m . ; forming, throughout that space, the E. boundary, and is then joined by the Sutlej, about 8 m . N.N.E. Sobraon; lat. $31^{\circ} 10^{\prime} \mathrm{N} . ; \operatorname{lon} .75^{\circ} 2^{\prime} \mathrm{E}$. Its entire course is thus about 215 m . The Beas has been considered larger than the Sutlej, but it is greatly inferior to that river in the length of its course; and, according to Burnes, though they have about the same breadth each-200 yards, the Sutlej has the greater volume of water. The united stream, below the point of junction, is called the Ghara or Gharra.

BEAS de segura, a tn. Spain, Murcia, prov. of, and 50 m . N.W. Jaen, in the centre of a fertile vale, near the 1. bank of the Guadalimar. It has two principal and several smaller streets, two squares, a church, town and court houses, an hospital, endowed school, damp and gloomy prison, and the relics of a large old castle. Coarse cloth and linens are manufactured, and dyeing, bleaching, taming, and oil-expressing, are carried on, Pop. 2695.

BEATENBERG (ST.), a mountain, Switzerland, can. Bern; it rises from the S.E. side of Lake Thun, and has a remarkable cave called the Beatenhöhle, in which St. Beatus is said to have lived, and worked miracles. On the slope of the mountain stands the alpine village and church, of the same name, about 3500 ft . above the level of the sea. Pop. 974.

BEATH, a small par. Scot. Fife. Pop. 487.
BEAUCAIRE [anc. Bellum Quadrum], a tn. France, dep. Gard, 14 m. E. by S. Nismes, r. bank, Rhone, opposite Tarascon. It is favourably situated for commerce; the

Spain, Italy, the coasts of Africa, and the Levant. The town is, in general, tolerably well built, but the streets are narrow and inconvenient. There are no public establishments here, and very few manufactories; but the suspension bridge aeross the Rhone, which forms the communication with Tarascon, is the finest work of the kind in France. The river here is about 478 yards wide. Previous to the erection of the present bridge in 1829, the Rhone was crossed by a bridge of boats. Pieturesquely situate on a rock stand the ruins of the ancient eastle, erected at the period of the first Crusades, and partly demolished in the reign of Louis XIII. Beaucaire is principally celebrated for its great fair, which rivals the fairs of Leipzig and Frankfort, and is held partly in the town, and partly in booths erected on the bank of the river. It commences on the 1st of July, and terminates on the 28th, at midnight. Little business is done, however, till the 15 th. About the 20th, buyers and sellers arrive in multitudes, and the town, which has not more than the ordinary accommodation for 10,000 inhabitants, receives an influx of 80,000 or 100,000 strangers. Merehants from all parts of Europe, and even from the coast of Africa, attend with their goods; and almost every kind of article, however rare, is to be purehased here. French, Italians, Spaniards, Greeks, Armenians, Turks, Egyptians, and Arabs, attend with the produce or the fabrics of their various countries; and notwithstanding the short period allotted to the transaction of business, sales are effeeted to the amount of several millions of fiancs. A court, composed of 12 members, pronounces judgment in all disputed cases. After the 28th, the unsold goods are either re-paeked, or disposed of at a low price; and the town sinks into its usual state of quiet. The ordinary trade of the town is principally in olive-oil, wine, and agricultural produce. Steamboats ply to Lyons, and to Toulon, and there is railway communication to Nismes, Montpellier, Alais, Avignon, Aix, and Marseilles. Pop. 8536.

BEAUCHENE, a small isl., S. Atlantic, about $34 \mathrm{~m} . \mathrm{S}$. of E. Falkland Island; lat. (S. point) $52^{\circ} 55^{\prime} 42^{\prime \prime} \mathrm{S}$. ; lon. $59^{\circ}$ $12^{\prime} 42^{\prime \prime} \mathrm{W}$. (1.)

BEAUCOURT, a vil. France, dep. Ilaut Rhin, 16 m . S.E. Belfort, noted for an extensive factory, employing in the town, and its vicinity, about 3000 persons; and in which are made all the finest kinds of clock and watch work, serews, locks, \&e. Pop. 1987.—Three other places in France have the same name.

BEAUDESERT, par. Eng. Warwick; 840 ac. Pop. 205.
BEAUFORT.-1, A group of islands, Gulf of Boothia, N.W. or outer isl. in lat. $69^{\circ} 55^{\prime} \mathrm{N}$. ; lon. $97^{\circ} 5^{\prime} \mathrm{W} .-2$, A cape, E. side of Cockburn's Gulf, lat. $67^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $96^{\circ}$ W.- 3 , A cape, Russian America, lat. $69^{\circ} \mathrm{N} . ; \operatorname{lon} .163^{\circ} \mathrm{W}$. -4, A bay, Russian America, on the Arctic Ocean, lat. $70^{\circ}$ N. ; lon. $142^{\circ} \mathrm{W}$.

BEAUFOR'T.-1, A tn. France, dep. Maine-et-Loire, 1. bank, Couesnon, 16 m. S.S.E. Angers. It has a parish ehurch with a lofty spire, a college, two hospitals, and a large saileloth manufactory. Pop. 3062.-Several other places in France bear the same name.- 2, A tn. Sardinian States, prov. Upper Savoy, 10 m . E. Conflans, near the Doro. IIas some trade in cattle and cheese. Pop. $3000 .-3$, A tn. Cape Colony, S. Africa, cap. of dist. of same name, 280 m . N.E. Cape Town ; lat. $32^{\circ} 31^{\prime}$ S.; lon. $22^{\circ} 40^{\prime}$ E.-4, A seaport, Cape Colony, dist. Zwellendam, 145 m. E.S.E. Cape Town, at the mouth of the Breede river; lat. $34^{\circ} 25^{\prime}$ S.; lon. $20^{\circ} \mathrm{E}$. It is encumbered by a bar, and only admits vessels of 200 tons, but is, notwithstanding, one of the best harbours on the S. coast of the colony, and has a considerable trade. 5 , A seaport tn., U. States, $N$. Carolina; lat. $34^{\circ} 40^{\prime} \mathrm{N}$.; lon. $76^{\circ} 41^{\prime} \mathrm{W}$. Contrary to an opinion formerly entertained, the harbour of Beaufort has been found to have sufficient depth for ships. By soundings and explorations, nade in February 1850, it was ascertaincd that there was 22 ft . water on the Phone being navigable for vesscls of moderate burden, up to the town. From its easy communication with the sea, Beaueaire is frequented by vessels from all parts of the Mediterranean, and has become the depôt of the French trade with
bar at half flood, a depth of several feet beyond former soundings. It is, besides, safe and spacious, and admits of direet and easy communication with the ocean. Beaufort is a place of considerable commerce; it has a Methodist chureh, a court-
house, jail, and several seminaries. Pop. 1974.-6, A small scaport, U. States, S. Carolina, on an arm of the sea off Port Royal, 50 m. S.S.W. Charleston ; lat. $32^{\circ} 26^{\prime}$ N.; lon. $80^{\circ} 41^{\prime}$ W. (R.)

BEAUFORT.-1, A dist. Cape Colony, bounded, N. by part of the extensive barren tract recently included within the colony, E. Graaf Reynet, and Uitenhage, S. George, and W. Worcester and Clanwilliam; area, about $20,000 \mathrm{sq}$. m. It is divided into three parts, namely, Zwarteberg, Gouph, and Nieweveld. Zwarteberg, lying in the S.W., is adapted for agriculture, is well watered, has extensive orehards and vineyards, and raises the greater part of the grain (chiefly wheat) consumed in the division. Gouph, an extensive elevated tract belonging to the Great Karoo, is chiefly used as a sheepwalk, consisting principally of heath, with very little grass. The want of water is here greatly felt. Nieweveld, commencing with the mountain range of the same name, stretches $\mathbf{N}$. to the limits of the division. It has some grassy pasture on the mountain-slopes, and is tolerably supplied with water, but the greater part of the surface is, like Gouph, covered with heath. Beaufort, the capital of the division, stands near the source of the Gambia or Great Lion river, about 360 m. E. Cape Town, and has not, as yet, acquired much importance. Bad roads appear to be one of the greatest obstacles to its prosperity. Pop. 5807, of whom nearly a half are eoloured.-2, A co., U. States, N. Carolina; arca, 650 sq. m. Surface low, and, at times, extensively overflowed. Principal productions:- cotton and rice. Cap. Washington. I'op. (1840), 12,225, of which 7050 are slaves.
-3, A co. W. Australia, of a triangular form, each of the three sides being about 45 m . in length. Its most prominent physical features are the Glenelg Hills, Emu Hill, and Mourts Walker and Arrowsmith; the latter at the southernmost point of the county.

BEAUGENCY [anc. Belgenciacum, Castrum de Delgency], n tn. France, dep. Loiret, 16 m. S.W. Orleans; agreeably situated on the side of a hill, r. bank, Loire, which is here crossed by a stone bridge of 39 arches. The town was formerly surrounded by a wall flanked by towers and bastions, parts of which still remain. In the middle of the last ceritury, the fortifications of the castle extended to the bridge, but they were destroyed in 1767. The square donjon tower of Beaugency, 115 ft . high, is a remarkable structure, and of high antiquity, probably of the 10 th or 11 th century, though the exact date of its erection is unknown. The articles manufactured here are principally cloth and leather. There are also some distilleries. A considerable trade is carried on in the wine of the neighbourhood, which bears the name of Beaugency, and is the best grown in the Orleanais; and in brandy, grain, wool, and beet-root sugar. Pop. 4028.

BEAUHARNOIS, aco. Lower Canada,U. States'frontier, S.W. Montreal; length 55 m . ; breadth 22 m . ; area, 710 sq. m . Both its soil and climate are good; and it possesses considerable local advantages from its extensive frontage to the St. Lawrence, here called the Lake of St. Francis. The principal villages are, Beauharnois, St. Regis, and Dundee. Pop., consisting of natives, Scotch, Irish, and Americans, 14,164.

BEAUJEU, a tn. France, dep. Rhône, arrond. of, and 14 m. N.N.W. Villefranche. It is the oldest town of the leaujolais, of which it was the capital, and was formerly a place of some importance, being the residence of the feudal lords of that small state. Paper-mills and a cotton-mill, driven by water, are established here, besides several tanneries. The trade is principally in wine of good quality, grain, iron, leather, and casks, made in the town. It is the entrepot for the trade between the Saône and the Loire. Pop. 2469.

BEAUJOLAIS [anc. Bellojoviensis Ager], a dist., anc. prov. Lyomnais, cap. Villefranche. It is now ineluded in the deps. Loire and Rhône.

BEAULIEU, or Bewley, par. Irel. Louth; 1228 ac. Pop. 688.

BEAULIEU, a tn. France, dep. Corrèze, 20 m . S. Tulle, agrceably situated, r. bank, Dordogne. The church is enriched with some very remarkable Gothic sculptures. Cutlery is manufactured here, and the wine grown in the neighbourhood is of fair quality. The trade is in wine and ship-timber. Pop. 2151.-Beavliev is the name of a number of other small towns in France.

BEAULY, a vil. and port, Scotland, co. Inverness, l.bank,

Beauly, at the head of the loch of same name, and near the embouchure of the river, 9 m . W. Inverness. It consists of one spacious street, with several smaller diverging from it; houses of stone, and generally well built; supply of water insufficient. The only building of any note is the N. of Scotland Bank, in the Elizabethan style. The parish church is $2 \frac{1}{2} \mathrm{~m}$. W. from the town, and the Free church about $1 \frac{1}{2} \mathrm{~m}$. in the same direction. There are two schools in the village under the auspiees of the latter. An extensive pork-curing establishment, and a large brewery, are here busily employed. The harbour is an excellent one, and has sufficient depth of water for vessels of from 150 to 200 tons. Principal ex-ports:-timber, potatoes, and grain; imports:-coal, lime, salt, \&c. The moral condition of the people is good, crime being hardly known among them. At the E. end of the village stand the ruins of its ancient priory, founded in the 13 th century. They are surrounded by trees of great size and age, and have a very picturesque appearance. The scenery along the banks of the Beanly is, in many places, of surpassing beauty ; the acclivities on either side being covered with birch and fir, and the edges of the stream lined beautifully with oaks, weeping birches, and alders. Pop. (1841),560.-(Local Correspondent.)

BEAUMARIS, a tn., seaport, and par., N. Wales, isle Anglesey. The town is situated on the W. shore of the Menai Strait, near its junction with the Irish Sea, where it expands into a grood roadstead called Beaumaris Bay; lat. $53^{\circ} 16^{\prime} \mathrm{N}$. ; lon. $4^{\circ} 5^{\prime} \mathrm{W}$. It consists of several streets well paved and clean; houses, in general, good, partienlarly in the principal strcet, which is terminated by the ancient castle of Beaumaris, erected by Edward I.; while many modern dwellings, of very handsome appearance, lave lately arisen, and are (1850) in course of erection, in various parts of the town and vicinity. The chief publie buildings, exclusive of the churches, are the townhall, a commodious and handsome edifice, containing a splendid ball-room, and other spacious apartments appropriated to public purposes; the county hall, the jail, and a custom-house. The places of worship comprise the chapel of St. Mary, a spacious and elegant structure, in the later style of English architecture, with a lofty square embattled tower ; Wesleyan, Calvinistic, Methodist, Independent, and Baptist chapels. Beaumaris has a free, national, and several daily and Sunday schools; several charities, and benevolent societies. The harbour is safe and commodious, and may be entered at any time of tide with a moderate breeze. Registered shipping in 1847, 17,219 tons; entered for the same year, 36,762 tons; cleared, 48,580 . Customs revenue for $1846, £ 4993,11 \mathrm{~s}$. The town has neither trade nor manufactures, but is mueh resorted to in the summer season for seabathing. It unites with Amlweh, IIolyhead, and Langefin, in sending a member to the IIouse of Commons. Registered electors in 1849,354. Area of par. 327 ac . Pop, of municipal bor, and par. 2299 ; of parliamentary bor. 2680.

BEAUME (LA), a vil. France, dep. Ardèche (Vivarais), $6 \frac{1}{2} \mathrm{~m}$. from Aubenas ; picturesquely situated under a mass of basalt occupying the angle of a valley nearly opposite to the junction of the Fontaulier with the Ardeche. The face of the basalt is finely pillared, and the top of it, forming what is called the Causeway of Pont-de-Beaume, is covered with vines. Within the rock is a grotto lined and vanlted with pillars, evidently natural, but so regularly joined and indented as to have all the appearance of a work of art. The canseway seems to be the joint product of the lava streams of several extinct volcanoes. Crowning a lofty peak, between the Fontaulier and Ardèche, stand the unmantled ruins of an old castle, which belonged to the dukes of Ventadour. La Beaune is encircled with terraced gardens, formed on the line of the old fortifications; and contains numerous antique houses of the 15 th and 16 th centuries, with some probably of a still earlier date. Pop. 1065.-Other three villages have the name of BEAUME.

BEAUMONT, two pars. Eng. :-1, par. Cumberland; 1470 ac. Pop. 288.-2, Beaumont-with-Moze, par. Essex; 2890 ac. Pop 451.

BEAUMONT, a tn. Belgium, prov. Hainaut, 33 m . S.E. Mons. It owes its name to its site on an clevated table-land, from which an extensive and richly diversified prospect is obtained. The marble of Jeaumont is in great demand for ornamental purposes. It has marble saw-works, forges, manu-
factures of woollen stuffs, soapworks, breweries, distilleries, and tanneries, and also a considerable trade in articles of mercery. Beanmont is a place of considerable antiquity. In the IIth century it was the capital of a large county belonging to the princes of the house of Croy, and had an old castle, of which only a few walls and towers now remain, William II I., King of England, having blown it up on taking the tower in 1691. Pop. 206t.-Other three places in Belgium have the name of Beaumont.

BEAUMON'T, several towns, France:-1, Beaumont-deLomagne, a tn., dep. Tarn-et-Garonne, 9 m . S.S.W. CastelSarrasin, beautifully situated, l. bank, Gimonc. The town is at once remarkable for the regularity of its plan, the neatness of the houses, and the beatty and fertility of the surrounding country, which is particularly rich in vineyards. The square is intersected by a main road, and in the centre is a covered market. The strects run at right angles from the square, and are broad and well kept. Mannfactures:-coarse cloth, tiles, and leather. A good trade is done in agricultural produce. Pop. 3217.-2, Beaumont-le-Roger, a tn., dep. Eure, 9 m. E. Bernay, near the forest of same name, r. bank, Kille. Cloth manufactories are established here, employing 400 workmen, and producing annually about 1000 pieces, of 21 yards each. The town has also bleachfields and glassworks. Trade:-principally in wood, flax, yarn, and cloth. Pop. 1250.-3, Deaumont-sur-Sarthe, or Beaumont-leVicomte, a tn., dep. Sarthe, $13 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Mamers, in the form of an amphitheatre, on the side of a hill, above the Sarthe, which is here crossed by two bridges. The streets are narrow and crooked, and the town, in general, badly built. It has manufactures of coarse cloth and matting, with worsted and cotton spinning-mills, besides tanneries. The trade is in grain, hemp, thread, honey, wax, poultry, and cattle. Pop. 1893. -4, Beaumont-sur-Oise [Bellus Mons], a tn., dep. Seinc-etOise, 14 m . N.E. Pontoise, agreeably situated on the brow of a hill, at the foot of which flows the river Oise, here crossed by a handsome bridge. The houses are well built; and a ruined tower, the sole remains of the ancient castle, overlooks the town. Leather is manufactured to some extent. Trade:principally in grain, flour, and agricultural prodnce. Pop. 2030.-Numerous other places in France, in addition to the above, have the name of Beaumont.

BEAUNE, a tn. France, dep. Côte-d'Or, cap. of arrond., 23 m. S.S.W. Dijon, at the foot of a hill, on the Bonzeoise. The bouses are well built, the strcets spacious, and watered by a formtain. The ramparts are planted with trees, and afford an agreeable promenade. The church of Notre Dame is a handsome edifice, and ranks next to the cathedral of the diocese. The great hospital, however, is the finest building in the town. It was founded in 1443, by Nicholas Rollin, chancellor of Philip the Good, Duke of Burgundy. In the court of the hospital are some fine remains of Gothic architecture. Beaune has also a public library, containing abont 10,000 volumes, a very fine public garden, a theatre, public baths, \&c. It manufactures cloth, serges, druggets, vinegar, casks, and beet-root sugar; and is noted for its dyeworks, breweries, and tannerics. In the neighbourhood are some excellent orchards. The trade is principally in the wines of Burgundy, of which Beaune exports thirty or forty thousand butts per annum. The wines grown in the district are the best of the ordinary Burgundy. A large trade is also carried on in agricultural produce, grain, provisions, and cattle. The arrondissement of Beaune contains 10 cantons. In the 17 th century, Beaune was a flourishing manufacturing town, and had 200 Calvinistic families, who furnished employment to 2000 workmen; but the revocation of the Edict of Nantes having driven the Protestant manufacturers from France, the manufactures fell into decay, and have never been revived. This town is the birthplace of the celebrated geometer, Gaspard Monge, the chief improver, if not inventor, of Descriptive Geometry, and one of the founders of the Polytechnic School. Pop. 10,753.

BEAUNE-LA-rollandf, a tn. France, dep. Loiret, 11 m . N.E. Pithiviers, noted for the quantity of fine saffron, honey, and wax produced in the neighbourhood. Pop. 1118.Other three small places have the name of Beaune.

BEAUPORT (SEigniory of), Lower Canada, co. Quebec. The ground on the banks of the St. Lawrence is level, fertile, and well cultivated. In the interior, the land rises into un-
productive ridges, covered with timber; which, however, is of excellent quality. The chicf agricultural productions of the seigniory are grain, fruit, vegetables, and maple sugar. Sandstone and limestone are found in the district; which also contains the quarries that supply the building-stone to Quebce. There is a village of the same name in the seigniory, beautifully situated on a gentle eminence, and remarkable for its neatness and regularity. It is inhabited by persons of the first respectability. In the vicinity are the celcbrated falls of Montmorency.

BEAUl'REAU, a tn. France, dep. Maine-et-Loire, cap. of arrond., in a fertile country, on the Evre, 26 m . S. W. Angers. Parts of its former wall, and other defences, still. remain. The old castle of Beauprean, on a hill in the vicinity, has a picturesque appearance. The town possesses one of the best colleges of the department. Manufactures:-handkerchiefs, linens, flannel, and common woollen stuffs. Trade:principally in cotton and woollen cloth, and leather. Pop. 2117.

BEAUPRE ISLANDS, a group in the S. Pacific, belonging to the Loyalty Isles, N.E. of New Caledonia. The most N.E. of the group is in lat. $20^{\circ} 22^{\prime}$ S.; lon. $166^{\circ} 14^{\prime}$ E. (R.)

BEAUREPAIRE, a vil. France, dep. Isère, 14 m. S.E. Vienne, formerly a place of considerable strength. During the wars of religion, it was besieged on more than one occasion. It has manufactures of table linen; corn and fulling mills, and carries on some trade in silk, grain, fodder, and cattle. Pop. 2030.

BEAUQUESNE, a $t n$. France, dep. Somme (Picardy), 5 m . S.S.E. ])oullens. On its square are to be seen the remains of a castle, built there, in the 13 th century, by Philippe d'Alsace, Count of Flanders. Pop. 2671.

BEAUSSET (Le), a tn. France, dep. Var, $8 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Toulon. It has mannfactories of soap, olive-oil, linens, casks, and tar; and some trade in wine, brandy, \&c. Pop. 2050.

BEAUVAIS [anc. Bratuspantium, Bellovacum], an anc. tn. France, cap. dep. Oise, 43 m . N. Paris, at the confluence of the Avelon with the Therain, in a rich valley surrounded by wooded lills. Several branches of the river run through and by the side of the town, forming canals which are of great service to the manufacturers. The houses of the town are badly built, being for the most part of wood, clay, and mortar, but what is wanting in solidity is made up in ornament, and the stranger is struck with the prodigions number of wooden sculptures and statues that decorate their exterior. As in most old towns, the strects are narrow,

LsEAUVA1S - From Voyages dino l'Ancicnne lisance.
crooked, and inconvenient. The main street runs E. and W., and, nnder five different names, divides the town into two nearly equal parts. A small portion of the present town is called the city; it is very ancient, nearly square, and surrounded by walls two yards thick, strengthened by round towers at intervals. The new town, which is mnch larger than the city, was formerly fortified, but the fortifications fell into decay after the invention of artillery, and are now replaced by handsome boulevards, which afford agreeable promenades. The ramparts were demolished in 1803, when the town un-
derwent geveral important alterations and improvements. The eathedral, although a fine Gothic edifiee, part of it only has been completed on the original plan. Its choir is the loftiest in the world, the height from the pavement to the roof being $153 \mathrm{ft} ., 13 \mathrm{ft}$. more than that of Amiens. The painted glass, exeeuted in the lest period and by the most celebrated masters of the art, is particularly rich. The church of St. Stephen has likewise fine painted glass windows, and the façade of the S. transept is remarkable for the richness of its sculpture. The Ilotel de Ville is the finest modern building in Beauvais. The Episcopal palaee, now the Hotel de Prefêt, is an ancient structure, partially fortified during the Middle Ages. In Beauvais there are also a college established in the old Ursuline convent, two hospitals, one for the sick, another for orphans, aged persons and foundlings, a theatre, cavalry barracks, and the court-house, where the sittings of the court of primary resort are held. Before the Revolution of 1793 , there were liere no less than 26 churehes, monasteries, and convents, the greater number of whieh have been appropriated to secular purposes. The principal mannfaeturing establishment of Beauvais is the Royal tapestry and earpet manufactory, famed for the beauty of its productions, and employing about 400 hands. The high priee of the articles, however, confines them to the wealthy. Other principal manufaetures are flanwels and woollen eloths, and, to a smaller extent, laee, earthenware, and chemical stuffs. In the neighbourhood are some extensive bleaeheries and tanneries, and the dyeworks of Beauvais are in high repute. None of the manufactures, however, can be said to be in a flourishing condition. Printed cottons, formerly made here to some extent, are now superseded by other fabrics. The trade, however, is extensive, a large district being supplied by the town with the artieles of ordinary consumption. Large quantities of corn and other agrieultural produce are brought to the weekly market, held on Saturday.

Beauvais is a place of great antiquity, having existed under the Romans. One of the most remarkable events in its history is the siege which it sueeessfully stood in 1472 , against an army of 80,000 Burgundians, under Charles the Bold. Though ungarrisoned, the eitizens boldly elosed their gates, and made a most heroie defence. The women partieularly distinguished themselves. One of thein, Jcanne Hachette, seeing a Burcundian planting a standard on the walls, hurled him to the bottom, and bore it off in triumph. In the proeession of st. Angadreme, which still commemorates the raising of the siege, the ladies, eonformably to an ordinance of Louis XI., lead the way, bearing the banner which La Hachette so valorously aequired. Pop. 12,355.

BEAUVAL, a tn. France, dep. Somme, 4 m. S. Doullens, on the highroad from Paris to Lille. It is neatly built, has a parish ehureh, and manufactures coarse linen, ehiefly pack sheeting. Pop. 2562.

BEAVER ISLANDS, a group of five or six islands in Lake Michigan, U. States. The largest, Big Beaver, contains 40 sq. m.

BEAWORTHY, par. Eng. Devon; 6270 ac. Pop. 405.

BEBINGTON, par. Eng. Chester ; 5250 ae. P. 5008.
BECAN, par. Irel. Mayo; 15,373 ae. Pop. 5589.
BECCLES, a market tn. and par. England, eo. Suffolk. The town, 33 m. N.N.E. Ipswich, r. bank, Waveney, consists of several well-paved and well-lighted streets, uniting in a spacious market-plaee; houses in general well built; supply of water ample. It has a handsome townhall, a theatre, at present used as a corn exchange; a jail, a enstom-house, and assembly rooms. The ehureh, ereeted in the 14 th eentury, is a spacious and elegant structure in the later style of English arehitecture, with a fine freestone tower, and beantiful poreh. There are, besides, chapels for Independents, Eaptists, Wesleyans, and Primitive Methodists, also two free schools, one of which has 10 exhibitions at Emmanuel College Cambridge, and various charities. Beecles maintains an aetive carrying trade in coals and corn coastwise by the Waveney, which is navigable to Yarmouth. A good deal of malting is likewise carried on in the vicinity. Races are held annually on a fine course near the town. The environs abound in beautiful seenery. Area of par. 1740 ac. Pop. 4086.

BEC-DU-RAZ, or Point Raz, a dangerons promontory, Franee, coast of Brittany, surrounded with rocks. There is
a lighthouse on it ; lat. $48^{\circ} 2^{\prime} 24^{\prime \prime} \mathrm{N}$. lon. $4^{\circ} 43^{\prime} 45^{\prime \prime}$ WV (B) a lighthouse on it ; lat. $48^{\circ} 2^{\prime} 24^{\prime \prime} \mathrm{N}$. ; lon. $4^{\circ} 43^{\prime} 45^{\prime \prime} \mathrm{W}$. (R.)

Vol. 1.

BECERRIL-de-campos, a tn. Spain, Leon, prov. of, and 10 m . N.W. Paleneia, in a fertile valley, interseeted by the Canal de Campos, having a eentral square, six parish churehes, a large townhouse, session-house, with attached prison, two endowed schools, an hospital, and numerous fountains. Em-ployments:-agrieulture, and domestie weaving. Pop. 3069 .

BECHIN, a tn. Boliemia, cirele of, and 10 m . S.W. Tabor, 47 m. S. Prague, r. bank, Luschnitz. It has a castle, manufactories of woollen cloth, and a chalybeate spring (temperature $73^{\circ} \mathrm{Fah}$. ), formerly much frequented. In the neighbourhood is found a singular mineral called the stone of Beehin. P. 2130.

BECHUANAS, or Bichuanas, a nation, S. Africa, inhabiting the country N . of lat. $27^{\circ} \mathrm{S} . ;$ and between lon. $22^{\circ}$ and $28^{\circ} \mathrm{E}$. They are said to be superior to the Kaffirs in arts and eivilization (Lichtenstein), and in personal appearance; their eomplexion being a brighter brown, and their features more European. They inhabit large towns, their houses are well constructed, and remarkable for their neatness; they eultivate the soil, and store their grain for winter consumption.

BECKANEER. See Bickaneer.
BECKBURY, par. Eng. Salop; 1640 ac. Pop. 312.
BECKENHAM, par. Eng. Kent; 3820 ae. Pop. 1608.
BECKENRIED, a vil. and par., Switzerland, can. Unterwalden, pleasantly situated on the 1. bank, Lake Luzern, at the foot of a mountain-range. The parish eliureh, a handsome bnilding, possesses a fine organ. The deputies of the four Waldstätte used to meet here. In the neighbourhood are the remains of the castle of Isenring. Pop. 1314.

BECKERMET, two pars. Eng. Cumberland :-1, Beckermet (St. John's), 3030 ae. Pop. 468.-2, Beckermet (St. Bridget's), 4640 ac. Pop. 630.

BECKINGTON, par. Eng. Somerset; 1840 ae. P. 1190.
BECKLEY, two pars. Eng. :-1, par., eos. Oxford and Bucks; 4370 ac. P. $763 .-2$, par. Sussex; 5540 ac . P. 1412 .

BECKTHEIM, a market tn. Hesse-Darmstadt, prov. Rheinhessen, near Osthofen. It has a chureh and a synagogue, and gives its name to an exeellent wine grown in the district. Both coal and iron are worked in the neighbourhood. Pop.
1600 . 1600.

BECKUM, a tn. Prussia, Westphalia, gov. of, and 23 m . S.E. Miinster, cap. circle of same name, on the Werse, which at a short distance from the town, is crossed by a handsome stone bridge. It eontains five churehes and chapels, and a synagogue; is the seat of several provincial offices, and has manufactures of linen, together with numerous breweries and distilleries, and four yearly markets. Pop. 2050.-The CIRCLE, whieh has an area of 199 geo. sq. m., is watered by the Werse, Angel, Sterne, and Liese. It has a few heights, as the Stromberg and Mockenberg, but is for the most part flat, and covered with moors and heathy pastures. Very little corn is grown, bnt considerable numbers of eattle are reared. Pop. 34,268.

BECLAEERE, a tn. and eom. Belgium, prov. W. Flanders, 6 m . E. Ypres, with a manufactory of woollen eloths, two breweries, and oil and corn mills. Pop. 2235.

BECSKEREK, two tns. Hungary, Banat:-1, Becskerck Nagy, or Great Becskerek, prov. Thither Theiss, co. Torontal, eap. dist. of same name, 1 . bank, Bega; $45 \mathrm{~m} . \mathrm{S}$.W. Temesvar, with which it eommunicates by the Bega Canal. It possesses important privileges as a market town, is the seat of several distriet offices, and contains a R. Catholic (parish), and a Greek non-united chureh. Pop. 12,000.-2, Becskerek Kis, or Littie Becskerek, co. Temes, and 10 m . N. W. Temesvar. It is inhabited by Germans and Wallachians. The former have a R. Catholie and the latter a Greek non-united ehureh.

BECTIVE, par. Irel. Meath; 3386 ae. Pop. 602.
BEDAF, a vil. Holland, prov. N. Brabant, 12 m. E.S.E. Hertogenboseh, with a ehureh and sehool, and 600 R. Catholie inhabitants.

BEDALE, a market tn. and par. England, eo. York, N. Riding. The town, situated in a valley, on the stream called Bedale-beek, whieh flows into the Swale, 33 m . N. W. York,

45
consists chicfly of one principal street, lighted with gas; houses mostly of briek, and irregularly built. The chureh, erected in the reign of Edward III., is a spacious building in the early English style, and contains some interesting monuments. The Methodists, Particular Baptists, Wesleyans, and R. Catholies, have also chapels here. A handsome public building was erected in 1840 , containing a suite of assembly roons, and various other commodious apartments for public purposes. Bedale has an endowed grammar, and two national schools, with numerous charities, including an hospital for six deeayed townsmen, and another for six aged persons. Wool stapling is carried on here to a considerable extent, giving employment to numerous wool-combers. The adjoining country is famed for its breed of hunters and race horses. Market-day, Tuesday ; and several annual fairs. Area of par. 7070 ac . L'op. 2803 ; of tn. 1250.

BEDARIEUX, a th. France, dep. Heranlt, $18 \mathrm{~m} . \mathrm{N}$. Beziers, agreeably situated, 1. bank, Orb, which separates it from one of its suburbs. It is well built, the streets conveniently laid ont, and is one of the busiest, and most thriving commercial and manufacturing towns of the same size in France. It lias manufactures of fine and common cloth, woollen stuffs, and floss silk, worsted and cotton stockings, hats, soap, olive-oil; tanneries, dyeworks, paper, and glassworks, and a brass foundry. It lias also trade in wine and brandy. Pop. 8722.

ISEDARNIDEs, a tn. France, dep. Vaucluse, beautifully sitnated, r. bank, Ouveze, which is crossed by a fine bridge, and near the confluence of the Ozeille and the junction of several canals, about 8 m. N.E. Avignon. The environs are very picturesque, fertile, and covered with rich pastures. Bedarrides has a mill for grinding madder. Pop. 1494.

BEDDGELER'T, or Bethgelert, a vil. and par., N. Wales, the former in co. Carnarvon, and the latter partly in Carnarvon, and partly in co. Merioneth. The village is situated in a beautiful tract of meadows, at the junction of three vales, near the confluence of the Glâs-Llyn, and the Colwyn, 12 m. S.E. Carnarvon. The scenery in this parish is remarkably wild and pieturesque, and derives no little additional interest from the touching story so beautifully versified by Southey, in his ballad entitled 'The Grave of Bethgelert.' Area of par. 26,716 ac. Pop. 1397 ; of vil. 777.

BEDIDINGHAM, par. Eng. Sussex; 2250 ae. P. 268.
BEDDINGTON, par. Eng. Surrey; 3830 ac. P. 1453.
BEDEEKAPFEE, a large and populous tn. Central Africa, kingdom, Bornou, 110 m . W. Kouka, r. bank, Yeou, which falls into Lake Tehad, about 110 m . to the N.E.; lat. $12^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $12^{\circ} 47^{\prime} \mathrm{E}$. It is the residence of the gevernor, commonly called here and in other African towns, Sultan. His dwelling, which is large and extremely clean, consists of a spacious quadrangular enclosure, surrounded with mats fixed to high poles. The Arab women of this place are remarkable for their beauty.

IBEDE-GUNA, a tn. and territory, C'entral Africa, kinglom, Bornou. The town is 130 m . W. by S. Kouka, and 80 S.S. W. Old Birnie; lat. $12^{\circ} 17^{\prime}$ N.; lon. $12^{\circ} 30^{\prime}$ E.-—TThe termitory, called sometimes Bedee, lies between lat. $12^{\circ} 13^{\prime}$ and $13^{\circ} 7^{\circ} \mathrm{N} . ;$ and lon. $11^{\circ} 16^{\prime}$ and $12^{\circ} 45^{\prime}$ E., and is bounded on the N. by the Yeou, which here bends suddenly in that direction. It ineludes many towns and villages, and produces Indian corn, wheat, and cotton. Herds of cattie also are numerous. The principal implement of agriculture, as throughout all Bornou, is a hoe of native iron, and native manufacture. The reaping is performed with a crooked knife, and merely the ears of corn are cut off, and stored in round thatehed huts of elay, or matting, raised on wooden blocks above the ground. The grain is cleared from the husk by hand-rubbing, and ground into flour between two stones. The inhabitants of this district aie Bornouese, and speak their native language. Although in the centre of the hottest region on earth, Capt. Clapperton and Dr. Oudney found the temperature so low in this part of Africa in a morning in December, that the water in their shallow vessels was ernsted with thin flakes of ice, the water skins themselves frozen as hard as a board, and the horses and camels shivering with cold.(Denliam and Clapperton's Travels.)

BEDFIELD, par. Eng. Suffolk; 1780 ac. Pop. 358.
BEDFONT (EASt), with-Hatton, par. Eng. Middlesex ; 1890 ac. Pop. 982.

BEDFORD, an inlaud co. England, cap. Bedtord, boumled, N.W. by Northampton, W. by Bucks, S. by the latter eo. and Herts, E. by the latter and Cambridge, and N.E. by Huntingdon; area, 296,320 ac., of which about 250,000 are arable, meadow, and pasture. The surface is pleasingly diversificd by hill and valley, and presents every variety of soil; but, on the whole, of about an average fertility. Chalk prevails in the S . division; while a belt of sand, varying from 1 m . to 5 m . in breadth, extends from Leighton Buzzard, on the $\mathrm{S} . \mathrm{W}$ border of the county, to Potton, on the N.E., particularly well suited for horticultural purposes, and for the turniphusbandry. The vale of Bedford, the soil of which consists mostly of clay, is very fertile; and the meadows on the margin of the Ouse and other streams are verdant and luxuriant, from frequent overflowings. The land is ehiefly under tillage, but agriculture is by no means in a very advanced state. On the sandy and ehalky soils, culinary vegetables are extensively cultivated for the London, Cambridge, and other markets. The onions produced here are reekoned little inferior to the Spanish; and the cucumbers, which are raised in great quantities, in the open air, are much estecmed. On the elays, beans and wheat are the principal produce; on the light soils, turnips, barley, sceds, and wheat usually follow each other; on the loams, beans or pease are generally sown after wheat. The drill is in extensive use, and a good deal of wheat is dibbled. Cattle and sheep, of indifferent breeds. The stock of the former has been estimated at about 200,000 ; and the produce of wool at 4250 packs. Average size of farms, about 150 ac., mostly held from year to year; average rent of land in 1842-43,25s. $5 \lambda$. per ac. The Ouse, with an exceedingly winding course, W. to E., intersects the county ; besides which, at is watered by the J vel, and some smaller affluents of the Ouse. Principal manufacture :-straw plait for hats, reckoned inferior only to that brought from Tuscany. The county is divided into nine linndreds, and 123 parishes. It returns four members to the House of Commons; namely, two for the county, and two for the borough of Bedford. Registered electors (1849), for co. 4287; for bor. 1071. Pop. 124,478.

BEDFOIRD, a bor. and market tn. England, cap. Bedfordshire, 46 m . N.N.W. London ; pleasantly situated on both banks of the Ouse, which is here crossed by a handsome stone bridge of five arches. The streets, the principal one of which is about $1 \frac{1}{4} \mathrm{~m}$. long, are open, clean, and lighted with gas. In the part called New Town, on the N., there are several new terraces, and rows of handsome houses. Water is abundant. The principal buildings are the five parish churehes, one supplementary chureh in the large parish of St. Paul, a range of public schools in the early English style, to be afterwards more particularly mentioned; a large infirmary, a lunatic asylum, and an elegant and spacious chapel, built by the chureh and congregation over which Bunyan was pastor. There are also public assembly rooms, a sessions-house, a subscription library containing 8000 volumes, and a handsome market-house, lately crected. The principal feature of the town is 'the Bedford Charity,'founded by Sir W. Harpur in 1561, which comprises the ancient grammar-school, a commereial and preparatory school, a girls' and infant schools; educating, altogether, without eost to the parents, about 1200 children. Connected with the graminar-school there are eight exhibitions, of $\mathscr{L} 80$ each, to Oxford, Cambridge, or Dublin, tenable for three years. Besides these schools, marriage portions of $£ 20$ each are given to poor maidens, premiums of $£ 20$ to boys, and $£ 15$ to girls, on going out apprentice; bencfactions to the same, of £10 cach, on the expiration of their apprenticeship; donations to domestic servants; 56 alms-houses, handsomely endowed; an hospital for the sustentation, clothing, and edneating a limited number of poor children; and lastly, $£ 500$ a year given away in alms. The qualification for the sehools is residence and parochial settlement of the parents in one of the five parishes of the town, excepting to the preparatory school, for admission to which, simple residence is required. The revenue of this establishment is upwards of $£ 12,000$ per annum ; having risen to this amount from a comparatively small sum, through the improved value, in course of time, of the land from which it is derived. There are several smaller charities in the town, the principal of which belong to 'Bunyan meeting.' These latter amount to upwards of $£ 300$ a year, and are, with the exception of $£ 70$ to the minister, given to the poor of the eongregation. The public free schools have at-
tracted large numbers of residents during the last 20 years. There was once a large trade done in Bedford in pillow lace, the manufacture of which employed most of the poor fernale inhabitants; but this trade has been all but destroyed by the introduction of machinery; and there is now no staple trade in the town; but within the last few years, two manufactorics of agricultural implements have been successfully carried on, employing about 150 hands. There is a large and increasing narket for corn and cattle held on Saturday, and another for pigs on Monday. Bedforl has given birth to no very eminent men, but is identified with two imperishable namesBunyan and Howard. John Bunyan was born at Elstow, a village situate $1 \mathrm{~m} . S$. of the town. It was at Bedford, however, that he lived, preached, and was imprisoned. He lived at a house in St. Cuthbert's parish; preached in a barn fitted up as a chapel, on the site of the new place of worship; and was imprisoned, some say, in the county jail, and others, in a cell of the old gate-house on the bridge, probably in both. But the house, barn, and prisons, are all pulled down. There are several relics of Bunyan in the town, the principal of which are, his chair in the vestry of the chapel, and the copy of Fox's Book of Martyrs which he read in prison. The latter is in the county subscription library. It is in two vols. folio, black letter, and has Bunyan's autograph in each of the titles, and several verses in his handwriting scattered over the book. John Howard lived at Cardington, 3 m . S.E. the town. Ilc is identified with Bedford by having constantly attended the dissenting places of worship there. Bedford has railway communication with the London and North Western line, by a branch from Bletchly station. Pop. (1841), 9178; believed now (1850) to be about 12,000.-(Local Correspondent.)

BEDFORD LEVEL, a large tract of low-lying land in England, comprising about 400,000 ac., in cos. Cambridge, Norfolk, Suffulk, Huntingdon, Northampton, and Lincolri, formerly full of fens and marshes, and, in rainy seasons, for the most part under water. Peterborough Fen, which is that part of the Level running into Northamptonshire, and extending letween Peterborough and Crowland, contains between 6000 and 7000 ac. One-scventh part of the Level is situated in Huntingdonshire. Nearly the whole of the isle of Ely, which forms the N . division of Cambridgeshire, consists of this marshy ground. The S.E. part of Lincolnshire, usually termed Holland, extending to the river Witham on the N., is also included in the Bedford Level. 63,000 ac. are situated in Norfolk; and 30,000 in Suffolk. It derives its name from Francis, Earl of Bedford, who, in the 17 th century, expended large sums of money in attempting to drain this fenny district. There is sufficient evidence to show that this part of the country was formerly dry land, at a much lower level than the present surface, which is formed by sedimentary depositions. Various expedients have been had recourse to for the purpose of draining these marshes. Numerous cuts have been made, intersecting every part. Some of these are so large and deep as to serve for navigable canals. In the isle of Ely, the Old and New Bedford rivers are two cuts, rumning nearly parallel to each other. These are both navigable for upwards of 20 m . In various places, windmills lave been crected, which raise the water to the requisite height, to admit of its being conveyed to receptacles sufficiently elevated, by which it may be carried off to its proper channel ; but the expense incurred in draining sometimes exceeds greatly the value of the land reclaimed. In Huntingdonshire, about the latter end of the last century, the tax raised on the land by the conservators, for its drainage, and the preserving of its embankments, was in some instanees so great, that the farmers preferred forfeiting their land to paying so exorbitantly for its preservation. In the present day, the art of drainage is better understood than when this stupendous work was first undertaken; but even yet, in many places, the farmer is still liable to have the produce of his grounds carried away by sudden inundations. Great improvements are now, however, constantly being made in the drainage and embankment of this extensive tract of land. In 1795, an Act was passed for improving the outfall of the river Ouse, and for making a cut across the marshes, from Eau Brink to Lynn; but it was not till 1818 that this important work was commenced. It was completed in about two years, and has proved highly serviceable. A great part of Belford Level has been brought under cultivation, and produces grain, llax, and cole-seed, in con-
siderable quantities; but there is still sufficient fenny land to yield a rich harvest of wild fowl, in winter, for the London market.-(Elstobb's History of the Bedford Level; Vancouver's Survey of Cambridge; Gough's edition of Canden's Britannia.)

BEDHAMPTON, par. Eng. Hants; 3260 ac. Pop. 533.
BEDINGFIELD, par. Eng. Suffolk; 1680 ac. Pop. 336.

BEDIZZOLE, a vil. Austrian Italy, gov. Milan, $9 \frac{7}{4} \mathrm{~m}$.
E. Brescia, pleasantly situated on a rising ground, in the dist. of Lonato, near the Chiese. It is well built, and has a handsome church; with forges for the manufacture of nails and agricultural implements, and an extensive silk spinning work. Pop. 2200.
$\operatorname{BEDJ} \Lambda$, a dist. Nubia, lying along the W. coast of the Red Sea, and extending N. from Suakin to Cape Camol, between lat. $19^{\circ}$ and $22^{\circ} 30^{\prime} \mathrm{N}$. It is chiefly inhabited by the Bisharye, a tribe of Bedouins, possessing the usual features and characteristics of that race, but with some of their worst qualities in an aggravated form. They are very savage; and, it is said, will even rcb the house of the person who receives them as gnests. Their food is alınost entirely fleslı and milk Much of the former is eaten raw ; the hot llood of slaughtered sheep is highly relished, but the greatest luxury is the raw marrow of camels. A few of them occasionally visit Ders or Assouan with senna of the best kind, sheep, and ostrich feathers; taking in exchange linen sheets and Indian millet, the grains of which they swallow raw, as a dainty, and never make into bread. They possess a breed of camels said to be superior to any other; and make plundering excursions as far as Dongola, and along the route to Senaar. Bedja is generally mourtainous, and is rich in minerals, particularly gold.

BEDLEN. See Betlis.

BEDMINSTER, par. Eng. Somerset; 4180 ac. P. 17,862
BEDNORE, or Bedexore, a th. and dist. Hindoostan, Mysore territory. The Town is $25 \mathrm{~m} . \mathrm{N} . W$. Coondapoor; lat. $13^{\circ} 50^{\prime} \mathrm{N} . ;$ lon. $75^{\circ} 6^{\prime} \mathrm{E}$. It was formerly of great extent and importance, but was ruined by IIyder Ali, who took and plundered it in 1763. It has since, however, greatly recovered, being a convenient thoroughfare for goods.-The district occupies the N.W. extremity of the Mysore Raja's territories, and extends over the summit of the range of W. hills, some of which are 4000 and 5000 ft . high, which over. looks the provinces of Canara and Malabar, and is named the W. Ghauts. The climate is extremely moist, rain falling frequently for nine months in the year; buc this redundant moisture only favours the peculiar products of the soil, whech consist principally of pepper, betel-nut, sandal-wood, and cardamums. Great numbers of cattle are reared for domestic purposes, but they are small.

BEDONIA, a tn. and com. Italy, duchy of Piacenza, 8 m . W. Borgo Tara, at the foot of Mount Selpi; tolerably well built, and having a church, medical college, and clementary schools. The surrounding country is billy, well wooded, and produces fine fruits, but little grain; cattle and sheep are reared in considerable numbers. Pop. 5378.

BEDOUIN, a th. France, dep. Vaucluse, 8 m . N.E. Carpentras, at the foot of Mount Ventoux. It is surrounded by very old walls, of remarkable strength. Bedouin has extensive potteries, and also spins a good deal of silk. This town was the scene of one of the most atrocious massacres of the revolutionary party. Because a tree of liberty had been sawed across during the night, the inhabitants were condemned en masse, and given up to military exccution. Under the direction of Margnet, an apostate priest, the town was set on fire, the public buildings blown up, and 180 of the inhalitants cither butchered on the scaffold, or shot while attempting to escape. Pop. 2550.

BEDOUINS [Arab. Bedawi-inhabitants of the desert], a race which, supposed to be derived from Islmael, the son of IIagar, had its original seat, and forms the great bulk of the population in Arabia. It is not, however, confined to that country, but has spread in all directions, particularly to the E. and W. In the former direction, Bedouins are said to have penctrated as far as China, and are found among the hills of Kurdistan; and in the latter, they have extended almost over the whole of N. Africa, and made its boundless deserts their peculiar domain, forming no inconsiderable part of the whole population, along the shore of the Mediterranean

## BEERNEM

to the Atlantic on the W., Egypt and Nubia on the E., and Negritia on the S. For the peculiar characteristics of the race, which in all countries seem scarcely susceptible of change, see Arabia. The name is now frequently written Bedawin, plural, Bedavi or Bedavey.

BEDSTONE, par. Eng. Salop; 1200 ac. Pop. 139.
BEDUM, a vil. Holland, prov. Groningen, 11 m . W. by S. Appingedam. It is a lively, thriving place, and has an old Calvinistic and a R. Catholic church, a school, and several mills-corn, bark, saw, and oil. Pop. 800.

BEDWARDINE (ST. JOHN), par. Eng. Woreester ; 3730 ac. Pop. 2663.

BEDWAS, par. Eng., S. Wales, cos. Glamorgan and Monmouth. Pop. 800.

BEDWELTY, or Bydwelty, par. Eng. Monmouth; 15,440 ac. Pop. 22,413.

BEDWIN (Great and Little), a market tn. and vil. England, co. Wilts. Great Bedwin lies on a plain, surrounded by forest and woodland, 7 m . S.E. Marlborough; consists chiefly of one main street, straight and well kept; houses brick, and mostly old; water abundant. It has a church, a plain, ancient structure, principally of flint, with a square tower ; a Methodist chapel, a Ranters' meeting-house, a townhall, built over the market house; a school for poor children, established by the Marquis of Aylesbury. The town has a little trade in coals, timber, \&c., by the Kennet and Avon Canal, which passes through it; and some business also is done in malting. Pop. (1841), 2178.-Littiee Bedwin is situated about $1 \frac{3}{4} \mathrm{~m}$. N.N.E. the former; it contains a neat little church, aud has a pop. of 580.-(Local Correspondent.)

BEEDER, a prov. Ilindoostan, chiefly between lat. $17^{\circ}$ and $20^{\circ} \mathrm{N}$. ; bounded, N. by Aurungabad and Berar, W. by Aurungabad and Bejapoor, S. by Hyderabad, and E. by Hyderabad and Gundwana. It is divided into seven distriets, namely, Calberga, Naldroog, Akulcotta, Calliany, Beeder, Nandere, and Patree; and is well watered by several rivers, of which the Godavery and Manjera are the principal. The surface is rather lilly, though not properly mountainous, and the soil generally fertile. Under the old IIindoo Government, Beeder was very populous; but since its conquest by the Mahometans, it has been comparatively deserted. Three languages, the Mahratta, Telinga, and Canarese, are spoken in this province. Beeder, with the other provinces of the Decean, was conquered by the Moguls towards the close of the 17 th century, in the reign of Aurıngzebe, from whose successors it was wrested, 1717, by Nizam ul Mulk, the sovereign of Hyderabad, in the occupation of whose successors it has since remained.

BEEDER, or BIDEr, a city, Ilindoostan, cap. of above province; lat. $17^{\circ} 49^{\prime} \mathrm{N}$. ; lon $77^{\circ} 36^{\prime}$ E.; 73 m . N.W. Myderabad. It stands on an open plain; is fortified by a stone wall, a ditch, and round towers, and is said to have been formerly 6 m . in circumference. About the end of the 16 th century, Beeder was founded near the ruins of an old city, by Ahmed Slah Bhamenee, who named it Ahmedabad, and transferred to it the scat of government from Calberga.

BEEK [a brook or rivulet], several villages, Holland:1, A vil., prov. Limburg, 6 m. N. .. Maastricht. It is a pretty large place, has a large R. Catholic and a Calvinistic elurreh; and two annual fairs.-2, A vil., prov. N. Brabant, $2 \frac{1}{2} \mathrm{~m}$. N.W. Breda; with a church and school.-3, A scattered vil., prov. N. Brabant, 9 m . N.E. Eindhoven, lying round the triangular market-place, in which is the R. Catholic church, and the townhouse. It has a school, and two annual fairs. Pop. 550. -4, A vil., prov. Gelderland, 7 m. S.S.E. Doesburg ; with a R. Catholic church, and school. Pop. 600, all IR Catholics. -5 , A vil., prov. Gelderland, 3 m . S.E. Nijmegen. It is picturesquely situated on the N . shoulder of a ridge of hills, at the end of which Nijmegen lies. It has two churches, and a school; and besides agriculture, a considerable number of the inhabitants are employed in washing and bleaching, for
which the numerous elear streans in the vicinity render the place peculiarly well adapted. Pop. 640.-BEEK is also a name applied to numerous streamlets in IIolland, but usually conjoined with a descriptive prefix, as Broedijkerbeek [broad-dike-brook]; Molenbeek [mill-brook], \&c.-(Van der Aa.)

BEELSBY, par. Eng. Lincoln; 1980 ac. Pop. 181.
BEEMSTER, a fertile dist. Holland, prov. N. Holland, N. of Purmerende. It consists of a drained part of the sea; has an area of $18,868 \mathrm{ac}$. , and is divided into Middle, N., E., W., and S. Beenster. In Middle Beemster, the most important section, are a Calvinistic and a Baptist church, townhouse, and a school ; in W. Beemster are a R. Catholic church and a school, and there is a school likewise in each of the other three divisions. Beemster has two building-yards for vessels, one near cither end of the district. The inhabitants are chiefly engaged in making Edam cheese. Pop. 3000.

BEENHAM, or Benham Valence, jar. Eng. Berks; 1890 ac. Pop. 421.

BEER, or Beme, two ths. and four pars. Eng.:-1, Beer. Alston, a small tn., co. Devon, pleasantly situated on a gentlo eminence, overlooking the vales of the Tamar and Tavy, $6 \frac{1}{2} \mathrm{~m}$. S. Tavistock, and $7 \frac{1}{2}$ N. Davenport. It consists of four principal streets, and a few smaller; most of the houses are mere cottages, built of clayslate, brick being used for the climneys only. There is a moderate supply of water, but it is apt to fail in summer. The places of worship are a chapel-of-easc, a neat new building, in the early English style; and an Independent, Methodist, and Bryanite chapels. There are fivo schools, one of which is endowed for a master and 16 scholars ; another is a dame's school, in connection with the Listablished chureh, having about 120 children. The principal sources of industrial employment are mining and smelting, there being some extensive lead and silver mines in the vicinity. Much employment is afforded, also, by picking black cherries in the season, of which there are large orchards in the neighbourhood. Beer-Alston formerly returned two members to the llouso of Commons, but was disfranchised by the Reform Act.-2, Beer-Ferris, a par. co. Devon, in which the above town is situated; 5850 ac. Pop. 2142.-3, BeerRegis, a decayed market tn . and par., co. Dorset. The town is pleasantly situated on the small river Beer; houses in general modern, and well built; abundant supply of water. The church is a large ancient structure, in different styles; it has a noble roof of carved oak, and contains some interesting monuments. The otler places of worship are an endowed mecting-house of Congregationalists, and a Wesleyan chapel. The parish comprises 7898 ac. Pop. 1394.-4, Deer-Crocombe, a par., co. Somerset; 770 ac. Pop. 179.-5, BeerHacket, a par., co. Dorset; 450 ac. Pop. 103.

BEERBHOOM, or BirbHoom [Sanscrit, Virablumithe land of herocs], a dist. Hindoostan, N. W. extremity of prov. Bengal, between lat. $23^{\circ} 25^{\prime}$ and $24^{\circ} 25^{\prime} \mathrm{N}$., and lon. $86^{\circ} 20^{\prime}$ and $88^{\circ} 20^{\prime} \mathrm{E}$. ; bounded, N. by the district of Boglipoor, E. by Rajshahy, S. by Burdwan and the juugle Malıals, and W. by Boglipoor and the jungle Mahals. The district is lilly, and mostly covered with jungle; the navigable streans are few, and trade is consequently limited. The roads and bridges are kept in good order by the Government convicts, and the prosperity and population of the district are increasing. The chief productions are silk, sugar, and rice. Mines of coal are profitably worked for the Calcutta market, and to supply the shipping. Iron ore is found in abundance, and snelted in native works. The fuel used is wood; but though the quantity required is very great, the forests from which it is taken continue undiminished, the power of reproduction rapidly filling up the gaps caused by consumption. Chief towns, Noony, Nagore, and Soory, in the last of which are the head quarters of the judicial establishment. Area, 3884 sq. m. Pop. about 1,267,065.

BEERFELDEN, a market tn. Hesse-Darmstadt, prov. Starkenburg, at the source of the Mimmling, 23 m . E.N.E. Mannheim. It contains a church, synagogue, and townhouse and lias some manufactures of eloth and hosicry; also, a dyework, tilework, and oil-mill. I'op. 2600.

BEERNEM, a vil. and com. Belgium, prov. W. Flanders, 5 m. S.E. Bruges, not far from the canal from Bruges to Ghent, which traverses the commune. It has trade in linen and cattle; and also possesses corn, oil, and malt mills. Pop. 3440.

BEEROU, a kingdom or dist., W. Africa, N. of Bambarra. Its principal town, Walet, is large and populous.

BEERSE, or BeERze, a river, Holland, prov. N. Brabant, an affluent of the Dommel, into which it falls near Boxtel. It is formed by the junction of the Great Beerse and Little Beek. The former originates in a lake within the Belgian frontier, takes a N. course, and receives the Little Beck near Oostel-Beers. Total course, exclusive of windings, from the source of the Great Beerse, 22 m .

BEERSHEBA, or BERsaba, the site of an ancient tn. or vil., on the S. borders of Palestine, pash. Gaza, 40 m . S.S.W. Jerusalem. It stood on a brook or torrent, now called Wadi Seba, on the N. side of which are still two wells, at some distance apart, circular, and lined with masonry. The larger is $12 \frac{1}{2} \mathrm{ft}$. in diameter, $44 \frac{1}{2} \mathrm{ft}$. deep, to the surface of the water, and partly excavated out of the rock; the less is 5 ft . in diameter, and 42 ft . deep. The water is abundant, pure, and sweet. The ruins, though scarcely any part is standing, can be traced about half a mile along the N. bank of the torrent, and about a quarter of a mile behind it. Beersheba possesses great interest from the frequent mention of it in Scripture, as the place where Abraham, Isaac, and Jacob often dwelt. The name may mean cither 'Well of the Seven,' or 'Well of the Oath,' referring to Abraham's offering of seven lambs, on making a covenant with Abimelech.

BEERTA.-1, A vil. Holland, prov. of, and 2.4 m . E. by S. Groningen. It is an old thriving place, consisting of a row of good-looking farm houses, the corn stacks connected with which are thatched with red tiles. It las a Calvinistic and a Baptist Churcl, and three schouls. The inhabitants are mainly engaged in agriculture. Pop. 1600.-2, Nev Beerta, a vil. Holland, 1 m. N.E. the preceding village, with a church, two schools, and a corn and a bark mill. Pop., chiefly agricultural, 700.

BEES (St.), par. Eng. Cumberland; 69,260 ac. P. 20,123.
BEES' HEAD (ST.) [Cliff of Barath], a promontory, England, the most W. point of co. Cumberland, par. of St. Bees, ward of Allerdale-above-Derwent, projecting into the Irish Sea, and forming a conspicuous sea-mark for vessels; lat. $54^{\circ} 30^{\prime} 48^{\prime \prime} \mathrm{N}$. ; lon. $3^{\circ} 38^{\prime} \mathrm{W}$. (r.) On the summit of the cliff is a lighthouse, erected in 1718 , which exhibits a bright fixed light, visible at the distance of 20 m . in clear weather.

BEESBY- in-the-marsh, par. Eng. Lincoln; 1180 ac; Pop. 157.

BEESKOW, a tn. Prussia, prov. Brandenburg, l. bank, Spree, 18 m. S.W. Frankfort-on-the-Oder. It is the seat of a court of justice; and has manufactures of cloth, linen, and tobacco ; with breweries, tanneries, limekilns, and four annual fairs. A considerable number of the inhabitants live by fishing, and seafaring occupations. Pop. 3625.
$\operatorname{BEES} T$, a vil. Holland, prov. Gelderland, 29 m. W.S.W. Arnhem, l. bank, Linge. It has two churches. The houses are built close to each other, along a strect paved with stone, the only one in the like circumstances in all the district. Pop., chiefly agricultural, 1000 .

BEESTON, several pars. Eng.:-1, par. Norfolk ; 3100 ac. Pop. 679.-2, par. Notts; 1440 ac. Pop. 2807.3, Beeston (St. Andrew), par. Norfolk; 920 ac. Pop. $46 .-$ 4, Beeston (St. Laurence), par. Norfolk; 450 ac. Pop. 48. -5, Beeston-Regis, par. Norfolk; 740 ac. Pop. 265.

BEESTON, a township, chapelry, and vil., England, co. York, bor. and 2 m. S.S.W. Leeds, with an Episcopal and a Weslayan chapel. Inhabitants chiefly engaged in the woollen manufactures, and the numerons coal mines in the vicinity. l'op. (1851), 1973.

BEETGUM, a vil. Holland, prov. Friesland, 5 m . N.W. Leeuwarden; with a church and school. It was at one time a coast village, but is now several miles from the sea; the intervening land laving been gained by means of dikes. Pop. 800 .

BEETHAM, or Betholme, par. Eng. Westmoreland; $12,850 \mathrm{ac}$. Iop. 1656.

BEETLEY, par. E̊ng. Norfolk; 1770 ac. Pop. 394.
BEETSTERZWAAG, a vil. Holland, prov. Friesland, 10 m . N.E. Heerenveen; with a church, a school, and a cornmill. Pop. 700.

BEFORT. See Belfort.
BEG (LoUGH), a small lake, Ireland, co. Antrim, separated from Lough Neagh by a neck of land, on which is the village of Coome. It is about 4 m . long, 1 to $1 \frac{1}{2} \mathrm{~m}$. broad, contains
several islets, and is considered an expansion of the Jower Bam, which flows through it.

BEGA, a river, Hungary, which rises on the confines of Transylvania, and, proceeding in a circuitous course, traverses the Banat N.E. to S.W., passing Temesvar, and joining the 1. bank of the Theiss near Teriasvaros, abont 6 m . above the junction of that river with the Danube. The navigation of the lega itself is very imperfect; but, by feeding the Bega Canal, which runs parallel to it dnring the greater part of its course, it has greatly added to the trade of this portion of Hungary.

BEG-BAZAR, or Bey-bazar, a tn. Turkey in Asia, pash. Anatolia; in a close valley, on three low hills, near r. bank, Kirmir, 52 m . W. Angora. The houses cover the declivity of the hills, and are of two stories, neatly covered with planks. It has some manufactures of carpets ; and, in the vicinity, which is very fertile, the excellent pears sold in Constantinople as those of Angora, are raised. Pop. about 4000.

BEGBROOKE, par. Eng. Oxford; 380 ac. Pop. 110.
BEGELLY, par., S. Wales, Pembroke. Pop. 1159.
BEGEMDER, a prov. Abyssinia, E. from Dembea, about 200 m . in length, and 50 or 60 in breadth. It is more level than the other provinces, and rears large numbers of black cattle, horses, and sheep. The hilly portion of it contains valuable iron mines. In this province is situated the valley of Weekneh, where the relations of the royal family, suspected of a dangerous ambition, are confined.

BEGMARM1, or BEGHERMEH, an extensive, but littleknown country, E. part of Central Africa, bounded, W. by Bornot, N. by Lake Tchad and the district of Kanem. It is traversed by the river Shary, which discharges itself into the lake just named. The inhabitants are warlike and predatory.

BEG-SHEHER, Bey-shemer, or Bei-Shehr, a tn. Turkey in Asia, pash. Karamania, 38 m. S.W. Koniych, cap. sanjak of same name. It stands near Lake Beg-sheher, on both sides of the river Bey-sheher, which is here crossed by a stone bridge of seven arches. The principal part of the town is on the N. side of the river, and contains some handsome buildings, among others an old mosque, richly ornamented; but the place generally is dirty and wretched, and though once possessed of an extensive commerce, appears fast falling to decay. The principal manufacture is common earthenware. Lake Bey-sheher is vaguely described as 32 hours in circuit, and evidently, from the number of tertiary fresh-water shells found about 200 or 300 ft . above its present level, has formerly occupied a much larger space. On the E. it is very shallow, and covered with rushes and reeds. On the W. and N. are some rocky, wooded islands. Large fish are sometimes caught in it. The water is perfectly fresh, though it has been described as salt; and one traveller even talks of hillocks of salt on its shores.

BEGU, or Bagur, a cape, Spain, N.E. coast of Catalonia; lat. $41^{\circ} 56^{\prime} 38^{\prime \prime} \mathrm{N} . ;$ lon. $3^{\circ} 14^{\prime} \mathrm{E}$.

BEGUILDY (Upper and Lower), par., S. Wales, Radnor. Pop. 1051.

BEHBEHAN, or Babahan, a tu. Persia, prov. Fars, cap. dist. of same name, in a very fertile and extensive plain, watered by the Kurdistan, $128 \mathrm{~m} . \mathbf{W} . \mathrm{N} . \mathrm{W}$. Shiraz; lat. $30^{\circ} 23^{\prime} \mathrm{N} . ; \operatorname{lon} .50^{\circ} 42^{\prime} \mathrm{E}$. It is surrounded by a mud wall, flanked with circular towers and bastions; and at its S.E. corner is a castle, with thick and lofty mud walls, encircled by a deep ditch. The streets contain few good houses, and are lined chiefly by wretched mud hovels, almost in ruins. The bazaar is small, and commerce is almost neglected. Pop. about 4000 .-The mistmict is bounded, N . by the mountain range which separates Irak-Ajemi from the S. provinces of Persia, E. by Shulistan, S. by the Persian Gulf, and W. by Ram-Hormuz and the Chab country. The soil, particularly in the plain, is a rich alluvial deposit; yielding, in the neighbourhood of the town, a return of twenty-four fold of corn. Near the gulf, cotton and rice are the staple productions. Among fruit trees, are the lemon, orange, pomegranate, and palm. Of these, the last takes the precedence. The whole district is watered by numerous streams; the principal being the ShemsiArab, Kheirabad, and Kurdistan. The climate is so mild, that in January the meadows in the vicinity of the town are covered with the narcissus, appearing spread out like a white sheet several miles in circumference, and diffusing the most
delicions fragrance. The inhabitants consist chicfly of Khogilu tribes.

BElINAR1), a tr. France, dep. Maine-et Loire (Anjou), on the Loire, about 9 m . from Angers. Directly opposite to the town is a little island of the same name, containing a Gothic chapel, embosomed among trees, and founded on a rock, whose uneven surface forms its only pavement. It was for ages a place of pilgrimage; and was visited by Louis X1., whose faded portrait still hangs within it. The walls, painted with tleurs de lis and other coats of arms, are hung with the votive chains of Christian slaves who had been rescued from Algiers. Pop. 2712.

BEHNESEH, or Bainsese [anc. Oxyrlinchus], a tn. Central Egypt, on the Bahr Yousef, 110 m . S.S.W. Cairo; lat. $28^{\circ} 33^{\prime} \mathrm{\lambda}$. ; lon. $30^{\circ} 47^{\prime} \mathrm{E}$. It was formerly a place of great strength and importance, but has long been going to decay. It is still, however, the residence of a governor; and was, some years ago, garrisoned by Turkish soldiers. In the vicinity are some mounds, covered with sand, on which stand several Sheikhs' tombs ; and others, consisting of broken pottery and bricks. Numerous granitic columnz, fragments of cornices, mouldings, and altars, lie scattered about, sufficiently indicating the former importance of the town.

BEHRING'S STRAIT, SEA, and ISLAND.-The strait is the channel that separates the continents of Asia and America, and which connects the N. Pacific with the Arctic Ocean. Its breadth, at the narrowest part, which is between Cape Prince of Wales, on the American coast, and E. Cape in Asia, is about 36 m ., but it widens rapidly both to the N. and S. of these points. Its depth, in the middle, varies from 29 to 30 fathoms. On both sides of the strait are several commodious bays; but the country has a repulsive aspect, being barren and rocky, with but a scanty display of vegetation. The sea here is frozen over every winter, and foggy, hazy weather is almost perpetual ; the sun seldom shining, even in the summer, for more than a few hours, and being often invisible for days together. Whales frequent the strait, and the walrus in vast numbers. The inhabitants on either shore support themselves chiefly by hunting and fishing; but those on the Asiatic side are greatly snperior, both physically and intellectually, to those on the American. The strait is called after Vitus Behring, a German, and captain in the Russian navy during the reign of the Empress Catherine, by whom it was first discovered. It was, however, more fully explored by Captain Cook in 1778, who surveyed the whole length of both coasts.--Behring's Sea, sometimes called the Sea of Kamtchatka, is that portion of the N. Pacific Ocean lying between the Aleutian Islands and Behring's Strait, or between lat. $50^{\circ}$ and $63^{\circ} \mathrm{N} . ;$ having Russian Anerica on the E., and the peninsula of Kamtchatka and the country of the Tchuktchi on the W.- Behring's Island is in the S.W. part of the above sea, off the E. coast of Kamtehatka; lat. (W. point) $55^{\circ} 17^{\prime} \mathrm{N}$. ; lon. $165^{\circ} 46^{\prime} \mathrm{E}$. (r.) ; the most W. of the Aleutian clain. It is uninhabited, and is without wood. It has, however, several springs of excellent water, and fine cataracts; and is frequented by various marine animals. On this island, the celebrated navigator, Behring, died under the most unhappy eircumstanees. After undergoing a series of great hardships, his ship was wreeked on this barren island, on November 3,1741, where neither food nor shelter, of any kind, were to be obtained; and here, as already stated, the intrepid mariner sunk under his sufferings, both of mind and body, on the 8th of the following month.

BEIGHTON, three pars. Eng.:-1, par. Derby; 3070 ac. Pop. 1121.-2, par. Norfolk; 910 ac . Pop. 288.-3, par. Suffolk; 550 ac. Fop. 884.
beiJerlani, or Old Beijerland, a vil. Holland, prov. S. IIolland, 7 m . S.S.W. Rotterdam. It is the largest and finest village in the country; has eleven streets, and through the centre a canal, planted on either side with chest-nut-trees. It has also a fine market-place and two harbours, frequented by numerous vessels during the flax scason. The townhouse, an elegant structure, is built over the canal, and has a pleasing appearance. There are here two churches, a synagogue, some schools, and a branch of the Society for General Good. Pop., chicfly agricultural, 3000.-New beijerland is a vil. about $3 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. the former. It consists of one long, broad strect, lined with good houses and rows of elm-trees; and has a church and school.-- Soutir Beijen-
land, or MItsert, is a vil. $6 \mathrm{~m} . \mathrm{S}$. of Old Beijerland, with a small church and school. Pop. 200.

BEILA, or Bela, a tn., S.W. Asia, Beloochistan, cap. prov. Las or Lus, 50 m . from the Arabian Sea; lat. $26^{\circ} 17^{\prime} \mathrm{N}$.; lon. $66^{\circ} 34^{\prime}$ E. ; on a rocky height, W. of which flows tho Pooralee river. The houses are built of mud, and have but the ground floor. The residence of the Jam, or chief of the province, is also mud-built, and surrounded by lofty castellated walls, flanked with cireular towers at the angles. Within the enclosure is a large mosque, covered with a dome. The strects are narrow, but always dry; and the bazaar, though small, neat and clean. In the neighbourbood are some old Mahometan sepulchres. In the ancient bed of the I'ooralce, are fields of vegetables and tobacco, with a large cultivation of rice. Pop. 5000.-(Masson's Journeys in Beloochistan.)

BELLAN, a tu. Syria, ncar the sea, 9 m . S.E. Iskanderoon; lat. $36^{\circ} 2 y^{\prime} 30^{\prime \prime} \mathrm{N}$. ; lon. $30^{\circ} 17^{\prime} \mathrm{E}$. Situated in the gorge of a mountain, from which numerous torrents pour down in winter. One large stream rushes through the centre of the town. The houses, which are of stone, are flat-roofed. The elimate in summer is extremely pleasant, though somewhat severe in winter. A great many wealthy Turks lave taken up their residence here, attraeted by its local and political advantages; the town being governed by a Sheikh, closen by the inlabitants from amongst themselves. Pop. between 4000 and 5000 .

BEILEN, or Beylen, a vil. Holland, prov. Drenthe, 10 m . S.S.W. Assen, near the Havelter Aa. It is a thriving place; has a church and school, and branch of the Society for General Good; a good deal of trade, and two annual fairs. Pop. 500.

BEIRA, a prov. Portugal, bounded, N. by provs. Entre-Douro-e-Minho and Tras-os-Montes, E. by Spain, S. by provs. Estremadura and Alemtejo, and W. by the Atlantic; area, 6480 geo. sq. m. The surface is mountainous, being intersected by the sierra d'Estrella, and traversed by its ramifications. The soil, though by no means fertile, produces wine, oil, corn, flax, and different kinds of fruit. Chestnuts are particularly abundant. The mountainous districts afford fine pasture both for sheep and eattle, and are famous for their cheese. Considerable attention is paid to the rearing of bees. The chief rivers are the Douro, Tagus, Aguada, and Mondego. A mong the metals are traces both of gold and silver, but the only one wrought is iron. The other minerals are marble and a little coal. The principal trade is in wine, oil, and fruit. In 1835, Beira was subdivided into Upper and Lower Beira (Beira-alta and Beira-baixa); the former containing 298 concelhos, cap. Viseu; and the latter 29 concelhos, cap. Castel Branco. The heir-apparent of Portugal has the title of Prince of Beira. Pop. 615,238.

BEIROUT. See Beyrout.

## BEISAN. See Bethehan.

BEI-sHEHR. See Beg-sheher.
BEITAVEND, a vil. Persia, Irak-Ajemi, about 15 m . N.E. Shuster, at the foot of gypsum hills, surrounded by green fields and meadows, and intersected by a small streain of brackish water. It consists of about 100 neat and clean houses.
lBEIT-el-fakim [commonly called Beetlejuehie], a tn. Arabia, Yemen, 32 m. S.S.E. II odeilah, and 77 N.E. Mokha; lat. $14^{\circ} 31^{\prime} \mathrm{N}$. ; lon. $43^{\circ} 41^{\prime} \mathrm{E}$. It is without walls, but has a strong castle. It is celebrated for its trade in Mokha coffee, which is chiefly grown in the neighbourhood. Merehants from Persia, Russia, and Turkey visit the town, for the purpose of purchasing the coffec. Pop. 7000.-The word lieit, signifying a house or hut, is prefixed to the name of various other small towns and villages in Arabia.

BEITII, a tn. and par. Scotland, the former in eo. Agr, the latter in cos. Ayr and Renfrew. The rown, which is $15 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Glasgow, is situated on terrace ground, sloping W., at an elevation of 300 ft .above the sea level. It consists of one principal street, stretching N. and S., and intersected by several smaller, all tolerably well kept; is lighted with gas, but indifferently supplied with water. The churches and schools are, the parish church, two U. Presbyterian churches, and a Free church; the parish school, with library attaehed, U. Presbyterian school, Free Chureh school, besides private selinols, both in town and parish. There are here a thriving savings'-bank, a public reading-room, and several benevolent
societies. Principal manufactures :-tanning, spinning, and hand-loom weaving; the first employing 150 hands, the second about 200 , and the third about 400 . A considerable business is also done in seed and grain.-The Pafish is about 5 m . in length, and 4 in breadth, mostly in co. Ayr, a small portion only being in Renfrew. Montgomerie, an early and celebrated Scottish poet, author of the 'Cherry and the Slae,' was born at Mazleliead Castle, in this parish. Pop., tn. and par., 5795.-(Local Correspondent.)

BEITSTAl, or Benstad, a tn . Norway, prov. N. Trondhjem, on the Beitstad Fiord, the most N. arm of the Trondhjem Fiord; lat. $64^{\circ} 5^{\prime}$ N.; lon. $11^{\circ} 20^{\prime}$ E. Pop. 2700.

BEJA [anc. Pux Julia, afterwards Pax Augusta], a tn. Portugal, prov. Algarve, dist. of same name, 85 m . S.1. Lisbon. It stands on a height in the centre of a pleasant district, is surrounded by walls flanked with 40 towers, and defended by an old fort built by King Denis. It is the seat of a bishop; and contains a cathedral, four parish churches, six monasteries, a well-endowed hospital, and graminar-school. It has pottcries and tanneries, but the chief employment is rearing bees, goats, and swine. In the neighbourhood are some fine olive plantations. The town was founded by the Romans, and some remains of their works are still visible. Pop. 5284.

JBEJ APOOR, a large prov. of the Decean, IIindoostan, comprised partly in the British dominions, and partly in those of the Rajah of Sattara and the Nizam, and containing the Portuguese territory of Goa. It is situated between lat. $15^{\circ}$ and $18^{\circ}$ N., and lon. $73^{\circ}$ and $78^{\circ}$ E. ; bounded, N. by Aurungabad, E. by same province and that of IIyderabad, S . by the rivers Wurda and Toombuddra, and the Cavara district, and W. by the Indian Ocean; length, 320 m. ; average breadth, 200 m . The W. districts of this province include part of the Ghauts, in which are numerous fortresses of great natural strength, usually built on isolated eminences, of which the sides are either naturally scarped, or cut perpendicular for 70 or 80 ft . below their upper margin, with only one narrow path leading up to the fortress. The country E. of the Ghauts, although less mountainous, is considerably elevated above the sca. Along the banks of the chief rivers, and other flat and arable tracts, a black soil prevails. The horses reared in this province were highly esteemed by the Malırattas, and mounted their best cavalry. The Ramoozes, a numerous tribe of robhers, are spread over the province; but their chief strongholds are in the hills adjoining the Ghaut Mountains, S.W. of Sattara. They are without caste, abstain from eating becf, dislike husbandry and mechanical trades, but are much attached to hunting and other similar recreations. In 1818, the whole of this province, except the part reserved for the Rajah of Sattara, came under British government, and the numerous petty chiefs, though most unwilling to adopt peaccful habits, have been coerced into them.

BLJAPOOR [anc. Vijayapura-the impregnable city], anc. cap. of the above prov., stands near the r. bank of an affluent of the Krishna; lat. $16^{\circ} 48^{\prime} \mathrm{N}$. ; lon. $75^{\circ} 40^{\prime}$ E.; 122 m . S.E. Sattara. From the great extent of its ruins, it would seem to have been one of the largest cities of India, while the splendour of these remains have procured for it the title of the Palmyra of the Deccart. In its present state, it may be described as two cities adjoining each other-the fort on the E., and the old city on the W. The former, though much less than the latter, has one entire and regular street, 50 ft . wide and ncarly 3 m . long. Groups of houses stand scattered over its extensive area, and numcrous mud hovels are seen stuek up among its massy ruins. Some of the mosques and mausoleums of Bejapoor exhibit specimens of elaborate architectural elegance, but the prevailing character is solid and massive. The great dome of Mahomet Shah's tomb is visible at the distance of 14 m. ; and numerous spires, cupolas, and minarets, are still standing. The fretwork on the ceilings and verandahs, the pannels covered with passages of the Koran in bas-relief, and stone trellises pierced with a mesh.work of Arabic characters, are all in the richest style of Oriental sculpture. Among the religious structures is a low IIindoo temple, built in the earliest and rudest style of Braliminical architecture, and popularly supposed to have been raised by Pandoos, a mythological race. There are here some guns of enormous size; one of brass, cast in 1549, capable, it is said, of carrying an iron ball of 2646 lbs . weightl It was inteuded to send this gun to England, but
the state of the roads rendered its removal to the coast impracticable.

BEJAR, a tn. Spain, Leon, prov. of, and 48 m . S. Sala. manca, near the sierra de Bejar. It is surrounded by a wall, now ruinous, and entered by nine gates; has narrow, crooked, steep, and dirty streets; a square, three parish churches, town and court houses, an orphan and four other schools, some public fountains, an old palace, and several convents with churches attached. The inhabitants manufacture linen and hempen fabrics, baize, and cloth, which they export; and import grain, oil, wool, \&c. Pop. 4994.

BEJETsK, a tn. Russia, cap. dist. of same name, gov. of, and 70 m. N.N.E. Tver, near the Maloga. It contains 14 churches, two convents, and a theological seminary. Pop. about 4000.

BEJIJ $A H$, a tn . Spain, Andalusia, prov. of, and 19 m . N.E. Jaen, r. bank, Guadalquivir. It is well built, and has a parish church, two endowed schools, several fountains, and a palace, once a castle, presented at the conquest, by Don Alonso, to the bishops of Jaen. Domestic weaving of linen and hempen fabrics, and tillage, are the chief employments. Pop. 2159.

BEJIS, a tn. Spain, Valencia, prov. of, and $35 \mathrm{~m} . W$. Castellon de la Plana, on the skirt of a mountain forming part of the sierra de Javalambra, at the confluence of the rivers Canales and Palanacia. It is indifferently built, with irregular and steep streets; and has a parish chureh, townhall, endowed school, and, at the top of the hill, an old castle, originally of Roman construction, but rebuilt by the Arabs; and, in the civil war, reparred and fortified by the Carlists; but, as a place of defence, insignificant, being commanded by the neighbouring heights. Paper, linen and woollen fabrics, wine, and oil, are manufactured and exported. Pop. 3155.

BEJUCAI, or Bajucal, a tn. and dep. Cuba. The town lies 25 m . S.S. W. Havana; is well built. Pop. 2000.

The depabtafart is mountainous, well watered, and fertile, yiclding excellent tobacco. Pop. 24,000, of whom 10,000 are slaves.

BEKES, Bekesvar, or Bekesch, a market tn. Hungary, beyond the Theiss, cap. co. of same name, at the junction of the Black and White Körös, $41 \mathrm{~m} . \mathrm{S}$.W. Grosswardein; for merly strongly fortified, and having three churches. Chief productions :-flax, cattle, corn (particularly wheat), wine, and honey, in all of which the trade is considerable. Fuel is searce. It has an old castle, whence the province obtained its name. Pop. 18,850.—The cousty of Békes,forming the two districts of Gyala and Ksaba, has an area of about 1040 geo. sq. m., and a pop. of 157,000 . It is watered by four streams-the White and Black Körös (which both flow S.E. to N.W.), the rapid Körös, and Brettyo, which join the former two, and fall with them into the Theiss. The soil, composed of a rich alluvium, is of remarkable fertility, and produces heavy crops, particu larly of wheat; but the wine is indifferent, fuel scarce, water bad, and the climate, owing to the numerous swamps formed by the inundations of the rivers, very unhealthy. Water melons attain great perfection; fish abound, and crawfish and tortoises abound in every quarter.

BELA. See Bella.
BELABRE, a tn. France, dep. Indre, 7 m . S.E. Blane, r. bank, Anglin. Near it are iron furnaces and foundries. Pop. 829. In the old castle of Belabre was strangled the Sieur de Flavi, whose cowardly order to shut the gates of Compiegne led to the capture of Joan of Arc.

BELAÏA (White), two rivers, Russia:-1, A river, Siberia, which rises in the mountains of Okhotsk, in lat. $62^{\circ} \mathrm{N}$., and lon. $138^{\circ}$ E., and, flowing W., joins the Aldan.-2, $A$ river which rises in the Ural Mountains, gov. Orenburg, and, after proceeding for about 100 m . S.E., suddenly turns almost due N. for another 100 m ., ther turns N.E. to Oufa, and continuing in the same direction, with numerous small windings, passes the town of Birsk, and ultimately joins the Kama on its l. bank. Its-principal affluents-the Oufa from the N. and the Dioma from the S., both join it at the town of Oufa. Its whole course is about 550 m . Of these, 240 m . are navigable.

BELAILCAZAR [anc. Gacta], a tn. Spain, Andalusia, prov. of, and 45 m. N.N.W. Cordova, l. bank, Caganchas. It has a large scuare, parish church, two schools, sinall hospital, and an ancient fortress, once of great strength and
celebrity. The inhabitants are employed in agriculture, weaving, and expressing wine and oil. Pop. 3380 .

BELAAN, par. Irel. Kildare; 1198 ac. Pop. 286.
BELASPOOR, a tn. Hindoostan, Gurhwal, l. bank, SutIej; lat. $31^{\circ} 19^{\prime} \mathrm{N} . ;$ lon. $76^{\circ} 47^{\prime}$ E.; 27 m . N.W. Simla, and 60 m. N.E. Loodiana. It lies about 1465 ft . above the level of the sea, in a spacious and extremely fertile valley, through which the Sutlej winds. The town is said to be well built, chiefly of flint stones; to contain about 3000 houses, and to exhibit a regularity rather exeeptional in this quarter of India. Baron Hägel found the streets 'paved with flint stones about 1 ft . in diameter, and as often loose as not; dislodging the unsteady foot of a luekless wayfarer, and knocking it violently to one side or the other.' The natives, however, trip lightly over these stones withont ever once stumbling. Towards the S. are three fortresses-l Bahadurpoor, Futihpoor, and Champa, formerly serving as a retreat to petty tyrants, who plundered both travellers and inhabitants indiseriminately. To this, however, an end has now been put. From Belaspoor, the snowy peaks of the Himalaya are distinetly visible.-(Hamilton's Last India Gaz.; Hiigel's Travels in the Punjab.)

BELAUGH, par. Eng. Norfolk; 810 ac. Pop. 161.
BELAUN, or Belawan, a small isl. Sooloo Archipelago, about $35 \mathrm{~m} . \mathrm{S}$. the isl. of Basilan, or about midway between that isl. and the isl. of Sooloo; lat. (E. point) $6^{\circ} \mathrm{N}$. ; lon. $122^{\circ} 8^{\prime}$ E. (R.) It bas a bigh round mount on its W. part, with a long space of low level land, extending several miles to the E .

BELBEIS, or Belbeys, a tn. Lower Egypt, 28 m. N.N.E. Cairo, on the road from that city to Syria-a circumstance which gives it considerable importanee, in despite of its want of attractions in other respeets, being ill built and dirty. It was oceupied, in 1798, by the French army, when its fortifications were repaired. They are now falling into decay, the walls being eomposed chiefly of mud. Belbeis is suecessor to the ancient Bubastis, from the site of which it is 14 m . distant. In the neighbourhood are traces of the ancient eanal that joined the Nile to the Red Sea. Pop. 5000.

BELBROUGHTON, par. Eng. Woreester; 5350 ac. Pop. 1765.

BELCASTRO, a tı. Naples, prov. Calabria Ultra, 14 m . N.E. Catanzaro, on a roek. It is the residence of a bisliop, lias a cathedral, diocesan seminary, and a mont-de-piété. Great numbers of cattle are reared in the neighbourhood. P. 1005.

BELCHALWELL, par. Eng. Dorset; 950 ac. P. 225.
BELCIA MP, three pars. Eng. Essex:-1, Belchampotten, 1600 ac. Pop. 389.-2, Belchamp (St. Paul), 2270 ac. I'op. 731.-3, Belchamp (Walters), 2110 ae. Pop. 698.

BELCHFORD, par. Eng. Lincoln; 2390 ac. Pop. 554.
BELCHITE, a tn. Spain, Aragon, prov. of, and 30 m . S.S.E. Saragossa; pleasantly situated in a plain, at the foot of a small hill which commands it on the S. and W. Its houses are tolerably well built, and its streets generally wide, though unpaved and indifferently kept; and it has five squares, of which the principal, Plaza Nueva, is handsome, and oeeupies the centre of the town. The parish church is an old strueture, built of brick in the Gothie style, with a lofty tower of the same material. Other publie edifices are, a capacious townhall, hospital, two ehapels, two schools, and a theatre, formerly a chureh dedicated to St. John. Manufactures:serge, stuff, blankets, horse-eloths, and linen fabries of various kinds and excellent quality, which are exported to a considerable extent. On June 18,1809 , an engagement took place liere between the French army, under Suehet, and the Spaniards, commanded by General Blake, in which the latter suffered a signal defeat, and lost 9 or 10 pieces of cannon. Pop. 2385.

BELCLARE, par. Irel. Galway; 7847 ac. Pop. 2663.
BELEM, a tn. Portugal, prov. Estremadura, r. bank, Tagus, $2 \mathrm{~m} . \mathrm{S}$. W. Lisbon, of which it may almost be regarded as a suburb. It has a ehureh and a monastery, built by King Emanuel in 1499; the former a fine building, in the mixed Norman-Gothic and Arabic styles, and the latter containing a royal mausoleum. It has also an hospital, high school, and extensive iron-foundry. A remarkable square tower rises out of the Tagus, ealled the Torre de Belem, which defends the entrance to the port, and whence ships entering the river are boarded by the custom-house officers. Here also are commodious quays, and a quarantine station. In the neighbour-
hood is the royal palace of Ajuda, with a botanical garden, menagerie, and cabinet of natural curiosities; and the Quinta da Rainha, a royal villa, with fine gardens and extensive parks-all of which are accessible to the publie. Belem is inhabited by many of the nobility and rieh eitizens of Lisbon. 1'op. about 5000 .

BELEM, or PARA, a city and seaport, Brazil, eap. prov. Para, l. bank of the estuary of Rio Para; lat. $1^{\circ} 34^{\prime} \mathrm{S} . ;$ lon. $48^{\circ} 50^{\prime}$ W. ; having W. the Moju, E. the Guama, and S. the Aeara, a tributary of the Moju, all falling into the Bahia Guajara, on the S. shore of which the eity is placed. Belem has straight, and mostly paved streets; its houses are of stone, constructed with solidity and some pretensions to elegance. The principal buildings are, the Governor's palace and the eathedral, magnificent edifices; but, besides these, the cruciform cluurch of Santa Anna, and the octagonal one of São João Baptista, are note-worthy. The eity possesses several other churehes, a convent, turned into a barrack; an arsenal, an episcopal palace, a seminary, in which Latin, theology, \&e., are taught; a college, with chairs of Latin, rhetoric, philosophy, geometry, and Frencli ; a normal, and two primary schools, two convents-one of Carmelites, and another of Capuchins; three hospitals, and a botame garden rich in plants, both exotic and indigenous. Belem is the seat of the legislative assembly of the province, the residence of the president, of the commander of the forces, and of the Bishop of Para. The port is defended by forts, and is capable of admitting vessels of any size; the tide rises 10 or 12 ft . The trade of the port is in riee, cacao, cotton, coffee, sarsaparilla, hides, and leather; tapioea, balsam, copaiba, gum-elastic, and Maranham chestnuts. The principal disease is intermittent fever. I'op. 10,000, mostly European.

BELENYES, a tn. IIungary, beyond the Theiss, co. Bihar, 32 m . S.E. Grosswardein, on the Black Körös. It is the see of a bishop; has three churches, a salt-office, and in the vicinity, quarries of beautiful black marble, mines of iron, copper, and silver ores. Pop. 3250.

BELLESTA, a vil. France, dep. Ariege, 19 m. S.E. Foix; remarkable for an intermitting spring in its vicinity, which, after flowing 36 minutes, ceases for about 32 minutes before it again begins to flow; but, after heavy rains, flows continuously without intervals. Belesta has extensive marble quarries, and mills driven by water for sawing marble, porphyry, and alabaster. It has also forges and iron-mills, and a considerable trade in fir timber. Pop. 1212.

BELFAST, a seaport tn. and parl. bor. Ireland, co. Antrim, 88 m . N.N.E. Dublin; lat. $54^{\circ} 36^{\prime} 24^{\prime \prime}$ N.; lon. $5^{\circ} 56^{\prime} 12^{\prime \prime}$ W. (r.) ; mostly on low ground on the l. bank of the Lagan, near its embouchure in Belfast Bay. The river, which is here about 250 yards wide, is erossed by an elegant stone bridge of five arches, each of 50 ft . span. Two other bridges. of less pretension, cross the stream; one about a quarter of a mile further $u_{p}$, and the third about three-fourths of a mile above the second. The town, owing to its extremely low position, has from a distance nothing imposing in its appearance; but, on a nearer approach, is found to improve considerably. The houses, mostly of brick, are well built, many of them very handsome; the streets are regular, spacious, and eleanly, well macadamized and lighted, and the whole general aspect of the place eminently calculated to make the most favourable impressions, not a little strengthened by the cheerful stir and activity which prevails in the mercantile quarters; and which, assoeiated with an enterprising spirit, have obtained for Belfast the reputation of being the first town in Ireland in commereial prosperity, and sceond to Dublin only as a port. The places of worship are numerous; consisting of eight Established ehurches, 21 Presbyterian, one Independent, eight Methodist, one Society of Friends, and four R. Catholic. Some of these are handsome structures. Of this deseription is St. Anne's, which is also the oldest; it has a graceful eupola, and is fitted up inside with rieh old mahogany. Trinity Chureh is a good specimen of the pointed Gothie, with a spire 130 ft . high. St. George's Chureh is adorned with a beautiful pertico, but bas little other architectural beauty. At the head of the educational establishments is the Queen's College, a magnificent structure of brick and stone, built at an expense of upwards of $£ 25,000$, and opened for the reception of students in November 1849. The collegiate body consists of the president, viee-president, and 20 professors;
and, for the maintenance of the institution, $£ 7000$ a year is allowed from the consolidated fund. The other educational establishments are, the Royal Academical Institution, founded in 1810 by voluntary subscription, an annual parliamentary

400,000 . The other branches of industry in the town or its vicinity are, two distilleries, 12 breweries, several large flour and corn mills, four large, and several smaller foundrics, several tanyards, two vitriol-works, a patent felt manufactory, saw-mills, \&c.; four extensive ship-yards, and yards for manufacturing ropes and sailcloth. Previous to the potato failure, Belfast had also a very large provision trade; and, since the partial restoration of that crop, it has begun to revive.

The commerce of Belfast is very considerable, and is rapidly increasing; the most important branch is across the Irish Channel. The tonnage which entered the port, in 1849 , showed an increase of 48,068 tons over that of the previous year. The following statement of the number of vessels and their tomnage, registered at the port, and which entered the harbour since 1842 , shows the rapid development of the trade of the port:-

| Years. | Registered. |  | Entered. |  |
| :---: | :---: | :---: | :---: | :---: |
|  | Vessels. | Tons. | $\mathrm{V}_{\text {tssels. }}$ | Tons. |
| 1842 | . 375 | .51,278. |  | . 3337,505 |
| 1843. | . 359. | .49,402. | . 3370 | .,363,038 |
| 1845 | . $39+$. | .54,771. | 3888... | ..492,560 |
| 1846 | . 426. | .62,094 | 4168. | . 543,862 |
| 1817 | . 461 | .68,659. | 4213. | 538,523 |
| 1848 | . 475 | .71,556. | . 3905 | ..506,953 |
| 1819 | 467 | .75,441. | 4080 | . 555.021 |
| 851. | 461 | 88,860. | 5663. | 684,798 |
| 52. |  | 78,378 |  | $706,8$ |

The tonnage which entered the port in 1849 consisted of-Irish coasters, 8474 ; across channel, 213,827; steamers, 270,921; foreign, 61,799 ;-total, 4080 vessels; 555,021 tons. In the year $17 \times 6$, the port revenue was but $£ 1533$, in 1850 , £29,012. In 1852 the net customs receipts were $£ 355,30$, 3 s. 11 d . About 30 steamers ply regularly between lBelfast and London, Liverpool, Fleetwood, Carlisle, and Whitehaven; Glasgow, Greenock, Stranraer, Ardros-
grant of about $£ 1900$ a year, which it received latterly, is now discontinued; the Belfast Academy, the Lancasterian School, numerous national schools, and private seminaries. The charitable and benevolent institutions comprise the poorhouse, with medical and surgical hospitals attached; the lying-in hospital, the fever hospital, the district lunatie asylum, the deaf and dumb and blind asylum, a new and elegant edifice; the Ulster female penitentiary, and the union workhouse. The other public buildings are, the commercial buildings, erected on a capital of $£ 20,000$, containing a spacious public newsroom, hotel, offices, and assembly-room ; the white and brown linen-halls, the theatre, the music hall, the new house of correction, built on the model of the London prison at Pentonville, and capable of containing 300 prisoners; and the new county court-house, a handsome pile, with a Corintlian portico of eight columns, crowned by a colossal figure of Justice. The building occupied by the Belfast Banking Company is also a very handsome edifice. The literary and scientific institutions comprise a natural history society, a royal botanical and horticultural society, a society for the promotion of knowledge, Ulster teachers' association, established for the purpose of improving the literary character of elementary teachers gencrally, and for securing to them a more adequate remuneration; Belfast music class, rhetorical society, and Belfast mechanics' institute.

Belfast is the great depôt of the linen trade of the N. of Ireland, as well as the chief seat of the manufactures of both linen and cotton. In 1841, there were, in the town and its immediate vicinity, 25 steam mills for spinning linen yarn; there are now (1850) upwards of 30 , employing many thousand persons; ono alone affording constant work to 1200 pcople, the annual amount of whose wages is about $£ 20,000$. This house consumes about 1000 tons of flax yearly, producing 450,000 bundles of yarn, at an estimated value of from $£ 100,000$ to $£ 110,000$. The same concern produced, besides, during the six months ending June $1850,55,637$ webs of brown linen, and 70,282 webs of blcached linen, each web averaging 60 yards. The number of spindles now at work in Belfast and the neighbourhood, is between 300,000 and

Vos. I.
san, and Dublin. The chief articles of export are cotton and linen manufactures, linen yarn, corn, meal, flour, provisions, flax, tow, and horses.

Belfast Lough is $13 \frac{1}{2} \mathrm{~m}$. in length, and 8 in breadth at the entrance, gradually narrowing as it approaches the town. Prior to 1839 , large vessels had to lie in the pool or basin of Garmoyle, 4 m . from the town; but, in 1840, a new channel was formed, having 9 ft . water at low tides, so that vessels drawing 16 ft . water can now come up in neap tides, and those drawing 18 ft ., in spring tides. A lighthonse and pilot station have been established at Garmoyle.

Belfast is governed by 10 aldermen, one of whom is mayor, and 30 councillors, and returns two members to Parliament. Registered electors, in 1849, 4701. The country around is extremely beautiful. The lough itself is a fine object; and the hills which bound it, and partly encircle the town, are being gradually brought under cultivation, while their slopes are thickly studded with the villas and country houses of the merchants.

Belfast is comparatively a modern town, dating from about the beginning of the 17 th century, when it was erected into a municipal and parliamentary borough, having the privilege of sending two members to the Irish parliament ; but its progress was subsequently much impeded by the civil wars of Charles I., during which it was ocenpied successively by royalists and parliamentarians. In 1704, one of the first editions or the Bible printed in Ireland was printed here; and in 1777 the cotton trade was introduced, from which its chief prosperity, it is considered, has arisen. Three rallways diverge from Belfast-N. W. the Ballymena and Carrickfergus railway, N.E. the County Down, and S. W. the Ulster railway in connection with the line to Dublin. Pop. (1851), 100,300. -(Local Correspondent.)

BELFAST, a post township, and seaport, U. States, cap. Waldo co., Maine, beautifully situated at the head of Belfast Bay, W. side of Penobscot River, 38 m . from the ocean. A small river passes near the centre of the town, over which is an extensive bridge. Belfast has a spacious and safe harbour, rarely obstructed by ice, and sufficiently deep for vessels of the
largest class. It has an extensive trade-foreign, coasting, in fishing, and in shipbuilding. Principal exports:-lumber end fish. Its tom. in 1840, was 38,218 . As the river above it freezes, Belfast forms the principal mart of the winter trade of Penobscot River. It has an academy, and 21 schools. Pop. (1840), 4186.—Also the name of another post township in Alleghany county, with a pop. of 1646 ; and of several other places in the U. States.

BELFAS'T LOUGH, or CArrickfergus Bay, a navigable marine inlet, N. of Ireland, between the cos. Antrim and Down. It is about $13 \frac{1}{2} \mathrm{~m}$. long, with a breadth at the entrance of 8 m ., gradually contracting to about 2 m . It is almost completely sheltered from the prevailing winds, by heights on the W. and N.W. Its banks are studded with woods, parks, clegant mansions, villages, and towns, and at the head of it, where it receives the river Lagan, stands the manufacturing town of Belfast (which see).

13ELFORD, a market tn. and par. England, co. Northumberland. The town, which is small and neatly built, is pleasantly situated on a gentle eminence, 9 m . N.E. Wooler, abont 2 m . from the sea, and consists chicfly of two tolerably wide strects; honses well built, and principally of stone, water abundant. The church, originally erected in 1700, has been rebuilt, in the carly English style, and is capable of containing 600 or 700 persons. Market-day, Tuesday, when an extensive business in corn is done. Area of par. 9380 ac. Pop. (1850), about 1500.

BELFORT, or Befort, a tn. France, dep. Haut Rhin, on the Savourcusc, 40 m . S.S.W. Colmar. Before the year 1648, Belfort consisted of little more than a castle, the fortifications of which were considerably increased ly Vauban, who surrounded the town with a wall flanked with bastions. The new town was built inside of the works, and laid out on a regular plan, with spacions, handsome streets. It is now a fortified place of the first class, and has three gates. Its situation at the intersection of six main roads, is highly favourable to its commerce, and makes it an entrepot for the traffic between the interior of France, and Alsace, and Switzerland. Belfort is well built, and has a fine parish church, barracks, townhouse, court of primary resort, public library containing 20,000 volumes, and a communal college. Manufactures :hats, clocks, wax tapers, iron, wire, sheet-iron, \&c. There are also breweries, tanneries, and iron furnaces. The principal trade is in grain, wine, brandy, and liqueurs. Iron is extensively worked in the neighbourhood. In 1814, Belfort was besieged by the Allies without success. Pop. 4114 Other two small places in France have the same name.

BELGA, the name given by Cæsar to the inhabitants of one of the three divisions of Gaul. This division stretched from the Rhine to the German Ocean, and extended into France as far as the Seine and the Marne. The Belgæ were of Germanic origin; and being very warlike, had succeeded, about A.D. 280 , in driving out the Celtæ, by whom the country had been previously inhabited.

BELGARD, a tn. Prussia, circlc, same name, prov. Pomerania, 20 m . E.S.E. Colberg, at the confluence of the Leitznitz with the Persante, and nearly insulated. It is surrounded with a wall, which, though old, is still strong, has an old castle, three clurches, two hospitals, and manufactures of cloth and tobacco. Pop. 3000.-The circle has an area of 320 geo. sq. m., and a pop. of 29,392 , of whom only 40 are R . Catholies, and 260 Jews. The surface is for the most part flat, and the soil, though occasionally inclinng to sand, is fertile.

BELGALM, a tn. IIindoostan, prov. Bejapoor, presid. Bombay, dist. of, and 55 m . N.W. Darwar ; lat. $15^{\circ} 52^{\prime} \mathrm{N}$. ; lon. $74^{\circ} 42^{\prime} \mathrm{E}$. The site of the town is elevated and healthy, having the benefit of the sca breeze; supply of water abundant, and of good quality. The fortifications are extensive and complete; the walls are massy and solid, with a broad and deep ditch, surrounded by an area of 600 yards. The inner area is large, but full of the ruins of native buildings, among which are two ancient temples. In 1818, the fort and town were taken by the British, after a gallant resistance by the Pesliwa's forces. The former stands in a plain, and is of great strength and extent. Its ramparts are faced with stone, flauked by massy round bastions, and protected by an admirable wet ditch cut out of the rock. The soil of the distriet, though barren in dry wather, becomes very fertile during the
rainy season, which lasts for six months. From the salubrity of the climate, and the purity of the water, it has been selected as a permanent military station. Pop. of tn. 7652.

BELGENTIER, a small tn. France, dep. Var, arrond. of, and about 14 m. N.N.W. Toulon. It is a place of great antiquity, and Roman remains have been found in its vicinity. Its manufactures consist of woollen stuffs, paper, and leather; and it has some trade in wine and olives. Pop. 1320.

RELGERN, a tn. Prussia, prov. Saxony, l. bank, Elbe, circle of, and 7 m . S.E. Torgau. It has a church, an hospital, and townhouse. The inhabitants live chicfly by agriculture, including that of the vine, the rearing of cattle, and traffic on the Elbe. Their general and cattle markets are considerable. Pop. 2850.

BELGIOJOSO, a tn. Austrian Italy, cap. dist. of same name, gov. Milan, prov. and 8 m . S. by F. I'avia. It is situated in a beantiful and remarkably fertile plain, between the Po and the Olona, from cach of which it is about $1 \frac{1}{2} \mathrm{~m}$. distant. It is well built, and contains a parish and an auxiliary chureh. The old castle, in which Francis I. was temporarily lodged after being taken prisoner at the battle of Pavia, has been converted into a magnificent chatcau, surrounded by fine gardens. Belgiojoso has an important annual fair', whicb lasts three days. Pop. 3383.

BELGIUM [French, Belgique; German, Belgien], a kingdom in the W. of Central Europe, between kat. $49^{\circ} 30^{\prime}$ and $51^{\circ} 30^{\prime}$ N., and lon. $2^{\circ} 35^{\prime}$ and $6^{\circ} 7^{\prime}$ E. ; bounded, N. by Holland, N.W. by the N. Sea or German Ocean, W. and S. by France, and E. by the duchy of Luxembourg, Rhenish Prussia, and Dutch Limburg ; greatest length, N.W. to S.E., 165 m ; greatest breadth, N. to $\mathrm{S} ., 120 \mathrm{~m}$.; area, about $11,400 \mathrm{sq} . \mathrm{m}$. Belginm, in shape, resembles a triangle, which has its vertex in the W .; the base resting on Germany on the E., the shorter side facing Holland and the sea, and the larger forming the frontier of France. For administrative purposes, it is divided into nine provinces-Antwerp, S. Brabant, E. Flanders, W. Flanders, Hainaut, Liege, Limburg, Luxembourg, and Namur. These provinces do not differ mueh in area, and are so arranged as to form a compact and commodious division of the kingdom; S. Brabant, which, from containing Brussels, the capital, may be considered the metropolitan province, oceupying the centre, while the others cluster round, and, with exception of the extreme provinces of Luxembourg and W. Flanders, actually touch it.

Physical Features.-A general idea of the surface of the country may be obtained by regarding it as an inclined plane, somewhat rugged, and considerably elevated in the S.E., from which it slopes, more or less gradually, N. and W. till it sinks into low plains, only a few feet above the level of the sea. The elevated districts are formed by ramifications of the Ardennes, which, entering Belgium from France, stretch along the S. of Namur, occupy the greater part of Luxembourg, and attain their culminating point in the S.E. of Liege, at Stavelot, in the neighbourhood of Spa, where the height exceeds 2000 ft . The rocks appear to rest on prinary formations; but those which reach the surface generally consist of slate, old red sandstone, and mountain limestone. Proceeding N.W., in the direction of the dip, these rocks take a cover, and the coal formation becomes fully developed. This coal field is a coutinuation of that of the N. of France, and stretches through Belgium in a N.E. direction, occupying the greater part of the province of Mrainaut and a considerable part of that of Liege, and skirting the provinces of Namur and Luxembourg. It contains numerous workable seams, both of coal and iron. N. and W., beyond the limits of this coal field, a more recent formation is found, covered by deep beds of clay and sand, the former prevailing more in the interior, and the latter near the coast, where it has been drifted into hillocks or downs, and forms the only barrier against the encroachments of the sea. Some of the clay in this district is fit for the manufacture of fine pottery ; but the greater part of it is fit only for coarse ware, or for bricks. In accordance with the general slope of the surface already mentioned, the main streams of Belgium have a N. direction; and the whole country lies within the basin of the German Ocean. In the S.E., where the surface is ele vated and broken, numerous torrents descend with rapidity ; and, becoming confined within rocky, precipitous, and richly wooded banks, often furnish, if not the grandest, the most picturesque and enchanting of landscapes. On reaching the
lower country their speed is slackened, and their augmented volume moves along in a slow winding eourse. Only two of them-the Meuse and the Scheldt-have a magnitude which entitles them to the name of rivers; but so important are these two in themselves, and so numerous their affluents, that no country in Europe is better supplied with water communieation. Besides the Seheldt or Schelde, and Meuse or Maas, the navigable streams are, the Ambleve, Demer, Dender, Darme, Dyle, Lys, Great Yethe, Little Nethe, Ourthe, Rupel, Sambre, Yperlee, and Yser. The climate of Belgium bears a considerable resemblance to that of the same latitudes in England. Though subjeet to sudden change, it is, on the whole, temperate and agreeable. Luxembourg and Namur, where the surface is high, and the numerous hills and dales which diversify it, both cheer the animal spirits and freely circulate an air at once keen and pure, are most favourahle to health and longevity. The only parts of the country which can be considered unhealthy are the low flats, which prevail in Flanders, and the polders or rich alluvial tracts which have been gained from the rivers by embankment, chiefly in Antwerp. There agues, and other diseases engendered by a humid and sluggish atmosphere, are prevalent.

Woods and Forests.-Nearly one-fifth of the whole surface of the kingdom is oceupied by wood. The distribution of it, however, is by no means equal; and hence, while the two Flanders and Antwerp fall far below the average amount, Luxembourg and Namur rise far above it, and are very densely wooded. In these provinces, extensive tracts are eovered with natural woods, in which the wolf and wild boar still have their haunts. These woods are the remains of the ancient forest of Ardennes, which Cæsar describes as stretching far out into France from the banks of the Rhine. They consist of hard wood, prineipally oak, which is often of great size, and furnishes large quantities of the most valuable timber. By carcfully dressing the stools after it is cut, a fine oak copse is raised, the cuttings of whieh annually produce many tons of bark; which not only supplies the tanneries of the country, but leaves a considerable surplus for exportation, chiefly to England; while the wood, unfit for the carpenter, is partly employed as fuel, and partly converted into charcoal, for the use of the ironworks, where the superiority of the iron smalted and wrought by it is well known. S. Brabant also possesses several fine forests; among others, that of Soignies, with which the field of Waterloo has made us familiar. In the other provinees, searcely anything deserving the name of forest is seen. Wood is distributed over them in occasional patches, and more frequently in the form of hedgerow. The timber thus grown is by no means small in aggregate amount, and forms a well-known feature in the rich rural landscapes which the old Flemish masters loved to paint; but, taking into account the injury which the cultivated crops sustain from it, it is very questionable whether it ought to be regarded as a source of profit either to individual proprietors or to the country at large. The timber itself, consisting chiefly of various kinds of poplar, is soft, and of an inferior description.

Agriculture. - The greater part of the country is well adapted for agricultural operations, and the inhabitants have so happily availed themselves of their natural advantages, that they early began, and in some respects still descrve, to be regarded as the model farmers of Europe. In the high lands traversed by the Ardennes, the climate is ungenial, and the soil so shallow and stony, as almost to forbid the labour of the plough. Here the occupants display their skill, not so much by what they do, as by what they refrain from attempting. Instead of vain endea vours to force the growth of corn, where it could never yield an adequate return, they have been contented to turn the natural pastures of the distriet to the best account, by employing themselves chiefly in the rearing of stock. In particular, they produee a hardy breed of horses, which, being admirably adapted for light cavalry, are largely exported to France for that purpose, while vast herds of swine are fed, almost at no expense, on the mast of the forests. At the same time, no part of the surface is allowed to lie waste. Where arable land occurs, it is carefully applied to its proper use. Even the vine has not been forgetten, and sumny slopes on which little else could have been grown, have been made to yield a tolerable wine. In the opposite extremity of Belgium, chiefly in the province of Antwerp, and partly in that of Limburg, an extensive tract occurs, which strikingly con-
trasts in appearance with the hilly districts of the S.E., but is perhaps still less adapted for the ordinary operations of agriculture. This tract, known by the name of Campine, is a vast expanse of noorland waste, of the most dreary appearanee, a dead monotonous flat, composed for the most part of barren sand, in whieh the ordinary heaths and lichens will searcely grow. The greater part of this tract seems destined to remain for ever in its natural state, but whenever a patel of more promising appearance occurs, the hand of industry has been at work, and corn fields and green pastures have bceome not unfrequent even in the Campine. Agricultural colonies, partly free, and partly compulsory, have been planted in different parts of the district. The former consist of persons generally in poor cireumstances, who have voluntarily engaged in reelaiming barren tracts as the means of procuring a maintenance, and saving them from the degradation of pauperism. The latter consist of convicts, who, having forfeited their liberty, give compulsory labour as the penalty of their offences. By the united exertions of both, a wondrous improvement has been made, and on parts of this waste, some of the finest eattle of the country are reared, and much dairy produce of excellent quality is obtained. Still, however, about $300,000 \mathrm{ac}$. remain untouched. With execption of the twe distriets now deseribed, there is no part of Belgium in whieh agriculture does not flourish; but the husbandry which has been so mueh lauded, is seen in its greatest perfection in the two Flanders. Its excellence is owing not to any superior knowledge of what may be called the theory of agrieulture, nor to any remarkable ingenuity in the invention of implements, by whieh its operations are more efficiently or more cheaply performed, but chiefly to an innate spirit of economy and industry-an economy which carcfully appropriates every gain however small, and an industry which grudges no labour however great, provided it is possible, by the application of it, to obtain an additional amount of valuable produce. In fact, the Flemish husbandry partakes more of the nature of garden than of field culture. In many of its operations, no doubt, horse labour is employed. The plough and the harrow are in frequent requisition, but the implement on which the greatest dependence is placed, is the earliest and simplest of all-the spade. To give full scope for the use of it, the ground is parcelled out into small fields of a square form, which have their highest point in the centre, and slope gently from it in all direetions towards the sides, where ditches of suffieient size earry off the superfluous water as it filters into them. To promote this filtration, the ground is trenched to a uniform depth, so that the slope of the subsoil corresponds as nearly as possible to that of the surface. In performing this trenching, a considerable degree of skill and ingenuity is displayed. The performance of the whole at onee, would be a formidable and not a very efficient process. In a few years, a new subsoil would be formed, and the trenching would require to be renewed. This is rendered unnecessary in the following manner. The land is laid out in ridges about 5 ft . wide, and when the seed is sown it is not covered, as usual, by the harrow, but by earth dug from the furrows to the depth of two spits, and spread evenly over the surface. By changing the ridges, and throwing the furrow of the previous year into the ridge of the next, the whole ground becomes furrow in the course of five suecessive crops, and is consequently trenched to the depth of about 18 inches. This process of trenching never ceases, and is unquestionably one of the most important eharaeteristies of the Flemish husbandry. The only other process particularly deserving of notice, is the care and skill manifested in securing an adequate supply of manure. Every farm is fully stocked, and the cattle, instead of being grazed in the fields, are fed at home, in winter, on turnips and other roots; and in summer, on green crops carefully arranged, so as to come forward in regular succession, and yield a full supply of rieh succulent food. In addition to this, every homestead has a tank built and generally arehed with briek, into which all the liquids of the cattle sheds are conveyed, and have their fertilizing properties increased by the dissolution of large quantities of rape-cake. This liquid manure is of singular efficacy in promoting the growth of flax, whieh enters regularly into the Flemish rotation, and is perhaps the most valuable crop of all, the produce of an acre being not unfrequently sold for 550 . As this erop is one of the most exhausting which can be grown, and requires the richest
manure while it yields none, the growth of it to any great extent, must, without the aid of the tank, have been impossible. At present, in Flanders alone, the value of flax
annually raised has been estimated at $1 \frac{1}{2}$ millions sterling. To save the necessity of further details, we subjoin the fullowing table.

The Provinces of Belqium, their Area, Extent under Cultivation, and Porulation, as at Jan. 1, 1849.

| Provinces. | ${ }_{\text {Area, in }}^{\text {sq. } \mathrm{m} .}$ | Arca, in ac. | Cultivaled. | Wood. | Waste. | P'opulation. |  |

|  | 11.366 | 7,275,612 | 4,800,393 | 1,360,218 | 813,116 | 4,359,090 |  |

It thus appears that about two thirds of the whole kingdom is under cultivation, and nearly eight-ninths profitably occupied, leaving only about one-ninth waste. Of this last, the far greater part belongs to the comparatively barren districts of the S.E. and N.E., already described; and hence, in the more favoured provinces, particularly those of S. Brabant, the two Flanders, and Hainaut, the quantity of waste is so very small, that the whola surface may be regarded as one vast garden. It is an error, however, to assert, as is usually done, that Belgium raises more corn than it consumes. For several years the import has considerably exceeded the export. In 1844, the import of wheat for home consumption amounted to above 60,000 quarters. The average price, for the same year, was $£ 2,18.8 d$. per qr. Considerable attention has been paid in Belgium to the rearing of stock, and the breeds both of cattle and horses are of a superior description. The horses of Flanders in particular, are admirably adapted for draught, and an infusion of their blood has contributed not a little to form the magnificent teams of the London draymen. In general, however, Belgium stock of all kinds is inferior to that of England. Throughout the kingdom, the estimated number of horses is 250,000 ; of cattle, 900,000 ; and of sheep, 753,000 .

Mines.-The mineral riches of Belgium are great, and, after agriculture, form the most important of her national interests. They are almost entirely confined to the four provinces of Hainaut, Liege, Namur, and Luxembourg, and consist of lead, manganese, calamine or zinc, iron, and coal. The lead is wrought to some extent at Vedrin, in Liege; but the quantity obtained forms only a small part of the actual consumption. Manganese, well known for its important bleaching properties, is obtained both in Liege and Namur. The principal field of calamine is at Liege, where it is worked to an extent which not only supplies the home demand, but leaves a large surplus for export. All these minerals, however, are insignificant compared with those of iron and coal. The former has its seat in the country between the Sambre and the Meuse, and also in the province of Liege. At present, the largest quantity of ore is raised in that of Namur. The coal field already described, has an area of above $500 \mathrm{sq} . \mathrm{m}$. The annual output exceeds $3,000,000$ tons, and of these nearly two-thirds are obtained in the provisce of Hainaut. It forms the largest and most valuable of all the Belgian exports. More than a half of the whole coal raised is taken by France. There cannot be a loubt that this export yields a handsome profit to the coalmasters, and adds greatly to the national wealth ; but a question has been raised as to the policy of thus lavishly disposing of a raw material which is absolutely essential to the existence of a manufacturing community, and the quantity of which, though great, is by no means inexhaustible. One obvious effect of the great foreign demand, is to raise the price, and thus place some of the most important manufacturing interests of the country in an unfavourable position for competing successfully with so formidable a rival as Great Britain. Besides minerals, properly so called, Belgium is abundantly supplicd with building-stone, pavement, limestone, roofing-slate, and marble. Of the last, the black marble of Dinant is the most celcbrated.

Manufactures.-The industrial products of Belgium are very numerous, and the superiority of many of them to those of most other countries, is confessed. The fine linens of

Flanders, and lace of S. Brabant, are of European reputation. Scarcely less celebrated are the carpets and porcelain of Tournay, the cloth of Verviers, the carriages of Brussels, the cutlery of Namur, the extensive foundries, machine-works, and other iron establishments of Liege. The cotton manufacture, confined chicfly to Flanders and the province of Antwerp, engrosses a capital of $£ 2,500,000$, and gives em. ployment to more tlian 12,000 persons.

Trade and Commerce.-The geographical position, the admirable facilities of transport, and the indefatigable industry of the inhabitants, early combined to place Belgium at the very head of the trading countries of Europe. The gradual rise of competitors still more highly favoured, has deprived her of this pre-eminence; but her trade is still of great importance, and within recent years has made a rapid advance. Her coal and iron, and the numerous products of her manufactures, furnish in themselves the materials of extcusive traffic; while the possession of one of the best harbours in the world, situated on a magnificent river, which directly, or by canals, stretches its arms into every part of the kingdom, and now made accessible by a system of railways with every kingdom of Central Europe, promises to make it the scat of a transit trade even more important than that which it monopolized during the Middle Ages. The limited extent of the seacoast, on which alone mariners can be reared, seems to make it impossible for Belgium ever to take high rank as a naval power; but if others must be the sea-carriers, she certainly bids fair soon to become the greatest land-carrier of the world. This she owes chiefly to the admirable system of railway communication which, in the exercise of an enlightened policy, was early established throughout the kingdom. This system has its centre at Malines, from which a line proceeds $N$. to Antwerp; another W. to Ostend, another S. W. through Mons, and on to the Northern Railway of France, which communi cates directly with Paris; and another S.E. to Liege, and on into Prussia, where it first communicates with the Rhine at Cologne, and thence by that river, and by rail, gains access both E. and S. to all the countries of Central Europe. In addition to these great trunks, one important branch connects Liege with Namur and Mons; and another from Antwerp, after crossing the W. truuk at Gfient, passes Courtray and proceeds directly towards Lille. The ramification is thus complete; and there is not a town in Belgium of any importance which may not now, with the utmost facility, convey the products of its industry by the safest and the speediest of all means of transport. Electric telegraphs have been annexed to all or most of the lines.

From the official returns of external commerce of Belgium, published by her goverument for the year 1850, it appears that the Belgian trade is steadily advancing. Thus, taking quinquennial periods as the best criterion to judge by, it results that, from 1835 to 1839 , the valued amount was $£ 15,480,000$; from 1840 to $1844, £ 25,000,000$; from 1845 to $1849, £ 28,720,000$; and in $1850, £ 36,480,000$. The exports of Belgian produce and manufactures, which in 1840 were to the value of $£ 5,600,000$, in 1849 had increased to nearly $£ 9,000,000$. The articles of export are far more numerous than those of import, the latter being chiefly raw cotton, wool, and colonial produce. The former are principally coal and flax, tissues of flax, cotton, and wool; glasswares, firearms, and nails. In 1853 there were sent to Great

Britain nearly $7,000,000$ eggs; wool (sheep's and lambs'), $1,760,916$ lbs.; glass (flint) 142,530 lbs.; plate glass, 9598 sq. it.; poultry and game (value) $£ 15,381$.

Little more than a half of the foreign commerce of Belgium is of a substantive nature, the rest depending on her position and polity, as a trading intermediary for the produce and goods passing to and from the states of the German Zollverein, the Netherlands, Britain and leer colonies, America, $\& c$. Thus it appears that the value of the direct exports in 1850, from Belgium to the United States, was about $£ 660,000$; from the United States to Belgium, about $£ 1,300,000$; but these figures give us no clear idea of the balance of trade between the two countries, as much of the American produce, finally destined for Belgian use, is borue first to Britain, \&c.; while, on the other hand, not a few manufactures of Belgian origin pass to the United States through France. To the latter country, in fact, more than a third of the whole exported products of Belgium is sent. Of similar character, probably, is the Belgian trade with Turkey, the imports from which, in 1850 , were valued at fully $£ 150,000$, and the exports thither to not quite $£ 30,000$.
The external trade of Belgium is cliefly carried on by means of foreign vessels. The returns for 1849 , indeed, give a list of 161 ships, \&c., employed in deep-sea voyaging; but not more than five of these were of considerable burden. In that year, the arrivals of vessels in Belgian ports from foreign countries were 2424 ; total tons of their cargoes, 268,931. Belgium is, in fact, much more of a manufacturing than a trading country.
The commercial intercourse between Belgium and Great Britain is considerable. From the reports of the Board of Trade, published in 1855, the following table of the chief articles of British export has been drawn up:-

| Goods and Producr. | Years. |  |  |
| :---: | :---: | :---: | :---: |

People.-The Belgium population is the densest in Europe, and is composed of two distinct races-Flemish, who are of German, and Walloons, who are of French extraction. The former, by far the more numerous, have their principal locality in Flanders; but also prevail throughout Antwerp, Limburg, and part of S. Brabant. The latter are found chiefly in Hainaut, Liege, Namur, and part of Luxembourg. The language of each corresponds with their origin-the Flemings speaking a dialect of German, and the Walloons a dialect, or, rather, corruption of French, with a considerable infusion of words and phrases from Spanish and other languages. This distinct mixture of races, and the repeated changes of masters to which they have been subjected, have necessarily been very unfavourable to the formation of a national character. Still, in some leading features, there is a remarkable uniformity in the population. Though the position of the country between France and Germany has made it the battle-field of Europe, the inhabitants show few warlike tendencies, and are unwearied in pursuing the arts of peace. Hostilearmies have irequently met upon their soil to decide the fate of kingdoms, carrying devastation into every quarter; but no sooner have they withdrawn, than the labours of the field and the workshop have been quietly resumed, and the very traces of devastation been, in a few years, cffaced. The tact bears strong testi-
mony to the patient cndurance of the Belgians,
a deficiency both of physical and moral courage, and thus prepares us for another leading feature in their character-their blind and slavish subjection to the Romish see. Protestantism is fully tolerated, and even salaried by the state, but cannot count above one-twentieth of the population among its adherents. One astunishing circumstance connected with this state of matters is, that Belgium early embraced, and at one time seemed on the eve of being gained to, the leformation. Persecution of the most fearful kind took place, and did what, perhaps, it has never done in any other part of the world, not only forced the people back to a religion which they had renounced, but induced them to return to it as willing converts. Where such a spirit prevails, education of an enlightened kind cannot have made much progress. Numerous schools, partly free and partly supported by the state, are planted througlout the kingdom; but the instruction given is of the most elementary description. Under the Dutch, attendance at these schools was compulsory. It has since become voluntary, and is said to have, in consequence, declined. In all the large towns, colleges (athenées) have been estahlished, where a superior education may be obtained, while a complete course for the learned professions is provided by four universities; two of them at Gihent and Liege respectively, established and supported by the state; one at Brussels, called the free university, founded by voluutary association; and one at Louvain, called the Catholic university, founded by the clergy, and apparently the most flourishing of all. Many of the professors in these universities are of distinguished reputation; but their works, written in French, which is still the official language, and in general use among the clucated classes, can scarcely be regarded as forming part of a national literature. Of late, however, patriotic feelings, to which the Belgians have too long been strangers, have acquired new strength; and one of its first manifestations has been an eager desire to cultivate the vernacular Flemish. It is said to possess great power and flexibility, and several works have already appeared in it, which bid fair to make it a classic language. The population, generally, is moral, and apparently in comfortable circumstances. The far larger proportion of it is rural; and though property is very much subdivided, the Belgians, instead of exhibiting the wretchedness so common among the small occupiers in Ireland, manage, by a happy combination of agricultural with other industrial employments, to derive from their little tenures all the necessaries, and not a few of the comforts of life. It is not to be denied, however, that in some of the provinces, particularly in Flanders, population, in so far, at least, as it can be maintained by agricultural resources, has reached its limit; and that a deficiency of other employment, particularly spinning and land-loom weaving, has placed large numbers on, if not within, the verge of pauperism. In Flanders and S. Brabant, a fourth of the people is dependent on total or occasional relief; and pauper riots have repeatedly occurred. Still, the population continues to move on, as if with accelerated pace. In 1841, it was $4,067,393$; and in 1849, 4,359,090.

Government. -The Belgian constitution combines monarchical with a strong infusion of the democratic principle. The executive power is vested in a hereditary king; the legislative in the king and two chambers, the senate and the clamber of representatives; both elected by citizens paying about 35s. of direct taxes-the former for eight years, and the latter for four; but one-half renewable every two years. The chief divisions of the territory is into nine provinces, each of which is administered by a governor, and is subdivided into arrondissements administratifs, and arrondissements judiciaries; subdivided again, respectively, into cantons de milice and cantons de justice de paix. Each canton is composed of several communes, of which the sum total throughout the kingdom is 2514. The other great territorial divisions are the ecclesiastical, which divides the kingdom into six dioceses; and the military, which divides it into four sections. The army has an effective force of $90,000 \mathrm{men}$, with a rescrve of the same amount; but all citizens between the age of 21 and 50 are enrolled in the garde civique, and form a militia of not less than 500,000 . The defensive power of the kingdom is greatly increased by numerous strong fortresses. The navy of Belgium is confined to a few steamers and a small flotilla of gun boats. The public revenue for 1850 , derived chiefly from direct taxation and dues of transport, amounted to $£ 4,636,420$.

The expenditure amounted to $£ 4,670,206$. About one-third of it was absorbed by the interest of the debt, the sum total of which, at the same date, was $£ 39,747,060$. The coins, weights, and measures are the same, both in name and value, as those of France (which sec).

History.-The first mention of the eountry is made by Julius Cæsar, who ineludes it in one of the three divisions of Gaul, and deseribes its inhabitants as particularly distinguished for valour. It continued under Roman domination till A.D. 409, when it becanc part of the empire of the Franks; which, under Clovis, extended from the Rline to the Loire. On the death of Clovis, in 511, it was divided among his sons, and formed four separate kingdoms. Ultimately, about A.1. 800, they all merged in the empire of Charlemagne. In the partition which took place on his death, almost the whole of modern lelgium fell to his son Lothaire. It was afterwards subdivided into several duchies, which, having been gradually absorbed by that of Brabant, passed with it to the house of Burgundy, in 1406 , and continued with it till 1477, when, by the marriage of Mary, heiress of Charles the Bold, it became united to Austria; and shortly after formed part of the extensive dominions of the Emperor Charles V. Through him, Belgium was united to the Spanish monarely. On the peaee of 1714 , it was ceded to Austria; which maintained its possession till 1791, when the armies of the French republic overran the country, and portioned it out into nine departments, as part and pareel of France. On the downfall of Napoleon, the allies united Belgium and Holland, under the king of the latter, into the kingdom of the Netherlands. The union was never harmonious, and proved short-lived. Taking advantage of the agitation caused by the expulsion of the Bourbons from France, in 1830, the Belgians revolted, and obtained a recognition of their independence. They have since enjoyed great prosperity under the enlightened and constitutional government of their own king, Leopold I. The recent changes in France were generally expected to produee corresponding changes in Belgium; and thousands of Frenchmen proceeded to the frontier to bestow the benefits of their republicanism. The Belgians, by the decisive manner in which they rejected the boon, proved that they are both sensible of the better blessings whieh they already enjoy, and prepared, if necessary, to defend them. -(Meert's Belgique ; Almanach Royal de Belgique ; Almanach de Gotha; Das Gegenwart; Parliamentary Papers.)

BELGRADE [ane. Sigindunum; Latin, Alba Graca, Bellogradia], a fortified eity, N. part of European Turkey, cap. of Servia, r. bank, Danube, at the junction of the Save with that river; lat. $44^{\circ} 47^{\prime} 46^{\prime \prime}$ N.; lon. $20^{\circ} 39^{\prime}$ E.; on the declivity of a hill. It is composed of the citadel, rising in the centre, and situated on a rock 100 ft . high; the lower town stretching W.from the eitadel to the river; and the suburbs, laizenstadt on the Save (opposite to the mouth of which river is the island Zingaris), and Palanka on the E. and S., leaning upon the height on which the citadel stands. The houses are, in general, very mean; the streets filthy in the extrome, and infested by swarms of half-famished dogs; and the shops consist wholly of a series of wooden stalls or booths, open towards the street, and, in general, poorly stoeked. The only public buildings worthy of notiee are the caravansary, the college, the two exehanges, and the two bazaars, the residenee of Prince Milosch, a Greek chureh, and the barraeks. Belgrade was at one time strongly fortified, and might still be readered almost impregnable; but its works have been neglected, and are now rapidly decaying. Within the fortress are the arsenal and magazines erected by the Austrians, the principal mosque, with its lofty tower, and the palace of the pasha, the latter composed of wood and mud. The garrison maintained in the citadel is in keeping with its ruinous condition, eonsisting of a few half-diseiplined, ill-equipped, and miserably paid Turkish soldiers. The principal artieles of manufacture are carpets, silk stuffs, hardware, cutlery, and saddlery; hut the quantities produced are inconsiderable, compared to what they were in former times, when Belgrade was celebrated for the extent of its manufactures. From the excellence of its port, formed by three islands in the Danube, above the town, and its favourable position on the Danube, which gives it an easy communication with the Black Sea, it still earries on a pretty extensive trade. The military experiences of Belgrade have rendered it famous in listory. Being the key of llungary, it was long an object of fierce contention between the Austrians and the

Turks. It was besicged by the latter in 1456; and again, with more success, in 1522, from which time it was held by them till 1688, wheu it was retaken by the Elector of Bavaria. Two years afterwards, it was again captured by the Turks, who perpetrated every sort of atroeity in the conquered city, besides killing 1200 of the garrison. In 1693, the Austrians made an unsuccessful attempt to regain the town, sustaining a loss of 1000 men. From this period it remained in possession of the Turks till the year 1717, when it was besieged by Prince Eugene, with an army of 90,000 men; the Turkish garrison amounting to 25,000 men, supported by a strong flotilla on the Danube, and subsequently by an army of 200,000 men, under the Grand Vizier, who marehed to the relief of the city. After a desperate conflict between the contending armies, the Turks were defeated, with a loss of 13,000 killed, 5000 wounded, and 3000 prisoners; the Austrians having only 3000 killed and 4500 wounded. In 1739 , the Turks made another vain attempt to retake Belgrade; but eame, soon after, into possessio: of it by treaty, retaining it till 1789, when it was taken by the Austrians, who restored it to the Turks in 1791 ; since whieh time it has remained in their possession, except for a short period during the Servian insurrection, when (1813) its suburbs were burned and its fortifications partly destroyed. Pop. 30,000.

BELGRAVE, par. Eng. Leicester; 3450 ac. P. 2609.
BELHAVEN, a small marine vil. Seotland, co. of, and 10 m . N.E. Iladdington, and half a mile S.W. Dunbar, beautifully situated at the head of a small bay. The houses are of stone, and most of them neatly buitt; and in the vieinity are several handsome mansions. Water is abundant, and a supply of gas is obtained from Dunbar. Belhaven has a chapel in connection with the Establisliment. Ale is the only manufacture, for the making of which there is here erected an extensive brewery. The locality is remarkably healthy, and forms, altogether, a very desirable summer retreat; enlianced for such purpose by a mineral spring lately diseovered there. Belhaven gives the title of Baron to a branch of the family of IIamilton. Pop. 380.-(Local Correspondent.)

BELIIELVIE, par. Seot. Aberdeen. Pup. 1594.
BELIDA, or Blina, an inland tn. Algeria, at the foot of the Lesser Atlas, near the plain of Metidjah, 30 m . S. the town of Algiers. It is surrounded by a wall, entered by four gates. The streets are comparatively wide, and the supply of water abundant. The adjoining country is fertile, yielding grain and all sorts of fruit in great quantitics, including, amongst the latter, oranges and olives. To these, and spices, the trade of the place is chicfly confined. The town was nearly destroyed by an carthquake in Mareh 1825. P. (1849), 8247.

BELITZ, a tn. Prussia, prov. Brandenburg, $12 \mathrm{~m} . \mathrm{S}$. by W. Potsdam. It is surrounded by old walls, and has con siderable manufactures of linen. Flax is grown extensively in the neighbourhood. Pop. 2000.-TThere are several other small places of this name in Prussia.

BELIZE, or Balaze, a tn. British IIonduras, or the Settlement of Belize, Yucatan, Central Ameriea, situated at the mouth of the river of the same name, whieh is erossed by a substantial wooden bridge; lat. $17^{\circ} 29^{\prime} 18^{\prime \prime} \mathrm{N}$. ; lon. $88^{\circ} 12^{\prime}$ W. (r.) It consists of a long street, running parallel to the sea-shore, from which three or four sinaller streets diverge. The houses are construeted entirely of wood, and are raised 8 or 10 ft . from the ground on pillars of mahogany; they are well built, spacious, and convenient. The town scems almost entirely inhalited by blacks; the streets, stores, and market places being thronged with them. They are deseribed by Mr . Stephens as a fine-looking race, tall, straight, and athletie, and well dressed-the men in white cotton shirts and trousers, with straw hats; the women in white froeks, and short sleeves, and broad red borders, and adorned with large car-rings and neeklaces. During the three dry months of the year, April, May, and June, fresh water is extremely searee here, and, indeed, throughout the whole settlement, there being no rivulets, and the water of the river being braekish for several milez upwards. The consequence is, that the inhabitants, at this season, are compelled to have recourse to wells about 3 ft . in depth, from which they procure a muddy, braekish, and fetid water, injurions to health, and productive of a variety of disorders. Strenuous efforts are now being made to remedy this evil, both by the Government and the European public of Belize; and considerable sums have already been
expended in sinking wells. An iron market-house has re eently been erected in the town, for which $£ 4000$ was voted. A savings'-bank has been established, under the gaurantee of the local legislature. There are, also, a public hospi-

tal, a dispensary for the relief of the poor, an asylum for the reception of lunaties, and a grammar-school, conducted on the Madras system, and whieh was attended, in 1847, by 100 pupils, while in the year before the number was only 75. This school, which is entirely supported by the local government, has a department for girls annexed. The Baptists and Wesleyans have chapels here, with schools con-neeted-the former, one; the latter, two. There are five judieial courts in Belize-the court of ordinary, and the supreme, grand, summary, and police courts. It is also the seat of the Honduras legislation. The anchorage in front of the town is excellent, being protected from the heavy swells of the open sea by the numerous cays; but is adapted for vessels of moderate size only. Belize is said to have obtained its name from a noted bucancer, called Wallace, by whom it was first discovered. The name was written Waliz by the Spaniards, and subsequently corrupted into Belize, as it now stands. For trade, \&c., sce Honduras (British).

BELK, or Hummock Island, an isl. Asiatic Arehipelago, one of the Serangani Islands; 23 m . S. Serangani Point, isl. Mindanao; lat. $5^{\circ} 24^{\prime}$ N.; lon. $125^{\circ} 21^{\prime}$ E. (r.)

BELL ROCK, or Incir CApe, a dangerous reef off the E. coast of Seotland, in the German Ocean, opposite the Frith of Tay, 12 m. S.E. by S. Arbroath, and about the same distance N.E. Fife Ness ; lat. $56^{\circ} 26^{\prime}$ N.; lon. $2^{\circ} 23^{\circ}$ W. (r.) The reef, which is of a reddish sandstone, is about 850 yards in length, and 110 in breadth. At low water, some of its highest parts are from 4 to 8 ft . above the level of the sea, but at high water the whole is covered, in some places to a depth of about 12 ft . In stormy weather the sea breaks over it with tremendous fury, and many vessels have been lost on it, as it lies in a much frequented track. To prevent as much as possible the recurrence of such disasters, a magnificent lighthouse was erected on one of its points in 1808-10, at an expense of $£ 61,331$. The total height of the building, including the light-room, is 115 ft ; the lantern being elevated 90 ft . above the sea at high-water mark. The light is revolving, the flashes succeeding each other every two minutes. During
foggy weather, bells are tolled every half minutc. In ancient times, there was a solitary bell on the rock, which was rung by the action of the waves, and warned vessels of their danger. The eircumstance, according to tradition, of this bell having been sunk by a Dutch pirate, who was himself, in consequence, afterwards wreeked on the reef, has afforded subject for an impressive ballad by Southey, called 'The Inch Cape Bell.'

BELL'S (King) TOWN, a tn., W. Afriea, 1. bank, Cameroons River, near its embouchure in the Bight of Biafra; lat. $4^{\circ} 2^{\prime} \mathrm{N}$.; lon. $9^{\circ} 41^{\prime} \mathrm{E}$., cap. of a self-styled regal chief of Guinea. The houses are neatly constructed of bamboo, in wide and regular streets, interspersed with plantain and cocoanut trees. The King's house is well built, with a raised story, surrounded by a verandah. A spacious saloon oceupies the whole front, and is filled with European goods in chests, and piles of crockery; figures and looking-glasses in abundance adorning the walls.-(Allen's Niger Expedition.)

BELLA, a tn. Naples, prov. Basilicata, 15 m . S. W. Melfi on a hill. It has a eollegiate and one other church, an hospital, and three charitable institutions. Pop. 5800.

BELLA ISOLA. See Borromean Isles.
BELLAC, a tn. France, dep. Haute Vienne, on the slope of a hill on the r. bank, Vinçon, 23 m . N.N.W. Limoges. It has manufactories of cloth, pajer, table linen, hats, and leather, with a considerable trade in horses, cattle, mules, oak wood, \&c. Pop. 3166.

BELLAGIO [Latin, Bilacus], a tn. Austrian Italy, gov. Milan, cap. dist. of same name, prov. of, and 15 m . N.N.E. Como, on the l. bank of the lake of that name, at the extremity of the promontory which divides the lake into two arms. Here are several beautiful villas, and it is said that here Pliny the younger had his country-house. Pop. 2258.

The district is, for the most part, fertile; but in some parts hilly and well wooded. Pop 9051.

BELLANO, a tn. Austrian Italy, gov. Milan, cap. dist. of same name, prov. of, and 26 m . N.N.E. Como, at the mouth of the Pioverna, on the E. shore of Lake Como. It is well built, has a bandsome principal strcet, an archiepiscopal palace, and several curious natural caverns. Pop. 2135.-The District is very productive, and it pastures large herds of cattle. Pop. 7685.

BELLARY [Valahari], a collectorate, Ilindoostan, presidency of Madras, part of the Balaghaut ceded distriets. It occupies the W. section of Balaghaut, but its limits have not been well defined. The prineipal towns in it are, Bellary (the eapital), Bijaragur, Adoni, Gooty, and Curnoul. It is watered by the Krishna, Toombudra, and Vadavati; and yields cotton, but not in large quantities.-The town, cap. of the above collectorate, the head-quarters of a civil establishment and military division, is 272 m. N.W. Madras; lat. $15^{\circ} 5^{\prime} \mathrm{N}$. ; lon. $76^{\circ} 57^{\prime} \mathrm{E}$. The fort is a square building, on an isolated rock, very difficult of access, and protected by three distinct ranges of works, one above the other. The pettah, or small fortified town below, is spacious, and contains perhaps the most regular military bazaar in India.-BelLAEY is also the name of a tn., prov. Allahabad, $50 \mathrm{~m} . \mathrm{N} . \mathrm{E}$. Gurral,, where are several fine Hindoo temples, and the ruins of a large town.

BELLAS, a tn. Portugal, prov. Estremadura, 9 m. N.W. Lisbon, 1. bank, Aneelva. The chalybeate waters in the neighbourhood are highly valued. Pop. about 3446.

BELLE-ALLIANCE, a farm-house, Belgium, field of Waterloo, r. side of the highroad to Brussels, and about 2 m . S. Mont St. Jean. Here Napoleon marshalled his guards for their last effort at Waterloo, and here Wellington and Bliicher met after the battle was gained.

BELLEEAU, par. Eng. Lincoln; 650 ac. Pop. 193.
BELLEEK, par. and vil. Irel. Fermanagh; 12,849 ac. Pop. 2875.

BELLEGARDE, the name of 12 or 13 small towns and villages in France. One in dep. Pyrérées-Orientales, is a fortification of the first elass, intended to command the pass of Perthus, between France and Spain.

BELLEGIIEM, a tn. and com. Belgium, W. Flanders, 3 m. S. Courtray; with brewerics and oil-mills, and some trade in flax and thread. Pop. 3233.

BELLE-ISLE-en-mer [anc. Colonesus, Pulchra insula], an isl. France, dep. Morbihan, in the N. part of the Bay of Biscay; lat. (lighthouse) $47^{\circ} 18^{\prime} 42^{\prime \prime} \mathrm{N}$. ; lon. $3^{\circ} 13^{\prime} 30^{\prime \prime}$ W. (R.) ; 11 m .
long, and about 6 broad. It is almost entirely surrounded by rocks, but is accessible by vessels at low water. Le Palais is the chicf town, and has the best of the three harbours on the island; the depth of water, however, seldoin exceeds 5 ft . It is defended by a citadel. The island is fertile, and produces excellent wheat. There is also a considerable extent of rich pasture, on which 700 or 800 horses of the best Breton breed are annually reared. Fresh water, of good quality, is abundant; and, about $1 \not \frac{\mathrm{in}}{}$. from Le Palais, may be seen the reservoir of Port Larron, constructed by Vauban, for the supply of water to the slips of the French navy. On the S. W. part of the island, a light of the first class is situated, 276 ft . above the sea level, and can be scen from a distance of 19 m . Several druidical monuments are to be found in the island. The English took possession of Belle-isle in 1761, but restored it to France at the peace of 1763 . Pop. about 6000 .

BELLEE ISLIE.-1, An isl. and strait, British America. The former is situated hear the middle of the N.E. entrance to the strait of the same name, 15 m . N . from the most N . point of Newfoundland, and about the same distance E. from the coast of Labrador; lat. (N.E. point) $52^{\circ} 1^{\prime} \mathrm{N}$. ; lon. $55^{\circ} 17^{\prime}$ W. It is ahout 21 m . in cireumference ; and has a small, but convenient harbour, on its N.W. side. The fisheries round the island are said to be of great value, but have hitherto been, in a great measure, monopolized by the French.- The strait is a chamel between the N.W. coast of Newfoundland and the coast of Labrador, on the continent of N. America. Its length is about 80 m ., and its breadth about 12. It is considered unsafe, and therefore little frequented.- 2 , Two other small islands, Newfoundland. One on the N.E. coast ; lat. $50^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $55^{\circ} 25^{\prime} \mathrm{W}$.; and the other on the S.E. coast, in Conception Bay, about 20 m . N.W. St. John.

BELLEM, a vil. and com. Belgium, prov. E. Flanders, 19 m . W.N.W. Gihent; with a considerable manufacture of sailcloth, a brickwork, an oil and a corn mill. The eanal from Ghent to Bruges traverses the commune from E. to W. T'op. 1847.

BELLEME, or Bellesme, a tn. France, dep. Orne, 10 m . S. Mortagne. The streets are neat, elean, straight, and well paved. It has masufaetures of cotton, table linen, canvas, cotton yarn, and paper; and has a good trade in corn, ship-timber, cotton goods, horses, and eattle. Pop. 3241.

BELLEVILLE.-1, A vil. France, dep. Seine, 3 m . from Paris, built in an agreeable situation, on an eminence, for the most part covered with country-seats. It has very much increased within the last 50 years, and now forms almost a suburb of the metropolis. It has numerous guinguettes, tea gardens, and other places of amusement, much resorted to by the Parisians. On the hill of Belleville are springs of water, which supply the capital by an aqueduet, which is one of the most ancient in the neighbourhood of Paris, being mentioned as early as the year 1244. It has manufactures of varnished leather, clemical stuffs, articles in polished steel, \&c.; and spinning-mills for fine woollen yarn, which is wovin into caehemires. Pop. (1846), 24,235.-2, Belleville-sur-Saîne, a tn. France, dep. Rhône, 8 m . N.N.E. Villefranche. It has manufactures of calieo and embroidery; and earries on a considerable trade in casks, and in wine produced in the vicinity, which is sent to Paris and the N. of France. Pop. 1870.-3, A vil., U. States, New Jersey, $3 \frac{1}{2} \mathrm{~m}$. N.E. Newark. It has an episcopal and several other churelies, with a varicty of schools; fine mill-streans, and varions kinds of manufactories. The calico printing-works are extensive. Pop. 2466.

BELLEY [anc. Bellica], a tn. France, dep. Air, cap. arrond., 39 m. S.E. Bourg, and 38 m. S.W. Geneva, agreeably situated between two lills, a short distance from the Rhone, in a fertile valley, watered by the Furan. A suspension bridge across the Rhone, at Balme-sous-Pierre-Chatel, connects France with the magnificent road of the Mont-du-Chat, leading to Italy by Cbambery and Mont Cenis. The town is very ancient, having been a place of note in the time of Julius

Cæsar, and is the seat of a bishopric, founded in 412. It contains a commual college, agricultural society, and court of primary resort. The episcopal palace, the belfry of the cathelral, the college, and the rieh cabinet of medals and antiquities, are worth notice. Muslins and Indianas are made here. Silkworms are reared; and lithographic stones, reckoned the best in France, are obtained from quarries in the neighbourhood. Pop. 3666.

BELLHEIM, a market tn . Bavaria, circle, Pfalz, about 5 m . from Germersheim, on the Spiegelbach. It is a place of great antiquity, being noticed so early as the eighth century ; and has two churehes-a Protestant and a R. Catholic. Pop., chiefly agricultural, 2375.

BELLIGAM, a tn. Ceylon, prov. same name, situated on a sinall, but beautiful bay, between Matura and Point de Galle. The houses are scattered among eocoa-nut groves. It contains many religions edifices, in one of which is a colossal figure of Buddha, in a reclining posture. The inhabitants, who are composed of Singhalese and Moors, are chiefly employed in fishing.-(Ceylon Gaz.)

BELLINGEWOLDE, a vil. Holland, prov. of, and 27 m. E.S.E. Groningen, in a moorish district on the Hanoverian frontier. It has a chureh, and two schools. The inhabitants are mainly employed in agriculture. Pop. 1500.

BELLINGHAM, a market tn. and par. England, co. Northumberland. The town, pleasantly situated on a declivity, 1. bank, N. Tyne, contains an ancient church, the only one in the distriet which has survived the Reformation, one Presbyterian, and one R. Catholic chapel. Area of par. $15,540 \mathrm{ac}$. Pop. of par. 1730 ; of tn. 672.

BELLINGHAUSEN ISLAND, one of the Society Islands, S. Pacific Ocean; lat. $15^{\circ} 48^{\prime}$ S.; lon. $154^{\circ} 30^{\prime} \mathrm{W}$. (n.) about 350 m . N.N.W. Tahiti.

BELLINZONA [German, Bellenz], a tn. Switzerland, one of the three caps. of can Tessin or Ticino, 1. bank, Ticino,

BFLLINZONA. - From Sazerac, Lettres sur la Suisso.
here crossed by a stone bridge of 10 arehes, and about 5 m . from its embouehure in the N. end of Lago Maggiore. It occupics the whole breadth of the narrow valley in'which it stands. The walls and ditehes prevented the increase of the town, the houses of which, built of stone, have a regular appearance, and are mostly built over arcades, but form narrow and dirty streets. It is a place of some commercial importance, as an entrepot for the merehandise of Ciermany and Italy, and from its position at the union of the four roads from the St. Gothard, the Bernardin, and from Lugano, and Locarno on the Lago Maggiore. It contains an arsenal, prison, Benedictine college, some silk-mills, and tanneries. Pop. 1520.

BELLOVAR, or Belovar, a fortified tn. Austria, Croatian military frontier, on the Belovar, 12 m . S.E. Kreutz; lat. $45^{\circ} 56^{\prime} \mathrm{N} . ;$ lon. $16^{\circ} 46^{\prime} \mathrm{E}$. It has two ehurehes, and a seminary of Piarists, all handsome structures ; a grammar-school,
and an hospital. A considerable quantity of silk is spun and exported, and the potteries, which are numerous and extensive, produce wares which are in great repute, not only in Croatia, but the surrounding provinces. Pop. 2800.

BELLUNO, a prov. Austrian Italy, gov. Venice, bounded N. and W. by Tyrel, E. by prev. Friaul, and S. by provs. Treviso and Vicenza; area, 1088 geo. sq. m.; divided into eight circles. It is mountainous; its principal stream is the Piave, and the only lakes of note are Capicino and Allegho. Grain, wine, fruits, and timber, are produced plentifully, and its rich pastures feed a large number of cattle and sheep. It likewise yields copper, lead, iron, alum, sulphur, chalk, pipeclay, and marble. Pop. 125,000.

BELLUNO [Latin, Bellunum], a tn. Austrian Italy, gov. of, and 48 m. N. Venice, cap. of above prov., on a hill, r. bank, Piave, at its junction with the Ardo. It is well built, and fortified, and contains, besides the cathedral planned by Palladio, several churches, convents, and hospitals; an extensive public library founded by the prelate Lollini, a gymnasium, and several other educational institutions. It has a considerable trade in timber, wines, and fruits; and has manufactories of wax, silk, leather, hats, and earthenware. The town is supplied with water from a considerable distance, by means of an aqueduct. It is the see of a bishop, who had formerly the title of Count of Bellune, and is the residence of the governor of the province. From this town, Victor, one of Bonaparte's marshals, took his title of Duke of Belluno. Pop. 10,000.

BELLUS, or Belussa, a market tn. IIungary, co. of, and 16 m. N.N.E. Trentschen, l. bank, Waag. It is governed by its own magistracy, has a parish church and a chapel, a considerable manufacture of carthenware, and a sulphur spring. Pop. 2330.

BELMONTE.-1, $\Lambda$ tn. Spain, New Castile, prov. of and 45 m. S.W. by S. Cuenca, on the declivities of two small lills in the extensive plain of La Mancha. It has irregular and badly-paved strects, two squares, two churches, a townhouse, hospital, school, prison (once a Jesuits' college), and some convents. The inhabitants are chicfly engaged in tillage, but they also weave some woollen stuffs, and express oil. lop. 2533.-2, A coast tn. Brazil, prov. Bahia, at the mouth of the Jequitinhonha, also called the Rio Grande or Belmonte; lat. $15^{\circ} 54^{\prime} \mathrm{S} . ;$ lon. $38^{\circ} 30^{\prime} \mathrm{W}$. It consists of three straight streets, each of upwards of 80 houses, surrounded by palmtrees, which give the place an agrecable aspect; and has a church, townhall, prison, and primary school. The port is inconsiderable, and is impeded by a sand bar at the mouth of the river; still it admits coasters, and has communication up the river with the interior of the province of Minas Geraes, whence, from Minas Novas, considerable quantities of salt are brought. Pop. 600.-3, A tn. Naples, prov. Calabria Citra, 13 m. S. W. Cosenza, on a mountain not far from the Mediterranean. It has a citadel, and four churches. Silkworms are reared in the district. Pop. 2914.-4, A small tn. Naples, prov. Sannio, 18 m . N.E. Iserna-- 5 , A small tn. Portugal, prov. Beira-baixa, on a hill overlooking a fertile valley, 15 m . S. Guarda. Pop. 1144.

BELMONTE (Rio). See Jequitinhonifa.
BELMULLET, a small tn. and port, Ireland, co. Mayo, $32 \frac{1}{2} \mathrm{~m}$. W.N.W. Ballina, consisting of two strects, and a small central square, a session-house, \&c. Corn and fish are exported, and timber, iron, slates, and other requisites imported. Many of the inliabitants are engaged in fishing. Pop. 637.

BELCEIL, a tn . and com. Belgium, prov. Hainaut, 16 m . E.S.E. Tournai, on the road to Mons. It is chiefly remarkable for its old castle, built in 1146 , now the seat of the Princes de Ligne. With its gardens and parks, it forms a noble domain; and its interior is rich in pictures and other objects of art and curiosity. The commune of Belœil is one of the loveliest in the province, and exports various kinds of agricultural produce, as well as cattle. It has several breweries, two salt-refineries, and a tannery. Many of the inhabitants live by tambouring. Pop. 2429.

BELOOCHISTAN, or Baloochistan, an extensive country, S. Asia, lying between Persia and the valley of the Indus, having the former on the W., Afghanistan on the N., Scinde on the E., and the Arabian Sea on the S.; extend ing from lat. $24^{\circ} 50^{\prime}$ to $30^{\circ} 40^{\prime} \mathrm{N}$.; and from lon. $58^{\circ} 51^{\prime}$ to $67^{\circ} 30^{\prime}$ E. ; greatest length, E. to W.. about 600 m. ; greatest Vol. I.
breadth, N. to S., 380 ; area, 160,000 sq. m . Its sea-coast from Cape Monze, or Ras Moaree, to Cape Jask at the W. extremity, is of remarkably uniform outline, about 630 m . in extent, and has several well-sheltered roadsteads, particularly Soumeanee Bay and Cboubar Bay, bnt no good larbours. Beloochistan is a little-known country, consequently in describing it, only an approximation to accuracy can be attained. It comprises seven divisions, or provinces :-1, Cutch Gundava on the N.E, bordering E. on Scinde, and N. on Afghan-istan.-2, Sarawan, bounded, N. and W. by Afghanistan, and E. by Cutch Gundava.-3, Kelat, in which is the reputed capital of the country of the samename, bounded, E., N., and W., by the two provinces already nained, and S. by Jhalawan.-4, Jhalawan, bounded, N. by the three preceding provinces, E. by Scinde, W. by prov. Mekran, and S. by Lus.-5, Lus, bounded E. by Scinde, S. by the Arabian Sea, W. by Mekran, and N. by Jhalawan.-6, Mekran, or Mukran, occupying the whele breadth of the country, from the desert of Afghanistan on the N., to the Arabian Sea on the S., and bounded, E. by Jhalawan and Lus, from which it is separated by a ridge of mountains, and W. by Persia and Kohistan; from the latter of which it is separated by the Bushkurd mountain-range. -7, Kohistan, the mountain-country, and the most W. province, bounded, E. and S. by Mckran, W. by Persia, and N. by Seistan. IIarrand and Dajil, included in some enumerations, appear properly to belong to Scinde. The provinces will be found noticed in separate articles, in their proper place.

Surface and Geology.-The general surface of Beloochistan is rugged and mountainous, with some extensive intervals of barren sandy deserts. The direction of the numerous moun-tain-chains with which it is intersected, are almost wholly unknown, with exception of a few of the principal ranges, and of these the general parallelism and uniformity are sonewhat remarkable, one system having an inclination from N. to S., another more palpably from E. to W. ; of the latter; one vast clain stretches along the entire coast, from the vicinity of Ras Jask on the W., to the river Pooralee on the E., apparently a continuation of the great mountain-systems of Armenia Azerbijan, Kurdistan, and Luristan, which, nniting at Shiraz, hold on their course in a single range to the valley of the Indus. Parallel to this range, and at the distance of about 70 m . N. from it, another well defined chain intersects Mekran, stretching from about lon. $60^{\circ} 30^{\prime}$ to $65^{\circ} 30^{\prime}$ E., where it joins the Sarawanee Mountains near Beila. A third parallel range, called the Wushutee, or Mue Mountains, about 110 m . N. from the last-described chain, forms part of the N. boundary of Beloochistan, separating it from the great S. desert of Afghanistan. This range is much shorter than either of the other two, being not more than a third of the length of the first, and scarcely a half of that of the second. The other more remarkable chains are the Bushkurd Mountains, stretch ing S.W. to N.E., or from Ras or Cape Jask, to near Sibbo, and forming the S.E. boundary of the prov. of Kohistan. The length of this range may be about 240 m . The Sarawanee Mountains, stretching generally N.E. and S.W. from lat. $26^{\circ}$ to $28^{\circ} 50^{\prime}$ N., thence to $30^{\circ}$ in a N.N.E. direction. The Hala Mountains, forming a part of the E. boundary of Beloochistan, are connected with the elevated region of Afghanistan by the Toba Mountains, of which they may be considered a prolongation. Tracing therr course N. to S., they are found overspreading the N.E. part of Beloochistan with their branches and offsets, in one of which is the famous Bolan Pass, and ultimately terminating at Cape Monze. Many of these mountains are of great height, and covered with snow.

The geology of Beloochistan, like all its other physical features, is but imperfectly known. Some of the mountainchains are of compact limestone, enclosing marine shells and corals, identical with similar objects picked up on the sea-shores at this day. The strata of the Hala range, where it presents a section of great depth in the Belan Pass, exlibits similar formations, the hills being of coarse conglomerate, secondary limestone, and sandstone; of which, also, the more S. portion of the same range, and the low bills cxtending along the coast on the S., are composed. The Kohistan, or hill country in the N.W., bears strong marks of existing velcanic action. Excepting fragments of quartz, found in Lus, primary formations have not been observed in any part of the Beloeche mountains. In the same province is a singular geyser of liquid mud, resembling the Malacuba, or mud volcano of Sicily.

The mineral wealth of the country is believed to be considerable, ineluding gold, silver, lead, iron, eopper, tin, antimony, brimstone, alum, sal-ammoniae, and many kinds of mineral salts, and saltpetre. Rock-salt is common in Kohistan.

Rivers.-Throughout Beloochistan there is a great defieieney of water, particularly in summer. The largest streams are the Dustee, or the Bhugwar, the Bunth, the Sudgec, the Siroo or Tank, the Aghor, the Kurmut, and the Pooralce, all of which fall into the Indian Ocean. In the N. part are the Bolan and the Molloh, which are ultimately lost in the sands of Cutch Gundava. Their courses form the celebrated passes bearing their names, leading from the valley of the Indus to Beloochistan and Afghanistan. The roads through the mountains in this country generally lead through the dry beds of rivers; and the plains are everywhere interseeted by mounds, intended to collect the rain water for the purposes of irrigation.

Climate.-The elimate in the higher parts is extremely cold, particularly during the months of December, January, and February; while in the plains and valleys, the heat in summer is oppressive. Some parts of Mekran are said to be the hottest localities in Asia. Snow falls from October to the end of February; and in some parts, remains continuously on the ground for two months. In February and Mareh, a good deal of rain falls. From the latter month to September is the dry season.

Soil and Produce.-The soil is not in general fertile; but patient industry has rendered the plains and valleys produe. tive in wheat, barley, and millet. The other chief crops are madder, and various kinds of pulse and oil seeds, in the districts principally $\mathbf{N}$. and E. of Kelat; cotton, particularly in Cutch Gundava; and in the low and loot regions, rice, maize in small quantities, indigo of excellent quality, and tobacco. The sugar-cane grows chiefly on the plains of Lus, and the date in Mekran. Vegetables are abundant. The principal esculents are turnips, carrots, cabbages, lettuees, cauliflowers, pease, beans, radishes, onions, celery, parsley, garlie, egg-fruit, and cueumbers. The gardens and orehards in the vicinity of the towns produce the finest fruits, especially figs, apricots, grapes, pomegranates, apples, plums, peaches, almonds, eherries, quinces, pistachio-nuts, and melons of fine flavour and large size. On the sides of some of the mountains, and in the jungle, which generally covers the wide beds of the rivers, trees are numerous, consisting of the juniper, cedar-tree, the tamarind, tamarisk, mulberry, capertree, babool, oriental plantain, ber-tree, ehinar, peepul, mango, walnut, sycamore, wild fig, and willow. The oak, ash, fir, and other trees common in Europe, are unknown.

Tribes, Manners, and Customs.-The inhabitants are divided into two great branches, called Belooches and Brahooees, differing in their language, figure, and manners, and each subdivided into a number of minor tribes. The Belooches are tall, and well formed, and have small bones, long faces, with prominent features, a dark complexion, and black hair. They are indolent and dissolute, avaricious, vindietive, and crucl. The Brahooees, so called from the words bah-roh-i [on the waste], are much shorter and broader than the Belooches; and have large bones, round faces, and flat features, their hair and beards frequently brown. Many of the females are pretty. They are most numerous in the province of Jhalawan, and in the N. and W. parts, but are found everywhere. They have greater physical strength, and are less addieted to raplne and predatory violence than the Belooches. Both races, but particularly the Brahooees, are pastoral. Both races are hospitable, brave, and capable of enduring much fatiguc. They live in rude tents, made of blaek felt or coarse eloth, of goat or camel hair, stretched over a frame of wieker-work. Their usual dress is an under-coat, trowsers gathered at the ankle, and a white or blue tunic of cotton eloth, with a scarf about the waist. In winter, men of rank wear an upper-coat or tunic of quilted eotton, and the lower orders a rough capote of felt or coarse cloth. The dress of the women within doors is much the same as that of the men, excepting that their trowsers are wider, and their cotton tunic is open in front below the bosom, When they go abroad, they muffle themselves up from head to foot in a long sliroud-like mantle. Both Belooehes and Brahooces are of the Soonce sect of Mahometans, and opposed to the Shites. Neither race possesses a written language, and their early histories have not been preserved. The Belooche language resembles the modern

Persian, the Brahooee the Hindoo. The other inhabitants of Belooehistan are few in number, and consist principally of Hindoos, who are found in almost all the towns; Dehwars or villagers, of Persian descent, and speaking the Persian language, who are engaged in agrieultural and other settled pursuits ; and Jets, of Indian origin, who speak a peculiar dialect, called Jetki, allied to Hindoostance, and form the bulk of the fixed population of Cutch Gundava; while others of them lead a wandering life, like the gypsies of Europe. All the Belooches are excellent marksmen, and attached to field sports. Gambling, of varions kinds, is one of their chief amusements. They keep as many slaves as they can maintain, and often domesticate and treat kindly the captives earried off in their predatory excursions. Polygamy is universal. Few, however, have more than two wives. Some of the elicfs have four. Wives are obtained by purehase, payment being made in sheep, \&e. The eeremony of marriage is performed by the mollah or priest, and a man is expected to marry the widow of a deceased brother. On the occurrence of a death, the body is watched for three nights by the friends and neighbours, and the time is passed in feasting.

Animals.-The domestic animals are horses, mules, and asses, camels, and dromedaries ; sheep, goats, cows, and buffaloes. The sheep are generally of the fat-tailed species. The horses are strong, bony, and large, but vicious. The best are to be found in the N. and W., where the breed is mueh improved by the admixture of Arabian and Persian blood. The wild animals are numerous. Leopards, wolves, hyenas, jackals, tiger-cats, and foxes, are found in the jungles; but except on the E border, lions and tigers are rarely seen. There are also wild dogs, wild asses, antelopes, elks, red and moose deer, hares, mongooses, mountain goats, and wild hogs, with varions sorts of monkeys. Reptiles and insects are not common. Of birds, there are almost every kind, including eagles, vultures, kites, falcons, and magpies ; parroquets, mainas, the variety of kingfisher ealled mitu, herons, flamingoes, bustards, black partridges, and snipes. Fowls and pigeons are plentiful; and the thickets in the hot distriets abound with the jungle-fowl. Geese, dueks, and turkeys are not found in the country. On the coast, fish are caught in great quantities.

Trade and Commerce.-The mannfactures of Beloochistan are confined to a few matchlocks and other fire-arms at Kelat, and the trade is very unimportant. Besides horses, the only exports are, grain from Cutch Gundava and Lus, and dates from Mekran; with butter, hides, wool, a few coarse drugs, dried fruits, and vegetable oil. The imports consist of a small quantity of British and Indian silk and cotton manufaetured goods, some metals, rice, betel-nut, sugar, spices, and dyed stuffs ; with salt from Mooltan, and slaves from Muscat.

Gocernment.-The government is despotic, the Khan having unlimited power over life, person, and property. He usually resides in Kelat, and his rule is almost confined to the immediate province around it; the greater part of the country being lield by tribes who acknowledge subjection only to their own ehiefs. He has no standing army, but all the heads of tribes are bound to furnish contingents of men in ease of war, as well as to pay tribute-an obligation which is often evaded. The Khan's revenues are estimated at upwards of $£ 30,000$. He has a great number of household slaves, from among whom he selects fit persons to be appointed governors of towns and provinces.

Modern IIistory.-About the middle of the last century, Beloochistan was made tributary by Nadir Shall, who bestowed it on Nasir Khan, with the title of Beglerbeg or com-mander-in-chief. The latter greatly extended the Belooche dominions, and was the ablest ruler who has ever governed Beloochistan. On his death, in 1795, the country was left in a comparatively prosperous condition; but since the commencement of the present century, especially since 1809 and 1810, it has suffered much from intestine wars and revolutions, and its territorial boundaries have been greatly curtailed. In Mareh 1839, on the advance of the British army of the Indus through the Bolan Pass towards Afghanistan, the conduet of Mehrab Khan, the ruler of Beloochistan, was marked with so mueh hostility, that Major-General Willshire was detaehed to assault Kelat, which, with the citadel, was taken by storm after a siege of a few hours, Nov, 13, the same year. The Khan limself, and about 400 of his troops were slain ; and

2000 of his soldiers became prisoners. In 1840, the governor established at Kelat by the British, with a feeble garrison of sepoys, was overpowered by the Belooches; but, at the close of the same year, the capital was re-occupied by the army under General Nott. In 1841, Mir Nasir Khan, the youthful son of Mehrab Khan, was recognized as ruler by the British, who soon after left the country. Principal town, Kelat. Pop. uncertain, being computed at 450,000 to $2,000,000$, which is presumed to be nearest the truth.- Masson's Journeys in Beloochistan, Afghanistan, and the Punjab; Elphinstone's Account of Cabool; Pottinger's Beloochistan; Mart's Journey from Kurrackee.)

BELORADO, a tn. Spain, Old Castile, prov. of, and 25 m. E. Burgos, l. bank, Tiron. It has ill-made streets, three small squares, as many parish churches, a Latin and two other schools, prison, chapter-house, hospital, some convents, a cemetery, and some vestiges of the ancient walls and castle. Coarse cloth, sacks, linen, and earthenware are made, but tillage is the chief employment. Pop. 1897.

BELP, a tn. Switzerland, can. of, and 5 m . S.E. Bern, at the foot of the Belpberg, near l. bank, Aar, which occasionally inundates it. The mountain of Belp, which extends S. from the town, parallel to the Aar, furmishes excellent grindstones, and some good veined marbles. On its side are the ruins of the castle of Hohburg. Pop. (Protestants), 3146.

BELPASSO, a tn. Sicily, cap. can. same name, dist. of, and 8 m . N.W. Catania, about che same distance S . Mount Etna. Pop. 2500.

BELPECH, a tn. France, dcp. Aude, 14 m. S.W. Castelnaudary, r. bank, Lers, formerly a place of importance, but the religious wars, and several destructive fires, almost annihilated it. Woollen cloths are made here. Pop. 1496.

BELPER, a market tn. England, co. Derby, in a valley, 1. bank, Derwent, over which there is a handsome stone bridge of three arches, 7 m. N. Derby, on the Midland Railway. It consists of several streets, partially paved, lighted with gas, and amply supplied with water from wells and pumps. The older houses of the town are fast disappearing, and are being replaced by handsomer and more commodious buildings, while numerous neat little villas, with flower gardens, orchards, \&c., attached, are fast rising on the elcvated grounds around the town. An elegant new church was built here recently, at an expense of nearly $£ 12,000$, and another is now (1850) in course of erection. There are places of worship, besides, for Independents, Wesleyan and Primitive Methodists, Baptists, Unitarians, and Plymouth Brethren; a national, Wesleyan, and infant school ; a mechanics' institution, library, and two neat alms-houses. Belper owes its prosperity to its cotton, and silk and cotton hosiery manufactures, which are very extensive, the latter said to be the largest in the kingdom, while the former, one company alone, employs 2000 persons. Nails and earthenware are also manufactured here to a great extent. Pop. 9885.-(Local Correspondent.)

BELS'TEAD, par. Eng. Suffolk; 1090 ac. Pop. 261.
BELSTONE, par. Eng. Devon; 2010 ac. Pop. 208.
BELT (Great and Little). -The Great Belt, a strait forming the central communication between the Baltic and the Kattegat, and separating the island of Fuilnen from that of Zeeland. Its length is about 37 m ., its medium breadth 18 m . The depth of its channel ranges between 6 and 26 fathoms. It has many slioals, and the navigation through it is difficult. In autumn and winter, ships have often a rough passage. Owing to the strength of the current it is seldom frozen over, but is ofter much encumbered with drift ice. Lighthouses with fixed lights, chicfly for the purpose of guiding the packets between Fuilmen and Zeeland, have been placed on Knudshoved, an E. promontory of Fiilnen, on IIalstov, on the W. coast of Zeeland, and on Sprogö, a small island which lies in the middle of the strait between these two points, and is constantly wearing away by the force of the waves.-The Little Belt is another strait, forming the W. communication between the Baltic and the Kattegat, and separating the island of Fühnen from the mainland of Jutland. Its length is about 30 m .; its breadth varies from 1000 yards to 12 m .; its depth ranges between 5 and 30 fathoms. The same inconveniences and dangers beset this passage as the former. It is annually frozen up from December to April. The two Belts, with the Sound, form the only communication between the Baltic and the Kattegat.

BELTON, five pars. Eng.:-1, par. Leicester ; 1900 ac. Pop. 718.-2, par. Lincoln; 3120 ac. Pop. 176.-3, par. Lincoln; 8530 ac. Pop. $1706-4$, par. Rutland; 2380 ac. Pop. 402. 5 , par. Suffolk; 2120 ac. Pop. 465.

BELTURBET, a market tn. Ireland, co. Cavan, r. bank, Erne, over which there is a new stone bridge, 8 m . N.W. Cavan. It is irregularly bnilt; has straggling and mean streets, a parish church, a R. Catholic chapel, a Methodist meeting-house, several schools, a small cavalry barrack, a dispensary, and alms-houses for six poor widows. There is a weekly market for corn, which is well attended; and barges with timber, coals, \&c., navigate the Erne to and from the town. Pop. 2070.

BELUGYUN, or Beloogyoon, other names for Balu (which see).

BELVEDERE, a tn. Naples, prov. Calabria Citra, 28 m. N. W. Cosenza, on a hill close to the Mediterranean. It has a fort, several clurches and convents, and three monts-depiété for portioning peor girls. The wine and raisins of the district are of good quality. Pop. 3970.

BELVES, a tn. France, dep. Dordogne, 32 m . S.S.E. Pcrigeux, on the brow of a hill that overlooks several valleys. Its public square is large and handsome, but the streets which terminate in, or open into, the principal street, are narrow and irregular. The extraction of oil from nuts is carricd on here to a large extent. Manufactures:-paper, leather, serges, and hosiery. Belves is the entrepot for the wines and agricultural produce of the district, which are conveyed in boats to Bordeaux. Pop. 1851.

BELYANDO, a river, N. Australia, about 190 m . from the E. coast, to which it runs parallel throughout the greater part of its course. It joins, under the name of Cape River, the Sintor River at lat. $20^{\circ} 25^{\prime}$ S.; lon. $147^{\circ} 3^{\prime} \mathrm{E}$. The portion of the river called the Belyando was discovered by Sir T. L. Mitchell, in 1846; that part called the Cape was discovered, at an earlier period, by Leichlardt.

BELZ, a tn. Galicia, gov. Lemberg, circle of, and 21 m . N. Zolkiew, on the Zolokia, in a plain surrounded by forests. The houses are, for the most part, constructed of wood. There are here an old castle, two handsome churches, and a potash-work. Pop. 2400, of whom 600 are Jews.

BELZIG, a tn. and circle, Prussia, gov. Potsdam. The Town, on a small stream of the same name, 23 m . S.W. Potsdam, has an old castle, three churches, an hospital, and considerable manufactures of linen and woollen cloth, and paper. Pop. 2500.-The CIRCLE, area about 565 geo. sq. m., is flat, and of considerable fertility, producing all the ordinary grain and pulse crops, hops, flax, and some wine. Manufactures both of woollen and linen goods exist, particularly the latter. There are also breweries, distilleries, tanneries, paper, and other mills. A considerable quantity of vermicelli is prepared. Pop. 55,640.

BEMBATOOKA, a tn. and bay, N. W. coast, Madagascar, N.E. or Majunka Point ; lat. $15^{\circ} 42^{\prime} 54^{\prime \prime} \mathrm{S}$. ; lon. $46^{\circ} 20^{\prime} 30^{\prime \prime}$ E. (R.) The town, an insignificant place, is on the N.E. side of the bay, which is large and safe. The entrance to this bay is about $3 \frac{1}{2} \mathrm{~m}$. wide, clear of danger, the dcpths irregular, from 18 or 20 fathoms to 6 and 7 fathoms in some places. This bay is estcemed an eligible place to refresh a fleet of ships. Bullocks are plentiful at $8 s .6 \mathrm{~d}$. each; rice and other articles may also be procured at reasonable prices.

BEMLRIDGE, a vil. England, E. side, Isle of Wight, $4 \frac{1}{2} \mathrm{~m}$. S.E. Ryde. It was formerly a mere collection of fish. ermen's hints, but is now a favourite watering-place.

BEMMEL, a vil. Holland, prov. Gelderland, 3 m . N.E. Nijmegen. It is an agreeable beautiful village, surrounded by shady lanes and rich fields of grain and tobacco, and fine meadows and orehards. It has a Calvinistic and a R. Catholic church, two benevolent societies, three brick fields, and an extensive brewery. Pop. 1200.

BEMPTON, par. Eng. York, E. Riding; 1930 ac. P. 313.
BEN, BEin, or Buein, a Gaelie word, signifying 'an elevated summit,' and applicd with various distinguishing affixes to a number of the highest Scottish mountains, the principal, or, at any ratc, the most widely known, of which are:-1, Benlawers, co. Perth, 31 in. W.N.W. Perth, height, $3945 \mathrm{ft} . ;$ being the fourth highest mountain in Scotland. It is of easy ascent, and the view from it singularly grand and imposing. It is rich in rare and beautiful specimens of alpine plants, in-
cluding Gentiana nivalis. Rutilite, an ore of titanium, a scarce metallic mineral, is found here. Scott speaks of this mountain in the Fair Maid of Perth, as 'The frowning mountain of Benlawers.'-2, Benlcdi, co. P'erth, 2 m . W. Callander, 3009 ft . high. It derives its name from the Gaelic words Beinn-leDia [the hill of Goll], supposed to have been so called by the Druids, who had a place of worship on its summit. The view from it is magnificent, including the Friths of Forth and Clyde, the towering hills of Arran, and a large portion of the Grampian range. Allusion is made to it in Scott's Lady of the Lake:-'Benledi saw the cross of fire,' \&c.-3, Benlomond, eo. Stirling, on the E. side of Lochlomond, from which it rises by a succession of swelling knolls. The height has been variously stated, from 3190 to 3240 ft . On the $\mathrm{S} . \mathrm{E}$. side, it presents a sheer precipice of about 2000 ft . By the usual route to the summit, the distance is 6 m . of continuous ascent, and generally occupies about three hours. The lower regions are finely wooded, and the intervening knolls comparatively smooth and verdant. It commands a prospect of vast extent and sublimity, including the beautiful lake below, with its numerous islands.-4, Benmachlhu or Benmacdhuie, co. Aberdeen. The precise height of this mountain also is uncertain, being variously stated from 4290 to 4305 ft . It disputes with Bennevis, the honour of bcing the highest hill in Scotland.5 , Benmore, the name of three mountains in Scotland, of remarkable elevation-one in co. Perth, 44 m . W. by S . from the city of that name, height, 3818 ft ; a second in the island of Mull, co. Argyle, height, 3168 ft .; and the third in co. Sutherland, height, 3231 ft - 6, Bennevis, co. Inverness, reputed the highest mountain in Scotland, the height assigned to it being 4380 ft . It is thus 809 ft . higher than Snowdon, the highest mountain in Wales, and 1214 ft . higher than Scawfell, the lighest in England. Its circumference at the base is supposed to exceed 24 m . On the N.E. side, there is a tremendous precipice of 1500 ft . sheer descent, and in the clefts of the rocks on this side, snow is found all the year round. To reach its summit is a laborious achicvement, and should never be attempted, but by those capable of enduring much fatigue, nor ever without a guide.-7, Benvyvis, co. Ross. As in the cascs of most of the other Scottish mountains, the height of Benwyvis is variously stated, from 3722 to 3426 ft . With the exception of the year 1826 , the summit of this mountain has never been entirely free from snow in the memory of man. In the September of that year, however, it had wholly disappeared.-8, Bencruachan, co. Argyle, on the banks of Loch Awe ; $3669 \mathrm{ft} .-9$, Benvoirlich [Great Mountain of the lake], co. Perth, S. side of Loch Earn; 3180 ft ; by other authorities, 3300 ft . (For other remarkable elevations, see Scotland.)

BENABARRE, or Benavarra, a fortified th. Spain, Aragon, prov. of, and 35 m. E. by S. Huesca, at the base of a limestone hill, defended by a castle, surrounded by a stone wall, and having six gates. It has narrow streets, a grand square, parish church, townhall, college, hospital, small and unwholesome prison, public fountains, and baths. Tillage, the manufacture of hempen shoes, brandy distilleries, and an oil expressary, afford the chief employment. Pop. 1900.

BENACO. See Garda.
BENAGAUCII, a tn. Spain, prov. of, and 14 m . N.W. Valencia, l. bank, Turia. It comprises two large and three smaller squares, an ancient castle, townhouse, prison, parish church, two endowed schools, and a storehouse. The inhabitants are chiefly occupied in agriculture and weaving. Pop. 3577.

BEN-AHIN, a vil. and com. Belgium, prov. Liege, 3 m . W. Huy, r. bank, Meuse, with manufactures of woollen stuffs, leather, gunpowder, and paper; and some traile in oil and wood. It bas also breweries and limekilns. Pop. 1466.

BENAMARGOSA, a tn. Spain, Andalusia, prov. of, and $18 \mathrm{~m} . \mathrm{E}$. by N. Malaga, on the river of same name. It has steep, narrow, and badly-paved streets, a square, parish church, chapel, endowed school, two fountains, and a cemetery. The inhabitants are engaged in tillage and mule-driving; besides expressing oil, and distilling brandy. A considerable quantity and variety of fruit is grown in the vicinity, and sent to Malaga. Pop. 3200.

BENAMEJI, a tn. Spain, Andalusia, prov. of, and 38 m. S. by W. Cordova, in a plain, surrounded, on the N.E., S., and W., by precipitous mountains. It has well-made clean
strects, two large squares, a paish church, chapel of ease, townhouse, hospital, publie storehouse, small, damp, unhealthy prison, a palace, and a cemetery. The inhabitarts are employed in agriculture, and in the manufacture of bass mats, soap, and vinegar, which they export. I'op. 4552

BENAMOCARRA, a tn. Spain, Andalusia, prov. of, and 20 m . E. by N. Malaga, on a rising ground at the basc of the sierra de Keugel, near the river Benamargosa. It has thiree squares, and badly-made, unpaved, and dirty strects; a Gothic parish clureh, civil and ecclesiastical court-houses, two schools, a public storehouse, prison, cemetcry, and three fountains of mincral waters; with baths mnch estcemed as remedies for scorbutic and cutancous disorders. Manufac-tures:-linen fabrics of all kinds, brandy, wine, and oil. Fruit is extensively cultivated in the vicinity, and exported. Pop. 2564.

BENAOCAZ, a tn. Spain, Andalusia, prov. of, and 60 m . N.E. Cadiz, in a mountainons distriet E. of the Guadelete, and W. of the sierra de Ronda; having a parish church and townhouse. It is celebrated also for its beautiful promenade and avenue, adorned with fountains and gardens. Pop. 3176.

BENAOJAN, a tn. Spain, Andalusia, prov. of, and 42 m . W.N.W. Malaga, at the base of the sierra de Juan Diego. It has a parish ehurch, two schools, a ruinous prison, aud two fine fountains; two oil-mills, a soapwork, and distillery. Trade in agricultural products, grain, fruits, and vegetables. Pop. 2377.

BENARES, one of the N.W. provinces, Hindoostan, formerly included in that of Allahabad, presid. Bengal. It lies chiefly between lat. $24^{\circ}$ and $26^{\circ} \mathrm{N}$., and lon. $82^{\circ}$ and $84^{\circ} 30^{\circ}$ E. ; and is divided into five districts, the names of which, with their area, population, \&c., will be seen in the accompanying table:-

|  | $\begin{aligned} & \text { No. of } \\ & \text { Town- } \\ & \text { ships. } \end{aligned}$ | $\left\lvert\, \begin{gathered} \text { Area } \\ \text { in } \mathrm{geo} \\ \text { sq. } \mathrm{m} . \end{gathered}\right.$ | Aria in Acres. | Land Revenue in 1845-6. | Total Pop. | No. of perzons toear h geo. m . |

About five-sixtlis of the whole consist of a well-cultivated flat on both sides of the Ganges, abundantly watered by that river, and by the Goomty, Caramnassa, Sone, \&c. The climate, which is cold enough in winter to make fires agreeable, is in summer scorching, from the N.W. winds which set in after March, and continue for three months. Not much rice is grown. The chicf productions are wheat, barley, legumes, flax, indigo, tobacco, betel-nut, sugar, and opium. The last is a Government monopoly, and Benares and Bahar are the only provinces of Bengal presidency in which its cultivation is allowed. Benares is one of the most flourishing provinces in India. The ehief manufactures are flowered muslins, brocades, and ornamented gauzes ; some salt, of inferior quality, is made, but the greater part is imported. The principal export is indigo. In 1775, the Nabob of Oude ceded Benares to the East India Company, and the Rajah has since become merely a stipendiary.

BENARES [Sanscrit, Varanashi or Kasi-the splendid], a large and populous city, Hindoostan, the ecclesiastical metropolis of India, presidency Bengal, cap. prov. and dist. of same name, I. bank, Ganges, 400 m . N.W. Calcutta; lat. $25^{\circ} 18^{\prime} 33^{\prime \prime}$ N. ; lon. $82^{\circ} 55^{\prime} 51^{\prime \prime}$ E. (L.) The Ganges here makes a sweep of about 4 m . long, and on the convex side of the curve stands the 'most holy' city of the Ilindoos, the Lotus of the world: believed by the natives not to belong to earth at all, but to be perched upon the top of one of the prongs of the trident of the god Shiva. The strects are so cxceedingly narrow, that it is difficult to pass through them even on horscback, while some houses are connected, with those on the opposite side of the street, by balconies. The city, seen from the river, presents the form of an amphitheatre, extending for 3 m . along the banks of the river, which are elevated some 40 or 50 ft ., above which are reared a series of temples and palaces-but chiefly the latter-with euperb ghauts or flights of steps. The palaces are those of
the Indian Rajahs and Indian chieftians, from one end of India almost to the other; every independent potentate being earnestly desirous to have a palace in Benares, so that, once in his life, at least, he may make a pilgrimage to the holy

city; and that, when not there, he may liave a resident representative in the person of an official, or some member of his family. Many of the houses are built of stone, six stories in height, with small windows, each story inhabited by a separate family; some of the larger houses thus contain, perhaps, 200 persons; the walls are daubed with mythological representations from the Hindoo pantheon. The more wealthy IIindoos live in detached houses, with open courts, and surrounded by walls. The British and other Europeans reside chiefly at Seroli, a handsome well-built village, about 2 m . from the city; they are few in number, consisting principally of officials connected with the Government, and courts of justice; medical men, and a few merchants ; indigo planters, and persons employed in the Government mint. Jesides the native population, there are settled in Benares a great number of Turks, Tartars, Persians, and Armenians. The Rajah's palace stands at Bamnaghur, about 1 m . above the city, on the opposite side of the river, where is also a superb temple built by Cheyt Singh; and, on an elevated and conspicuous site, on the city side of the river, the Emperor Aurungzebe erected, in the 17 th century, a magnificent mosque. There are numerous other mosques, many of them inconveniently situated; also a number of Hindoo temples, 'stuck,' says Bishop Heber, 'like shrines, in the angles of the streets, and under the shadow of the lofty houses. Their forms, however, are not ungraceful, and many of them are covered over with bcautiful and elaborate carvings of flowers, animals, and palm-branches; equalling, in minuteness and richness, the best specimens that I have seen of Gothic or Grecian architecture.' Fakirs houses, as they are called, adorned with idols, and sending out an unceasing tinkling of discordant instruments, occur at every turn; while religious mendicants, with distorted limbs, and in hideous attitudes of penance, literally line the chief streets on both sides.

An old observatory, founded before the Mussulman conquest, and still very entire, though not made use of, is one of the most interesting and singular objects in the city. It is of stone, with a large square tower, containing instruments,
chiefly of stone, of which many liad been evidently used for judicial astrology. A few miles E. of Scroli is the Saranath, a remarkable monument, 40 to 50 ft . in diameter, seemingly of solid masonry; considered, by some, to be of Grecian origin; but alleged, by the inliabitants of Benares, to be a Buddhist structure. This city and its environs, for a distance of 10 m . round, are held sacred by the Hindoos; and the number of pilgrims who resort hither, during religious festivals, from all parts of India, and even from Thibet and Burmah, is very great. It is crowded with mendicant priests, and there are, it is said, 8000 houses occupied by Bralımins who live on the alms and offerings of the pilgrims.

Several of the natives here are men of affuence, who act as bankers, and are wont to facilitate the money operations of the East India Company. Some deal in diamonds, and other precious stones, brought hither from Bundelcund. 'Benares is, in fact,' says Heber, 'a very industrious and wealthy, as well as a very holy city. It is the great mart where the sliawls of the N., the diamonds of the S., and the muslins of Dacea and the E. provinces centre ; and it has considerable silk, cotton, and fine woollen manufactures of its own; while English hardware, swords, shields, and spears, from Lucknow and Monghyr, and various Europcan luxuries, circulate through Bundelcund, Gorruckpoor, Nepaul, and other tracts which are removed from the main artery of the Ganges.' Benares has long been the most celebrated seat of Bralmminical learning in Hindoostan ; and is still so revered, that many foreign Hindoo Rajahs keep vakeels or deputies here to perform for them the requisite oblations and sacrifices. The Hindoo Sanserit college of Benares, founded in 1791, is the chief seat of native learning in India; an Erglish class was added to this college in 1827, when the number of students was 259 ; in 1830 , the number of students was increased to 287. In 1811, it was found necessary to re-model the regulations of the Hindoo college, and to corrcet the prevailing abuses. A great many other schools have been established here by missionaries

MADHORAY GHAUT, AND THE MNARETS, BFNARES, from the River. From Prinsep's Benares lllustrated.
and others, of late years, which are well attended; in one of these, npwards of 200 scholars are taught English, Hindoostance, Persian, and Arabic, as well as writing, arithmetic, geography, general history, and astronomy ; there are also
private teachers of beth Mahometan and Hindoo law. The vicinity of the city is fertile and well cultivated, but very bare of wood; fuel is, consequently, scarce and high priced. In 1017, the city was taken by Sultan Mahmood, and, from 1190, followed the fortunes of the Delli sovereigns until 1775, when it devolved to the British, under whom it has enjoyed perfect tranquillity, with the exception of one single instance of temporary disturbance. Pop. about 200,000.-(Heber's Narrative; Hamilton's East India Gaz.; Parliamentary Papers.)

BENÁSAL, a tn . Spain, Valcneia, prov. of, and 30 m . N. Castellon de la Plana. It has three squares, a parish church, three chapels, townhall, prison, a Latin and two other schools, two fountains, and a cemetery. Manufactures:soap and woollen fabrics, but the chicf occupation is agriculture. Pop. 2108.

BENATEK, several small places, Bohemia; the only one of importance is the municipal town of Benatek or New Benatek, cap. of a circle of aame name, r. bank, Iser, about 20 m. N.E. Prague ; with an old castle, which was long the residence of the famous astronomer, Tycho Brahe. Pop. of tn. 904; of circle, 5347

BENAVENTE.-1, $\Lambda \mathrm{tm}$. Spain, Leon, prov. of, and 23 m. N. by E. Zanora. It is overlooked by a castle, and is surrounded by an old decayed wall, entered by six gates. Its squares and principal streets are spacious, well paved, and clean, but want uniformity. It has six churches, one Latin and seven other schools, townhouse, three hospitals, two prisons, storebouse, ecclesiastical court, a bishop's palace, and one belonging to the Counts of Benavente; many of the above edifices, especially the last, are of high antiquity, and of considerable architectural merit; and in some of the churches several good pietures, and good specimens of monumental statuary, are preserved. Manufactures:-linen, woollen, silken, and cotton fabrics, and velvets, which are exported to some extent. Three annual fairs. Pop. 12,464.-(Madoz.) - $2, \mathrm{~A}$ tn. and par. Portugal, prov. Estremadura, dist. Santarem; in a beautiful plain, l. bank, Zatas, 26 m . N.E. Lisbon. It bas a royal palace, and an annual fair, which lasts three days. Pop. 1860.

BENBECULA, a small isl. Scotland, one of the outer Hebrides, co. Inverness; lat. $57^{\circ} 28^{\prime}$ N.; lon. $7^{\circ} 18^{\prime} \mathrm{W}$.; lying between the islands of N. and S. Uist, separated from the latter by a channel half a mile broad, which is dry at low water. The island is 8 m . long by 8 broad, and mostly flat, sandy, and unproductive; and contains numerous fresh-water lakes, and its shores are serrated with bays, lochs, and inlets. There are no trees now on the island, but the trunks and branches that are being constantly dug out of the mosses afford evidence that it must have becn at one time well wooded. $\Lambda$ good deal of moss land has been lately brought under cultivation lere, and considerable improvement generally has taken place in the mode of agriculture. The language spoken is Gaelic. The ordinary food of the peasantry, who are not of very eleanly habits, consists of barley-bread, potatoes, milk, and occasionally fish. The rents are mostly paid in kelp. Anciently there was a numnery in this island, and the ruins of several old castles still exist; one of them, called Caisteal a Bhrebider or the Weaver's Castle, is a very conspicuous object. Pop. 2107.

BENCOOLEN [Dutch, Bengkoelen and Benkoelen; properly, Bangka-hooloo], a tn., W. coast, isl. Sumatra, cap. Dutch prov. of same name. It is protected by Fort Marlborough, and lies at the mouth of a small river, in an unhealthy situation, on a contracted, incommodious, and insecure roadstead, and in a thinly-peopled distriet; lat. (Fort Marlborough) $3^{\circ} 47^{\prime} 36^{\prime \prime} \mathrm{S}$. ; lon. $102^{\circ} 19^{\prime} \mathrm{E}$. (r.). At one time, it was the first town on the W. coast of the island; but, not being advantageously situated for commerce, it is now far eclipsed by Padang, the residence of the governor of Sumatra. As a whole, the town is mean-looking; the houses of the Chinese inhabitants are mostly in a falling condition. The houses of the Europcans are built apart from each other, and lave stone foundations, but the upper parts are constructed of wood, on account of the earthquakes to which the locality is subject; one which occurred in 1833, destroyed the only Christian church, and injured nearly all the houses in the place. The old and new governor's houses, situated within the fort, are both respectable-looking edifices; the former is surrounded by a pleasant park, planted with cocoa-nut and nutmeg trees. The
only other public building of importance is the Roema-Pandjang, in which are all the Government offices. The trade of Bencoolen has declined greatly from what it was formerly. The imports consist of cloths, rice, and salt, by the Bugis and Bali traders ; handkerchiefs, tobacco, sugar, and various other articles, from Batavia; opium, taffetics, coarse cloths, chintzes, and white eloths, from Bengal; salt, and blue and white piece goods, from Coromandel ; iron, steel, cloth, beads, brass wire, cutlery, and printed cottons, from Europe; and gambir, salt fish, oil, salted eggs, poultry, salted fish roes, timber, and planks, from the N. parts of the island. The principal exports are coffee, sugar, and wood, with pepper, nutmegs, cloves, benzoin, and camphor. The town was formerly several miles further N., where the British settled in 1685, and, in 1690, built Fort York. In 1714, they built Fort Marlborough, on the site of the present town, as being a more healthy locality. In April 1825, Bencoolen, which had always been maintained at a great loss by the British, was ceded, with their other settlements on the island of Sumatra, to the Dutch, in exchange for their possessions on the continent of Asia. The population is very mixed, being composed of Europeans, Javanese, Bengalese, Malays, and 600 or 700 poor Chinese; total, 6000 , or not more than half the number it formerly contained. $\qquad$ The province of Bencoolen is a mountainous distriet, and lies on the W. side of a mountainous range; and all its streams flow to the Indian Ocean. It extends from the river Mandjoeta, S.E., to Point Basse; or from about lat. $2^{\circ} 20^{\prime}$ to $6^{\circ} \mathrm{S}$., with a breadth varying from 5 to 40 m . It is thinly peopled. Its principal products are benzoin, camphor, cassia, cotton, indigo, riee, ivory, gold, and tin. The cultivation of cloves and nutmegs, formerly carried on to a considerable extent, is understood now not to be very extensive. Pop. variously estimated, from 94,000 to 200,000 .-(Van der Aa; Temminck, Coup d'ail ; Moniteur des Indes.)
bENDEMIR, or Kur [anc. Araxes], a river, Persia, which rises among the mountains of Zagroosch, on the fromticrs of Irak-Ajemi and Khuzistan, and, after a S.E. courso of nearly 300 m ., falls into the W. extremity of the salt lake, Baghtegan, 55 m . E. Shiraz. It is wholly within prov. Fars, and its chief affluent is the Ab or Cyrus. The passage of Alexander the Great over the Bendemir, is celebrated.$\Lambda$ village, also called Bendemir, and traversed by the river, lies 30 m . N.E. Shiraz.

BENDER, a tn. European Russia, cap. dist. of same name, gov. Bessarabia, 34 m. S.E. Kijenef, r. bank, Dniester. It is a fortified town, having a citadel. It likewise has a leather manufacture. In the environs is Varnitza, a locality famed as the retreat of Charles XII., King of Sweden, from 1709 to 1712 , after the battle of Pultowa. Bender once had some importance, but lost it long before it was ceded by the Turks, in 1812. The lkussians took it by assault in 1770, and again in 1809. Pop. (1849), 14,820.

BENDER-ABBAZ or Abass, or Gomberoon, a seaport tn. Persia, prov. Kerman, opposite the island of Ormus, at the entrance to the Persian Gulf; lat. $26^{\circ} 10^{\prime}$ N.; lon. $56^{\circ} 15^{\prime} \mathrm{E}$. During the period that Ormus was occupied by the Dutch, it was a place of great importance. Though a considerable quantity of goods are still landed here for transmission into the interior of Persia, yet the town has much fallen off from its former condition, no trace of its splendour now remaining, excepting the ruins of the dwellings of the Europeans. It is a town of Arab construction, and is only inhabited during winter, the summer heat being so suffocating, and being succeeded by dangerous fevers. A good deal of trade is done in fish, caught plentifully in the gulf; and salt, fruits, and sulphur, the latter obtained in the vicinity, are shipped to Mascat. The readstead is by no means secure. Bender-Abbaz, though situated in Persia, is a dependency of the Imaun of Mascat.

BENDORF, a tn. Prussia, gov. circle of, and 6 m . N. Coblentz, r. bank, Rhine; with a valuable iron mine, and two iron furnaces. The vineyards and orehards of the vicinity employ a great number of the inlabitants. It has also stone quarries, clay pits, tileworks, some manufactures of cloth, and a mill for spinning worsted. Pop. 2063.

BENE, a tn . Sardinian States, prov. of, and 11 m . N. Mondovi, between the Sture aud the Tanaro. It has a college, an old castle, and an hospital. This town has arisen out of the ruins of the ancient Augusta Bagiennorum, destroyed by Alaric, and of which many interesting vestiges are found at

Roveglia, about half a mile distant. The ruins of an aqueduct, amphitheatre, baths, and other buildings, extend over a considerable tract of ground. North of Bene is the district of Salmoria, anciently called Sarmatia, from the Sarmatians who settled there during the lower empire. Pop. 5600.

BENEFIELD, par. Eng. Northampton; 5100 ac . P. 533.
BENENDEN, par. Eng. Kent; 6780 ac. Pop. 1594.
BENESCHAU, a tn. Bohemia, cirele, Beraun, 23 m . S.S.E. Prague; with two churches, one of them ancient, and in ruins; a Piarist college and gymnasium, and an hospital. The inhabitants live chiefly by weaving and agriculture. Pop. 2000.-Otler four places in Bohemia, two in Prussia, and one in Moravia, have the same name.

BENET, a vil. France, dep. Vendée, 12 m . E.S.E. Fontenay, in a fertile plain; with manufactures of woollen and linen goods. Pop. 1364.

BENEVENTE, a maritime tn. Brazil, prov. EspiritoSanto, l. bank, river of same name, 50 m . S.W. Victoria; laving the church on an eminence behind, and the vicar's house, sessional chambers, townhall, and prison all in one building, which was formerly a church. Before the town is a bay, affording shelter to vessels. The port is one of the most frequented in the province. The building of merehant vessels is carried on here to a limited extent. Pop. of til. and dist., chiefly agricultural, 3000 .-The Eiver Benevente has an E.S.E. course of about 70 m ., and is deep at its mouth, forming a good harbour for merchant vessels.

BENEVENTO [anc. Beneventum], a city, Papal States, cap. deleg. of same name, situated on the declivity of a hill, near the confluence of the Calore and Sabbato, 31 m . N.E. Naples; lat. $41^{\circ} 7^{\prime} \mathrm{N}$. ; lon. $14^{\circ} 43^{\prime} \mathrm{E}$. It is about 2 m . in circumference, surrounded by walls, and defended by a castle. It contains a number of interesting antiquities, and many of the walls of the modern buildings are constructed of fragments of the altars, tombs, and columns of ancient Beneventum. The monument in best preservation is the triumphal arch of Parian marble, erected in honour of Trajan, by the Roman senate, about the year 114. It forms one of the gates of the city, called the Porta Aurea, and is ornamented with sculptures of exquisite workmanship. The other public buildings are the palazzo publico or townhall, the archepiscopal palace, the cathedral, eight other churches, and several convents. There are here, likewise, a seminary of arehitecture, containing a rich library; a college, an orphan hospital, three other hospitals, and two monts-de-piété. The town is the seat of a distriet court, and of an archbishopric, founded in 969 ; and metropolitan to ten episcopal sees.

The origin of Benevento is attributed to Diomed. At first, it is said to have been called Maleventum, on account of the violence of the winds that prevailed in the district. When the Romans established a colony here, they changed its name to Beneventum. In 545 , it was taken and partially destroyed by the Goths. The neighbouring plain was the field of battle where Charles of Anjou, King of Naples, defeated and slew his rival Manfred, in 1266. In the $16 \mathrm{th}_{1}$ century the population of the town was much more considerable than at present. The plague of 1652 carried off 4000 persons, and the earthquakes of 1688 and 1703 were also very destructive. Several councils were held here in the 11 th and 12th centuries. Pop. 16,316.-The province or delegation is locally within prov. Principato Ultra of Naples, but belongs to the States of the Church. It is of an elliptical form, and is traversed from E. to W. by the Calore, which divides it into two nearly equal parts; greatest length, 10 m . ; breadth, 6 m . ; area, about $45 \mathrm{sq} . \mathrm{m}$. The surface is lilly, but the soil fertile in corn, fruit, and pasture. Game is very abundant, and the Sabato, which joins the Calore from the S., teems with fish. In the sixth century, Benevento became a dukedom under the Longobards, and was of great extent, including all their conquests in Samnium, Campania, and Apulia. On their subjugation by Charlemagne, Benevento became independent, and its dukes assumed the title of Princes. The Normans having taken it, gave it to the Pope, in whose possession, with oceasional interruptions, it has since remained. In 1806, Bonanarte gave it to Talleyrand, with the title of Prince; but it was restored in 1815, and is now governed by a cardinal, with the title of Legate. Pop. about 23,000 .

BENFELI), a tn. France, dep Bas-Rhin, 10 m. N.N.E.

Schelestadt; agrecably situated on the river Ill, in a district which is remarkable for its fertility, and is the centre of the tobacco culture. It has cotton mills, a tannery, breweries, dyeworks, tile and brick works, and manufactures of candles, earthenware, and various articles of ironmongery. It also carries on a considerable trade in grain, tobacco, hemp, leather, \&c. Pop. 2642.

BENFLEET, two pars. Eng.:-1, Benfleet (North), or Little Benfleet, par. Essex; 1730 ac. Pop. 364.-2, Benfleet (South), or Great Benfleet, par. Essex; 2160 ac. Pop. 707.

BENGAL (Presidency of), the largest and most important of the three presidencies into which the British possessions in E. India are divided, extending between lat. $16^{\circ}$ and $31^{\circ} 15^{\prime}$ N., and lon. $74^{\circ}$ to $96^{\circ} \mathrm{E}$. ; bounded, N. by Rajpootana, the Himalaya Mountains, Nepaul, and Bootan, E. by the Burman Empire, S. by the Bay of Bengal and the presideney of Madras, and W. by Bhopal, Independent Bundelcund, and Rajpootana; thus comprising the provinces of Bengal, Bahar, the government of Agra, composed of the N.W. provinces, Agra, Allahabad, Meerut, Delhi, Benares, and Rohileund; portions of Oude, Gundwana, Berar, Orissa, and the British possessicns beyond the Ganges; Assam, Cachar, Aracan, the Tenasserim provinces, and the possessions in the Straits of Malacca, Penang, Malacea, and Singapore. The government is vested in the Governor-general of India, at Calcutta, and five councillors, three of whom are appointed absolutely by the East India Company; the fourth is also appointed by the Company, but subject to the approbation of the sovereign; the fifth is the commander-in-chief. These form the Supreme Council of India. The net revenues of the presideney, including the N.W. provinces (formerly Agra presidency), for 1847 and 1848, was £17,089,527. The largest items in the revenue returns of the presidency, are the land revenue, and the customs and stamp duties. The tariff, which came into operation in June 1845, levying increased duties on various descriptions of goods imported into the presidency, has had the natural effeet of checking the importation of such goods. Woollens have fallen more than onehalf, metals to nearly a half, and wines and spirits about a fourth; the whole reduction in imports amounting to nearly a million and a half. An increase has, however, singularly enough, taken place in the importation of English salt, to the serious detriment of the Indian revenue, one of the most important sources of which was the sale of the native salt manufactured by Government. Both the exports and imports of the presidency are, however, on the increase, and have been so since 1835 , being now nearly double what they were then. The imports of 1842 amounted to $£ 5,855,826$, and the exports to $£ 8,440,880$. Accounts throughout the presidency are kept in Company's rupees (value about $2 s$. each), to which standard all current specie must be reduced. Cowries, and other small coin formerly in use, are now disappearing, being confined to small payments amongst the natives. There is little gold in circulation; the most common coin in that metal is the mohur, equal to 16 rupees or $£ 1,12 s$. (For. trade and commerce, see Calcutta.) The native infantry of the presidency consists of 74 regiments, containing 80,249 men; their number, however, varıes according to cireumstances, having been at times nearly the double of that named. The principal cities are, Calcutta, the British eapital of Indlia; Delhi, the Mahometan capital ; with Benares, Moorshedabad, Dacca, Bahar, Patna, Allahabad, and Agra. For an account of the physical features of the presidency, its climate, produetions, \&c., see the articles on the different provinces of which it is composed. Estimated area of the entire presideney, $220,312 \mathrm{sq} . \mathrm{m} . \quad$ Pop. 69,710,071.

BENGAL, a large and important prov. IIindoostan, and the principal seat of British authority in the East; is situated between lat. $21^{\circ}$ and $27^{\circ} \mathrm{N}$., and lon. $86^{\circ}$ and $93^{\circ} \mathrm{E}$., being about 400 m . N. to S., and 470 E . to W. It is bounded, N. by Nepaul, Bootan, and Assam; S. by Orissa and the Bay of Bengal, E. by Assam, Caehar, and Burmah, and W. by thic province of Bahar. Its general physical character is that of a champaign country, there being few remarkable elevations within its limits, thongh surrounded with lofty chains of mountains ; the N. part resting on the terraces of the Himalaya Mountains, the E. being bounded by the Garos or Garrows chain, and the W. being ribbed with offsets of the Vindhya Mountains. It is intersected in all directions by rivers, the

## BENGAL

376
BENGAL
principal of which are the Ganges and Brahmapootra, whose annual inundations render the soil which they reach extremely fertile, particularly in the production of rice, of which it yields immense crops. In those tracts where this advantage is not enjoyed, the soil is thin, seldom exceeding a few inehes in depth. Notwithstanding, lowever, the general fertility of the country, the crops sometimes fail, chiefly through the abundance of the periodical rains, when all the horrers of famine ensue, the unfortunate natives dying by thousands, of starvation. The most inhospitable part of Bengal is what is called the Sunderbunds (from being covered with the soondru or sunder-tree), that portion of the country through which the numerous branches of the Ganges seek the sea, or the space lying between the river Hoogly and Chittagong, about 150 m . from E. to W., and about 160 from N. to S. This district is infested with tigers, is traversed in all direetions by water courses or nullahs, and interspersed with numerous sheets of stagnant water, called jheels, which abound with fish and water-fowl, and are nuch resorted to by alligators. The greater part of these contain no water during the dry season.

Geology and Minerals.-In the N. part of Bengal, at the foot of the Himalayas, is a band of tertiary formation; S. from which, and along the course of the Ganges, more especially E. from that river, and including the greater part of its delta and that of the Brahmapootra, the country is wholly composed of alluvium or modern detritus. Calcutta stands upon strata of the transition series, which stretch W. into Baliar; and are flanked, N. and S., by tracts of crystalline formation. In the Garos hills, coal, iron, and limestone are found ; and nitre effloresces on the surface round Calcutta and elsewhere. Mineral springs are not numerous.

Rivers. - The principal rivers besides the Ganges and Brahmapootra, the latter of which enters the provinee at its N.E. extremity, and falls into the Bay of Bengal, near the principal embouehure of the Ganges, are the Soobunreka, which falls into the Bay of Bengal in lat. $21^{\circ} 35^{\prime}$ N.; S.S.W. of the Hoogly, the Cosi or Coosee, which rises near Khatamandoo in Nepaul, and falls into the Ganges near Bhagulpore in lat. $25^{\circ} 20^{\prime} \mathrm{N}$. ; and the Dumooda, which, rising in Bahar, falls into the Hoogly about 22 m . below Calcutta. There are numerous other streams of less note, mostly tributaries of the Ganges and Brahmapootra, or their larger affluents.

Climate.-There is more regularity in the changes of the seasons in Bengal, than, perhaps, in any other part of India; but it is subject to great extremes of heat, which, added to the humidity of its surface, and the heavy dews that fall, renders it generally unhealthy to Europeans. The prevalence of hot winds, which are sometimes loaded with sandy particles, is another source of disease. The seasons are distinguished by the terms hot, cold, and rainy. The hot season continues from the beginning of Mareh to the end of May, within which periods the thermometer frequently rises to $100^{\circ}$, sometimes to $110^{\circ}$. The month of September is also often intensely hot; and when so, is the most unhealthy period of the year to natives as well as Europeans, owing to the profuse exhalations from stagnant waters left by the inundations, and from a rank, decaying vegetation. The rainy season commences in June, and lasts till October. During the first two months of this period, the rain is frequently so heavy, that 5 inches of water have fallen in one day, the aunual average being from 70 to 80 inches. It is in this season that the inundations take place, and that the Ganges overfows its delta, covering the land with its waters for more than 100 m . The cold season, the most grateful and healthful of any to Europeans, continues from November to February, during which period N. winds prevail, with a elear sky.

Natural Productions.-Alnost all kinds of grain and pnlse are grown in Bengal; but rice (called also paddy) is the most generally cnltivated, being found in almost every part of the province, in an endless variety of species. Forming the chief article of food, much care is bestowed on its cultivation; embankments are formed to retain the water indispensable to its growth on the plains, and reservoirs are formed on the higher grounds for irrigating the lands below. Millet (called also jowary) is also extensively cultivated, and in the W. districts large quantitics of maize are grown. At the commencement of the colder season, wheat and barley are sown, and are reaped before the rains set in. The next most
important vegetable productions of the province are cotton, indigo, tobacco, sugar-cane, mulberry, and poppy, from which opium is mannfactured. The fruits are pine-apples, citrons, lemons, limes, oranges, pomegranates, grapes, almonds, tamarinds, and plantains. Apples and pears are met with in the N. districts, but there only. Orelıards of mango trees are to be found in every part of Bengal, the fruit being held in the highest estimation, and in general demand during the lot months. Most of the vegetables known in other countries are cultivated in the gardens, including potatoes, carrots, onions, garlie, \&c. Many of them, however, become tasteless and insipid, as in all other tropical climates. The flowering trees and shrubs that grow wild, or with little care, are numerous. Of the former, the most remarkable is the Ficus Indica or banyan tree, whose immense size, beautiful foliage, and golden-eolonred berries, with its singular manner of sending down roots from its branches, and thus forming new stems, renders it an olyject at once of surprise and admiration. This tree, though of little use, is much estecmed by the natives of Bengal. Flowers are numerous, and many of them of the most gorgeous hues; but, excepting roses and a few others, none of them have any scent. Few countries equal, and none surpass Bengal, for useful timber. The principal trees of this description are teak (Tectona grandis), Sal (Shorea robustu), yielding a resinous exudation; toon (Cedrela toona), well adapted for boat-building; malıgany (Swietenia mahogani), billoo (Chloroxylon Swictenia) or satin-wood (Pterocarpus santalinus), red sandal-wood (Pterocarpus murrupium), which is said to produce a variety of gum-kino, and is impervious to insects. Several kinds of ebony, and numerous other valuable woods, are also abundant.

Animals.-The wild animals are lions, tigers, elephants, boars, bears, wolves, foxes, jackals, hyenas, leopards, panthers, lynxes, hares, deer, zebras, buffaloes, antelopes, apes, and monkeys. The most formidable of all these animals, not exeepting the lion, is the tiger, which here attains its utmost size, and perhaps also its greatest ferocity, there being, probably, no animal on the face of the earth so tremendous as the Bengal tiger, which is said to be able to clear 100 ft . at one spring, and to carry off a large bullock with the greatest case. The jungles in the province are infested with them; but they are most numerous, as are lions also, on the delta of the Ganges, where they every year carry off many of the natives. Dogs, most of them without owners, swarm in the streets of every town in Bengal; they are gencrally of the eur species, with sharp erect ears, and pointed tails. The domestic animals are native horses, thin, ill-shaped animals, and not well adapted for any kind of labour; eattle, of a very inferior breed, being extremely small and miserable-looking; sheep, likewise of diminutive size, with very coarse hairy wool; but when well fed, their flesh is excellent. Hogs and goats are also plentiful, and buffaloes are domesticated for the sake of their milk. Reptiles are numerous and formidable, including gavials, a kind of crocodile, with whieh the larger rivers are infested ; and, amongst the serpent tribe, many of which are highly poisonous, the deadly cobra-dacapello. Turtles, frogs, and lizards, also abound, with swarms of mosquitoes. The turtle are chiefly procured from the island of Cheduba, in the Bay of Bengal. Fish are so exceedingly plentiful, as to be within the reach of almost every elass of inhabitants. Those most highly estcemed are the mango-fish (a sea fish which ascends the rivers when the mango-fruit is most abundant, hence its name), the bicktee, sable fish, and mullet, the first two being especial favourites with Europeans.

Game, poultry, and water-fowl of all deseriptions, abound in Bengal, particularly ducks, of which there is a great variety, and most of them of a superior kind. The gigantic crane, commonly called the adjutant, from the stately air with which he struts about, frequents the towns in considerable numbers, performing the office of scavengers, by clearing the streets of garbage, in consideration of which duty he enjoys an entire immunity from all disturbance; its principal food is offal, toads, lizards, serpents, and insects. The argill or hurgill, a species of ardea, may also be noticed; it is a large and ravenous bird, held in great veneration by the Brahmins. Crows, kites, sparrows, and other small birds, are numerous.

Agriculture, Manufactures, \&c.-There being few gardeners by profession in India, vegetables are grown mostly by farmers; who, however, meet with little demand for them
from the natives, who have never acquired a relish for them, not even for the potato, which is rarely to be met with, excepting in the gardens of Europeans. The plant called pat, from which a stout cordage and a coarse kind of cloth is made, is largely cultivated in Bengal. It will grow on almost any description of land; is sown generally in May, and cut down in August and September. It attains to a height of 5 or 6 ft ; and after being cut, is stecped in water for about 10 days, when it is reduced to a substance like hemp. The greater part of this crop is cultivated by those who use or manufacture it, almost all the Hindoo farmers weaving eloth from it. About a fourth part of the whole is sold for exportation. The East India Company are endeavouring to promote the cultivation of an article called the son, similar in its uses to pat, affording excellent material for both sails and cordage, and from which the natives make their fishing nets. Cotton is grown over all India, but the best of the herbaceons kind is raised in Bengal and on the Coromandel coast; the finest grows on light rocky soil. The cotton seed is sown in the latter end of October, and is gathered between the middle of April and the middle of June, the produce varying from 500 to about 800 lbs . an acre. In the absence of rain, the cotton field is watered every 8 or 12 days, four men watering about an acre a day. The cotton of India is generally inferior to that of N. and S. America; but this is believed to be wholly owing to careless cultivation, and to the slovenly manner in which it is prepared for the market. Sugar-cane is cnltivated throughout the whole valley of the Ganges, but litherto without much success. For the four or five years preceding 1848, the average produce of Bengal did not exceed 70,000 tons. Where a proper system of agriculture is observed, one crop only of sugar-cane is grown on the same field in three years. There are two kinds of sugar-cane, the Khagra and Kajoli. The former is a yellow hard cane, about the thickness of a finger; the other is much thicker, is deeply stained with purple, and often attains a height of 12 and 14 ft . The Kajoli is by far the most productive, but the most troublesome to cultivate ; and, therefore, avoided by the most indolent farmers; the land on which it is grown requiring 10 or 12 double plonghings, and a great deal of manure. These ploughings take place between October and January; the cuttings, about a foot in length, are planted in February and March, and are cut between the middle of December and the end of the following March. Extensive farmers, and these only, cut so much as an acre of cane in a year. One mill, and one set of implements used in inspissating the juice, thus serve for several farms. The mill and implements generally belong to some wealthy man, who lets them out on hire. Although the expense of cultivating sugar is more than that of cultivating grain, the profit accruing from the former is considerable. Tobacco, which requires a light soil, is grown in three different situations, in rich spots of land contiguous to the farmer's house, in high land suitable for the growth of sugar-cane, and often alternating with that crop, and on the banks of rivers. The crop is generally largest in the first of these situations, and most scanty in the last. The betel leaf, famous for its intoxicating quality, and largely used over all India on that account, is cultivated in what is called a voroj or fort, and is carefully protected from the sun and wind. So great a luxury is this plant considered, and such the importance attached to it, that its cultivators form one of the nine tribes of tradesmen that were admitted to be pure. A betel garden lasts from 12 to 30 years, yielding the best return of any land in Bengal. Indigo leing one of the principal articles of foreign commerce with l3engal, is extensively cultivated in that province. It is, however, a very uncertain crop, and both the soils chosen for it, and the seasons for sowing it, are various. The land nost commonly selected is high, sandy, and, in general, poor. The seed is sown broadcast in March, April, and May, and is fit for cutting in four months after; its cultivation is neither so laborious nor expensive as that of rice. Indigo is also grown on the flat sandy banks of rivers, which are inundated in the rainy season; but here the additional risk is run of the waters rising earlier than usual, in which case the crop is overwhelmed and entirely lost. It is remarkable that the produce of indigo in Bengal has not increased in any degree for the last 30 years.

The luxuriance of vegetatiou in Bengal is, perhaps, un-
equalled in any other part of the world. The cultivation of the land requires little effort, and large crops are obtained without the application of any other manure than the sediment or mud deposited by the inundations. It is doubtful, however, how far this facility is good, since it seems to have had the effect of preventing all attempts at improvement, either in the science of agriculture itself, or in the implements used in its practice. The Indian plough is of wretched construction, having neither coulter nor mould-board, and, in some districts, it wants even the share; while the animals by which it is dragged, two oxen or cows, are miserable, half-starved creatures. The reaping-hook (kastya) is a most inofficient implement, the curved or cutting part of the blade is 6 inches long by $1 \frac{1}{2}$ broad, with teeth like a saw; the handle is about $4 \frac{1}{2}$ inches long. The dengki, by which the husks are separated from the grain, is another wretched implement, and so ill adapted to its purposes, that one fifth part of the whole grain is sacrificed in the operation. Nearly all the other implements in use are of an equally rude and imperfect deseription. Rotation of crops and the use of fallows are unknown to the farmers of India; the land is generally in an exhausted condition, and the enclosures everywhere bad. Grain is trodden out by oxen, and stacking corn is unusual ; the corn being often left exposed to the weather. Irrigation, however, is well under-stood-necessity giving rise to invention-and is accomplished by the most ingenious and efficient means. Farms are generally small, varying from 1 to 20 ac., and are oppressively high rented; the consequence is, that the farmers are, most of them, miserably poor, and are without the means of effecting improvements of any kind. Another obstacle to improvement is the mixture of occupations; the peasants indifferently quitting the plough to use the loom, and the loom to resume the plough.

Dfanufactures.-The principal manufactures are, cotton piece goods of various descriptions, calicoes, blanketing, diaper, chintzes, woven silks, and taffetas; pack-thread, and sailcloth. Muslins of the most beautiful and delicate texture were formerly made at Dacca, a city in this province, but the manufacture is now extinct. 'Some of these fabrics,' says Tavernier, ' were so fine that they could hardly be felt in the hand, and the thread, when spun, was scarce discernible.' In Ward's History, \&e., of the Hindoos, this character of the muslin of Dacca is confirmed; though, perhaps, in both cases, it is a little exaggerated. 'When this muslin is laid on the grass,' says the latter, ' and the dew has fallen upon it, it is no longer discernible.' In the hyperbolical, but poetical, langnage of the East, these delicate airy fabrics were designated as ' webs of woven wind.' The extraordinary fineness and beauty of India muslins manufactured under the disadvantages of rude machinery, and ill-prepared material, is attributed to the exquisitely fine sense of touch possessed by the Hindoos, an effeminate people, to their patience and gentleness, and to the hereditary continuance of a particular species of manufacture in families, through many generations. The delicate formation and flexibility of their fingers is equally remarkable, and presents a striking contrast to the rigid clumsy fingers of the Enropean. The extinction of the muslin manufactures of India has been owing, in a great measure, to the successful competition of this country, and to the circumstance of British fabries being subject to no duty in Bengal, while high duties were levied on the fabrics of Bengal in Britain. In 1831, a great number of natives of the highest respectability individnally petitioned the Lords of the Privy Council, 'to allow the cotton and silk fabrics of Bengal to be used in Great Britain free of duty, or at the same rate which may be charged on British fabric consumed in Bengal.' The petition was not complied with. Large quantities of a coarse cloth called tat or choti, manufactured from pat, a plant formerly spoken of, are made in various districts of Bengal; and many of the poorer people are clothed with a coarse linen (megili) prepared from the same material.

Commerce.-The trade of Bengal with Britain is at once extensive and various. The chief imports are metals, foreign wines and spirits, beer, woollen and cotton cloths, cotton yarn, glass, and hardware; the exports, silk and silk manufactures, cotton, indigo, sugar, saltpetre, and lac dye. Bengal has also a considerable trade with France, Portugal, the U. States, China, Burmah, Java, and several of the larger islands of the Asiatic Archipelago. The following Table ex-

48
hibits the proportion of the commeree of Bengal enjoyed by each country in the year 1849-50:-

|  | Imports. | Exports. |
| :---: | :---: | :---: |
| United Kingdon | £ $4,057,27$ | £4,768,074 |
| France | 123,380. | 629,021 |
| Hamburg | 13,227. | 13,551 |
| Other countries of Europe | $12,763$. | 9,272 |
| Coromandel coast. | 163,83.4. | 191,881 |
| Malabar coast. | 268,924. | 856,440 |
| China. | 988,072. | 3,219,696 |
| Singapore. | 348,899. | 408,205 |
| Other comntries of Asia | 339,956. | 469,97. |
| Africa (Mauritius, Bourbon, Cape).. | 67,877. | 316,110 |
| North Ameriea | 112,887. | 548,356 |
| South Americ |  | 2,132 |

The aggregate exports, as shown above, exceed those of the preceding year by $£ 1,078,203$; and the imports by $£ 791,138$. For a more detailed account of the foreign trade and commerce of the presideney and province of Bengal, see Calcutta, the orly port of importance.

People, Ellucation, Social and Domestic Condition, \&ic.The natives of Bengal are generally handsome, particularly when young, though slightly formed, and small of stature; their colour varies from light olive to dark brown; faces oval, hair and eyes universally black. Their dispositions are lively, and their manners mild and polite; but their bad qualities are numerous, and their moral character, generally, exceedingly low. They are overbearing to inferiors; strangers to truth, honesty, and good faith; and incorrigible cheats and pilferers. The lower classes live in a state of continual warfare with cach other ; and there are few families withont internal divisions, aceompanied by the most bitter and lasting enmities. They want courage to meet their enemies in open combat, and to commit thefts attended by danger; but have little hesitation in murdering and robbing when darkness or other cireumstances promise a safe perpetration of these crimes.

It is a necessary consequence of the extreme poverty of the bulk of the population of India, that education should be there at a very low ebb. The first rudiments of edueation are usually given in small sehools ealled pathsals, in which the fees are extremely low, but still far beyond the reach of the majority of the people; they are, therefore, few in number ; and did not parents, in many instances, instruct their own children, there would not be many who could either read or write. Children usually go to sehool at five years of age, and are instructed in reading and writing at the same time, tracing letters on the floor with a pencil of steatite; at a more advanced stage, they write on the palmyra leaf, with a pen (made of reed or bamboo) and ink; afterwards, they begin to write on paper, and learn to keep accounts. Nothing is taught in these sehools but reading and writing, in the common language of the provinee, together with arithmetic. The Prakrito, or polite language of Bengal, is confined to persons of liberal education, amongst whom it is the usual means of correspondence. In the common language of the eountry, there is neither grammar nor dietionary, nor a single book from which anything ean be learned; neither are there many books of value in the Prakrito, the usual printed compositions in that language being songs, hymns, and poems. The English language is now, however, making rapid strides in every part of India.

The private houses of Bengal are huts, with pent roofs, construeted of two sloping sides, which meet in a ridge. Une hut of this kind serves the poor man for himself, family, and cattle; wealthy men increase the number of houses, without altering the plan, and without having any communication between the different apartments. The walls are generally made of mud, and the floor is raised a foot or two above the level of the plain, to prevent its being flooded in the rainy season, which however is not always accomplished; in which case the family have to wade through mud to reach the door. The frames of the houses consist of bamboos tied together ; wooden posts and beams being used in the construction of the houses of the wealthy only. The huts, collectively sufficient for the accommodation of a family, are usually surrounded by a common fence. Farmers have, in general, larger and better houses than people living in towns. A rich farmer will sometimes have as many as 12 or 14 huts within his enclosure.

The expense of maintaining the table of a Ilindoo family
of high rank and station, with eight domesties, exclusive of the master and mistress, has been estimated, by Mr. Masters, at about $£ 167$ per annum. The maintenance of a common labourer, with a wife and two children, is estimated at between $£ 8$ and $£ 9$ per annum; his whole expenses at about $£ 12$. Intermediate classes, with one or two more in family, vary, according to position, from $£ 87$ to $£ 33$ and $£ 15$ per annum, for food alone; which consists chiefly of rice, wheaten flour, fish, vegetables, and butter, with various condiments and seasonings. In the case of the labourer, there is neither flour, fish, vegetables, nor butter, the ehief food of that elass being a coarse deseription of rice.

History.-The English first established themselves in Bengal in 1656, when, through the influence of an English medical man named Boughton, the East India Company obtained the sanction of the Emperor of 1)elhi to locate themselves on the right bank of the river IIoogly. Thirty years afterwards, the Company's factors, having had a rupture with the Moslem commander at the place where they were located, removed to Calentta, then the village of Chuttanutty, where they continued to carry on their trade. In 1700, the Viceroy of Bengal, being in want of money to dispute the succession to the Mogul throne, obtained a large sum from the Company for the township on which their faetory stood at Caleutta, and some adjacent lands. Seven years afterwards, namely, in 1707, Calentta was ereeted into a presideney, and the foundation of British power in India laid; presenting a striking proof of the superior energy of the British charaeter, there having been settlements in India by the Portuguese, Duteh, French, and Danes, previous to, and contemporary with, the location of the English in that quarter of the world, but the mighty aehievement of attaining the supremacy in that vast empire, could, it appears, be accomplished only by the British. For nearly half a century, the Company pursued a peaceful and profitable commeree; but, at the expiry of that period, 1756, Caleutta was attacked and taken by the Soubahdar of Bengal, who threw the Englishmen he found there, 147 in number, into a dungeon, the well-known black hole of Calcutta, where 123 of them perished in 11 hours. In the ensning year, Caleutta was retaken by Lord Clive; an event which was followed by a series of vietories on the part of the British, that terminated in the entire conquest of India. (See India.)

Bengal is distributed into three divisions-Calcutta, Moorshedabad, and Daeca-which have 17 subordinate districts or collectorates. The principal cities, besides the three just named, are Burdwan, Hoogly, Chandernagore, Purneah, Rajemalial, and Dinajepore. Pop. estimated at about $25,000,000$. -(Martin's Eastern India; Mamilton's East India Gaz.; Journal of the Statistical Society of London; The Picture of India; Porter's Progress of the Nation; M'Culloch's Account of the British Empire; The Anglo-Indian and Colonial Almanac; Martin's British Colonial Library ; Baine's History of the Cotton Manufacture ; Parliamentary Rcports.)

BENGAL (BAY OF), a gulf of the Indian Ocean, and, with exception of the Arabian Sea, the largest indentation on the S. coast of Asia. It lies between the peninsular portion of Hindoostan, on the W., and the coasts of Lower Siam, Tanasserim, Tavoy, Burmah, and Aracan, on the E.; or between lat. $7^{\circ}$ and $23^{\circ} \mathrm{N}$., and lon. $78^{\circ}$ and $99^{\circ} \mathrm{E}$. It is about 1400 m . in width at the broadest part, or between Cape Comorin, the extreme S . point of Hindoostan, and the corresponding latitude on the coast of Lower Siam. From this point it diminishes little in breadth till lat. $15^{\circ} \mathrm{N}$. is passed, when it gradually contracts to a breadth not exceeding $250 \mathrm{~m} .$, and latterly terminates in a comparatively narrow inlet, of not more than 50 m . in width, erowded with islands, and in which are the emboucbures of the Brahmapootra, and the largest and most E. branclı of the Ganges.

BENGAZI, or Bengazx, a maritime tn. regeney of Tripoli, dist. Barea, E. coast of the Gulf of Sidra; lat. (eastle) $32^{\circ} 6^{\prime} 48^{\prime \prime}$ N. ; lon. $20^{\circ} 2^{\prime} 42^{\prime \prime} \mathrm{E}$. (r.) ; situated on the verge of a large and fertile plain, extending to the foot of the Cyrenaic chain of mountains. It is wretchedly built, and most of the houses are constructed of mud, or of rough stones cemented with that material instead of mortar. Those who can afford it, spread a preparation of lime over the mud, which renders it impervious to the weather. The houses consist generally of one floor, having a quadrangular courtyard within, into which the
doors of the various apartments open. The roofs are flat, laid over with rafters, and thereafter covcred with all sorts of rubbish, which is kept down by a thick coating of mud. The houses of the poorer classes are composed of such frail materials, and so unskilfully constructed, that numbers of them fall on their inmates, often seriously injuring them, during the rainy season of each year-a calamity which combined indolence and poverty prevent them providing against, notwithstanding their repeated expericnees. The town is, besides, extremely filthy throughout; and in the market-place is a pool of stagnant and putrid water, into whieh all the blood and offals of the animals killed, and all the rubbish of the town, excepting what is deposited on the streets, is thrown. The harbour, which was, about 50 years since, of sufficient depth to admit vessels of from 200 to 300 tons burden, is fast filling up with sand, and will not now float vessels drawing more than 7 or 8 ft . water. It is defended at the entrance by a castle, so slightly constructed as to be incapable of a protracted resistance. The trade of the town, which is carried on principally by Jews, is still pretty eonsiderable. The exports consist ehiefly of cattle, sheep, corn, wool, and salted butter. Provisions, fruits, vegetables, and fresh water abound; and ships touching at the port may have ample supplies of them all. Bengazi occupies the site of the Berenice of the Ptolemies, of which few vestiges are to be seen above ground; but numerous and interesting remains are found at almost every point within the distanee of half a mile, on digging a little way beneath the surface of the earth. In the neighbourhood are to be seen some singular chasms, of large area, filled with luxuriant vegetation, and surrounded by perpendicular walls of rock, presenting a most picturesque appearanec, and supposed to have been the sites of the gardens of the Hesperides. Bengazi is in the dominions of the Pasha of Tripoli, under whom it is governed by a Bey, who resides in the castle; where, also, his officers and troops are quartered. Pop. estimated at 5000.

BENGEO, par. Eng. Hertford; 3020 ac. Pop. 1141.
BENGEWORTH (St. Peter), par. Eng. Worcester. Pop. 1082.

BENGORE MEAD, a promontory, N. coast, Ireland, co. Antrim; lat. $55^{\circ} 15^{\prime} \mathrm{N}$. ; lon. $6^{\circ} 29^{\prime} \mathrm{W}$. It is formed of a number of capes, the most prominent of which rises 320 ft . above the level of the sea.

BENGUELA, a little-known dist., W. coast, Africa, lying between lat. $11^{\circ}$ and $17^{\circ} \mathrm{S}$. , and bounded, N. by Angola, E. by the Cunene river, $S$. by Nourse's river, and W. by the Atlantie Ocean. The interior of the country is mountainous, the direction of the elevated lands being from N.E. to S.W. It is well watered, having numerous springs and lakes, many of the latter brackish, and some salt ; and being thickly intersected by rivers and streams. Its vegetation is luxuriant, ineluding every description of produee peculiar to tropical countries. The slopes of the mountains are covered with dense forests of cedars, palms, date-trees, tamarinds, \&c. The vine, the banana, ananas, and other deseriptions of tropical fruit, also abound. The soil is well adapted for the production of grain; but, from indolence and want of skill on the part of the natives, little is grown. The larger and fiercer animals of the African wilds are numerous in this district; lions, tigers, rhinoceroses, elephants, hippopotami, and alligators (the latter of a very formidable kind) frequently invading, in large bodies, the neighbouring towns and villages, when the rivers they inhabit run low. Zebras, elks, deer, and antelopes are likewise abundant. Horses are scarce, but eattle, sheep, and goats plentiful. The ostrich and the peacock are found here; the latter wild in the woods. Reptiles of all sorts, harmless and dangerous, are met with everywhere. The mineral wealth of the district consists of copper, sulphur, petroleum, and crystals. Gold and silver have also been found, but it is not known whether they abound.

BENGUELA (SÃo Felipe de), a tn., W. coast, Africa, Portuguese cap. of the above dist. It is situated on an open bay, formed to the S.W. by projecting cliffs, below Mount Sombreire or St. Philip's Cap; lat. (flag-staff) $12^{\circ} 32^{\prime} 15^{\prime \prime} \mathrm{S}$.; lon. $13^{\circ} 30^{\prime} 45^{\prime \prime} \mathrm{E}$. The buildings are of half-baked bricks, cemented with mud, and covered with a thick plaster of shell lime. The town is surrounded by a marsh, full of stagnant pools, from which the most deadly exhalations arise, rendering the place so unhealthy that no European can live in it. A large mud fort, going to decay, mounted with a few rusty
guns, forms the chief defence of the town. Here an extensive trade in slaves was at one time carried on, 20,000 being annually exported from it; and there is no good reason for believing that there are fewer now. The town was, some time ago, invaded by a herd of elephants in quest of water, and almost wholly destroyed by them. The pop. consists of free blacks and slaves, and amounts to about 3000 .

BENHALL, par. Eng. Suffolk; 2010 ac. Pop. 749.
BENHOLME, par. Scot. Kincardine, about 3 m . square, bounded on the S.E. by the (ierman Ocean. Pop. 1648.

BENI, a river, Bolivia, formed by several head-streams baving their sources in the high mountain-ranges N.W. of Cochabamba, about lat. $18^{\circ} \mathrm{S}$., and which unite about lat. $16^{\circ} 42^{\prime} \mathrm{S}$. ; Ion. $68^{\circ} 10^{\prime} \mathrm{W}$. From this point, the Beni holds a generally N. course for about 300 m ., when it bends N.E., and subsequently joins the Mamore or Marmore in lat. $10^{\circ} 35^{\prime}$ S., the united streams receiving the name of the Madeira, which falls into the Amazon near Serpa, in lat. $3^{\circ} 20^{\prime} \mathrm{S}$. It is but proper to mention that there are considerable differences of opinion regarding some parts of the course of this stream, the whole not having been yet explored. Extensize levels, of great fertility, streteh along its banks, which are also adorned with the most magnificent trees, many of them fruitbearing; medieinal herbs and aromatic gums also abound. Fish are numerous; and gold is found on its shores. The banks are inhabited by various tribes of Indians, some of whom are in a barbarous state.

BENI, a dep. Bolivia, formed, in 1843, by uniting provs. Caupolican or A polabamba, previously included in dep. La Paz, to those of Moxos and Y uraeares, which made part of dep. La Cruz. The new department, therefore, embraces the territory on both banks of the river Beni. It extends N., aecording to the Bolivian maps, to lat. $10^{\circ} \mathrm{S}_{.}$; and ineludes, on the W., the highest points of the Bolivian Andes, Sorata, and Illimani ; on the E., a vast tract of level plain, watered by numerous great rivers, clothed with superb forests, and extensively inundated during the wet season. The pop. of this vast territory probably does not exeeed 35,000 , nearly all indigenous.

BENICARLO, a tn. and port, Spain, Valencia, prov. of, and 44 m . N.E. Castellon de la Plana, $1 \frac{1}{2} \mathrm{~m}$. from the Mediterranean. It is entered by four gates; and has well-made and paved strects, four squares, a parish church, townhouse, eustom-house, hospital, adult and three other sclools, a cemetery, and several convents. Manufactures:-hempen fabries, ropes, and saileloth. There are here two brandy distilleries, tanneries, numerous wine-presses, and oil-mills. Fishing, to a limited extent, is carried on. Exports:-red wines, brandy, and oil, which are sent to Cadiz, Malaga, and other points of the peninsula. Imports:-wheat, ling, sardines, sugar, iron, and timber. Benicarlo is chiefly noted for the red wines of the surrounding country, of which it exports upwards of 220,000 casks annually. Most of these wines are sent to Bordeaux, for the purpose of mixing with their clarets. A portion, and no inconsiderable one, is also sent to this country to be manufactured into port. 'During the vintage,' says Mr. Ford in his Handbook,' 'the mud of these towns is absolutely red with grape-husks, and the legs of the population dyed from treading the vats. Nothing,' he adds, 'can be more dirty, classical, and unscientific than the modus operandi. The press is rude; the filth and negligence boundless.' Pop. 6060.

BENICIA, a recently-commenced seaport tn ., U. States, California, about 30 m . N.N.E. San Francisco. It is admirably situated on a spit of land in the N. part of the Bay of San Franeisco, and commands the navigation both of the Sacramento and San Joaquim rivers. The largest vessels lie elose in shore. The climate is fine; the place is rapidly increasing. Shipbuilding is carried on.

BENIDORM, a tn. and port, Spain, Valencia, prov. of, and 27 m. N.E. Alicante, on a hill at the head of a bay of same name. It has a parish ehureh, townhall, prison, four publie schools, eustom-house, and a ruinous castle. The inhabitants are chiefly employed in fishing, and as muleteers. As a port, its commeree is unimportant; consisting principally in importing grain from Andalusia, and exporting salt fish, fruits, vegetables, \&c. 1’op. 4502.

BENIGANIM, a tn. Spain, prov. of, and 37 m . S. Valeneia. It has spacious, clean, and well-paved streets, an extensive square, two parish churehes, two endowed schools, a substantial townhall, hospital, prison, two public fountains,
a palace of the Marquis of Belgida, and several convents. The inhabitarts are chiefly employed in agriculture, but also manufacture linen fabrics, soap, and a kind of sweetnieat called arropa de Beniganim. There are here also four brandy distilleries, and some wine-presses. I'op. 2318.

BEN1-ISGUEN, $n \mathrm{tn}$. Algeria, in the Sahara Desert, on the Wady Mzab; lat. $33^{\circ} 30^{\prime} \mathrm{N}$.; lon. $2^{\circ} \mathrm{E}$. It is described as approaching in size to the town of Algiers, as being strongly built, and surrounded by a rampart, on which are five towers. It has three gates, and some trade in grain. The inhabitants are of the Beni-Mzab tribe.-(Daumas, Le Sahara Algerien.)

BENI SABIIH, a tn. Marocco, cap. prov. Darah or Draha, r. bank of streamlet Draha, 224 m . S. by E. the city of Miaroceo ; lat. $28^{\circ} 58^{\prime} \mathrm{N}$.; lon. $6^{\circ} 45^{\prime} \mathrm{W}$. It is a small but rather densely-populated town. and has some trade in goat-skins.

BENIN, a Negro country or kingdom, W. Africa, Upper Guinea, on the Bight of Benin, Gulf of Guinea, extending along the coast on both sides of the Benin River, but how far, and to what distance inland, is not known ; indeed, respecting the whole country, our information is exceedingly defective. It is, however, now understood to be neither so extensive, nor important, as at one time it was deemed. The capital is Benin. The coast is thickly indented with estuaries, some of them of considerable breadth, and studded with islands. The country is flat for some distance inland, when it begins gradually to rise, till it attains a height of between 2000 and 3000 ft . It is very well wooded, and being likewise well watered, it is rich in all the vegetable productions of the tropics. Cotton is indigenous, and its wool is woven into cloth by the women. Sugar-cane of good quality is grown; the soil is laid out in square plots, producing yams, plantains, Canada and Indian corn. The religion is Fetichism. Human sacrifices are numerous, and cruelty, in its most atrocious forms, is characteristic of the people and the Government. An extensive traffic in slaves is carried on in this country. Besides this nefarious traffic, there is a considerable trade in salt, palm-oil, and blue coral.

BENIN, a large tn., W. Africa, cap. of above kingdom; lat. $6^{\circ} 12^{\prime} \mathrm{N}$. ; lon. $5^{\circ} 45^{\prime} \mathrm{E}$. (c.), r. bank, river of same name, formerly called by the Portuguese Rio Formosa, but now ascertained to be one of the mouths of the Niger. As in almost all African towns, the houses are set down without the slightest regard to order, and often at wide distances from each other. They are built of clay, neatly thatched with reeds, straw, or leaves, and kept exceedingly clean. The palace of the King stands outside of the city, and is defended by walls. Benin was at one time the great emporium of the district for slaves, but this traffic is now carried on nearer the coast, as large vessels could not come within a shorter distance of the town than Gatto or Agattou, a port about 40 m . down the river. It is still, however, the scene of a busy market for cattle, sheep, goats, pigs, poultry, yams, cottons, ivory, and European wares; with fruits of various kinds. The country around is fertile, but low and swampy, and very unhealthy for Europeans. Belzoni, the celebrated traveller, died here in 1823. Pop. estimated at 15,000 .

BENIN (Bight or), a large indentation of the Gulf of Guinea, extending along the entire coast of Benin and Dahomey. The coast is low and swampy, and rendered exceedingly dangerous by the heavy surf which is continually rolling on the beach. The current on the shore sets always $\mathbf{E}$. at a rate varying from half a mile to one and a half per hour. The prevailing winds are W. In the montls of February and March the coast is subject to violent tornadoes from the N.E., accompanied by heavy, cold rains. There are a number of considerable towns along the coast, carrying on a pretty extensive trade in palm-oil and ivory, and at all of which. the necessaries of life, with fruits and vegetables, may be had cheap, and in abundance.

BENIN (River of), [called by the Portuguese Rio Formosa, and still recognized by that name], in W. Africa, kingdom of Benin, and believed to be one of the mouths of the Niger. It falls into the Gulf of Guinea about 180 m . below Benin, and about 115 m . N.N.W. Cape Formosa; lat. (entrance, N. W. point) $5^{\circ} 46^{\prime} \mathrm{N}$. ; lon. $5^{\circ} 4^{\prime}$ E. (R.) It is a fine bold river. It divides into two branches, both of which were ascended in 1840, in a steamer, by Capt. Becroft, the one branch for a distance of 50 , and the other for a distance of 70 m . Further progress was stopped, by the impenetrable
nature of the aquatic vegetation. The river is 2 m . widc at its mouth, across which is a bar of mud, clay and sand, extending from 4 to 5 m . seaward, and on which there are not more than 12 ft . water at spring tides. A few miles up, the river contracts to the width of half a mile. The depth of water does not in any part exceed 24 ft . The climate here is fatal to Europeans ; the disease, a malignant remittent fever, which frequently carries off great numbers of the crews of vessels frequenting the river. The chief articles of export are palm oil, ivory, and pod or cayenne pepper, for which cloth, particularly scarlet, beads, guns, gunpowder, hardware, and spirits, are taken in exclange. The tide rises in the river 5 or 6 ft .

BENIOLEED, a tn. and valley, N.W. Africa, regency of Tripoli, ahout 100 m . S.S.E. from the seaport town of that name. The valley, which is very fertile, is described by Major Denham as being bounded on all sides by whitish brown hills, capped in many places with greenstone, and anygdaloid, or vesicular lava, rugged villages, and ruinous castles, on every point, some overtopping the columnar greenstone, and scarcely distinguishable from it. The hills do not exceed 400 ft . in height, and are composed mostly of limestone.

BENISA, a tn. Spain, Valencia, prov. of, and 38 m . N.E. Alicante, on a hill overlooking the Mediterranean. It has badly-constructed and mean-looking streets, a parish church, two schools, \& townhall, public prison, hospital, storehouse, and a Franciscan convent, the church of which is used as a chapel of ease. The inhabitants are engaged in tillage, and in preparing Muscatel raisins, which are exported. A monthly market is held for the sale of the agricultural produce, and for cattle. Pop. 3678.-(Madoz.)

BENISALEM, a tn. Spain, isl. Majorca, prov. Baleares, $10 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Inca, having spacious streets, two squares, a parish church, two schools, a townhall, and a cemetcry. Trade in coal, and marble, wrought in the neighbourhood, and in lime, grain, oil, and exquisite fruits. Pop. 3027.

BENINUEFF, or BENIsooéf, a tn. Egypt, cap. prov. or beylik of same name, 1. bank, Nile, 83 m . S. Cairo. It is the residence of the bey or governor, who has a palace in the town, and contains a maufactory for silk and cotton stuffs, established by Mehemet Ali in 1826, and a large barracks for cavalry. Benisueff was once famous for its linen manufactures, and for its trade in flax, but both are now extinct. An indifferently supplied market is held here once a week. 'The bank of the river at Benisooéf,' says Sir Gardner Wil. kinson, 'presents the ordinary scenes common to all the large towns on the Nile; the most striking of which are, numerous boats tied to the shore, buffaloes standing or lying in the water, women at their usual morning and evening occupation of filling water-jars, and washing clothes, dogs lying in holes they have scratched in the cool earth, and beggars importuning each newly-arrived European stranger, with the odious word bakshish [a present].' Pop. 5000.

BENNECKENSTEIN, a tn. Prussia, prov. Saxony, on the Rapbode, at the foot of the IIarz, 13 m . N.N.W. Nordhausen ; lat. $51^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $10^{\circ} 40^{\prime} \mathrm{E}$. It has an iron foundry, a nail-work, a brewery, and manufactures a variety of articles from wood. Pop. 3500.

BENNEKOM, a vil. IIolland, prov. Gelderland, 10 m . W. by N. Arnhem, with a church, school, and 900 inhabitants.

HENNESCH, or BENN1SCH, a th. Austrian Silesia, on the borders of Moravia, 9 m . E. Troppau. The inhabitants, who are almost all Germans, live chiefly by weaving linen, and spinning yarn. A valuable silver mine, which employed a great number of furnaces, once existed in the neighbourhood. It lad long been closed, but was again opened in 1817. Nothing, however, is obtained from it except iron ochre, and clay ironstone. Pop. 2750.

BENNINGTON, three pars. Eng.:-1, par. Hertford; 2950 ac. Pop. 605.-2, par. Lincoln; 3090 ac. Pop. 539. -3, Bennington (Long), par. Lincoln; 4420 ac. Pop. 1007.

BENNINGTON, a post vil., U. States, Vermont, on elevated ground, 37 m . N.E. Albany; lat. $42^{\circ} 42^{\prime} \mathrm{N}$. ; lon. $73^{\circ}$ W. It has a court-house, Congregational church, two acadenics, and 12 schools. In 1777, an engagement took place on the W. border of the village, between the British and Americans, in which the former sustained a defeat. Pop. (1840), 3429.

BENNIWORTH, par. Eng. Lincoln; 2840 ac. P. 488. BENOIT (St.), a tn., E. coast, isle of Bourbon, 27 m . S.E. St. Denis, for which place the produce of the district is shipped in small vessels. Pop. about 9000 .

BENOWEN, par. Irel. Westmeath; 6887 ac. Pop. 1548.
BENOWM, or Benown, a tn., N. Africa, cap. of kingdom Ladamar, S. border of the Cireat Desert; lat. $15^{\circ} 8^{\prime} \mathrm{N}$.; lon. $9^{\circ} 40^{\prime} \mathrm{W}$.

BENSHEIM, a tn. grand duehy of Hesse-Darmstadt, prov. Starkenbarg, on the highroad and the railway between Frankfort and ILeidelberg, 17 m . S. Darmstadt; lat. $49^{\circ} 40^{\prime}$ N.; lon. $8^{\circ} 35^{\prime} \mathrm{E}$. It is surrounded with old walls; and eontains a gymnasium, a normal school, and three churches. The inhalitants live by trade and agricultare, including that of the vine. Pop., chiefly R. Catholic, 4000 . - The DISTrict of the same name, though mountainous, is fertile; produces all the ordinary crops; rears a great number of excellent cattle; and has a pop. of 23,200 .

BENSINGTON, par. Eng. Oxford; 2800 ac. Pop. 1254.
BENTALA, a tn. Senegambia, about 210 m . N.N.E. Sierra Leone ; lat. $11^{\circ} 25^{\prime} \mathrm{N}$. ; lon. $12^{\circ} \mathrm{W}$. ; l. bank of a tributary of the Rio Grande.

BENTHALL, par. Eng. Salop; 770 ac. Pop. 587.
BENTHAM, par. Eng. York, W. Riding; 23,100 ac. Pop. 3535.

BENTHEIM, a prov. or earldom, Hanover, lying be tween the Prussian prov. of Westphalia, and the Duteh prov. of Overijssel ; area, about 399 sq.m., mostly level, and tolerably productive. Ainongst its mineral produets are potters' clay, coals, millstones, and freestone. Its only manufacturcs are flax yarn spinuing and weaving. The climate is, on the whole, temperate and healthy. Both the language and manners of the inhabitants are Dutch.-The rown of Bentheim, in lat. $52^{\circ} 18^{\prime} \mathrm{N}$. ; lon. $7^{\circ} 8^{\prime}$ E., is built on an acclivity, on the W. side of the Weehté. The streets are steep and crooked; but the palace, which crowns the summit of the acclivity, and is of a castellated form, surrounded with walls, commands a beautiful prospect. There is a sulphur spring in the neighbourhood, which is much resorted to. Pop. of tn. 1972; of prov. 28,754.

BENTINCK ISLAND, an isl. in Australia, Gulf of Carpentaria; lat. (S. point) $17^{\circ} 8^{\prime} \mathrm{S}$.; lon. $139^{\circ} 30^{\prime} \mathrm{E}$. It is about 10 m . long, and as many broad, of moderate elevation, and thickly covered with wood. Its S. side is mueh indented, and the projections are lined with mangroves.

BENTLEY, several pars. Eng. :-1, par. IIants; 2450 ac. Pop. 766.-2, par. Suffolk; 2350 ac. Pop. 419.-3, Bentley (Great), par. Essex; 2850 ac. Pop. 1005.-4, Bentley (Little), par. Essex; 2750 ac. Pop. $462 .-5$, Bentley (Fenny), par. Derby; 670 ae. Pop. 343.

BENTON (Long), par. Eng. Northumberland; 8760 ac . Pop. 8711.

BENTOTTE, a beautiful vil. or small tn. Ceylon, 1 . bank, river of same name, $12 \mathrm{~m} . \mathrm{S}$. Cultura. It has distilleries of arrack, and manufactures considerable quantities of cordage, both of which are exported to the coast of Coromandel. There is a pretty large church in the village, and a house for the reception of travellers. Fish is abundant; and the oysters taken in the vieinity are celebrated for their flavour. The pop. is numerous.-(Ceylon Gaz.)

BENWEE HEAD, Ireland, eo. Mayo, rises perpendicularly from the sea to a height of 900 ft . ; lat. $54^{\circ} 21^{\prime} \mathrm{N} . ;$ lon. $9^{\circ} 45^{\prime} \mathrm{W}$.

BENTWORTH, par. Eng. Hants; 3770 ac. Pop. 609. Benzerta. See bizerta.
BEOLEY [anc. Beaulieu], par. Eng. Worcester ; 4700 ac. Pop. 657.

BEPTON, par. Eng. Sussex ; 1260 ac. Pop. 207.
BEQUIA ISLAND, one of the Grenadines, a clain of small islands, belonging to the British, between St. Vincent and Grenada, W. Indies, 7 m . S. from the former. It is about 7 m . in length, and from $1 \frac{1}{4}$ to 2 m . in breadth. On the W. side is a spacious bay, called Admiralty Bay ; lat. (N. point) $13^{\circ} 5^{\prime} \mathrm{N} . ;$ lon. $61^{\circ} 14^{\prime} \mathrm{W}$. (n.) It has a slightly hilly surface. Produces cotton and sugar.

BERAR, a large prov. Hindostan, in the Deccan, incorporated into the British dominions in the year 1854; between lat. $17^{\circ} 48^{\prime}$ and $22^{\circ} 43^{\prime} \mathrm{N}$., and lon. $75^{\circ} 20^{\prime}$ and $82^{\circ} 48^{\prime}$ E.; bounded, N. by Candeish and Malwa, E. by prov. Gund-
wana, S. by Aurungabad and Beeder, and W. by the dominions of the Nizam ; greatest length, N. to S., 330 m . ; breadth, 300 m . ; area, $56,723 \mathrm{sq} . \mathrm{m}$. It is centrally situated, being almost equidistant from the Bay of Bengal and the W. coast of India; and consists chiefly of an elevated valley, reached by a chain of ghauts or mountain passes, sometimes sloping gradually, sometimes terminating abruptly towards the valley, which, owing to the undulations of the ground, and numerons intervening small peaks, is seldom seen till it is nearly approached. The chief rivers are the Wurda, the Khahan, Wynegunga, and other affluents of the Godavery, and the Tuptee or Tapty, and Mahanuddy. The soil is fertile, yielding abnndant erops of dry grains; also pease, vetches, flax, sugar, betel, and tobacco. The wheat is reckoned the best in India, and is harvested three months after it is sown, leaving time for a crop of Indian corn. Cotton is grown to some extent, and considerable numbers of sheep are reared. Since the country has been under the supervision of the British, a large proportion of the land has been brought into cultivation, and greater attention paid to the means of irrigation generally. The agrieultural implements in use are still of a very inferior description, particularly the plough, which is extremely rude and inefficient. The indigo-plant is not cultivated, though growing wild; neither is opiam much attended to. A large portion of the country is in the hands of zemindars, who pay small quit-rents to Government, but are otherwise independent. In the more civilized parts of Berar, the revenue is collected by the potail or head village farmer, who is responsible to Government for the punctual payment of the ryot's rents; he himself receiving some 17 per cent. by way of remuneration. The office of potail is usually considered hereditary, but the Government claims the power of dismissal. The judicial authorities rank, under the Rajah, in the following order:the soubahdar of the distriet, the native pergunnah collector, and the potail. The punchayet, a body of five arbitrators, of whom two are chosen by each party in the cause, and the fifth by the local authority, decides most petty civil causes, finally, without appeal. Cases of more importance are decided by the Rajah in person, or by the soubahdar, who is usually a military officer; when the loser must pay down one-fourth of the disputed claim, as a fine, to the Rajah, and the gainer another fourth, as recompence for the trouble of decision. Education in Berar is chiefly confined to the children of Brahmins and those of the mercantile classes, and is of a description little calculated to advance their moral or intellectual faeulties. All the other classes are exceedingly illiterate, it being rare to find a cultivator of the soil who can write his own name. The only order who ever study books are Brahmins, and these books are exelusively books of theology. The trade of Berar is chiefly limited to internal traffie, and that is insignificant, from the want of good roads and other means of communication; still a considerable quantity of cotton, and numerous sheep, are sent to Kamgaum, in the N.W. part of the province, to be forwarded thence usually by the Chandore pass to Bombay. The road, however, is so wretched, that large quantities of the cotton are lost or destroyed on the way, and not one-third of the sheep reach Bombay alive, and even those that do survive the journey are greatly reduced in flesh.
Towards the end of the 17th century, Berar, which had been formerly ruled by independent sovereigns, was added to the Mogul empire. On the decline of that empire it was overrun by rapacious hordes of Mahrattas, and for some time it was nearly equally divided between the Peshwa and the Rajah of Nagpoor. The latter, however, in 1803, having taken part with Dowlat Row Sindia against the British, he was, in the December of the same year, compelled to cede to the latter the province of Cuttack, including the port of Balasore, as well as the provinces of Sumbulpore and Patna (afterwards restored to him), also some districts on the Hyderabad frontier, which were made over to the Nizam. In 1817, the new Rajah, Appah Sahib, having joined the Peshwa against the British, the latter took upon themselves the government of his territory, in the name of Bajee Rao Booshlah, then a minor. In 1826, the young Rajah attained his majority, and was put in possession of part of his territory, the remainder of which was given up to him in 1829. IIe died without issue, December 11, 1853, and in course of the following year his territories were incorporated with the pos-
sessions of the East India Company.-(Diill's History of British India; Parliamentary Papers, dic.)
lierat, or Arnaut berat [anc. Arnaout Beligral], a tn . Turkey in Europe, near the centre of Albania, sanjak of, and 28 m . N.E. Aulona, romantically situated on both sides of the Tuberathi or Ergent, here crossed by a handsome bridge of eight arches. It contains an acropolis or citadel, repaired and strengthened by Ali Pasha, situated upon a high hill, within which are the palace of the Vizier, several Greek churches, and about 250 houses. The lower town, without the walls of the acropolis, has 13 mosques and a large and handsome bazaar, well supplied with articles from Constantinople and Macedonia, and with foreign goods imported through the port of Aulona. It lies in, and commands a narrow pass, is considered an important post, and its posscssion has been frequently disputed by contending Pashas. It is the residence of a bishop. The Greek women here wear a peculiar kind of cap or bonnet, nearly two feet high, and shaped like a bishop's mitre, generally made of blue cloth, well stuffed, and fastened under the chin with ribbons. The vicinity is fertile in grain, wine, and oil. Pop. about 8000 or 9000 .

BERAUN, a small walled tn . Bohemia, cap. prov. of same name, 17 m . W.S.W. Prague, on the Beraun, near its junction with the Litawka. It has a gymnasium, and a monastery of Piarists. Its staple manufacture is earthenware, of excellent quality. In the vicinity are marble quarries and coal mines. A few miles off, on a rock, in the middle of a valley, stands the castle of Karlstein, the most remarkable feudal fortress in Bohemia. It suffered greatly during the Thirty Years' War, but is still tolerably entire. It has a donjon tower 121 ft . high, with walls 13 feet thick. (On the third story is an interesting old chapel; and close to it, the magnificent oratory of St. Catherine, built by Charles IV. of Austria, by whom the castle itself was erected, in 1348, for the preservation of the Bohemian regalia. Within the castle is a well 232 ft . deep. At Beraun, in 1744, the Austrians gained a signal victory over the Prussians. Pop. 2200--The province of Beraun, area 720 geo. sq. m., consists of mountains, intersected at intervals by fertile valleys, and is watered by the Moldau, Sasawa, Beraun, and Litawka. It produces rich crops of grass, and small quantities of wine and hops; and is famous for its breeds of horses, cattle, and sheep. 1ts higher slopes are covered with excellent timber; and among its mountains are mines of silver, lead, and iron, the last maintaining several blast furnaces and other iron works. Coal, also, and quarries of marble, abound. Nor are the manufactures of Beraun unimportant. Its naileries are the most extensive in Bohemia; and it has numerous sugar-works, potash-works, pottcries, and paper-mills, together with manufactures of linen and cotton goods. Pop. 185,000.

BERBER, a dist. Nubia, on either side the Nile, intersected by lat. $18^{\circ} \mathrm{N}$. It consists of rich alluvial land, suitable for growing grain, cotton, tobacco, and indigo; but it is to a great extent uncultivated. It is the rendezvous for merchants from Sennaar and Kartoom, on their way to Cairo. A considerable traffic in slaves is carried on. Pop. 8000 to 9000.

BERBERA, a seaport and tn., or rather market-place, E. coast, Africa, Somauli country, on the Gulf of Aden, situated in a beautiful harbour, formed by a curvature of the coast line, and a low sandy cape projecting out nearly at right angles with the general line of the coast to a distance of nearly $13 \frac{3}{4} \mathrm{~m}$. The extreme of this sandy cape is in lat. $10^{\circ} 26^{\prime} 20^{\prime \prime} \mathrm{N}$. ; lon. $44^{\circ} 6^{\prime} 20^{\prime \prime} \mathrm{E}$. The direction of the harbour is E.N.E. to W.S.W., and at its entrance it is three-quarters of a mile wide, with 13 fathoms mid-channel; shoaling to 5 fathoms, within 200 yards of the town. During the summer, from A pril till early in October, Berbera is a waste, utterly deserted, without inhabitant ; but no sooner does the season change, than the inland tribes commence moving towards the coast, to prepare huts for the expected visitors. These huts being merely for temporary use, mostly consist of leaves of the doum palm, long dried grass, or badly-preserved skins, extended over a few poles, so as to form a roof. A few huts of the more wealthy merchants make an attempt at greater display; but being wholly composed of roof, there is little scope for the exercise of architectural genius. Now the traders begin to arrive from all points of the compass; long strings of camels wind through The?streets, and now the annual fair commences. Here are met slave merchants from Hurrur and Efat, Egyptians, Nubians, Abyssinians, Dankali, and natives of Somauli, Susa,

Kaffa, Kombat, Isah, and Zingero, surrounded with the products of their respective countries; Banians from India, peering forth cunningly between piles of rich goods; Persians, with shawls from Kerman, and turquoises from the neighbourhood of the Caspian Sea ; the natives of Mesopotamia, and Oman, and Hadramaut, and lemen, and the Hcjaz, with whatever commodities the soil of Arabia produces. The harbour is filled with vessels from Arabia, Persia, India, \&c. The imports are white and blue cotton cloths of Indian manafacture; also, piece goods, Indian handkerchiefs, brass and copper wire, zinc and beads, dates and grain from the coast of Arabia, and some few prints from Hurrur. The exports are ghee, hides, deers' horns, ivory, gums, ostrich feathers, coffee, sheep, and horned cattle. Among the prineipal subjects of traffic are slaves, particularly young females, most of whom have been kidnapped from their parents. The greater part of the trade of this fair is in the hands of the Banian merchants, and the amount of business done, mainly by barter, is very great; the amount of coffee alone sold having been estimated as high as 15,000 tons. The whole of the multitudinous assemblage brought together at this remarkable fair, and pervaded by the spirit of gain, is engaged from morning till night in excessive turmoil and wrangling. Honesty, moreover, is a rare visitor among them. Each endeavours to overreach the other, high words arise, quarrels spring up, blows are given and returned, lances flourished and creeses drawn; and here and there a pool of Mussulman or Pagan blood tells of the way in which bargains are sometimes concluded by these rough customers. All the dialects and idioms of Babel pass current, each man screaming at the top of his voice, in order to make himself heard amid the indescribable din. By the end of March, the fair is nearly at a close; craft of all kinds, deeply laden, sail ou their homeward voyage, and kafilas depart on their homeward journey; and by the first week of April, Berbera is again a desolate waste, with nothing left to mark the site of a town lately containing 20,000 inhabitants, beyond bones of slauglitered camels and sheep, and the framework of a few huts carefully piled on the beach, in readiness for the ensuing year. Beasts of prey now take the opportunity to approach the sea. Lions are commonly seen at the town well during summer, and ostriches walk quietly about on what recently was the scene of business, activity, and turmoil.

Berbera has evidently been a market-place for centuries; but there are no architectural remains in or near it, excepting the remains of an aqueduct, similar to those at Aden, of a stone reservoir, of a small building which has apparently been a mosque, and of a small fort or tower. The water in the town wells is brackish; and the wealthier merchants procure supplies of good water from Seyareh, a small harbour 18 m . E. - (Lieut. Barker and Lieut. Cruttenden, in Jour. Roy. Geo. Soc.; Johnston's Travels in S. Abyssinia ; D'Héricourt's Voy. dans le Royaume de Choa; Commercial Tariffs; Foreign Quarterly Review.)

BERBERS, a name given by the Arabs to the original inhabitants of N. Africa; who, however, do not recognize it, calling themselves, in their own languages, Amazirgh or Tamzirght. The country of the Berbers, in its widest acceptation, includes the whole of the mountains and deserts of N. Africa, from the Atlantic to the Egyptian oases, and from the Mediterranean to the banks of the Senegal and Niger; but it is now generally restricted to the Atlas range, from the Atlantic coast of Marocco to the shores of the Gulf of Cabes, in the regency of Tunis. The Berbers in the mountains live under tents, or in huts covered with mats, or in caves; but in the plains they have houses and villages, built generally of wood and clay, covered with straw, and surrounded by a wall full of loop-holes, to fire through. They subsist chiefly on the produce of their cattle, and all rear bees. They have light complexions, fair hair, and thin and scanty beards; they are remarkably well proportioned, robust, active, lively, restless, and bold, and implacable in their revenge.

BERBICE, a river, British Guiana, supposed to rise abont lat. $3^{\circ} 30^{\prime} \mathrm{N}$. ; and which was ascended by Schomburgk as far as a great cataract S . of lat. $4^{\circ} \mathrm{N}$. It flows nearly due N ., and falls into the Atlantic in lat. $6^{\circ} 24^{\circ} 30^{\prime \prime} \mathrm{N}$. ; its whole course, so far as known, being upwards of 200 m . The bore which occurs at the mouth of this river is noted for its height and strength, rising, it is said, from 12 to 15 ft . At the dis-
tance of 165 m . from the sea, measured along the windings of the river, the influence of the tide ceases. Beyond this point, formidable and frequent rapids and cataracts render further navigation impracticable. The river is much infested by the species of alligator called Cayman, some of them of immense size. It was in a basin of this river that Schomburgk discovered the magnificent and gigantic flower known by the name of Victoria regia. The Berbice is about $4 \frac{1}{2} \mathrm{~m}$. wide at its mouth, where there is a bar, having only 7 ft . water at low tide. In the middle of the channel is an island, called Crab Island, from its abounding in crabs, which divides the course of the river into two passages, both of which are navigable; the one on the E . side having from 17 to 20 ft . water, that on the $W$. from 8 to 13 ft . Vessels of considerable size can ascend the stream for about 50 m . The banks of the river are generally low, and covered with mangroves.

## BERBICE, co. Guiana. See Guiana (British).

BERBICE, tn. Guiana. See Amsterdam (New).
BERCETO, a tn. Italy, duchy, Parma, 10 m . E. Borgo Tare, near the borders of Tuscany. It is well built, and clean; has a castle, a church, and school. Pop. 900.

BERCHEM, a vil. Holland, prov. N. Brabant, 12 m. E.N.E. Hertogenbosch. It is a large spread-out place, something in the form of a semicircle, with a windmill in the centre. It has a R. Catholic church and a school. Three annual fairs are held herc.

BERCHEM.-1. A vil. and com. Belgium, a short distance S. Antwerp, of which it may be considered a suburb. It has a manufactory of starch, a cotton printfield, a brewery, a distillery, and two corn-mills. Here, in 1830, a struggle took place between the Belgian and Dutch troops; here, also, the French besieging army had its head quarters in 1832. Pop. $3045 .-2$, A vil. and com. Belgium, prov. E. Flanders, r. bank, Scheldt, 6 m. S.W. Audenarde, with linen manufactures, two oil-mills, and a distillery; it has also extensive establishments for the preparation of chicory. Pop. 2386.

BERCK, a coast vil. France, dep. Pas de Calais (Picardy), 9 m . S.W. Montreuil. There is here a lighthouse, with a fixed light, which can be seen from a distance of 8 m .; lat. $50^{\circ} 24^{\prime}$ N.; lon. $1^{\circ} 33^{\prime} 42^{\prime \prime}$ E. (r.) Pop. 2100.

BERCY, a large and handsome vil. France, outside the walls of Paris, beyond the Barriere de Bercy. It owes its origin to the guinguettes and wine-houses, established outside the barriers of the capital for the retail of liquors, that pay a tax on entry. As the greater part of the wine and brandy that come to Paris arrives by the Seine, it necessarily passes in front of Bercy, and the merchants found it advantageous to establish a depôt here, which in a short time presented an extensive range of excellent warehouses, and is now one of the best depôts of its kind in France. A quay was soon after added, and a suspension bridge to communicate with the l. bank of the Scine. The most noteworthy building is the chateau of Bercy, in a park on the r. bank of the Seine; a handsome edifice, ornamented with numerous statues. There are distilleries, vinegar-works, a sugar-refinery, and some tanneries at Bercy. The business done in wine, brandy, vinegar, oil, wood for fuel and for building, is very considerable. Pop. 8641.

BERDIANSK, a seaport, S. Russia, gov. Tanrida, at the mouth of the Berda, N. shore of the Sea of Azof, 150 m . N.E. Simferopol; lat. $46^{\circ} 38^{\prime} 12^{\prime \prime}$ N.; lon. $36^{\circ} 48^{\prime} 15^{\prime \prime} \mathrm{E}$. (r.) When viewed from the sea, its appearance is by no means prepossessing; but it gains much on a nearer irspection, and is found to be a clean, well-built town, consisting of several regular spacious streets, lined with handsome houses, many of them provided with gardens, and indicating, by their exterior, the comfort which prevails within. The roads of Berdiansk are the best in the Sea of Azof. They are sheltered on all sides except the S., and have a sandy bottom, affording good anchorage. Coasting vessels unload on the beach; but larger vessels lie at some distance. A lighthonse shows the entrance into the roads. Berdiansk is admirably situated for trade, and is rapidly ontstripping the neighbouring ports. Its trade is furnished, to a considerable extent, by the products of its own immediate neighbourhood; but it is also the natural entrepot for the products of the surrounding governments, which send to it large quantities of grain, oil seeds, and wool for exportation. The interior trade extending by the mouth of the Don, and through it by the Wolga, into the whole of E. Russia, and even Siberia, consists chiefly of wood, coal, fish, and salt. The mines in
the neighbourhood furnish the last to the extent of 1600 tons annually, and are apparently inexhaustible; while the fishing already employs from 400 to $5(10$ persons. Pop. (1849), 6498.

BERDITSCHEF [Pol. Berdyczew], a city, European Russia, gov. Volhynia, dist. of, and 25 m . S. Jitomir. It is an ill-built place, swarming with Jews, but contains several churches, and a large Carmelite convent ; in the church of which is an image of the Virgin Mary, the object of pilgrimages. It carries on a considerable trade in corn, wine, cattle, honey, wax, and leather; and it is famous for its quarterly fairs. At these, goods to the value of about $£ 600,000$ are disposed of, and much business is done, especially with Austrian dealers. An almanac of great repute is printed here. Pop. (1842), 35,592.

BERDON, Berden, or Berdin, par. Eng. Essex; 1570 ac. Pop. 391.

BERE ISLAND. See BEAR.
BERECHTESGADEN, a tn. Bavaria, circle, Upper Bavaria, on the Achen, or Alben, in a pleasant valley at the foot of the two Matzmanns, about 13 m . S. Salzburg. It has a judicial tribnnal ; an office of woods and forests; an ancient cathedral church; a Franciscan monastery; a charitable asylum, and a royal palace. The chief manufactures are cutlery and hosiery. The salt mines in the neighbourhood are important, employing 200 miners, who turn out annually about 800 tons of rock salt. Pop. 1800.

BERECHURCH, or West Doniland, par. Eng. Essex ; 1450 ac. Pop. 146.

BEREGH, several places in Hungary :-1, A tn., circle, this side the Danube, co. Bacs; on the Danube, near the confines of co. Baranya, abont 5 m . from Bezdan. Pop. 2331.2, A market tn . and co., circle, this side the Theiss. The town stands near the Borsoa, in the lordship, and about 14 m . S. Munkacs, and has a pop. of 1750.——The countx, arca, 1070 geo. sq. m., is hilly in the N., level in the S., and in the latter direction particularly, is very fertile. Great part of the surface is covered with forests, which abound with game, and in which great herds, both of cattle and swinc, are reared. It is well watered by streams, which abound in fish, and are much frequented by water-fowl. Land tortoises also are numerons, and of large size. The principal minerals are iron, rock-crystal, and alumstone. The last is in great abundance, is extensively refined, and bears a high name. Gold, in small quantities, has been found near Muzsaj. There are several extensive swamps, but the climate is said, notwithstanding, to be healthy. Pop. 121,500.

BEREGHSZASZ, a tn. Hungary, circle, this side the Theiss, co. Beregh, on both sides the Verké, 16 m . S.S.W. Munkacs, famous for its millstones. In the environs an excellent wine is produced; and a gold mine was at one time worked. Pop. 3560.

BEREGUARDO, a tn. Austrian Italy, gov. Milan, prov. of, and 9 m . N.W. Pavia, on the grand canal which runs through Pavia and Abbiate-Grasso. The irrigation of the soil in this district is effected through supplies of water drawn from this canal. Pop. 1002.

BERENICE [modern name, Sakayt-el-Kubla, or 'The Southern Sakáyt'], an anc. port, W. side of the Red Sea, at the extremity of a deep gulf, formed by the projecting point of Septe Extrema, now Ras el-Ans, or Cape Nose; lat. $23^{\circ} 56^{\prime}$ N.; lon. $35^{\circ} 34^{\prime} \mathrm{E}$. The inner bay, which constituted the former port of Berenice, is now nearly filled up with sand. The ancient town was founded by Ptolemy Philadelphus, who named it after his mother. A number of interesting antiquities have been found here, including sculptures of various kinds, inscriptions, and hieroglyphics, in which last occur the names of Tiberius and Trajan, \&c.; besides a temple built in the Egyptian style, 102 ft . long, and 43 wide, the walls of which are adorned with well-executed figures in basso-rilievo. The ancient town is said, by Belzoni, to have measured 1600 ft. N. to S., 2000 E. to W., and to have contained 10,000 inhabitants.

BERENT, or Behrend, a tn. and circle, Prussia, gov. Dantzic. The town lies on the Ferse, 32 m . S.W. Dantzic. There are two blast furnaces in the neighbourhood. Pop. 2000. -The circle, area, 470 geo. sq. m., is almost entirely covered with forests and lakes. The chief crop raised is potatoes. Fish is very abundant. The manufactures are various,
but none of them are earried on to any great extent. Pop. 28,000.

BERETIIALOM, or BERTHALM, a market tn. Fungary, Transylvania, in a valley between vine-clad hills, 30 m . N.E. IIcrmanstadt. It is the residence of a Lutheran superintendent, and has a Lutheran parish, and a Greek non-united ehurch. Its wines are the best in the prineipality. Pop. 3290.

BERETTYO, a river, E. Ilungary, whieh rises in the Beregh hills, in the N.W. part of Transylvania. It flows N., and then W., and, after a somewhet winding course of about 170 m ., falls into the Koros near Szarvas. It is subjeet to frequent inundations, and is the eause of numerous marshes.

BERETTY()-UJFALU, a market tn. IIungary, beyond the Theiss, eo. Bihar, r. bank, Berettyo; with a reformed church. Pop. 5426.

BEREZINA, a river, European Russia, which rises in the gov. and N. the town of Minsk ; lat. $54^{\circ} 53^{\prime}$ N.; Ion. $27^{\circ} 4^{\prime}$ E.; and, after a course mainly S.S.E. for above 250 m ., for the most part navigable, falls into the Dnieper 8 m . above Retchitzka. It is united to the Düna, or Dwina, by a eanal, which thus gives a eommunieation between the Baltic and the Black Sea. This stream is memorable for the disastrous passage of the French army at Studianka, near Borisov, in 1812, on its retreat from Moseow.

BEREZNA, a tn. Russia, gov. of and 24 m . E.N.E. Tehernigov, on the Desna, containing six ehurehes. Pop., ineluding the villages dependent on it, 5500 .

BEREZOV, or Beresoff [the town of birch-trees], a tn. Siberia, gov. of, and 400 m . N. Tobolsk, cap. dist. of saine nane, on a height above the 1. bank Sosra, one of the branches of the Obi ; lat. $63^{\circ} 55^{\prime} 59^{\prime \prime} \mathrm{N}$. ; lon. $65^{\circ} 4^{\prime} 19^{\prime \prime}$ E. (L.) It consists of wooden houses, carefully built of large timbers, and generally with high steps in front, and contains three churches and a chapel. The chief trade of the place is in connection with the important fair of Obdorsk. Many of the merehants are opulent, and have their warerooms stored with Ostyak and Samoyed produets, prineipally rein-deer skins, mueh valued for clothing. Its inhabitants, who are ehiefly Coscaeks, subsist by the ehase and by fishing; they barter furs, skins, fisl, \&e., for flour, flesh meat, tobacco, ironware, and brandy, brought by the Tobolsk dealers, whose craft are floated down the Irtish into the Obi. Berezov is the favourite place of resort for the Ostyaks and Voguls. Prince Menzikoff, the favourite of Peter the Great, died here in exile in 1731, having been banished by his grandson, Peter II. In 1821, nearly a century after, his grave having been opened, the coffin was found embedded in frozen soil, and the eontents so entire, that parts of the clothing, and even the eyebrows, heart. and other parts of the body, weresent to his descendants. P. (1842), 1179.

BEREZOVIE, an isl. Russia, Gulf of Finland, gov. Viborg, separated from the mainland by the Biork Sound or Strait of Berezovie.

BERG [hill].-1, An ane. duehy of Germany, forming part of Rhenish Prussia, and now included in govs. Arnsberg, Cologne, and Düsseldorf. It extended along the Rhine from the Juhr to the frontiers of Nassau, and had an area of 864 geo. sq. m. It is more a manufaeturing than an agricultural district, and has long been famed for its minerals, which inelude iron of the finest quality, lead, copper, zine, and the precious metals. In addition to the employment furnished by these minerals, the inhabitants, who are very industrious, have, with considerable suecess, superadded textile manufactures. The duchy of l3erg, founded in 1389, had been long consolidated with the Prussian dominions, when, 1806, Napoleon revived the title, and conferred it, with an enlarged territory, on Murat. It returned to Prussia in 1815. Pop. 376,238.2, Of the numerous plaees in Germany of the name of Berc, the most deserving of notice is a vil. Würtemberg, romantieally seated on the Neekar, N.E. Stuttgart, and eontaining the remains of the ancient eastle of the Lords of Berg. It has a cotton-mill, dye-works, copper-work, and manufaetures of leather, a considerable wine and general trade, and a strong chalybeate spring. Pop. 1200.-3, A vil. Switzerland, can. of, and 4 m . N.N.E. St. Gall ; with a church and sehool. The vicinity yields good firnit and wine; the latter of which used to be a favourite beverage of the abbots of St. Gall, and was presented at all high festivals in the monastery. Pop. 609.

4, A vil. France, dep. Bas-Rhin, 18 m . N.W. Saverne; with lime quarries. Pop. $470 .-5$, A vil. Ilolland, prov.

Limburg, 11 m. N. by E. Maastricht, r, bank, Maas, built in a semicirele. It has a R. Catholic ehureh, a school, and a cornmill. Pop. 700.-6, A vil. Holland, prov. N. Ilolland, 9 m . S.E. Amsterdam, on an island formed by the Vecht; consisting of a single street, on the W. side of which stands the ehurch, elevated on a height, whence the village takes its name. This elevation or mound is supposed to be of artificial formation, raised for the purpose of keeping the church dry during inundations, to which the place is exposed, from the overflowing of the river. Besides the church here referred to, there is also a R. Catholic church. Iloop, chareoal, and vinegar making are carried on, but the principal employments are agriculture and turf-eutting. Pop. 800 .

BERG-AMBACIIT, a vil. Holland, prov. S. Holland, 14 m . E. Rotterdam. It is a good-looking, well-built place, and has a chureh, built in the 16th ecntury in place of one burnt in 1513. There is a sehool here. Pop. 650.

BERGA.-1, A tı. Spain, Catalonia, prov. Barcelona, 18 m . N.E. Solsona, near the river Lobregat. Its streets are paved, but for the most part narrow and erooked. It has five squares, three churehes, a chapel, a Latin, and three other schools; a small, but respectable townhouse, two prisons, an hospital, theatre, several fountains, and a eastle, with a strong battery; by which the town is overlooked and defended. The manufactures of Berga, though on the inerease, are confined to cotton fabries, and the usual branches of meehanical industry; the bulk of the inlabitants are employed in husbandry and as muleteers, by which conveyance the produce of the vieinity, grain, wine, oil, fruits, \&c., are exported. Two annual fairs are held. Pop. 6999.-2, A vil. Prussian States, prov. Saxony, gov. Merseberg, eirele of, and near to Sangerhausen; with an evangelieal ehureh, and hospital. Pop. 1182.

BERGAMO [ane. Pergamos], a th. Turkey in Asia, pash. Anatolia, r. bank, Grimaldi or Caïeus, 42 m. N.N.E. Smyrna. It oceupies the site of the ancient town, which was the seat of one of the seven ehurehes of Asia, and contains numerous remains attesting its ancient magnifieence. In the centre is an extensive ruir, supposed to have been the palace of a Roman emperor. Numerous khans and mosques-among the latter, one which, from its style, appears to have been an early Christian chureh-oecupy the site of aneient buildings. Triumphal arehes, and ruined houses, are interspersed with Turkish hovels. To the S.W. of the eastle are the remains of the amphitheatre, with arches of fine workmanship, though now almost under ground. The cemeteries are full of beautiful relics. Pop. about 10,000 .

BERGAMO [ane. Bergamum], a eity, Austrian Italy, cap. prov. of same name; gov. of, and 29 m . N.E. Milan. It is well fortified, being surrounded by walls flanked with bastions, and is defended by several small forts, and is built in the manner of an amphitheatre, on an isolated height, between the Serio and the Brembo. It is divided into the high and the low town. The former, or town proper, eonsisting of all that lies within the walls, has steep narrow streets, and old houses, several of them, however, interesting, as affording fine specimens of the architeeture of the Middle Ages. The low town consists of the three districts of St. Antonio, St. Tomaso, and St. Leonard's; the last of which, in particular, is well and regularly built, with spacious well-paved streets, and handsome houses, ehiefly occupied by the more wealthy mercbants. Bergamo is the seat of a court of primary resort in civil, criminal, and mercantile eauses; and the see of a bishop, suffragan to Milan. It contains a very ancient eathedral, completely repaired in 1689 , after the designs of Carlo Fontana, and adorned with numerous fine frescoes, wood carvings, and figures in bronze and marble ; and 14 other ehurches, several of them handsome, and rich in fine paintings. The other public buildings of note are the museum, particularly rich in the antiquities of the district; the old palace Della Ragione, with a fine colonnade; the market hall or fiera, a large quadrangular building, with a handsome piazza, shaded by old trees, and allorned with a beautiful fountain; the governor's palace; the municipal buildings ; the theatre ; and the Academia Carrara, so called after its founder, the Count of Carrara, a magnifieent building, in whieh, with a view to promote the study of design and painting, numerous pupils are gratuitously instrueted. The ehief benevolent institutions are, the general hospital, the foundling hospital, the house of invalids, the house of industry, the institute of merey, the mont-de-prété, and the peniten-
tiary. Among the educational establishments are, four higher elementary, and numerous minor schools, a gymnasium, and a lyceum, to whieh a good collection of philosophical apparatus, and cabinet of natural history, are attaehed. Here is also an institution for teaching the deaf and dumb. There are in the town some large manufactorics of silk, cotton, and woollen stuffs, wax candles, ehina, and earthenware ; and its trade is considerable in these, and in corn, wine, oil, whetstones, confections, and ironware. Within the market hall, containing 540 booths, a great annual fair, which dates from the 10 th century, is held in the monthis of August and September, during which all the produets of the Austrian provinces are exposed for sale, but̂ ehiefly silk, wine, and ironware. It is said that goods to the value of $£ 1,000,000$ sterling are sometimes sold during the fair. Bergamo is the birthplace of Bernardo Tasso, father of Torquato Tasso, to the latter of whem a statue has been crected in the great square; of Tiraboschi, a learned Jesuit, author of the Storia della Letteratura Italiana ; of Antonio Serassi, the biographer of Ikante, Petrareh, and Tasso; and of many painters of note. The city was taken by the French in 1796, and made the eapital of the department of the Serio. Pop. 32,614.--The Province of Bergamo has an area of 928 sq . m., divided into 18 districts. Its greatest length is about 100 m .; its greatest breadth, 45 m . With the exception of the S., which is level and fertile, it is of a mouutainous nature, and much covered with wood. Its pastures are rich, and rear large numbers of sheep and goats; but the produce, neither of corn nor wine, does not equal the consumption. Chestnuts and olives abound, and considerable quantitics of excellent silk are produced, Among the mineral products are iron, marble, whetstones, and lignite. Pop. 363,754.

BERGARA, or Vergars, a tn. Spain, prov. Guipuzcoa, 25 m . S.E. Bilbao, in a fertile valley, surrounded by mountains, r. bank, Deva. The houses are generally well built, the streets wide, well kept, and paved; and the two squares, in the principal of which is a substantial townhouse, supported by 12 arches, are spacious, though somewhat irregular. The other public edifices are three parish churches, several chapels, an hospital, prison, and fives-court, a convent wherein females are educated, and several public sehools. Hardware, agricultural implements, and cutlery, are manufactured; and a handsome cotton factory, recently constructed, employs above 300 persons. In the vieinity, turnips are raised in considerable quantities, and form the chief winter provender of the numereus cattle. An annual fair is held in May for general produce, and one monthly for eattle. This place has obtained considerable eelebrity, on account of the 'Convention of Bergara,' coneluded here on August 31, 1839, after protraeted negociation between Mazoto and Espartero, thereby putting an end to the disastrous eivil war of that period. The site of this act of fraternization is ealled 'El Campo del Abrazo.' Pop. 3785.

BERGED(ORF, a small tn. Germany, under the joint jurisdiction of Liubeek and Hamburg, and about 10 m . E.S.E. the latter, with which it is conneeted by a railway. It carrics on a eonsiderable trade. Pop. 2151.

BERGEN, a tn. and seaport, Norway, cap. prov. of same name, and of bail. Sondre Bergenhuns, beautifully situated near the head of the innermost bay of Byfiord, ealled Vaagen, about 25 m . from the open sea, and 186 m . N.W. Christiania; lat. $60^{\circ} 24^{\prime} \mathrm{N} . ;$ lon. $5^{\circ} 18^{\prime} \mathrm{E}$. (n.) The houses are mostly timber bnilt, and painted white; those of the wealthier classes being often very handsome struetures, somewhat in the Dutch style. By the side of eaeh door stands a water cask, for use in case of fire, from which Bergen has frequently suffered severely. The streets are irregular and narrow, but for the most part well paved. The Strand-Gaden, the principal thoroughfare and place of traffic, is deseribed by Mr. Forrester as having a busy air, from the number of shops, and the croups of eitizens, sailors, and country people by whom it is thronged. Almost all the houses of the better sort have pots
of flowers ranged in the windows, the effect of which is exceedingly pleasing. There are five churches in the town, including the eathedral ; of these the most remarkable, as well as the most ancient, is the German, or St. Mary's Chureh, situated near the entrance-gate on the N . side of the port. The exterior is of a cumbrous, but effective, style of architeeture; it has two towers, and contains many ohjects of interest, including an ancient altar-piece, and several fine specimens of earving. All the other churehes are of modern date, and have no particular claim to attention. The principal sehools comprise:-one cathedral school (a handsome new building), and five ehureh schools; two burgher; four poor and free sehools, and one commercial and artizan sehool. There are several charities, hospitals, and poorhouses; three or four small libraries, in one of which both native and foreign works are

bERGEN, from the Citalds, on the N.W. of the Town.- From Vosages de la Commlssion Sclentifique du Nort
to be liad; a theatre, and a museum, the latter containing a large and interesting collection of Norsk antiquities. The only other place worthy of special notice is the castle, or fortress, which commands the entrance to the harbour; it is of irregular construction, consisting of three bastions, and a ravelin towards the town, and three bastions and two batteries towards the sea. All the guns, however, are now dismonnted, except one battery of twelve-pounders, on traversing platforms. Within the fort there is an agreeable promenade, and several walks planted with trees. Above all rises 'Walkendorf's Tower,' a square massive building, with a flat roof of stone, supported by immense beams of timber, forming a platform, from which a splendid view of the surrounding scenery is obtained. The inhabitants of Bergen are said to be remarkable for an excessive politeness. Persons who have but the slightest aequaintance of each other, on meeting in the strect, uncover the head with a profound obeisance; the same ceremony is observed as often as a window is passel in which females are seated. On entering a shop for the purpose of purchasing any trifling article, the intending purchaser takes off his hat, and remains uncovered during the transaction. Even young boys take off their eaps to each other in the strect with the ntmost gravity.

The principal manufactures of Bergen are tobacco-spinning, candle-making, rope-making, and shipbuilding; there are also several distilleries. Its commeree, though much fallen off from what it was in former times, still execeds that of any other port in Norway. Vessels from almost every country in Europe may be seen in its harbour ; and in the early part of the scason, it is erowded with the eraft which bring the produce of the cod-fisheries from the stations on the N. coast, and by the sea-going ships by which it is conveyed to foreign ports. Bergen exports annually about $£ 231,250$ worth of stock fish, and 400,000 or 500,000 barrels of salted herrings, with 20,000 barrels of cod-oil. Large quantities of spawn and fish-scales also, are sent to the S. of Europe, where they are used as baits, particularly for the fishery of sardines, in the Mediterranean. There is likewise a considerable ex-

Vol. 1.
port of rye. The principal imports are corn, brandy, and wines, cotton and woollen manufactures, slates, soap, salt, coals, heinp, and colonial produce. In 1846, there were 364 vessels belonging to the port, and in the same year it was entered by 973 vessels, in all about 71,000 tons. The business of the place is facilitated by a branch of the Norwegian bank, established here. The harbour is sheltered and secure, but is of difficult, and even dangerous access, without a pilot.

Bergen was founded in the 11 th century, and was at an early period a town of the Hanseatic League, but since Christiania has become the seat of the legislature, as well as of a university, it has taken precedence of the former, while lofty ranges of empty warehouses, extending along the quay, testify at onee the large seale on which trade was here conducted by the Ilanse merchants in the latter part of the 16 th eentury, and the decay which ensued on the overthrow of the Hanseatic influence in the middle of the 18th. Bergen sends four representatives to the Storthing, or Senate, of Norway.

Although there is little attraction in the town itself, its vicinity is exceedingly picturesque, having mountains 2000 ft . in height on three sides, and the fiord, with its islands, in front. Numbers of beautifully-situated villas are scattered along the heights, commanding fine and extensive views. I'op. (1845), 25,000.-(Forrester's Norway in 1848, 1849; Sköldberg's Beskrifning öfver Skandinaviska Halfön ; Parliamentary Papers ; Murray's Handbook.)

BERGEN.-1, A tn. Prussia, eap. of isl. Rügen, 15 m . N.E. Stralsund, situated in the centre of the island; streets a:td lanes dirty, and the houses mean. North of the town rises the hill of Rugard, the lighest in Rügen, erowned by old fortresses, and from which a complete view of the whole island is commanded. Bergen has a court of justice, a castle, and a convent of noble ladies. The inhabitants are chiefly employed in agricultural pursuits, and the linen manufacture. Pop. 3100.-The cIrcle of the same name has an area of about 275 geo. sq. m. The surface is generally flat, fertile, and well cultivated. The distriet around Gingst in partieular, is so rieh, as to have acquired for it the name of Paradise. Pop. 38,500 . Numerous places in Germany have the name of Bergen.-2, a vil. Itolland, prov. Limburg, $25 \mathrm{~m} . \mathrm{N}$. Roermonde. It has a R. Catholic chureh, and a school ; and in the vicinity are several breweries, two tanneries, two grain, two oil, and two malt mills. Pop. $850 .-3$, Two vils. and two townships, U. States:-a vil. and township, New York, $237 \mathrm{in}$. W. Albany. Pop. 2032.-a vil. and township, New Jersey, 56 m. N.E. Trenton. It was settled by Danes in 1616, and contains two churelies and 14 seliools. Pop. 5255.

PERGEN, or Bergens-Stift, an administrative prov. and diocese, Norway; bounded, N. by prov. Trondhjem, E. by Christiania, S. by Christiansand, and W. by the N. Sea. It lies between lat. $59^{\circ} 30^{\prime}$ and $62^{\circ} 41^{\prime} \mathrm{N}$., and lon. $4^{\circ} 42^{\prime}$ and $8^{\circ} 12^{\prime}$ E. ; area, $1 £, 984$ geo.sq. m. It is mountainous; the coast is very much indented by a multitude of bays, gulfs, and fiords, and fringed by innumerable islands and rocks. The highest hills are on the E. boundary, and among them may be named the IIouklefjeld, Ilardangerfjeld, Halnefjeld, Filefjeld, and Sognefjeld, all portions of the Langefjeld; besides these, there are numerous lofty peaks in other parts of the province. Many of the hills are covered with perpetual snow, and on their slopes are numerous glaciers. The valleys are narrow, and only the islands and the coast land can be said to be low. Lakes and rivers of any size there are none, but there are innumerable rivulets. Though mountainous, Bergens-Stift is by no means well wooded; the forests having been to a great extent exhausted, the hills are now mostly covered merely with copsewood. In consequence of this want, the iron and copper, which are plentiful, can only be wrought to a very limited extent. Besides metals, marble, whetstones, millstones, \&c., are wrought. Agriculture is not much pursued; and though some grain, vegetables, and fruits are raised, yet the quantity is far from being sufficient for the demands of the inhabitants, who mainly subsist by eattlerearing and fishing, for which the fine pastures, and numerous gulfs and fiords, render it peculiarly well adapted. The climate is moist; winter is wet, dark, and cold, and summer warm. Mannfactories, except in the capital, Bergen, which is the only town in the province, there are none; but the country people make violins, combs, turnery-wares, and fish-
ing.nets. Bergens-stift is divided into two amt or bailiwicks Nordre (North) Bergenhuts (area, 5072 gen. sq. m.), and Sondre (South) Bergenhuus (area, 4368 geo. sq. m.) ; anl one fügderi or stewartry, Simdmüers Fojderi, being a portion of the bailiwick of Romsdal ; area, $4 \overline{5} 44$ geo. sq. m. The province is subjoined into six fögderi or stewartries, and 168 parishes. Pop. of prov. (1845), 276,281.

BERGENIIUUS (Nordre and Sondre), Norway, two bailiwicks in Bergen or Bergens-Stift (which see).

BERGEN-OP-ZOOM, an important fortress and port, Holland, prov. N. Brabant (formerly eap. of a margraviate of same name), in a marshy situation, r. bank, E. Scheldt, 20 m. N.N.W. Antwerp; lat. (church) $51^{\circ} 29^{\prime} 42^{\prime \prime} \mathrm{N}$. ; lon. $4^{\circ} 17^{\prime} 30^{\prime \prime} \mathrm{E}$. (n.) It is strongly fortified both by nature and art, the impassable morass on one side adding greatly to the strength of the defences constructed in 1699-1700, by the eclebrated Cochorn. The town has four gates, and a convenient harbour, furnished with spacious quays, planted with trees. It is generally well built, and has been greatly improved since 1831, when many houses were destroyed, and many lives lost, by an unfortunate explosion which then took place. It has five open squares, of which the most important are the great market, the fish marlset, and the horse square. In the great market stands the townhouse, a large elegant building; and in the middle of the town is the barracks, an old good-looking edifice, still called Markiezenhof, and formerly used by the Margraves as a place of residence. The military hospital, formerly a numery; the eloth hall, now used as a military watch-house; the shambles, now become a repository of works of art, are all respectable structures of their kind. The places of worship are a R. Catholic and two Protestant churches, and a synagogue ; and the schools, a Latin, a French, and five common schools. Of benevolent institutions there are several, an hospital for old men, one for orphans, and an infirmary, besides some others of less note.
Bergen-op-Zoom was at one time a place of much greater commereial importance than it is now, having suffered greatly from the proximity and rise of Antwerp. Some transit and shipping, however, is still done, and some fishing carried on, the anchovies and plaice eaught in the neighbourhood being highly esteemed. Many of the inhabitants, however, depend on the garrison for their support. The principal manufactures of the town are earthenware and tiles, which are considered to be of a superior deseription, and for the making of whiel there are no less than ten establishments. The only other manufactures are ale and salt. The history of this fortress dates as far back as A.D. 422, at which period a eastle is said to have stood liere. Bergen-op-Zoom suffered greatly during the Spanish war, and was deemed impregnable, having withstool the attacks both of the Duke of Parma (1581 and 1588), and of the Spanish General, Spinola (1622), and others; but in 1747, it was taken, after a siege of 63 days, by the French under the Count of Löwenthal. It was again taken by the French in 1794. An attempt made to reduce it, in 1813-14, by the British under Sir Thomas Graham, was unsuccessful, and the loss to the besiegers considerable. Pop. 7000. - (Van der Aa's Aardrïkskunlig Woordenboel der Nederlanden.)

BERGERAC, a tn. France, dep. Dordogne, 25 m . S.S.IW. Pcrigueux; on a large and fertile plain, r. bank, Dordogne, here crossed by a fine bridge of five arelies. The town is in general very badly built, the greater portion being composed of narrow, crooked strects. It contains a theatre, a public library, a communal college, a court of first resort, and manufactorics of liqueurs, chemical stuffs, serges, and crockery. In the neighbourhood are iron-foundries, tameries, and brandy-distilleries. A considerable trade is carried on in grain, truffles, white wine, iron, copper, timber, and paper. Pop. 6805.

BERGHEIM, a tn. France, dep. Ilant Rhin (Alsace), about 9 m . from Colmar. On a lieight above it stands the old castle of Reichenberg. The manufactures are eutlery ant larger articles of ironmongery. Pop. 3363.

BERGIIOLT, a vil. and two pars. England:-1, A vil. Suffolk, N. bank of the Stour, 6 m . S.S.E. Hadleigh, and $9 \frac{1}{2}$ m. S.S.W. Ipswieh; contains a church, in the decorated Gothic style, the tower of which is unfinished.-2, Bergholt (East), par. Suffolk; 2380 ae. Pop. 1461.-3, Bergholt (West), par. Essex; 2170 ae. 1'op. 822.-(Local Correspondent.)

BERGOO, or Bergou, an extensive territory in the interior of Africa, bounded, E. by Nubia and Darfur, W. by Bergharmi. It is more generally named Wada or Waday (which sec).

BERGREICIIENSTEIN, a tn. and lordship, Austria, Bohemia, circle, Prachin. The town lies in a narrow valley, 42 m. S.S.E. Pilsen, and was once famous for its gold mines. It contains two churches, three chapels, a townhouse, and school. About 30 persons are still employed in the mines, which are nearly exhausted; but the inlabitants live chiefly by agriculture and weaving. Pop. of tn. 1752 ; of lordship, 4593.

BERGUES, a fortified tn. France, dep. Nord, 5 m . S. Dunkirk; situated in a marshy country, at the junction of the Bergues, Dunkirk, and Colme Canals. The town is well built of brick, has a good port on the canal, capable of admitting vessels of 250 tons, and is the centre of a considerable trade. The Hotel de Ville is very elegant ; but the most remarkable

the cluck tower and hotel de ville, berguls. From Coney's Cathedrals and Hotels de Ville.
edifice is the belfry, upwards of 160 ft . higb, of unknown date, but supposed to be of Spanish origin. The other pnblic buildings are two high towers that once belonged to the abbey of St. Winnoc, preserved to serve as landmarks to vessels entering the port of Dunkirk; a public library, and a museum. Bergues has manufactures of soft soap, earthenware, hats, cotton yarn, and lace. It has also sugar and salt refineries, distilleries, tameries, and a considerable trade in grain, cheese, butter, wine, brandy, and cattle. The weekly grain and cattle market is the most extensive in this part of France. The fortifications were constructed after the plans of Vauban, and it is now a fortified place of the first class. Bergues owes its origin to the eastle of Berg, to which St. Winnoe retired in 902. Baldwin II., Count of Flanders, walled and fortified it; and Baldwin IV. adorned it with a magnificent monastery, in honour of St. Winnoc. In the beginning of the 13th centary, it had become a flourishing manufacturing town, but suffered greatly during the three following centuries, when it passed successively under different masters, and was subjected to a scries of assaults, in one of which, by the French (1383), the most fearful atrocities were committed. It was finally secured to France by the treaty of Aix-Ia-Chapelle. Pop. 5827.

BERGUM, a vil. Holland, prov. Friesland, 9 m. E. Leeuwarden; pleasantly situated, N. side of lake of same name, in a flat country, well covered with underwood, and possessing good pasture and arable land. Bergum has a church and school, and two annnal markets-one for cattle, the other for horses. The inhabitants are chiefly employed in agriculture,
and in rearing young trees. Formerly there was a convent here; and on some neighbouring moorlands, Coehorn, the celebrated constructor of fortifications, while a youth, made some of his early experiments. Pop. 1900.-The LaKe has a circumference of about 9 m ., and, by means of canals, communicates with the sca both from the E. and from the W. side.

BERGZABERN, a tn. Bavaria, circle, Pfalz, 10 m . S.S.W. Landau. It contains a R. Catholic and two Protestant churches, a castle and several public offices. It has some tobacco factorics, a saw, oil, and two flour mills. Ironstone is worked in the neighbourhood. Pop. 2565.

BERINGEN, a vil. and par. Switzerland, can. of, and 3 m. W. Schaffhausen; at the foot of the Randen, in the midst of vineyards and cherry orchards, from the former of which a good wine, and from the latter a famous cherry brandy is made. Pop. 1417.

BERJA, a tn. Spain, Aridalusia, prov. of, and $22 \mathrm{~m} . \mathrm{W}$. Almeria, in a glen overlooked by the sierra de Gador. The houses are generally two stories high, well built, commodious, and have gardens attached; the streets are clean, and paved. It has four squares, of which the principal one contains the parish church and townhouse. The other town buildings are a chapel, prison, storehouse, 2 Latin and three primary schools, a cemetcry, and several fountains. Linen fabrics, hats, hardware, wine, oil, and leather are manufactured. Lead and antimony, from the mines of the sierra de Gador, are smelted and exported to Adra and Roquetas; and some of the inhabitants are engaged in husbandry. Berja suffered severely from an earthquake in 1804, during which mmerous individuals were maimed, and 67 lost their lives. Many public edifices were also destroyed, amongst others the parish chureh, which has since been only partially restored. The structure now used as a sanctuary was once a pantheon. Pop. 8709.(Madoz.)

BERKEL, two vils. Holland:-1, a vil., prov. N. Brabant, 9 m . S.W. Hertogenbosch, whose inhabitants, about 500 , are employed in agriculture, raising chiefly rye, buckwheat, and coleseed.-2, a vil., prov. S. Holland, about 8 m . N.W. Rotterdam; well built, with a Calvinistic, a Remonstrant, and a R. Catholic church, and a school. Pop. 1100.

BERKEL, Borckel, or Borkul, a river, Holland, prov. Gelderland. It rises in the Prussian province, Westplialia, near Coesfeld, flows with a generally N.W. course past Borkulo and Lochem in Holland, and falls into the Ijssel at Zutphen, after a course, exclusive of windings, of nearly 50 m . It is in many places shallow, and sanded up, so that it is of very little use as a water-way.

BERKELEY, a market tn. and par. England, co. Gloucester. The town, $16 \mathrm{~m} . \mathrm{S}$.W. Gloucestcr, is pleasantly situated on a gentle eminence in the vale of Berkeley, $r$. bank, Avon, about 1 m . from its junction with the Severn, and within 1 m . of the Bristol and Birmingham Railway. It consists chiefly of two irregular streets, one of which is well paved, and contains some good houses of brick and stone. water abundant. The church is a spacious structure, style later Norman and early English; it contains some curious monuments, and is the burial-place of Dr. Edward Jenner. There is also here a Wesleyan chapel. The Avon being navigable to the town, for vessels of 40 or 50 tons burden, a pretty extensive trade is carried on by its means, in coal, brought from the Forest of Dcan. At the S.E. end of the town stands Berkeley Castle, esteemed a singularly perfect specimen of castellated building. It has been the scene of many remarkable events, including the atrocious murder of Edward II. The date of the commencement of the castle has not been ascertained; but it is known to have existed long prior to the 12 th century. A tradition, told by Datthew of Westminster, respecting an old woman, a noted witch, who lived in Berkeley A.D. 852 , has furnished Southey with the subject of a curious hallad.- The Parish is the largest in the county, comprising about 14,680 ac. Pop. 4405 ; of town, 926.-(Local Correspondent.)

BERKESWLLL, a par. Eng., co. Warwick; 6360 ac. Pop. 1504.

BERKHAMPSTEAD, a tn., vil., and three pars. England, all in co. Hertford:-1, Berkhampstead (Great), a tn. and par., the former beautifully situated in a hollow, surrounded by hills, on the main road leading from London to Ayles-
bury; W. side of the Bulbourn stream, and the Grand Junction Canal; on the line of the London and North-Western Railway; $26 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. London, by railway ; and $26 \frac{1}{2}$ by road. It consists almost wholly of one main street, which is nearly 1 m . in length; is well-supplied with water, and is lighted with gas. The cluurch is an ancient and beautiful Gothic edifice, and contains some curious antique monuments. The other places of worship are, a Baptist, Independent, and Wesleyan chapels, and a Friends' meeting-house. Schools :one national, with infant school connected, one day school, on the British system, one charity school, called Bourne's sehool after the founder, and maintained by endowment; and a free grammar-school, where a certain number of boys receive a liberal education. There are varions small charities and benevolent associations connected with the different religious denominations, and a mechanics' institute on a small seale. The only manufacture is straw-plaiting. Market-day, Saturday, chiefly for corn. Four fairs annually. Petty sessions are held once a fortnight. Area of par. 4250. Pop. 2979.2, Berkhampstcad (Little), a par., and small but neat vil. in hund. of Hertford, $4 \frac{1}{2} \mathrm{~m}$. S.W. Hertford. It contains a national school, for boys and girls, and a provident society, one of the principal establishments of the kind in the county. Area of par. 1, 70 ac. Pop. $555 .-3$, Berkhampstead (St. Mary), a par., hund. Dacorum. Area, 3890 ac. Pop. 1265.-(Local Correspondent.)

BERKLLY SOUND, a spacious inlet, at the N.E. extremity of E. Falkland Island, about 4 m . wide at its entrance, and upwards of 15 m . in length, terminating in three excellent and distinct anchorages, Johnson Harbour, Stag load, and Port Louis. This sound is the only place on the E. coast of the island that can be entered by night.

BERKSHIRE, an inland co. England, and one of the most beautiful in the kingdom, bounded, N. by Oxford and Buckingham, from which it is separated by the Thames, E. by Buckingham and Surrey, S. by Southampton, and W. by Wilts. Area, $481,280 \mathrm{ac}$.; of which 237,000 are arable, meadow, and dairy land. The principal high land consists of a range of downs, running W. by N.; which in some parts attain a considerable elevation. The soil is various, being very poor on the hills, and in the low lands, cold and laborious to work; but in the district called the vale of the White IIorse, which comprises a large portion of the county N. of the chalk range, there occurs some of the most fertile lands in England, and in its W. parts, the richest pastures. Here, also, along the bottom of the lills, lies the fine corn land for which the vale is renowned. The vale of Kemet, extending along the river of that name for about 25 m ., is also a fine tract of land, and well adapted for corn, though not so fertile as the vale of the White Horse. The E. part of the county, or what is called the forest district, contains Windsor Forest, part of Bagshot IIeath, and some other considerable tracts of waste land. It is, perhaps, the least productive part of the county, but exhibits much pleasing woodland scenery. Rich meadows stretch along the banks of the Thames and Kennet.
Agriculture is a good deal improved in this county, but is still at rather a low ebb. Principal crops, oats and wheat. Farms are usually held on leases for 7 and 14 years; but, as there are rarely any restrictions imposed on the tenant as to cultivation or mode of cropping, the land is generally in bad condition, and is often left by the outgoing tenant completely exhausted. Farms, for the most part, rather small, average rent in 1842-43, $£ 1,4 s .8 \frac{1}{2} d$. per aere. The W. parts of the vale of the White ILorse, is celebrated for its dairies; producing cheese of the description called Donble Gloucester. The number of cows has been estimated at 5000 , and the quantity of cheese made at 1000 tons. The cattle are now cliefly of the Holderness and Teeswater breeds; but Scotch and Welsh cattle are extensively grazed in the forest district. Of sheep, the South Down breed, but much crossed, is at present the most generally diffused. The total stock of slreep has been estimated at about 308,000 , and the total annual produce of wool at 4500 packs. Hoga are reared in great numbers in this county, and are esteemed the best in England. Manufactures and minerals, of no importance. Berkshire contains 20 hundreds, and 151 parishes. It returns nine members to the House of Commons-three for the county, two cach for the boroughs of Reading and Windsor, and one each for

Abingdon and Wallingford. Annual value of real property, in $1842-43, £ 967,475$. I'op. ( 1851 ), 170,065 .

BERLAER, a vil. and com. Belgium, prov. Antwerp, 10 m . N.E. Mechlin, on the Greater Nethe. The inhabitants are chicfly employed in weaving, and lave also a little tratle in wood and coal. Pop. 3075.

BERLAERE, a vil. and com. Belgium, prov. E. Flanders, r. bank, Scheldt, 12 m . E. Ghent. Agriculture and weaving are the principal employments. Pop. 3505.

BERLANGA, a tn. Spain, Estremadura, prov. Badajoz, 13 m. E. Llerina, in a hilly district. It has a parish church, several schools, town and court houses, prison, poor's hospital, large fountain, several convents, and a cemetery. The inhabitants are chiefly engaged in tillage, and manufacturing frieze eloth. An annual fair is held in August. Pop. 3410.

BERLEBURG, a tn. Prussia, prov. Westphalia, gov. of, and 28 m . S.S.E. Arnsberg. It is the residence of the prince of Wittgenstein; has some manufactures of woollen goods; and in the neighbourhood are several forges and iron-mills. Pop. 2035.

BERLENGAS, a group of small islands in the Atlantic, near the W. coast of Portugal, about $8 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Peniche; lat. $39^{\circ} 25^{\prime} \mathrm{N}$. ; lon. $9^{\circ} 30^{\prime} \mathrm{W}$. They are surrounded by shelving rocks, and are, for the most part, preeipitous. Berlenga, the chief of them, has some flat ground and a fresh-water sprius, and is defended by a small fort, which has been occasionally used as a state prison.

BERLICHINGEN, a vil. Würtemberg, on the Jaxt, 7.4 m. W.N. W. Kunzelsau ; with a R. Catholic church and a synagogue. Wool-spiuning is carried on; but a large proportion of the inhabitants are musieians, in which capaeity they travel about to distant parts. There was formerly here a castle, the natal place of the family of Berlichingen, from which sprung thie famons robber knight Götz von Berliehingen, with the iron hand, whom Goethe has made the subject of one of his dramas. Pop. 1410.

BERLILUM, a vil. Holland, prov. Friesland, about 8 m . N.W. Leeuwarden, consisting chiefly of a double row of houses, running E. and W., with some small bye-streets, all well paved. It has a beautiful Calvinistic and a Baptist ehureh, and a school; and its inhabitants are chiefly engaged in trafficking in apples, pears, berries, and other fruits, the produce of their gardens and orehards. Two annual fairs are held. Pop. 1200.

BERLIN, a post township, U. States, Connecticut, 10 m . S. by W. Hartford; containing New Britain, a considerable vil., where various articles, particularly tin ware, are extensively manufactured. It has an academy and 16 schools Pop. (1840), 5255.

BERLIN [anc. Berle-unenltivated land], the cap. of the Prussian dominions, the residence of the King and forcign ambassadors, prov. of Brandenburg; lat. (new observatory) $52^{\circ} 30^{\prime} 16^{\prime \prime} \mathrm{N}$. ; lon. $13^{\circ} 23^{\prime} 53^{\prime \prime} \mathrm{E}$. (L.) ; after Vieuna, the largest town in Germany, and, for the beauty and size of its buildings, the regularity of its streets, the importance of its institutions of science and art, and its activity, industry, and trade, one of the first cities in Europe. It is situated on a dreary sandy plain, about 126 ft . above the level of the sca, on both sides of the Spree, a sluggish stream, here about 200 ft. broad, which winds through the city from S.E. to N.W., and, near its centre, forms an island by the division of its chamel. It is somewhat more than 10 m . in circumference, and ocenpies a surface of 6700 ac . It is surrounded with a wall 16 ft . high, with 16 gates, besides minor outlets; and divided into 11 sections or quarters, namely, Berlin 1'roper, Old and New Kölln, Friederichswerder, Luisenstadt, Dorotheenstadt, Friedrich-withelms-stadt, spandauer quarter, Königs-stadt, and Stralauer quarter, besides the two suburbs beyond the walls-Rosenthal and Oranienburg. The prineipal public buildings are in Berlin Proper. The origmal portion of the eity lies on the r. bank of the river, and is very irregularly built, consisting, for the most part, of narrow crooked streets, and very indifferent houses. The more recent portion rose up, as if by magic, at the orders of Frederick the Great; who, having previously adopted a plan, subdividing its intended site by straight and spacious streets, partly parallel, and partly at right angles to each other, caused them to be lined by elegant houses of uniform appearance, and, for the purpose of occupying a larger space, of only two stories in height.

As yet, however, the plan has only been partially completed, and nearly a third of the whole space within the walls, towards the S. and E., is still unoccupied. The houses are built partly of white freestone, but the greater number are of brick covered with a thin coating of plaster or stucco. The drainage of the city, however, owing to the flatness of the ground on which it stands, and to the sluggishness of the Spree, is so bad, that, in hot weather, the most offensive odours pollute the air and render it unhealthy. The streets are now well paved and well lighted with gas. IIackney coaches and other street conveyances are numerous, and under excellent surveillance. The houses are all heated with stoves. Of the numerous bridges, the finest is the long bridge or Frederick's bridge, constructed of iron, 245 ft . long, and 33 ft . broad, with eight arches, each of 27 ft . diameter. The city has 27 churches, and 1 synagogue; 17 public hospitals, 8 military infirmaries, 17 barracks, 8 royal magazines, and 24 cemeteries, 16 within the walls, and 8 beyond. Berlin, though not advantageously situated, is one of the finest cities of Europe. Its principal and most frequented street, the Unter den Linden, is perhaps unsurpassed. It is situated in the new portion of the eity, and traverses it from E. to W. It is three quarters of a mile in length, and of remarkable width, the centre being oecupied by a double avenue of lime-trees, which give it its name, and form a fine shady promenade; while on either side of the trees is a carriageway, and beyond each carriageway, in front of the houses, a spacious foot pavement. At the E. end of this street are clustered the principal publie buildings of the city, the museum, with its fine collection of sculpture and paintings; and behind it the new museum, erceted for the reception of Egyptianantiquities; and the castle or schloss, royal palace, arsenal, university, opera house, and theatre, and, diverging from it, several fine squares: at the W. end, it terminates magnifisently with the Brandenburg gate, a noble structure, modelled, on a grand scale, after the Propylæum of Athens, and regarded as one of the finest portals in existence. It is surmounted by a colossal Victory, mounted in a car drawn by four horses, and bearing in her hand an eagle and iron cross. Outside the walls, immediately beyond this portal, are two large open spaces; on the right, the Exerzier Platz, or exercise-ground, where the troops are drilled; and, on the left, the Thiergarten, an extensive and well-wooded park. The royal castle or schloss is a vast pile, more remarkable for a certain air of grandeur than architectural beauty. It is sumptuously furnished, and contains the great library belonging to the heir-apparent, the royal treasury, a valuable picture-gallery, with museums of natural history, the mechanical and fine arts, including an interesting collection of historical relies. The arscnal (Zeughaus) is a building of the most exquisite arehitecture. It is in the Grecian style, and above the windows of the inner court are 21 masks, admirably carved in stone by Schluiter, and representing the agonies of dying combatants. The apartments on its first and second floors form a kind of military museum ; the fommer containing various kinds ot ancient artillery, and the latter about 60,000 stand of arms. The palace of Prince Albert,
a handsome edifice; the architectural academy, by the eninent architect, Schinkel, one of his most original achievements in this department of art; the Italian opera-house, the colonnade of the new museum, the guard-house, and the university, are all beautiful structures. Amongst the more remarkable monuments are an equestrian statue, in bronze, of the great Eleetor Frederick William, finely placed on an elevated pedestal at one extremity of the long bridge. In front of the arsenal is a statue of Bluicher, also in bronze, in which the celebrated Rauch has admirably succeeded in exhibiting both the features and well-known characteristics of the hero. Two marble statues by the same sculptor-one of Biilow and another of Leharnhorst, are well deserving of notice. There are also, in the square called Willhelms Platz, statucs of six heroes of the Seven Years' War-Prince of Anhalt Dessan, Generals Ziethen, Schwerin, Winterfeldt, Keith, and Seidlitz, but they have little merit. The literary institutions of the eity are numerons and respectable; they include the university, attended by nearly 1800 students, and numbering, among its professors, many names of European reputation; the aeademy of sciences, the gymnasia or high schools, of which there are six, with a number of less celebrated aca demies; an institution for instructing thic deaf and dumb, an academy of fine arts, the Gewerlie Scllute or industrial school, where promising young artists are taught drawing, modelling, \&c. gratuitously.

Eerlin is the literary and scien. tific metropolis of Germany, and, in tlee various walks of literature, philosophy, science, and art, can show a galaxy of names such as few cities can equal. Since the time of Frederick the Great, it has been the policy of the Prussian kings to at tract to their capital, either through professorships in the university or otherwise, learned men in every department of
knowledge. Consequently, though but a city almost of yesterday, the number of eminent men who lave laboured, or who still labour, within the walls of Berlin, is very great. Of those who are world-renowned, may be named Leibnitz, who founded the academy of sciences in 1700 , and became its first president; the pious spener, the historian I'uffentorf, the philosophers Fichte, Schleiermacher, F. A. Wolf, and IIegel; the theologians Neander, Twetsten, and IIengstenberg; the historians Ranké and von Raumer; the geographers Ritter and Leipsius; the linguists Bopp, Zumpt, the brothers Grimm, and many others. In the natural sciences, stauds unrivalled in the present or any other age, Alexander von Humboldt; and after him are many brilliant names, as Poggendorf, Ermann, Mitscherlich, liose, Erichson, Ehrenberg, and Link. Many others might be mentioned; but it may suffice, further, to name the poets Tieck and Ruickert, the famous sculptors Ranch and Schadow, and the eomposer Felix Mendelssohn.

The charitable institutions include the hospital of eharity, the royal institution for providing for widows, the hospital for invalids, the hospital of St. Dorothy, the new royal hospital, \&c., with a great number besides for all kinds of benevolent purposes.

The manufactures of Berlin are various and extensive. Its elief productions are china, silks, cottons, stockings, ribloos,
cast-iron ware, types, silk hats, paper, oils, refined sugars, tabaceo, and anuff. In the iron-foundry, busts, statues, basrelicfs, and copies of pictures, are cast; together with a great variety of ornaments of unrivalled delicacy of workmanship. The black varnish with which the ironware is laid over, to prevent rust, is made of amber, dissolved, and mixed with lamp-black. The society of the upper classes of Berlin is diffienlt of access, and their hospitality limited. Music is here extensively and successfully cultivated. The performance of sacred vocal music in particular, has attained extraordinary perfection. The opera and theatres are on the most respectable footing, and are liberally encouraged, the taste for such entertaimments pervading all classes. The local affirirs of the place are administered by a magistracy, consisting of 25 individuals, with the assistance of the assembly of deputies.

Railways.-Berlin is well supplied with railways. It communicates W. direct with Hamburg; N. with Stettin, and thence S.E. with Pesen; E. through Frankfort-on-the-Oder and Breslau, with Cracow, Warsaw, and Austria; S. by a line of two forksone to Leipzig by Cöthen and Halle, and the other to Dresden, and from these citics communicating with the lines of S.W. Germany; S. W. through Potsdam, with Magdeburg, and thence through Hanover, with Cologne, Belgium, and France.

IIistory.-About two centuries ago, Berlin was a place of little importanee. It was confined to the immediate bank of the Spree, and the island which divides its channel; and consisted of a series of villages, which have gradually merged into each other, and now form its different quarters. The first important improvement was made by the great Elector, Frederick William, whe planted the Unter den Linden. His successor, Frederick I., seconded his efforts; but Berlin never assumed the appearance of a capital till the time of Fredcrick the Great, who, determined to make it worthy of his extended dominions, enclosed a large space within the walls, and proceeded to build upon it, to supply the wants, not so much of actual, as of an anticipated population. He was twice interrupted in the work, and almost driven from his purpose, when, in 1757, the city fell into the hands of the Austrians; and, in 1760 , into those of the Austrians and Russians. But he soon repaired the damage; and his successors, having followed ardently in his steps, Berlin has rapidly risen to be the second city in Germany in respect of population, and perhaps the very first in respect of architectural grandeur and political influence. Pop. (1846), 408,502; of whom 19,194 were solcliers, and 5000 Jews.- (Huhn's Lex. Deutschland; Murray's Handbook; Förster's Deutschland; Dieterici, Die Devillierung des Preussischen Staats.)

BERLINCHEN, a tn. Prussia, gov. Frankfort, on the large lake of the same name, 40 m . S.E. Stettiu, with a large church, an hespital, a paper-mill, linen manufactures, and distilleries. Pop. 3400.

## BERMEJO. See Vermejo.

BERMEO, a tn. and seaport. Spain, prov. Biscay, 15 m . N. Bilbao, lat. $43^{\circ} 35^{\prime} \mathrm{N}$. ; lon. $2^{\circ} 40^{\prime} \mathrm{W}$., on a slope facing the bay. It has two parish churches, two sehools, a townhouse, which contains the prison and the public storehouse, a custom-house, two fourtains (one of medicinal waters), and some convents. The chief occupation of the inhabitants is agriculture, fishing, and salting and drying fish, which they export, although the trade has much fallen off. Pop. 4000 .-(Madoz.)

BERMONDSEY, a tn. and par. England, co. Surrey, r. bank, Thames. The town is $1 \frac{1}{2} \mathrm{~m}$. S.S.E. London, and consists of several principal streets, all straight, paved, and well kept, and a number of smaller. The houses are of various form and construction, and mostly of brick, with some ancient structures of timber intermingled. It is lighted with gas, and amply supplied with water; and has four churches,
two of which-one of them a very handsome building-lave been erected within the last two years; anl several dissenting chapels, including laptists and Wesleyans, and a handsome 1R. Catholic chapel. There is also a convent of the Sisters of Mercy for about 40 inmates, a free school, the united charity schools; cach of the four churches above mentioned having, besides, schools attached. Leather-tanning is carried on here to a great extent ; there are also numerous woolstaplers, feltmongers, curriers, and manufacturers of vellum, parcliment, and hats; vinegar-works, a distillery, a brewery, and some boat-building. The London and Greenwich Railway crossea the parish by means of a magnificent viaduct. Area of par. 620 ac. Pop. (1841), 34,947.-(Local Correspondent.)

BERMUDAS (The), or Somer's Islands, a group of islands, N. Atlantic Ocean, belonging to Great Britain, 580 m

S.E. Cape IIatteras, in N. Carolina, and lying between lat. $32^{\circ} 14^{\prime}$ and $32^{\circ} 25^{\prime} \mathrm{N}$, and lon. $64^{\circ} 38^{\prime}$ and $64^{\circ} 52^{\prime} \mathrm{W}$. They lie S.W. to N.E., based on the edge of a bank stretching in the same dircction, 23 m . by 13 ; but only occupy a space of about 18 m . by 6 , though said to be about 365 in number. They are separated from each other by very narrow channcls, and are mostly rocky islets, five only being of any considerable size. They are of difficult access, being enclosed on thrce sides, N., W., and S., by formidable coral reefs, nearly all under water, and extending, in some parts, 10 m . from the islands, the only reefs of this description oecurring in the whole central expanse of the Atlantic Occan. Some of the corals now growing here, are asserted by the natives, on the authority of tradition, to have been living in the same spots for centurics, and are supposed to vie in age with the most ancient trees of Europe. In removing some reefs, by means of divers, at the entrance of St. George's harbour, in the island of that name, evidences were found confirmatory of the idea that part of the former land of the Bermuda Islands has subsided, and is now below the sea. The islands have little elevation, and, in their general aspect, much resemble the W. India Islands. The climate is delightful, a perpetual spring clothing the fields and trees in perpetual verdure. Severe thunderstorms, however, frequently occur ; and when S. winds prevail, the atmosphere becomes charged with a humidity unfavourable to various complaints, including those of a pulmonary nature. Though the soil is not so fertile as it was, being now much exhausted, almost every deseription of fruit and vegetable grows here abundantly, and the arrow-root is said to be superior to that of any other place. The orange orchards of the islands are extending and improving; and generally more skill and industry has been applied to the clearing of land, and to cultivation, within the last few years than formerly. The quantity of live stock maintained is small, and the dairy produce sufficient only for the wants, of the inlabitants. Domestic fowls are abundant, especially
ducks; and during summer, numbers of turtle are taken. It is somewhat remarkable that there are neither springs nor freshwater streams in the islands, and only a few wells, the water of which is brackish. This want is supplied by collecting rainwater in tanks, every house being provided with one, and the roofs being adapted as conductors. The adjoining seas are stored with various kinds of fish; and many whales are taken in the season, which is between March and June. The flesh is sold in the markets, and eaten by the natives. The principal employment is building vessels, generally of cedar; small, swift, and durable. Platting straw, and the mid-rib of the palmetto leaf, is also carried on to some extent. Principal exports :-arrow-root, potatoes, and onions. The amount of imports into the Bermudas, for the year ending January 5 , 1848, was $£ 138,992,163.9$ d.; exports for the same year, $£ 20,205,6 \mathrm{~s} .8 \mathrm{~d}$. The number and tonnage of vessels inwards, for the same period, were 185; tonn. 19,399;-outwards, 189, tonn. 20,400. The number and tonnage of vessels belonging to the celony in the year named, were 52 ; tonn. 3372. The largest harbour is that of St. George's, a beautiful and romantic bay, capable of containing a large fleet, but of difficult ingress and egress, from the narrowness of its entrance, now, however, much improved. It is strongly fortified, and generally garrisoned by a regiment of the line, with some companies of artillery and engineers. The legislature consists of a governor, council, and legislative assembly. The council is composed of eight members and a president, nominated by the governor, but subject to confirmation by the Crown; the Ilouse of Assembly of 36 members, returned by the nine tribes or parishes into which the island is divided. The islands contain nine churches, five chapels for dissenters, and 24 public or free schools, principally supported by different societies in England, and by funds under the control of the Bishop of Nova Scotia, in whose diocese the Bermudas are situated. There are, besides the above, 25 private schools. An establishment for convicts has recently been placed here. The number of the latter, in 1848, amounted to 1750. The computed cost of a convict to the public at the Bermuda establishment, including the expense of the passage out, and every other charge, is about $£ 20$ per annum; and the value of his labour, £33 per annum. The capital is Hamilton, on Bermuda or Long Island. Pop. (1848), estimated at from 9500 to about 11,000 whites, coloured, and free blacks.

BERN, or Berve (Canton of), the largest, and in rank, the second canton in the Swiss Confederation, one of the three vorort or direeting cantons, situated in the W. of Switzerland, between lat. $46^{\circ} 19^{\prime}$ and $47^{\circ} 30^{\prime}$ N.; and lon. $6^{\circ} 50^{\prime}$ and $8^{\circ} 28^{\prime}$ E.; bounded, N.W. by France; N. and N.E. by the cantons of Basel Country, Soleure, and Aargau ; E. by Luzern, Unterwalden, and Uri ; S. by the Valais ; S.W. by Vaud; and W. by Freiburg, and Neufchatel; greatest length, 83 m. ; greatest breadth, 65 m. ; area, $2560 \mathrm{sq} . \mathrm{m}$. The S. boundary of the canton is formed by the Bernese Alps, which include some of the highest summits of the alpine system. Among these are the Finster-Aarhorn, $14,111 \mathrm{ft}$.; Jungfran, $13,718 \mathrm{ft}$.; Schreekhorn, $13,386 \mathrm{ft}$; the Mönch, $13,498 \mathrm{ft}$. , \&c. Offsets from this mountain-range cover the S . part of the canton, and form the high country or Bernese Oberland, celebrated for the beauty of its valleys, the principal of which are, the Simmen, the Lauterbrunnen, the Grindelwald, and the Hasli. The N. part of the canton, separated from the S. by the valley of the Aar, bears the name of Leberberg or Jura country, from the moun-tain-range that intersects it. This rarige is considerably lower than the Bernese Alps. Excepting a small portion on the French frontier, watered by the Doubs, the whole of the canton belongs to the basin of the Rhine. Tho principal streams are, the Aar, and its tributaries, the Enmen, Simmen, Kander, and Thiele. In the N.W., besides the Doubs, the canton is watered by the Suss and the Birs, with its affluent the Trame; the former falling into the Lake of Biel, and the latter into the Rhine near Basel. The canton contains three considerable lakes, Biel in the basin of the Thiele, and those of Thun and Brienz, in the basin of the Aar. The climate is healthy, but rigorous in the alpine regions, where the incessant snows form extensive glaciers; and in some localities it is exposed to sudden changes, a warm day being frequently succeeded by a night of frost. In the valleys of the Thiele, the Emmen, and lower Aar, the temperature is mueh milder. The mountains of Bern are finely wooded with pine and ash; the valleys are
fertile, and yield good crops of grain, but not in sufficient quantity for the population. Hemp, and flax of good quality, are raised, and indifferent wine to a small extent, is grown in the neighbourhood of the lakes. But cattle form the prineipal wealth of the inhabitants; the rich pastures of the canton rendering it peculiarly well adapted for the rearing of cattle, of which, the breeds found in the vales of Emmen, and Sarine or Saane, are esteemed the best in Switzerland. The dairy produce of these valleys has a high reputation, the cheese being reckoned only second to that of Freiburg. The total cheese made in the canton, amounts to about 2500 tons annually. Bern is famed for its horses ; those of Emmenthal are exported in considerable numbers to France, for draught and heavy-armed cavalry. The canton contains mines of iron, lead, and copper, with quarries of marble, gypsum, freestone, grindstones, granite, and limestonc. Coal is also obtained, but in small quantities. Fine crystals are found among the quartz roeks of the Grimsel and gold dust is met with in the sands of the rivers. Mineral springs are numcrous, and the bathing establishments of Weissenburg, Blumenstein, \&c., are much frequented. In the mountain distriets, the houses are generally of wood, but in the lowlands, and round Bern, of stone. The land, in gencral, is very much subdivided, from being equally partitioned among children, except in Emmenthal, where the youngest son inherits the patrimonial domain. The manufactures of the canton are inconsiderable; linen and woollen goods are made in the Emmenthal ; paper, leather, hardware, kirschwasser, fire arms, and agricultural implements are also made, and partly exported. Horses, cattle, and cheese, form the principal exports. The imports consist of salt, colonial produce, wine grain, tobacco, metals, cotton, wool, silk, hemp, and flax. The transit of goods in the W. part of the canton, is much facilitated by the Aar and its tributarics, from which also a considerable quantity of fish are obtained. Sehools and educational institutions are numerous. Attendance at school is obligatory The contingent of troops furnished to the Confederation, is 5824 men, and the war contribution, 104,080 Swiss franks (£5960), annually. The canton is divided into 28 administrative sections or prefectures, the first magistrates of which are elected for six years by the executive council. The prefectures are divided into political communes, whose boundaries frequently differ from those of the ecelesiastical communes or parishes. The tribunals are-1. The supreme court, composed of 10 members, chosen for 15 years by the Grand Council, and a president chosen for five years. This is the high court of appeal, both for criminal and civil cases. 2. The district courts, 30 in number, one for each prefecture, and two each for the prefectures of Delemont or Delsperg, and Cerlier. Ecclesiastical affairs are under the direction of two ecclesiastical committees, one Protestant, the other R. Catholic. Onethird of the vacant Protestant churehes, are filled up by the executive council, and the other two-thirds by the seniority of the ministry. The first Protestant minister is the Dean of the Münster or cathedral of Bern, capital of the canton. The R. Catholic part of the state belongs to the the bishopric of Basel, and is dependent on the vicar-general of Porrentrui.

The canton of Bern has formed a portion of the Swiss Confederation since 1352. In 1798 , it comprised a larger extent of territory, and was then divided into four cantons, Bern, Aargau, Lemar (which afterwards became the canton of Vaud), and Oberland, which was reunited to Bern in 1803. As an indemnification for its dismemberment, the Congress of Vienna, in 1815, added to it the town of Biel or Bienne, and the territory on the W . side of the Thiele, which formed the greater part of the ancient bishopric of Basel, and was then possessed by France. With exception of the inhabitants of this district, who are of Freuch extraction, the Bernese belong to the German stock, and speak German. The great majority are Protestants. Pop. (1837), 407,913.

BERN [Latin, Berna, Aretopolis], a tn. Switzerland, cap. of above canton, and, alternately with Zürich and Luzern, seat of the federal government, and of the diet or rorort of the Swiss Confederation, 59 m. S.W. Zürich, 39 m . W.S.W. Luzern ; lat. (observatory) $46^{\circ} 57^{\prime} 6^{\prime \prime}$ N. ; lon. $7^{\circ} 26^{\prime} 34^{\prime \prime}$ E. (L.) Height (at the observatory) above the level of the sea, 1912 ft . The town, situated on a sandstone promontory formed by the Aar, is bounded on three sides by the river, and on the fourth, the W. side, it is defended by fortifications. A magnificent stone bridge, 909 ft . long, and the central arch of which is 93 ft .
abore the stream, here crosses the Aar, and snpplies a level road between the town and the ligh bank on the opposite side. Bern is the handsomest town in Switzerland, and one of the most regularly built in Europe. It has the air of a metropolis, and is the reputed capital of the Confederation, being the residence of the ministers from all the foreign states, except the lapal nuncio, who resides at Luzern. The houses are substantially built of stone, and the streets are spacious; all of them are plentifully supplied with water by means of fountains, some of which are grotesque, others elegant, and many of the streets have a rapid stream of water rmnuing under the footpath. The principal street or Grancle Rue, like a majority of the others, is steep, but it is also wide, and is adorned with many fountains; the houses are lofty and handsome, and built over arcades or covered piazzas, which line the street on either side, affording shade and shelter from summer's heat, and from winter's snows; though, from being neither high nor wide, they make the street look rather heavy and sombre. From the platform on which the cathedral stands, which is about 100 ft . above the river, a magnificent view of the Bernese Alps is obtained. Gardens, in terraces, hang upon the bank; which, fur a mile in length, presenta a beautiful declivity, covered with fruit-trees, evergreens, and weeping willows. Beyond the river, the country presents a verdant and finely-liversified surface, sprinkled with villages, houses, and cottages; and, in the farther distance, is a vast range of mountains. The cathedral is a fine Gothic structure, built between 1421 and 1502 , with a spire 190 ft . ligh, bnt incomplete. The other public edifices are, the church du St. Esprit; the musenm, containing an extensive collection of the natural productions of Switzerland; the townhouse, a Gothic edifice of the 15 th century; the mint, where money is coined for several cantons; the extensive citizen-hospital (Bürgerspital), the new prison and penitentiary, the Insel or island hospital, the corn market and corn magazine, for storing grain in case of scarcity; the bank, and the state honse. The university of Bern was founded in 1834, and has a full equipment of professors in all the different faculties and arts. There is also an academical lyceum, with 11 professors; a gymnasium, with 11 professors and masters; a school of arts, with nine professors; a school of painting and design, and a deaf and dumb institution. The publie library contains 35,000 volumes, and 1200 MSS . ; the medical library, 7000 volumes. Bern is celebrated for the number and excellence of its charitable institutions ; and, in addition to the hospitals, has two orphan asylums, an infirmary, lunatic asylum, ard a fund for the aid of indigent students. It has also an observatory and a botanical garden. The chief mannfactures are eloth, linen, cotton, and printed goods, clocks and watches, delieate meehanical and philosophical instruments, straw hats, leather, gunpowder, \&e. The property belonging to the corporation is very large; and the revenue not only suffices to defray the public expenses, but to provide all the citizens with fuel, and still leaves a surplus.

Bern owes its foundation to Berchtold, fifth Duke of Z:ïhringen; who, in 1191, fortified the peninsula on which the town stands, and invited merchants and craftsmen to resort thither for protection. In 1218, it was raised to the rank of a free town of the empire, with extensive privileges. In 1353, it entered the Swiss Confederation, at that period consisting of seven cantons, and obtained the second rank. In 1798, Bern was obliged to open its gates to the republican armies of France, and the cuuton was dismembered From 1799 to 1803, it was the seat of the Melvetic Government. The government of Bern had hitherto been oligarehical, but, in 1830, the population threw of the rule of the privileged families, and appointed a supreme council, which entered on its duties in October 1831. Bern is said to derive its name from bairen, the plural of the German word bär [a bear]; and that animal figures on the armorial bearings of the town, as well as on the coins, sign-posts, fountains, and public buildings. For many centuries, living bears have been maintained at the public expense, as part of the state property. The great majority of the inhabitants of Bern are l'rotestants. Pop. 22.422.

BERNARD (Great St.), a celebrated pass of the Pennine Alps, can. Valais, on the mountain-road lealing from Martigny in Switzerland to Aosta in Piedmont; lat. $45^{\circ} 51^{\prime}$ N.; lon. $7^{\circ} 11^{\prime} 23^{\prime \prime} \mathbf{E}$. (1..) On the E. side of the pass is Mount Velan, and, on the W., the Pointe de Dronaz; there is no mountain known by the name of St. Bernard. Almost on the very erest of the pass is the famons Mospice, supposed to be the highesi inhabited spot in Europe, 8200 ft . above the level of the sea. It is a massive stone building capable of accommodating 70 or 80 travellers with beds, and of sheltering 300. As many as 500 or 600 have received assistance in one day. It is situated on the highest point of the pass, exposed to trementons storms from the N.E. and S.W., and is tenanted by 10 or 12 brethren of the order of St. Augustine, who have devoted themselves by vow to the ail of travellers crossing the mountains. The clinate of this high region is necessarily rigorous. There is a lake on the sumnit, at a short distance from the Ilospice, on which ice has frequently remained throughout the whole year. The severest

CONTENT OF THR GREAT St. nernard. From Rieharde on's Sketches in Italy and Switzerland.
cold recorded is $29^{\circ}$ below zero, Fah., but it las often been $18^{\circ}$ and $20^{\circ}$ below zero; the greatest stmmer heat recorled is $68^{\circ}$ Fah. From the difficulty of respiration in so elevated a locality, and the severity of the climate, few of the monks survive the time of their vow, 15 years from the age of 18 , when they are devoted to this service. They are driven, often with ruined health, to retire to the more genial elimate of Martigny, where there is a branch establishment for the brethren who cannot live on the mountains. The dogs kept at St. Bernard, to assist the brethren in their humane labours, are well known. In the muserm of Bern, the skin of one, called 'Barry,' is preserved, who is recorded to have saved the lives of 15 luman beings. In 1847, the revolntionary government of Valais laid the monastery under the heavy foreed contribution of 120,000 franes ( $£ 4800$ ), thereby much impairing the resources of the establishment, and, according to a letter of the prior, written at the time, rendering its continuance impossible. Snbseriptions from various quarters have since been made, to enable the brethren to continue their benevolent labours. The pass of St. Bernard appears to have been known at a very early period; and a pagan temple formerly stood here, from which a Roman road led down the liedmontese side of the mountains. The remains of a massive pavement are still visible; and the cabinet of the Hospice contains votive tablets, bronze figures, and other antiquities, found in the vicinity. The 1Iospice was founded in 962 , by lBernard de Menthon, a Savoyard nobleman, for the benefit of those who performed pilgrimages to Rome. In May 1800, Napoleon led an army of 30,000 men, witl its artillery and cavalry, into Italy by this pass.

IBERNARD (Little St.), a mountain, Sardinian States, belonging to what are called the Grecian Alps, about 10 m . S. Mont Blane. It stands between Savoy and Piedmont,
having the valley of the Isere, in the former, on the W., and that of the Doire, in the latter, on the E. The pass across it is one of the casiest in the Alps, and is supposed to be that which IIannibal used. The Ilospice, at the summit of the pass, has an elevation of 7192 ft .

BERNARDIN (St.), or Bernardino, a mountain, Switzerland, can. Grisons, over which a road, constructed at the joint expense of the Sardinian and Grison governments, leads from the Rheinwald into the valley of the Misoceo, and forms one of the direct lines of communication, through Switzerland, letween W. Germany and the N. of Italy. It leads to Lago Maggiore; the pass of the Splugen departing from the same main road in Grisons, leading to Lago di Como. The summit of the pass is 7115 ft . above the sea, and is partly occupied by Lake Moesola, the source of the Moesa.-On the S. slope stands the viliage of St. Bernardin, a post station, the first and loftiest in the valley of the Misocco, consisting of a few houses on a small plain or ledge. It possesses a mincial spring, which is one of the highest in the Alps, and attracts a few visitors.

BERNAU, a tn. Prussia, prov. Brandenburg, on the Planke, 14 m . N.E. Berlin. It is surrounded with walls and ditches; has two churches, an ancient townhouse, and an hospital. It has manufactures of silk, velvet, calicocs, linen, \&c., and a number of breweries. Pop. 2850.——Several other places in Germany and Bohemia have the same name.

BERNAY, a tn. France, dep. Fure (Normandy), 25 m . W. N.W. Evreux, agreeably situated, r. bank, Charentonne. The grain market occupies part of an old abbey church, the remains of which are very curious and interesting. The church of St. Croix is distinguished by its large and magnificent altar, and by marble statues and sculptures, brought from the abbey of Bec; and the church of La Conture was Cormerly celcbrated for being supposed to cure persons possessed with evil spirits, and is still visited by numerous devotees. Bernay has also a communal collcge, an hospital, a court of first resort, a board of manufactures, an agricultural society, and a savings'-bank. It has important manufactures of cloth, and flannel, tape, linen, and cotton goods ; and spins a good deal of cotton, thread, and worsted. It has also bleachfields, dyeworks, tannerics, \&c. Trade:-principally in grain, cider, cloth, iron, paper, leather, linen, horses, and cattle. The horse fair, held in Lent, is one of the greatest in France, and is attended by purchasers from all parts of the country, to procure post and diligence horses, for which Normandy has long been celebrated. Pop. 5490.

IBERNBURG, or Anhalt-Bernbura, a tn. Germany, cap. duchy of same name, on both sides of the Saale, in N.W. Leipzig, with which, as well as with Berlin and Magdeburg, it is connected by railway. It is divided into the old, the new, and the high town; the first two surrounded by walls, and communicating by a bridge 173 ft . long. Bernburg is well built, and contains several well-paved and well-lighted streets. The principal building is the palace, situated, with a garden, on the highest part of the high town. It is very ancient, but has received numerous modern additions; and contains a picturegallery, theatre, and church. Among the other buildings and establishments are a townhouse, court-house, three Protestant churches and a chapeI, a R. Catholic oratory, a synagogue, gymnasium, savings'-bank, hospital, widow's asylum, bridewell, and seven schools. Besides an oil-mill, and several brewerics and distilleries, there are manufactures of paper and carthenware. Pop. 6772.-The DUCHy, forming part of the country of Anhalt (which see), has an area of 256 geo. sq. m., is well wooded and well cultivated, and has made considerable progress in manufactures. The minerals include coal, copper, lead, silver, and iron, of which the last is the most important. Pop. 46,252.

BERNE. See BERN.
BERNECK, Bernegg, or Bernang, a vil. and par. Switzerland, can. of, and 11 m . E. St. Gall, pleasantly situated in the Rheinthal, and containing an ancient church, which is used in common by Protestants and R. Catholics. The culture of tho vine, spinning, and knitting, are the chicf cmployments. Pop. 2119.

BERNECASTEL, or Berncastel [anc. Beronis Castellum], a tn. Prussia, prov. Lower Rhine, cap. circle of same name, r. bank, Moselle. It is a dirty town, but picturesquely situated at the base of the IIundsrück Monntains, 38 m . S.W. Yol. I.

Coblentz. The wines of the neighbourhood are celebrated. Bernecastel has several quarries, from which excellent grindstones are obtained, also a lead and a copper mine. Its commerce is considerable. Pop. 2100.-The carcle of the same name has an area of 210 geo. sq. m. It is very hilly, several of its highest points exceeding 2000 ft . Abont twothirds of the surface are covered with wood. The hills are rich in minerals, particularly iron, lead, and copper, which are extensively worked; and, along with the coal which is also found in the district, maintain numerous furnaces. Pop. 43,318 .

BERNERA, a small isl. Scotland, the most S. of the Hebrides ; lat. (N. point) $57^{\circ} 43^{\prime} \mathrm{N}$. ; lon. $7^{\circ} 12^{\prime} \mathrm{W}$. (r.) ; about 5 m . in circumference. The S.E. side is rocky, and frequented in the summer months by immense numbers of sea-fowl. The interior is fertile. It contains a quarry of granite, beantifully marbled, and of a very superior quality. A handsome lighthouse, built of this granite, has been erected here. The island is said to have been a sanctuary of the Druids, an entire circle of upright stones giving a plausibility to this belief. There are here the remains of two chapels, one dedicated to St. Asaph, the other to St. Columba. Pop. 30.

BERNESTAD'T, or Bernstadt, a tn. Prussia, prov. Silesia, r. bank, Wida, 24 m. E.N.E. Breslau. It is walled, has an old castle, two churches, a synagogue, an hospital, and manufactures of woollen cloth, linen, and leather. Pop. 3600.

BERNIER'S ISLAND, a small isl., W. Australia, at the entrance of Shark Bay ; lat. (Kok's Island, off N. point) $24^{\circ} 43^{\prime}$ S. ; lon. $113^{\circ} 7^{\prime} \mathrm{E}$. (r.) It is about 15 m . long by 3 to 5 broad.

BERRE, a tn. and com. France, dep. Bouches-du-Rhône, and 14 m . W.S.W. Aix, on the lagoon of same name. It is well built, but ill supplied with water, there being but one well in the town. The little port is safe and commodious, and carries on an active coasting trade in salt, chemical substances, oils, and fruit. Soda and chemical stuffs are manufactured. Pop. 1926.-The lagoon is about 12 m . long, by 7 broad, and communicates with the sea by the canals of Martignes and Tour-de-Bouc. It deposits on its shores large quantities of salt, the gathering of which gives a considerable amount of employment. The lagoon also abounds in fish.

BERRI (Le), a former prov. of France, which, with the exception of the single arrond. of St. Amand, belonging to the Bourbonnais, now forms the departments of Indre and Cher.

BERRIAN, a vil., N. Africa, in the Sahara of Algiers, 25 m . E. Gardaia. It is walled, and has 250 to 300 houses, including some mosques and schools; and has a little trade in grain.

BERRIEDALE, or Berrydale, a small fishing hamlet and ness, or headland, Scotland, co. Caithness, par. Latheron. The village is situated at the mouth of the Berriedale water, which rises in the mountains in the S.W. part of the parish, and is one of the most picturesque and romantic streams in Scotland. In the vicinity are the ruins of the ancient Castle of Berriedale.-The NESs, or promontory, is about 2 m . S. by W. the village, and is in lat. $58^{\circ} 12^{\prime}$ N.; lon. $3^{\circ} 30^{\prime} \mathrm{W}$. This district gives the title of Lord Berriedale to the Earl of Caithness.

BERRIEW, or Aber-Rinw, par., N. Wales, Montgomery. Pop. 2259.

BERRIMA, a tn. New S. Wales, co. Camden, 66 m . S.W. Sytney, on a remarkable bend of the flat which forms the channel of the Wingecarribbee river. Pop. 377.

BERRIN, a tn., W. Africa, Senegambia, in the country of the Feloops, on the l. bank of the Casamanza; lat. $12^{\circ} 28^{\prime} \mathrm{N}$.; lon. $16^{\circ} 28^{\prime} \mathrm{W}$.

BERRINGTON, par. Eng. Salop; 2920 ac. Pop. 651.
BERROW, two pars. Eng.:-1, par. Somerset ; 2310 ac. Pop. 578.-2, par. Worcester; 1940 ac. Pop. 480.

BERRY HEAD, a promontory, England, co. Devon, S. point of Torbay; lat. $50^{\circ} 24^{\prime} \mathrm{N}$. ; lon. $3^{\circ} 28^{\prime} \mathrm{W}$. (R.)

PERRY-POMEROY, par. Eng. Devon; 4610 ac . P. 1149.
BERRYN-ARBOR, par. Eng. Devon; 5050ac. Pop. 899.
BERSTED, par. Eng. Sussex ; 2750 ac. I'op. 2490.
BERTHOLSUORF, a market tn. Austria, duchy, Lower Austria, on the railway between Vienna and Trieste. It lies among the hills between Brunn and Rodaun; surrounded by vineyards, and contains an ancient church, with a lofty tower, and a curious subterranean chapel. Behind it are the ruins of an old castle, which was repeatedly occupied by dowager
princesses of the house of Hapsburg. Baths, and a swimming establishment, have recently been erected here. Pop. 2226.

BER'THOUD. Se Burgdorf.
BERTINORO, a tn. Papal States, 7 m . S.E. Forli, on a hill, at the foot of which flows the Ronco. It is the seat of a bishopric, and has a cathedral, three parish churches, and five convents. The wine prodnced in the neighbourhood is highly esteemed. Pop. 4000.
bekV IE, liervy, or Inverbervie, a royal bor. and par. Scotland, coast of co. Kincardine. The town is 22 m . S.S.W. Aberileen. It is irregularly built, and the only buildings worth mentioning are the parish church, an elegant Gothic structure; a Free church, commodious and substantial ; a small Baptist chapel, and the townhall, also a good builling. The ancient market cross is an object of intercst; it is an octagon of six steps, surmounted hy a column 12 or 14 ft . high. The first flax spinning-mill in Scotland driven by inanimate power was erceted at Bervic, but was unsuccessful. There are now five small flax spinning-mills here, all driven wholly by water, excepting two, which have some auxiliary steam power. Collectively, they throw off about 4000 spindles of yain weekly, and employ about 100 hands. There are also a meal mill, and a small wool mill on the water of Bervie; the latter employing about 30 hands on the premises, carried on by a firm principally in the hosicry trade, who employ out of doors, chiefly in Aberdeenshire, in the winter season, about 1300 women knitting hose; and in the summer season, about a third of that number. Tiles are likewise made here to a considerable extent. The staple trade of Bervic used to be handloom-weaving; but it has declined very much of late, and now only about 60 looms are employed, by houses in Arbroath, Montrose, Brechin, and Aberdcen. The seaport of Bervie is Gourdon, about 1 m . distant, where the grain from the Howe of the Mearns is mostly shipped, amounting to about 30,000 qrs. annually, principally barley and oats, sent mostly to Glasgow. About 16 boats belong to Gourdon; and during the herring fishery, about 40 boats fish here, manned by about 200 men. There is one fish-curing firm in the place, who send the fish to London and Glasgow. Bervie has long been famous for its smoked haddocks, known by the name of bervies. It unites witl the Montrose district of burghs in returning a member to the House of Commons. The parish is about 2 m . in length, and $1 \frac{1}{2}$ in breadth. Pop. of burgh (1841), 864; of par. 478 ;-total, 1342 , which includes the vil. of Gourdon, containing 390 inhabitants.(Local Correspondent.)

BERWICK, four pars. England:-1, par. Sussex; 1250 ac. Pop. 199.-2, Berwick (St. James), par. Wilts; 2370 ac. Pop. 247.-3, Berwick (St. John), par. Wilts; 4230 ac. Pop. 419.-1, Berwick (St. Leonard), par. Wilts; 970 ac. Pop. 41.

BERIWICK, a co. Scotland, forming the S.E. extremity of the kingdom, bounded, N. by co. Haddington, W. by eos. Edinburgh and Roxburgh, S. by the Tweed, and E. by the German Ocean ; area, $282,880 \mathrm{ac}$., of which, from a third to a half are supposed to be arable. The Lammermoor range of hills, varying in height from 630 ft . to 1500 ft ., occupy the N. parts of the county; between these again and the Tweed is a tract of comparatively level country, called the Merse, one of the most fertile and best cultivated districts in Scotland. The farms here are in general large, and the farmers a wealthy and intelligent class of men. Handsome country seats and farm houses, with comfortable cuttages, thickly distributed over the country, afford pleasing evidence of the prosperity that everywhere prevails. The E. part of the county is also hilly, and in many places broken up into deep, rugged gullics and ravines. The sea-coast is bold and rocky, and of irregular outline, eurving into bays, and winding round numerous promontorics, of which the most remarkable is St. Abb's IIead. Wheat and turnips are the great objects of culture, but barley and oats are raised in large quantities; beans also are cultivated to a considerable extent. Many improvements have been effected during the last 20 years, by the more complete drainage of the land, the adoption of rotations better suited to its varying capacities, the introduction of bone manure, the culture of waste land, \&ce. The horses are principally of the Clydesdale breed, and in general strong and active. Cattle, a mixed breed, latterly improved by the introduction of shorthorned bulls. In the Merse, the sheep are principally longwoolled; in the Lammerinoor hills, the Cheviots have been
axtensively introduced; but in the bleak parts of the country, the black-faced breed keep their ground. The stock of sheej, dias been estimated at about 115,000 . Average rent of land in 1842-43, 16s. 93 d. an ac. The principal river connected with the county is the Tweed, which is here a beautiful and majestic strean. There are a number of smaller rivers, amongst which are the Whitadder, Blackadder, and Leader, all well stored with trout. There is only one lake in the county, Coldingham Loch, a small shect of water, covering about 30 ac. The county is all but purcly agricultural, the majority of its population subsisting by its pursuits, and the various arts connected with them; almost the only exception is found in the bleak, hilly district of Lammermoor, which, being unfit for any other purpose, is appropriated to the grazing of sheep. Interesting remains of antiquity are numerous in this connty, every parish containing old castles, towers, abbeys, priories, \&c., with many tumuli, cairns, \&c. The county contains 33 parishes, and has Grecnlaw for its: capital ; it returns one member to Parliament. Registered electors in 1849, 1050. Pop. (1851), 36,297.

BERWICK (Nortif), a royal burgh, scaport, and pas. Scotland, co. Haddington. The town is situated on a small bay, near the base of a beautiful conical hill, 940 ft . in height, called N. Berwick Law, at the S. entrance to the Frith of Forth, 21 m. N.E. Edinburgh ; lat. $46^{\circ} 1^{\prime} \mathrm{N}$. ; lon. $2^{\circ} 41^{\prime}$ W. It is built on a sandy plain, and consists chiefly of two principal streets, straight, and well kept, running nearly at right angles to each other; and one of which is adorned with a row of fine plane-trees. The houses are mostly plain, and are built of hard trap rock. They are generally old, and have a weather-beaten appcarance; but of late years, some handsome houses have been erected to the E. and W. of the town. The supply of water is obtained from springs, and is generally much impregnated with lime. The churches are, the parish church, crnciform, built in 1670 ; a Free church, and a U. Presbyterian church. Schools-the parochial, burgh, and two private schools, none of them very numerously attended. The harbour is small, but of easy access. Its coasting trade, which was at one time considerable, is now altogether extinguished by the railways. Of late years the town has come into some repute as bathing quarters; and a number of the inhabitants depend, to a considerable extent, on letting portions of their houses to summer visitors. About a quarter of a mile W. from the town, are the ruins of the abbey of North Berwick, beautifully sitnated on the snmmit of a gentle elevation. The town forms one of the Haddington district of burghs, which return a member to Parliament. Pop. (burgls and par.) in 1841, 1708.-(Local Correspondent.)

BERWICK-ON-TWEED, a port, bor., market tn., par., anl co. of itself, England, on a gentle acelivity, l. bank, Tweet, near its confluence with the sea, 48 m . S. L. Edinburgh, and 300 N. by W. London; lat. (lighthonse) $55^{\circ} 46^{\prime} 12^{\prime \prime} \mathrm{N}$.; lon. $2^{\circ} \mathrm{W}$. (r.) It occupies an area of nearly 2 m . in circumference, and is surrounded by fortified walls $1 \frac{3}{4} \mathrm{~m}$. in circuit, formed of earth, and faced with stone, along which is an agreeable promenade. The streets are for the most part narrow, steep, straggling, and irregular; but some of the principal ones are wide, and open. Houses chiefly of stone, and well built; supply of water inditferent, and the quality often objectionable; lighted with gas by two companies, an old and new. There are altogether 12 churches in the town, namely, the parish cburch, four U. Presbyterian, an Independent, a Baptist, one in conncetion with the Church of Scotland, one with the English Presbyterian, a Wesleyan, a Primitive Methodist, and a R. Catholic. The schools are:the corporation academy, for the education of the children of burgesses, no others being admissible, conducted by a rector, with three male and three female teachers, and managed by the town comeil ; a classical academy, the management of which is vested in 21 trustces, appointed by the Lord Chancellor; a charity school, founded in 1725 ; a school of industry, established in 1819 ; and an infant school, the workhouse, and various private schools. The principal public buildings are:-the townhall, erected betwcen 1750 and 1760 , a handsome modern freestone structure, with a beautiful portico of the Tuscan order, and a spire 150 ft . high; the barracks for infantry, built of stone, in the form of a quadrangle, capabic of accommodating upwards of 600 men ; the parish church, a commodious building, without a spire, having been built in
the time of the Puritans; a prison, finished in 1850, affording accommodation for 12 prisoners, and containing, besides, a room in which the petty sessions are held; a chapel, \&c. The ${ }_{0}$ Tweed is crossed at the town by a bridge of 15 arches, measuring 1164 ft . in length, and only 17 ft . in width, commenced in the reign of James I.; and by a magnificent railway viaduct, considered to be the largest stone bridge in the kingdom, consisting of 28 semicircular arches, each 61 ft .6 inches in span. Of literary and benevolent institutions, Berwick has a naturalists' club, a public subscription library, established in 1812 ; and a dispensary, combining the advantages of an infirmary. The only manufactures carricd on, and these but to a small extent, are linen, sack and sail cloth, ropes, hosiery, carpets, and hats. The river is navigable to the bridge only, though the tide flows for several miles beyond it. The harbour, which is naturally inconvenient, has been recently deepened several feet, and the shipping trade of the place thereby much improved, large steamers and other vessels now superseding the smacks and small craft by which the traffic of the port was formerly exclusively carried on. The number of vessels registered at Berwick-on-Tweed, for the year ending December 31,1847 , was 251 ; tonn. 17,219 . The number and tonnage entered for the same period, was 995 ; tonn. 53,859 . Cleared, 553 ; tonn. 39,082. The chief exports are salmon, of which great quantities are caught in the Tweed, and mostly sent to London, packed in ice; cod, haddocks, herrings, corn, wool, and coal. The imports-timber-deals, staves, iron, hemp, tallow, and bones for manure.

In the beginning of the 12 th century, during the reign of Alexander I., Berwick was part of his realm of Scotland, and the capital of the district called Lothian. Soon after this date, it became populous and wealthy; was the chief seaport of Scotland, contained a strong castle, with churches, hospitals, and monastic buildings, and was created one of the four royal burghs of Scotland. In 1216, the town and castle were stormed and taken by King Jolin. During the competition between Baliol and Bruce for the Scottish throne, the English Parliament sat in Berwick; and in the hall of the eastle, Edward I. pronounced judgment in favour of Baliol. Bruce retook the town and castle in 1318; but, after undergoing various sieges and vieissitudes, both were surrendered to Edward IV. in 1482, and have ever since remained in possession of England. By 6 and 7 Will. 1V., Berwick is constituter 'a county of itsclf to all intents and purposes' (excepting the return of members of Parliament). Pop. of par. (1849), 9000 ; or for the entire parliamentary and municipal bor. 13,800.-(Local Correspondent.)

BER'ZOCANA de san fulaencio, a tn. Spain, Estre. madura, prov. Caceres, 6 m. N.E. Logrosan, on the borders of New Castile. It has spacious, clean, and paved streets, a parish church. endowed school, townhall, storchouse, several fountains, and a cemetery. The inhabitants are almost cxclusively engaged in agriculture, and in rearing goats, pigs, horned cattle, and a few sheep. Pop. 2026.

BES $\Delta L U$, a tn . Spain, Catalonia, prov, of, and $15 \mathrm{~m} . \mathrm{N}$. by W. Gerona, in a plain, between the river Fluvia and the brook Campellada. It has two squares, two churehes, an endowed school, townhouse, prison, and a public fountain. The inhabitants, engaged in agriculture and as carriers, also spin and weave cotton. Pop. 2012.

BESANCON [anc. Vcsontio], a fortified tn. France, cap. of dep. Doubs, and of the sixth military division of the kingdom, 206 m . S.E. Paris ; lat. (citadel) $47^{\circ} 13^{\prime} 46^{\prime \prime} \mathrm{N}$. ; lon. $6^{\circ} 2^{\prime} 19^{\prime \prime}$ E. (L.) It is agreeably situated at the extremity of
a valley watered by the Doubs, which almost surrounds the a valley watered by the Doubs, which almost surrounds the town, and divides it into two parts. These communicate with each other by a stone bridge, part of which is a Roman strnc-
ture of large blocks, and part a modern erection, for the purture of large blocks, and part a modern erection, for the purpose of enlarging the roadway. The town is surrounded by hills covered with vineyards. The isthmus or peninsula, on which it is built, is composed of a mass of rocks crowned by the citadel, which commands the country towards the N.; but the citadel itself is commanded by several eminences in the neighbourhood, on which forts have been erected for the purpose of securing the approaches. Besançon, which is a forti-
fied place of the first class, and one of the strougest towns in l'rance, is also considered to be one of the best built. Within the walls it contains 1455 houses, all built of hewn stone, two or three stories high, and ormamented with balconies.

The streets are spacions and well laid out, and the squares, which are of considerable extent, are adorned with fountains A splendil promenade is formed, within the town, on the banks of two branches of the Doubs. The public bnildings are, the cathedral, and three other churches (containing some fine pictures and sculptures), the hospital, the hotel of the prefecture, the college, the palace of justice, and the citadel, which is one of Vauban's finest works. There are also a theatre, and a public library containing 50,000 volumes and some valuable manuscripts; and an aqueduct, cut in the rock by the Romans in the second century, and called now Porte Taillée. The celebrated architect Paris bequeathed to his native town, Besançon, a collection of antiquities, pictures, drawings, books, and other objects of rarity, now forming a museum here. In the environs are the splendid ruins of the castle of Montfaucon, supposed to have been built by Louis XI. Besançon is the seat of a royal court for the departments of Doubs, Jura, and the Haute Sâone; of a court of first resort and of comnerce; and of an archbishop. It likewise has a school of artillery, academy of arts and sciences, royal college, agricultural and medical societies, dcaf and dumb institution, and grand seminary. Previous to the Revolution of 1793 , it was the capital of the Franche-comte ; liad a parliament, university, mint, eight parishes, two chapters, a college, and 13 convents or abbeys. Besançon carries on a considerable trade, especially with Switzerland; the principal articles are, wine, brandy, liqueurs, vinegar, salt, drapery, clocks, and watches; files, iron, chains, nails, horses, cattle, grain, butter, cheese, \&c. ; and manufactures carpets, hats, stoves, ironmongery, printing-presses, coach-springs, stained papers, artificial flowers, liqueurs, and mustard. It has also extensive foundries, breweries, and tanneries. Watchmaking is the principal trade. It was introduced from Switzerland about 50 years ago, and employs 2000 workmen, who work principally at their own houses. A bout 600,000 bottles of artificial Seltzer water are made here annually.

The origin of the town is too remote to be traced. Julius Cæsar entered it 56 years before the Christian era, and mentions it in his Callic War as a place of great extent and natural strength. Louis XIV. besieged and took it in 1660 ; and by the treaty of Nijmegen its possession was sccured to France, along with the rest of the F'ranche-comté. In 1495, a council was held here under Charles of Neufchatel. Pop. (1846), 27,854.

BESIIEK, or Belschik [anc. Bolbe], a lake, Turkey, Macedonia, a little E. of the Culf of Contessa, into which it pours its superfluous waters, and about 20 m . E. Salonica; greatest length, E. to W., about 14 m .; greatest brealth, 4 m . To the N. it is bomded by a chain of mountains stretching E. and W., and the scenery in its neighbourlood is very magnificent, bearing some resemblance to that of Switzerland. Various kinds of fish are found in the lake. On its N. sloore are the two villages of Greater and Lesser Beshek, both beautifully situated; the former on the water edge; the latter, and larger of the two, on a promontory jutting into it, with lofty hills behind, eovered to their summit with olive trees.

BESIGIIEIM, a tn. Wiirtemberg, 15 m . N. Stuttgardt, on a rocky tongue of land, at the junction of Enz with the Neckar. It has two Roman towers, and is walled. On the Schalkstcin, a hill hard by, the best wines on the Neckar are produced. Pop. 2412.

BESNI, a tn. Turkey in Asia, pash. Marash, 38 m. W.N.W. Sumeisat. It is 2340 ft . above the level of the sea, but, being jent up in a narrow limestone glen, and having neither trees nor gardens within it, is hot and unhealthy in summer. It contains 2500 houses of Mahometans, and 250 of Armenians, clustering round the castle, whicli stands on the summit of a cliff, and is in a very ruinons condition. There is a tolerable bazaar.

## BESOEKI. See Bezoeki.

BESSARABIA, once the E. division of Moldavia, now the most S.W. gov. of European Russia; bounded, S. by the Danube, N. and E. by the Dniester and the Black Sea, W. by the Pruth, which separates it from Moldavia, and by the Buckowina, part of Austrian Galicia. It thus forms, between two rivers, a strip of territory 372 m . long by 50 of medium brealth; area, 14,256 geo. sq. m. On nearing the maritime borders, it gradıally widens, and naturally divides itself into two portions. The portion named by the Tartars Budjuk,
is composed of a flat, reaching to the sea-shore, between the mouths of the Danube and the lower course of the Dniester, and has the common aspect of the Russian steppes, being chiefly suited to the breeding of stock. The N. portion presents a hilly country, beautifully undulated, covered with noble forests, and extremely fertile. The climate is in general mild, salubrious, and agreeable; the grape, the finer kinds of fruit, and melons, growing in the open air. The chief mineral product is salt, obtained from lakes in the Budjak. Saltpetre, coal, alabaster, marble, and lime, are also found. Bessarabia is divided into six distriets - Ismaël, Akermann, Bender, Kichinev, Khotin, and Yassy.

In the Budjak territory are met Russians, (Cossacks, Germans, Jews, Bulgarians, Swiss vine dressers, Gipsies, with Greek and Armenian traders. The N. part of the province, again, is almost entirely inhabited by the Moldavian race, the line of their villages extending along the Dniester, to near Akermann.

Bessarabia was the fairest and most protuctive portion of Moldavia at the beginning of this century, and perhaps has more capabilities, natural and commercial, than any portion of the Russian empire of the same extent. Yet, till very recent years, it has been strangely negleeted, being poorly cultivated, and in many places almost deserted. The Russian Government has established, in different parts of the territory, colonies of Bulgarians, Germans, Cossacks, and even some heretofore wandering Gipsy tribes. The people of Bessarabia are essentially agricultural, few of them take to trades; the few of these that exist in the country, are entirely of the domestic kind. Of what is understood by the term manufactures, there are none. The Moldavian peasants are generally frank, cheerful, and hospitable; but are said by the Russians to be indolent. Hommaire de Hell, however, asserts that 'in the Moldavian villages the houses are usually kept in the neatest order, and generally surrounded with gardens and fruitful orehards.'

Bessarabia once formed the E. distriet of the Roman province of Dacia. After various vicissitudes consequent upon the fall of that empire, it was invaded by the Asiatic Turks, and became a portion of European Turkey. It was ceded to the Russians by the treaty of Bucharest in 1812. At first, the Bessarabians were allowed to retain their peculiar laws anil privileges undisturbed; but misunderstandings soon arose, and since 1829, the administrative institutions of the country have been assimilated to those of the rest of the empire. P. $(1850), 808,000$.

BESSASTADIR [Danish, Bessastad], a vil. and church, S. W. coast of Iccland, dist. Gullubringu-Syssel, on a promontory, opposite to, and about 3 m . S.W. Reikiavik, to which the sehool formerly possessed by Bessastadir has been recently removed.-(Baggesen.)

BESSE, several small tns. France, particularly: -1 , Besse-sur-Braye, dep. Sarthe, 7 m . S. St. Calais, r. bank, Braye. It has manufactures of coarse cottons, paper, and wax candles. Pop. 1195.-2, Besse, dep. Puy-de-Dôme, on the Couse, 17 m . W. Issoire. It lies in the midst of a mountainons district, and is built on an immense mass of basaltic lava. All the houses are built of the same material, and lave in consequence a gloomy appearance. An ancient building in the town, of a circular form, has bcen supposed to be the remains of a temple of the sun, but is more probably only a baptistery. In the neighbourhood there is an acidulated spring. Pop. 996.

BESSELSLEIGII, par. Eng. Berks; 980 ac. Pop. 106.

BESSI NGBY, par Eng. York, E. Riding; 1230 ac. P. 66.
BESSINGHAM, or Bassingham, par. Eng. Norfolk; 410 ar. Pop. 139.

BESSUNGEN. See Darmstadt.
BESTHORPE, par. Eng. Norfolk; 2.440 ac. Pop. 536.
BETANIMENES, a maritime dist. Madagascar, E. coast, extending between lat. $18^{\circ} 30^{\prime}$ and $20^{\circ} \mathrm{S}$. It is watered by several rivers, and contains two considerable towns, Devourante and Manooroo, both of whieh are situated on the coast, at the months of rivers bearing, respectively, the same names.

BETANZOS, a city, Spain, Galicia, prov. of, and 12 m . S.E. Coruna, on an eminence, at the base of which flow the rivers Manden and Mendo, subsequently uniting to the N.

The houses are well built and commodions, forming several steep, but clean streets; and the square, or 'Campo de la Feria,' contains a handsome edifice, once used as a depository for the arehives of Galicia, but now converted into a barraek. Here are also two parish churehes, several chapels, a handsome townhall, hospital, two endowed sehools, two suppressed eonvents, and an Angustine monastery, on the bank of the Mendo, near the old bridge. Linen fabries, earthenware, leather, and bread, are manufactured; considerable quantities of the latter article being exported to Cornina. An annual cattle fair is held in May. Pop. 4210.

BETCIIWORTH, or Beachwortir, par. Eng. Surrey ; 3660 ac. Pop. 1140.

BETHANIA, or Betifany, a tn. Syria, about 2 m . S.E. Jerusalem, on the way to Jerieho. It is now a mean village, inhabited by a few Turkish families, by whom it is called Lazari, in memory of Lazarus, who dwelt here, and who was here raised from the dead. The inhabitants of the village show the pretended sites of the houses of Lazarus, of Martha. of Simon the leper, and of Mary Magdalene. The alleged tomb of Lazarus, a large excavation in the rock, is also shown to the credulons. The situation of Bethania is extremely picturesque.

BETHERSDEN, par. Eng. Kent; 6410 ac. Pop. 1011.
BETH-HORON (Upper and Lower), or Bett-Ur elFoka, and Beit-Urel-Taita, two vils. Palestine, pash. Gaza, about 9 m. N. W. Jerusalem. They are small, but exhibit traces of ancient walls and foundations. They were both fortified by Solomon. The one stands on the side, and the other at the bottom of a hill, and between them is the pass of Betli-horon, which still, as in ancient times, is the great thoroughfare between the sea-coast and Jernsalem.

BETHLEIIEM, a tn. Syria, honoured above all other towns, in having been made the birthplace of our Saviour. It stands $6 \mathrm{~m} . \mathrm{S} . W$. Jerusalem, on an eminence, surrounded by small valleys, or depressions, covered with vine and olivevards. Half the town is in ruins, and the other half consists of houses irregularly huddled together. These, thongh not large, are solidly built; and several of the strects are entered by gates. The convent, which is separated from the town by a platform, erowns an E. slope, and is oceupicd by three sets of monks, Greck, Armenian, and Latin. The chureh caller

TII PRINCIPAL STREET, BETHLEHEM. -From Maytr's Views in Palestine.

St. Mary of Bethlehem, or the Chureh of the Nativity, was built by Helen, the mother of Constantine the Great, and is said to stand on the spot where our Saviour was born. It is a structure of considerable grandeur, though of irregular architecturc. The roof, which is of a moderate height, is supported by a double row of marble Corinthian colitmms. The floor also is of marble, and both the walls and ceiling are covered with half-faded pictures, and representations of Mosaic, apparently of great antiquity. Beneath the chancel is a cave, which is cntered from above by a flight of steps, and is shown by the monks as the 'Cave of the Nativity.' An inscription bears, Hic de Virgine Maria Jesus Chrisfus natus est-' IIere Jesus Clirist was born of the Virgin Mary.

The chief occupation of the inhabitants is in making crucifixes, chaplets, \&c., for pilgrims. Pop. 3000.

BETHLEHEM, a tn., U. States, Pennsylvania, 1. bank, Lehigh, at the mouth of Manskicy Creek, 48 m . N.N.W. Philadelphia. It las a commanding anpearance, being built on ground which gradually rises from the river and creek. It consists of a compact street running N. and S., and two others running E. from it. It has a large Gothic church, with a small tower rising from the centre, and surmounted by a dome. The burying.ground, E. of the town, is laid out with great elegance and taste. A bridge over the Lehigh is 400 ft . long, and the Lehigh Canal passes along the river through the lower part of the town. It has likewise a celebrated female school, conducted by the Moravians; by which community of Moravians it was settled under Count Zinzendorf, in 1741. Pop. (1840), 2989.

BETHNAL GREEN, par. Eng. Middlesex, and one of E. suburbs of London; area, 760 ac. Pop. 74,088. (See London.)

BETHSIIAN, or Betishean [Greek, Scythopolis; modern, Beisûn], a vil. Palestine, pash. Damascus, 20 m. S.E. Nazareth, on a height a little above r. bank, Jordan. It was anciently a place of importance, as indicated by the extensive ruins, both of the city itself, and of its acropolis, which stood on a lofty circular hill. At present it is only a village, containing 70 or 80 houses, occupied by inliabitants who have made themselves somewhat notorious by fanaticism and lawless demeanour.

BETISHEMESII, or 'Ain Shems, anciently a city, Palestine, about 15 m . W.S.W. Jerusalem. It stood in a fine deep valley, and is repeatedly mentioned in Scripture as a place of importance. At present its site is merely marked by a ruin.

BETHUNE, a tn. France, dep. Pas de Calais, cap. arrond. of same name, 19 m . N.N.W. Arras. It stands on a rock washed by the Brette, and is a place of consilerable strength, ranking as a fortress of the second class. It is nearly in the form of a triangle, one of the angles of which is occupied by the castle, built by Vauban. The appearance of the town is not prepossessing. The houses are ill built, and the streets are bad. There is, however, one fine square, the centre of which is occupied by an ancient belfry of remarkable construction, while the Hotel de Ville, among the best edifices in the town, forms one of its sides. There are two parish churches. The nave of one of them is remarkable for the elegance and lightness of the pillars which support its roof. The chief manufactures are oil, soap, and cloth. There are also distilleries, tanneries, and salt and sugar-refineries. The trade, including corn, wine, brandy, oil-sceds, cheese, linen, and earthenware, is greatly favoured by the canals of Lawe and Basséc, which meet here, and form a fine basin. A native of Bethune is said to have invented Artesian wells, which are common in the town, and supply several fountains of excellent water. The family of the Lords of Bethune is very celebrated, and a branch of it was established in Scotland about the end of the 12 th century. To this branch the persecutor, Cardinal Beaton, belonged. Pop. 7150 .—The arrondissement has an area of $200 \mathrm{sq} . \mathrm{m}$., and is subdivided into eiglit cantons. Pop. 131,973.

BETLEY, par. Eng. Stafford; 1480 ac. Pop. 884.
BETLIS, Bedlis, Bidlis, Bitlis, and Bittis, a tn. Turkish Armenia, about 20 m . W. Lake Van. It is one of the most ancient cities of Kurdistan, situated in a wide ravine, traversed by a stream, on whose steep banks the town is built. The houses are of red stone, generally two storics in height, with grated windows to the streets. In the centre of the town, on a high rock, is an ancient castle, formerly the residence of the Khans of Betlis. The town contains several caravansaries, a number of mosques, nine churches, and three baths. The country around is fertile, well cultivated, and produces excellent crops of grain, cotton, hemp, rice, olives, tobacco of the best description, and a variety of fruits and vegetables of superior quality. Game is plentiful in the neighbourhood, and on the surrounding hills are numbers of lions, wolves, and bears. The principal manufactures of the town are of coarse cotton cloth and tobacco, the greater part of the latter being sent to Erzeroom and Constantinople, where it is much esteemed. The inhabitants consist of Turks, Kurds, and Armenians. Pop. 10,000.

BETSILEO, a prov. Madagascar, in the interior of the S. part of the island, divided into N. and S. Betsileo. Having a great extent of excellent pasturage, it produces vast numbers of cattle, sheep, goats, and pigs. The scenery is picturesque, and the indications of voleanic action numerous and distinct. Saline springs are of frequent occurrence. The inhabitants of this district are so attached to the place of their nativity, that they seldom leave it; they are of a warliko disposition, but false and treacherous.

BETSIMSARAKA, a maritime prov. Madagascar, E. coast, between lat. $16^{\circ} 45^{\prime}$ and $18^{\circ} \mathrm{S}$. It is, in general, flat towards the sea, and mountainous as it approaches the interior; in some places it is swampy, and covered with thickets and forests, but in others it presents abundance of grazing land, and is covered with numerous herds of cattle belonging to the Queen, and a few also to the inhabitants. Several fine lakes exist in this province, forming a scrics along the coast of upwards of 100 m . in extent. The soil is fertile, and the country to some extent brought under cultivation. The crops, however, are often much damaged, and not unfiequently altogether destroyed, by the herds of wild pigs with which the neighbouring provinces are infested. The N. part of this district is celebrated for the growth of roots. Rice is also cultivated to a great extent, as well as other grain. The principal trading ports are Foule Pointe, Tenerif, and Tamtave.

## BETTALA. See Battalaif.

BETTESHANGER, or Betshanger, par. Eng. Kent; 370 ac. Pop. 18.

BETTISCOMBE, par. Eng. Dorset; 1810 ac. Pop. 53.
bettola (San Giovanni de), a tn. and com. Italy, duchy of, and 20 m. S. by W. Piacenza, I. bank, Nure. It contains a churel, and a school for both sexes. The vicinity is fertile, but not wholly cultivated. The low marsh land on the r. bank of the river is much infested by snakes. Pop. 6608.

BETTUS, par. Eng. Salop; 8500 ac. Pop. 452.

BEUNINGEN, a vil. Holland, prov. Gelderland, 3 m . W. by N. Nijmegen; with a R. Catholic and a Protestant church, a school, and 800 inlabitants, chiefly engaged in agriculture.

BEUSICHEM, a vil. Holland, prov. Gelderland, 7 m . N.W. Thicl, near 1. bank, Leck. It is an old, nice-looking village, with the chureh (founded in the middle of the 10 th century) placed in a large open space, planted with lindentrees. It has, likewise, a school ; and in the vicinity, across the Leck, formerly stood the old castle of Beusichem. In the month of June a market is held, celebrated for its horses and stallions. Pop. 900.

BEUTELSBACH, a tn. Würtemberg, circle, Jaxt, on the Beutelsbach. It contains an ancient chureh, and a castle, which was the original seat of the Würtemberg family. Pop. 1850.

BEU'TIIEN.-1, Beuthen, or Butom, a tn. Prussia, gov. of, and 46 m. S.E. Oppeln, cap. circle of same name, containing two churches, a synagogue, townhouse, and hospital. Pop. 4400.-The circle, which has an area of 226 geo. sq. m., is intersected by ridges of clay, but has a good deal of fertile loam, inclining, in the N. and E., to sand. Among the hills, the Trockenberg is particularly remarkable for its mineral riches. The principal rivers are the Malapanc, Brinnitze, Stola, and Klodnitz. The chief minerals are, argentiferous lead, calamine, iron, marble, alum, and millstoues. The language almost universally spoken is Polish. Pop. 69,000.2, A tn. Prussian Silesia, gov. Liegnitz, l. bank, Oder, 11 m . below Glogau. It contains a palace, two parish churehes (a R. Catholic and a Protestant), two schools, a townhouse, and an hospital. There is a garrison; and several public offices have their seat here. The inlabitants are chiefly employed
in making earthenware and straw-plait, and in boatbuilding. Pop. 320 .

BEVAGNA [anc. Mevania], a vil. Papal States, 17 m . S.E. Perugia, on the Maroggia, a tributary of the Tiber. It suffered much by an earthquake in 1832. In the neighbourhood an excellent wine is grown.

BEVEDERO, a considerable lake, La Plata, prov. or state, Mendoza, between lat. $32^{\circ} 45^{\prime}$ and $34^{\circ} 17^{\prime}$ S., aud lon. $66^{\circ} 0^{\prime}$ and $66^{\circ} 32^{\prime} \mathrm{W}$. It is composed of two distinct portions, called sometimes the Greater and the Less Bevedero, connected by a river channel about 8 m . long. The smallest, and most $\mathrm{N} .$, measures about 22 m . by 15 m . ; and the larger, which is very irregular in form, though somewhat triangular, measures 40 m. N. to S ., and from 3 or 4 m . to 25 m . E. to W. This lake is the reservoir of the waters flowing E. from the Andes, between lat. $31^{\circ}$ and $34^{\circ} \mathrm{S}$. Through the Desaguadero, it receives the waters of the rivers Mendoza and San Juan, and the lakes Guanacache and Silvero, besides numerons extensive morasses. The other principal affluent is the river Tunuyan, which enters it by numerous arms. The lake has no outlet.

BEVELAND (Noord), or North Beveland, a river isl. Holland, prov. Zeeland, forming part of the delta of the Scheldt. It is isolated from Schouwen, Duiveland, and Tholen, by the E. Scheldt; from Zuid or Sonth Beveland and Wolfaartsdyk it is parted by the Zuid-Vliet ; and from Walcheren by the Sloe. N. Beveland is 11 m . long, by 5 broad at its widest part. The lands here are tolerably fertile, and produce corn and madder ; and much stock is raised on the grazing flats. It was entirely submerged in the year 1532 , and a considerable number of the inhabitants drowned. The soil was not recovered for many years. Pop. 4800.

BEVELAND (ZUid, or South), a river isl. Holland, the largest and most fertile in prov. S. Zeeland. It is situated at the parting of the E. and W. Scheldt, and is separated from Walcheren by the Sloe, and from Wolfaartsdyk by a narrow canal. The entire length of S. Beveland is 25 m. , its greatest breadth about 11 m . This district, too, suffered an inundation, though not so eomplete as that of N. Beveland, in 1532 ; it suftered greatly from floods again, Jan. 14 and 15, 1808. It is now a very productive territory, especially in wheat, estecmed the best grown in Holland; mnch vegetables and madder are also grown, and butter and cheese made. It is well covered with mderwood, and has some good orchards and nursery gardens. Fish are canglit in abundance near the coast. The capital is Goes, N. side of the island. Pop. 23,000

BEVERCOATEs, par. Eng. Notts; 790 ac. Pop. 44.
BEVEREN.-1, A to. and com. Belgium, prov. E. Flanders, about 6 m . W. Autwerp, on the road between (ylient and Antwerp. It has a fine church, built of white stone, with a lofty pyramidal tower; from the top of which is a tine view over the Waes territory. This ehurch contains the tomb of Adolphus of Burgundy, Lord of Beveren, who died in 1540, and also several tolerable pictures. In the town there are breweries, tanneries, dyeworks, tobacco-factories, and extensive mannfactures of laee, employing about 2000 women Pup. 6566.-2, A th. and com. Delgium, W. Flanders, in which are a brewery and brickworks. Pop. 2996.

BEVERLEY, a vil. and township, U. States, Massachusetts, 16 m . N.E. Buston. N. of it is Salem, with which it is connected by a bridge 1500 ft . long. It has considerable manufactures, but the inhabitants are chiefly employed in commerce and the fisheries. The village contains four churches (two Congregational, one Baptist, and one Unitarian), an acalemy, and 10 schools; a bank and an insurance office. Pop. 4689 .

BEVERLEY, a market tn. and bor. England, co. York, cap. F. Riding, 27 m. E.S.E. York, at the foot and E. edge of the chalk range of the Yorkshire Wolds, and on the IIull to Bridlington branch of the York and N. Midland Railway. It consists of one continuons street, bearing various names, and upwards of a mile in length, and of 13 smaller streets, some of which, however, are spacious, and not inelegant. The streets are all paved with boulders, called 'cobbles;' and the principal ones have flagged footways, and are kept extremely clean. The houses are mostly of brick, and are irregular as to height and dimensions. Water is supplied by pumps and deep wells, or borings in the chalk, below the gravel on which the town stands. Several of these wells are

60 ft . in depth, and in some the water rises spontaneously to the surface. The town is lighted with gas. The most remarkable and most interesting edifice in Beverlcy, and one of the fincst structures of its kind in the kingdom, is the minster. This snperb specimen of ecclesiastical architecture was built at different periods, and is in the decorated and perpendicular English styles. Its length, from E. to W., is 334 ft .4 inches; the breadth of the nave and aisles, 64 ft .3 inches; the height of the nave, 67 ft . ; and the length of the great cross aisle or transept, 167 ft .6 inches. The centre tower is $107 \mathrm{ft} .$, and the two $W$. towers 200 ft . high. It is now the parochial church of the united parishes of St. John and St. Martin. The other places of worship are, St. Mary's Church (a large and beantiful structure), St. John's Chapel, two Wesleyan Methodist chapels, and chapels for Independents, Baptists, Prinitive Methodists, Scotch Baptists, and a small R. Catholic chapel. The town or guikl hall is a spacions and handsome edifice, and contains several public offices. At the N. end of the town is an extensive range of buildings, comprising the E. Riding sessions'-house and jail, the principal front of which consists of a portico, supported by four Ionic columns. The other public buildings are, the register office, asseinbly rooms, temperance hall, and news and billiard room. A beautiful cross in the market-place, erected in 1711 , may be also mentioned. Principal schools :-an endowed grammar-school, St. Mary's national, St. Mary's infant and school of industry, St. Martin's national, the minster girls', a Wesleyan, blue-coat charity, and two infant schools. Charities:-a dispensary, seven sets of alms-louses, in which upwards of 90 aged poor are maintainerl; and several minor charities. Litcrary institutions, \&e. :- a mechanics' institute (established in 1833), several gooll libraries, the Methodist reading society, a pamphlet club, two news-rooms, and the news and billiard room already mentioned. Manufactures:- the principal mannfactories are, an extensive foundry and manufactory of agricnl. tural implements, employing, when in full work, 400 hands; a large cement and colour-work, a linsced-cake and rape-dust manufactory, a bone-crushing mill, and several extensive breweries and tanneries. There is a considerable trade in wool and leather. The corporation is composed of six aldermen and 18 comeillors, who annually elect a mayor out of their number. Beverley sends two members to the 1louse of Commons; registered electors (1849), 1373. The vicinity of the town abounds in the most beautiful and picturesque walks; while its inhabitants have, at all times, unobstructed access to a tract of pasture land, consisting of 1174 ac ., belonging to the freemen of the town, to whom it is open as pastures; and as public walks and rides to every one. Beverley was, at one time, deemed one of the healthiest places in England, and was, on this account, a favourite place of resitence with persons of independent means. It is now otherwise. Owing to bad drainage, defective sewerage, and the extreme hardness of the water, its mortality has been rapidly increasing, and is now very great; the deaths in 1848 being 32 per cent. over those of 1847. Pop. (1841), 8409.-(Local Correspondent.)

BEVERLO(), a vil. and com. Belgium, prov. Limbourg, 12 m. N.W. Hasselt. On the extensive heaths in the neighbourhood is held a ycarly camp for exercising the Belgian army. Pop. 1505.

BEVERSTONE, par. Eng. Gloucester; 2360 ac. P. 178.
BEVERUNGEN, a tn. Prussia, gov. Minden, circle of, and 8 m . S. Höxter, I. bank, Weser, near the confluence of the Bever. It is walled, and otherwise fo-tified; and has a k. Catholic church, a synagogue, and poorhouse. Manufac-tures:-leather, soap, and paper ; some shipbuilding; several oil-mills; and an active trade in corn, iron, wood, and colonial produce. Pop. 1918.

BEVERWVIJK, an anc. market tn. Holland, prov. N. Hollant, 8 m . N. Hatrlem, close upon the Wijkermeer, an arm of the Ij. It is a large, beautiful, well-built, and wellpaved town, situated in one of the most agreeable localities of N. Holland. The principal street (Breestraat) is broad, and planted on either side with a double row of trees; and opens, to the one side, through Meerstraat, upon the harbour, which has a spacions, excellent quay. By means of the Pipe, about 1000 yards long, the harbour communicates with the Wijkermeer. The townhouse of Beverwijk is a respectable-looking edifice, and, besides the usual offices, contains the weigh-house
and the chief watch-honse. There are here four churches (Calvinistic, Evangelical Lutheran, R. Catholic, and Baptist), and a small Jewish synagogue. The town, moreover, possesses two ordinary and two industrial schools (of the latter, one being for boys, the other for girls), an orphan hospital, and two hospitals for the sick. Beverwijk has an annual leather market, and formerly had cattle markets; the latter have, however, been discontinued. It is much exposed to inundations. Pop. 2300.

BEVILACQU A, a vil. Austrian Italy, gov. Venice, prov. Verona, 5 m . E. Legnago, on the Togna. The only object in it deserving of notice is a feudal castle, built in 1354. The greater part of the ancient edifice has disappeared, but a palace, of modern erection, has been united to what remained; and the whole, though much dilapidated during the revolutionary wars, has a very picturesque appearance.

BEWCASTLE, par. Eng. Cumberland; 26,640 ac. Pop. 1274.

BEWDLEY, a market tı. and bor. England, co. of, and 14 m. N.N.W. W orcester, beautifully situated, r. bank, Severn, here crossed by an elegant stone bridge. It has two or three spacious paved streets, is lighted with gas, and amply supplied with water. The honses in the principal street are in general well built, and of respectable appearance. The townhall is a neat structure of stone. Places of worship:-a chapel of ease (a spacious stone building, with a tower and peal of bells), and chapels for Baptists, Wesleyans, Unitarians, and a Friends'meeting-house. Schools and charities:-a free grammar-school, a blue-coat school, and several sets of almshouses. Manufactures :-comb and rope making, tanning and brassfounding; some malting is also carried on. The corporation consists of a mayor, four aldermen, and 12 councillors. Bewdley returns a member to the House of Commons. Registered electors (1849), 394. Pop. 3400.

BEX, a large vil. Switzerland, can. Vaud, 26 m . S.S.E. Lausanne, on the Avençon, an affluent of the Rhone, and in a mountainous and picturesque country. It is a beautiful village, with substantial stone houses, and a tastefully-built church, and five annual fairs. Near it are saline springs, and mines of rock-salt; the most important source in Switzerland whence salt is derived; besides, sufphurous springs and baths, and marble quarries. In the salt mines, beantitul crystals of selonite and muriacite are obtained. Pop. 2854.

BEXAR, (San Antonio de), a tn. Texas. See Antonio.
BEXHILL, par. Eng. Sussex; 7900 ac. Pop. 1916.
BEXLEY, par. Eng. Kent; 5370 ac. Pop. $3955^{\circ}$.
BEXWELL, par. Eng. Norfolk; 1280 ac. Pop. 70.
BEYED, a lofty mountain, Abyssinia, prov. Samen, king. dom of Tigré; lat. $13^{\circ} 18^{\prime} \mathrm{N}$. ; lon. $38^{\circ} 40^{\prime} \mathrm{E}$.; covered with perpetual snow, and believed to be nearly $16,000 \mathrm{ft}$. high. About $15 \mathrm{~m} . \mathrm{S}$. by W. from Mount Beyed is Amba Hai, the highest mountain in Abyssinia, also covered with perpetual snow.

BEYERLAND. See Beijerland.
BEYROU'T, Beirut, or Bairout [anc. Berytus], a scaport tn. Asiatic Turkey, pash. Acre, agreeably situated on a promontory which on one side projects about 2 m . into the sea, and on the other merges into a beautiful plain, backed by the mountains of Lebanon, 60 m . W.N.W. Damascus; lat. $33^{\circ} 54^{\prime} 30^{\prime \prime} \mathrm{N}$. ; and lon. $35^{\circ} 28^{\prime} 15^{\prime \prime} \mathrm{E}$. (r.) It consists of the town proper, and of suburbs far surpassing it in extent. The latter are situated anong fine gardens, orchards, and groves, and contain a great number of villas and other commodious buildings. The former occupies a kind of shoulder, sloping from the N.N.W. side of the promontory to the shore, where two castellated buildings defend the anchorage; on the land side it is enclosed by a substantial wall of no great leight, flanked by large square towers, and is entered by six gates. The houses, all of stone, are well built, and generally lofty, but have the disadvantage of being much crowded, and arranged in narrow and ill-cleaned streets. Its principal edifices are a mosque, a Capuchin convent, a numnery belonging to the sisters of charity, and the mansions occupied by the different consuls, and rendered conspicuous by their national flass. The manufactures consist ehiefly of silk and cotton goods, the latter produced to some extent by European machinery; the bazaars are large and well supplicd; and the trade-though wanting the bencfit of a proper harbour, and possessing only an anchorage capacious and deep enough, but exposed to $W$. and $\mathrm{N} . \mathrm{W}$. winds-is already extensive, and
promises a rapid increase. As the port of Danascus, Beyrout has extensive connections with the interior. Its chief imports are Manchester goods, rice, and hardware; its exports, the above articles of manufacture, tobacco, gall-nuts, madder, and oil. It is considered the healthiest town on the coast of Syria, is the residence of a wealthy class of Armenian Christians, and has every appearance of being in a flourishing condition, though possessing little of the splendour for which it was celebrated in early times, and of which some traces still exist in the fragments of granite columns strewn along the shore. It is supposed to be the Berothah of Scripture, or Baal Beroth of the Phenicians. Under the Romans it had a famous school of jurisprudence, and in the 6th century was considered the finest city of Phenicia, It subsequently experienced disastrous changes, and suffered much, particularly during the Crusades. Pop., including suburbs, at least 30,000.

BEY-SHEHER. See BEg-sileher.
BEZIERS, a tn. France, dep. Herault, cap. arrond. of same name, 38 m . S.W. Montpellier, on a hill on the banks of the Orbe, here crossed by a stone bridge, and at the mouth of the Languedoc Canal. The situation of the town is celebrated for its beauty, and is, likewise, deemed healthy. Beziers is surrounded by old walls, but has no gates. The streets are, in general, narrow, but the houses are tolerably regular, and substantially built of stone; and the inhabitants boast greatly of the recent improvements made in the town, which is a busy thriving place. The general aspect of Beziers, on the Narbonne side, is extremely picturesque, as it seems to rise high above the plain. The effect is heightened by the

the cathedral, beziers. - From Voyages dans l'A nelenne France.
old cathedral, which stands on the top of the hill, and is a regular Gothic structure, with a handsome nave; an elegant choir, in form of a semicircle, surrounded with columns of red marble, and well-painted windows. On the terrace of the cathedral, there is a reservoir to supply the town with water, which is raised from the river Orbe by a steam-engine. Besides the cathedral, there are two other churches of interest in the town. Beziers has courts of first resort, and of commerce ; a communal college, a public library containing about 5000 volumes, a courthouse, formerly the episcopal palace, and an agricultural socicty. In the vicinity, excellent red wines are produced. Brandy-distilling is carried on here to a great extent, this being one of the chief markets for that spirit in France. Other manufactures, some of them extensive, are, cloth, silk stockings, gloves, confectionary, chemical stuffs, silk yarn, glass, paper, soap, leather, and casks. It has a considerable trade in wool, grain, oil, soda, verdegris,
almonds, nuts, fruits, and the articles manufactured. In 1209, Beziers was the scene of a horrible massacre of the Albigenses by a fanatical crusade, headed by the bishop of the district, and the abbot of Citeaux. The number of victims has been stated at 60,000 ; but the abbot himself, in a letter to Pope Innocent III., humbly apologizes for not having succeeded in slaying more than 20,000 . Pop. 16,322 .

BEZOARA, a tn. Hindoostan, Carnatic, presid. Madras, 1. bank, Kistnah, 42 m . N.W. Masulipatam; lat. $16^{\circ} 37^{\prime} \mathrm{N}$. ; lon. $80^{\circ} 43^{\prime}$ E. The Kistnah, which is here confined between two bold projecting mountains, is 3300 ft . wide, and is erossed by a ferry, whieh forms the great thoroughfare between the Circars and the Carnatic. The town contains a well-built Mahometan serai and mosque. The roeks are embellished with picturesque Hindoo pagodas, and eave temples of an inferior description have been formed in the body of the mountain. Irahmins and beggars are the only inhabitants.

BEZOEKI, a prov. Java, oceupying the whole of the E. end of that island; bounded, W. by prov. Passoeroean, N. by the Strait of Madura, E. by the Strait of Bali or Bally, and S. by the Indian Ocean; area, 3072 geo. sq. m. It is volcanic and mountainous; the lighest peaks, volcanoes, are, Idjeng, $10,170 \mathrm{ft}$; Wido Daren, 7956 ft ; and Lemongan, $6561 \mathrm{ft} . ;$ and those not voleanoes, Argopoero, $8530 \mathrm{ft} . ;$ and Krintjing, 8202 ft . The E. part is thickly wooded, and yields sulphur; and in the W., limestone rocks are found. Towards the shore, the land is low, marshy, and mhealthy; but, over all, the soil is fertile. Coffee, rice, and sugar, are the principal products. Among the trees is found the upas-tree. The animals are, horses, buffaloes, oxen, sheep, and numerous tigers. Fish are plentiful on the coast. The province is divided into the districts Probolingo, Bezocki, and Banjoewangi. Pop. (1838), 398,061.

BEZOEKI, a tn. Java, cap. above prov., on a rivulet of same name, at its embouchure in the Strait of Madura, 69 m . S.S.E. Soerabaya. Being built on a plain formed by the alluvium of the river, and sand thrown up by the sea, in the midst of rice fields, and at the foot of high wooded mountains that prevent a free circulation of air, it is a very unhealthy place even for Java. The stagnant water in the marshes devoted to the culture of rice being, at certain seasons, run off, the decomposition of vegetable matter, and of the thousands of worms and marine animals exposed under a tropical sun, raise a stench felt even on board ships in the roads, though vessels must lie a considerable way off. Intermittent fevers are then prevalent, attaeking both natives and Europeans. These last, bowever, chiefly reside up the river fiom the town, in a more Healthy locality. A good deal of business is done here in the products of the province. The roadstead is secnre in the E. monsoon.

BHADRINATH, or Badrinath [anc. Vadarinatha].1, A small tn., N. Hindoostan, prov. Kumaon, in the centre of a narrow valley of the Ilimalaya, on the Alacananda, 10,290 ft . above the sea, 80 m . N. Almora; lat. $30^{\circ} 43^{\prime} \mathrm{N}$. ; lon. $79^{\circ} 39^{\prime}$ E.; famous for a Hindoo temple, said to possess 700 villages in different parts of Gurwal and Kumaon, and visited yearly by upwards of 50,000 pilgrims from all parts of India. There are here warm, sulphurous, and cold springs. -2 , A peak of the Himalaya, $17 \mathrm{~m} . \mathrm{W}$. the town, $23,440 \mathrm{ft}$. ligh.

B'HAG, or Bagn, a tn. Beloochistan, dist. Cuteh Gundava, 140 m . E.S.E. Kelat. It is a large place, and surrounded by walls, which are in a ruinous state. It has not much trade in the products of the district, but its situation, on the caravan route from Shikarpoor to Khorasan, gives it an important transit trade. Pop. 8000.

BHAMO, Bamo, or Baxmo [also Zee-theet-zeit-the new mart landing-place], a large trading tn. Burmah, the seat of a viceroy, 1. bank, Irawadi, whieh is here a deep navigable stream. It lies $170 \mathrm{~m} . \mathrm{N} . \mathrm{N} . \mathrm{F}$. Ava, and 15 m . W. from the frontier of the Ch.inese province of Yunan; lat. $24^{\circ} 9^{\prime} \mathrm{N}$. ; lon. $96^{\circ} 45^{\prime}$ E. (Gutzlaff.) This is a modern town, erected for the convenience of water carriage to Ava; the old Shan town, Manmo or Bamo, being two days' journey distant up the river Tapan, which falls into the Irawadi about 1 m . above the new town of Bhamo. It lies on unequal clay ground, 40 to 50 ft . above the level of the river, and is surrounded with a bamboo palisade. The houses, about 2000 in number, are large and comfortable; these belonging to the
natives being made of reeds thatched with grass, but those helonging to the Chinese are mostly substantially built of blue-stained bricks. The Chinese temple is built, and the streets are paved with the latter material, and the grounds of the temple are surrounded by a neat brick tile-covered wall. Besides the regular inhabitants, who are chiefly Laos, there always numerous strangers in Bhamo-Chinese, Shans, and Kakhyens, who come either as purehasers or in searels of work. There is here a good bazaar, and the principal merchants are Chinese, with an intermixture of Burmans. The principal article of export trade, eotton, is entirely in the hands of the Chinese. Other articles of trade are, salt, dricd fish, rice, betel-nuts, and other vegetable produce; birds' nests, ivory, copper pots, carpets, and warm jackets. From Chisa, the imports are, tea, manufactured goods, paper, \&e. It is the chief entrepot between Burmah and China, and, in many respects, may be considered a southern Kiakhta. The people are wealthy and comfortable, and pay for everything in silver, the export of which, however, from Burnah, is prohibited. The Palongs, who inhabit the neighbouring hills on the Chinese frontier, are remarkably industrious; they are good dyers, carpenters, and blacksmiths, and make all the swords used in this part of the country.-(Jour. Bengal Asiatic Soc., A pril, 1837.)

BHATGONG, a city, N. Hindoostan, Nepaul, 9 m. E.S.E. Katamandoo, once the seat of an independent chief, and said to have formerly contained 12,000 houses. It is now much decayed, but is still a favourite residence of the Nepaulese Brahmins. It has a palace, several publie buitdings, and an extensive library. Pop. 12,000.

BHATNEER, or Bhutneer, a tn. Hindoostan, Rajpootana, modern cap. of the Bhatty Country, and the most E. town in the presidency of Bengal, 180 m . W.N.W. Delhi, 130 m . N.N.E. Bicanere; lat. $29^{\circ} 36^{\prime}$ N.; lon. $74^{\circ} 27^{\prime}$ E. It was taken and destroyed by Tamerlane in 1398, and in 1807, was again captured by the liajah of Bicanere, who kept possession of it for several years.

BIIATTIES (The Countiy of The), Hindoostan, prov. Ajmeer. Its limits are not fixed, but it may be assumed to be bounded, N. by the river Garra or Gharra, S . by the territories of the Bicancre Rajah, E. by Hurrianna and parts of Delhi, and W. by the great sandy desert. Bhatneer and Batindah are the ehicf Bhatty towns, but those best known to Europeans are, Futtehabad, Sirsah, Raneal. The inhabitants barter or export little produce, and import only white eloth, sugar, and salt, being almost wholly abandoned to predatory habits. They were originally shepherds, whose deseendants are still to be found in the Punjab, and E. of the Indus from the sea to Ooch.

BHAUGULPORE, or Boglaroor, a dist. Hindoostan, presid. Bengal, chiefly in prov. Bahar, but the E. portion in Bengal, between lat. $23^{\circ} 4^{\prime}$ and $25^{\circ} 49^{\prime}$ N., and lon. $86^{\circ} 15^{\prime}$ and $87^{\circ} 31^{\prime}$ E. ; bounded, N. by districts Tirhoot and Purnealn; E. by Purneah and Moorshedabad; S. by Ramghur and Beerbhoom; and W. by Bahar and Ramghur; length, N.W. to S.E., 133 m. ; breadth, 80 m .; area, $8225 \mathrm{sq} . \mathrm{m}$. It lies on both sides of the Ganges, and has several chains and groups of hills, forming part of the Vindhya Mountains. The two prineipal groups are situated, respeetively, near the N.E. and N.W. boundaries of the district. The former, elose by Rajamahal, are pretty well cultivated; but the lills to the W. are mostly waste, and, in many places, covered with almost impenetrable forests. A great part of the surface of the level land is mere rock; in other parts, the ground is studded, at intervals, with fragments of rock, partieularly on the W. hills, where the plough eannot be employed. It has been estimated that the area of the rocky level ground is upwards of 1700 $\mathrm{sq} . \mathrm{m} . ;$ and that of the uncultivable hills, $1150 \mathrm{sq} . \mathrm{m}$. The remaining arable portions consist of rich and productive soil, about $3000 \mathrm{sq} . \mathrm{m}$. being under tillage. The chief crops are, wheat, barley, maize, cotton, sugar-cane, and indigo. Of the last, large quantities are exported. I'otatoes are grown near Monghir and Boglipoor. Small quantitics of silk and saltpetre are produced. Tissues of cotton, and silk and cotton mixed, fire-arms, sugar, and domestic articles in metal, are the only manufactures. Owing to the want of good roads and bridges, there is little trade. Besides the Ganges, which runs through the distriet for 60 m ., the chief rivers are the Goggra aud the Gandahi. South of the Ganges, the streams
are merely hill torrents, which, though broad, are usually fordable during the rainy season, when several of them are deep enough to float down bamboos and timber. The winds most prevalent are the E. and W.; they are also the most violent. The winters are less cold than in the adjoining distriet of Purneab, and the summer season is often oppressively hot. There are a few wild elephants on the hills in the L. part of the country; but the most destructive quadruped is the IIunimaun baboon (considered by the Hindoos nearly as sacred as the cow), which abounds here. Great numbers of pilgrims, soldiers, and European travellers, are constantly passing through the district both by land and water; and this forms a principal source of profit to the inhabitants, who furnish travellers with provisions and other necessaries; it is estimated that, at certain seasons, no fewer than 100 passage boats stop daily at Rajamahal, besides those stopping at Pointy, Colgang, Sultangunge, Boglipoor, and Monghir. In the 12 th eentury, W. Bhaugulpore was seized by the Mahometans, and E. by the Bengalesc, and, until the British supremacy was established, anarchy prevailed in both. Pop. 2,020,000, of which one-sixth are Mahometans.-(Tennant's Indian Recreations ; Martin's History of East India; Rennell's Memoir of a Map of Hindoostan; Report on East Indian Affuirs; Hamilton's East India Gaz.)

BHAUGULPORE, (more eommonly now, Boglipoor), [the abode of refugecs], cap. of above dist., seat of a government, resident, and circuit court, beantifully situated near r. bank, Ganges, $113 \mathrm{~m} . \mathrm{N}$. W. Moorshedabad ; lat. $25^{\circ} 13^{\prime} \mathrm{N}$. ; lon. $86^{\circ} 58^{\prime}$ E. The town is large and finely situated, but is meanly built, and contains numerous bazaars inconveniently placed. The European houses and Mahometan mosques are handsome buildings, and the monument of Mosein Khan is well worth notice. Bhaugulpore has a neat jail, an hospital, Arabie college, with about 40 scholars, and an English school, well attended, ehiefly by the children of the hill chiefs. There is a small R. Catholic church, attended by persons of that rehigion, partly descendants of the Portuguese, and partly by native converts, who, in other respects, retain their own dress and manners. A little N.W. of the town, are two singular round towers, snpposed to be of Jain origin, and meant for the accommodation of the numerous worshippers of this sect, who annually visit them. As the traveller approaches the town, the numerous mosques, overtopped by lofty paims, and mingled with the hanging foliage of the tamarind-tree, give it a very pleasing appearance. The vicinity abounds with swelling hills, and is very fertile, well-cultivated and healthy, though much infested by snakes, particularly the Cobra da capello. Pop., chiefly Nlahometans, 30,000 .

BIIAWULPOOR. See Bahawulpoor.
PHEELS, a race of mountaineers, Hindoostan, inluabiting the mountains of Candeish, and the wild and uncultivated country along the l. bank, Nerbudda, from the plains of Newaur, to those of Goojerat. They differ from the other natives in appearance and manners, and are belicved by some to be the original inhabitants of the country. They are small, have dark complexions; go almost in a state of nudity, eonstantly armed with bows and arrows, and are greatly addicted to thieving and robbery. They are said to be Hindoos of the Bralminical persuasion; but they bury their dead, eat beef and pork, drink spirits of every description, and indulge in many other practices which are in direct opposition to the requirements of the Hindoo religion. Many of them, in certain districts, pretend to be converts to Mahometanism; of which, however, they seem to know little beyond the namc.
bHEERJOON, or Birnschun, a th. Persia, prov. Khorasan, cap. dist. of same name, about 180 m . S. Mushed. It is of great antiquity, and though moch decayed, is still a place of considerable importance. It is the scat of Government, and has extensive felt manufactures. The population has been stated at 30,000 families, but Fraser thinks that it does not exeeed that number of individuals.

BHOBANESER, or Bhavaneswara, a small tn. or vil. Ifindoostan, prov. Orissa, $16 \mathrm{~m} . \mathrm{S}$. Cuttack, on the site of a very ancient city, founded in the seventh century. It consists of a few hundred mud huts. At one extremity of it is the burrah tellores or great tank, half a mile square, and very deep, with a magnificent temple in the eentre.

BHOOJ, a city, Hindoostan, prov. Cutch, of which it is the modern eap., on an aeclivity in a plain, S.W. a fortified Vol. I.
hill called Bhoojan, 240 m . N.W. Surat, and 35 m . N. the Gulf of Cutch ; lat. $23^{\circ} 17^{\prime} \mathrm{N}$. ; lon. $69^{\circ} 53^{\prime} \mathrm{E}$. It is situated on a rising ground, and presents, from a little distance, a picturesque appearance, with its mosques, pagodas, and brilliant white houses, shining from amidst thick plantations of datetrees. As in the case of most Eastern cities, however, a nearer view dispels the illusion. The fort of Bhooj was taken by the British in 1819, and both port and town suffered considerably from an earthquake in June of the same year. West of the city, and elose to the walls, is a large tank, with stairs to the water's edge, and in the centre an elevated terrace, formerly a place of recreation for the chiefs; but the buildings are now in ruins. Bhooj is celebrated for the skill of its artists in working gold and silver. Infanticide is frequent in the vicinity. Pop. 30,000.-(Bombay Researches ; Trans. Bombay Lit. Soc.)

BHOONG-BARA, a dist. India, N. part of Scinde, about lat. $28^{\circ} \mathrm{N}$. ; lon. $69^{\circ} \mathrm{E}$. It contains 15 villages, and formerly yielded an annual revenue of $£ 60,000$. It has repeatedly changed masters, and in 1843 the British authorities in Scinde bestowed it upon Mahomet Bhawl Khan, ruler of Bahawulpoor, as a reward for his zeal and fidelity.

BHOPAUL, or Bopaul, a territory, IIindoostan, under British protection, presid. Bengal, provs. Malwa and Gundwana, between lat. ' $22^{\circ} 32^{\prime}$ and $23^{\circ} 46^{\prime}$ ' N.; and lon. $76^{\circ} 40^{\prime}$ and $79^{\circ} 20^{\prime}$ E. ; bounded, N., W., and S., by the Scindias dominions. The Nerbudda forms a natural boundary through nearly the whole extent of the S. frontier ; lengtl, E. to W., 140 m .; breadth, N. to S., 81 m .; area, $6764 \mathrm{sq} . \mathrm{m}$. The surface is uneven and full of jungles, and is traversed centrally from E. to W. by a hilly traet, forming part of the Vindhya Mountains. The soil is generally fertile, especially in the valleys, yielding wheat, maize, millet, pease, and other vegetable productions peeuliar to Central India. Rice is not largely cultivated, but sugar, tobaceo, ginger, and cotton, are raised in quantities exceeding the home consumption, and exchanged for salt and manufactured goods. The district is well watered by the Nerbudda, Betwah, and other minor streams. The dominant people are Patans, established here by Aurungzebe, in the early part of the 18th century. In 1812, the Vizier Mahomet made a gallant and successful defence against the combined forces of Scindia, the Rajah of Nagpoor, and the Pindarrees; but on his death in 1816, the Britisls took Bhopaul under their protection, conferring on Malımet's son, Nusseer Mahomet Khan, a considerable part of the present territory. The country has remained since in a peaceful and prosperous condition. Population estimated at 662,872 .

BIIOPAUL, a tn. Hindoostan, eap. of above territory, on the boundary between Malwa and Gundwana, 108 m . E. Oojein ; lat. $23^{\circ} 16^{\prime} \mathrm{N}$. ; lon. $77^{\circ} 28^{\prime} \mathrm{E}$. It is surrounded by a stone wall, and has on the S.W. a native fort or ghuny, with square towers, all much dilapidated. E. and W. of the town are two large tanks, the source of the rivers Bess and Patra.

BHOTAN. See Bootan.
BHOWNUGGUR, a seaport tn. Hindoostan, prov. Goojerat, W. side of the Gulf of Cambay, 60 m . W. Baroche; lat. $21^{\circ} 50^{\prime} \mathrm{N}$. ; lon. $72^{\circ} 15^{\prime} \mathrm{E}$., and the chief mart of import and export for Ahmedabad, \&c. The trade with Arabia is considerable.

BHURTPOOR, a native state, Hindoostan, bounded, E. by Agra, and $\mathbf{S}$. and $\mathbf{W}$. by the Rajpoot states, extending from lat. $26^{\circ} 43^{\prime}$ to $27^{\circ} 50^{\prime} \mathrm{N}$. ; lon. $76^{\circ} 54^{\prime}$ to $77^{\circ} 49^{\prime} \mathrm{E}$. ; area, 1978 sq m . The chief towns are, Bhnrtpoor (tlie capital), Deeg, Weyre, Biana, Combher, Gopanlghur, and Kurnau. Some parts of the country are so low and flat, as to be eompletely inundated during the rainy season. The soil in general is light and sandy, but well watered, and well cultivated. The chicf produetions are corn, cotton, and sugar. Salt also is obtained from brine springs. From the country not being well wooded, fuel is scarce, and eonsequently highpriced. The villages are in good condition, and indicate an industrious population. There are numerous wells, construeted by building the masonry first, and afterwards undermining and sinking it. The peacock is an object of such veneration here, that it is dangerous to kill it.

About A.D. 1700, the Jâts settled in this district, having emigrated from the banks of the Indus, in the lower part of the province of Mooltan; they assumed the title of the military caste, and their chief that of Rajah. In 1768, this territory was at its greatest extent, stretching along the course of the
river Jumnah, from near Delhi to Etawah; but in 1780, Nudjiff Klian conquered it and reduced it to an insignificant area, diminishing in proportion the revenue of the Rajah. After various changes, Buldeo Singh, in 1824, ascended the throne of his father Runjeet, and his son, Bulwunt Singh was recognized by the British, in 1825, as legitimate Rajah. In 1826, Durjunt Sal attempted to usurp the throne of the young Rajah, and having resisted British interference, was defeated, and himself and family sent prisoners to Allahabad. Since this time, Blurtpoor has been under British protection.

BHURTPOOR, a tn. Hindoostan, cap. of above dist., 110 m. S.S.W. Delhi, and 30 m. E. Agra; lat. $27^{\circ} 12^{\prime}$ N.; lon. $77^{\circ} 32^{\prime} \mathrm{E}$. It is about 4 m . in circuit, and was formerly strongly fortified, but its defences have been long demolished, and it is now surrounded by a low wall only. The streets, as in all Eastern towns, are extremely narrow and dirty, but are full of life and bustle; the houses are of stone, and two or three stories in height. At the N.W. part of the town is the fort, in the form of a pentagon. It consists of walls of hewn stone 60 ft . high, reckoning from the bed of the moat, which is 30 ft . deep, and is full of water, in which are a number of tortoises. Within the walls is the Rajah's palace, situated on

Bar. Pop. 4000.-2, A tn. Poland, gov. Podlachia, 38 m . E.S.E. Siedlec, on the Krzna. It contains the fine castle of the Radziwill family. Pop. 3600.

BIALYSTOK, or Belostok.-1, A prov. Russia in Enrope, formerly belonging to Poland, but ceded to Russia by the treaty of Tilsit, in 1807. It is bounded, li. and s. by the Grodno territory, and N. and W. by Poland, and is divided into four districts-Bialystok, Sokolka, Bielsk, and Drohiczya; area, nearly $3400 \mathrm{sq} . \mathrm{m}$. The surface is flat, and marslyy at intervals, but is in general fertile ; and a considerable portion is covered with fine forests, those belonging to the Crown comprising about 250,000 acres. In these forests, bears and wolves are not uncommon, and game abounds. The agricnltural produce includes rye, wheat, oats, barley, flax, hemp, and hops. Its mauufactures comprise coarse cloths, hats, leather, soap, \&c. The chief exports are grain, flax, hemp, hops, tallow, and timber. Pop. (the majority R. Catholic), 265,944.-2, A tn. Russia in Europe, cap. of above prov., on the Bialy, 45 m . S.S.W. Grodno. It is a well-built, liandsome town; is the seat of a criminal court, and of a civil court of appeal, and contains a gymnasium and seven other schools, with about 500 pupils. It has some manufactures, employing about 700 hands; also a busy trade. Here are the fine dwelling and domain formerly possessed by the Counts of Braniski, once called 'The Versailles of Poland.' Pop. about 10,000 .

BIANA, or Beana, a tn. Mindoostan, prov. of, and $52 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Agra, dist. Bhurtpoor, on the Bangunga; lat. $26^{\circ} 56^{\prime} \mathrm{N}$. ; Ion. $77^{\circ} 14^{\prime}$ E.; situated at the foot of a hill. It was formerly the capital of the province of Agra, and is still a considerable town, containing large stone buildings, and a spacious and flourishing bazaar. In the environs may be traced the remains of a more extensive city.

BIANCAVHLi,, a tn. Sicily, dist. of, and 14 m. N.N.W. Catania. It stands on the S.W. elope of Mount Etna, from which it is about
an eminence, surrounded with pretty flower-gardens and fountains. The building is of red and yellow freestone, in the Mogul style, and has a singularly picturesque appcarance, not a little heightened by the fine trees with which it is encompassed. Bhurtpoor derives no small interest from having been the scene of two sieges, in one of which the flower of the British army was destroyed. The first occurred on January 3, 1805, when the place was invested by Lord Lake, and taken after a siege of upwards of 14 weeks, with a loss to the British, in killed and wounded, of 3100 men. The second took place in January 1826, when it was again taken, but with a loss, on this occasion, of no more than 103 killed, and 446 wounded. Standing on a plain, Bhurtpoor is seen from a great distance; in approaching it, luxuriant fields of wheat and barley are eeen on every side. Pop. about 100,000 .

## BHUTNEER. See Biatneer.

BIAFRA (Bight of), Africa, Gulf of Guinea, having Cape Lopez on the S., and Cape Formosa on the N., distant from each other 390 m . The shores of the bight extend to about 600 m. , between lat. $0^{\circ}$ and $4^{\circ} \mathrm{N}$.; and lon. $5^{\circ}$ and $10^{\circ} \mathrm{E}$. The N. African and Guinea current terminates in this bight, coming slightly in contact with the equatorial current before entering it. There are three islands in the bight, Fernando Po, Prince's Island, and St. Thomas's; and it receives the Old Calabar river, the Cameroons, and some others.

BIAGIO (St.), or St. Biase, a tn. Naples, prov. Calabria Ultra, $2 \frac{1}{2} \mathrm{~m}$. W. Nicastro. In the vicinity good wine is produced, and there are some mineral springs; but the sitnation of the town is unhealthy. It suffered from an eartliqnake in 1783. Pop. 3300.

BIALA.-1, A tn. Austrian States, Galicia, gov. Lemberg, on the frontiers of Moravia, cirele of, and 18 m . S.W. Wadowice, on the Biala. It has manufactures of woollens, linens, nails, and iron utensils. It has been a free town since 1789 , and was made capital of the circle by the Confelcration of

10 m . distant, and is supposed to occupy the site of the ancient Etna or Inessa. It lias some trade in grain, silk, and cotton. Pop, about 6000.

BIANCO [white], four capes, Mediterranean Sca:-1, A cape, Tunis, the most N. point of Africa; lat. $37^{\circ} 20^{\circ} \mathrm{N}$., lon. $9^{\circ} 47^{\prime}$ E. (r.)-2, A cape, isl. Cyprus ; lat. $34^{\circ} 29^{\prime} 18^{\prime \prime} \mathrm{N}$. ; lon. $32^{\circ} 28^{\prime} 15^{\prime \prime}$ E. (R.) -3, A cape, Ionian Islands, the most S. point of Corfu ; lat. $39^{\circ} 21^{\prime} 12^{\prime \prime}$ N.; lon. $20^{\circ} 7^{\prime} 45^{\prime \prime}$ E. (k.) -4, A cape, isI. Sicily, S.W. coast ; lat. $37^{\circ} 22^{\prime} 24^{\prime \prime}$ N.; lon. $13^{\circ} 16^{\prime} 30^{\prime \prime}$ E. (R.)

BIAR, a tn. Spain, Valencia, prov. of, and 29 m . N. by W. Alicante, in a valley of same name. It has stcep, but generally wide and well-paved streets, two squares, a parish church, townhouse, containing the prison; an hospital, poorhouse, endowed school, and storchouse. The inhabitants are engaged in agriculture, weaving woollen fabrics, and in cutting tombstones, \&c., and manufacturing carthenware. Two mines of copper and iron are wrought in the neighbourhood; wine and oil made, and excellent loney produced. Jop. 2963.

BIARRIT/, an unimportant seaport th. France, dep. Basses Pyrénécs, 4 m . from Bayonne. There is here a lighthouse, situated on a point called St. Martin de Biarritz; lat. $43^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $1^{\circ} 33^{\prime} \mathrm{W}$. The light is revolving, and visible from a distance of 16 m . The town is much frequented by the inliabitants of Bayonne as a watering place. 1'op. 1892.

BIASCA, or Ablentscir, a vil. and par. Switzerland, can. Tessin, on the Blegno, 8 m . N. Bellinzona. It contains a very ancient church, from which a scries of chapels, forming what is called a Via Crucis, leads up to the chapel of St. Detronilla, commanding a fine view. In 1512, a mass of earth and rock, thrown down by an carthquake, dammed up the Blegno, which soon formed an extensive lake. Two years after, the barrier gave way, and the flood carried devastation into the distriet. Biasco, then a flourishing place, was almost destroyed, and has never recovered. Pop. 1912.

BIBBIENA, a th. and com. Tuscany, prov. of, and 11 m . N. Arezzo, near 1. bank, Arno, commanded by a castle of considerable strength and extent; and having two churches, a townhouse, theatre, several palaces, an academy of science, and other educational institutions. Some grain and fruits are grown, and a considerable number of sheep and cattle reared. Pop. 5079.

BIBBONA, a tn. and com. Tuscany, prov. of, and 34 m . S. by E. Pisa, 16 m. N. Campiglia, on a declivity N.V. Mount Gherarlesca. It possesses a spacious square, and handsome church; and is commanded by a castle, defended by a wall flanked with towers, and surrounded by a deep fosse. IIcre are extensive ironworks, supplied with metal from the island of Elba. The commune is fertile in grain, and is rich in pasturage. Pop. 1656.

BIBERACH, a to. Wuirtemberg, circle, Danube, on the Riss, 22 m . S.S.W. Ulm. It is surrounded by walls, has a townhouse, five churches, numerous educational institutions, and an hospital. It carries on an active business in skindressing, tanning, and brewing, and in the manufacture of strong woollen fabrics. It has also a considerable trade in grain. In the vicinity is Oberholzheim, the birthplace of Wieland. The French, under Moreau, defeated the Austrians near Biberach in 1796. Pop. 4687.-Several other places in Germany have the same name.

BIBIANA, a vil. Sardinian States, Piedmont, prov. of, and about $8 \mathrm{~m} . \mathrm{S} . S . \mathrm{V}$. Pinerolo, on the Felice. It contairs a parish church, a convent, and a castle, and has two annual fairs. Pop. 2500.

BIBLIS, a tn. Hesse-Darmstadt, prov. Starkenburg, r. bank, Weschnitz, 15 m . S.W. Darmstadt; witla a R. Catholic parish church. Pop. 2050.

BIBURY, par. Eng. Gloucester; 6300 ac. Pop. 1077.
biCANERE, Bickaneer, or Bicanir, a principality, Hindoostan, prov. Ajmeer, of which it occupies the centre. It lies chiefly within lat. $27^{\circ}$ and $29^{\circ} \mathrm{N}$.; and has, N. the great Ajmeer desert and the Bhatty country, S. the Joudpoor and Jeypoor dominions, E. the British district Hurriana and the Shekawutty country, and W. Jesselmere and the great desert, into which it merges; but like all other states in this desert of moving sand, its limits are not easily defined, and are continually changing; area, supposed to be about 18,000 sq. m. The country is somewhat elevatel, but the surface is flat; and the soil, which is a light brown sand, absorbs the rain as soon as it falls. Various kinds of Indian pulse are almost the only produce of the soil. Artificial irrigation must, in almost all cases, be resorted to, in order to obtain a crop of any kind. Horses and cattle, of a very inferior kind, are the sole exports; while rice, sugar, opium, and indigo, are the principal imports. This is the poorest of the Rajpoot principalities, and in 1818 was admitted within the pale of British protection. The capital is Bicanere. Pop. 539,250.
bicanere, or Bickaneer, a fortified tu., W. Hindoostan, prov. Ajmeer, cap. principality of same name, 240 m . W. by S. Delhi; lat. $27^{\circ} 57^{\prime}$ N.; lon. $73^{\circ} 30^{\prime}$ E. It stands within a tract of desolate country, and has a magnificent appearance at a distance, which is not borne out by a closer inspection. It is surrounded by a wall, with numerous round towers and Indian battlements. There are some elevated houses and temples, one of which has a lofty spire; but the great majority of the dwellings are mere huts, with mud walls, painted red. The citadel, a confused assemblage of towers and battlements, about a quarter of a mile square, and surrounded by a wall 30 ft . high, is regarded by the natives as a place of great strength. $\ln$ it is a well, 300 ft . deep and 20 ft . diameter. There are generally several Europeans in the service of the Rajah. Pop. vaguely estimated at 60,000 .

BICCARI, a tn. Naples, prov. Capitanata, 18 m. W.S.W. Foggia, on the E. declivity of the Apennines. It has a collegiate, and several other churches. Large fairs are held here. Pop. 3460.

BICESTER, a market tn. and par. England, co. Oxford. The town stands on a plain, 54 m . N.W. London, and 11 m . N.N.E. Oxford. It consists of three principal streets, two of them straight, and all well kept; houses mostly of stone, and all well built. The town is lighted with gas, well supplied with water, and has been much improved of late by flagging and draining. The churches are, the parish church, a spacious structure, with a lofty tower and peal of bells, rebuilt in

1400 , and containing many interesting monuments and antique sculptures; an Independent chapel, and Wesleyan chapel, both handsome edifices. The principal schools are, the national school, for girls only; the blue-coat school, founded 1721, for 30 boys; the diocesan school, two private schools for girls, and two for boys, and several sabbath-schools, two of which are endowed. There are also several benevolent and charitable societics and associations; the most remarkable of which is an ancient institution called 'The Town Stock,' for the relief of decayed parishioners who have been formerly in good circumstances. A savings'bank was established in 1842. The manufacture of leather slippers and sacking, and the combing of wool, were formerly carried on here to a considerable extent; but one only of these branches (the manufacture of sacking) now remains, and that only on a very small scale. Ale is brewed to some extent, and has obtained considerable celebrity, its excellence being supposed to arise from the purity of the water. Area of par. 2580 ac . Pop. (1841), 3022.-(Local Corrcspondent.)
bicétre. See Gentilly.

BICTON, par. Eng. Devon; 1180 ac. Pop. 198.
BIDASSOA, or Vidasoa [Basque, 'way to the west,' or 'two streams'], a river, Spain, about 45 m . long, the last 12 of which form the boundary between France and Spain. It rises in the mountains of Spanish Navarre, and, after various changes of direction, falls into the Bay of Biscay near Fontarabia. In former times, Spain claimed not only the entire river, but so much of its banks, on the French side, as its waters covered at full tide. This difference was finally settled by each country contenting itself with its own shore. Near Irun, there is a small island in the middle of the stream, called the Island of Pheasants; on which, being a sort of neutral ground, Louis X I. and Henry IV. met in 1463. Here, also, a peace was concluded between France and Spain in 1654; and here, again, in 1660, Cardinal Mazarin met Louis de Haro, and arranged the marriage between the daughter of Philip IV. and Louis XIV.

BIDEFORD, a market tn., river-port, and par. England, co. Devon, hun. Shebbear. The town is 44 m. N. Plymouth : lat. $51^{\circ} 4^{\prime} 30^{\prime \prime} \mathrm{N}$. ; lon. $4^{\circ} 12^{\prime} \mathrm{W}$. (r.), picturesquely situated on both sides the Torridge, the principal portion being on the W. side, on a bold acelivity, 3 m . from the sea. A handsomo stone bridge of 24 arches, and 677 ft . in length, connects the two divisions of the town. There are six principal streets, all well paved, and which, from their being on a slope, are always clean and dry; houses mostly of stone, and generally well built. The town is abundantly supplied with water from numerous springs, there being scarcely a house without a pump; and it is well lighted with gas. Near its centre is a spacious market-place; and, on the margin of the river, a commodious quay. The principal public civic buildings are the town and guild halls, both extremely plain. There are six different places of worship, including the parish church; an endowed grammar-school, two other public schools, and two private seminaries, and a number of minor charities; also
a dispensary (lately established), a literary and scientific institution, with a good library. The woollen manufietures, formerly considerable, have been discontinued. The most important manufactures now are coarse earthenware, and pottery of a finer description, ropes, sailcloth, shipbuilding, and the various branches connected therewith. A prolific culm mine, also, has been lately opened, which promises to form a considerable addition to the ordinary trade of the town. In former times, Bideford had an extensive shipping trade, having, at the close of the 17th century, more ships engaged in the Newfoundland trade than any port in England, except London and Topsham. It is also said that it imported more tobaceo in some years of last century than the metropolis. The trade of the port is still considerable. The number of vessels registered, in the year ending December 1847, was 150 ; tonn. 12,436. Entered during the same period, 572 ; tonn. 26,376 ; -cleared, 250 ; tomn. 12,912. The imports consist chiefly of timber, hemp, tallow, wines, fruit, cattle, coal, iron, flagstones, \&c. The principal export is agricultural produce. The amount of customs received in 1847 was $£ 3750$. By the municipal act of 1835 , the government of the town is vested in a mayor, four aldermen, 12 councillors, a recorder, and several borough magistrates. The scenery around the town is singularly beautiful, and the climate is salubrious. Area of par. 4510 ac. Pop. (18 11 ), 5211; of tn. 4830.(Local Correspondent.)

BIDFORD, par. Eng. Warwick; 3240 ac. Pop. 1567.
BIDOUZE, a small river, France, an affluent of the Adour, into which it falls 15 m . W.N.W. Bayonne. It rises in the Pyrenees, near St. Jean Pied de Port, dep. Basses Pyrénées, and by means of the tide is navigable for a small part of its course, which in all does not exceed 50 m . The chief article of traffic upon it is hewn stone, for Bayonne, from the quarries of Came and Bidache.

BIDNCHOW (Neu), or New Biczow [Bohem. NowyBydzow], a tn. Bohemia, circle of same name, 45 m . E.N.E. Prague, on the Czidlina, near a small lake. It is very old, and has a church, a synagogue, a townhouse, and an hospital. The inhabitants live chiefly by agricnlture and weaving. The cattle reared here are of a superior kind. Topaz, chalcedony, agates, and jasper have been found in the environs. Pop. 7891, of whom 3863 are Jews.-The curcle is bounded, N. by Prussian Silesia, W. by circle Bunzlau, S. by Chrudim, Czaslau, and Chocsim, and E. by Königgrätz; area, 744 geo. sq. m. The surface consists of three marked de-scriptions-the highlands, belonging to the Riesengebirge, and containing several ridges of considerable lieight, broken by narrow valleys; the midlands, exhibiting generally an undulating surface; and the plains. The summits of the mountains are granite, and their sides mica-slate; the lower hills are chiefly of red sandstone, in which are some appearances of coal ; the plains have usually a substratum of chalk, covered by a deep alluvium. The principal rivers are the Elbe, which rises in the circle; the Iscr, the Milnitz, and the Czidlina. The minerals are of no importance. The hilly districts are in general well wooded, and the lower very fertile, producing all kinds of corn and pulse. The principal fruits are cherries and pluins. Excepting in the lower valleys, the climate is unfavourable to agriculture ; consequently the inhabitants are chiefly engaged in trade, and in the manufacture of cotton, linen, glass, iron, paper, \&c. Pop. 251,414.

BIDSTONE, par. Eng. Chester; 4260 ac. Pop. 1013.
BIEBRICH, or Bieberich, a tn. duchy of Nassau, 20 m . W.S.W. Frankfort ; prettily situated, r. bank, Rhine, which here forms the boundary between Nassau and IIesse-Darmstadt. It is the usual residence of the Duke, whose palace is a large and handsome edifice, surrounded by gardens and an extensive park. The railway from Wiesbaden to Mainz has a station at Biebrich. There is here also a quay, at which vessels can load and unload. The sawing and polishing of marble is carried on to some extent. Pop. 3000.

BIEDENKOPF, a tn. Ilcsse-Darmstadt, on the Lahn, 23 m . N.N.W. Giessen; with ironworks, and considerable manufactures of cloth, serge, and hosiery. Pop. 3200.

BIEL. See Bienne.
BIELA, the name of numerous small German villages, particularly in Bohemia.

BlELEF, or BELEV, a tn. Russia, cap. dist. of same name, gov. of, and 62 m. S. W. Tula, 1. bank, Oka; lat. $53^{\circ} 45^{\prime} \mathrm{N}$. ;
lon. $36^{\circ} 5^{\prime}$ E. It is the second town of the government, and gives name to the Greek bishopric of Tula-and-Bielef. It las manufactures of soap, leather, and hardware. Leatherdressing and tallow-melting are carried on, and a considerablo general trade. Pop. 8000 .

BIELEFELD, a tn. Prussian prov. Westphalia, cap. circle of same name, $38 \mathrm{~m} . \mathrm{E}$. Münster. It has walls with ramparts, along which spacious walks have been formed; several R Catholic and Protestant churches, a synagoguc, and an orphan asylum, with a fine old castle, now turned into a prison. It has extensive manufactories of thread and linen; the last, the hest made in Germany ; and is celcbrated, also, for its tobacco pipes, made of earbonated magnesia, and called meerschaum. Pop. 5800 .-The cincle, area, 80 gco. sq. m., is of far greater importance than its extent would seem to indicate. The inlabitants are remarkable for their industry: The chief agricultural products are hemp and flax; but bleaching, and the weaving of common linen and damask, are carried on to an extent which makes Biclefeld one of the most important manufacturing districts of Prussia. The other industrial products are ironmongery, tobaceo, woollen stuffs, leather, soap, and yarn. Pop. 45,903.

BILLGOROD, a tn . Russia, cap. dist. of same name, gov. of, and 76 m . S. Koursk, on the Donetz; lat. $50^{\circ} 40^{\prime} \mathrm{N}$.; lon. $36^{\circ} 35^{\prime}$ E. It comprises, properly speaking, two towns, the old and new, with three suburbs; the houses are nearly all of wood. It is the seat of an arehbishopric, contains 13 churches and two monasteries, and las three very important fairs, of a week each. Its name, which in Russia means 'white town,' is derived from a chalk hill in the vicinity. The environs are noted for producing fine fruits. Pop. 10,318.

BIELITV/, a tı. Austrian Silesia, gov. Brünn, circle of, and 18 m. N.E. Teschen; 42 m. W.S.W. Cracow, l. bank, Biala, which divides Silesia from Galicia. A stone bridge connects it with the town of Biala in Galicia. It has extensive manufactures of woollens and linens; and dyeworks and printfields of considerable repute. A large amount of business in manufactures is done with Hungary, Italy, Poland, Russia; and in IIungarian wine, sent to Prussia, Silesia, and Galicia, from which last province it in return receives rock-salt. Here are several charitable institutions, and a Protestant consistory, having under its jurisdietion Moravia and Austrian Silesia. The town was totally destroyed by fire in 1808 . In 1751, Biclitz was erected by the Emperor Francis I. into a duchy, and has since belonged to the princes Sulkowsky, who have here a castle, converted into public offices, with a handsome park attached. Pop. of the duchy, about 10,000 ; of the tn. 6000 .

BIELITZA, two tns. Russia:-1, Bielitiza (Novo), gov. Mohilew, at the confluence of the Mies and Soj with the Dnieper, $63 \mathrm{~m} . \mathrm{N}$. Tehernigov. Pop. 2000.-2, Dielitia, gov. of, and 55 m . E. Grodno, r. bank, Niemen. Pop. 900 .

BIELLA [Latin, Bugella], a tn. Sardinian States, Piedmont, cap. prov. of same name, gov. of, and 36 m . N.N.E Turin, on the Cerno. It is the seat of a bishop, and of a district court of justice; and contains a cathedral, five parish churches, eight convents and monasteries, two hospitals, and a college. Manufactures:-cloth, serges, linen, and stockings, silk, wool, and paper; and carries on some trade in silk, oil, and chestnuts. Pop. 7700 .-The Province is 20 m . long, and 16 m . broad; mountainous, being partly formed by spurs of the Pennine Alps ; and has no rivers, except some small affluents of the Po. It produces the best wine in Piedmont, depastures a large number of cattle, and yields copper and iron. The inhabitants are industrious, and carry on an active trade. The province is divided into 10 mandements, which are again subdivided into 78 communes. Pop. 94,958.

BIELOI, a tn. Russia, gov. of, and 80 m . N.N.E. Smolensk, on the Mega or Obsha. 1t has a considerable trade, particularly in grain. Pop. 3476.

BlELOI'OLJE, a tn. Russia, gov. of, and 108 m . N.W. Kharkof, in the Vira. It contains eight clurches, has several large distilleries, and a considerable general trade. Pop. 9600.

BIELO-OZERO [White Lake], a lake, Russia, gov. Novgorod, about 240 m . E. St. Petersburg; 25 m . long by 20 broad. Several streams flow into it; and it sends its waters by the Scheksua into the Wolga. It is very deep, abounds in fish, and, by means of canals, communicates with the Onega, Sukona, and Dwina.

BIELOZERSK, a tu. Russia, cap. dist. of same name, gov. Novgorod, S. side of Lake Bielo-Ozero ; agreeably situated on a hill, and possessing a pure, healthy air ; indifferently built of wood. It contains 16 churches, and a seminary. Its chief manufacture is candles; and it has some trade in piteh, tallow, cattle, corn, and especially fish. Bielozersk is an ancient city, and was capital of the old principality of the same name. It was taken and ravaged by the Lithuanians in 1678. Pop. 3000.

BIELSK, a tn. Russia, cap. dist. of same name, gov. of, and 25 m . S. Bialystok, on the Biala. It is well built, and paved; has a fine custom-house, and was once capital of a Polish palatinate. In 1831, the Poles gained a victory here over the Russians. Pop. 2400.

BIENNE [German, Biel], a tn. and lake, Switzerland, can. Bern. The rown is situated at the N. end of the lake, at the foot of the Jura Mountains, $16 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Bern. It is surrounded by ancient walls and watch-towers, is well built, and approached by several avenucs. It has a parish church, townhouse, public library, college, and hospital, with extensive tanneries, dyeworks, and a cotton mill. The transit trade is considerable, from several main roads meeting at the town. Six fairs are held in the year. Pop. (principally Protestants), 4248 . The lake [German, Bielersee] is in length, N.E. to S.W., 10 m .; greatest breadth, 3 m . It stands 1400 ft . above the level of the sca, and has a depth of about 30 fathoms. It lies 8 ft . lower than Lake Neufehatel, whose superfluous waters it receives by the Thiel, and afterwards sends with its own, by the same river, into the Aar. The scenery around is beautiful, but not bold. One of the most interesting objects is its little islet of St. Pierre, where J. J. Rousseau toek up his residence for two months, in 1765, to avoid imaginary persecution.

BIENTINA, a tu. and com. Tuscany, prov. Pisa, $2 \frac{1}{2} \mathrm{~m}$. N.E. Vico Pisano, at the E. base of Mount Pisano. The town is well built, and has a square, and a parish church, in which are some good pictures. Pop. 2537.

BIENYENIDA, a tn. Spain, Estremadura, prov. of, and 49 m. S.E. Badajoz, in a fertile plain. It has a chureh, a large and substantial building; a chapel of case, approached by a fine avenue of poplars; a townhouse, prison, two schools, a storehouse, and cemetery. Some little trade is done in wine, fruits, and wool. Pop. 2800.-(Madoz.)

Bieque, Vieque, or Crab Island, one of the Virgin Islands, W. Indies; lat. $18^{\circ} 7^{\prime} \mathrm{N}$. ; lon. $65^{\circ} 34^{\prime} \mathrm{W}$. (r.) It is uninhabited, and is about 16 m . long, l . to W., and 3 to 4 broad, N. to S.; low towards the E., and covered with trees and bushes; and towards the W., rising to an elevation of 600 to 800 ft . It has no larbour, but has some good roadsteads. The British, Danes, and Spaniards have the right of cutting wood and fishing here, but nonc of them are allowed to form settlements in the island.

BIERTON-witil-broughion, par. Eng. Bucks ; 2470 ac. Pop. 605.

BIERVLIET, a vil. Holland, prov. Zceland, 9 m . E. by N. Oostburg, l. bank, Braakman; with a chureh, school, and sinall port, from which grain is exported, and to which wood, stones, \&c., are imported. In olden times, Biervliet was rather an important town, subsisting chicfly by fishing, more especially the herring-fishing. Frequent inundations almost totally destroyed this town and its fortifications, which were renewed early in the 17 th century, from which period the present village dates its existence. In the 15 th centory, Willem Beukelsz, a native of Biervliet, invented the method of curing herring by salt. IIe died in 1497, and his picture is preserved in the church. Pop. 470.

BIESBOSCHI, a large sheet of water or marshy lake, IIolland, provs. N. Brabant and S. IIolland, between the towns of Dordrecht, Geertruidenburg, and Willemstad. It is also now called Hollands Diep, and forms part of the estuary of the Maas. It was formed, November 18, 1421, by an inundation of the sea, and, according to some, a simultaneous rise of the Waal and the Maas. Dikes and dams were broken down, and the sea burst in and overflowed 72 villages and towns, of which 34 were never more seen; and drowned 100,000 human beings, besides innumerable cattle. It is not very deep, and has numerous islands.

BIETIGHEIM, a tn. Würtemberg, cirele, Neckar, at the confluence of the Metter with the Enz, 14 m. N. Stutt-
gart; with woollen manufactures, dyeworks, worsted spimningmills, and fulling-mills. Pop. 2920.

BIÉVENE, a tn. and com. Belgium, prov. Itainaut, 34 m . E.N.E. Tournai; with considerable linen manufactures. Pop. $3 \not 14$.

BIGBURY, par. Eng. Devon; 4160 ac. Pop. 652.
BIGBY, par. Eng. Lincoln; 1040 ac . Pop. 245.
BIGGA or Biga, one of the Shetland islands in the Sound of Yell, between the island of the latter name, and the mainland. It is abont 2 m . long and from 1 to $1 \frac{1}{4}$ broad; and is inhabited by a few families, who rear some blaek cattle and sheep.

BIGGAR, a bor. of barony and par. Scotland, co. Lanark, Upper Ward. The town stands on a gentle acclivity, having a fine S . exposure, 25 m . S.W. Edinburgh, $4 \frac{1}{2} \mathrm{~m}$. from the Caledonian Railway, on both sides the Biggar Water, that on the r . bank being of modern erection. It consists chiefly of one principal street, straight, spacions, and clean; houses, of stone, and generally well built; and many of the shops handsome. It is lighted with gas, and is amply supplied with water. The churches are, a parish church, a plain Gothic building, with an unfinished spire, and two U. Presbyterian churches. Schools:-a parish, infant, and U. Presbyterian. There are about 140 hand-loom weavers in the town. A wellattended market is held here every Thursday. The parish contains $11 \frac{1}{2} \mathrm{sq} . \mathrm{m}$. and an entire pop. of 1865 . Pop. of tu. 1395.-(Local Corrcspondent.)

BIGGLESWADE, a market tn. and par. England, co. Bedford. The town is pleasantly situated r. bank, Ivel, here crossed by two stone bridges, 9 m . S.E. Bedford. Since 1785, when a large portion of the town was destroyed by fire, it has been greatly improved, and now presents a very handsome appearancc. It is lighted with gas, and well supplied with water; has a respectable townhall, a modern structure of the Doric order, a mechanics' institute, a saving's bank, and free, British, national, and infant schools, and four small charities. Places of worship:-the parish chureb, a handsome Gothic edifice, built in 1230, but much modernized, a Wesleyan and a Baptist chapel. The making of whitethread lace and edging, and straw-plaiting, afford employment to a considerable portion of the female population. The river is navigable to the town, and affords the means of carrying on a considerable traffic in coals, timber and oats. A wellattended market for corn is held every Wednesday. The Great Northern lailway, which passes through the town, has a station near it. Area of par. 4220 ac. Pop. 3807.

BIGIIA, or Biga, a tn. Turkey in Asia, pash. Anatolia, cap. sanjak of same name, in a fertile plain, about 15 m . S. the Sea of Marmora. The sanjak is ancient 'Troas, and celebrated as containing both Mount lda and the plain of Troy. Its chief products are cotton, silk, wine, tanning bark, gall-nuts, and turpentine.

BIGHORN, a navigable river, U. States, rising in the Rocky Mountains, in lat. $42^{\circ} 30^{\prime} \mathrm{N}$. , and falling into the Yellowstone River, at Fort Manucls, after a N.E. course of 240 m . direct distance, unobstructed by falls, through a fertile open country.

BIGIITON, par. Eng. IIants; 1580 ac. Pop. 284.
BIGNOR, par. Eng. Sussex ; 1180 ac. I'op. 210.
BIGORRE [anc. Bigeritanus Pagns], France, a dist. of the former prov. of Gascogne, of which the cap. was Tarbés. It now forms almost the whole of dep. Hautes l'yrénées.
bIHACS or Bhatcif, a fortress, Turkey in Europe, prov. Croatia, on an island in the Unna or Unaly, about 50 m . E. the Adriatic. It is one of the strongest places in N. Turkey, and its possession was often keenly contested during the Turkish wars. It consists of old Hungarian stone buildings, and more modern Turkish houses; the latter looking as if they would tumble to pieces. A mosque has recently been constructed, and a Christian charch which once stood without the walls, is now known only by its site, where the Christian rayals still assemble for their devotions, tlough the Turks have so completely destroyed the building, that not a stone is standing. Owing to the lowness of the situation, the town is unhealthy, and the inhabitants have a sickly look. Pop. 3000.-(Paton's Adriatic.)

BIHAR, a co. Hungary, circle, beyond the Theiss, area, 3200 geo. sq. m. Its capital, which stands near its centre, is Grosswardein. The E. side is encircled by the Carpathian

Mountains, the W. stretehes ont into an extensive plain. It is watered by the Koros, the Black Koros, and the Berettyo. All are subject to great overflows, which have covered the plains with lakes and morasses, and made them very unhealthy. A clearer air and better elimate are found in the upper grounds, and also in the valley of the Koroteh, which is of great extent and very beantiful. The county is on the whole fertile, produeng largo crops of winter and summer corn, about 120,000 pipes of wine, and 6200 tons of hay. The higher grounds are well, the plains but indifferently, wooded. The minerals are numerous and valuable. Gold and silver are found iu small quantitics; copper, lead, and iron, in abuudance. The woods are well supplied with game, and the rivers and lakes team with fish. Crawfish also, and land tortoises, are found in great uumbers. There are several mineral springs and baths. The chief employment of the inhabitants is in pursuits connected with agriculture. There does not seem to be any manufactures. Pop. 459,200 .

BIIIAR, a market tn. Ifungary, above co. to which it gives its name, within 3 m . of Grosswardein, with a Protestant church. Pop. 2440.

BIISK. See Biysk.
BIJANAGUR [V̈̈ayanagara-the city of triumph], a city, IIndoostan, of great antiquity, and once of great importance, but now nearly uninhabited, and little more than a heap of ruins; presid. Madras, prov. Bejapoor, r. bank, Toombuddra, 30 m . N.W. Bellary; lat. $15^{\circ} 15^{\prime} \mathrm{N}$. ; lon. $76^{\circ} 37^{\prime}$ E. It stands in a plain, surrounded by enormous masses of granite, in some places assuming the appearance of hills; and in others, presenting detached blocks, heaped together in the most extraordinary manner; sometimes obstructing all passage excepting throngh the narrow winding defiles which separate tbe fragments. N. and W., the city is bounded by the Toombuddra, and S.E. it is enelosed partly by natural barriers, and partly by strong stone walls, the whole nearly 8 m . in circuit. The main streets, which often follow the tortuous passages between the stone blocks, are paved with large flags of granite, and are intersected at intervals by aqueducts. The remains of numerous temples, and public and private buildings, exhibit the purest style of Hindoo architecture. There is a continued succession of paved streets, now almost uninhabited, for 3 m . W. from the Toombuddra ferry. Near the W. extremity, and terminating a street 90 ft . wide, is a magnificent temple, dedicated to Mahadêva (the great god) ; it is surrounded by numerous cells for devotees; facing the E. is a pyramidal portico, about 160 ft . high, divided into 10 stories. The attendant Brahmins are numerous; and the establishment is well endowed. The street leading to this temple is lined by a row of handsome stone buildings, decorated with sculptures, and appropriated to the use of pilgrims during the annual festival. Another temple, near the centre of the city, is dedicated to Wittoba (an incarnation of Vishnu), and oecupies an area of about 400 by 200 ft ., environed by cells, and entered through a painted pyramidical portico. The temple of Rama is known by its pillars of black bornblende, covered with mythological sculptures of the minutest elegance; and near the ferry, among a group of picturesque temples, is a gigantic figure of IIunimaun, the huge monkey, carved in basso-rilievo. Besides these, there are the ruins of numerous other pagodas, temples, \&e. Bijanagur was built between 1336 and 1343 , by two brothers, named Aka Hurryhur, and Bucca Hurryhur, who ruled liere in succession, the former until 1350, and the latter until 1378. In 1564 , it was taken, and completely sacked, by a confederation of Mahometan rajahs, which caused it to be almost totally deserted.-(IIamilton's East India Gaz.)

BIJA-PUR, or Vijaya-Pura. See Bejapoor.
BIJBAIIAR, or Vigipara, a tn. Caslımere, r. bank, Jailum, 20 m . S.E. Serinagur, with nothing in it worthy of notice except a large bazaar. Next to the capital, it is the largest town in the valley. Over the river here is a wooden bridge.

BIJ NEE, or Kiungtaghaut, a principality, Hindoostan, cap. same name, prov. Bengal, adjoining Assam, consisting partly of independent territory, and partly of lands under the British jurisdiction. It lics on both silles of the Brahmatpootra, and consists chiefly of a flat country, watered by the affluents of that river. The soil is suited for the production of rice (the chief crop), wheat, barley, nustard, legumes, the
betel, sugar cane, and mulberry. Many of the villages are stationary, and much neater than those of Bengal, and many have plantations of betel-nut and sugar cane; but numbers of cultivators are migratory, and, on the least dispute, withdraw into the territories of $\Lambda$ ssam and Bootan. The inhabitants are divided into two sections, the Blakat, or worshippers of Krishna, and the Gorami, who eat pork, and indulge in strong drink.-13ijnee, the capital, is 310 m . N.N.E. Calcutta; lat. $26^{\circ} 35^{\prime} \mathrm{N}$. ; lon. $90^{\circ} 51^{\prime} \mathrm{E}$. It is surrounded by a brick wall, has some small brick temples, and a few thatehed huts; and is the residence of the rajah.

BIJORE. See Bajour.
IBILBA(), a city, Spain, cap. prov. Biscay, in a fertile plain surrounded by mountatins on all sides, except towards the sea, r. bank, Nervion, 26 m . N. Vittoria; lat. $43^{\circ} 15^{\prime} 40^{\prime \prime}$ N.; lon. $2^{\circ} 51^{\prime}$ W. (R.) The appearance of the town, when viewed from thy of the heights around it, is very picturesque. It is generally well built. The houses are usually of three stories, with ornamental façades; and some of the principal streets are straight and spacions, though the majority of them are narrow anll winding. All of them, however, are remarkably elean and well paved. There are, properly, only two squares in the town, but both of them are handsome. The principal buildings are, the four parish elurches, several monasteries and convents, the hospital, a magnifieent stone building, supported by voluntary subscription, and containing 600 beds; the custom-house, townhall, court-houses, the theatre, and slaughter-house. The last, which serves also as the flesh market, is a fine building of the Tusean order, and is kept perfectly clean by a copious fountain, which is constantly flowing. The river is crossed by three bridges, one of them

THE church of san antonio abail, ulbao. From Eepar̃a Artistica y Monumental.
a very handsome suspension bridge of recent construction; and along its banks is a wide and pleasant promenaile, well planted with oak and lime trees. The ehief educational establishment is the general college of Biscay. There is also a Latin, five public, and numerons private schools. Bilbao is uncommonly well supplied with water, which is conveyed in stone tunnels under the street, and, in order that these may not be disturbed, wheeled carriages are absolutely prohibited, all the traffic being carried on on horseback, or by means of sledges. The ehief manufactures are, woollen and linen goods, silks, iron and copper ware, hats, paper, and soap. Ship and boat building is also extensively carried on. The port of Bilbao is reached by the tide, but does not admit vessels of more than 70 tons. The trade, lowever, is still important, though much less so than formerly. Merino wool used to be the staple export, but has suffered much by the competition of the fine wools of Saxony. One of the chief imports is dried cod, which is transmitted to all parts of the interior. Bilbao was twice besieged by the Carlists, without suecess, in 1835. The first siege was conducted by the celebrated Zumalacarregui, who received a death-wound. Pop. 10,234.

BILIBOROUGII, par. Eng. Notts; 1090 ac. Pop. 267.
BILBROUGGH, par. Eng. city of York Ainsty; 1i10 ac. Pop. 216.

BILDESTONE, or Bisson, a decaycd market tn. and par. England, co. Suffolk. The town is 11 m . W.N.W. I pswich. The parish elurch, on an elevation at a short distance W. the town, is a spacions and handsome structure. There is also a Baptist chapel here. Bildestone was at one time
noted for its mannfactures of blue cloth and blankets, but both have fallen into decay. The market which used to be held here has been discontinued for some time. Area of par. 1420 ae. Pop. (1841), 857.-(Local Correspondent.)

BILEDULGERID, an extensive and little-known tract, N. Africa, lying between the S. declivity of Atlas and the Great Desert, and between Fezzan on the E., and Cape Non, on the Atlantic, on the W. It consists of gently-inclined plains, which spread to the foot of the mountains, and which are nearly as sandy and barren as the desert itself, ex cepting along the courses of the numerous streans descending from the S. slopes of the Atlas Mountains, all of which are absorbed by the sand, and nany of which are strongly impregnated with salt. Along these streams date-palms abound, which, with eamels, horses, and cattle, form the sole wealth of the inhabitants. The real name of the place is said to be Beled-el-Jereed, whieh has been translated, by some, into 'the land of dates,' by others, into 'the parched country.' Both would, to a certain extent, apply, as the date-tree flourishes luxuriantly in its limited localities, while an utter sterility characterizes all other portions of the country.

BILGORAY, a tn. Russian Poland, dist. of, and 50 m . S. Lublin, 1. bank, Lada. It contains three churches, and has several important fairs. Pop. 1600.

BILIARsK [anc. Boulimer], a tn. Russia, gov. and about 80 m . S.E. Kazan, l. bank, Teherem-Kana. It is a place of great antiquity; and, though now decayed, its former magnificence is attested by numerous ruins, particularly those of an ancient temple, which is still lield in great veneration by the Tartars. Pop. about 2500 .

BILIN [Bohemian, Bylina; Latin, Belina], a post tn. Bohemia, eirele, Leitmeritz, 42 m. N.W. Prague, prettily situated in the vale of the Bila. It is walled, contains a fine old castle, built in 1680 , and one of more modern date, in which is a good collection of minerals, an armoury, and a museuin. In the town there are several churches, chapels, cotton-spinning mills, and beet-root sugar manufactories. Within 1 m . of the town are mineral acid springs, much resorted to, and from which 900,000 jars of water are exported annually. The waste water of the wells is evaporated, and the salts and magnesia thus obtained form important articles of commerce. In the vicinity are found coal and garnet. Here is also the singular basaltic rock called Borzenberg or Biliner Stein.

BILLERICAY, a small market tn. England, co. Essex, on a hill, 24 m . E.N.E. London. It consists of two prineipal streets, one of which is straight, spacious, and about half a mile in length. It is amply supplied with water from numerous and copious springs, and is well lighted with gas; and contains a plain, but neat market-honse, in which a corn market is held every Tuesday. The churches are, the district church, having an ancient and handsome tower adorned with turrets; and a chapel belonging to the Independents, a very tasteful structure. Principal public schools:-a national and British school, also a respectable academy, several minor schools, and a thriving mechanies' institute. No manufactures, and the chief business of the town is limited to a retail trade. The scenery in the vicinity is exceedingly beautiful, and from several points extensive and delightful views are obtained. Pop. 1284.-(Local Correspondent.)

BILLESDON, a sinall market tn. and par. England, co. of, and 8 m . E. Leicester. In the town are a elurch, Baptist chapel, alms-houses, and other charities; also a school-house, erected in 1650 . In the vicinity are vestiges of a strong Roman encampment and pagan temple; and, though the trade and population are now inconsiderable, Billesdon appears to have been, in the time of the Romans, a place of some consequence. A fair is held in April. Area of par., including the chapelries of Goadby and Rolleston, 4430 ac. Pop. 878.

BILLESLEY, par. Eng. Warwick; 750 ac. Pop. 31.

BILLINGHURST, par. Eng. Sussex; 6830 ac. P. 1439. BILLINGSLEY, par. Eng. Salop; 1560 ac. Pop. 149.
Billiton, blleton, or Blatong, an isl. Indian Archipelago, belonging to Palembang in Sumatra. It lies E. of Banka and W. of Borneo, between lat. $2^{\circ} 3^{\prime}$ and $3^{\circ} 20^{\prime} \mathrm{S}$.; lon. $107^{\circ} 28^{\prime}$ and $108^{\circ} 22^{\prime}$ E.; rises to a considerable height above the sea, and is surrounded with dangerous rocks and shoals. Billiton, as well as Banka, contains vast deposits of tin, which the Dutch Government keeps in reserve in case of the exhanstion of that metal in the larger island. At present, the iron and steel ores only are worked, and are found, without much trouble, in the form of slightly oxydized iron. It produces the same woods as Banka. The inhabitants live chiefly by fishing, and the sale of trepang, tortoise-shell, wax, rosin, and edible birds' nests. They were, for a long period, notorious pirates; but having, in 1821, had the audacity to attack and plunder a Dutch gun-boat conveying stores and money to Sarapua, the Dutch Government made Billiton a military post, and gradually brought the island entirely under its sway. The inhabitants, being excellent boat-builders, were employed in constructing light cruisers, which have proved of great use in suppressing piracy. Billiton was recognized as a Dutch possession by the treaty of London, in 1824. I'op. 6000.

BILLOCKLY, or B1LLockby, par. Eng. Norfolk; 260 ac. Pop. 71.

BILLOM, a tn. France, dep. Puy-de-Dôme, 13 m. E.S.E. Clermont, on a hill in a fertile district. The town is ancient, and in the 15 th century was surrounded with walls, and had a flourishing university. At that period its tanneries were very considerable, but the walls have now disappeared, and the trade has long been on the decline. Still, however, it has manufactures of linen, serge, delft, and coarse earthenware, brieks, and tiles, and a considerable trade in hemp (the great staple of the distriet), thread, wool, honey, corn, cattle, wood, and tanned leather for gloves. Storms are of frequent occurrence, and the great quantity of rain that falls at Billom has become proverbial. Pop. 3265.

BILL-QUAY, a vil. Eugland, co. Durham, 3 m. E. Gateshead. It has extensive works for smelting lead ore, and making litharge and red lead; green glass bottle-works on a large seale; a tar, naphtha, and turpentine distillery; and an establishment for distilling oil from bones; also manufactures for preparing colours, and making mustard, besides a large ship-building yard, and floating dock.

BILLY, par. Irel. Antrim ; 17,330 ac. Pop. 7277.
BILMA, a tn. in N.W. Africa, Sahara, and in the W. limit of the Tibboo country, of which it is the cap.; lat. $18^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $13^{\circ} 30^{\prime} \mathrm{E}$. It stands in a hollow, on the oasis called Wady Kawas, and is surrounded by low mud walls, which, with the honses within, are mean and miserable. 'The women of this town,' says Major Denham, 'are of a superior class to those of the minor towns; some having extremely pleasing features, while the pearly white of their regular teeth is beautifully contrasted with the glossy black of their skin.' They are further described as daneing with great taste and skill, and being altogether exceedingly attractive. Bilma is the residence of the Sultan, and derives further importance from the caravans which pass through it on the road between Murzook and Bornou, and from its vicinity to some salt lakes, from which large quantitics of fine crystallized salt are collected, and sent to Bornou and Soodan. Dates also grow here abundantly, but other provisions are scarce and dear.

BILNEY, two pars. Eng.:-1, Bilney (East), par. Norfolk; 670 ac. Pop. 218.-2, Bilney (West), par. Norfolk; 2750 ae. Pop. 298.

BIlsA (Bilvesa), a large tn. IIindoostan, prov. Malwal, belonging to Seindia, r. bank, Betwa, near its junction with the Bess, 34 m. N.E. Bhopaul; lat. $23^{\circ} 33^{\prime}$ N.; lon. $77^{\circ} 56^{\prime}$ E. It is surrounded by a stone wall, and some years since contained 5000 houses. The vicinity is celebrated over all India for its tobacco.

BILSBY-and-thurlay, par. Eing. Lincoln; 2960 ac. Pop. 584.

BILSINGTON, par. Eng. Kent; 2300 ac. Pop. 385.
BILSTHORIE, par. Eng. Notts; 1600 ac. Pop. 244.
BILSTON, a market tn. England, co. Stafford, 3 m . S.E. Wolverlampton, on a rising ground, and extending nearly 2 m . in length. It is irregularly built, but the prineipal
street contains some substantial and handsome houses. It is lighted with gas, but very inefficiently; the smaller streets are unpaved, and the larger macadamized. There are few public buildings, and none of any note. The ehureh is a neat clifice, in the Grecian style, with a low tower. St. Mary's chapel is also a handsome strueture, in the perpendicular English style, built in 1829. A third church has been reeently ereeted. There are places of worship, besides, for Baptists, Independents, Primitive and Wesleyan Methodists, Methodists of the new connection, and R. Catholics; also a small Welsh ehapel. Schools numerous, ineluding what is called the Cholera Orphan sehool, instituted for the gratuitous education of the children under 12 years of age, of those who died of cholera in the town in the autumn of 1832 , amounting to no fewer than 742 in less than seven weeks, leaving 450 destitute children. The manufacturing industry of Bilston is very great. The noise and smoke of engines and furnaces is heard and seen in all directions, and for many miles around the town. The manufactures inelude tin, japanned and enamelled wares of every kind; iron wire, nails, screws, iron gates, and palisades, machincry, steam-engines, \&c. There are also some mills for forming pig-iron into bars, and many iron and brass foundries. Coarse pottery is made with the clay which is found in the neighbourhood in great abundance. A particularly fine sand for casting, and a very hard stone, suitable for grindstones, are also obtained here in great plenty. Iop. 20,181.

BIL'TON, two pars. Eng. :-1, A par. and small vil. Warwiek; 1820 ac. Pop. 623.-2, A par. Ainsty of the city of York; 4150 ac. Pop. 881.

BIMA, a seaport tn., isl. Sumbawa, Asiatie Arehipelago, cap. dist, of same name, N. side of the island, and near its $\mathbf{E}$. extremity, at the head of the Bay of Bima. It is a place of some importance, being the residence of the Sultan, of a Duteh agent, and laving a considerable export trade in rice, pis-tacia-nuts, timber, wax, and horses. During the dreadful volcanic eruption of the Tomboro Mountain, 40 m . distant, which oceurred in this island in April 1815, many of the houses in Bima were choked up with ashes, while the lower parts were inundated with the sea, which, though there was a perfect calm, rolled in upon the shore. The Bry of Bima stretelies 21 to 24 m . into the island, with soundings of 60 or 80 fathoms at the entrance, 2 or 3 m . inside of which the bay narrows, and has on each shore a native fort. liugged Point, the E. entrance into the bay, is in lat. $8^{\circ} \mathrm{I} 1^{\prime} \mathrm{S} . ;$ lon. $118^{\circ} 51^{\prime}$ E.

BIMBIA, a river, W. Africa, falling into the Bight of Biafra, W. the Cameroons; lat. $4^{\circ} 0^{\prime}$ N. ; lon. $9^{\circ} 20^{\prime}$ E. On its banks are numerons villages, built on a beautiful amphitheatre of roeky ground. The inhalitants, who are of the Dualla nation, are principally oceupied in the collection of palm-oil, which forms the staple article of their traffic. In 1833, their chief placed himself under British protection.

BIMLIPATAM, a small seaport tn. Ilindoostan, Carnatic, 16 m. N.N.E. Vizagapatam ; lat. $17^{\circ} 53^{\prime} \mathrm{N} . ; \operatorname{lon} .83^{\circ} 22^{\prime} \mathrm{E}$. The only tolerable buildings are a few houses in the European style near the beach, and a temple on the slope of a mountain that bounds the town on the S. Traces of a Dutch fort still remain. A considerable trade is carried on from hence in native craft.

IBINAB, a tn. Persia, prov. Azerbijan, l. bank, Sofi Cliai, $55 \mathrm{~m} . \mathrm{S} . \mathrm{S} . \mathrm{W}$. Tabreez, and 8 m . E. Lake Urumia ; lat. $37^{\circ} 17^{\prime}$ N.; lon. $46^{\circ} 0^{\prime} \mathrm{E}$. It is abundantly supplied with water, and is one of the neatest and cleanest towns of Persia; having several good caravansaries, and a bazaar. It is surrounded for many miles by orchards and vineyards; and, from its mild climate, is well adapted for the eultivation of grapes, vast quantities of which are exported to Tabreez. It is a dependeney of Maraghah; yielding a eonsiderable revenue, and furnishing a quota of 400 men to the Azerbijan army. Binab is quite a modern settlement, no mention being made of it by any of the Oriental geographers. Pop. about 7500.

BINABOLA, or Twelve P'sis, a group of mountains, Ireland, co. Galway, about midway between Lough Corrib and Aghris Head, consisting of two distinet mountain-ranges, conneeted by an elevated pass called Maam Ina, and occupying a space of about $25 \mathrm{sq} . \mathrm{m}$. The highest summit is 2400 tt . above the level of the sea, and the lowest about 1800 ft It is intersected by glens, and encircled by lakes, and in most
places is very precipitous. Qnartz is the principal formation, but towards the foot of the momtains limestone abounds.

BINACRE, or Benacre, par. Eng. Suffolk; 1660 ac . P. 194.
BINASCO, a tn. Austrian Italy, gov. Milan, cap. dist. same name, prov. of, and $12 \mathrm{~m} . N$. by W. Pavia, and interseeted by the l'avia Canal. The town is defended by a castle, and has a handsome chureh. It was burnt by the French in 1796. Pop. $1182 .-T h e$ nistrict is well irrigated, and produces fine crops. Pop. 9338.

BINBROOKE (St. Gabricl and St. Mary), a united par. Eng. Lineoln; 6070 ac. Pop. 1209.

SINCHE, a tn. and com. Belgim, prov. Hainant, nearly midway between Mons and Charleroi. It is pretty; its environs are pieturesque; and it contains several handsome buildings; among others a chureh, a communal house, a small college, and an hospital. The manufactures are considerable, including metal forging, eutlery, glassworks, soapworks, sugar refineries, hat factories, tanneries, three breweries and distilleries. Some hundreds of women are engaged in flowering lace. Binche was walled, in 1110 , by Baldwin the builder, Count of Ilainatt; and burnt, in 1534, by IIenry Il. of France. Pop. 5131.

BINCOMBE, par. Eng. Dorset; 1220 ac. Pop. 170.
BINDRABUND, a large tn . Inlia, prov. of, and 35 m . N.N.W. Agra, r. bank, Jumna; lat. $27^{\circ} 37^{\prime}$ N. ; lon. $77^{\circ} 43^{\prime}$ E. It is ehiefly famons as having been the scene of the youthful sports of Krishna, the eighth avatar of Vishnu, who is an object of enthusiastic admiration to the IIindoos, and to whom many temples, still existing, were dedicated. Some of these

inndoo tembleas at bindrabund. From Danietrs Views in India
are of a remarkable style of arehitecture, and the great cruc; forin pagroda is esteemed one of the most massy and elaborate works of Brahminical superstition. There are likewise several saered pools, where the pilgrims perform their ablutions, and wash away their sins. Different parts of the neighbouring woods are pointed ont as the abode of ancient Ilindoo saints and sages, and which are now oceupied by religious mendicants.

BINEGAR, par. Eng. Somerset; 680 ac. Pop. 338.
BINFIELD, par. and vil. Eng. Berks; 3530 ac. P. 1242.
BINGEN, atn. grand duchy IIesse-Darmstadt, prov. of, and on l. bank, Rhine, 15 m . W. Mainz. It contains about 520 houses, and is the place of sale for the wines produced in its vieinity, which are mnch esteemed. It has also a considerable trade in corn, several extensive tanneries, aud manufactures of tobaceo, and earries on an active traffic on the Rhine. It is a place of high antiquity, having existed under the Romans. The bridge across the Nahe into Bingen, is said to have been constructed by Drusus, the Roman general. On an cminence near the town are the ruins of an old fort, ealled Klopp, or Drusus Castle, commanding a fine view. The navigation of the Rhine was formerly obstrueted near Bingen, by a ledge of rocks that ran obliquely across the river; but by blasting,
a channel of 210 ft . width, called Binger Loch [hole of Bingen], has been opened in them, through which vessels now pass in safety. In its vicinity are the Mausethurm [mouse tower], the retreat an I death-place of Bishop Hatto of Mainz, the castle of Rheinstein, and other arclitectural remains. Pop. 4415.

BINGIIAM, a small market tn . and par. England, co. Notts. The town, 9 m. E. Nottingham, has two principal streets, and a few smaller, a large church, several dissenting chapels, a poorhonse, some parochial and Sunday schools, and other charities. The petty scssions for the hundred of Bingham are held here, and it is one of the polling places for the S. division of the county. Two annual cattle-fairs are held, in February and May; and two others, one in Whitsunweek and one in November, for hops, \&c. The par., intersected by the Grantham Canal, has an area of 2930 ac. Pop. 1998.

BINGHAMTON, a post vil., U. States, New York, cap. Broome co., 138 m . S.W. Albany. It contains a court-house, jail, county clerk's office, an academy, nine churches, two Presbyterian, one Episcopal, one Baptist, two Methodist, one IR. Catholic, and two African ; is surrounded by a rich agricultural country, and exports a large amount of lumber. Pop. (1840), 2800.

BINGLEY, a tn. and par. England, co. York, W. Riding. The town lies on the sides and summit of a gentle cminence, between the Aire, and the Leeds and Liverpool Canal, 36 m . W.S.W. York, and consists chiefly of one long street, is tolerably well built, lighted with gas, and anply supplied with water. The churches and schools comprise the parish church, a spacious and venerable structure, with a square embattled tower, in the later English style; Baptist, Independent, Primitive Methodist and Wesleyan chapcls, a free grammar, national, and several day and Sunday schools. The manufacture of worsted and cotton is carried on here, and in the neighbourhood, to a great extent. There are also paper mannfactories, and some trade in malt. The town is altogether rapidly increasing in importance and prosperity. Area of par. $13,180 \mathrm{ac}$. Pop. 11,850 ; of $\mathrm{tn} .10,157$.

Bingtang, Pulu-Bintam, or Bintam, an isl. Indian Arelipelago, between lat. $1^{\circ} 10^{\prime} \mathrm{N}$. and $1^{\circ} 10^{\prime} \mathrm{S} . ;$ lon. $104^{\circ} 15^{\prime}$ and $104^{\circ} 37^{\prime}$ E.; bounded, N. by the Strait of Singapore, E. and S. by that of Riou, and W. by the China Sea. It is 30 m . in length, and nearly the same in breadth. Numerous small islands and reefs make its waters dangerous to seamen, to whom it and some of the neighbouring islets are best known under the name of Riou, a port in the small island of Tand-jong-Pinang. Bingtang is subject to a Viceroy of the Sultan of Linga, but the supreinacy of the Dutch is fully recognized. It contains 6000 ginger gardens. Pop., with surrounding islets, 6000.

BINHAM, par. Eng. Norfolk; 2200 ac. Pop. 502.
BIN1C, a seaport tn. and com. France, dep. Cotes-duNord, 6 m. N.N.W. St. Brienc, at the foot of a semicircular lill, whose base is washed by the sea. A wooden bridge across the river Ic mites the commones of Pordic and Binic. The port has a depth of above 18 ft . in spring, and about 8 ft . in ebb tides, and is one of the most convenient on the coast of Brittany. It receives annually between 150 and 160 vessels of various sizes. Twenty-nine belong to Binic, and of these, 18 to 20 , from 120 to 300 tons burden, are engaged in the Newfoundland cod-fishery. Pop. 2324.

BINLEY, par. Eng. Warwick; 2470 ac. Pop. 233.
BINSEY, par. Eng. Oxford; 470 ac. Pop. 61.

BINTON, par. Eng. Warwick; 1260 ac. Pop. 269.
BINTREE, par. Eng. Norfolk; 2120 ac. Pop. 409.
BIOBIO, the largest river in Chili, prov. Concepcion. Its liead streams, which are numerous, rise in the Andes, and, uniting at Nacimiento, or about lat. $37^{\circ} 20^{\prime}$ S., form the Biobio, which falls into the Pacific at the town of Concepcion, lat. $36^{\circ} 49^{\prime} 30^{\prime \prime} \mathrm{S} . ;$ lon. $73^{\prime} 5^{\prime} 30^{\prime \prime} \mathrm{W}$. (к.), after a total course of about 150 m ., but not more than 80 m . from the junction of the head streams at the point above named. It is about 2 in . wide at its mouth, but is too shallow for large vessels; sinall river barges, however, and eanoes, navigate it as far up as Nacimiento. The Biobio forms the N. boundary of the territory of Araucania.

BIR, or Beer [anc. Dirtha], a tn. Asiatic Turkey, 62 m. Vol. I.
N.E. Aleppo, on the side of a steep hill, l. bank, Fuphrates, which is here about 600 yards wide, and from 10 to 12 ft . deep. The town is surrounded, on the land side, by a wall, with towers at the angles, and pierced with loop-holes. The streets are narrow, but clean. It contains several mosques with tall minarets, a few coffee-houses, a bath, a bazaar, and a caravansary. In the centre, on a steep rock, is an old ruined fortification. The rocks on which Bir is built are of chalk, and the houses of the same material, the whiteness of which, in bright sunshine, is painful to the eyes. Bir has long been the point where earavans and travellers, from Aleppo to Orfah, Diarbekir, lBagdad, and l'ersia, cross the Euphrates, which they do in boats of a peculiar description, 40 ft . long by 10 broad, 15 ft . high at the prow, and only 2 ft . at the stern. It is also the point from which it is proposed to navigate the Euphrates by steam. Pop. between 3000 and 4000 .

BIRBHOOM. See Beerbhoom.

BIRGHAM, a small vil. Scotland, co. Berwick, on the Tweed, $15 \mathrm{~m} . \mathrm{S}$. W. Berwick, formerly called Brigham, from a bridge which, it is supposed, united the two kingdoms at this point. The village is worthy of notice on account of its historical associations only. It was here that IIugh, Bishop of Durham, ambassador of Henry II. of England, and William the Lion of Scotland, attended by his bishops, earls, and barons, met on the subject of the Saladin tenth, a tax which Henry proposed to levy in Scotland, as he had done in England, to carry on a new crusade; but which William there informed the bishop he could not prevail on his people to pay. It was here, also, that a numerous meeting of the community of Scotland assembled to express their approbation of the proposed marriage of Prince Edward, son of Edward I., with Margaret of Scotland, but which, in consequence of the death of the latter, never took place. In July of the same year, 1290, another meeting was held at Birgliam, at which were present the Bishop of Durham and five others, who ratified, in the name of the King of England, certain measures taken by the Scots to secure the independence of their kingdom.

BIRIOUSSA, a river, Siberia, forming part of the boundary between govs. Irkutsk and Yenesei. It is one of the head streams of the Ona, an affluent of the Tchuna, and lias a N. course of about 200 m .

BIRIOU'TSCH, a tn. European Russia, cap. dist. of same name, gov. of, and 80 m. S.S.W. Voroneje, l. bank, Sosna, a tributary of the Don. It is surrounded by an earthen rampart, and a ditch of considerable depth, contains seven churches, and has four important annual fairs. Pop., chiefly agricultural, about 6000.-A stream of the same name, near the town, is remarkable for the pearls occasionally obtained from its oysters, and the bones and teeth of elephants often exposed upon its banks.

BIRKBY, or Bretby, par. Eng. York, N. Riding; 3400 ac. Pop. 256.

BIRKENFELD, a principality, cap. samename, belonging to the grand duchy of Oldenburg, but locally separated from it, 1. bank, Ihine, N. of Hesse-Ilomburg, and surrounded on all sides by the Prussian governments of Trier and Coblentz. It has an area of 154 geo. sq. m., and is divided into the three bailiwicks of Birkenfeld, Oberstein, and Rohfelden. The surface is generally rugged, the soil by no means fertile, and the climate, particularly in the neighbourhood of the Hundsrücken, cold and severe. The chief streams are, the Nahe, Frais, Idar, and Kanne. The wood is principally oak and beech ; and the minerals are, coal, iron, roofing-slate, and whetstones. Pop. 28,669.——The Town is 24 m . E.S.E. Treves or Trier, with a sharpening and polishing mill, linen manufactures and tanneries. Pop. $2385 .-$ Numerous small places, particularly in Prussia, have the same name.

BIRKENHEAD, a market tn. and port, England, co. Cheshire, on ihe estuary of the Mersey, here 1340 yards wide, opposite Liverpool ; lat. $53^{\circ} 23^{\prime} \mathrm{N}$. ; lon. $3^{\circ} 2^{\prime} \mathrm{W}$. It is of entirely modern erection, and owes its formation and the prosperity which has attended it, to its commodious docks. It has five principal streets, rumning from N.W. to S.E.; crossed at right angles by a number of shorter ones; a handsome square, having an area of $6 \frac{1}{2}$ ac., four of which are enclosed and planted with shrubbery; a townhouse that cost $£ 10,000$; market on an extensive scale, which cost $£ 30,000$; slaughter-houses on the most approved plan, and ranges of dwelling-houses for workmen, unusually complete in their accommodation and in all their appointments. The system of drainage and sewerage is also singularly complete. The width of courts is regulated, and the streets are generally wider than in the best parts ot most towns. It is well paved, lighted with gas, and abundantly supplied with water. There are four churches belonging to the establishment, all handsome edifices, in various styles of architecture, a Scotch church, five dissenting places of worship, and a R. Catholic chapel, five schools in connection with the parish church, three with Trinity church, three with St. Jolın's, and two with St. Anne's, besides schools in connection with the dissenting chapels. There is also a theological college, where young men are prepared as clergymen for foreign missions. A mechanics' institute was established in 1840. The benevolent institutions comprise an hospital or infirmary, a lying-in hospital, and a dispensary. In the N.W. part of the township, on rising ground, a large public park beautifully laid out, has been formed, having a noble carriage entrance, in the Ionic style. Its magnificent docks, however, form the great distinguishing features of Birkenhead, and are the sources of its prosperity. When the works are completed, there will be a total accommodation of more than 200 ac . The dock warehouses are on an equally magnificent scale. The area of the principal or floating dock will be 120 ac . ; and its depth 19 ft .

The communication with Liverpool is kept up by small steamboats, which ply from each side of the river every quarter of an hour. Birkenhead is connected by railway with Chester, and thence with all parts of England. The rails are brought round all the quays of the docks. Pop. of the township, which includes Birkcnhead and a few neighbouring places, about 23,00!.

BIRMINGHAM [anc. Bremenium], one of the greatest manufacturing towns of England, N.W. extremity of co. Warwick, division of its name, hun. Hemlingford, ou the borders of the counties of Stafford and Worcester; 102 m. N.W. London, and $112 \frac{1}{4}$ by railway. It stands nearly in the centre of England, on slightly elevated ground, having an ascent on al1 sides but the N.W., is somewhat circular in form, and about $5 \frac{1}{2}$ to 6 m . in circumference. The streets are generally winding, few of them running parallel to each other, and still fewer being perfectly straight; many of them, however, are imposing, and are lined with handsome buildings. The lower part of the town, consisting chiefly of old houses, is crowded with workshops and warehouses, and inhabited principally by manufacturers; but the upper part contairs a number of new, broad, and regular streets; houses well built, chiefly of brick, the more recently erected being, in most instances, faced with Roman cement and plaster. They are lighted with gas, and the main streets, upon the whole, well paved; in the smaller, however, as in many other towns in England, the footways are laid with boulders, making very uncomfortable walking to unaccustomed feet.
situations for the children of artizans and others, thus conveying the benefits of this noble foundation very extensively. The institution is now open to persons of every denomination. It is under the management of 20 governors, and the bishop of the diocese. Among the other public buildings of note, besides several of the churches to be afterwards mentioned, are the Queen's college (late the royal school of medicine and surgery), opposite the townhall, in Paradise Street, founded in 1828, containing most valuable and extensive museums of human and comparative anatomy, incorporated by royal charter in 1843-up to 1846 open to medical students only, but now open to all classes of students, and entitled to issue certificates for degrees in the university of London, in arts, law, or medicine; Queen's hospital, lying-in hospital, deaf and dumb institution, blue-coat school, blind asylum, Bingley exhibition hall, Hebrew school, Odd-fellows' hall, bankruptey court, the building belonging to the society of arts, the theatre, the post-office, the news-room in Bennett's Hill, the philosophical society, the polytechnic institution, the dispensary, and the new market-hall, wash houses, and baths; and to these may be added the public office, the proof-house, the London and North-western Railway station, the general hospital, the cavalry and infantry barracks, the Birmingham new and theological library, the extensive and commodious baths at Lady Well and Balsalt, and the statue of Lord Nelson, a colossal figure in bronze, in the centre of the open area called the Bull Ring. New barracks, on a large scale, are about to be built at Birmingham.

Places of Worship. - Birmingham, within the borongh, which includes Edgbaston, a suburban par. and town, and part of Aston, contains 23 churches and chapels in connection with the Establishment. The old parish chureh of St. Martin's, supposed to have been founded in the seventh or cighth century, though its present exterior does not seem earlier in date than the 13th, is not remark able either for grandeur or architectural beauty, but has a large massive tower, surmounted by a tall symmetrical spire, about 210 ft . ligh; measures are now in progress for rebuilding it. The interior contains some fine and remarkably curious monuments of the De Birminghams, the ancient lords of the place. St. Philip's Church, erected in 1725 , on the most elevated spot in the town, is a beautiful structure, in the Palladian or Italian style, consisting of a pedestal line, of good height, a range of lofty Doric pilasters, enclosing the large and well-proportioned windows, and a handsome balustrade. The tower, carried upwards by a series of carved figures, is surmounted by a dome and cupola. St. George's Church, erected in 1822, is a handsome and graceful structure, in the decorated English style, with a lofty, square, embattled tower. St. Thomas's Church, the most capacious in the town, built in 1829 , gives a fine specimen of Doric architecture. The other churches are St. Mary's, belonging formerly to the parish of St. Martin, erected by subscription in 1744 ; St. Paul's, erected by subscription in 1779 , somewhat heavy in its architecture, but relieved by an extremely light and elegant spire; Christ Church, a large, plain, and commodious stone building, admirably situated on an angular tongue of land, formed by the convergence of several important streets; St. Bartho-
lomew's, a plain brick building, with a powerful organ, by England, and a handsome altar-piece; St. Peter's, formerly a chapel of ease to St. Plilip's, in the Grecian style, with a massive Doric portico, in imitation of the Parthenon at Athens; St. James's Chapel, a chapel of ease to Aston Church, as are also St. John's, built in 1735, and IIoly Trinity Chapel, a handsome Gothic building; All Saints', erected in 1833, a large and handsome brick structure, interspersed with Bath stone; and Bishop Ryder's Church, so called as a testimonial to the memory of the prelate of that name, by whose example and influence subscriptions were raised for its erection. To these may be added, the old and the new church at Edgbaston, and several churches recently built in those populous parts of the adjoining parishes, included within the Parliamentary boundary of the borough. The dissenting places of worship are very numerous. There are a large R. Catholic cathedral, and three or four chapels; ten Wesleyan Methodist chapels, three new connection, and one belonging to the Wesleyan Association, besides several smaller, belonging to other sections of Methodists; eight Baptist chapels, seven Independent chapels, five places of worship for Unitarians, an elegant new Presbyterian churech in Broad Street, and a chapel belonging to Lady IIuntingdon's comnection; a New Jerusalem church, a Quakers' meeting-house, and a Jews' synagogue. Some of these places of worship are very elegant and spacious buildings. The most remarkable is the R. Catholic cathedral of St. Chad, erected at an expense of $£ 60,000$; it contains a melodious peal of bells; contiguous is a handsome building, the residence of the R. Catholic bishop and clergy.

Charitable Institutions.-Amongst the charitable institutions, the most important are the general lospital, supported by subscriptions, and by the profits arising from the triennial musical festival ; and the Queen's hospital, founded in 1840. There are, besides, the general and self-supporting dispensaries, the lying-inhospital, the eye infirmary, an institution for the relief of deafness, the general institution for the blind, the deaf and dumb asylum, and the Magdalene asylum at Islington. In various parts of the town are numerous almshouses, for tutions, the names of which need not be here specified.

Schools, Literary and Scientific Institutions, dic.- Besides the free grammar-school, and Queen's college, already described, the principal educational establishments of Birmingham are:-the blue-coat school, with accommodation for 200 boys, and 100 girls; the education includes the ordinary elementary branches, and religious instruction; the girls are also taught sewing, knitting, and houseliold work, and are prepared for domestic servants; the Protestant Dissenters' charity school, established in 1762 , and entirely supported by voluntary subscription, at present clothes, maintains, and educates 40 girls, but the number is not limited; St. Philip's industrial free school-originally established in 1824, though the present building was erected in 1846 -admits 170 children, boys and girls. Besides these, there are numerous private, ordinary, and boarding schools; National, British, and Lancasterian schools; a Hebrew school; infant, Sunday, and ragged schools, \&c.; Springhill College, for the education of young men for the dissenting ministry amongst Independents,
is a well-endowed seminary, recently established; and in the neighbourhood of Birmingham is the R. Catholic seminary of Uscott. A diocesan training institution is about to be erected, for the diocese of Worcester, at Saltley. There are two public subscription libraries in the town, one containing 30,000 volumes, and the other 7000 ; a society of arts, and Government school of design, an Odd-fellows' literary institute, a philosophical institution, a polytechnic institute, and a society of artists. Among the scientific institutions, the Birmingham botanical and horticultural society, established in 1829, whose gardens are at Edgbaston, is deserving of notice.

Manufactures.-The origin and progress of the prosperity of Birmingham, is wholly attributable to the excellence and extent of its hardware manufactures. Its geographically central situation on the border of a great coal and iron district, combined with the command of a wide and ready transit, both by canal and railway, have contributed to render it one of the
greatest manufacturing towns, in the particular line above alluded to, in the world; approached only, perhaps, by sheffield. Nowhere else can we find such extraordinary developments of human skill and ingenuity, nor such perfection in the arts in which they are employcd. The vast variety of trades render it a desirable place for the talented and skilled artizan; and this variety is such, that it has seldom happened that Birmingham has been distressed, like many towns, from utter lack of employment. Of the early history of Birmingham, as a manufacturing town, littlo further is known, beyond the general fact that it has enjoyed a reputation for its iron and steel manufactures for several centuries; although its greatest and most rapid progress has taken place within the last forty ycars. In 1805, the amount of hardware and cutlery exported was 4288 tons; in 1844, it amounted to 22,552 tons, all the intermediate years, with two or three exceptions, showing a progressive increa c. In

1821 , the value of the exports was $£ 1,237,692$; in 1844 , $£ 2,179,087$. But the value of hardware goods was, probably, fully a third more in the foriner than in the latter year ; so that the quantity exported in 1844, exceeds that of 1821 far more than the respective valuations indicate. The extraordinary reduction in the price of Birmingham manufactures has arisen, partly from a reduction in the cost of the material, but clicfly, and in many cases solely, from improved methods of production, as the cost of the material forms, generally, a very small portion of the value of the finished article. Some of these reductions are truly extraordinary: on fire-arms the reduction is about 53 per cent. ; on gun-locks, from 65 to 85 per cent. ; on spoons, stirrups, \&c., from 61 to 69 per cent. and on iron chains, 68 per cent. One of the most important manufactures of Birmingham is that of fire-arms. During the last war, $5,000,000$ were furnished on account of Government, and of the grivate trade; those for the former being supplied
at the rate of 15,000 muskets weekly. The manufacture of swords is also one of the staple trades of Birmingham. Both of these trades, however, have, of course, much fallen off; and the skill and industry employed in them have taken other directions. At Soho, in the vicinity of the town, was formerly one of the largest steam-engine manufactories in the world, belonging to Boulton, partner of the celebrated James Watt but the steam-engine department is now carricd on, exclusively, at Smethick, a short distance to the west of Sol.o, where extensive works have recently been erected by the same company. Goods of various descriptions, however, are still made here, snch as vases, candelabras, and other articles in bronze or ormulu, with large quantities of plate. Here, also, the copper coinage of the kingdom used to be executed. The coining mill, working eight machines, was capable of threwing off 4000 pieces of money per hour. Cast-iron articles of all kinds, and of the most beautiful patterns and workmanship,
are manufactured here to a great extent, superseding those made of more expensive metals. In former years, iron-founding was limited to large and heavy articles, but is now extended, with the most entire success, to the lightest and most graceful, in the finishing of which bronze is now very generally employed. The quantity of solid gold and silver plate manufactured in Birmingham is not great; but the consumption of silver in plating was very considerable, having been estimated at about $200,000 \mathrm{oz}$. a year. It is now, however, rather less, in conscquence of the introduction of such netallic compounds as that called albata, which, though inferior in appearance to well-finished plated goods, are durable and cheap. The beautiful invention of electro-plating, first discovered in this town, tends very greatly to the increase of the consumption of silver, and also of gold. The vast establishment of Smith, Elkington, and Co., New Hall Street, is an object of great attraction. Japanning, in all its forms and varieties, is carried on here to a large extent; and, though of comparatively recent introduction, has attained to a great degree of perfection, especially in the pictorial department; the trays and waiters manufactured in Birmingham, particularly those of papier maché, often displaying, in the conception and execution of their ornamental designs, taste and talent of the highest order. Glass manufacturing, and glass staining or painting, forms another important branch of manufacture ; in the former, ornaments of a size are made, which it was once thought could be produced only in metal ; on these the most beautiful, delicate, and brilliant surfaces are raised by the lathe and cutting tool. The manufacture of steel pens, scarcely known 25 years ago, is another important branch of the trade of Birmingham. One manufacturer of this apparently trivial article, employs 400 individuals, and consumes upwards of 85 tons of fine sheet-stcel annually, each ton making 10,000 gross of pens. The price of this article has fallen from 12 s . per dozen to 1 s . per gross, and still lower for an inferior article. The whole quantity of steel pens now manufactured is estimated at $750,000,000$ annually, consuming above 400 tons of steel. Large quantities of these are exported. Pins are also manufactured here to a great extent; and such is the extraordinary productive powers of the machinery employed, and of the system of minute subdivision of labour, that 12,000 pins can be cut and pointed in an hour, and 50,000 heads rounded off in the same space of time. The manufacture of buckles was at one time carried on to a great extent at Birmingham, but has long been extinct, in consequence of the general disuse of that article. Buttons are still made in large quantities, and, though there has been a great falling off in some of the branches of that trade, yet necessity, the mother of invention, has given birth to many new species of buttons. The whole number made annually in the town is estimated at $750,000,000$. When gilt buttons were more in demand than they now arc, so extraordinary a degree of perfection was attained in the art of gilding, that $3 d$. worth of gold was made to cover a gross of buttons. In making florentine, or silk buttons, 14 pairs of hands, and a number of machines, are employed; and yet a set of 14 buttons can be sold for a $1 d$. or $1 \frac{1}{2} d$. Fancy seals, brooches, clasps, and other trinkets, composed of what is called Birmingham gold, and polished steel, are made in immense quantities, of the most beautiful workmanship, and at prices which excite astonishment. Great numbers of gold rings are also manufactured; in 1839, no fewer than 25,000 wedding gold rings were assayed and marked at the Assay Office in Birmingham. The above sketch gives only a selection of a few of the leading articles manufactured at this great seat of human industry and ingenuity. The simple enumeration of all, without any statistical detail, would occupy a far greater space than could be afforded in a work of this nature. The machinery employed in the manufacture of nails, screws, button shanks, and in rolling out thiek bars, or ingots of metal, into long thin sheets, are amongst the most wonderful inventions of the mechanical genius of this extraordinary place; all of these combining prodigious power, with the most delicate and beautiful precision of movement. The most delicate impressions on metals are often produced by the die sinking stamp. Not many large capitalists are engaged in the manufactures of Birmingham; a great proportion averaging from $£ 500$ to $£ 1000$. These persons give out their work to the workmen they employ, who are generally paid by the piece, and work at home. The
employer lias thus no expensive establishment to maintain and no wages to pay but when he has orders to execute. The workman, again, when the work put into his hands requires the aid of machinery, may hire, for any given time, one or more rooms, together with a certain quantity of steam power, in any one of a number of buildings appropriated to such purposes, which are furnished with steam-engine, working-shafts, lathcs, benches, \&c. The engine power of Birmingham, in 1849, was estimated at that of 5400 horses, and consumed 377 tons of coal per day. The working of this power employed 8000 to 10,000 persons. It has been greatly lamented by those who take an interest in the morals of this town, that a vast and increasing employment of married women and of very young children in the delicate manufactures, should occasion much domestic evil and physical suffering; but still more that the morals of the cottage hearth, together with its comforts, should vastly suffer by the absence, in so many cases, of the mother and wife. The effect upon the elucational effort is very disastrous. There is a branch bank of England in Birmingham, and seven other banks, and a very flourishing savings'-bank.

Canals and Railways.-Birmingham is in the centre of the canal and railway systems of the kingdom; and is indebted to them for a great part of its prosperity. The Old Canal opens a communication, through the Severn, with Shrewsbury, Gloucester, and Bristol ; and, through the Trent, with Gainsborough, Hull, and London. This canal has also a junction with the grand line, running through the potteries of Staffordshire, to Manchester and Liverpool; so that both the Irish Sea and the German Ocean are laid directly open to Birmingham traders. The new Birmingham and Fazely Canal provides a similar water conveyance, by Tamworth, Atherston, Nuneaton, and Coventry, to Oxford; and thence, by the Thames, to London. In addition to the facilities for conveyance by canals, Birmingham has the advantage of the following railways:the London and Birmingham, and the Grand Junction, now amalgamated under the name of the London and North-western Railway; the Birmingham and Derby Junction, which passes from the London and Birmingham line to Derby, and thence to Nottingham; the Birmingham and Bristol, which passes through Worcester and Gloucester; both of which branch from the London line to their respective termini. There is now open a railway into the potteries, and the N. parts of Staffordshire are also penetrated. Shortly there will be a direct communication with the populous district of which Dudley and Wolverhampton are the extremities, by means of the Stour Valley Railway, soon to be opened. The Oxford Railway, amalgamated now with the Great Western, is expected to proceed in its works, which are far advanced; its immense viaduct being now a prominent object.

Markets, Fairs, \&c.-The markets are held, Monday, Thursday, and Saturday, and are well and abundantly supplied. On Thesday, there is a market for hay, straw, and hides. Fairs are held at Whitsuntide and Michaelmas; that is, on the Thursday and two following days in Whitsun-week, and on the Thursday and the two follewing days nearest to September 29. At these fairs, considerable business is done in cattle, horses, and agricultural produce generally. Birmingham is the emporium of the midland countics.

Municipal Government and Representation.-By the Reform Act in 1832, and Corporation Reform Act, 1835, Birmingham was constituted a borough, and sends two members to Parliament. Constituency in 1846,6129. Its municipal charter bears date October 31, 1838, and divides the borough into 13 wards. Sixtcen aldermen are elected; one for each of the 13 wards, and three supernumeraries to act in the absence of any of the other 13 . The number of councillors is 48 . The aldermen are in the commission of the peace, and hold regular borough courts. The county magistrates sit in petty session, for the division, at the public office, twice a week, and the borough magistrates daily. The county court has also been established in Birmingham, and has superseded the old court of requests. A separate court of quarter-sessions for the borough, has recently been granted by the Crown. Previous to the erection of this court, all prisoners committed for trial were sent to the county prison, at Warwick; but a borough jail has been lately completed at Winson Green, $2 \frac{1}{2} \mathrm{~m}$. from the centre of the town, at the estimated cost of $£ 50,000$. There is also a lunatic asylum erceted near it. The borough
comprises the parishes of Birmingham and Edgbaston, and the townships of Bordesley, Deretend, Duddeston, and Nechells. Area, within the parliamentary and corporate boundary, 8780 ac.

Name and History.-Birmingham was known to the Romans onder the name of Bremenuim, and is mentioned in Doomsday Book under the name of Bermengeham. The name, as well as those of the neighbouring hamlets of Castle Bromwich and West Bromwich, is supposed to have been derived from the great quantity of broom which grows in the vicinity. It is said to have been celebrated for the manufacture of arms previous to the Roman invasion. Of its early history, however, very little is known. It was the centre of the Saxon kingdom of Mercia; and, at the time of the Conquest, was a place of some consideration. Birmingham was distinguished in the cause of the parliament; and was the scene of some conflicts, in the last of which, in 1643 , it suffered considerably; having been taken, partially burnt, and a heavy fine inflicted on the inhabitants by Prince Rupert. It suffered, to a fearful extent, from the plagne in 1665 . Its first considerable increase in size and population, took place in the reign of Charles II. Toward the middle of the last century, it began to assume an important appearance, and has since continued rapidly to increase. It is not eighty years since it was inade a post town ; previous to this, letters used to be directed to Birmingham, near Walsall. The American and French wars, during the latter part of the last century, and the early part of this, were the great causes of the prosperity and increase of the place, by the great demand which they caused for muskets. In July 1791, Birmingham was the scene of a series of disgraceful riots; property was destroyed to the amount of $£ 60,000$. In 1839 , riots again took place, when several private buildings in the neighbourhood were set on fire, and various other excesses committed. Dnring the excitement of 1848 , not one man was taken into custody for any political offence-a circumstance indicative of great moral improvement. The general healthiness of Birmingham is deserving of notice. Dr. Price considered it the healthiest place in England. For this it is thonght to be indebted partly to the quantity of vitriol which is consumed in the manufactories, and is considered to have a purifying influence on the atmosphere; but a more obvious and more extensive cause may be found in the larger quantity of open space which Birmingham possesses, when compared with such towns as Manclester and Liverpool; in the general excellence of its drainage, greatly facilitated by the substratum of sand and gravel on which it is built; and in the important fact that there is searcely an underground dwelling, or what is called a cellar, within its precincts. One man in Birmingham lives on the same space as two in Manchester, and three in Liverpool ; and the mortality of each town is as nearly as possible in the same ratio. Edgbaston, already named, a suburban par. and tn. Birmingham, is pleasantly situated abont half a mile W. from the latter. It is a favourite residence of the wealthier classes of Birmingham, and is almost exclusively inhabited by them. It is in consequence rapidly increasing, and becoming quite a fashionable resort. It consists of several principal streets, regularly laid out, and remarkably well kept. The houses, mostly modern, are well built, chiefly of brick stuccoed, there being few of stone. Water is abundant, and all the principal thoroughfares are now lighted with gas. There are here two churches, and a third is about (1850) to be erected, all connected with the Establishment, and three public schools. No workshops of any description are allowed to be erected in the parish. There are botanical gardens here, open to the publie one day in the week. Area of par. 2790 ac. Pop. 6609

Population.-In 1801, the population of Birmingham and the suburbs was 73,670 ; in 1841 , it was 182,922 ; being about 150 per cent. in 40 years; in 1849, it was estimated at 220,000.- (Local Correspondent; Guide to Birmingham; \&c.)

BIRNAM, a hill, Scotland, co. of, and 12 m. N.W. Perth; according to the last statistical account 1300 ft . in height; and according to some other authorities, 1580. It was anciently included in a royal forest, but has long since been denuded of the wood, rendered famous by Shakspeare. Birnam is 12 m . distant from Dunsinnan.

BILNBAUM, a tn. Prussia, cap. circle of same name; on the Wartha, 45 m. W.N.W. Posen; with a R. Catholic and a Reformed chureh, a synagogue, an orphan hospital, and
manufactures of linen. Pop. 2800.-The C1RCLE, area, 400 geo. sq. m., is in general flat, and covered to a great extent with forests and meadows. The inhabitants are chiefly occupied with agricultural pursuits. Pop. 38,158. Numerous small places in Germany have the same name.

BIRNEE, or Birnie (Ord and New), two tns. Bornon, both W. Lake Tchad. Old Birnee, formerly cap. of the kingdom, but now deserted and in ruins, is near the r . bank of the Yeou, 70 m. N.N.W. Kouka, and 75 W . the lake; lat. $13^{\circ} 0^{\prime} \mathrm{N}$. ; lon. $13^{\circ} 15^{\prime} \mathrm{E}$. In the days of its splendonr, it covered a space of $6 \mathrm{sq} . \mathrm{m}$. , and is said to have contained a population of 200,000 . The walls, of which portions are still standing, in large masses of hard red brickwork, were from 16 to 18 ft . in height, and from 3 to 4 ft . in thickness. New Birnee is about 75 m . S.S.E. Old Birnee, 20 due N. Kouka, and 15 from Lake Tchad; lat. $12^{\circ} 30^{\prime} \mathrm{N}$. ; lon. $14^{\circ} 16^{\prime} \mathrm{E}$. This town is also walled, and contains a royal palace, a large mud edifice. Pop. about 10,000 .

BIRNIE, par. Scot. Elgin, 7 m. long, and about 2 broad. lop. 407.

BlRR, or Parson's-town, a market tn. and par. Irelanl, King's co. The town stands on gentle acclivities, on both banks of the little Brosna, 69 m . W.S.W. Dublin. It con sists chiefly of one principal street and several smaller, the better description of which are straight and well kept; houses generally of stone, and the greater number laving a respectable appearance. There is also a good square, in which is a statue of the Duke of Cumberland, at one of the terminations of the main street. Water is sufficiently abundant, bnt of indifferent quality. The only buildings of note are the parish church, and the R. Catholic chapel. The former has a square tower, and the latter an elegant spire. They are both in the Gothic style, and both of recent erection. There is also a conrt-house. Besides the churches mentioned, there are a neat Wesleyan Methodist chapel, and a Presbyterian meetinghouse. There are two national schools in the town, one for boys, the other for girls-the latter conducted by nuns; a school connected with the parish chnreh, one with the Presbyterians, a classical school, and several smaller primary schools; likewise a fever hospital, a dispensary, a public reading-room, and a mechanics' institute. In the town and neighbourhood are several corn and rape mills, and a distillery. There is no trade of any importance. Area of par. 7218 ac .; pop. 9567. Pop. of tn. 6336.

BIRSA, par. Orkney, Mainland, $7 \frac{1}{2}$ m. long, and 5 broad. Pop. 1634.

BIRSE, par. Scot. Aberdeen, 10 m. long, and about the same breadth. Pop. 1295.

BIRSIS, a small maritime tn. Tripoli, dist. Jeb-el-Akdar; lat. $32^{\circ} 17^{\prime} \mathrm{N} . ;$ lon. $20^{\circ} 39^{\prime} \mathrm{E}$.

BIR-SEBA. See Beeriheba.
BIRSK, a tn. Russia, gov. Orenburg, at the confluence of the Bir with the Belaia, 50 m . N.W. Oufa. It contains three churches. Pop. 3500.

BIRSTALL, a par. and vil. Eng., co. York, W. Riding ; $13,180 \mathrm{ac} . ; 7 \mathrm{~m}$. S.W. Leeds. The inhabitants are principally employed in the manufacture of woollens, cottons, linen, silk, and in the coal and ironstone mines. Pop. 29,723.

BIRTS-MORTON, par. Eng. Worcester; 1410 ac. Pop. 313.

BIRU, or Beroo, a kingdom, W. Africa, in Soodan, N. and W. of the Niger, with the Sahara bounding it N., between lat. $15^{\circ}$ and $16^{\circ} \mathrm{N}$., and lon. $5^{\circ} 30^{\prime}$ and $7^{\circ} 15^{\prime} \mathrm{W}$. The cap. town, Walet, is 260 m. S.S.W. Timbuctoo.

BISACCIA, a tn. Naples, prov. Principato Ultra, 12 m . N.E. St. Angelo de Lombardi, on a hill; with several churches, and an hospital. Pop. 5916.

BISACQUINO, or Bussachino, a tn. Sicily, 28 m . S. Palermo; with a considerable trade in grain, oil, and flax. Pop. 8000.

BISAMBERG, a vil. Lower Austria, about 8 m . NN. Vienna, cap. of a dist. and sitnated on a hill of the samo name, the summit of which is 1190 ft . above the sea. It has a palace, a parish church, a school, and an hospital. In its neighbourhood, one of the best wines of Austria is produced, and a great deal of lavender grown. Pop. 642.

BISAYAS, a name given by the Spaniards to all the Philippine islands excepting Luzon. It is derived from the language spoken throughout them, called Bisaya, which has
numerous dialects, and differs greatly from the Tagala, the language spoken in Luzon. These islands were also called Pintados [painted men], from the inhabitants painting their bodies different colours-a custom not yet quite disused among the tribes of the interior.

BISBAL, a tn. Spain, Catalonia, prov. of, and 12 m . E. by S. Gerona, in a fertile plain surrounded by hills. It has a parish church, two chapels, several schools, a chapter-house, prison, hospital, and a fine promenade. Manufactures:linen fabrics, bricks, tiles, earthenware, and corks. An annual fair is held for grain, cattle, implements of husbandry, and industrial requisites. Pop. 4000.

BISBROOKE, par. Eng. Rutland; 720 ac. Pop. 211.
BISCARA, a tn. Algeria, originally built by the Romans, 200 m . S.S.E. Algiers. It is defended by an insignificant castle, mounted with a few guns, and is said to be so infested with scorpions and other poisonous reptiles, as to be uninhabitable during summer. It carries on a small trade in negroes and ostrich feathers. The natives are held in great esteem for their honesty in Algiers, to which town the greater number of the poorer classes resort for a livelihood.

BISCARI, or Viscari, a tn. Sicily, prov. of, and 44 m . W. by S. Syracuse, founded in the 15 th century. Pop. 2700. BISCATHORPE, par. Eng. Lincoln; 1050 ac. Pop. 63.
BISCAY [Spanish, Vizcaya], also called Bilbao, a prov. Spain, forming one of the three Basque provinces [Spanish Vascongadas], bounded, N. by the Bay of Biscay, W. by prov Santander, S. by Alava, and E. by Guipuzcoa; area, 1267 sq. m. The surface is generally mountainous; the only plains of any extent lying along the banks of the principal streams. The loftiest summits are in the W., S., and E. ; in which last direction they attain their culminating point in Mount Arno, on the borders of Guipuzcoa. In geological structure, the province belongs to the more recent secondary formation; the smaller portion of it, lying to the N. and N.E., consisting of lias, and the larger portion of chalk. Both, but particularly the chalk, are traversed by ridges of trachyte, and occasionally of green porphyry. The principal river is the Nervion or Ibaizabal, which crosses the province from S.E. to N.W., and divides it into two nearly equal parts. The other streams are little more than mountain-torrents. In point of soil and natural productions, Biscay is one of the least favoured provinces of Spain; but the industry of the inhabitants has been successfully exerted, in converting naturally barren tracts into fruitful fields and verdant pastures. The chief crops are maize and barley. Many fine fruits, especially nectarines, are raised; walnuts and chestnuts everywhere abound, and form a considerable export to England and Germany. The cattle are of a small and inferior breed; and the rearing of sheep for wool is rendered difficult by the brushwood, which covers great part of the mountain-districts, and tears and destroys the fleece. Fish abound along the coast, and give occupation to a great number of fishing-boats. The principal species taken are bream, tunny, cod, and anchovies. The most important mineral is iron, which is found of excellent quality throughout the province, and is extensively worked. Lead, copper, and zinc also occur. The inhabitants of Biscay are brave, active, and industrious. One of their most distinguishing features is their love of freedom, and their history is full of the exploits which they have performed in repelling attempted encroachments on it. Pop. 150,000.

BISCAY (Bay of), a gulf of the Atlantic, on the coasts of Spain and France, extending from Cape Ortegal, in Spain, to the isle of Ushant, off Brest, in France, distant from each other about 400 m . This bay is remarkable for its heavy seas, produced by N.W. winds. It is of great depth, and is traversed by Rennel's current. (See Atlantic.)

BISCEGLIA, a seaport tn. Naples, prov. Terra di Bari, 13 m . E.S.E. Barletta, on a rock, W. shore of the Adriatic; lat. $41^{\circ} 14^{\prime} 24^{\prime \prime} \mathrm{N}$. ; lon. $16^{\circ} 30^{\prime} 30^{\prime \prime} \mathrm{E}$. (r.) surrounded by walls, and in general badly built. It has a cathedral, two collegiate and several other churches, convents of both sexes, a seminary, hospital, and a mont-de-piété. It is the residence of a bishop. The port admits vessels of small burden only. The town being almost destitute of water, rain is collected in large cisterns cut in the solid rock. The neighbourhood produces good wine. Important fairs are held here twice a y ear. Pop. 15, 141.

BISCHHEIM, a tn. France, dep. Bas-Rhin (Alsace),
about 3 m . N. Strasburg, with a manufactory of starch. Here the first attempt was made to cultivate tobacco in Alsace. Pop. 2929.

BISCHOFSBURG, a vil. Prussia, prov. E. Prussia, on the Dimmer, 15 m. S.S.W. Rossel. The inhabitants are employed in weaving and spinning. Pop. 2450.

BISCHOFSLIEIM.-1, Bischofsheim vor der Rhön, a tn. Bavaria, Lower Franconia, cap. dist. of same name, on the Brent, in a mountainous district, 19 m. S.E. Fulda. It has manufactures of woollen and linen cloth, a dyework, a large worsted and several other mills. Pop. 1795.-The District has an area of 56 geo. sq. m. Pop. 12,241.-2, Bischofs-heim-Neckar, a tn. Baden, circle, Lower Rhine, cap. dist. of same name, about 16 m. S.E. Heidelberg. It is walled; and has two palaces and a powder-mill. Pop. 1930.- The distinct has an area of 48 geo.sq. m. Pop. 14,803.-3, Bischofs-heim-Rhein, a tn. Baden, circle, Middle Rhine, cap. dist. of same name, 10 m. N.E. Strasburg. Pop. 1652.-The District has an area of 36 geo. sq. m. Pop. 12,606.-4, Bischofs-heim-Tauber, a tn. Baden, circle, Lower Rhine, cap. dist. of same name, 16 m. S.W. Wuirzburg, on the Tauber, with a parish church. Pop. of tn .2427 ; of dist. 16,482.-5, Two small places, the one in Hesse-Darmstadt, the other in IlesseCassel, each containing a parish church.

BISC'HOFSTEIN, or Bischstein, a tn. Prussia, prov. E. Prussia, 47 m. S.S.E. Königsberg, with three churches (one of them amongst the finest in the province), a high school ; manufactures of cloth, hosiery, and leather; distillerics, breweries, \&c. Pop. 2830.

BISCHOF-'IEINITZ, a fortified tn . Bohcmia, circle, Klattau, 1. bank, Radbusa, 26 m . S.W. Pilsen, with a palace, surrounded by a fine park; several churches, two of them founded in the 13th century, and containing fine tombs and statues. The inhabitants live by agriculture, weaving, and shopkeeping. Pop. 2403.-The Lornsiup of the same name has a pop. of 17,775 .

BISCHWILLER, a tn. France, dep. Bas-Rlin, 12 m . N. Strasburg, r. bank, Moder. It was formerly an episcopal town, and defended by a castle, erected in the 15 th century but dismantled in 1706. It has manufactures of cloth for the army, ticks, linen, woollen gloves, knitted articles, oil, and pottery; besides bleachfields, spinning-mills, brewerics, tanneries, madder-mills, and iron mines. Its trade is in wine, hops, hemp, tobacco, madder, coal, cattle, \&c. Pop. 6242.

BISEN'TINA, or Possentina, an islet, Papal States, in Lake Bolsena. It contains a church, built by the Farnese family, and decorated by the Caracci ; and a Franciscan convent, with fine gardens.

BISENTO, or Bisenti, a tn. Naples, prov. AbruzzoUltra, 9 m . N.W. Civita-di-Penne, in a valley. It has several churches, and a dyework for woollen cloth. Pop. 2742.

BISENZ, a tn . and lordship, Moravia, circle of, and 12 m . S.W. Hradisch. The town lies in a plain, at the foot of a hill, which produces the best wine in Bohemia. It has a handsome palace, surrounded by extensive gardens. A good deal of garden produce is raised, and the vine is successfully cultivated. The chief field crop is maize. Pop. of tn. 2800; of lordship, 5858.

BISERT, a river, Russia, gov. Perm. It rises in the Ural Mountains, and, after a S.W. course of about 80 m ., joins r. bank, Oufa, a little above Krasnoufimsk.

BISHAM, par. Eng. Berks; 2520 ac. Pop. 659.
BISHAMPTON, par. Eng. Worcester; 2140 ac. P. 410.
BISHOP and CLERK, two rocky islets, S. Pacific Ocean, S. from Macquarie's island, lat. $55^{\circ} 15^{\prime} \mathrm{S}$.; lon. $158^{\circ} 56^{\prime} \mathrm{E}$. (r.)

BISHOP-AUCKLAND, a market tn. England, co. of, and 9 m. S. W. Durham, on the Stockton and Darlington Railway, pleasantly situated on an eminence, nearly 140 ft . above the level of the plain. The slopes on each side are partly covered with hanging gardens, while the honses occupy the brow and remaining portion of the declivity. It consists of three principal streets, and a spacious market-place. The honses are generally old, ill built, and of every sort of material. It is well lighted with gas, but is indifferently supplied with water. The parish church is a mile from the town. The other places of worship are, a chapel of ease, belonging to the Church of England; a Wesleyan, an Associated Wesleyan, a Primitive Methodist, an Independent, and a R. Catholic chapel, and a Quakers' meeting-house. Schools:-a grammar-school,

Barrington school, a Quakers' school, and four or five private schools. There are likewise several benefit societies, and a mechanies' institute. No manufactures, the town depending on the coal trade, being situated in the midst of a coal field, known as S. Durhain. I'op. 3776.-(Local Correspondent.)

BISHOPBRIDGE, or Bishophriggs, a vil. Scotland, co. Lanark, par. Cadder, about 3 m. N.N.E. Glasgow, and a station on the Edinburgh and Glasgow Railway. The quarries in its vicinity are very extensively worked, and furnish much of the fine freestone of which Glasgow is built. Above the freestone is a good scam of Roman cement.

BISHOI'SBOURNE, par. Eng. Kent; 1860 ac. P. 334.
13INHOP'S CANNIN(XS. Sie CANning (Branm's).
I3ISHO1'S CASTLE, a market tn. and par. England, co. Salop, hund. Purslow. The town is situated on a gentle acelivity, 17 m . S.W. by S. Shrewsbury. It consists chiefly of two strects, both straight and well kept; houses of stone, and, though old, generally well built; supply of water ample. The only buildings of note are, the union workhouse, the market-house, a neat modern builcing, and the parish chureh, a fine old structure, partly in the Norman style. The other places of worship are a Primitive Methodist chapel, and a chapel belonging to the Independents. The schools are a national sehool, and a partially free sehool, for the benefit of the inhabitants of the town. With exception of a little chairmaking, no manufactures are carried on liere, the people being chiefly engaged in agriculture. The castle, from which the place takes its name, is not now in existence, its site being occupied by the Castle Inn. It belonged to the Bishops of Hereford. Area of par. 6000 ac. Pop. of par. 1781 ; of tn . 1510.-(Local Correspondent.)

BISHOP'S STORTFORD, a market tn. and par. England, co. Ilertford. The town, which is 27 m . N.N.E. London, is built in the form of a cross, and occupies the acelivities of two hills, on the river Stort. It consists chiefly of four strects, all nearly straight and well kept; houses, mostly brick; lighted with gas, and supply of water abundant. The corn exchange, built in 1828, is a handsome and commodious building, containing assembly and coffee rooms. The ehurel is also an clegant structure, having a tower at the W. end, with a spire about 80 ft . in height. Other places of worship are, Wesleyan, Baptist, and Independent chapel3, one of each, and a Quakers' meeting-house. There are here, likewise, a free grammar-sehool, a national sehool, and a British and Foreign school, some alms-houses, several minor charities, a savings'-bank, and a meehanies' and literary institution. The principal trade of the town is malting, which is carried on to a very considerable extent. A large patent tanning manufactory, which employed many hundred hands, is now, and has been for some years, closed. The business of the town is facilitated by the Eastern Counties Lailway, whieh has a station here, and by a canal, which joins the river Lea. The market, now one of the principal in the county, is held on Thursday. I'etty sessions are held once a fortnight, and the county court once a month. Area of par. 3080 ae. Pop. 46 s 1. -(Local Corresponilent.)

BISIIOP's sCTTON, par. Eng. ITants; 3510 ac. P. 517.
BISHOI'STONE, five pars. Eng.:-1, par. Hereford; 840 ac. Pop. 304.-2, par. Sussex; 1820 ac. Pop. 288. -3 , par. Wilts; 2730 ac. Pop. $569 .-4$, par. Wilts; 3330 ac. 1'op. 704.-5, par., S. Wales, Glamorgan. Yop. 491.

BISIIOI'STROW, par. Eng. Wilts; 980 ac. Pop. 296.
BISIIOP'S WALTHAM, a small market tn. and par. England, co. Hants, the former 10 m. N.E. Southampton. 1ts church is an ancient stmucture, in the mixed style, with a square stone tower. The sehools are, a national sehool for boys and girls, and an endowed grammar-school. S.W. the town are the ruins of Waltham Abbey, the ancient palace of the bishops of Winchester. Bishop's Waltham is a polling station for the election of county members for N. Hants. Area of par. 7389. Pop. 2193.-(Lacal Correspondent.)
 city of York Ainsty; 760 ac. Pop. 404.

BISHOP WEARMOUTH. See Sundehland.
BISHOPTON, par. Eng. Vurham ; 5100 ac. Pop. 473.
BISHTON, par. Eng. Monmouth; 1850 ae. Pop. 187.
BISIGNANO [ane. Bisinanium], a tn. Naples, prov. Calabria Citra, $14 \mathrm{~m} . N$. Coseriza, the seat of a bishop, and defended ly a citadel occupying the summit of the lighest
of the seven hills that surround it. It contains a cathedral, 19 churches, several convents, a seminary, two hospitals, and a house of refuge. The cultivation of the silkworm forms a principal branch of industry. Pop. 10,000.

BlNK. See Biysk.
BISKRA, a tn., N. Africa, in the Sahara, 214 m . S.E. Algiers; lat. $34^{\circ} 47^{\prime} \mathrm{N}$. ; lon. $5^{\circ} 22^{\prime} \mathrm{E}$. It is less a town than the collocation of seven villages, or urban quarters, lying among plantations of date-trees covering nearly $50,000 \mathrm{ae}$. of land. Nearly in the centre rises 'the kasbah,' a kind eitadel, where a garrison is lodged. The summit of the chief mosque surmounts the highest palm-trees near it. The general aspect of the town buildings is not otherwise remarkable than that, like all other houses in towns of the Sahara, they are built of baked earth, and have terraced roofs. Biskra is the eapital of the Zibans. Pop. about 4000.-(Sahara Algerica.)

13ISLEY.-1, A vil. and par. England, co. Gloueester. The former, 11 m. S.E. Gloueester, consists chiefly of one main street; houses well built, supply of water indifferent. There are here but one cliureh, and a parish school. Broad cloth was formerly manufactured here to a great extent, but is now very limited; area of par. 7980 ac. Pop. (1841), 5339. -2, par., co. Surrey ; arca, 780 ac. Pop. (1841), $321 .-$ (Local Correspondent.)

BISPHAM, par. Eng. Lancaster; 3490 ac. Pop. 2339.
BISSAGOS (The), or Bijuga Islands, a group of small volcanic islands, about 20 in number, W. coast, Africa, opposite the mouth of the Rio Grande, between lat. $10^{\circ}$ and $12^{\circ} \mathrm{N}$. ; and lon. $15^{\circ} 30^{\prime}$ and $16^{\circ} 30^{\prime} \mathrm{W}$. The largest, Marshi, is about 15 m . in length. Most of them are inhalited, but some of them are merely bare rocks, and visited only occasionally. The soil of the more fertile islands is excellent, consisting prineipally of decomposed lava, and vegetable matter. They are mostly covered with wood, but present a few elear spaces covered with a rich verdure, on which herds of elephants, deer, buffaloes, and other wild animals depasture. The inliabitants cultivate maize, and have plantations of bananas and palms, but their chicf dependence is on their cattle, goats, and fisheries. They are a brave, but treacherous people, and go always armed.- There is a town of the same name on the 1. bank of the Bulola IRiver, about 22 m . from its embouchure; lat. $11^{\circ} 36^{\prime} \mathrm{N} . ;$ lon. $15^{\circ} 10^{\prime} \mathrm{W}$.

BISSAO, an isl. and seaport tn., W. Africa, coast of Sencgambia, at the mouth of the Jeba or Geba, the latter in lat. $11^{\circ} 52^{\prime} \mathrm{N}$. ; lon. $15^{\circ} 37^{\prime} \mathrm{W}$. (1.) The island is extremely fertile, and densely peopled by a race called Papels, remarkable for their industry and fidelity. On the E. side of the island, and close to the beach, is a Portuguese fort, a large square building with four bastions and several guns, garrisoned by about 300 soldiers, who are chiefly convicts and mulattoes. execpting the officers, who are detached from the Cape de Verde Islands, of which this settlement is a dependeney. Good anchorage may be had off the town in 7 fathoms' mud. Refreshments of all kinds are to be obtained here, but at ligh prices. Wrater of good quality is also to be had, but the supply is seanty. The Portuguese have been in possession of this island for upwards of two centuries, but of the numerous fortifications with which it was formerly protected, the one above spoken of is all that remains. The present trade is confined to a very few annual shijs from Lisbon.

13ISSOLEE, two towns, India:-1, A tn. Punjab, r. bank, Ravee; lat. $32^{\circ} 28^{\prime} \mathrm{N}$. ; lon. $75^{\circ} 44^{\prime} \mathrm{E}$., with an irregularly built bazaar, and a remarkable palace of the lajah, regarded by Vigne as the finest building of the kind in the East.- 2, A th., prov. Delhi, 31 m. S.W. by W. Bareily; lat. $28^{\circ} 19^{\prime}$ N.; lon. $79^{\circ} 10^{\prime} \mathrm{E}$. It flourished under the early Mogul Emperors and the liohillas, but is now comparatively desolate. It eontains the tombs of some of the family of the Rohillah founder.

BISSUNI'OOR, an ane. th. Ilindoostan, prov. Bengal, $79 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Calcutta ; lat. $23^{\circ} 4^{\prime} \mathrm{N}$. ; lon. $87^{\circ} 25^{\prime} \mathrm{E}$. It is situated in a tract of ferruginous soil, about 30 ft . above the alluvial plains of the Ganges, and is still a place of considerable traftic and importance. The only note-worthy strueture is the old fort where the Rajah resides, at one time a place of great strength and magnificence, though now fallen into decay.

BISTRAU, a tn. Bohemia, circle, Chrudim, cap. lordship of same name, in a deep valley, 39 m . W. by S. Olmütz. It has a church with a fine altar-sereen, an industrial school, and a weekly market. Pop. of tn. 1926; of lordship, 10,179.

BISTRITZ.-1, A tn. and lordship, Moravia, circle, Pre rau. The town, situated on the Bistritsa, 25 m . S.E. Olmïtz, has a parish church, two chapels, a castle, and an hospital. Pop. 1463. The lordship has an undulating surface, and is watered by the Bistritsa and Russawa. Pop. 9512.-2, A tn. and lordship, Moravia, circle, Iglau. The town, 42 m . W. by S. Olmütz, has its own magistracy, two churches, a townhouse, an hospital, and considerable manufactures of cloth Pop. 2447. The lordship is generally level, though in part hilly, and is watered by the Schwazawa, Nedwedicka, and Bobruwka. Pop. 6328.-3. A vil. and lordship, Bohemia, circle, Klattau. The village has a castle, a chapel, a manufactory of looking-glasses, a mill, and two workhouses. Pop. of vil. 524 ; of lordship, 14,299.-4, Bistritz (Neu), a tn. and lordship, Bohemia, circle, Tabor. The town lies in a valley almost level, 35 m . S.S.E. Tabor, and contains a church, a castle, a townhouse, and hospital, and has some woollen and linen manufactures. Pop. of tn .3450 ; of lordship, 10,164, all R. Catholic.

BISTRITZ, a royal free tn. Transylvania, cap. dist. of same name, on tha Bistritz, opposite to the Borgo Pass, in a fine valley, 29 m. E.N.E. Szamosujvar; lat. $47^{\circ} 6^{\prime}$ N.; lon. $24^{\circ} 30^{\prime}$ E. It is walled, has two churches, one Lutheran, with a tower 250 ft . high; and one R . Catholic, a monastery of Piarists, and one of Minorite Friars, a Protestant, and a R. Catholic gymnasium, a printing-office, two hospitals, two schools, and a handsome corn-markct. The inhabitants manufacture cloth, cordage, leather, potashes, and soap, and trade with Bukowina, Austrian Poland, and Moldavia. Two large cattle-markets are held lere annually. Wine is produced in the vicinity. Near the town are the remains of an old castle, formerly the seat of the Hunyads. Pop. 6620.-The district, area, 530 geo. sq. m., is intersected by a branch of the Carpathian Mountains, and particularly in its higher parts has a severe climate. Agriculture is necessarily of very limited extent, but the woods abound with game, and the rivers with fish. There are about 30 salt springs in the district. The great Szamos is the largest stream, but the most celebrated is the Little Bistritz, known by the name of Golden Bistritz, which it owes to the gold dust found among its sands. Pop. 55,000.

BITBURG, a tn. Rhenish Prussia, gov. Trier or Treves, cap. circle of same name, between the Nyms and the Kyll, 18 m . N.N.W. Treves. It is the seat of several public offices, has two R. Catholic churches, and a castle, some manufactures of cloth and leather, a weekly, and four yearly markets. Pop. 2000.-The circle, area, 220 geo. sq. m., lies between the Ardennes and the Eifel, and is watered by the Moselle or Mosel, Kyll, Prüm, Nyms, Sauer, Diezbach, and Enzbach. The surface is much broken by hills, which are generally well wooded, and in the N.W. furnish quarries of slate, limestone, and sandstone. The valleys are fertile and well cultivated, and produce good crops of grain, pulse, potatoes, rape, flax, and hops. Iron is worked to some extent. Pop. 39,941.

BITCHE, a fortified tn. of the first class, France, dep. Moselle, $59 \mathrm{~m} . \mathrm{E}$. by S. Metz. The lower town, formerly called Kaltenhausen, is built at the foot of a rock, near a lake, from which the Horne takes its rise. The castle, situated on a rock about 150 ft . above the valley, mounts about 80 picces of cannon, and requires 1000 men for its defence. It consists of four bastions and a half-moon battery, and is well supplied with water from fine cisterns, and a very deep well sunk in the heart of the rock. Bitche has manufactures of earthenware and paper snuff-boxes; and in the neighbourhood are the glassworks of Munsthal. Pop. 3131.

BITCH FIELD, par. Eng. Lincoln; 1540 ac. Pop. 160.
BI'TETTO, a tn. Naples, prov. Terra di Bari, 10 m . S.W. Bari, in a fertile plain, W. shore Adriatic. It is the seat of a bishop, has several convents, and a cathedral, containing numerous interesting pictures and marbles. Pop. 4664.

BITIOUG, a river, Russia, which rises in the S. of gov. Tambov, shortly after enters Voroneje, and, after a S. coursc of above 130 m ., joins l. bank Don, about 15 m . above Pavlovsk. Its banks are covered with fine forests.

Bitlis. See Betlis.
BITONTO [anc. Butuntum], a tn. Naples, prov. Terra di Bari, in a fine plain, 15 m. W.S.W. Bari. It is the seat of a bishop, and has a handsome cathedral, 12 parish churches, convents for both sexes, an hospital, and a seminary. The
environs produce excellent wine, called Zagarello. A short distance from the town the Spaniards gained a decisive victory over the Austrians, May 25, 1734. Pop. 16,235.

BITRITTO, a tn. Naples, prov. Terra di Bari, 6 m . S. from Bari. It has a collegiate church; and its territory is noted for the excellence of its wines and almonds. Pop. 2607.

BITSCHWILLER, a tı. France, dep. Haut-Rhin, 18 m. N.N.E. Belfort, in the valley of the Thur. It has cotton mills, iron furnaces, and manufactures of numerous articles in tin, steel, and common iron. Pop. 2847.

BITTADON, par. Eng. Devon; 5100 ac. Pop. 78.
BitTBURG. See Bitburg.
BITTERFELD, a tn. Prussia, prov. Saxony, cap. circle of same name, l. bank, Mulde, 21 m . N. Leipzig, 16 m . S. Dessau. It was founded by a colony of Flemings, is walled, and has some manufactures of cloth and earthenware. Pop. 3850 .——The circle, area, 210 geo. sq. m., is level, and the soil fertile. The railway between Leipzig and Magdeburg skirts the circle. Pop. 41,373.

BITTERLEY, par. Eng. Salop; 5610 ac. Pop. 1098.
BITTESWELL, par. Eng. Leicester; 2630 ac. P. 495.
BI'TTI, a vil., isl. Sardinia, about 55 m . S.E. Sassari, in a mountainous district. The rearing of cattle is the chicf employment. Pop. 2200.

BI'TTON, par. Eng. Gloucester ; 7520 ac. Pop. 9338.
BIVERI, or Biviéri, a lake, Sicily, 15 m . S.S.W. Catania. In summer, the greater part of it, converted into a mere marsh, produces a miasma which makes the whole district unhealthy; but when swelled by the rains of winter, it has a circuit of nearly 20 m . It communicates with the sea by the river Lentini, and contains various kinds of fish, the taking of which employs from 50 to 60 boats.

BIX, or Bixbrand, par. Eng. Oxford; 3130 ac . P. 427.
BIXLEY, par. Eng. Norfolk; 760 ac. Pop. 110.
BIYA, a river, Siberia, uniting with the Katunya, 10 m . S.E. Biysk, and forming the Obi. It rises in Lake Altin, flows N.W., then S.W., and has a total course of upwards of 100 m .

BIYSK, BIIsk, Bisk, or Bejsk, a tu. Siberia, gov. of, and 270 m . S. Tomsk, on the Biya; lat. $52^{\circ} 0^{\prime} \mathrm{N} . ;$ lon. $85^{\circ} 10^{\prime} \mathrm{E}$. It is wholly composed of wooden houses, and derives its chief importance from the facilities it offers for carrying on trade with China, from the frontiers of which it is only 190 m . distant. The country around is fertile in wheat, depastures numerous cattle, and produces a considerable quantity of honcy. Pop. 2000.

BIZERTA, or Benzerta [anc. Hippo Zarrhytus], a seaport tri. and bay, regency of Tunis. The town stands on the W. side of the bay, $35 \mathrm{~m} . \mathrm{N}$. by W. Tunis; lat. $37^{\circ} 16^{\circ} 36^{\prime \prime} \mathrm{N}$., lon. $9^{\circ} 49^{\prime} 15^{\prime \prime} \mathrm{E}$. (r.) ; and is thus the most N. town of Africa. It is about a mile in circumference, and is fortified, towards the sea, by several castles and batteries; which, however, are all but useless as defences, in consequence of being commanded by a hill at the distance of a quarter of a mile. 13izerta was formerly one of the best ports in Tunis; and is still good, though now seldom frequented, except by small vessels. The shores of the bay are chiefly composed of sandy downs; there is good anchorage at a little distance from the shore, in 5, 6, and 7 fathoms. $A$ lake, or rather lagoon, runs from the bay a considerable distance into the land, and is said to have a depth, in some places, of 40 to 50 fathoms; but its entrance from the sea is narrow, and has not more than 9 ft . over the bar. There is an extensive fishery here, which is farmed at a ligh rate; the fish taken are chiefly mullet, of a large size and fine flavour. The country around is singularly beautiful and fertile, producing corn, pulse, oil, cotton, and fruits in great abundance. Notwithstanding this, its inhabitants have been represented as living in a state of the greatest poverty. Pop. about 10,000 .

BJÖRKÖ.-1, An isl. Sweden, in Lake Malar, about 13 m . from Stockholm. It is supposed that here stood the famed large and great city Björkö; and ruins of walls, gates, \&c., seem to confirm the accuracy of the supposition.-2, An isl. E. coast, Sweden ; lat. $59^{\circ} 53^{\prime} \mathrm{N}$. ; lon. $19^{\circ}$ E.; 10 m . long by 4 broad. -3 , An isl. Russia, Gulf of Bothnia, W. coast, Finland; lat. $63^{\circ} 21^{\prime}$ N.; lon. $19^{\prime} 13^{\prime} 23^{\prime \prime} \mathrm{E}$.

BJÖRNEBORG, a seaport tn. Russian Finland, dist. of, and 70 m . N.N.W. $\AA \mathrm{bo}$, and on a sandy tongue of land, at the mouth of the Kumo, in the Gulf of Botlmia. It has some
shipbuilding; and exports of timber, pitch, tar, articles of wood, and fish; the two last chiefly to Stockholm. Its entrepot is $N$. Sanbad, above a mile from the town. The States of Sweden met here in 1602. Pop. 4570.

BLABY, par. Eng. Leicester; 3300 ac. Pop. 1896.
BLACK FOREST. See Schwarzwald.
BLACK HEAD.-1, A bay, Ircland, co. Clare, S. side, Galway Bay, having the promontory of Black Iead-lat. $53^{\circ} 9^{\prime}$ N.; lon. $9^{\circ} 17^{\prime}$ W. (r.) -on the W., and Finvarra Point on the E.-2, A point, N.E. coast, Ireland, co. Antrim, N. side of the mouth of Belfast Lough; lat. $54^{\circ} 46^{\prime} 6^{\prime \prime} \mathrm{N}$. ; lon. $5^{\circ} 41^{\prime} 15^{\prime \prime}$ W. (1.)

BLACK RIVER, a river, U. States, New York, falling into Black River Bay, in the N.E. part of Lake Ontario, after a N.W. course of about 108 m ., of which about 40 m ., near its centre, are navigable for boats. The lower part of the river is obstructed by rapids.

BLACK SEA, or Euxine [anc. Pontus Euxinus], a large inland sea, bounded, N. and N.W. by Russia, N.E. by Caucasia, W. by Turkey in Europe, S. by Anatolia, and S.E. by Armenia, between lat. $41^{\circ} 0^{\prime}$ and $46^{\circ} 37^{\prime}$ N., and lon. $27^{\circ} 25^{\prime}$ and $41^{\circ} 46^{\prime}$ E. Greatest length, from E. to W., about 700 m . ; breadth, about 300 m . ; extent of coast, upwards of 2000 m . ; area, variously estimated at 160,000 and 180,000 sq. m. It receives some of the largest rivers in Europe, including the Danube, Dnieper, and Dniester, and drains a surface of $950,000 \mathrm{sq} . \mathrm{m} . ;$ its waters are, in consequence, only brackish. Its depth in general is great, no bottom having been found in some parts witl a line of 140 fathoms, although, in a few places, as the Strait of Yenikale, it does not exceed 10,20 , or 30 ft .; while off the mouth of the Danube the water deepens so gradually from the shore, that the distance from the latter may be ascertained within half a mile by soundings alone. Throughont the whole of the llack Sea there are scarcely any rocks, and almost everywhere are excellent anchoring-places. Storms are rare, and, when they do occur, are of short duration, seldom lasting more than 12 hours, without considerable abatement. During the summer, N . winds prevail, and S . in the beginning of autumn and spring. The former frequently detain vessels from the Mediterranean in the Dardanelles and Bosphorus for weeks together. The currents of the Black Sea, generally, have a tendency towards the Bosphorus or channel of Constantinople. The most constant and powerful is that which sets along the W. shore, from the mouth of the Dnieper to the Bosphorus, occasioned by the great influx of water, especially on the melting of the snow, from the great rivers that fall into the N.W. portion of this inland sea. There is no flow of tide in the Black Sea, the slight difference of elevation that occasionally occurs arising solely from the winds and currents. The S. coast of the Crimea, and the coast of Anatolia and Caucasia, abound in lofty mountains, which rise up immediately from the margin of the sea, and afford excellent landmarks. On the N.W. and N., the coast is generally low, and on this account dangerous, as it can be seen only from a very short distance. Harbours and bays are numerous, and many of them good; but there are none of any great extent. Those that penetrate deepest into the land are the Gulf of Kerkinet on the N., between the Crimea and the mainland; the Gulfs of Rassein and Burgas on the W., and those of Sinope and Samsoon on the S. There are no remarkable projections or headlands, excepting those formed by the W. and S. extremities of the Crimea, and Cape Indjeh and Bozdepeh in Anatolia. The Black Sea communicates with the Sea of Azof by a narrow channel, called the Strait of Kertsch or Yenikalé, and with the Mediterranean by the Bosphorus or Channel or Strait of Constantinople, the Sea of Marmora, and the Dardanelles.

There are few fisheries of any importance carried on in the Black Sea, although it abounds with various kinds of fish, including porpoises, sturgeons, dolphins, mackerel, mullet, bream, \&c. Seals, also, are numerous. One of the most extensive fisheries is at the entrance of the Strait of Yenikale, where considerable quantities of sturgeon are taken. The N. jorts are frequently shut up by ice for three or four months in the year, or from about December to March.

The Black Sea extended, at a remote period, much further E. and N. than it now does, occupying the whole of the vast plains and steppes that surround the Caspian and the Sea of Aral, in Tartary, neither of which had then a separate exist-
ence, being included in this great inland sea. The relative level of the Black Sea, with the Caspian on the one hand and the ocean on the other, were long undetermined points; but seem now to be pretty well ascertained. It has been found that the Caspian is 101 ft . lower than the Black Sea, and that the latter is precisely of the same level as the ocean. That it is, however, a little, though, perhaps, but a very little above the level of the Mediterranean, which is itself kept below that of the Atlantic by evaporation, would appear from the almost constant flow of a current towards the Grecian Archipelago, through the Dardanelles. The amount of evaporation which takes place in the Black Sea must be also very great, as the discharge by the Bosphorus is wholly insufficient to account for the disposal of the immense quantities of water passed into it by its rivers. How it should retain its saltness, notwithstanding this large and constant accession of fresh water, has not yet been satisfactorily explained.

The Black Sea was explored at an early period by the Greeks, who, from their ignorance of the arts of navigation and shipbuilding, represented it as beset with dangers of the most formidable kind; and who, it has been said, gave it the name of 'Black'Sea, as expressive of the dread and terror in which they held it-a feeling further manifested by their placing the Cimmerian land of everlasting darkness on its N. shore. Having gathered courage from experience, the Greeks, at a later period, formed numerous establishments along its shores, from which they carried on an extensive trade in slaves, cattle, and corn; and to this day, their vessels are the most numerous in the Black Sea, the greater part being employed in exporting the corn, hides, timber, iron, and furs of Russia, and in importing wine and fruits, and the manufactures of England and France.

BLACK WARRIOR RIVER, a river, U. States, Alabama, falling into the Tombeckbe; lat. $32^{\circ} 32^{\prime}$ N.; lon. $88^{\circ}$ W., after a S.S.W. course of about 160 m . For steam boats, it is navigable to Tuscaloosa, 48 m . direct distance; and for boats, much higher up.

BLACKAUTON, par. Eng. Devon; 5850 ac. P. 1449.
BLACKBURN, a parl. bor., market tn., and par. England, co. Lancaster. The town is $21 \mathrm{~m} . \mathrm{N} . \mathrm{N} . W$. Manchester, pleasantly situated in a valley, sheltered by hills on the N.E. and N.W. It is very irregularly built, but contains many respectable houses; is lighted with gas, and amply supplied with water, but indifferently paved. The church, a spacious and elegant edifice, in the later English style, with a lofty square tower, was almost wholly rebuilt in 1819-26, at an expense of $£ 30,000$. The other churches are, the district churches of St. Paul, St. John, and St. Peter; the latter two neat modern edifices. There are places of worship for Baptists, Independents, Wesleyans, Primitive Methodists, Warrenites, and Society of Friends; also a Scotch kirk, and R. Catholic chapel ; a free grammar-school, several national, and numerous other schools, in which 5000 children, altogether, are educated; a number of charitable institutions, and a gymnasium, established by a private company for the recreation of their workmen, for whose children the same benevolent individuals have erected a school, at a cost of $£ 1000$. There is a spacious covered market, with tower and clock, a small theatre, assembly rooms, and a cloth hall, now seldom used for that purpose, the stalls for the sale of cloths being erected in the streets. The house is still shown in Blackburn in which the father of the late Sir Robert Peel was born. It is a homely-looking dwelling, situated in what is called Fish Lane.

Blackburn is the seat of extensive manufactures of cotton goods, of which from 50,000 to 60,000 pieces are manufactured weekly in the town and vicinity, employing above 10,500 persons. The annual value of the goods produced, is estimated at upwards of $£ 2,000,0000$. This species of manufacture has entirely superseded the 'Blackburn grays,' a fabric for which that town was formerly celebrated, as it was, also, at an earlier period, for ' Blackburn checks.'

Some of the most important improvements, in the spinning and manufacturing of cotton, originated with James IIargreave, a carpenter in Blackburn, who was the inventor and patentce of the spinning jenny.

Blackburn commands an extensive inland navigation by means of the Leeds and Liverpool Canal, whith passes the outskirts of the town; railways afford it still further facilities,
connecting it, on the E., with Burnley and the W. Riding of York; on the W., with Preston and Liverpool ; and on the S., with Bolton and Manchester. There are two railway stations in the town, belonging, respectively, to the East Lancashire, and to the Bolton and Clitheroe Railway Companies. Blackburn returns two members to the House of Commons. Registered electors (1849), 1116. Area of par. $4 \overline{5}, 620$ ac. Pop. of parl. bor. (1841), 36,186 ; of par. 71,711.

BLACKFORD, par. Eng. Somerset; 680 ac. Pop. 178.
BLACKHEATH, a vil. and well-known heath, England, co. Kent, the former about 6 m. S.E. London, with which it is connected by the Greenwich Railway, pleasantly situated on a gentle slope on the verge of the heath. It consists of one principal street, spacious, but irregular ; the houses plain, and mostly of brick; those of the working classes said to be ill drained, and otherwise exceedingly uncomfortable. Close by is Morden College, a quadrangular red brick building, founded by Sir John Morden, for the benefit of decayed Turkey merchants, many of whom reside here in the greatest comfort, and are remarkable for their longevity. The only place of worship in the village is the Wesleyan chapel. There are no manufactures in the village.-TThe heath contains about 70 ac . within its present limited bounds. It is very picturesque, and, in summer, is much resorted to by pleasure parties, donkey-riding being one of the amusements for which it is well adapted. This celebrated heath has been the scene of many remarkable events, some of them of great historical interest.- (Local Correspondent.)

BLACKLAND, par. Eng. Wilts; 460 ac. Pop. 81.
BLACKMORE, par. Eng. Essex ; 1990 ac Pop. 709.
BLACKNESS, a vil. Scotland, co. Linlithgow, r. bank, Forth, 3 m . E. Borrowstounness. It has been long in a decaying state, and is now only resorted to by a few families in summer as bathing quarters. On a peninsula near the village stands Blackness Castle, one of the four forts in Scotland, stipulated to be kept in repair by the articles of union, and famous as the place of confinement of many of the Covenanters.

BLACKPOOL, a vil. England, coast of Lancashire, between the estuaries of the Ribble and Wyre, 27 m . S.S.W. Lancaster, which has, of late years, attracted many visitors by its advantages as a watcring-place. It is elevated considerably above the sea at low water; affords excellent accommodation for visitors, a range of lofty houses about 1 m . long facing the sea. A library and news-room are kept open during the bathing scason, and an excellent promenade has been formed along the edge of the breakwater. The air is healthy and bracing. The number of visitors present at one time, during the bathing season, varies from 2000 to 6000. Stationary pop. 1304.

BLACKRATH, par. Irel. Kilkenny; 1759 ac. P. 341.
BLACKROCK.-1, A tn. Ireland, co. Dublin, 4 m. S.E. Dublin Castle, S. shore of Dublin Bay, interzected by the Dublin and Kingston Railway. It is much resorted to as a bathing place by the inhabitants, and its numerous handsome villas form suburban retreats for the wealthy citizens of Dublin. Pop. 2372.-2, A vil., U. States, New York, near the foot of Lake Erie, $2 \frac{1}{2} \mathrm{~m}$. below Buffalo, with which it is connected by railway. It has a church, with several stores, warehouses, and manufactories of different kinds. The harbour is formed by an immense pier projecting into the Niagara, built by the State of New York for the accommodation of vessels on the lake, and of boats which here enter it from the canal. Pop. (1840), 1800.

BLACKTOFT, par. Eng. York, E. Riding; 2730 ac. Pop. 505.

BLACKWALL, a tn. England, forming an important suburb of London, co. Middlesex, par. Poplar, 4 m . E.S.E. St. Paul's, at the confuence of the Lea and the Thames. It is a scene of immense bustle and activity, containing a grcat number of shipbuilding yards, and also the E. and W. India docks. It is connected with the city of London by a railway; and numerous steamers are continually arriving and departing from its wharfs. The Cabinet Ministers take an annual whitebait dinner here, prior to the prorogation of Parliament. Pop. of par. (1841), 20,342. See London.

BLACKWATER, several rivers, Ireland:-1, Rising in the S. part of co. Tyrone, and forming, for a considerable portion of its course, the boundary between that county and cos.

Monaghan and Armagh. After flowing S.E., N., and N.E., and receiving the Cullen and several other affluents, it falls into the S. part of Lough Neagh. Total course, 30 to 40 m . It long formed the boundary between the English Pale and the Tyrone O'Neills.-2, The principal stream, co. Cork, and celebrated for the romantic and picturesque beauty of its banks; by Mr. Inglis esteemed not inferior to either the Rhine or the Danube. It rises on the confines of cos. Kerry and Limerick ; flows, generally E., by Mallow to Cappoquin, where it bends S., and falls into St. George's Channel, through Youghal harbour, after a course of upwards of 80 m . It is not navigable, but it abounds in salmon, and propels numerous mills.-The other streams of the same name, nearly 20 in number, are all small, and famous for nothing but trout.

BLACKWELL, par. Eng. Derby; 1700 ac. Pop. 477.
BLACKWOOD RIVER, a small stream, W. Australia, co. Sussex, falling into the Indian Ocean at Cape Leeuwin, after a course of about 50 m .

BLADON, par. Eng. Oxford; 1350 ac. Pop. 687.
BLAEN-PORTH, par., S. Wales, Cardigan. Pop. 752.
BLAGDON, par. Eng. Somerset; 2520 ac. Pop. 1178.
BLAIR-ATHOLE, a vil. and par. Scotland, co. Perth; the former on a plain near the confluence of the Tilt and Garry, on the great Highland road from Perth to Inverness, 30 m . N.N.W. Perth. It consists of a single row of ornamental cottages, and a commodious inn, erected by the Duke of Athole. At a short distance are the parish church and school, both plain but substantial buildings. At the distance of about a quarter of a mile is Blair House or Castle, the scat of the nobleman above named -a plain but beautifully situated building. There are here some larch trees of enormous size, which derive no small interest from their being amongst the first planted in Scotland. The parish is about 30 m . in length, and 18 in breadth, and is remarkable for the beauty of its scenery. Pop. 2231.(Local Correspondent.)

BLAIRGOWRIE, a vil. and par. Scotland, co. Perth. The village is on a rising ground with a S. exposure, 15 m . N.N.E. Perth. The streets are, in general, straight and well kept; houses of stone, and slated, and, for the most part, well built. The churches and other places of worship comprise the parish church, a Free church, and Independent chapel ; an Episcopal chapel, and a R. Catholic chapel, none of which have any claim to architectural beauty. The principal schools are, the parish school, the Free church school, and a school supported chiefly by private subscription. There is here a charitable clothing society. Flax-spinning is carried on here and in the vicinity to a great extent, there being no fewer than 13 mills in the village and around it, all driven by water-power from the river Ericht. They employ, altogether, about 1200 hands; from 300 to 400 more are engaged in hand-loom weaving. The salubrity of the climate, and the beauty of the scenery around Blairgowrie, have rendered it a favourite summer resort.--The PARISH is about 11 m . in length, and upwards of 8 in breadth. Pop. of par. (1841), 3471 ; of vil. (1850), upwards of 3000.-(Local Correspondent.)

BLAIR-LOGIE, a small vil. Scotland, co. of, and about 3 m . N.E. Stirling, beautifully situated at the base of the Ochils, at the entrance to Glendevon, and much resorted to by invalids on account of the salubrity of its climate. Pop. 124.

BLAISDON, par. Eng. Gloucester; 760 ac. Pop. 264.
BLAISE, two small rivers, France; the one rises above Senonches, arrond. Dreux, dep. Eure-et-Loire, and running N.E., falls into the Eure, after a course of about 25 m .; the other rises above Juzennecourt, arrond. Chaumont, dep. Haute Marne, and after a course of about 36 m . falls into the Marne.

BLAISE (St.), a well-built vil. Switzerland, can. of, and 4 m. N.E. Neufchatel, and on the borders of the lake. It has an old church with a lofty tower, three schools, and an extensive cotton-printing work. Good white wine is grown in the vicinity. Pop. 1050.

BLAISOIS, a dist. France, which formed a dependency of anc. prov. Orleannais, and had Blois for its capital. It now forms the greater part of dep. Loiret-Cher.

BLAKEMERE, or BEAckmoor, par. Eng. Hereford; 1080 ac. Pop. 183.

BLAKENEY, a par. and small seaport, Eng. Norfolk; 1630 ac . The harbour is capacious and safe, and numerous vessels are employed in oyster-fishing. Pop. 1021.

BLAKENHAM, two pars. Eng. Suffolk:-1, Blakenham (Great), 1850 ac. Pop. 180.-2, Blakenham (Little), 250 ac. Pop. 119.

BLAKESLEY, par. Eng. Northampton; 2840 ac. P. 830.
BLAMONT.-1, A tn. France, dep. Mcurthe, 17 m. E. Lunéville, on the Vezouze. Its old castle was occupied by the allies in 1814. It manufactures calicoes, woollen yarn, carthenware, and leather. Pop. 2671.-2, A small tn., dep. Doubs, on the frontiers of Switzerland, 40 mn . E.N.E. Besançon. It has a castle of considerable strength. Pop. 698.

13LANC (Le), a tn. France, dep. Indre, $32 \mathrm{~m} . W . S . W$. Chateauroux, picturesquely situated on the Crense, which divides it into the Upper and Lower town, and formerly a place of great strength, but now its fortifications are dismantled. It is, however, one of the neatest towns in the department, and has recently received great improvements. It has a court of first resort, manufactures of coarse cloth, vinegar, earthenware, woollen yarn, linen thread, and an extensive brewery, and in the vicinity there are several blast furnaces, and other ironworks. Trade:-principally in the wine of the district, iron, wood, and fish. Pop. 4770.

BLANC MONT. See Mont Blanc.
BLANCA, a tn. Spain, prov. of, and 20 m . N.W. Murcia, in a rocky and barren district, near 1. bank, Segura. It has a spacious, paved, principal street, with several smaller streets and narrow hilly lanes diverging from it, a large square, a parish church, town and chapter house, prison, hospital, school, and some remnants of a Moorish castle. Manufactures:silk, linen fabrics, bass-mats, and oil, but people mainly engaged in agriculture. Pop. 2240.

BL ANCHVILLESKILL, par. Irel. Kilkenny ; 854 ac. Pop. 152.

BLANCO CAPE, numcrous capes in various parts of the world:-1, A well-known cape, W. coast, Africa ; lat. $20^{\circ}$ $46^{\prime} 30^{\prime \prime}$ N.; lon. $17^{\circ} 4^{\prime}$ W. (r.) It forms the extremity of a rocky ridge, named Jebel-el-Bied or White Mountain, which, bending S., forms, with the shore, a spacious harbour, called the Great Bay. It was discovered by the Portugnese in 1441. A luerative fishery is carried on here by natives of the Canary Islands, who resort to it in boats or vessels of 100 to 150 tons burden.-2, A cape, N. W. Africa; lat. $33^{\circ} 8^{\prime}$ N.; lon. $8^{\circ} 38^{\prime}$ W. (r.)-3, A cape, N. Africa, Tunis; lat. $37^{\circ} 15^{\prime} \mathrm{N} . ;$ lon. $8^{\circ} 35^{\prime}$ E. -4, A cape, Corfu Island; lat. (S. end) $39^{\circ} 20^{\prime} \mathrm{N}$.; lon. $20^{\circ} 10^{\prime}$ E.-5, A cape, Palestine, N. of Acre, and 13 m . S. Tyre; lat. $33^{\circ} 5^{\prime}$ N.; lon. $35^{\circ}$ E. (R.) -6, A cape, isl. Cyprus, S. W. coast ; lat. $34^{\circ} 20^{\prime} \mathrm{N}$. ; lon. $32^{\circ} 41^{\prime} \mathrm{E} .-7, \mathrm{~A}$ cape, isl. Majorca, S. W. side; lat. $39^{\circ} 20^{\prime} \mathrm{N} . ;$ lon. $2^{\circ} 47^{\prime}$ E. (R.) -8, A cape, Peru, N. W. extremity ; lat. $4^{\circ} 17^{\prime}$ S.; lon. $81^{\circ} 16^{\prime}$ W. (R.)-9, A cape, E. coast, Patagonia, N. of the Gulf of St. George ; lat. $47^{\circ} 12^{\prime} \mathrm{S}$. ; lon. $65^{\circ} 44^{\prime} \mathrm{W}$. (k.)

BLANDAIN, a vil., tn., and com. Belgium, prov. Hainaut, 6 m . W.N.W. Tournai. The chief employments are weaving and spinning. Much oil is made here ; and butter, honey, and wax are exported. Pop. 2783.

BLANDFORD FORUM, a market tn. and par. England, co. Dorset. The town is 14 m . N.E. Dorchester, beantifully situate on a bend of the Stow ; across which are three bridges, one of them having six arches. It has regularly laid eut, well-paved, and lighted streets; a townhall and theatre, neat and commodious buildings; the church, situated in the centre of the town, an elegant modern structure, in the Grecian style, with a tower and spire ; places of worship for Independents and R. Catholics; a freo grammar-school, a blue-coat school, for clothing and instructing 12 boys, besides daily and boarding schools, with alms-houses, and other clarities. Blandford was formerly celebrated for its fine point lace; but shirt buttons are now the only manufacture, and even that is declining. Races are held in August, on fine downs, in the immediate vicinity. The weekly market is on Saturday; and fairs are held on March 7, July 10, and November 8, for horses, sheep, cattle, and cheese. Blandford is a borough by prescription; and a clarter of incorporation was granted by James I. The government of the town is vested in a bailiff, four aldermen, and 12 councillors. Petty sessions are held every alternate week. The town has euffered severely, at four different times, from fire ; the last time, June 4, 1731, it was nearly wholly destroyed. It gives the title of Marquis to the Duke of Marlborough. Area of par. 920 ac. Pop. 3349.

BLANDFORD (St. Mary), par. Eng. Dorset; 420 ac. Pop. 407.

BLANKENBERGI, a vil. and com. Belgium, prov. W. Flanders, 9 m . N.W. Bruges. The village was once a seaport, and called Scharphout; but was destroyed, with a great number of other villages, in 1334, by a rise of the tide; and afterwards rebuilt under its present name. Fishing is nearly the whole support of the inhabitants. Pop. 2125.

BLANKENBURG, a tn. duchy of, and 38 m . S.S.E. Brunswick, cap. circle of same name; situate on the IIarz Mountains, surrounded by walls, and has a gymnasium, with several ellucational and charitable institutions. On the summit of a height close by the town is the ducal palace of Juisenburg, a heavy-looking structure, containing 270 apartments, and a large collection of paintings. Pop. 2800. The circle, area, about $144 \mathrm{sq} . \mathrm{m}$. ., is, in some parts, well cultivated; but a great portion of it is covered with forests. Pop. 22,600.

Several other places in Germany have the same name.
BLANKENESE, a tn. Denmark, prov. IIolstein, r. bank, Elbe, 5 m . W. Altona, to which there is a good road; and about lat. $53^{\circ} 34^{\prime} \mathrm{N}$.; lon. $9^{\circ} 48^{\prime} \mathrm{E}$. Three small creeks of the Elbe divide it into three parts, which rise up in terraces to a considerable height. It is irregularly built; but has a beautifully laid out park containing about 110 ac ., the price of admission to which, a small sum, yields a considerable yearly amount, which is appropriated to charitable purposes. The inhabitants are nearly all engaged in seafaring pursuits. A bout 240 vessels, together 15,876 tons, belong to the place; but there being no harbour, they are obliged to winter in Altona and Ilamburg. There is a ferry across the Elbe, which is here about $1 \frac{1}{3} \mathrm{~m}$. broad. Pop. 3000 .

BLANKENHAYN, a tn. Germany, duchy of SaxeWeimar, on a height $8 \mathrm{~m} . \mathrm{S} . \mathrm{S} . \mathrm{E}$. Weimar. It contains a castle, two churches, and a R. Catholic chapel; and has manufactures of ginghams, porcelain, common pottery, and tiles. It has also some trade in wool and ribbons; and three yearly markets. Pop. 1690.

BLANKNEY-with-LiNwood, par. Eng. Lincoln ; 6000 ac. Pop. 640 .

BLANQUEF()R'T, a tn. France, dep. Gironde, 6 m . from Bordeaux. In the vicinity, excellent white wines are grown. Four fairs are held annually. Pop. 1648.

BLANQUILLA, an isl. Caribbean Sea, 53 m . N.N.W. Santa Margarita ; lat. $11^{\circ} 55^{\prime}$ N. ; lon. $64^{\circ} 37^{\prime} \mathrm{W}$. (r.) It is about 15 m . in circuit, abounds in turtle, and is inhabited by a few fishermen.

BLANTYRE, a vil. and par. Scotland, co. Lanark, the former on a plain 8 nt . S.E. Glasgow, and 3 m . W. Hamilton. It is kept extremely neat and elean, and being tastefully adorned with trees, has a remarkably pleasing appearance. The houses are of stone, and generally well built. The parish church is in the village, and at a little distance from it is a Free church. Pop. 261.-About $1 \frac{3}{4} \mathrm{~m}$. from Blantyre stands a village called Blantyre W orks, or Low Blantyre, containing a manufacturing pop. of 1750 , connected with the works carried on there by Henry Monteith and Co., including the branches of cotton spinning, weaving by hand and power loom, and Turkey-red dyeing. The houses of the village are beautifully situated about 90 ft . above the level of the river, and overlook a fine sloping bank of about six acres, laid out in green sward as recreation ground for the inlabitants. The houses and streets are lighted with gas, and well supplied with river and spring water. $\Lambda$ station of the Hamilton branch of the Clydesdale Junction Nailway is within 200 yards of the village, affording communication with Glasgow, Hamilton, \&c.

The PARISH, about 6 m . in lengtl, and about 1 m . in breadth, contains the ruins of Blantyre Priory, founded by Alexander II., situated on a high rock on the banks of the Clyde, opposite Bothwell Castle. Pop. of par. 3047.

BLANZY, a vil. France, dep. Saone-et-Loire (Burgundy), which gives its name to part of a very important mining district, known as the coal-field of Creuzot and Blanzy.

BLARNEY, a vil. Ireland, co. of, and 4 m . N. W. Cork, on a rivulet of same name, here crossed by a handsome bridge of three arches. It is small, but well built; and, besides the parish church, contains a national school and dispensary. Flax and cotton were formerly manufactured to some extent, but both of these branches have now decayed. Spinning and dyeing woollen yarn, is, however, still carried on; and there
is an extensive paper-mill, employing about 170 hands. Blarney Castle stands on an isolated limestone rock, at tha junction of the Blarney and Comane; erected in the 15 th century, and the scene of several intcresting historical events; but deriving its chief notoricty from a stone in its N.E. angle, about 20 ft . from the top, bearing a Latin inscription, recording the date of the erection, and called the 'Blarney Stone;' to which tradition ascribes the faculty of communicating to all who kiss it, that species of most persuasive fluency of speech, commonly ealled blarney. The groves of Blarney are extensive and interesting; and beneath the castle there are also some curious natural caves. The Dublin and Cork Railway passes close to the vil. Pop. 253.

BLAS (SAN).-1, A point or cape, and bay (the latter called also Mandingo Gulf), Caribbean Sea, N. coast, isthmus Panama, and precisely at the narrowest part of the latter, which is here not more than 30 m . broad. The point, which forms the N.W. side of the bay, is in lat. $9^{\circ} 35^{\prime} \mathrm{N}$.; lon. $78^{\circ} 58^{\prime}$ W. (r.) The mouth of the gulf from Cape Blas to the anchorage of Mandingo, is 6 m . N. and S. ; and from that line, as much to the W., its coasts are low, and covered with mangroves, which run into the sea. The anchorage is sheltered, and has depth sufficient for any class of vessels. In the gulf, and extending from it several miles E., there are numerons islets and cays, with banks. It is about 50 m. E. Porto Bello, and 70 m . N.E. Chagres.-2, A seaport tn. Mexico, Jalisco, on an island, at the embouchure of the Santiago, in the Pacific Ocean, 37 m. W.S.W. Tepic; lat. $21^{\circ} 32^{\prime} 30^{\prime \prime} \mathrm{N}$. ; lon. $105^{\circ} 15^{\prime} 30^{\prime \prime} \mathrm{W}$. (R.) The climate is extremely unhealthy, the harbour bad, and the trade very inconsiderable.- 3, A tn., S. America, La Plata, on the bay of same name, 480 m . S.W. Buenos Ayres; lat. $40^{\circ} 32^{\prime}$ S.; lon. $62^{\circ} 10^{\prime} \mathrm{W}$. The port is known also to sailors as the Rubia de todos Santos. Pop. about 2000.-4, A cape, N. shore, Gulf of Mexico, mainland of Florida, U. States; lat. $29^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $85^{\circ} 22^{\prime}$ W. (r.)

BLASENDORF, or Balasfalva, a market tn. Transylvania, in a very fertile district, on the angle formed by the confluence of the Great and the Little Kokel, 39 m . N.N.W. Hermanstadt. It is the see of a bishop of the Greek United Church; and contains, besides the cathedral, several other churches, a divinity hall, a diocesan seminary, a gymnasium, a normal school, and a monastery. Pop. 4000.

BLASEWITZ, a vil. Saxony, circle of, and about 5 m . S.S.E. Dresden, l. bank, Elbe; and only deserving of notice because Schiller has named the female Suttler in the camp, of Wallenstein Gustel of Blasewitz, doubtless after a person of the same name, who, in Schiller's time, sold cakes at the inn close to the ferry. Pop. 230.

BLASKAT, or Blasquet Islands, a group of 12 rocky lslets, lying off the S.W. coast of Ireland, N. side of entrance to Dingle Bay, co. Kerry, the largest of which, called the Great Blaskat, is $2 \frac{1}{2} \mathrm{~m}$. long.

BLASTON (St. Michael), par. Eng. Leicester; 1300 ac. Pop. 102.

BLATHERWYCKE, par. Eng. Northampton; 2750 ac. Pop. 236.

BLATNA, a tn. Bohemla, circle, Prachin, cap. lordship of same name, on the Uslawa, 52 m . S.W. Praguc. It contains a palace, a deanery church, townhouse, school, and hospital, and has a potash refinery. Gold was at one time found in the neighbourhood. Pop. 1500.

BLATON, a vil. and com. Belgium, prov. Hainaut, 14 m . S.E. Tournai, with manufactures of woollen stuffs, hosiery, serges, \&c. It has also limekilns, and some trade in cattle. Pop. 2608.

BLAUBEUREN, a tn. Würtemberg, circle of the Danube, on the Aach, $9 \mathrm{~m} . \mathrm{W}$. Ulm. The principal buildings are the church, and the monastery, which was founded in 1467, and contains some good pictures. Besides woollen and linen manufactures, Blaubeuren possesses several breweries, a vinegar work, and numerous mills, among others, an iron, a saw, an oil, a paper, and a fulling mill. Pop. 1973.

BLAXHALL, par. Eng. Suffolk; 1930 ac. Pop. 576.
BLAYDON, a vil. England, co. Durham, r. bank, Tyne, 4 m . W. Newcastle, a station of the York, Newcastle, and Berwick Railway. It has an Established, and three Wesleyan churches. Large quantities of coals are embarked liere in keels, to be shipped at Shields. Here are extensive works
for the manufacture of lead; several white lead and sulphuric acid works; a chain and nail manufactory; a foundry for ovens, stoves, and other articles; a coke and lamp-black factory; a steel and iron forge ; and a fire-brick manufactory. Pop. 1114.

BLA YDON-BURN, a hamlet, England, co. Durham, 6 m. W.S.W. Newcastle, pleasantly situated on the Tyne, at the confluence of a small rivulet. It has extensive works, where fire-bricks and various articles of fire-clay are mannfactured. IHere is also an extensive collicry, employing from 200 to 300 hands.

BLAYE [anc. Blavia], a seaport tn. France, dep. Gironde, r. bank, Gironde; lat. $45^{\circ} 7^{\prime} \mathrm{N}$. ; lon. $0^{\circ} 41^{\prime} \mathrm{W}$. It is a fortified place of the fourth class, and lies at the foot of a rock, on the top of which stands the Upper town, called the citadel, a modern fortification built round an old Gothic castle. The glacis is planted with trees, and forms an agreeable promenade. Blaye is also defended by Fort Medoc, on the r. bank of the Gironde, and by the Paté, a fortified tower on a small islet in the middle of the river, here $2 \frac{1}{2} \mathrm{~m}$. wide, which is thus completely commanded. The fort of Blaye is much frequented, inward bound vessels delivering their manifests here, and outward bound usually calling for provisions. This town has courts of first resort, and of commerce, an hospital, and an agricultural society, with manufactures of linen and woollen stuffs, brandy distilleries, glassworks, potteries, and buildingyards for coasting vessels; a considerable trade in winc, brandy, oil, soap, apples, nuts, dried fruits, resin, ship and house timber, \&c. In 1832, the Duchess de Berri, who had been arrested in Nantes, was confined in the citadel of Blaye. Pop. 3348.

BLAZEY (St.), par. Eng. Cornwall; 2000 ac. P. 3234.
BLEADON, par. Eng. Somerset; 2490 ac. Pop. 778.

BLECIIINGDON, par. Eng. Ox ford ; 2540 ac. P. 638.
BLEDD-FA, or Blethvaugh, par., S. Wales, Radnor. Pop. 235.

BLEDINGTON, par. Eng. Gloucester; 1110 ac. P. 354.
BLEDLOW-with-LLEDOW-Ridge, par. Eng. Bucks; 4130 ac. Pop. 1205.

BLEGNO, a river and valley, Switzerland, can. Tessin. The valley lies in the N. part of the canton, formed by the nountains of the Laventina Valley on the one side, and of the Grisons on the other; it is watered by the river, and is fertile, yielding fruit and grain, and depasturing cattle._-The RIVER falls into the Tessim, after a S. course of about 15 m .

BLEIBACH, a tn. Austria, Carintlia, circle of, and about 5 m . W. Villach, in the valley of the Drau, and not far from the famous Blciberg or Lead Mountain. It contains two churches, a R. Catholic and Lutheran. Pop. 5600.

BLEIBERG, a vil. Austria, Carinthia, about 7 m . W. Villach, and so called from standing in the centre of tho important mining district of Bleiberg, which yiclds annually about 1600 tons of lead and copper.

BLEICHERODE, a tn. Prussia, prov. Saxony, gov. Erfurt, 11 m. W.S.W. Nordhausen, at the foot of the Pocken. It is walled, and has considerable woollen and cotton manufactures, tanneries, blcachfields, and oil-mills. Pop. 2780.

BLEISWIJK, a vil. Holland, prov. S. Holland, 7 m . N. Rotterdan, in a pleasant fertile situation, surrounded by a canal called de Snelle. It has a respectable townhouse, in which is a weigh-house; two churches, and a school.

BLELING, a small principality, cap. same name, N. side, isl. Bali, against which a successful expedition was directed by the Dutch, in July 1846, in consequence of the piratical doings of the lajah and his subjects.-The rown, lat. $8^{\circ} 15^{\prime}$ S. ; lon. $115^{\circ} 5^{\prime}$ E., is the sccond on the island.

BLENDWORTH, par. Eng. Hants; 3110 ac. Pop. 280.
BLENHEIM, or BlindHLim, a vil. Bavaria, on the Danube, circle, Schwaben and Neuburg, near the town of Hochstädt, celebrated as the scene of the great battle fought between the English, aided by Prince Eugene and the Imperialists, under Marlborough, and the French and Bavarian forces, under Marshal Tallard, on August 13, 1704, when the latter were defeated with a loss of 40,000 men, killed, wounded, and taken prisoners, 120 pieces of cannon, and 300 standards.

BLENHEIM PARK, a tract of lant, England, co. Oxford, 60 m .W.N. W. London, containing 2940 ac., bestowed by

## BLERE

422
BLOIS

Queen Anne, upon the great Duke of Marlborongh, in reward of the splendid victory of Blenheim; and subsequently confirmed by Act of Parliament, the House of Commons further voting the sum of $£ 500,000$, for the erection of a sxitablo palace. The structure was completed in 1715, after a design by Sir John Vanbrough.

BLERE, a tn. France, dep. Indre-et-Loire, 16 m. E.S.E. Tours, 1. bank, Cher, here crossed by a bridge, built, about the middle of the 12th century, by Henry II. of England. Bléré is the entrepot for the timber from the forest of Loche, and for most of the merchandise that comes down the Cher, from the Berry and the Bourbonnais. In the canton, and near the town of Bléré, is the castle of Chenonceaux, which at first was a simple manor-house, but extended to its present dimensions in the reign of Francis I. It was purchased, in 1535, by Henry II., who gave it, with the duchy of Valentinois, to the celebrated Diana of Poitiers, whe embellished it with great magnificence; but, before her designs were completed, was obliged to cede it to Catherine de Medicis, who continued the embellishments on a still more lavish scale. It was afterwards possessed by the house of Condé; and, in 1733, was purchased by M. Dupin (former General), the wit and beauty of whose widow attracted the most distinguished literati of the last century to the castle. Voltaire, Montesquicu, Buffon, and Rousseau, who wrote one or two pieces for the theatre, were amongst the visitors. The castle is constructed on a kind of bridge across the Cher, and has a long gallery that leads from one side of the river to the other. It fortunately escaped the Revolution, and is in perfect preservation. Many fine pictures decorate the interior. The architecture, furniture, and decorations all belong to the time of the Valois. Among the curiosities, is shown the mirror used by Mary, Queen of Scots, when married to the Dauphin. lop. 1972.

BLESSINGTON, a tn. and par. Ireland, co. Wicklow, on the Liffey, 16 m. S.W. Dublin. The town is tolerably well built, has a thriving appearance, and comprises a handsome church, two R. Catholic chapels, several schools, a dispensary, and numerous elegant private dwellings. Manu-factures:-frieze cloth, and linen fabrics. Fairs are held in May, July, and November.-In the Parisi, which is for the most part hilly, are several quarries of excellent granite. Area, 15,781 ac. Pop. (1841), 2168.

BLETCHINGLY, a tn. and par. England, co. Surrey. The town, 19 m . S. London, is pleasantly situated on an eminence, and commands an extensive prospect of the S. Downs, and other parts of Sussex. It has a church, a venerable and spacious edifice, in the early English style; an Independent chapel, an endowed grammar-school for 25 boys, alms-houses for 10 aged persons, and several smaller charities. The inhabitants are principally employed in agriculture. It formerly returned two members to Parliament, but was disfranchised by the Reform Bill; since which it has sunk into a mere village. The market has long been discontinued; but there are two annual fairs, for horses, cattle, and pigs. The SouthEastern, and the London, Brighton, and South-coast Railways, have each a station at Bletchingley. Area of par. 5250 ac. Pop. 3546.

BLE'TCIIINGTON, two pars. Eng. Sussex:-1, Bletcinington (East), 2110 ac. Pop. 163.-2, Bletclington (West), 2530 ac. Pup. 64.

BLETCHLEY, par. Eng. Bucks; 2220 ac. Pop. 685.
bletilerston, par., S. Wales, Pembroke. Pop. 271. BLETSOE, par. Eng. Bedford; 2220 ac. Pop. 420.
BLEW BERRY, par. Eng. Berks; 6950 ac. Pop. 1096.
BLEWFIELDS, or Bluefields, a tn. Central America, Mosquito territory ; lat. $11^{\circ} 59^{\prime} 18^{\prime \prime} \mathrm{N}$.; lon. $83^{\circ} 41^{\prime} 30^{\prime \prime} \mathrm{W}$. (r.) It stands on an inlet of the Caribbean Sca, on a height, near the mouth of the river of same name, has a good harbour, and is the residence of the king.-The river rises about lat. $13^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $86^{\circ} 0^{\prime}$ W., flows S.E., and falls into the inlet on which the town stands, about 7 m . N., after a course of upwards of 200 m ., for 80 of which it is navigable.

BLICKLING, par. Eng. Norfolk; 2240 ac. Pop. 356.
BLidA. See Belida.
BLIDWORTH, par. Eng. Nottingham; 6610 ac. Pop. 1132.

BLIES, a small river, W. Germany, which rises in an isolated part of the territory of Saxe-Coburg, and, after a
circuitous course through a corner of Rhenish Prussia and Rhenish Bavaria, joins r. bank, Sarre, near Sarreguemine.

BLIESKASTEL, a tn. Bavaria, Palatinate, cap. can. of same name, on the Blies, here crossed by a bridge, 5 m . W. Zwei-Briucken or Dexx Ponts. It contains two churches and a grammar-school, and has a tobacco-factory. Pop. of tn. 1874; of can. 19,762.

BLIGH, an inland co. New S. Wales, 88 m . in length, S.W. to N.E., and about 28 m . in breadth at the broadest part, or throughout about half its length, and from 10 to 15 m . throughout the remainder ; area, $1683 \mathrm{sq} . \mathrm{m}$. , or $1,077,120 \mathrm{ac}$. The plains in this county are extremely fertile. Live stock:horses, 927 ; head of cattle, 9035 ; pigs, 151 ; sheep, 120,986 . The principal town is Ailsa; the others are Dalkeith and Montefiores. Pop. 598.

BLIGH, a dist. New S. Wales, containing $5,000,000$ ac., bounded, S.W. by the Macquarie river, and N. by the Liverpool range. Live stock:-horses, 695 ; head of horned cattle, 35,754 ; pigs, 100 ; sheep, 124,211. Pop. 788, of whom 615 are males.

BLIJHAM, a vil. IIolland, prov. Groningen, 3 m . S.W. Winschoten, near the Hanoverian frontier, with two churches and a school. The vicinity is chiefly fertile clay lands, in the cultivation of which the inhabitants are mainly employed. Pop. 800.

BLIND BAY, New Zealand, N. end, isl. New Munster, off Cook's Strait, having, at its entrance, D'Urville Island on the E., and Cape Farewell on the W., distant from each other 50 m. ; lat. $40^{\circ} 42^{\prime} \mathrm{S}$. ; and between lon. $173^{\circ}$ and $174^{\circ} \mathrm{E}$.

BLIS, Balis, or Beles [anc. Barlissus], a ruined tn. Syria, 60 m . E.S.E. Aleppo, r. Dank, Euphrates ; lat. $36^{\circ} 1^{\prime} 21^{\prime \prime}$ N.; lon. $38^{\circ} 7^{\prime} 10^{\prime \prime} \mathrm{E}$. The ruins lie among chalk hills and dry valleys, and extend about 2 m . parallel to the river, and about half a mile from it; and consist of remains, both Roman and Saracenic, including mosques, castles, and domestic buildings. There are here the remains of a landing-place or port, and Blis is supposed at one time to have been the Euphrates port of Aleppo.-(Chesney's Euphrates Expedition.)

BLISLAND, par. Eng. Cornwall; 6800 ac. Pop. 688.
BLISWORTH, par. Eng. Northampten; 1980 ac. P. 882.
BLITHFIELD-with-newton, par. Eng. Stafford; 4180 ac. Pop. 390.

BLOCK ISLAND, an isl., U. States, state of Rhode Island, 10 m . S. the mainland; lat. $41^{\circ} 13^{\prime} 24^{\prime \prime} \mathrm{N}$.; lon. $71^{\circ} 35^{\prime} \mathrm{W}$. (r.) The surface is uneven and hilly, and the soil fertile. It has no harbour. The inhabitants are chiefly employed in fishing.

BLOCKLEY, par. Eng. Worcester; 7660 ac. P. 2136.
BLOFIELD, par. Eng. Norfolk; 1990 ac. Pop. 1112.
BLOIS [anc. Blesum, Blesia], a tn. France, cap. dep. Loire-et-Cher, 99 m . S.S.W. Paris; lat. $47^{\circ} 35^{\prime} 20^{\prime \prime} \mathrm{N}$. ; lon. $1^{\circ} 20^{\prime} 24^{\prime \prime}$ E. (c.) ; built in the form of an amphitheatre, r. bank, Loire, on one of the finest sites of the kingdom. From its position, on an acclivity, it is divided into upper and lower town. The upper portion, which more properly forms the town of Blois, is ill built; with narrow, crooked streets, almost impassable by carriages, but clean, and ornamented with fountains. The lower town consists of a series of well-built houses, extending along a handsome quay; a stone bridge of 11 arches, which crosses the river at this point, unites it to one of the principal suburbs. The castle of Blois is celebrated from its historical associations. It was for several centuries the abode of the Counts of that name, and afterwards the favourite residence of the Kings of France. It has been inhabited by more than a hundred princes or crowned heads, who from time to time embellished and extended it. Louis XII, was bern there; and Francis I., IIenry II., Charles IX., and Henry III. held their courts in it. Amongst other events, the Castle of Blois was the scene of the murder of the Guises. During the religious wars which at that period (1588) desolated France, the states known by the name of the States of Blois, were convoked in the castle by IIenry III., to put an end if possible to the troubles by which the kingdom was distracted. The Duc de Guise, and his brother the Cardinal, were on their way to attend the sitting, when the former was stabbed, almost in presence of the King. The Cardinal was murdered next day by some soldiers in the tower of the castle, and his body was burnt, to prevent the leaguers from making relics of his remains. The castle has been rebuilt and extended at so many various periods, that
nothing remains of its original structure, except the Gothic tower. The E. portion was built by Louis XII., the N. by Francis I., and the fine W. façade by Gaston of Orleans, after the designs of Mansard. The castle is now used as a barracks; but the states-hall, the Quecn's room, and the cor-

COURT GF THE CASTLE OF LUIS.-From France Monumentale et Pittoresque.
ridor where the Duke of Guise was assassinated, are still pointed out. The finest modern building of Blois is the episcopal palace, built by Gabriel, architect to Louis XIV. It is now used as the hotel of the Prefecture. The old church of the Jesuits, built after the designs of Mansard, is an interesting structure. The aqueduct that supplies part of the town with water, is cut through the solid rock. It is a stupendous work, and is supposed to have been executed by the Romans. Blois has also a fine public promenade, a public library, containing 17,000 volumes ; a theatre, hospital, botanic garden, lunatic asylum, and several interesting monuments. It is the seat of a bishopric, a court of first resort, and of commerce, and has an exchange and an agricultural society, communal college, two seminaries, and a royal stud. Manufactures:-gloves, vinegar, earthenware, and leather. It has a considerable trade in wine, brandy, cloth, paper, ship-timber, and firewood. Blois is the principal entrepot for the spirit called Orleans brandy. The town is of great antiquity, and was formerly the capital of an extensive county. In the 16 th century, it was twice the seat of the states-general of the kingdom. When the allied armies menaced Paris in 1814, the Empress Maria Louisa retired here, and made this place for a short period the seat of imperial government, the last acts of which were dated and despatched from Blois. Pop. (1846), 13,132.

BLOKZIJL, a market tn. Holland, prov. Overijsel, 16 m. N.N.W. Zwolle, at the embonchure of the Blokzijler Aa, in the Zuider Zee. It is a regularly built, good-looking town, with two churches, Calvinistic and Baptist; a synagogue, three schools, and a weigh-house. The chief occupations are trade, shipping, the manufacture of salt and leather. Pop. 1700.

BLOMBERG, a tn. Germany, Lippe-Detmold, on the Distel, 26 m . S.S.E. Minden. It is entered by three gates, contains two churches, a townhonse, and old castle; and has a bark-mill, a fulling-mill, and a tilework. Pop. 1950.

BLOOMINGTON, a vil., U. States, Indiana, 43 m. S. Indianopolis. It has five churches, belonging to different religious bodies; a female academy, and a university. Pop. (1840), 1550.

BLO-NORTON, par. Eng. Norfolk; 1400 ac. Pop. 435.
BLORE, par. Eng. Stafford; 3730 ac. Pop. 333.
BLOTZHEIM, or Bladolsheim, a vil. France, dep. IIaut-Rhin, 15 m . E. Altkirch. Near it is a ferruginous spring. Pop. 2280.

BLOXHAM, par. Eng. Oxford; 4240 ac. Pop. 1543.
BLOXHOLME, par. Eng. Lincoln; 1100 ac. Pop. 67.
BLOXWORTH, par. Eng. Dorset; 3420 ac. Pop. 306.
BLUDENZ, or Pludenz, a tn. Austria, Vorarlberg, r. bank, Ill, 12 m . S.E. Feldkirch. It is a sombre-looking place, has a capacious monastery, salt and alum works, and, on a neighbouring hill, an old castle. Pop. 1865.

LLUEFIELDS. See Blewfields.

BLUE MOUNTAINS.-1, A system of mountains oceupying the E. portion of isl. Jamaica. The principal ridge runs from E. to W., and varies in height from 5000 to 6000 ft . Some isolated peaks rise still higher.- 2 , A range of mountains in E. Australia, about 70 m . from the coast, stretching generally from N. to S., and lying between lat. $33^{\circ}$ and $35^{\circ} \mathrm{N}$. - 3, A range of mountains in the Oregon territory, midway between the Rocky Mountains and the coast; they are about 200 m . in length, and attain an elevation, at the highest part, of $2400 \mathrm{ft} .-4$, Blue Ridge, the E. portion of the Alleghany Mountains, U. States, branching off from the main range in N. Carolina, crossing the state of Virginia, and extending to the high lands on the Hudson River. The highest peak has an elevation of about 4000 ft .

BLUNDESTON, par. Eng. Suffolk; 1500 ac. Pop. 592.
BLUNHAM, par. Eng. Bedford; 3300 ac. Pop. 1050.
BLUNSDON (St. Andrews), par. Eng. Wilts; 1420 ac. Pop. 79.

BLUNTISHAM-AND-EARITH, par. Eng. Huntingdon; 3410 ac. Pop. 1457.

BLYA, a vil. Ifolland, prov. Friesland, 12 m. N.E. Leeuwarden; with a church and school. The inhabitarts, chiefly agriculturists, are said to be the best flax-growers in Friesland. Pop. 990.

BLYBOROUGH, par. Eng. Lincoln; 3080 ac. Pop. 197.
BLYMHILL-with-brincton, par. Eng. Stafford; 2190 ac. Pop. 633.

BLY'TH (South), or Blyth Nook, a small seaport tn. England, co. Northumberland, r. bank, Blyth, at its confluence with the German Ocean, $11 \frac{1}{2}$ m. N.N.W. Newcastle; lat. $55^{\circ} 7^{\prime} 30^{\prime \prime} \mathrm{N} . ;$ lon. $1^{\circ} 30^{\prime} \mathrm{W}$. It has but one principal street, crooked, and indifferently kept; houses of stone, ill built; and water carted into the town. It has a chapel of ease connected with the Established church, four places of worship belonging to dissenters, day and Sunday-schools, a mechanics' institution, baths, and two public gardens. The harbour is secure, and the entrance for small vessels at all times free from obstruction. A lighthouse was erected here in 1788, which shows a fixed light visible for 10 m . in clear weather. There are also a beacon light, a dry dock, two slipways for building and repairing ships, and a custom-housc. In the neighbourhood are several coal mines. The export of coals and salt, and of iron, from the Bedlington ironworks, 5 m . distant, employs about 100 vessels. The Cramlington station of the York, Newcastle, and Berwick Railway, is 6 m . from the town. Pop. (1841), 1921.-North Blyth, situated opposite S. Blyth, 1. bank of the river, is a small vil., inhabited chiefly by fishermen and pilots.

BLY'TH, a par. and vil. England, co. York, W. Riding, area, 17,070 ac. The vil. lies 6 m. N.N.W. East Retford, on a gentle acclivity; and possesses a church and several charities. It was formerly a place of some importance. Pop. of par. 3488.

BLYTH, a river, England, co. Suffolk, rising near Laxfield, and, after an E. course of 16 m ., falls into the German Ocean, 1 m . S. by W. Southwold. It is navigable to Halesworth, a distance of about 8 m .

BLYTHBURGH, par. Eng. Suffolk; 3590 ac. Pop. 837.
BLYTHFORD, par. Eng. Suffolk; 1240 ac. Pop. 223.
BLYTON-with-wharton, par. Eng. Lincoln; 2830 ac. Pop. 647.

BO, or Po, a group of seven islands, Indian Archipelago, E.S.E. isl. Gilolo; lat. $1^{\circ} 17^{\prime} \mathrm{S} . ;$ lon. $129^{\circ} 18^{\prime}$ E. They abound in cocoa-nuts and sago, are very populous, and subject to the Rajah of Popo.

BOARHUNT, par. Eng. Hants; 1850 ac. Pop. 232.
BOAVISTA, or Bonavista, the most E., and one of the largest of the Cape de Verde Islands, 21 m . S. by E. Ilha de Sal, and 300 m . W. by N. Cape Verde, the nearest point of the African coast ; lat. (N. point) $16^{\circ} 5^{\prime} \mathrm{N}$. ; lon. $22^{\circ} 48^{\prime} \mathrm{W}$. It is of irregular form, about 16 m . long, and as many broad ; and, as its name implies, presents a beautiful appearance. Hills and valleys alternate, while, in some places, low points project into the sea; on the E. side, in particular, is a low projecting point not discernible at a distance, from which extends a reef of dangerous rocks; and N. this point are several rocky islets, terminating in another reef, which has caused the destruction of several vessels. Salt is the principal article of trade, exchanged for clothes and other nccessaries. The best and
safest of the several anchorages is English Road, a little off the only town on the island. The inhabitants exhibit every variety of colour, owing to intermarriages; and several years ago were estimated at 3000 .

BOBBBING, par. Eng. Kent; 1040 ac. Pop. 404.
BOBBINGTON, par. Eng. Salop and Stafford; 2320 ac. Pop. 418.

BOBBINGWYORTH, par. Eng. Essex; 1430 ac. P. 357.
BOBBIO, a tn. Sardinian States, eap. prov. of same name, gov. of, and 37 m . N.E. Genoa, on the Trebbia. It is surrounded by walls, has a dismal appearance, and is the seat of a bishopric suffragan to Genoa, and of a district court of justice. It owes its origin to a monastery founded here in the 7 th century. In 1743 , it was ceded to Sardinia by Austria. Pop. 4000 .-The province is 25 m . long, and 10 m . broad. A spur of the Apennines divides it into two parts; the S . portion watered by the Trebbia, and the N. by the Stafora and Tidone. It is divided into four mandements, which are again subdivided into 27 communes. Pop. 31,354 .

BOBER, a river, Prussian Silesia, which rises near a vil. of same name, in the Riesengebirge, and after receiving, 1. bank, the Queis and Oels, and, r. bank, the Sprotta, falls into the Oder, near Crossen, after a N.N.W. course of nearly 180 m .

BOBERKA, or Bobrka, a small tn. and lordship, Austria, Galicia, circle, Berzezany, 19 m. S.S.E. Lemberg. It contains a R. Catholie and a Greek church. The inhabitants are chiefly employed in weaving linen. Pop. 2700.
bOBIA, Abobbi, or Pirate Island. See Amboises.
BOBLINGEN, a vil. Wïrtemberg, 10 m . S.W. Stuttgart; with woollen, linen, and cotton manufactures, vinegar and chemical works. Pop. 3300 .——The District, area, 54 geo. sq. m., has a pop. of 40,000 , employed chicfly in weaving, the culture of hops, and the timber trade.

BOBROUISK, a fortified tn . Russia, cap. dist. of same name, gov. of, and 85 m . S.E. Minsk, at the junction of the Bobrouiia with the Berezina. It has four churches and a school, and forms a station for steam-vessels navigating the Berezina and Dnieper. It was besieged by the French, without success, in 1812. Pop. 5500.

BOBROV, or Bobroff [beaver], a tn. Russia, cap. dist. of same name, gov. of, and 53 m . S.E. Voroneje, r. bank, liitioug. It has two churches, extensive gardens, and some trade. Pop. 5500.

BOCA, or Bocca [mouth].-1, Boca del Toro, a channel between two islands, leading into the bay of the same name, Carribean Sea, N. coast, Yeragua; lat. $9^{\circ} 20^{\prime} 30^{\prime \prime}$ N.; lon. $82^{\circ} 15^{\prime} 15^{\prime \prime} \mathrm{W}$. (R.) - 2 , Boca del Drago, a channel leading into the same bay, 15 m . N.W. the former.-3, Boca de Chiviqui, a channel, Carribean Sea, leading through a cluster of islands into a lagoon of the same name, N. coast, Veragua, 40 m . S.E. Boca del Toro.-4, Boca Chica [little mouth], the entrance into the harbour of Cartagena, New Granada; lat. $10^{\circ} 20^{\prime} \mathrm{N}$. ; lon. $75^{\circ} 38^{\prime} \mathrm{W}$.

BOCAGE (LE), two dists. France, the one forming part of dep. Vendée, and so called from the great quantity of wood which covers it; and the other, called also Bessin Meridional, which belonged to prov. Normandy, and had Vire for its capital, is now included in dep. Calvados.

BOCAİNA, a mountain-range, Brazil, prov. Rio de Janeiro. It is an offset of the Orgãos or Organ Mountains.

IBOCAYREN'IE, a walled tn. Spain, prov. of, and 50 m . S.S.W. Valencia, on a small conical hill at the W. extremity of the valley of Agres. It has hilly and inconvenient streets, four kquares, a parish church, three well-attended schools, a townhall, small and very unwholesome subterraneous prison, an hospital, publie storehouse, and an extensive palace of the Baron de Casasnova. Manufactures:-linen and woollen fabries, cloth and baize of all kinds, hats, soap, hemp, and lurandy. A monthly market is held. Pop. 4074.

BOCCA TIGRIS, or BOGUE, the name given to the embouchure of the principal branch of the Chu Kiang, or Canton river, China. At this point the river suddenly expands to an estuary of 20 m . in breadth. To the S.W. there are several shallow channcls, by which the flat-bottomed trading craft of the Chinese can reach Canton; but British ships, and all others of large draught of water, can ascend the liver by the Bogue only. On this account it was strongly fortified by the Chinese, but, though mounting 120 caunons,
was forced, with little effort, by the British frigates Imogene and Andromache, in September 1834.

BOCHNIA, a tn. Austria, Galicia, cap. circle of same name, gov. Lemberg, 25 m . E.S.E. Cracow, near the Raba. It is tolerably well built, with several churches, a gymnasium, a grammar and other schools, and a board for the government of mines and saltworks. The salt mines here employ 500 persons, and yield about 12,500 tons per annum. Pop. 5500.

The circle, area, 800 geo. sq. m., contains five municipal and cight market towns, and 377 villages. In addition to agriculture and the ordinary handicrafts, mining, partieularly that of salt, gives employment to the inhabitants. There are also considerable manufactures of linen, and various articles of ironware. Pop. 178,760.

BOCHOLD, or Bocholt, a tn. Prussia, prov. Westphalia, gov. Munster, on the $\mathrm{Aa}, 15 \mathrm{~m}$. E.N.E. Cleves. It contains three churches, one of them a beautiful structure, in the Gothie style, and a castle of the princes of Salm-Salm; and has manufactures of silk, cotton, and woollen stufis, bonnets, and hosiery; with several distilleries. In the neighbourhood are valuable iron mines, and ironworks, which produce sheet iron, and all kinds of castings. Pop. 4462.

BOCHOLZ, a vil. Holland, prov. Limburg, 13 m . E.S.E. Maastricht, with a R. Catholic chureh, a school, an old castle, a brewery, and a distillery. Pop. 680.

BOCHUM, a tn. Prussia, prov. Westphalia, gov. Arnsberg, cap. circle of same name, 25 m . N.E. Düsseldorf. It is walled, contains four churehes and chapels, and has manufactures of kerseymeres and ironmongery. Pop. 3813.The circle, area, 104 geo. sq. m., consists of an undulating plain, which is very fertile, watered by the Rulr, and the Emsch, and studded over with old eastles, which gives the whole district a very picturesque appearance. Pop. 48,058, almost all Protestants, only 2000 being R. Catholies, and 300 Jews.

BOCKAU, a mining vil. Saxony, circle, Zwickau, dist. of, and 4 m. W.N. W. Schwarzenberg. It has a tin furnace, several chemical, and numerous vitriol works. In the neighbourhood, silver and cobalt are worked, and medicinal herbs extensively grown. Pop. 1700.

BOCKENHEIM, a tn. IIesse-Cassel, prov. and circle of IIanau, not far from Frankfort-on-the-Main. It is a very stirring place; and has numerous manufactures-cloth, straw hats, ironware, machinery, and the well-known Hessian crucibles. It has also a bleachfield, and a distillery for spirits of wine. Pop. 3300.

BOCKING, a vil. and par. England, co. Essex. The village lies on a gentle acclivity on the Blackwater, a little N. from Braintree; with which it forms a continuous town, though in a different parish. It consists of one principal street, and several smaller; some of the houses are well built ; most of the others are merely lath and plaster. It is well supplied with water, but not lighted. The only buildings of any note are the parish chureh, an Independent and Wesleyan chapels, and the union workhouse. The schools are, a national school, a British school, and a respectable boarding-school. There are several minor charities; also a literary and mechanics' institute. Bocking was, formerly, celebrated for its baize manufacture; but this branch has given place to the silk trade, which is carried on here to a great extent ; the weaving of silks, satins, and velvets, employing many hundred hands. There is also a crape mann factory. Area of par. 3800 ac. Pop. 3437.-(Local Correspondent.)

BOCKLETON, par. Eng. Hereford; 3300 ac. Pop. 358.
BOCOGNANO, a tn. France, isl. Corsica, 16 m . N.E. Ajaccio, in an extensive and very fertile plain, near l. bank, Gravone. Many persons in easy circumstances retire to it during the summer heats, to enjoy its cooling breeze. Pop. 2631.

BOCONNOC, par. Eng. Cornwall; 2230 ac. Pop. 312.
BODDING'TON, two pars. Eng. :-1, par. Gloucester 1550 ac. Pop. 414.-2, Boddington (Lower and Upper), par. Northampton; 3770 ac. Pop. 675.

BODE, a small river, Germany, which rises in the Harz Mountains, and is formed by two streams, called the Cold and the Warm Bode. It afterwards receives the Rapp-Bode and the Jup-Bode; and, flowing E.N.E., joins the saale about 7 m. E. Halberstadt.

BODEDERN, par., N. Wales, Anglesey. Pop. 1085.
BODEGA, a port and settlement, U. States, California, on the Pacific, $40 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. the embouchure of the San Francisco, lat. $38^{\circ} 40^{\prime} \mathrm{N}$. ; lon. $122^{\circ} 40^{\circ} \mathrm{W}$. The settlement was made by the Russians, in 1812, and was designed to serve as the factory of the Russian American Company, and the entrepot of their peltry.

BODEGRAVEN, a vil. Holland, prov. S Holland, 11 m. W.S.W. Leyden. It is well built, on both sides of the Rhine, here crossed by a drawbridge, and ha3 a cruciform Calvinistic church, a small evangelical Lutheran church, and two schools. It is one of the stations between Leyden and Utrecht, the traffic between which makes the village cheerful.

BODENHAM, par. Eng. Hereford; 5530 ac. P. 1017.
bodensee. See Constance (Lake).
BODENSTADT, a tn. Austria, Moravia, circle, Prerau, in a valley 20 m. E. Olmütz. It is a very old place, and contains a castle, two churches, and an hospital. Pop. 1305.

BODENSTOWN, par. Irel. Kildare; 2832 ac. P. 459.
BODENWERDER, a tn. Germany, on an isolated part of IIanover, and 30 m . S.S.W. the city of that name, 1. bank, Weser. It has walls with two gates, carries on a good shipping trade, and contains numerous tanneries, a printfield, and cotton mills. Pop. 1486.

BODEWRYD, par., N. Wales, Anglesey. Pop. 32.
BODFARY, or Bodvart, par., N. Wales, Denbigh. P. 945. BODFERIN, par., N. Wales, Carnarvon, Pop. 64.
boldfuan, or Bodvean, par., N. Wales, Carnarvon, I'op. 366.

BODIIAM, par. Eng. Norfolk; 1680 ac. Pop. 292.
BODIAM, par. Eng. Sussex ; 1480 ac. Pop. 377.
BODMIN, a parl. bor. and tn. England, co. Cornwall, near its centre, chiefly on the slope of a hill, $26 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Plymouth. It has three principal streets, lying E. and W., all straight and well kept; houses of stone, and those of recent erection commodious and substantial; well lighted with gas, water abundant. The church, erected about the middle of the 15th century, and situate at the E. end of the town, is the largest in the county, and, in the interior, the landsomest. It contains, amongst other interesting relics, a curious font, evidently of high antiquity. There are chapels, besides, for Bryanites, Independents, and Methodists. The schools are, a national school, an endowed British and Foreign school, and an academy. There are also a literary institution and a dispensary. The town has much improved since 1839, when the whole of the county sessions and assizes began to be held in it, although its population does not seem to be increasing. It has no manufactures. By the municipal act, its government is vested in a mayor, fonr aldermen, and 12 councillors. It returns two members to the House of Commons. Area of par. 6310 ac. P. ( 1841 ),4643; of bor.5901.-(LocalCorrespond.)

BODNEY, par. Eng. Norfolk; 2590 ac. Pop. 98.
BODÖE, a tn. Norway, prov. Tromsüe, cap. bail. Nordland, on the Salten-fiord, at the extremity of Bodöe peninsula, the youngest and most unimportant chief town in the country. It has a good harbour; trade is its only support, and fish its only export. Pop. 309.

BODROGH KERESZTUR, a market tn. Upper Hungary, 3 m. N.N.W. Tokay, r. bank, Bodrog. It has two churches, a synagogne, and large annual cattle-markets. The environs produce rye, and the famous 1Iegyalla wines, known by the name of Tokay. Pop. 4500.-An important river, which is formed by the confluence of the Latoreza, the Ungh, the Laborez, and the Ondava, takes the name of Bodrogh in the latter part of its course, before joining the Theiss at Tokay.

BODROROG, par., N. Wales, Anglesey. Pop. 358.
BOEO (CAPE), [anc. Lilyberum Promontorium], the most W. point of Sicily, about 1 m . W. Marsala ; lat. $37^{\circ} 48^{\prime} 10^{\prime \prime} \mathrm{N}$.; lon. $12^{\circ} 25^{\prime} 10^{\prime \prime} \mathrm{E}$. The cape, like the rest of the coast in its vicinity, is low, and the shore is foul, a shelving rocky bottom extending more than a mile ont, and making the navigation dangerous. This cape being the point of Sicily nearest to ancient Carthage, early became an important naval station; and near it was fought a famous naval battle between the Rumans and Carthaginians. The decisive victory gained by the former, put an end to the first Punic war.

BCEOTIA, a division of ancient Greece, now included in the modern nome or province of Attiké and Viotia. See Attike.

Vol. I.

BOG. See Bua.
BOGAN, a river, New S. Wales, Wellington district. Its chief sources are in Harvey's Range, in about lat. $32^{\circ} 50^{\prime} \mathrm{S}$. ; lon. $148^{\circ} 27^{\prime}$ E. It flows N.W., and falls into the Darling, in lat. $30^{\circ}$ S.; lon. $145^{\circ} 51^{\prime}$ E.; whole course, about 300 m . The uniformity of this river is remarkable, neither the character of its banks nor the breadth of its bed undergoing any perceptible change throughout its entire length.

BOGARRA, a m . Spain, New Castile, prov. of, and 29 m . S.S.W. Albacete, near l. bank, Madera; with irregular and steep streets, a large square, a parish church, townhouse, prison, endowed school, and two public storehouses. Manufac-tures:-linen, woollen, and silken fabrics; trade, cattle and grain. Pop. 1927.

BOGDOIN DABASSU, a salt lake, Russia, gov. Astrakhan, at the foot of the remarkable hill Bogdo-oola, and 14 m . E. Tchernoiarsk. It is about 10 m . long, from N. to S., and 6 m . broad; produces a fine sparkling white salt, the incrustation of which along the shore makes it look as if covered with snow. The salt, owing to the expense of transport, has ceased to be an object of traffic.

BOGDO-OOLA, a remarkable hill, Russia, gov. Astrakhan, not far from the banks of the Aktuba, and about 14 m . E. Tchernoiarsk. It stands isolated in the middle of a vast steppe, and, rising up into a conical peak, to the height of nearly 500 ft ., forms a conspicuous object from a great distance. Its base forms a mass of earth and rock of a triangular form, and appears to rest on limestone. Higher up, it consists of sandstone, which, on the N.E. side, rises perpendicularly like a rampart, and is cut into deep clefts, which are the resort of innumerable birds from the steppes. The sandstone is succeeded by layers of clay and sand, alternately white and red, giving it a very strange appearance. The summit contaius fragments of mussel limestone, but is chiefly composed of masses of rock-salt. Bogdo-oola, or Holy Mount, is the name given to the hill by the Kalmuks, who hold it in the highest veneration, and have a tradition that the Dalai Lama once passed a night upon it, and, while dining, let fall a grain of salt, which grew up into the present salt cone. At the foot of the hill is the salt lake Bogdoin Dabassu (which see).

BOGENHAUSEN, a vil. Bavaria, r. bank, Isar, in the immediate vicinity, and almost a suburb of Munich. It contains two palaces and a fine royal observatory. Pop. 196.

BOGENSE, a tn. Denmark, N.W. coast, isl. Fühnen, 17 m . N. W. Odense; with a small harbour, from which there is regular communication to the coast of Jutland. Pop. 1400.

BOGIE, a rivulet, Scotland, co. Aberdeen, formed by the confluence of two burns near the manse of Auchindoir, and, after a course of about 11 m . through the beautifnl strath to which it gives its name, falls into the Doverin a little below Huntly.

BOGLIPOOR. See Bhavgulpore.
BOGMUTTTI, Bogmutty, or Bogmuttee, a river, IIindoostan, rising in Nepaul, S.W. Khatamandoo, and after a S.E. course of 22 m . and receiving numcrons affluents, it falls into the Ganges opposite Monghur ; lat. $25^{\circ} 25^{\prime}$ N.; lon. $86^{\circ} 28^{\prime}$ E.

BOGNOR, a small market and maritime tn. England, co. Sussex, 6 m . S.E. Chichester, on an extensive plain, sheltered from the N. winds by the S. Down hills. It is lighted with gas, amply supplied with excellent water, and has three principal, straight, spacious, and well-kept streets, houses built without any attempt at regularity, but generally substantial. There are, besides, two handsome terraces, and numerons elegant villas in the vicinity. Bognor has four churches, the parish church, a chapel of ease, and a dissenting and Wesleyan places of worship, all of them plain structures ; a national and infant school, and an academy. It has become a favourite watering-place. Pop. 3000.-(Local Correspondent.)

BOGOE, or BAAGÖE, an isl. Denmark, between islands Möen and Falster. It is fertile, has a village named Bogöby, and about 1000 inhabitants.

BOGODOUKHOF, or Bonodoukhof, a tn. Russia, cap. dist. of same name, gov. of, and 34 m . N.W. Kharkov, on the Merle. It has some trade in ox-hides, and goat-skins, which are prepared in considerable quantities. Pop. 10,606 .

BOGORODITZK, a tn. Russia, cap. dist. of same name, gov. of, and 32 m . S.E. Tula. It is a mean-looking place, but contains three churches, a fine palace, and has some export of grain, flax, and honey, produced in the district. Pop. 3000.

54

BOGORODSK, or Boronodsk, a tn. Russia, gov. of, and 30 m . E. Moscow, r. bank, Kliasma, and on the road between Moscow and Vladimir. Though it ranks as a town, and is chief place of a circle of the same nane, it is in appearance a mere village. The houses are of wood, and have steps to the doors, and covered balconies. Most of them have bath chambers, and at almost every front door, an earthen vessel is hung up called rukamónik [hand-washer], which is used by the inmates every morning. In the neighbourhood are quarries, with strata of compact quartz, generally yellow, but sometimes brown, and exhibiting marks which have evidently been made by the spines of encrinites. Pop. about 500 .

BOG()SLOVSK, a mining vil. Russia, Ural Mountains, gov. of, and 185 m . N.E. Perm, near lat. $60^{\circ}$ N., 960 ft . above the sea. The copper ores obtained here are found in limestone, about 2 m . from the village. The mines are the property of the bank of Russia, the workmen convicts. Grain will not ripen, and turnips do not thrive here.

BOGOTA [formerly Santa Fé de Bogota], a city, S. America, cap. republic of New Granada, the seat of government, and of an archbishopric ; lat. $41^{\circ} 35^{\prime} 48^{\prime \prime} \mathrm{N}$. ; lon. $74^{\circ} 13^{\prime} 45^{\prime \prime}$ W. (L.) It is situated on an elevated plain, 8863 ft . above the sea, at the foot of two lofty mountains, with a delightful thongh moist climate, resembling a perpetual autumn; the temperature rarely exceeding $59^{\circ}$ Fah. Seen from a distance, it presents a very imposing appearance, rising in the form of an amphitheatre. The streets are narrow, but regular, crossing each other at right angles, and many of them having a stream of water flowing down the middle. They are all paved, and have footpaths, but are indifferently lighted; and, there being no common sewers, are often in a filthy state. The principal street, Calle Real, is very handsome, terminating at one end in a square, formed by the palace of the president, the cathedral, the custom-house, \&c. There are several other squares besides, of inferior pretensions, though spacious, and all ornamented with fountains. Bogota being subject to earthquakes, the houses are low, and strongly built; few of them exceeding two stories in height. They are constructed of sun-dried brick, whitewashed, and tiled, without chimneys, stoves only being used. Traffic is carried on in the streets by mules, no vehicles of any kind being employed. The religious structures of the city are disproportionately numerous, there being no fewer than 26 churches, a cathedral, nine monasteries, and three nunneries, to whieh more than half the liouses in the city belong. The churches, though gorgeously adorned interiorly, display more splendour than taste. Bogota contains a university, three colleges, most of the professors in which are monks or priests, a school of chemistry and mineralogy, a Lancasterian school, a national academy, a public library, an observatory, a botanic garden, and a well-attended theatre. The inhabitants, mostly Creoles, are described as a mild, polite, and cheerful people. The women are reputed bandsome, with fair and clear complexions, and Spanish physiognomy. The market is well supplied with provisions of every kind, and with fruits and vegetables, the former including strawberries, pine-apples, peaches, \&c. Manufactures :-soap, cloth, leather, and precious metal; trade active. Bogota was founded in 1538 , and made an archbishopric in 1561. It was formerly capital of the Spanish vice-royalty of New Granada, and also capital Republic of Colombia. Pop. 30,000 to 40,000 .

BOGOUSLAV, or Boguslaw, a tn. Russia, gov. of, and 70 m . S.S.E. Kiew, cap. dist. of same name, r. bank, Rossa. It contains three churches (two Greck and one United). A great proportion of the inhabitants are Jews. Pop. 6000.

BOGOWONTO, a river, isl. Java, rising in prov. Baglen, skirting the W. of Djocjokarta, and falling into the Indian Occan.

BOGUTSCIIAR, a tn. Russia, gov. of, and 138 m . S.E. Yoroneje, on the Bogutscharra, at its junction with the Don. The district is productive of corn and cattle. Pop. 2600.

BOGWANGOLA, or Bifagavan Gola, a tn. Hindoostan, presid. and prov. Bengal, 8 m. N.E. Moorshedabal, r. bank, Ganges. It is a busy place, presenting more the appearance of a fair than a town, and is built entirely of bamboos and thatch. The encroachments of the river have caused the town to be removed back several times. Having always plenty of water, it is a busy emporium for inland navigation.

BOHAIN, a tn. France, dep. Aisne, 12 m. N.N.E. St. Quentin. Cashmere and light silk sliawls are made here, and
in the surrounding villages, to a large extent. Musical clocks are also manufactured. Pop. 3748.

BOHARM, a par. Scotland, cos. Banff and Moray; length, 9 m .; breadth, from 2 to 3 m . Pop. 1261.

BOHEMIA (Kingdom of), [German, Bühmen or Biheim; French, Bohême], an administrative division of the Austrian empire, in the Germanic Confederation, cap. Prague; bounded, E. by Moravia, N.E. by Prussian Silesia, N.W. by the kingdom of Saxony, W. by Bavaria, and S. by the archduchy of Austria; and between lat. $48^{\circ} 33^{\prime} 58^{\prime \prime}$ and $51^{\circ} 3^{\prime} 39^{\prime \prime}$ N.; and lon. $12^{\circ} 4^{\prime}$ and $16^{\circ} 47^{\circ} 8^{\prime \prime}$ E.; length, E. to W., 210 m . breadth, N. to S., 171 m .; circuit, 814 m .; area, $20,223 \mathrm{sq} . \mathrm{m}$. Bohemia forms an extensive upland valley, with an inclination to the N.W. It is surrounded on all sides by mountains, and belongs almost exclusively to the basin of the Elbe, by which stream nearly all the water that falls in the country is drained off through a single defile on the Saxon fronticr, which scparates the Erzgebirge from the Lausitz branch of the Riesengebirge. It is divided into 16 circles (kreise) or provinces, and the metropolitan district of Prague.

Mountains.-Four chains of lofty mountains constitute the natural boundaries of the Bohemian basin. N. and N.E., it is separated from Silesia by the Riesengebirge [giant mountains], one of the principal branches of the Sudetic chain. The highest peaks, which are likewise the loftiest of N. or Central Germany, are the Riesenkoppe [giant cap], or Schneckoppe [snow cap], 5400 ft ; the double-capped Brunnberg, or Bornberg, 5007 ft . ; and the Sturmhaube [storm-hoodl], 4756 ft . N. and N.W., it is separated from Saxony by the Erzgebirge [ore mountains]; parted N.E. from the Riesengebirge by the defile through which the Elbe leaves Bohemia. The Erzgebirge is not so much a chain of mountains as a huge continuous mound, sloping gradually on the Saxon side, but remarkably abrupt on the Bohemian. It is well wooded, and its undulating ridges are broken in some places by considerable depressions. Its highest peaks are the Schwarzwald, or Sonnenwirbel, ncar Joachimsthal, 4124 ft ; Little Fichtelberg, near Wiesenthal, 4009 ft ; Schnceberg, 3300 ft . W. and S.W., Bohemia is scparated from Bavaria and the archduchy of Austria by the Böhmerwaldgebirge [Bohemian forest mountains], a range which forms part of the Sylva Hercynia of ancient geographers. At its N.W. extremity, it is separated from the Erzgebirge by the depression through which the Eger flows. It is wild, precipitous, and full of decp chasms and ravines; towards Bavaria it is very stcep, but of more gradual inclination on the Bohemian side. Its most elevated points in Bohemia are the Meidelberg, 4623 ft ; Kubani, or Boubin, 4521 ft ; Plakenstein, 4482 ft ; Ossaberg, 4245 ft. S., S.E., and E., the Mährischesgebirge [Moravian mountains] separate Bohemia from the archduchy of Austria and Moravia. This chain, uniting at its S.W. extremity with the Bübmerwaldgebirge, and at its N.E. with the Riesengebirge, completes the circle of mountains by which Bohemia is enclosed. The Moravian chain is of gentle acclivity, of the average height of 3281 ft ., and separates the basin of the Elbe and Moldau from that of the Danube. Several offsets from these chains, of inferior height, intersect the kingdom.

Geology and Mincrals. - The whole of these mountainranges, gencrally speaking, are of primitive formation, though later formations are found on the N.W., where the Elbe
quits Bohemia, and on the N.E. near Trautenan. In the centre of the country is an extensive sandstone formation; and that the carboniferous serics likewise exists, is evidenced by the presence of coal, of whieh the quantity produced in 1845 was 285,180 tons, and in $1846,321,855$. Indeed, one of the chief sources of the country's wealth has been its valuable minerals, found ehiefly in the Erzgebirge and the spurs of the Fiehtelgebirge. Of gold and silver it now yields little; of the latter, in 1844, the quantity obtained was only $21,243 \mathrm{lbs}$. Troy. But it produces cinnabar, tin, bismuth, copper, zinc, nickel, lead, manganese, litharge, sulphur, alum, iron, arsenic, chrome, sulplate of iron and copper, and plumbago; some of these in considerable quantity. For the years 1842, 1843, and 1844 , the total money-value of the produce of the mines was, respectively, $£ 317,172, £ 322,093$, and $£ 368,109$. The plumbago, or graphite, is said to be inferior to that of England, though still of good quality. In 1845, the quantity produced was about 400 tons; and in 1846 , upwards of 550 tons. Quarries are worked everywhere, and excellent marble, alabaster, quartz, granite, freestone, superior millstones, and grindstones are obtained. The beautiful garnets, famous over Europe, are found chiefly in the cireles of Czaslau and Leitmeritz; and in varions localities topazes, chaleedonies, amethysts, jaspers, sapphires, carnelians, rubies, agates, and many other kinds of precious stones, porcelain earth, and potters' clay.

Rivers, Lakes, and Springs.-The streams of Bohemia converge from all sides towards the Elbe, which rises in the Riesengebirge, and of which, either direetly or indireetly, with exception of some inconsiderable tributaries of the Danube and Oder, they all are affluents, and through which their waters are drained off through a mountain defile in the Saxon frontier, where the level of the river is 287 ft . above the sea. The principal affluents of the Elbe in Bohemia are the Moldau, with its tributaries the Beraun and the Eger; the first rising in the Moravian mountains, and the second in the Fiehtel, and the third in the Bohemian forest. These streams afford excellent water-ways for navigation and flotation. Bohemia has no large lakes, but it is said to possess 20,000 ponds, and 160 mineral springs. Some of these last are famed over Europe, of which may be specified the saline chalybeate springs of Franzensbruun, near Eger; those of Marienbad and Giesshiibel; the warm alkaline aperient springs of Carlsbad and Töplitz ( $166^{\circ}$ and $99^{\circ}$ Fah., respectively); one at Marienbad, and others at Bilin and Liebwerda; the bitter, cathartic waters of Sedlitz, Saidschütz, and Püttna; the sulphurous springs of Töplitz; besides a host of others of less repute. The warm spring to which Carlsbad owes its celebrity, seems to have been known in the seventh century. 200,000 gallons of these mineral waters are exported annually.

Climate.-The elimate is variable, but in general healthy; and warmer in the low districts, the eentral parts, and towards the N., than in the S. The mean annual temperature at Prague, is $48^{\circ} 43^{\prime}$ Fah.; winter, $32^{\circ} 31^{\prime}$; spring, $47^{\circ}$; summer, $69^{\circ} 50^{\prime}$; autumn, $50^{\circ} 22^{\prime}$. In the Bölmerwald, the snow is often found 12 ft . deep, and lies till the middle of April; in some of the other ranges it remains throughout the whole year. The prevailing winds are W., N.W., and S.W., bringing drought in winter, and rain in summer; the annual fall of rain is about cqual to that of the midland counties of England.

Vegetation, Agriculture, dec.-Excepting in the lofty moun-tain-ranges, the soil of Bohemia is generally fertile, more especially in the N. and N.E., and in the valleys of the Eger and the Elbe. The whole amount of arable land is estimated at $12,259,362 \mathrm{ac}$., of whieh $6,101,649 \mathrm{ac}$., or nearly one-half, is under the plough, the remainder being laid out in orehards, vineyards, pastures, \&c. The principal crops raised are rye and oats, about equal in quantity; barley and wheat, about half the two former. Potatoes and turnips are grown extensively, and considerable quantities of legumes, poppies, rape and clover sceds, flax, and hemp. Of the hops, which are good, a large portion is sent to Bavaria. Fruit is abundant on the lower grounds; and in the warmer localities, on the banks of the Elbe, the vine ripens, and yields about 250,000 gallons of wine. Besides the portion under cultivation, $3,756,290$ ae. are under wood, yielding annually $3,638,000$ cubic fathoms of timber, value $£ 1,916,811$. The horses are superior, though of small size, being handsome and vigorous,
especially in the circles of Saatz, Leitmeritz, and Chrudim. The horned cattle are small, and ill formed, owing, in part, to the scarcity of fodder; and the supply for home demand is so inadequate, that it is found necessary to import large numbers from Poland and Moldavia. The breed of sheep is now greatly improved, and the wool excellent. Comparing the stock of cattle in 1834 with the stock in 1846, as follows, it will be found that cattle-rearing lias been on the increase:-

|  | 1834. | 1846. |
| :---: | :---: | :---: |
| ITorses ....... | 144,882 | 158,319 |
| Horned cattle | 1,011,559 | 1,059,692 |
| Sheep and goa | 1,357,566 | ..1,409,856 |

The rearing of poultry and bees is extensivcly prosecuted; but attcmpts to introduce the silkworm have not been suceessful. On the whole, agrieulture has made considerable progress in Bohemia of late years; but still, the utmost capabilities of the soil are not, and cannot be fully developed under a system which, as there, excludes the cultivator from partieipation in its produce. In Bohemia there are no tenants, properly speaking, and, therefore, no class corresponding to our farmers; the owners of estates keep them in their own hands, and employ labourers to perform the necessary work. Hence arise two evils of great magnitude-the land is not parcelled out into manageable farms, but retained, in immense tracts, in the hands of the landlord; and the immediate cultivator of the soil, receiving no share of the produce, takes no interest in its amount.

Animals. - Game is still abundant; and hunting is a favourite anusement, though, from the progress of agriculture, gradually on the decrease; still, extensive preserves exist, containing large numbers of the wild boars for which Bohemia is noted. Polecats, martens, foxes, and squirrels are met with, but wolves and bears have been nearly exterminated. Pike, earp, and trout are plentiful in the rivers and ponds; and in the Moldau and some other streams, large numbers of pearl mussels are found.

Manufactures.-For manufaeturing skill and activity, Bohemia has long ranked as one of the most important provinces of the Austrian empire. In 1844 there were produced $1,500,000$ pieces of linen, of 30 ells each; value, $£ 1,050,000$. There are 83 cotton-spinning factories in the kingdom, with 395,000 fine spindles, produeing about $3,500,000$ pieces, and employing about 150,000 persons. Mueh cotton yarn, of the inferior numbers, is spun by machinery, but the higher numbers are imported from the archduchy of Austria, and from Britain. Calico-printing has increased of late, and bleachfields are numerous. The whole quantity of wool produced in Bohemia, is estimated at 106,960 ewt.; and the eloth made, at about 186,000 picces-valuc, $£ 1,082,000$. Tapes, ribbons, and lace are also manufactured; and in Prague, silk to a small extent. The manufacture of potash employs nearly 6000 people, and leather 4000 . In 1845 , there were $10 \mathrm{manu}-$ factories of sugar from potatoes, and 25 from beet-root; but the quantity produced was too small to supply the home consumption. Besides these, there are five sugar refineries. There are likewise 917 breweries, and 1228 brandy distilleries, mostly on a very small scale, produeing $4,052,852$ imperial gallons of spirits distilled from various artieles, such as rye, potatoes, wine-lces, plums, cherries, \&c.; but the national beverage is beer made from barley. The total amount of cast-iron manufactured in Bohemia, in nails, wire, cutlery, locks, \&c., may be estimated at 17,500 tons per annum, employing about 6000 persons; and the value of the whole ironware produced, $£ 170,000$. Gold, silver, and pewter are manufactured at Einbogen, Budwcis, Königgrätz, and Prague, at the last of which, and at Carlsbad, good needles are made. Other manufactures are white lead and brass, to a small extent; spoons, buekles, buttons, porcelain, earthenware, and paper, the last extensively. Glass has been a staple article of Bohemian manufacture since the 13 th century, although it is not supposed to be now so flourishing as it was formerly. There are in the kingdom 67 glassworks, properly so called, besides mirror factories, and glass-cutting works, and factories of glass pearls, employing in all about 30,000 persons. It has been estimated that about one-third of the entire population of the kingdom is employed in the various manufactures.

Roads, dec.-By means of the two navigable rivers, the Elbe and the Moldau, and the numerous excellent roads throughout the country, the business of Bohemia is greatly
furthered. The first railway completed in Germany was that from Budweis in Bohemia, to Linz in the archduchy of Austria, and subscquently prolonged to Gmiunden. From the capital there is direct railway communication with Vienua, through Olmütz, and also to the N. W. with Dresden and W. Germany, excepting 18 m . between Leitmeritz and Tetschen, still (1851) incomplete. Besides these there is a short line W. to Lana.

People.-The greater proportion of the inhabitants of Bohemia are Czeches or Tscheches, of Sclavonian descent, and remarkable for bravery, general intelligence, strength of memory, and a passionate love of music. The second, in point of numbers, are the Germans, about 900,000 , who dwell chiefly at Prague, and in the districts bordering on Saxony, Prussia, and Bavaria. 'They constitute the most industrious part of the population, and in mercantile and mechanical pursuits excel the Sclavonians. The Jews seem to have settled in the country at a very remote period; for inscriptions, discovered on several tombstones, indicate their presence as early as the first century of the Christian era. They number about 70,000 , and apply themselves principally to trading in corn, cattle, leather, and wool, and to banking or exchange business. Most of the breweries, distilleries, and potash factories are in their hands. The average ratio of deaths to the whole population is 1 in 33 , including the capital; in the low country it is said to be 1 in 39 .

Religion.-The R. Catholic is the prevailing creed, and the state religion of the Bohemians; other Christian denominations are tolerated. The sceular clergy are governed by the metropolitan Archbishop of Prague, three bishops at Leitmeritz, Königgrätz, and Budweis, one titular bishop, and 12 prelates. The total number of parishes is 1765 . The regular clergy, though much reduced by the reforms of Joseph II., still possess 75 monasteries or communities, and six nunneries. Protestants are almost exclusively confined to the N.E. districts, and have 53 parishes. The Jews have a head rabbi at Prague, and several district rabbis.

Educational Establishments.-Bohemia is abundantly supplied with educational establishments, comprehending a university at Prague, with 53 professors, 14 assistants, and more than 2000 students; a model normal seminary, 3493 schools, of which 48 are chief or grammar, 3371 R. Catholic, 74 Protestant, and 19 Jewish schools; a polytechnic institute, 26 gymnasia, with about 6000 scholars, for the most part kept by monks, especially Piarists; three diocesan philosophical schools, tliree diocesan seminaries of theology, a Jewish college, an academy of painting, a conservatory of music, and several military academies. The school attendance is, male one to five, and female one to six, of the population; while in the whole Austrian empire, the proportion is only, male one to nine, female one to 12 . The total sum expended on schools, chiefly by provincial districts and local and municipal governments, is about $£ 26,000$.

Charitable Institutions, \&c.-There is no legal provision for the poor in Bohemia, consequently the number of street beggars is almost incredible. There are, however, numerous benevolent institutions at Prague, and in the chief towns of the kingdom, for the relief of the sick and destitute, such as foundling and lying-in hospitals, dispensaries, infirmaries, houses of refuge, \&c., for widows and orphans; asylums for the blind, the insane, the deaf and dumb, \&c.
Languages.-The use of the vernacular tongue, a dialeet of the Sclavonian, is confined in a great measure to the lower and middle classes. A knowledge of Bohemian is not deemed necessary in the service of Government. Among the edncated classes, German is generally spoken ; and in the schools, German alone is taught, and has been so since the time of Maria Theresa, who enjoined its use in all edncational establishments. Of late years, however, there has been a great national movement amongst the Bohemians, directed chicfly to the cultivation of their language and literature. This movement is discouraged, but not openly opposed by the Austrian Government.

Government, \&c.-Bohemia, with the title of Kingdom, forms a provincial government of the Austrian empire, with certain special political rights. The Emperor of Austria is styled King of Bohemia, and is crowned at Prague. The crown is hereditary in the Imperial family, both males and females; but, in case of extinction of the reigning dynasty,
the right to elect a king appertains to the Estates, consisting of the clergy, the high nobility, the knights, and the burgesses. The civil administration is managed by a central gubrmium at Prague, subordinate to the higher powers at Viemma. Military affairs are under the direction of the CommauderGeneral.

IIistory.-Bohemia derives its name from the Boii, a Celtic pcople, who settled in the conntry about 600 years n.c., and who were expelled, in the time of Augustus, by the Marcomanni. Abont the middle of the sixth century, a numerous army of Czeches entered the country, and subdued it. The first Duke known to us by name is Przemislas, a peasant, whom the P'rinecss Libusja married in A.v. 632, and raised to the throne. In 1061, the Emperor Ilenry 1V. gave the royal title to the Dukes of Bohemia. By the extinction of the nale line, the crown came to the House of Laxembourg, in 1310, when Charles 1 V . united Bohemia with the German empire. After many vicissitudes, Bohemia fell to the Ilouse of Austria, in the person of Ferdinand the Archduke, brother of Charles V., and brother-in-law of Louis II., King of IIungary and Bohemia, who was killed in 1526, in a battle with the Turks, near Mohacz. At this period, Bohcmia possessed a comparatively free constitution, and the most of its inhabitants were Protestant. In consequence of the encroachments of the succeeding emperors on the religions liberties of the Protestants, serious disturbances arose, which threatened the Honse of Austria with the loss of the kingdom. In 1619 , the people offered the crown to Frederick V., Elector-palatine, to the exclusion of Ferdinand II. But the battle of the White Mountain, fought in November 1620, and in which Frederick was totally defeated, put an end to the rising hopes of the Protestants, and proved the source of innumerable calamities to the Bohemians, who were subjected by their conquerors, the Austrians, to a persecution scarcely paralleled in history. The Protestant religion, held by three-fourths of the people, became well nigh extinct; the free constitution was totally subverted, and Bohemia converted into an absolute and hereditary monarchy, and the R. Catholic faith established, to the exclusion of all others. From this time the kingdom continually declined. More than 30,000 families, including many of the nobility, all the Protestant ministers and teachers, numerous artists, mechanics, \&c., were forcibly driven into exile, or had their estates and property confiscated. When Frederick II. died, in 1637, out of $3,000,000$ inhabitants which Bohemia containcd in 1617, there remained only 780,000. On the deatls of Charles VI. (1740), Charles Albert, Elector of Bavaria, claimed the crown, but Maria Theresa succeeded, after an arduous struggle, in securing possession of the kingdom. She was succecded by her son, Joseph II., in 1780; and from this time downwards, a more liberal and enlightened system of administration has been pursued, under which Bohemia is advancing in prosperity as steadily as any other portion of the Austrian empire. Pop. (1843), 4,249,669, of which $1,991,667$ are males, and $2,258,002$ females, being $210 \cdot 14$ to the sq. mile.-(Raffelsperger's Lex. aller Österreich; Staaten; Österreich Nat. Encyclopädie; Statistiches Jahrbuch; Parliamentary Papers.)

BOHILLANE, par. Ircl. Cork; 1097 ac. Pop. 572.
BÖHMERWALD [forest of Bohemia], a wooded moun-tain-range of considerable extent, running nearly N.W. and S.E., and separating Bohemia from Bavaria and the archduchy of Austria. W.N.W. it joins the Erzgebirge [ore mountains], and S.S.E. the Mailrischesgebirge [Moravian mountains]. Length, about 120 m . ; mean breadth, about 25 m . In its whole length it is traversed only by six roads, along one of which, at Freistadt, the railway from Budweis to Linz passses. It is the Sylva gabreta, forming part of the Hercynian forest of the Romans. This chain is mainly constituted of granite, overiaid by gneiss, schist, and calcarcous deposits. Towards the N. and N.W., the hills are frequently basaltic, isolated, and almost of a conical shape. The principal peaks are Mounts Arber, 4848 ft ; and Rachel, 4743 ft ., in Bavaria; and Heidelberg, 4623 ft ; and Kubani, 4521 ft ., in Bohemia.

BOHOE, par. Ircl. Fermanagh; 15,058 ae. Pop. 2824.
BOHOL, one of the Philippine Islands, dependent on Zebu, and lying between that island and Leyto, and N. of Mindanao ; lat. (S.E. point) $9^{\circ} 48^{\prime}$ N.; lon. $124^{\circ} 26^{\prime}$ E. (r.); about 52 m . long by 34 broad. It is watered by several
rivers, one of which comes from a lake in the centre of the island. Rice is grown, and cattle reared. The inhabitants make cocoa-nut oil, cultivate and weave cotton, producing strong eloth; and weave also silk.

BOHOLA, par. Irel. Mayo; 8674 ac. Pop. 4301.
BOHORODCZAN, a market tn. Austria, Galicia, circle, of, and 10 m . S.S.W. Stanislau, on the Bistrica. It contains a Dominican cloister, and a Greek church. Pop. 1920.

BOÏ-ABAD, or Avad, a tn. Turkey in Asia, pash. Anatolia, r. bank, Kara-su, an affluent of the Kizil-Irmak, 96 m . N.N.W. Amasia; lat. $41^{\circ} 28^{\prime}$ N.; lon. $34^{\circ} 45^{\prime}$ E. It consists of about 300 scattered houscs, contains three khans, and, with its luxuriant gardens, full of fine fruit-trees, and overrun by vines, presents a pleasing appearance. There is here a castle, attributed by the natives to the Genoese, but bearing no inscriptions; it was long the seat of an independent chieftain. Pop. 1800.

BOIPEBA-VELHA, a tn. Brazil, prov. of, and 65 m . S.W. Bahia, on the island of same name. It has a church, and primary school; but is a poor little place, exporting to Bahia piassava, rice, and bark for tanning.

BOIS (Les), [German, Rudisholz], a vil. Switzerland, can. of, and 26 m. W.N.W. Bern; 3421 ft . above the sea level, on the Jura Mountains. It has an old church, and a school. Watch-making is carried on to some extent; and two wellfrequented cattle-markets are held. Pop. 994.

BOIS BLANC, or White Wood, an isl., U. States, Michigan, in Lake Hnron; lat. $45^{\circ} 45^{\prime} \mathrm{N}$.; lon. $84^{\circ} 55^{\prime} \mathrm{W}$. It is 11 m . long by 3 broad, and is generally fertile, though the under portion of the soil is sandy. It has a lighthouse on the E. end.

BOIS-DE-LESSINES, a vil. and com. Belgium, prov. Hainaut; 28 m . N.E. Tournai ; with some linen manufactures. Pop. 1752.

## BOIS-LE-DUC. See Hertogenbosci.

BOIZLNBURG, a tn. Mecklenburg-Schwerin, circle, Wendisch, on the Elbe, $32 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Schwerin. It has walls, with two gates; and is a handsome, well-built, stirring place, containing numerous manufactures; among others leather, glue, vinegar, soap, and tobacco; and carrying on a considerable shipping trade, for which its situation on the Elbe gives it great advantages. The vessels belonging to the town amount to 30. Pop. 3184.

BOJADOR (CAPE), a promontory, W. coast, Africa; lat. $26^{\circ} 7^{\prime} 10^{\prime \prime} \mathrm{N} . ;$ lon. $14^{\circ} 29^{\prime} \mathrm{W}$. (n.) ; one of the projecting points of the Great Desert of the Sahara, and forming the W. extremity of a rocky ridge, called the Jebel-khal or Black Mountains. The coast N. of this cape is extremely dangerous, being shallow to a great distance out, and constantly enveloped in a haze. It has been, in consequence, the scene of many melancholy disasters. Cape Bojador was long the limit of navigation towards the S., and was first passed by the Portuguese in 1433.

BOJANA, a river, Turkey in Europe, prov. Albania, pash. Scutari. It issues from Lake Scutari, near the town of that name, and after a winding course of from 20 to 25 m ., falls into the Adriatic in lat. $40^{\circ} 5^{\prime} \mathrm{N} . ;$ lon. $19^{\circ} 21^{\prime}$ E.

BOJANO [anc. Bovianum], a tn. Naples, prov. Sannio, 10 m. S.W. Campobasso; on the Biferno, in a deep defile, at the foot of Mount Matese. It is the scat of a bishop, and has a cathedral, several churches and convents, a seminary, and an hospital. Two fairs are beld annually. Pop. 3117.

BOJANOWO, a tn. Prussia, prov. and gov. Possen, 9 m . N.W. Rawiez. It is divided into the old and new towns. Most of the houses are of wood. It has some manufactories of coarse cloth, linen, leather, and earthenware. Pop. 2450.

BOKA, a vil. Hungary, circle, this side the Theiss, co. Torontal ; on the Temes, between Kanak and Szetsany, 33 m . S.S.W. Temeswar. Pop. 2599.

BOKHARA, or Uzbekistan [Uzbek-land], a kingdom, Independent Tartary, Central Asia, cap. same name. 1ts geographical limits have not been precisely ascertained, hardly any two authorities agreeing exactly as to the space it occupies; but it may be said to lie between lat. $36^{\circ}$ and $42^{\circ}$ or $45^{\circ}$ N., and lon. $61^{\circ}$ or $63^{\circ}$ and $67^{\circ}$ or $70^{\circ} \mathrm{E}$., for all these different boundaries have been assigned to it. Khanikoff, a Russian traveller, who was there in 1842, says that the Emir's sway extended over the space of country comprised between lat. $37^{\circ}$ and $43^{\circ} \mathrm{N}$., and lon. $61^{\circ} 50^{\prime}$ to $69^{\circ} 50^{\prime} \mathrm{E}$. Arrow-
smith's map places it between lat. $36^{\circ}$ and $41^{\circ} 20^{\prime} \mathrm{N}$., and lon. $62^{\circ} 25^{\prime}$ and $70^{\circ} 10^{\prime} \mathrm{E}$. It is bounded, N . by the Kirghis steppe and the khanate of Khokand, W. by Khiva, S. by Afghanistan, and E. by Hissar and the khanate of Khoondooz. Burnes makes the Sea of Aral, and the river Sir or Jaxartes the N. boundary, but the former, at all events, is now known to belong to Khiva. Khanikoff makes the Amou or Jihoon the S. boundary, though Balkh and Andkoo are understood to be at least tributary to the Khan of Bokhara. Area estimated at $228,808 \mathrm{sq} . \mathrm{m}$. According to native authorities, the political divisions are Karakool, Bokhara, and seven districts around, Kermina, Meeankal or Kutta Koorghan, Samarcand, with five districts, and Juzzak, all in the valley of Samareand besides these, Kurshee, Lubiab or banks of the Oxus, and Balkh, and the provinces S. of that river. It is mountainous, and elevated towards the E., where it includes the valleys forming the W. slopes of the great Asiatic plateau, some of the summits of which Burnes estimated at $18,000 \mathrm{ft}$. high, being enveloped in snow in June; and S. it leans on the IIindoo Koosh and N. escarpment of the Persian plateau. All the rest of the country is uniformly low and flat, belonging, in its characteristics, to the dry steppes and sandy wastes of the Caspian and Aral Seas. Bokhara forms part of the plain of Toorkistan, which has an elevation of 2000 ft . It slopes N.W. towards the Sea of Aral, to whose basin it exclusively belongs. It is very imperfectly watered, possessing only two streams of any consequence, the Amou, Jihoon, or Oxus, traversing the country S.E. to N.W., and receiving, according to some, as affluents, the Balkh or Adirsiah on the left, and the Zourkab on the right; though, according to others, both these streams are absorbed in the sand before reaching the Oxus. The other principal stream is the Samarcand, Zerafshan or Znrufshan, which traverses the country E. to W., passing the cities of Samarcand and Bokhara, and falling into Lake Dengis, a short distance N. of the Oxus. Besides these, there are some other smaller streams, as the Kurshee or Karchi, described by Burnes as a mere rivulet. Along the banks of these rivers lie the only cultivable lands in the country, not reaching to more than a tenth of the entire area. Along the stream Samarcand is the valley of the same name, so vaunted for its beauty by the Arabian conquerors, that it was called an earthly paradise. Though certainly beautiful, its attractions are doubtless heightened by comparison with the sandy wastes which on every side surround it. The territory on the banks of the Oxus is likewise greatly favoured by nature. N. of the Oxus, and from the mountains W. to Bokhara, the country is occupied by a snccession of low rounded ridges of oolite, limestone, and gravel, covered with a scanty verdure; between these ridges are hardened plaius of argillaceous clay, forming excellent natural roads. On these occur sand-hills of no great extent, but sufficient to absorb the rivulets flowing towards the Oxus. W. the city of Bokhara, and S. the Oxus, however, the country is covered with these hills or rather mounds of loose sand, of a horse-shoe shape, about 15 to 20 ft . in height, resting on a firm soil, having been accumulated by the winds, and so numerous that little space is left for cultivation. In the valleys formed by these sand-hills, deposits of salt and saline rivulets frequently occur. The only lake of importance is Dengis or Karakool, about 50 m . S.S.W. the city of Bokhara. It is deep, brackish, and about 10 m . long.

Mineralogy.-Gold, in considerable quantities, is found among the sands of the Oxus; but there are no mines of that metal in the kingdom, neither are there any of silver, copper, or iron, all these being imported from Russia. Sal-ammoniac is found in its native state, and salt deposits are numerous.

Climate.-The climate of Bokhara is salubrious and pleasant; it is dry, and in winter very cold, the Oxus being frequently frozen over so strongly, that travellers pass across it on the ice. In summer, the heat seldom rises above $90^{\circ}$, except in the desert, where, in June, it reaches $100^{\circ}$. In Balkh, also, the heat is oppressive, and the climate unhealthy. The sky is always clear, and of a bright and beautiful azure. The country, however, is subject to violent tornadoes, which usually follow excessive heat. In winter, snow lies for three months on the ground at and around the city of Bokhara, and the spring rains are often very heavy.

Vegetable Products.-The tree most abundant in Bokhara is the poplar, which is used for house-building. The cotton
plant is cultivated, and hemp is likewise grown ; but the only use to which the latter is turned by the natives, is the extracting oil from the seeds, and also an intoxicating drug called bang; the stalks of the plant are given to cattle. The principal grain crops are rice, wieat, barley, Indian corn, and sesamum. The fruits of Bokhara are celcbrated, especially the melon, which here attains an excellence known nowhere else. The other fruits are the peach, plum, apricot, eherry, sour cherry, apple, pear, quince, walnut, fig, pomegranate, mulberry, grape, pumpkin, and cucumber. The raisins of Bokhara are large, and of dclicious flavour, but the wines are very indifferent. Neither indigo nor sugar-cane grow here; but an excellent substitute for the latter is found in an article called turunjubeen, a saccharine gum which exudes from the camel's thorn. This singular and valuable plant abounds in the vicinity of Kurshee and Samarcand, to which localities it is almost wholly confined, not being found W. the city of Bokhara. Tobacco, of a superior quality, is grown at Kurshee, and wild rhubarb abounds in many places. Vegetables are in great plenty - turnips, carrots, onions, radishes, and beet-root.

Animals.-The only beasts of prey in Bokhara are leopards, and a very small species of tiger; the other wild animals are deer, antelopes, foxes, wolves, jackals, and bears; there are also wild hogs and wild asses. Bats, tortoises, and lizards are found in the deserts. Scorpions are common, but comparatively harmless. Eagles and hawks are met with, and plover, wild pigeon, and water-fowl abound; but there are no singing-birds, and game of all kinds is scarce. There being few rivers or lakes, fish is not abundant; those taken in the Oxus are similar to what are found in other Asiatic rivers, with the exception of an enormous kind of dog-fish called lukha, which has no scales, and sometimes attains the weight of 600 lbs . English. In the Lake Dengis or Karakool, fish of good quality and flavour are eanght. There are no alligators in the Oxus, nor any other animals to be dreaded. Locusts sometimes infest the country, but few other noxious insects are met with. Silkworms are reared in great numbers in all parts of the kingdom where there is water, especially on the banks of the Oxus, the silk produced there being considered the most valuable, both from the softness and fineness of the thread. The guinea-worm, called by the natives rishtu, which burrows in the flesh of the human body, and causes great pain and annoyance, is one of the greatest evils with which Bokhara is afflicted; it is calculated that one-fourth of the entire population are annually attacked by this animal. The natives are singularly dexterous in the extraction of the worm, which they effect with needles. Of the domestic animals the sheep and goat are the most important, the former furnishing valuable skins, and the other a wool second only to that of Cashmere. Both feed on furze and dry grass, and their flesh is sweet and well flavoured. The sheep have large tails, sometimes weighing so much as 15 lbs ; those that produce the black, curly flecce, in such demand in Persia for caps, are peculiar to Karakool ; and it is said the animal will thrive nowliere else, and that, when removed to any other place, the fleece becomes deteriorated. The skins having the smallest curls are most prized; of these about 200,000 are annually exported. The goats of Bokhara are about the common size, and of a dark colour; their wool is gray, and lies next the skin. The camels of Bokhara, of the Bactrian or two-hump kind, are greatly superior in appearance to those of India, being covered with a sleek coat of hair, whereas the latter are almost naked, and often disfigured by eruptions. The ass of this country is large and strong, and is much used both for saddle and burden. The horned cattle are of good size, but greatly inferior to those of England. Beef is eaten by the lower orders only, mutton being always preferred.

Manufactures and Commerce.-There are no manufactures in Bokhara of any extent ; the most considerable are those of silk and cotton, and of a kind of cloth in which both are combined. Articles of steel, gold, and silver are also made, and of good quality, such as sabres, knives, rings, and other jewellery. The art of dycing is well understood, but in tanning the Bokharians are inferior to the Russians, and their leather generally bad, with exception of morocco. The principal articles of export to foreign countries are cotton, raw and manufactured, the latter consisting of coarse chintzes and cotton thread; silk, sent chiefly to India and Cabool; lamb
skins, of which, as already stated, 200,000 are annually exported. In former years, the greater part of the trade of Bokhara in European goods was carried on through Russia; it is now conducted chiefly through India and Cabool. The cbicf articles of import from India are muslins, brocades, white cloth for turbans, sugar, and shawls; those from Russia are white cloth, muslin, chintzes, broad cloth, velvet, nankeen, gold thread, hardware, metals, cutlery, jewellery, leather, paper, \&c., the greater part of British manufacture, as are also the greater part of the goods imported from India, the cloths of England being greatly preferred to those of any other country. Owing, principally, to the want of good roads and other means of communication, the internal trade of Bokhara is very limited, although large quantities of merchandise are brought yearly to the city, no less than from 12,000 to 15,000 camel loads, but this is owing to the circumstance of its being the central point of all the commercial routes between E . and W. Asia, and being on this account made a depôt for goods intended ultimately for remote destinations. The trade with Russia is carried on by caravans, from 5000 to 6000 camels being yearly employed in the transport of merehandise from Bokhara to that country, the value of which amounts to between $£ 600,000$ and $£ 800,000$, the returns to about $£ 450,000$, having increased nearly threefold within the last 20 years. The trade with Cabool, Herat, and Cashmere employs from 3000 to 3500 camels; the chief article imported from Cabool is indigo, most of which is used in Bokhara, the rest being sent to Russia.

Government.-The Government of Bokhara is a monarchy, the Emir, or sovereign, having all but absolute power, including the right of life and death, and being limited only by the Mussulman canonical law. The Emir appoints chiefs, or governors, to the distant towns, giving them the fullest powers, excepting life and death, which he reserves in his own hands. The number of troops of all arms which the Emir can raisc, is conjectured by Khanikoff to be about 40,000 men, of which, the same authority says, not more than a third is completely armed, the rest consisting merely of the followers of the army, or such as are indifferently equipped. During Khanikoff's stay at Bokhara, there were only 1000 regnlar infantry who had proper fire-arms. The Emir's prime minister, and lighest state officer, is the Kúsh-beghi, or Vizier, who is keeper of the seals, and general receiver and disburser of the national revenues. The public revenue has been estimated at about $£ 400,000$, derived chiefly from land, but in part also from farm produce, fruits, and skins. The prescit Emir (1847), is Nasr-Ullah Bahadur Khan Melik-cl-Mumenin, second son of Emir Seid, who died in 1826.

Races of Men.-Bokhara is at present inhabited by no fewer than 11 different nations, the Uzbecks, Tadjicks, Toorkmans, Arabs, Persians, Mongols or Kalmuks, Kirghis, KaraKalpaks, Jews, Afghans, Lesghis, and Gipsies. The most numerous by far are the Uzbecks, who were the last conquerors of the country. Most of them lead a wandering life, while a few apply themselves to the arts of peace, inhabiting the large towns and cities. The Tadjicks consider themselves the aborigines of the country; they resemble Europeans in personal appearance, and are remarkably industrious. The Toorkmans, Kirghis, and Kara-Kalpaks are all of Turkish descent; the former inhabit the desert W. of the Oxus, the last are few in number, and live N. of the Zar-afshan, and in the vicinity of Kurshee. The other nations settled in Boklara at different periods, and have no particularly distinctive character.

Religion, Education, Habits, Dress, \&c.-The people of Bokhara are all Soonite Mahometans, and no other religion may be publicly professed. There are daily public prayerz in the capital, during which time there is a cessation of all business. Bokhara was long celebrated as a seat of learning, but although there are still many educational establishments, both in the capital and throughout the country, the greater portion of the population remain wholly uninstructed. The diet of the people, generally, is simple, consisting chiefly of tea, rice, vegetables, mutton, cheese, and milk. Knives and forks are not used, all kinds of food being raised to the mouth with the fingers. Large white trowsers, close short drawers, and caps of red cloth, form the principal articles of dress of the Bokharians. The dress of the women is very nearly similar to that of the men, with the addition of highly decon
ated bootz, and black veils. Both sexes are in the habit of staining their nails with henna.

History.-Bokhara, in part, corresponds to the Bactria of the ancients. After the destruction of the Greek Bactrian empire, it formed a powerful kingdom, conquered in 705 by the Arabs. In 1232, it fell into the hands of Genghis Khan, whose descendants were dispossessed by Timor in 1303 . In 1505 , the Uzbecks became masters of the country and the throne.

Bokhara contains 19 towns of some note, ineluding the capital. The pop. has been variously estimated, by Myendorff at 2,478,000, by Khanikoff at 2,000,000, and by Burnes at 1,500,000.-(Burnes's Travels in Bokhara; Khanikoff's Bolhara, its Emirs and its People; \&e.)

BOKHARA [the treasury of sciences], the cap. of the kingdom or khanate of Bokhara; lat. $39^{\circ} 48^{\prime}$ N. ; lon. $64^{\circ} 26^{\prime} \mathrm{E}$. It is situated in a flat country, and is embosomed in trees; is surrounded by a mud wall, with battlements; has 11 gates,

PLAN OF bokiara. - From Eversmann's Reise von Orenburg nach Bukiara.
and is between 8 and 9 m . in circumference. The streets are extremely narrow, and the houses small; of the former, there are, altogether, about 360, few of which are paved, and those that are, are so very ill kept, that the large rongh projecting stones rather impede than facilitate locomotion. The principal public edifices are the Emir's palace, which stands on an elevated piece of ground, of abont 300 ft . high, in the centre of the city; it is surrounded by a brick wall of 70 ft . in height. Within this area, besides the palace of the Emir, is the residence of the Vizier, his public courts of audience, and the dwellings of several other grandees, with the houses of their numerons retinues, and three inosques. There are, altogether, 360 mosques in the city, there being thus one for every street; but eight only of any note. The largest oecnpies a square of 300 ft ., and is enamelled with tiles of azure blue; attached to this mosque is a tower of 210 ft . high, from which criminals are thrown. Of colleges, there are 103; none of them, however, have any arehitectural pretensions; but a few have their fronts ornamented with coloured tiles. The number of students, in 1840, amounted to about 10,000 . The city contains 38 caravansaries, 24 of stone and 14 of wood; and 16 principal baths. The private dwellings, all built of sun-dried bricks, and flat roofed, generally enclose several four-cornered courts; the inner walls are sometimes plastered, but the windows are without glass, and the houses of the poorer classes often extremely filthy. Those, however, of the wealthy are frequently tastefully adorned with comfortable and elegant apartments. The city is intersected by a canal, shaded by mulberry-trees; but in snmmer, it is often dried up for months, when water becomes extremely scarce, and what is to be had is so exceedingly bad, that it gives rise, it is said, to the terrible disease occa-
sioned by the guinea-worm, as mentioned in the preceding artiele. The bazaars are numerous, there being places of this kind appropriated to each of various different artieles of provision, fruits, clothing, drugs, hardware, \&c. Khanikoff, in this way, enumerates 24 ; three of which are for kid boots. The streets of Bokhara, during the day, are densely crowded, and the din of the busy population perfectly stunning; immense quantities of fruit are exposed for sale, and the demand for it incessant. Tea is in universal favour with the Bokharians, and is drunk at all times of the day, and in all manner of ways; it is sold prepared, in the market-places, in small bowls, and is largely consumed. Grape jelly or syrup, mixed up with chopped ice, and called, in Eastern phrase, 'the delight of life,' is another much-prized luxury of Bokhara, which is always to be had on the streets during the warm weather. With regard to the population of Bokhara, accounts differ widely. Burnes, in 1835, states it 150,000; while Khanikoff, in 1843, estimates it at 60,000 to 70,000.

BOKOL, a large vil. Senegambia, near the Senegal river; lat. $16^{\circ} 24^{\prime} \mathrm{N}$. ; lon. $15^{\circ} 24^{\prime} \mathrm{W}$. ; governed by a marabout. It has some trade; and the people are cultivators and cayman hunters.

## BOLABOLA. See Borabora.

BOLAM, par. Eng. Northumberland; 8260 ac. P. 603.
BOLAN I'ASS, a formidable defile in the lofty range of mountains that traverse the N.E. corner of Beloochistan, prov. Sarawan; about lat. $29^{\circ} 30^{\prime}$ N.; lon. $67^{\circ} 40^{\prime} \mathrm{E}$. The elevation of the crest of the pass is 5793 ft . above the sea; its total length, between 54 and 55 m . ; average ascent, 90 ft . in the mile. 'The minutest description,' says Lieut. Conolly, 'could hardly convey a just idea of its strength; it is a defile which a regiment of brave men could deferd against an army.' The eminences bounding the pass, however, are not generally of very great elevation; but there are points where it is edged by perpendicular cliffs of 500 to 600 ft . in height, and approaching so near as to leave but a narrow lane between, tremendous in its depth, and overshadowed by huge walls of

THE BOLAN PASS.-Fiom Atkinson's Shetches in Af hanistan
living rock, which seem almost to close over the gloomy path below. The air, in the lower parts, is, in summer, oppressively hot, and so excessively unhealthy, that scarcely any persons then venture through it, except messengers on urgent business.

It is traversed by a small river called the Dolan, which,
when there is rain in the higher parts of the mountain, comes down in an almost perpendicular volume, without warning, and swecps all before it. The pass is infested by Belooches, a lawless, treacherous, sanguinary race, who rob and murder all travellers whom they think they can overpower. In 1839, the Bengal column, with its accompanying artillery, marehed through this pass, on their way to Cabool, taking six days to accomplish it.

BOLANOS, a tn. Mexico, Jaliseo, 65 m . N.N.W. Guadalajara; chiefly remarkable on account of the rich silver mines in its neighbourhood.
bOLAS (Magna and Meeson), par. Eng. Salop; 2650 ac. Pop. 288.

BOLBEC, a tn . France, dep. Seine Inferieure, 17 m . E.N.E. Le Havre ; agreeably situated on the side of a hill, washed by the Bolbec, and at the junction of four valleys. It is well built, partly of brick, partly of stone; the strects are wide and straight, and have a lively appearance. On July 14, 1765, a fire occurred in the town, which destroyed 868 houses, and reduced 3000 persons to destitution. The modern town, in consequence of the conflagration, was built without that admixture of wood so cominon in the houses of Normandy. It is a thriving and industrious place, and well situated for commerce. It carries on the manufacture of cotton goods to a large extent, receiving the raw cotton from Le Havre, coals from Fecamp and Harfleur, and disposing of the products at Rouen. Its printed cottons and handkerchiefs have long been held in high estimation. Besides these, it produces linen and woollen stuffs, lace, cotton, velvet, and thread; and has several dyeworks and tanneries, with a considerable trade in grain, horses, and cattle. Pop. 8658.

BOLDON, par. Eng. Durham; 4760 ac. Pop. 915.
BOLDRE, par. Eng. Hants; 5260 ac. Pop. 2888.
BOLE, par. Eng. Notts; 1250 ac. Pop. 191.
BOLECHOW, a market tn. Austria, Galicia, gov. Iemberg, circle of, and $14 \mathrm{~m} . \mathrm{S}$. Stry, on the Sukiel. The salt springs in the neighbourhood furnish a large quantity of salt; and the convent of Hoszow is much frequented by pilgrims. Pop., of whom more than a half are Jews, 2322.

BOLESKINE-ANd-abertarf, a united par. Scotland, co. Inverness. Length, about $21 \mathrm{~m} . ;$ average breadth, about 10 . It has a rough climate, abounds with tarns, and is intersected by Loch Ness. Pop. 1876.

BOLI, a city, Asiatic Turkcy, pash. Anatolia, 87 m. N.W. Angora, on an eminence, at the W. extremity of a fcrtile plain, on or near the site of the Hadrianopolis of the Romans. It has several mosques, a square, market-place, and public baths; and is the residence of a pasha of two tails. It is a thoroughfare for the caravans travelling between Erzeroom and Constantinoplc. There are mineral baths within a short distance of the town, much frequented by the Turks. Pop. 6000.

BOL-ILMEN, or MAnitch, a lake, Russia, formed by the Manitch; between govs. Don Cossacks and Caucasus. It is a long irregular expanse of brackish water, stretching nearly 60 m. S.E. to N.W.; and in average breadth does not exceed 3 m .

BOLINGBliOKE, a market tn. and par. England, co. Lincoln. The town, $22 \mathrm{~m} . \mathrm{S} . \mathrm{E}$. Lincoln, comprises an ancient church, several Nonconformist chapels, some schools and charities, and the ruins of an old castle. The market is held on Tuesday, and an annual fair on St. Peter's day. Area of par. 2570 ac. Pop. 919.

BOLIVIA [formerly called Upper Peru], an independent republic, S. America, confining on, and nearly enclosed by the States of Peru, Brazil, the Argentine republic, and Chili. When the frecdom of the Spanish-American colonies was definitively won by the victory at Ayacucho, on Dec. 9,1824 , the future government and political organization of Alto (Upper) Peru, as the country was called, which embraced the provinces of Chareas, Potosi, la Paz, Cochabamba, and Santa Cruz de la Sierra, became the first and most pressing object of consideration. These territories had originally belonged to the viceroyalty of Peru, the seat of which was at Lima, 500 m . distant along the cordillera; but in 1767 , they were annexed to that of Buenos Ayres, still further off, and the road to which, through the desert of the Grand Chaco, was hardly less dangerous than that of the mountains. The inconvenience arising from the remote distance of the scat of supreme authority, being universally felt and admitted, it was resolved to unite the liberated provinces in question into a
separate repnblic, whieh, throngh gratitude to General Bolivar, was named Bolivia, and this resolytion was carried into effect in 1825.

Boundaries.-The boundary of Bolivia, towards Peru, begins on the shore of the Pacific Ocean, at the river Loa, in lat. $21^{\circ} 32^{\prime} \mathbf{S}$. , and follows np the course of this stream E. to the Andes, where it turns N., inclining a little to the W., as far as the Nevado of Tacora, above Arica, in lat. $18^{\circ} \mathrm{S}$. ; it then goes N. by E. across the Lake of Titicaca to the E. cordillera, in lat. $14^{\circ}$ S., and continues along a branch of these to the river Yapuré, whence it turns to the confluence of the Beni with the Mamoré, in about lat. $10^{\circ} \mathrm{S}$. Here the Brazilian frontier commences, going along the Mamoré, and its great affluent the Guaporé or Iténez, and from the latter river in a straight line to the Yuaru, which falls into the Paraguay. Such were the boundaries fixed by treaties between Spain and Portugal, in 1750 and 1777; but the Brazilians have in fact eneroaehed so much on this line, that from the Iténez or Guaporé, in lat. $13^{\circ} \mathrm{S}$., to the Otuquis, which falls into the Paraguay in lat. $20^{\circ} \mathrm{S}$., a distance of at least 500 m ., they have oceupied a tract 50 or 100 m . wide on the $\mathrm{S} . \mathrm{W}$. or W. banks of the rivers marked by treaty as the lines of demareation. Along the Paraguay the Bolivian frontier extends S. to lat. $22^{\circ} \mathrm{S}$., where it meets that of the Argentine republic, a conventional line running generally W. from that point across the plains to the Andes, separating these two states. The boundary towards Chili is undefined, parts of the territory being in dispute.

Area.-Thus it appears that Bolivia, with a frontier of more than 3000 geo. m., yet possesses but a small extent of sea-coast; and this maritime tract, which is extremely inhospitable throughout, is connected with the inland and productive provinces by a portion of the cordillera, not more than 80 m . in length. Owing to its remoteness, therefore, as well as to its natural character, which unites the disadvantages of steep, rocky mountains, with those of sterile, sandy deserts, it is of little value. The most N. point of Bolivia is at the junction of the rivers Beni and Mamoré, in about lat. $10^{\circ} \mathrm{S}$.; its most S., the confines of Chili. In width it extends throngh rather more than $12^{\circ}$ of longitude, from the Paraguay, in lon. $58^{\circ} \mathrm{W}$. , to the shores of the Pacific Ocean. The area of Bolivia probably does not fall much short of 450,000 geo. sq. m. ; or nearly five times the surface of the British Islands.

Divisions.-Bolivia is divided into seven departments, namely, Chuquisaca, La Paz, Potosi, Cochabamba, Oruro, Santa Cruz do la Sierra, and Beni ; besides two provinces, namely, Cobija and Tarija, which, in respect to local government, are on the footing of departments. These divisions are all named from their chief towns, respecting which it will be sufficient in this place to mention, that Chuquisaca is the capital of the state, and the seat of Government; and that Cochahamba is, in public documents, sometimes called Oro pesa, though this name laving failed to become popular, is now seldom used. The subdivision of the departments is as follows. For the little information possessed respecting the area and population of the departments, the reader is referred to the separate articles.

| Departmeats. | Provinces. | Departments. |  |

Two of the provinces, Chiquitos, in the department of Sta. Cruz de la Sierra, and Moxos, in the department of Beni, are
so important on account of their magnitude-forming, as they do, nearly two-thirds of the whole Bolivian territorytheir great natural capabilities, and the civilization partially diffused among their indigenous inhabitants by the Jesuit missionaries, as to deserve especial mention.

Aspect.-There is no country in the world, perhaps, possessing such a variety of soil and climate, of physical aspect and productions, as Bolivia. Nowhere else are to be seen such contrasts of nature, exhibited in close juxta-position, and on so grand a scale. The broadest part of the Andes, where these mountains, encompassing the great lake of Titicaca, divide into two chains, known as the E. and W. cordilleras, lies within the limits of this state. On its W. side, therefore, Bolivia presents to view an immense pile of mountains, rising in many points beyond the limits of perpetual snow, and enclosing within them an clevated plateau nearly 100 m . wide. The slope of the W. cordillera, towards the Pacific Ocean, presents a most forbidding aspect; bare rocks, fearful precipices, and moving sands, with but few and partial traces of verdure, weary the eye of the traveller as he toils up the steep paths which lead him from the burning climate of the coast to the regions of perpetual winter. Arrived on the elevated, treeless plain, and having now in view the snowy peaks of the E. cordillera, he may admire the grandcur of the scene, but not without a sense of its dreariness and monotony. But when he arrives at the passes of the E. cordillera, and looks down on the deep valleys which stretch beyond, he is ravished at the total change which the garb and aspect of nature at this point undergo, and gazes with delight on the luxuriant prospect of interminable forests, and the hundreds of lively streams which hasten on to form the mightiest rivers in the world. The Andes, while they present to the W. an abrupt and uniform ridge, throw off to the $E$. numerous rami fications, which extend a long way from the cordillera. In the valley of the Guapey or Rio Grande, the chains of hills connected with the Andes may be traced to a distance of 350 m . from the sea-coast; such then is the width of the Bolivian mountain region. And here again nature takes a new face. The hills cease, and are succeeded by a plain exceeding Great Britain in superficial extent, in which no stone, nor even a pebble is to be found, and which is annually flooded to such a degree by the numerous fine rivers which run through it towards the Amazon, that communications by boat are practicable across it, through the stately forests, in nearly all directions. This is the country of the Moxos. Beyond this, towards the Paraguay, the plain rises in general above the reach of inundation, and rocks and hills of moderate leight again make their appearance. This is the country of the Chiquitos. These dry plains separate the basin of the Amazon from that of the La Plata; but some of the affluents of the Paraguay approach so close to the sources of the Iténez, that in floods it is said a canoe can pass from the one river to the other. Such is the general outline of Bolivia; but the chief natural features of this remarkable country, its mountains, valleys, plains, rivers, \&c., demand a more attentive and detailed consideration.

Mountains.-The W. cordillera of the Andes in Bolivia, attains a great height at no great distance from the sea, and exhibits not a few nevados or summits rising above the limit of perpetual snow, which in the vicinity of a great table-land lies higher than on an insulated mountain, and rarely descends here below an absolute elevation of $17,000 \mathrm{ft}$. The road from Arica into Bolivia passes between the nevados of Tacora and Niuta, while on the left is seen that of Chipicani, and on the right a still loftier series of snowy crests. The heights of these mountains, as determined by Mr. Pentland, are as follows:-
Tacora.............................18,890 ${ }^{\text {Parinacota.........................22,030 }}$ Chipicani.........................19,740 Pomarapa........................21,700

The pass of Tacora is itself at an elevation of $14,400 \mathrm{ft}$., which is about the general height of the W. portion of the table-land to which it conducts. The village of Tacora, one of the most elevated inhabited places on the earth, is but 150 ft . below this ridge. Of the nevados in the E. cordillera, on the opposite side of the plain, the most conspicuous are:$\left.\begin{array}{l}\text { Ancohumi,or the Nevado } \\ \text { of Sorata.................. }\end{array}\right\}$ 21,286 21,149

Huwayua Potosi ....................20,260 of Sorata

Chachacomma (two summits) $\{20,355$

Here it must be remarked, that Ancohumi and Illimani were long regarded as the highest mountains in America, or even, with the exception of one or two points of the Himalaya, in the whole world. The re-calculation, however, of the ob servations made to ascertain their height, has recently reduced them to the measure given above, Sorata losing by this correction nearly 4000 ft . of its supposed elevation. With this fact before us, it is impossible not to receive with mistrust the heights assigned by the same observer to the series of nevados between the parallels of $18^{\circ} 7^{\prime}$ and $18^{\circ} 25^{\prime}$, and which all exceed the height of Chimborazo. From Illimani a clain of mountains runs W. by S., which bears, throughout a great portion of it, perpetaal snow, and may therefore be assumed to reach an elevation of $18,000 \mathrm{ft}$.

Valleys.-Between the snowy heights of the cordilleras extends a great plain, from N.N.W. to S.S.E. for above 300 m ., widening towards the S . The W. side of this plain has an elevation of $14,400 \mathrm{ft}$., for a width of abont 40 m. ; it then sinks abruptly about 1000 ft ., and slopes to the shores of the Lake of Titicaca, the level of which is about $12,700 \mathrm{ft}$. above that of the ocean. The Lake of Titicaca is connected by its outlet, the Rio Desaguadero, with the Lake of Aullagas or Ullaguas, 160 m. S.S.E. from it, and lower in level by nearly 490 ft . Here then is a great valley equal in area to Ireland, and lying at the height of from 12,280 to $14,400 \mathrm{ft}$. above the sea. This remarkable feature in the geography of Bolivia is the more deserving of attention, inasmuch as it was on the shores of Lake Titicaca that the power of the Incas chiefly lay, and the indigenous civilization of America, cradled in that elevated region, grew up with a character harmonizing completely with the skies above, and the scenes around it. Besides, the peculiar husbandry of the indigenous inlabitants of these plains, who are still numerous, and who kcep large herds of llamas and alpacas, employing the former almost exclusively in the mountains as beasts of burden, depends altogether on the boundless extent of their dry plains and elevated pastures. The S. and more depressed part of this high plain is traversed by several low ridges, running nearly from W. to E. The openings between these break off towards the E. into numerous valleys, some of which pour their waters into the Pilcomayo, which joins the La Plata, while hundreds more contribute to swell the Mamoré, Beni, and other great affluents of the Amazon. The chief of these valleys, in respect of magnitude, is Valle Grande or the valley of the Rio Grande.
livers.-The W. slope of Bolivia, or the tract between the W. cordillera and the Pacific Ocean, has no river deserving of notice; but on the E. side of the E. cordillera, the rivers are countless, and the utmost we can do here is to group them. The hills of Chuquisaca separate the streams which flow into the Pilcomayo from those running into the Rio Grande. The Pilcomayo is probably navigable from the commencement of the plains to the Paraguay ; but, owing to the inhospitable character of much of the country through which it flows, it has hitherto engaged but littlo attention, and nothing is known of its capabilities. Betwcen the Pilcomayo and the Rio Beni, the Parapiti descends into the plains, and seems long doubtful whether it shall ally itself with the floods of the Amazon, or with those of the La Plata; it decides, however, for the former, and spreads into extensive marshes, which overflow, during the rainy scason, into the Rio Grande. This great river descends from Chuquisaca, in an E.S.E. direction, for 300 m ., till it turns the last hills connected with the cordillera; it then winds N.N.W. under the name of the Sara till it meets the Mamoré, when the joint stream flows N. through the low country of the Moxos, till it receives the Beni, and leaves the territory of Bolivia. The river-course thus described, from the source of the Rio Grande to the junction of the Beni and Mamoré, exceeds 1000 m . in length, and the lower half of it is navigable for large boats. But the Mamore, and Beni also, with several of their affluents, are noble streams, navigable, to a great extent, at all seasons, and, after the rains, even to the foot of the cordillera. But again the Mamoré is joined, on its r. bank, by the Guaporé or Iténez, a great and navigable river, which marks the Brazilian frontier; and the head waters of the Itenez are separated by a portage of only a few miles from the Juara, which may be navigated in canoes to the Paraguay. A better com munication, however (for Bolivia at least), with the last-named great river, may be found in the Oxuquis or Otuquis, which
ioins the Paraguay on its r. bank, in lat. $19^{\circ} 50^{\prime} \mathrm{S}$., and receives the Tucabaca, into which flows the San Rafael river, from the hills of the Chiquitos; from the same heights flow the San Miguel, and Baures or Rio Blanco, both navigable streams, N.N.W. to the Iténez.

Lakes.-The few and inconsiderable rivers of the elevated plain between the cordilleras, may be considered as belonging to the lake or lakes which form one of the most striking features of that region. Lake Titicaca, the position of which has been already described in general terms, has a length of perhaps 90 m ., and a breadth of about 25 ; but the delineations of it hitherto published are much at variance with respect to its shape, and are obviously not entitled to implicit confidence. At about a third of its length from the S . end, it is contracted by peninsulas from both sides, which divide it, in fact, into two lakes; of these, the S. and smaller one is properly named the Lake of Chicuito, and lies wholly in Bolivia; of the larger basin or Titicaca, the E. shores alone fall within the limits of this state. The waters of Lake Titicaca and Chicuito are carried off, at the S. extremity of the latter, by the Rio Desaguadero, which flows S.E. about 160 m ., to the Lake of Aullagas or of Pausa, as some call it. This lake is about 490 ft . lower than that of Titicaca, the waters of which it receives. It has, itself, no outlet, but is wasted by evapor ation, and is, consequently, salt. The Rio Desaguadero has a general width of 300 ft ., with a moderate uniform current, and appears to be navigable throughout. In the plains of E. Bolivia, lakes are numerous, particularly during the rains; but these inundated tracts, however they may be denominated are still forest as well as lake. Little in fact is known, as yet, of the situation and extent of the permanent standing waters in those great plains; nor can we even tell exactly the position of the Salinas, whence the Indians of the mission of the Chiquitos draw, in the dry season, large quantities of excellent salt. They are vaguely described as lying about 150 m . S.W. from the most southern of these missions.

Gology. - The slope of the W. cordillera, towards the sea, is formed almost wholly of trachytic conglomerates, in various stages of decomposition; it is generally whitish, or of a reddish hue, but dark-coloured rocks of kindred origin frequently break through it. The point which shelters the harbour of Cobija is a mass of basaltic porphyry. The Cerro de Tacora, and other dome-shaped summits of the ridge, are of trachyte, the bare rock being often exposed, as on the nevado of Chipicani, in consequence of its steepness. It has been said that some of the conical summits of this cordillera are extinct volcanocs, and that the Cerro de Tacora is a true Solfatara; but it seems now fully established, that no lavas or other volcanic productions, of a geologically recent age, are found on the Bolivian table-land, which is never disturbed by earthquakes; and, as to active volcanoes, the Bolivians know of only one, which is situate, in the S. part of the maritime cordillera, in the province of Carangas. The disintegrated trachyte, which covers the W. and more elevated part of the table-land, abounds in quartz crystals, exhibits much saline cfllorescence, and is generally adverse to vegetation. The river Maure, rumning S.E. through this tract till it falls into the Desagnadero, bas worn its bed, in a wide chasm, 600 ft . deep; the W. side of which presents to view horizontal strata of the whitish trachytic conglomerate, while the E. side is formed of basaltic porphyries. The country thence E. has a more diversified and broken outline, the hollows of the ground not being filled up, as on the W., by mouldering trachyte. This geological character continues across the plain to the E. cordillera; there the snows of the Illimani rest on an immense pile of granite. The general direction of the granitic range is N.W. and S.E. In its neighbourhood the trachytic rocks become micaccous; on the E., the granite is overlaid by rocks of the silurian and Devonian systems, through which it has forced its way, upheaving them so that some of the sandstones of the Devonian series nearly reach the heiglt of perpetual snow. The granite seems to extend from Illimani N.W. ; but towards the S., from Oruro to Potosi, it is probable that the silurian and other overlying strata have been raised by trachyte. The granite shows itself only in the elevated chain of the E. cordillera; but to the E. of it are found a few spots of porphyry, and with these end all traces of Plutonian rocks throughout the lowlands of Bolivia. The rock next met with in the plains is older, and of a totally different char-
acter. The hills or mountains of the Chiquitos are 200 m . distant from the nearest branch of the cordillera, and torm a system quite distinct from the Andes on the one side, and the Brazilian mountains on the other. They consist of gneiss, a stratified rock, which here extends from W.N.W. to E.S.E., and resembles a long island in the midst of a sea of alluviun. It is, in many places, broken and dislocated by the forces which lave raised it into its present position. The gneiss is overlaid by foliated silurian strata, the lowest of which has a thickness of at least 600 ft . ; and on this again rests sandstone of the Devonian series, after which comes the red carboniferous sandstone. The depressions in these formations are, as it may be supposed, filled up, and levelled by alluvium or sedimentary deposits of various ages. Of these, the most remarkable are-the alluvium of the Pampas, which seems to have been derived from the wear of the gneiss rock, and contains, in great abundance, the fossil remains of mammalia many of them of great size, as the giant armadillo, the three toed sloth, the American horse, \&c.; this stratum, whicl contains the remains of an extinct animal world, is covered immediately by a deposit, enclosing the shells of existing species; another alluvium, called the guarani tertiary, contains lyydrates of iron in abundance, and is generally found resting horizontally on the carboniferous limestones. It may be remarked, that the cretaceous and marine tertiary formations are here wholly wanting, and that the plain, in general, has been levelled by a sea of mud, now distinguished as the fossiliferous alluvium, and which is, in many places, coveret by modern sediments made up of fine sand and decayed vege tation.

Minerals.-Here, as elsewhere, the precious metals are found chiefly in the silnrian strata, where these approach the igneous rocks. Gold is found in many of the streams that fall down the E. side of the cordillera, and at Choquecameta; near Cochabamba, at the sources of the Rio Grande, as well as at Tipuani, near sorata, the washing of the gold-sands is still carried on with profit. In the same district the schists of Palca are rich in silver; and thence S.E., by Oraro to Potosi, this whole country is famed for the incalculable treasures which lave been drawn from it, chiefly in the form of auriferou 3 silver-ores. The celebrated Potosi was once the richest silverdistrict in the world. From the year 1556 down to 1834 , it yielded $£ 163,000,000$, without counting the large quantity of silver stolen by the Indian labourers; probably equal to onefourth more. Though many of the veins are now exliausted, and the rest are imperfectly wrought, the annual yield of this renowned mountain is still $£ 450,000$. The tin-mines, in the department of Oruro, are said to be the richest in the world. At Corocoro and IIuallamarca, both in the same department, but 120 m . asunder, copper is found nearly pure. But these and all other sources of wealth are rendered comparatively valueless for export purposes from the difficulty and great expense of bringing them down to the coast.

Climate.-From the foregoing account of the physical aspect and conformation of Bolivia, it might be at once concluded that it embraces every variety of climate, from the heat and humidity of the torrid zone, to the perpetual frost of the polar circle. On the elevated table-land there is frost every night, and the morning ice on the river Tacora is always strong enough to bear a man; but here, on the borders of perpetual snow, the climate has one great advantage over that of polar regions, for the sky is always bright and cloudless, and the air dry. The atmospheric phenomena which charac terize this region may be best studied on the E. cordillera, whence may be seen, towards the E., like a misty sea, the clouds which roll over the luxnriant forests of the plains and valleys beneath. This sea of clouds generally rests, at a certain elevation, on the side of the cordillera; but, during thred months of the year, it rises, and fragments of it pass over to the table-land. Then follow violent storms and showers of rain; and, at this season (chiefly in December, the hottest month), the nevados put on their annual covering of new snow. But the clouds and rains rarely reach the W. half of the tableland, and never pass the W. cordillera. From the confines of Bolivia, on the S., as far N. as Payta, in Peru, or about the parallel of $5^{\circ} \mathrm{S}$, it seldom or never rains. Adjacent to this arid region, the table-land of Bolivia enjoys bright skies for nine months in the year, and has three months of rain to restore the verdure, and of mountain-snows to supply the
rivers. But a little further E., even a day's journey down from the crest of the cordillera, may be found places where rain falls every day in the year. The inhabitants of these countries distinguish three regions of climate, the Puna, $\mathrm{Pa}-$ ramo, and Yungas. The first is elevated and cold, and disagreeable to those unused to it, from the difficulty of respiring in an attenuated atinosphere. This is the region of the llama and alpaca; higher upstill is the Puna brava, which is frequented by the wild guanaco and the vicuna. The country round Lake Titicaca comes, for the most part, under the denomination of Puna. The second or middle region is the Paramo, which is temperate and productive. The Paramos have been naturally taken advantage of by the European settlers, who lave filled them, as in the valley of La Paz, with European grains and fruits. Below the Paramos lie the Yungas or valleys, laving a decidedly hot climate, and distinguished by a rank vegetation. Thus La Paz, seated in a Paramo, and enjoying a climate resembling that of the S. of France, is close to the region of the llama on the one side, and on the other, to valleys yielding excellent coffee, cocoa, and other tropical productions. The inhabitants of these deep valleys are not unfrequently afflicted with goitres, but are said to be not liable to the cretinism which, in Europe, often attends on that disease. Intermittent fever is frequent in some of the valleys on the $\mathbf{E}$. side of the cordillera; but it is not easy to trace out the source of the malaria producing it, as some spots, quite exempt from the disease, enjoy no visible advantages of situation above others, the air of which is reputed to be most deadly. Water does not scem, in this part of the world, to be a principal agent in creating or disseminating disease; for while some valleys, apparently favoured by nature, are scarcely liabitable, owing to fever, the villages of the Indians, in the midst of marshes or of inundated forests, are often quite healthy. In the plains of the Moxo and Chiquitos, the prevailing wind is from the N.; the E. wind blows sometimes, and is likewise a warm wind. The W. wind is never felt, being intercepted by the cordillera. The S. wind is extremely cold, and, to the inhabitants of the plains, disagreeable. The rains fall chiefly from October to April.

Dotany.-The botany of Bolivia is, of course, as various as its climate. On the ridge of the W. cordillera, there is no deficiency of species of Alpine plants; but, taken collectively, they form but a scanty vegetation, so that the treeless and dreary plain seems, at the first glance, to be wholly destitute of vegetable life; yet dwarf plants occupy the elefts of the loosened rocks. A broom grows to the leight of 5 or 15 inches, according to the elevation of the ground; and several small plants (as Laretia acaulis, Verbena mimina, and Lycopodium hastatum), attaching themselves to the projecting parts of rocks, there increase, in the course of ages, perhaps, into tufts of considerable magnitude, so compact that lichens grow upon them, and so strong that the axe alone can lay them open. Owing to their density and resinous nature, these tufts are valuable as fuel. An aromatic little bush characterizes the trachytic plain; lower down, as soon as available soil is met with, the Indian plants, potatoes, and, in favourable spots, barley is sown, not for the sake of the grain, which docs not ripen here, but as green food for the loaded mules that cross the plain. Towards the shorcs of the lake, though trees are still wanting, the grasses become luxuriant, and 20 species of gramineous plants have been gathered there in a hasty excursion. In descending the E. cordillera, the first plant which attracts especial attention is the cactus, like a candelabra, or in other majestic forms, and which, in a particular zone (perhaps about 7000 ft . above the sea), attains a height of 40 ft . This is followed by the zone of acacias; and, Jower down, the species increase, and the forest thickens, till at length, near the foot of the mountains, the bamboo and tree ferns grow beneath the canopy formed lyy the graceful foliage of palms nearly 50 ft . high. An attempt to describe systematically the productions of these forests would here be out of place. Let it suffice to say, that, in these primeval forests, the Indians find all their wants supplied. IIere they procure the trunks of trees, from which their large canoes are made; as well as the canes to build, and palm leaves to cover their louses. From the inner bark of a kind of mulberry, they obtain a vegetable gauze, of which they make their shirts, and which does not luse by a comparison with cotton. The woods of the Moxos abound in the mate leaf or Paraquay tea;
nearer the cordillera is found the tree which yields the balsum of Peru; and higher up, that producing cinchona or Peruvian bark.

Cultivation.-The valleys occupied by the Spanish settlers on the E. slope of the Bolivian ligh land, and varying in height from $12,500 \mathrm{ft}$. to 8000 ft . above the occan, produce abundantly all the fruits and grains of Europe. The vine, the cultivation of which was forbidden by the jealous policy of Spain, is now introduced. The warin and well watered valleys, as that of Cochabamba, supply with corn and fruit the populous but comparatively sterile districts of the tableliud. In the Yungas, and the hot plains of Santa Cruz, the objects of culture are coffeo (said to be excellent), cocoa, tobacco, indigo, cotton, maize at all seasons, yuca or mandioc, potatoes, guavas, the chirimoya (a delicious fruit), the sugarcane, and, above all, coca. This is the leaf of a shrub (Eirythroxylum Peruvianum) which the inhabitants of this part of the world masticate as the Malays chew the betel-nut; and such is the force of habit, that coca is, to the Bolivian and Peruvian, an article of the utmost necessity; without it he pines; with it, the smallest quantity of food will sustain him through great fatigue. The yearly sale of coca in Bolivia amounts to $10,150,000 \mathrm{lbs}$ - a large quantity to supply the wants of a particular class, in a population of $1,000,000$ at the utmost.

Zoology.-The quadrupeds inhabiting the elevated parts of the cordillera, are few in number as well as in species. The llama and alpaca, which are domesticated, are thought to be but varieties of the guanaco, which is still wild; the vicuña is a different species. On the same heights with the guanaco is often to be seen the rough-haired deer (Cervus Antisianus). The chinchilla, hunted for its beautiful fur, and now almost extirpated, prefers the neighbourhood of the snow, as does also the viscacha or long-eared marmot, the burrows of which sometimes occupy a great space in the plains. On the wooded sides of the E. cordillera, the cactus thickets afford shelter to bears. Lower down, the pecari wastes the cultivated fields, and the jaguar attacks the cattle. The number of these beasts of prey, however, is rapidly diminishing, the governor of Santa Cruz paying a cow for every jaguar skin brought in. The tapir, the glutton, sloth, armadillo, and many other animals, are killed by the natives for food. The large rivers flowing into the Amazon are frequented by the fresh-water dolphins peculiar to this quarter of the globe. These have a formidable enemy in the cayman or alligator, which, together with the palameta or armed bream, and some voracious small fish, renders the waters of the Bolivian plains extremely dangerous. The vampire bat is so troublesome in Caupolican and other parts of the Yungas, as to prevent the rearing of cattle. The forests are crowded with monkeys of different species, always social and active. Their varied cries, mingled with those of birds, show how much life there is in these wild solitudes. But that which chiefly astonishes the naturalist here, is the multitude of the feathered tribe. Whether on the sea-shore or in the forests, they are numerous enough, when on the wing, to darken the sky. From the condor, which soars above the Andes, to the diminutive hummingbirds, from the loud-screaming parrot to the musical organito, birds of all cliaracter, size, and plumage, are to be found in Bolivia.

People.-The population of this country is variously estimated at from 600.0100 to $1,600,000$; it probably does not exceed $1,000,000$; of whom two-thirds belong to the aboriginal race of the country, and the remainder are Mestizoes, or descendants of the original settlers by native women. The indigenous inhabitants of the Bolivian highlands, near Lake Titicaca, are, the Aymaru; while to the N. and E. dwell the Quichua, with whom the former were united under the dominion of the Incas. These two nations speak distinct, though cognate languages. Numerous monuments of the national prosperity and civilization of the Aymarus still remain. Ancient villages, with domed houses built of stone, or of sun-dried brick, and with enclosures for cattle; truncated obelisks, facing E. and W.; and well-built tombs, containing the mummies of whole families, arranged together in a sitting posture, are strewed thickly over the country, and seem to indicate the former existence of a considerable population. The Aymarus are industrious, gentle, and intelligent. They scem to prefer the pastoral life, and the cultivation of the potato, to any other occupation. As Christians, they
retain many of their pagan usages, daucing in masquerade at certain church festivals, for two or three days without intermission. The clothing of the peasantry is generally black; in the towns, the women prile themselves on the number of

COSTUDES UF AYMARUS AND QUICHUAS, From DORbIgny. Fiks. $1,2,3$, A ) marue; Fig. 4, Quichua.
petticoats they wear; they load themselves accordingly, till, with felt hats of immense circumference, these swarthy beauties are as broad as they are long. The Quichua Indians, on the E. side of the cordillera, do not differ much from the Aymarus. In the provinces of the Moxos and Chiquitos,

DOMFD HOUSE OF THE AYMARUS
liere are the remnants of perhaps some 20 nations or communities, speaking different languages; but the judicious policy of the Jesuits, who founded these missions, and sought by all means to unite the scattered tribes under one language (the Chiquito) and uniform customs, is still persevered in, and the original distinctions between the aboriginal tribes are rapidly disappearing. The Indians are collectively tractable and honest ; and some of them, as the Moxos, seem to have entered fairly on the career of civilization. The Spaniards in Santa Cruz, and other remote parts of Bolivia, have adopted the simplest mode of life; the clothing of both sexes is scanty; their houses, far from being luxurious, want evell comfort. Their amusements, which occupy much of their time, are dancing, and drinking chicha, a kind of beer made from maize.

Trade.-It might be supposed at the first view, that a state, possessing such extensive territories as Bolivia, with a soil so prolific, such variety of climate and productions, and such noble rivers, has within itself all the elements of commercial prosperity; but a little consideration will show, that the state in question is debarred to a great extent, by nature and position, from those facilities of communication without which commerce cannot flourish. The enormous cost of carriage from the sea-coast across the cordillera, to the populous towns of the interior, must necessarily operate to discourage trade by that route. And as to facility of intercourse with the sea, by means of the rivers Otuquis, l'arayuay, Parana, and La

Plata, or by the Beni, Guapey, Madeira, and Amazon, these courses suppose a river navigation of 1500 or $2000 \mathrm{~m} .,-a$ preliminary condition which, so far as commerce by sea is concerned, must subject the foreign trade of Bolivia to great disadvantage. With these drawbacks the trade of the country is not of much importance, the most of it being internal with the neighbouring republics of La Plata and Peru. The Yungas supply the high lands with coca, coffee, sugar, and cocoa, and other products of the warmer regions; the high lands send chilona (or dried meat) and corn to the Yungas ; and the silver of Potosi, the tin of Oruro, the copper of Corocoro, the cincliona of the forest, and the gold of Tipuani, constitute the medium of exchange for European conmodities. The Spanish settlers, who thought of nothing but the precious metals, have never condescended to profit from the example of the Incas, and to construct good roads. Hence it is that wheeled vehicles are unknown in Bolivia. The construction of a good road for wheel carriages over the W. cordillera, and of a railway connecting the Parana with Chuquisaca, may appear perhaps to be undertakings far beyond the present resources of the republic; but they must, nevertheless, precede any considerable development of its trade and industry; and, under judicious managemeut, would doubtless prove eventually remunerative.

History.-The early history of Bolivia is included in that of Peru. As the state was constituted in 1825, Bolivian history, properly so called, commences with that epoch. The constitution which was drawn up for the new state, by General Bolivar, and was adopted by the Congress in 1826, makes ample provision for personal and political liberty, securing religious toleration, the freedom of the press, and the independence of the tribunals. It established a legislative body, composed of two chambers, namely, the congress and the senate, with a president elected for five years. The public debt amounts ( 1850 ) to about $£ 1,084,943$.- (I'rocter's Nar. of Jour. across the Cordillera of the Andes, and of a Residence in Lima; Stevenson's Mistorical and Descriptive Narrative of Twenty years' Resilence in S. America, \&c.; Lieut.-Col. Brand's Journal of a Voyage to Peru, and Passage across the Cordillera of the Andes; Memoirs of Gen. Miller in the Service of the Iicpublic of Peru; Beauchamp, Histoire de la Conquite et des Revolntions du Perou; D'Orbigny, Voyage dans l'Amerique Meridionale, 1826-33; Private Information.)

BOLKENHAIN, a tn. and circle, Prussian Silesia. The town lies 19 m. S.S.W. Liegnitz, l. bank, Neiss ; and has two churches, two schools, a townhouse, and hospital ; with some woollen, linen, and ribbon manufactures. Pop. 2450. The circle, area, 98 geo. sq. m., is mountainous, and covered to a great extent with wood, but is fertile; yielding flax, hops, and potatoes. Silver, copper, arsenic, and sulphur, are found, and linen is manufactured extensively. Pop. 32,413.

BOLKHOFF, or BaLkhov, a tn. Russia, cap. dist. of same name, gov. of, and 34 m . N. Orel, on the Nougra. It is a very ancient place, is chiefly built of wood, and contains 22 churches, a monastery, and a nunnery. It has manufactures of leather, and of worsted stockings, and a considerable trade in hemp, hemp-oil, and tallow. Pop. 10,000.

BOLLATE, a tn. Austrian Italy, prov. of, and 6 m . N. W. Milan; with a square, and a parish church. Pop. 2021.

BOLLENE, a tn. France, dep. Vaucluse, $23 \mathrm{~m} . \mathrm{N}$. Avignon, in a fertile territory, watered by the Lez. Silk of good quality is spun, and several important markets, two of them of three days each, are held here. Pop. 2860.

BOLLULOŚ-del-condado, a tn. Spain, Andalusia, prov. of, and 18 m . E. by N. Huelva. It has narrow, ill-made streets, a square, two churches, a session-house, townlall, hospital, three schools, a prison, and several convents. Manu-factures:-earthenware, tiles, and brandy. Produce of vicinity: -wine and oil. Export3:-grain and wine. Pop., chiefly agricultural, 4638.- (Madoz.)

BOLM, a maritime dist. or territory, W. Africa, S.S.E. from the peninsula of Sicrra Leone, extending N. from the Sherboro river to Yawry Bay, and intersected nearly in the centre by the parallel of $8^{\circ} \mathrm{N}$.

BOLMEN, a lake, Sweden, Jönköpings län, 53 m . N.N.W. Christianstad, about 20 m . long, by 7 broad. In it is the island of Bolmsö, forming a whole parish.

13OLNEY, par. Eng. Sussex ; 3550 ac. Pop. 713.
BOLNHURST, par. Eng. Bedford; 2130 ac. Pop. $3 \$ 4$.

BOLOGNA, a delegation, Papal States, bounded, N. by deleg. Ferrara, E. by deleg. Ravenna, S. by Tuscany, and W. by Modena; area, 1296 sq . m. The surface in the S . is mountainous, being traversed by ramifications of the Apennines; but, in the N., slopes down toward the plains of Lombardy. It is watered by numerons streams, which are extensively employed in irrigating rice fields, and make the air rather unhealthy. In addition to wheat and maize, which are the principal cereal crops, rice, hemp to a great extent, and saffiron, are raised. The olive also is cnltivated, and a good deal of wine of moderate quality is produced. Cunsiderable attention is paid to the rearing of silkworms, and silk is both spun and woven to a considerable extent. The chief trade is in hemp, cordage, rice, and silk. Pop. 322,228.

BOLOGNA [Latin, Bononia; French, Bologne], after Rome, the first city, Papal States, cap. deleg. of the same name, residence of a cardinal legate, seat of an archbishopric, and of one of the four appeal courts of the States, in a beautiful and fertile plain, at the foot of the lower slopes of the Apennines, between the Savena and the Reno, 190 m . N.N.W Rome, and 396 ft . above the level of the sea. It is surrounded by a high brick wall, in which are 12 gates, and has a circuit of about 5 m ., being nearly 2 m . long, and 1 m . broad. It is divided into four quarters, the older of which, indifferently built, and consisting of narrow tortuous streets, have a heavy, antique, and gloomy aspect, and strikingly contrast with the broad and well-paved thoroughfares and the noble structures of the modern city. One of the peculiar features of Bologna is the line of arcades continued through all the streets, and covering the footpath, so as to afford both shaile and shelter. The public edifices are numerous, and many of them magnificent. The churches alone exceed 70, and are remarkable, not more for the beauty of their architecture than the works of art which they contain. The most deserving of notice are the cathedral (il Duomo), founded in very early times, but repeatedly rebuilt, and not completed, in its present form, till 1748, of imposing appearance, arranged, in the interior, in the Corinthian style, and adorned with numerous fine paintings and frescoes, particularly an Annunciation, the last fresco executed by Ludovico Carracci; the church of San Petroneo, the largest in Bologna, and though unfinished, one of the finest specimens of Italian Gothic ; San Stefano, the oldest, and perhaps the most curious, formed by the union of seven churches, containing numerous fine paintings and very early relics of antiquity; San Domenico, with its adjoining cloister of the same name; San Salvatore, San Giacomo, and San Giovanni in Monte. Of numerous public and private palaces, the most deserving of notice are the Palazzo Maggiore del Publico, where the legate resides, adorned with numerous fine statues, and containing, among other magnificent halls, the Sala Farnese, whose roof and walls are covered by paintings of celebrated masters; and the Palazzo de Podesta, remarkable as the prison of King Euzius, son of the great Emperor Frederick II., captured by the Bolognese, in 1249, and detained, in spite both of the threats and offered ransom of the Emperor, till his death in 1272. Among the most conspicuous structures of the city are two leaning towers, near its centre. The one, built in 1109, by Gerard Asinelli, whose name it bears, was originally higher than at present, but an earthquake overthrew the upper portion of it, and reduced its height to 256 ft . It inclines 3 ft . 2 in . from the perpendicular. The Garisenda tower was built in 1110. Its height is 130 ft ., and its inclination 8 ft . From one of the gates of the city, an arcade, nearly 3 m . long, with 700 arches, leads to the handsome church of La-Madonna-di-San-Luca; in the vicinity of which is a fine public cemetery. This areade is one of the finest structures of the kind built since the time of the Romans. Bologna has always held a prominent place in the annals of art and science. Its university is the most ancient in Italy, having been founded in the year 425, by the Emperor Theodosius. It was considerably augmented by Charlemagne. The number of students attending it, at one period, was not less than 10,000 ; and its professors were of European reputation. One remarkable honour peculiar to this university is the number of its learned female professors, of whom three distinguished themselves, respectively, in the chairs of law, mathematies, and anatomy. Legal stndies at one time had the pre-eminence, but medicine now aolds the first place. The building, including the university,
institute, and other similar establishments, was originally the Palazzo Cellesi, purchased by the Scnate to receive the noble bequests of Connt Marsigli, a friend of Newton, including a rich cabinet of natural history, a museum of antiquities

THE ASINELLI AND GARISENDA TOWERS, BOLOGNA. From Galiy Knight's Eceleslastical Architecture of I:aly.
and a library of 150,000 volumes, with many MSS. Count Marsigli also founded and endowed an observatory, an anatomical hall, and a botanical garden, which is one of the most complete in Europe. There is another public library, containing 83,000 volumes, and 4000 MSS. The collection of works of art is numerous; among which, that of the acadeny of painting, endowed in modern times by the municipality, principally with the treasures of abolished churches and monasteries, is rich and full of historical interest. In the 16th century, the Caracci, Guido Reni, Domenichino, and Albano, founded a school, to which their works have given great reputation. Many of their paintings adorn the churches and collections of the city. Bologna has likewise three theatres, and a casino or assembly-room, for the upper classes, supplied with literary and political journals, and several well-endowed and well-managed hospitals, of which the first place is due to the Ospedale Grande. One curious fact connected with it is, that the number of cases of stabbing annually admitted into it averages 500. The manofactures of Bologna are important ; consisting of silk goods, velvet, crape, coarse linen, common cloth, cordage, and paper, excel lent liqueurs, scented soap, artificial flowers and fruits, and salted provisions. The cervelas and mortadello sausagcs of Bologna, are known throughout Europe. Glass, jewellery leather, needles, and small steelwares, straw hats, nitric and sulphuric acid, and cream-of tartar, are likewise manufactured here. Commerce is facilitated by the Bologna Canal.

The people of Bologna are frank, gay, and spirited; their bearing is the most manly and independent of any people of the Papal States, owing probably to the ardour for political freedom, imbibed from their ancient political institations. The women are generally handsome. The dialect spoken is the most uncouth and corrupt of all Italy. Foundlings are numerous, illegitimate births being one-eighth of the whole. The air of Bologna is pure, but, from the proximity of the Apennines, liable to sudden changes, causing frequent inflammatory diseases. Bologna is the Bononia of the Romans. A Christian church was erected in it in the third century, and in 728 it passed into the hands of the Lombards, from whom it was taken in 800 by Charlemagne. In the 12th century, Bologna took possession of several of the surrounding cities, and for 156 years ( 1118 to 1274), formed the most flourishing republic in Italy. In 1506, it was united to the Papal States. Bologna has produced eight popes, 100 cardinals, the naturalists Galvani and Aldrovandi, the anatomists Malpighi ant

Mondino, the astronomer Marsigli, the mathematician and cngineer Manfredi, the painters Guido, Albano, Barbieri, Domenichino, the three Caracci ; and the professers Monti, Orioli, Tommasini, and Mezzofanti. Pop. 72,000.

BOLONCHEN, a large thriving vil., Central America, Yucatan, 66 m . N.E. Campeachy. It derives its name from two Maya words: Bolen, nine, and chen, wells; nine wells having formed, from time immemorial, the centre of a population, and these wclls being now in the plaza or square of the village, which consists of a long line of straggling houses or huts, on either side the road. The wells are circular openjugs, cut through a stratum of rock, evidently communicating with a common reservoir, for the water is always at the same level in one that it is in all the rest. The village authorities make it a principal part of their business to keep these wells in a proper state of preservation; but, with all the care bestowed upon them, the supply of water completely fails for four or five months in the year. During the season of scarcity, the inhabitants derive their supply of water from a remarkable cavern (cueva) at a considerable distance from the village. The entrance to this cavern is by a lofty and abrupt opening, under a ledge of overhanging rock. At the distance of 60 paces from the entrance, the descent is precipitous for about 80 ft. , and is accomplished by a ladder. A little further advance leads to the brink of a great perpendicular descent, to the bottom of which a strong body of light is thrown from a hole in the surface, a depth of 210 ft . From the brink of this precipice the descent is made by a ladder, between 70 and 80 ft . long, and about 12 ft . wide, rudely constructed of the rough trunks of saplings, lashed together lengthwise, and supported by horizontal trunks, braced against the face of the precipitous rock. In the large cavern at the foot of this ladder, seen in the accompanying view, a village fôte is annually

WFLL AT DOLONCHEN.-From Catherwoods Views in Central Amerin
held at the opening of the wells in the cueva, which takes place on a day appointed by the municipality. The walls of the rocky chamber are dressed with branches, and hung with lights, and the whole village comes out with refreshments and music, the pastor at their head, and pass the day in dancing in the cavern, and rejoicing that when one source of supply fails, another is opened to their need.

By a laborious descent from this great cavern, Mr. Stephens reached a pool of water, calculated to be at a depth of 450 ft . perpendicular height, and 1400 ft . distant from the entrance to the cave. The number of ladders leading down is seven; and of
the nature of the whole descent some idea may be formed by an examination of the accompanying section. There would

section of well at boloncuen.
appear to be scven water pools, screral of which Mr. Stephent visited, reached by various passages diverging from the great cavern, at the foet of the ladder. The surface of the surrounding country is mountain limestone. Pop. of vil. 7000.(Stephens' Incidents of Travel in Yucatan.)

BOLOR-TAGH, a lofty mountain-range, Central Asia, W. of Little Tibet, stretching nearly due N . and S . It forms one of the N. branches of the Himalaya, connecting it with the Thian Slian range, and several others beyond or further $N$. Its most elevated summits are supposed to exceed $19,000 \mathrm{ft}$. in height. In these mountains, great numbers of a diminutive species of ox, called yak or kash-gow, are reared.

BOLOTANA, a tn., isl. Sardinia, 41 ml . S.E. Sassari, in a fertile district that produces excellent corn and pasture. It centains a monastery. Pop. 2274.

BOLSAS, a river, America, rising in confederacy and state of Mexico, and, after a considerable W. course, in part of which it forms the boundary of the state of Mexico and Valladolid, falls into the Pacific Ocean at Zacatula, 240 m . S.W. the city of Mexico ; lat. $17^{\circ} 53^{\prime} \mathrm{N}$.; lon. $102^{\circ} 20^{\prime} \mathrm{W}$.

BOLSCIA.JA-RJEKA, a river, Kamtchatka, which rises among hills in the S. of that peninsula, and, flowing W., falls inte the Sea of Okhotsk, below Bolsherezk. Its chicf affluent is the Natseliika, after receiving which it becomes navigable for barges. In spring tides, it admits the largest vessels at its mouth.

BOLSENA [anc. Vulsinium], a tn. and lake, Papal States, deleg. of, and 20 m . N.N.W. Viterbo. The town stands on the N . side of the lake of the same name. It is surreunded by a high wall flanked with towers, and defended by a diteh, and is rich in remains of antiquity. Pop. 2000.-The lake [anc. Lacus V'ulsiniensis], supposed to have been a crater, is about 9 m . long, and about 7 m . broad, 285 ft . deep at the deepest part, 1000 ft . above the level of the sea, and well stocked with fish. It is surrounded by wooded hills, affords some charming scenery, contains the twe islands of Bisentina and Martana, which were anciently believed to be floating; and gives rise to the river Marta, which flows to the Mediterranean.

BOLSHEREZK, a small tn . and port, Kamtehatka, S. W. coast, about 160 m . N.W. Cape Lopatka; lat. $52^{\circ} 55^{\prime} 30^{\prime \prime}$ N.; lon. $156^{\circ} 50^{\circ}$ E. (R.) The houses are built of wood, and thatched.

BOLSOVER, a tn. or vil. and par. England, co. Derby. The town. about 22 m . N.N.E. Derby, stands upon a high
table-land overlooking the vale of Scarsdale, and has tolcrably straight, and pretty well kept streets; the houses are irregularly built, and generally of a mean appearance. The church, an ancient building, is in the early English style, and contains some curious specimens of antique sculpture. There are also an Independent and Wesleyan chapels, and a national school. Bolsover was at one time celebrated for the manufacture of buckles, but now it has no manufactures of any kind. Area of par. 6060 ac. Pop. (1841), 1512.-(Local Correspondent.)

BOLSWARD, a tn. Holland, prov. Friesland, $15 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Leeuwarden, at the junction of several canals. It is bordered N.E. by rich corn and pasture lands, and on the W. and S. has several lakes that teem with fish. It is circular, surrounded by a high earthen rampart, now a public walk planted with trees, and is everywhere intersected with deep canals, crossed by numerous stone and wooden bridges. The streets are wide and airy, the houses and gardens remarkably neat and clean. The parish church is said to be the largest and finest in Friesland, and has an elaborately carved pulpit, representing the four seasons, and supported by two eagles. There are two Reformed churches, two R. Catholic, a Baptist church, and a synagogue ; a Latin, a Dutch and French, a Dutch, and a poors' school. Bolsward has a highly ornamented townhouse, and a court-house, a well-endowed poorhouse for Reformed, R. Catholics, and Baptists, a poorhouse for the Reformed alone, and an hospital, called the Provenier's IIouse, in which frugal persons, by yearly payments beforehand, may purchase a comfortable retreat for their old age. The trade consists chiefly in cattle, cheese, and butter; above half a million lbs. of cheese, and nearly as much butter, are yearly brought to market. Many of the inhabitants make their living by spinning what, under the name of Friesland worsted, is sent largely to other provinces. There are also two woollen and one linen manufactory, shipbuilding yards, tile and brick works, potteries, and tanworks. Pop. 3650.

BOLT HEAD, a cape, England, co. Devon, the most S. point of that county; lat. $50^{\circ} 13^{\prime} \mathrm{N}$. ; lon. $3^{\circ} 49^{\prime} \mathrm{W}$.

BOLTANA, a tn. Spain, Aragon, prov, of, and 30 m . N.E. Huesca, l. bank, Ara. It has pretty good though steep streets, one principal and several smaller squares, a collegiate church, chapel, two schools, a townhall, prison, and storehouse. Manufactures:-linen, woollen, and silken fabrics, and hempen shoes. Trade:-cattle, earthenware, and apparel, manufactured goods, and raw silk. Pop. 2360.

BOLTON, or BOLTON-LE-MOORs, a large manufacturing tn., bor., and par. England, co. Lancaster. The town lies 10 m. N.W. Manchester, and consists of two divisions, called, respectively, Great Bolton and Little Bolton. It contains a great number of narrow and irregular lanes, but by far the larger portion of it is modern, the public improvements, within the last 30 years, having been very extensive. The principal streets unite at a spacious market-place, and are crooked and irregular; ill paved, and worse drained. The houses are chiefly of brick, badly built, and of every form and dimension, and destitute, in most cases, of all comfort and conveniency. The town is lighted with gas ; and, since 1824, has been plentifully supplied with water. The public edifices comprise a townhall, exchange buildings, erected in 1825, in which year a mechanics' institute was established; a theatre, the old eloth hall, the Bolton dispensary and infirmary, a spacious temperance hall, in Little Bolton, used for lectures, public meetings, concerts, \&c. In 1846 , splendid baths, with public rooms for concerts, \&c., were erected. A handsome building has recently been finished for the savings'-bank. Great Bolton has also several news'-rooms and public libraries. The parish church of St. Peter, in Great Bolton, is a spacious and very ancient structure, with a beautiful stained-glass window. In 1825, an elegant new chureh, in the later style of English architecture, with a tower, was erected; and, since then, Emmanuel Church and Christ Church have been built, all in Great Bolton. In Little Bolton there are three Established churches. The Wesleyans have three large chapels in the borough, one of which is also used as a Sunday-school. The Wesleyans are also erecting (1850) a spacious new chapel in stone, in the perpendicular Gothic style. The R. Catholics have two chapels, and the Independents three. A Scottish church, in the early English style, was erected in 1846. There are many other places of worship, for Baptists, several

The local charities are numerous and well conducted. The free grammar-school, containing 60 boys, was founded and endowed in 1641. A charity school, containing 90 papils, was founded and endowed in 1693 ; and another, the 'Churchgate charity school,' was founded in 1714. There are, besides, in the parish, numerous public schools, conducted on the systems of the National, and British and Foreign School Societies. Some of these are in edifices that are highly creditable to the friends of education, and ornamental to the town. There are Sunday-schools in connection with almost every place of worship in the parish, embracing in their operations, nearly one-fifth of the population, and frequently retaining the scholars until they become adults. The one in connection with the parish church numbers more than 1300 scholars, and is conducted in a building of freestone, in the later Eng lish style, erected in 1819. Within the last 70 years, the town has greatly increased, and attained to a high degree of commercial prosperity. In 1337, emigrant Flemings introduced the manufacture of woollen cloth into Bolton, and laid the foundation of its future importance. So early as the reign of Henry VIII., the town and its vicinity were celebrated for producing what Leland calls cottons; which, however, wer woollens, the vegetable cotton not having been introduced until the reign of James I. After the revocation of the Edict of Nantes, in 1685, many of the French refugees took a] their abode in the town. Prior to the introduction of the cotton trade, some weavers from the palatinate of the Rhine had introduced the manufacture of a mixed fabric, partly of Iinen yarn (chiefly imported from Germany), and partly of cotton. The chief articles were fustian, jean, and thickset velvets, entirely of cotton, were first made here in 1756 ; and muslins, cotton quiltings, and dimities, in 1763. Many of the subsequent improvements in the cotton manufacture originated in Bolton, and to these it mainly owes its present flourishing condition. Between 1767 and 1775, Sir Richard Arkwright, originally a barber, and resident here, brought the spinning jenny and the water-frame machines to perfection; and Samuel Crompton, a native of the parish, who resided in the neighbourhood, invented a machine called 'the mule,' combining the properties of both. The factories of Bolton continued long on a small scale, in consequence of the scarcity of water, till the employment of steam as a motive power, and the adoption of power looms, enabled the proprietors both to enlarge their works, and greatly to improve and extend the trade. In 1847, Bolton had 61 cotton-mills, using annually about 6000 tons raw cotton; and other four large factories are just now (1850) being built. The articles chicfly made are, plain and fancy muslins, superfine printing calicoes, quiltings, and counterpanes; dimities, jeans, cotton shawls, and the gen erality of power-loom productions. The power of the steam engines used, exceeds that of 2200 horses. A large propor tion of the cotton fabrics manufactured here are bought up by the Manchester manufacturers; and the principal Bolton manufacturers have warehouses in Manchester, where they generally attend every Tuesday for the sale of their goods. Bleaching is also carried on to a great extent, there being 23 bleaching grounds, some of them very large. More than $10,000,000$ pieces of cloth are annually bleached in the parish. In each of the three most extensive establishments, from 130,000 to 150,000 pieces are, on an average, bleached every morth. There are 22 iron-foundrics and machineworks, some of them on a very extensive scale. They con sume together about 35,000 tons of coal and coke, and use nearly 20,000 tons of metal. Besides these, there are several paper-mills, saw-mills, and chemical works. The whole amount of horse power employed in the different works of Bolton in 1846, was 3816. The abundant and cheap supply of coal from the neighbouring collicries, and the advantages of an extensive inland canal navigation, together with the introduction of railways, have added materially to the prosperity of the place. A canal connects Bolton and Manchester, and has a branch to Bury. The Bolton and Leigh Railway, a branch of the Liverpool and Manchester line, was completed in June 1831. The Bolton and Salford Railway, which, running almost parallel with the Bury and Bolton Canal, establishes a direct line of communication with Manchester, was opened in 1838; a railway to Euxton, a few miles S. of Preston, in 1843; and a railway to Darwen and Blackburn, in 1847. The market-days are Monday and

Thursday ; the former, for general provisions, being the principal. There is likewise a large market on Saturday for butcher meat; and one for store cattle every alternate Monday, between January 5 and May 12. Fairs for horned cattle, horses, and cheese, hardware, and toys, are held on April 28, July 30 and 31, and October 13 and 14.

The name of Bolton-le-moors or Bolton-on-the-moors, is derived from its situation-in the midst of moors; a portion of which have been brought under cultivation, having been enclosed under an Act passed in 1792. The town received a charter of ineorporation in 1838 , and is now governed by a mayor, 12 aldermen, a recorder, and 36 councillors. Petty sessions for the borough are held every Monday and Thursday. By the Reform Act, Bolton returns two members to the House of Commons. The boundaries of the parliamentary borough and the municipal borough are the same. Number of electors (1849), 1531. Bolton is the centre of a poorlaw union, comprising 26 other townships and chapelries. The parish of Bolton includes, altogether, 12 populous townships, and six ehapelries; area, 31,390 ac. ; pop. (1831), 63,034 ; in 1841, 73,905. Pop. (1841), Great Bolton, 33,610; Little Bolton, 16,153 ; together, 50,163 . It is now (1850) supposed to be about 60,000.-(Baines' Lancashire; Parliamentary Papers; Local Correspondent.)

BOLUS HEAD, a cape, Ireland, co. Kerry, N.W. side of the entrance into Ballynaskelling Bay; lat. $51^{\circ} 48^{\prime} \mathrm{N}$. ; lon. $10^{\circ} 15^{\prime} \mathrm{W}$.

BOLVA, a river, Russia, rises in the N.W. of gov. Kalouga, and, after a S. course, joins the Desna near Briansk. During part of the year it is navigable.

BOLY, or Galvoly, par. Irel. Tipperary; 1268 ac. P. 410.
BOMBA, a vil. Naples, prov. Abruzzo Citra, 18 m. W.S.W. Vasto, on the side of Mount Pallano, watered by the Sangro. The parish chureh is one of the most remarkable and most richly ornamented churehes in the province. On the mountain on which the town stands, are soma gigantic ruins, whose history is unknown.

BOMBAY (Presidency of), one of the three presidencies into which British India is divided, situated between lat. $14^{\circ}$ and $29^{\circ} \mathrm{N}$. ; and lon. $66^{\circ}$ and $77^{\circ} \mathrm{E}$. It comprehends the districts Ahmednuggur and Poonah in prov. Aurungabad; N. and S. Concan, and Darwar, in prov. Bejapoor; Ahmedabad, Baroach, Kaira, and Surat, in prov. Goojerat; the island of Bombay, Candeish, and Seinde, recently added. The surface is irregular, presenting the diversities of low barren hills, mountainous tracts, valleys, and elevated table-lands. The mountains comprise a large portion of the $W$. Ghaut range, which line the whole W. coast of peninsular IIndoostan, the Santpoora chain, the W. portion of the Vindhya chain, and further N. the Aravulli chain. E. of the latter lies the tableland of Malwa, having an average height of 1600 ft . above sea level, and of which two-thirds are in the presideney of Bombay. The principal rivers are the Nerbudda and Tapty, both falling into the Gulf of Cambay, but there are several other considerable streams that have their sources only in the presidency, such as the Godavery and Kisbna, whieh fall into the Bay of Bengal. The valleys are remarkably fertile, and many purts of the presidency are in a high state of cultivation, although there is still much waste land, particularly in Surat. The roads, also, are so exceedingly bad, as seriously to affect the development of its resources, and, conjoined with the absence of navigable rivers, to limit greatly its internal traffic. So detrimental to the interests of the country have these evils been found, particularly the former, that in 1850 , the merchants and bankers of the city of Bombay presented a memorial to the Governor-general of India, stating that 'so miserably inadequate are the means of ecmmunication with the interior, that many valuable articles of produce are, for want of carriage and a market, often left to perish in the fields, while the cost of those that do find their way to Bombay is enormously enhanced, to the extent sometimes of 200 per cent.; considerable quantities never reach their des-
tination at all, and the quality of the remainder is almost universally deteriorated.' It appears further, that in consequence of this wretched state of the roads in the presideney, of the vast numbers of sheep fed in Candeish and the Deccan, which are sent down to the Bombay market, not one-third reach the city alive, and those greatly reduced in flesh. A railway, however, has recently been commenced at Bombay (which see), which may be the precursor of a better state of things, as regards internal communication.

Climate and Vegetable Productions.-The climate of the presidency is various; in some parts, such as Bombay and its immediate vicinity, it is exceedingly unhealthy, liver complaint being more frequent and fatal there than in any other part of India. In other places, again, such as Poonah, which is only about 80 m . distant from the city of Bombay, and lies in an elevated situation, the climate is so favourable to Europeans that the ratio of mortality amongst the British troops stationed there, has not much exeeeded that of the Foot Guards in England. These extraordinary differences in the salubrity of adjoining distriets, are now carefnlly attended to by the Bombay Government in the distribution of the European troops, by which means a great saving of life has been effected.

The principal vegetable produetions are cotton, rice, dates, and cocoa palms. In the N. parts, a great abundance and variety of fruit is produced, and in S. Concan, and the central districts, large quantitics of rice are grown. Cotton also is cultivated to a great extent, partienlarly in Baroach, and is the best raised in India. It is brought from Baroach to Bom. bay in half-serewed bales. Sugar and indigo are grown in Candeish, the latter of a superior quality, but considered rather light in the colour.

Animals.-These are such as are met with generally throughout India-elephants, tigers, panther3, leopards, hyenas, buffaloes, wild boars, deer, antelopes, and jackals. Snakes abound, and many of them of the most venomous deseription, ineluding the whip snake, and the cobra da capello. Birds are numerous, and of great variety.

Government, de.-The government of the presidency is vested in a governor, subjeet to the authority of the Governorgeneral of India, but independent of all other local control. He is assisted by three councillors, with several secretaries, and various officers of state. The law department is presided over by a chief, and one puisne judge. Civil justice is administered almost exclusively by native judges, and with remarkable effieieney. In 1814 , the number of eases deeided by them was 74,067 ; and of these, 3571 were appealed, or 4.82 per cent.; and of this number, 936 were reversed, or 1.26 per cent. ; that is, not more than 1.25 cases were reversed in 100 tried, affording strong testimony to the carefulness of the decisions by the native judges. There are at Bombay, as at Calcutta, courts of requests for the recovery of small debts; the recorders of which are Europeans. The publie revenue for 1846 was $£ 2,647,171$. Expenditure, $£ 2,741,231$. The expense of maintaining the military foree in the presidency, in the same year, amounted to $£ 1,704,852$.

Church Establishment and Education.-Bombay is the see of a bishop, subordinate to the Bishop of Calcutta; and has also a recognized branch of the Chureh of Scotland, which annually receives a grant of $£ 1994$; and a grant of $£ 826$ is also made to the R. Catholics, who are more numerous in this, than in either of the other presidencies. The most numerous body of Christians here are Nestorians. The Government educational institutions in Bombay are under the management of a board of education. This board consists of a president, five members, and a seeretary; three of the members are Europeans, one a Parsee, one a Hindoo, and another a Mahometan. A maximum sum of $£ 12,500$ is fixed for educational purposes, under the Bombay presideney; and the board control a sum of $£ 2000$, constituting the Sanserit College Fund. The provincial English schools are at Poonah, Tannah, and Surat; at which the scholars, in 1842, amounted to 174. Of the district vernacular schools in 1842 , there were 120 , with an attendance of 7750 scholars. There are, besides, a number of village schools.

Manufactures, Trade, dic.-The principal manufactures are of sugar, indigo, and silks; a description of the latter, ornamented with gold and silver, is woven at Poonal; ; but, with exception of these, there are no other manufactures worth mentioning. The internal trade of the presidency, for the

## BOMBAY

reasons mentioned at the beginning of this article, namely, want of roads and of navigable rivers, is much more limited than it would otherwise be. For an account of the foreign trade, see Bomaxy (City of). The population of this presidency, including Scinde, is estimated at about $8,500,000$.

BOMBAY [Portuguese, Bom-Bahia-Good Harbour], a well-known city and seaport, W. coast of the peninsula of Hindoostan, cap. of the presidency of Bombay, and situated on a narrow point of land at the S.E. extremity of the island of the same name; lat. $18^{\circ} 53^{\prime} 42^{\prime \prime}$ N. ; lon. $72^{\circ} 48^{\prime}$ E. (r.) ; 660 m . N.W. Madras, and 1050 m . S.W. Calcutta overland,

and somewhat more than double that distance by sca. The city is divided into two portions, one lying next to the sea, and surrounded by fortifications; and situate about 1 m . N.W. the other, called the Black, or Native town. The strcets of the former are narrow, without any foot pavement, and in many places choked up with dust. The houses aro three, and sometimes four stories ligh, and are provided with verandahs, which rise one above the other, and are supported by wooden pillars; they have also small bow windows, adorned with neat trellis-work. In the lower part of the town are the bazaars, which are narrow and dirty, and are chiefly kept by Parsees, an industrious and singularly intelligent race, of Persian descent, to whom a large portion of the mercantile wealth of Bombay belongs, and who assimilate themselves to Europeans in habits, manners, and mode of living, more than any other race in the East. Between the fort and the nearest part of the native town without, is what is called the esplanade, used as parade and airing ground, on which no permanent building is allowed to be erected. The European population is accommodated, partly within the fort, in the largest and best-situated houses, but the greater proportion in bungalows, or villas, in various parts of the island; these are generally large and handsome, with extensive areas, called compounds, in front, and built with careful reference to the climate, verandahs encircling the rooms of the house. Bombay Castle, the treasury, the Government-offices, and almost all the nicrchants' warehouses and offices, are situated within the

Vol. 1.
fort. The principal building is the townhouse, within the fort, and occupying the E. side of the square called the Bombay Green; it contains many of the Government-offices; a library, rich in collections, gathered from all parts of Asia, and a spacious saloon, adorned with marble statues of Mountstuart Ehphinstone and Sir John Malcolm. In the centre of the Green itself, is a statue of Lord Wellesley; and another, to the memory of Lord Cornwallis, stands outside the fort, at what is called the church gate. There are now several Protestant churches in Bombay:-four of the Church of England one being a cathedral, a handsome building; one Established Church of Scotland, and one Free Church of Scotland, a graceful structure, with an elegant spire, lately erected, and one American Presbytcrian. There are also a great many Portuguese and Armenian churches in the city, several synagogues, for both white and black Jews, and a great number of Mahometan mosques and Hindoo temples. Bombay is the seat of a Protestant bishop, of English and American missions, and of missions from the Established and Free Church of Scotland. There is also a large R. Catholic population in the city, whose religious establishments enjoy the support of the East India Company. A great portion of the Black, or Native town, is built on a low tract of land, which, in former times, suffered much from inundations, and was, during seven or eight months in the year, an unwholesome swamp. Much has been done of late to remedy this evil, by draining, and the formation of roads and streets, and with some success, although the streets, which are here also most inconveniently narrow, still continue to abound in nuisances; while, during the rainy season, much sickness and suffering prevail, in consequence of the excessive damp. The houses in Black town are small, built of brick, and two stories in height. The lower stories are kept open as bazaars, in which the dealers sit cross-legged, surrounded by baskets containing piles of merchandise. In the evenings, the scene here is very animated; the streets and bazaars are lighted up with numerous small lamps, and crowds of natives throng the stalls, examining the goods, and making purchases.

The markets of Bombay, though not equal to those of Calcutta, are well supplied with provisions, mutton, kid, poultry, and fish in abundance, and generally of good quality; the onions are particularly exccllent, and as such, are celebrated all over the coast. The wages of servants here are much higher than in Bengal; but food is dearer, which is probably the cause; yet the salaries of the public servants are smaller here than in either of the other two presidencies.

The harbour of Bombay is one of the largest and safest in India; while its scenery, and that of the neighbouring continent, presents a rare combination of grandcur and beauty. It is 12 or 14 m . long, with a general width of from 4 to 6 m . It is situated between the islands of Colabah, Bombay, and Salsette on the one hand, and the mainland and islands of Caranjah and Elephanta on the other, and is defended by formidable batteries, particularly strong towards the sea. The usual anchorage is on the W. side of the harbour, off the town of Bombay. The general depths in approaching the former, are from 14 to 8 fathoms. The docks, which are the property of the East India Company, are under the management of Parsees, by whom the shipbuilding is conducted. Two ships of the line can be completely built and equipped in these docks every 18 months, and the slips and basins are calculated for vessels of any size. The ships constructed here include merchant vessels of large dimensions, occasionally frigates, and even ships of the line; the timber being amply supplied from the neighbouring districts of Malabar and Goojerat.

The trade of Bombay is of great extent and importance. The following table shows the value of the imports and cxports each year, from 18445 to 1847-8:-

| $1844-5 \ldots . £ 5,126,552 \ldots £ 3,773$ | 261 | $1846-7 \ldots £ 4,604,897 \ldots . .22,701,417$ |  |  |  |
| :---: | :---: | :---: | :---: | :---: | :---: | :---: |
| $1845-6 \ldots$. | $5,801,780 \ldots$ | $3,0<4,948$ | $1847-8 \ldots$. | $4,326,796 \ldots$ | $2,949,591$ |

Of the imports of 1848, Great Britain furnished to the value of $£ 1,289,757$, and took of exports $£ 951,370$. China furnished to the value of $£ 738,434$, and took $£ 2,959,169$. After these, but to a much smaller extent, stands the trade with the Persian and the Arabian Gulfs; the coast of Africa; the Portuguese possessions in the East; France, including the isles of

France and Bourbon; and America. The shipping, inwards snd outwards, at Bombay, for the year ending April 30, 1843, was:-

| Tessels. | No. of Ships | Tonnage. |
| :---: | :---: | :---: |
| British. | . 328 | 175,963 |
| French. | . 7 | 2,191 |
| Portugues | .. 4 | 843 |
| American | . | 1,398 |
| Arabian.. | .. 6 | 2,193 |
| Siamese. | .. | 350 |
|  | 350 | 182,93 |

Bombay is the chief Indian port connected with the establishment of steam navigation between India and this conntry. In 1837, three steam vessels sailed between Bombay and Suez; and in 1843 , there were eight. There is now a regular trans mission of mails by steam, every fortnight, by way of the Me. diterranean and the Red Sca. Steamers ply between Bombay and Point de Galle in Ceylon, where they meet other steamers which proceed to Madras and Calcutta, and also to Canton in China. A railway between Bombay and Tannah, a town and fortress on the island of Salsette, about 25 m . N.N.E. from the former, was commenced on October 31,1850, and is the first railway begun in India.-The Island of Bombay, on which the city is situated, is one of a clnster of islands, and the largest of all, excepting Salsette, with which it has long been connected towards the N.E. by a mound and arched stone bridge; another connecting mound was formed towards the N.W. a few years ago. It is about 8 m . long from N . to S ., and about 3 m . broad, formed by two ranges of rock of unequal length, running parallel to each other on opposite sides of the island; these ranges are united at the extremities by hills of sandstone, which are only a few feet above the level of the sea. The interior of the island was formerly liable to be overflowed by the sea, which is now prevented by substantial works and embankments, but the lower parts are still covered with water during the rainy monsoon. On the S.W., the island terminates in a rocky peninsula 60 ft . high, called Malabar Point, stretching far into the sea, and forming the W. side of Back Bay, by which the S. end of the island is hollowed out. It is adorned with a pleasing variety of country seats, interspersed with groves of cocoa-nut trees, and traversed in all directions by good roads. Magnificent views are obtained from this point. The S.E. extremity of the island, again, terminates in a similar, but much longer projection, formed, in part, by Old Woman and Colabah islands connected together, and to Bombay, by causeways. This projection, which, by the junction of the islands, appears an entire peninsula, forms the E. side of Back Bay. Here, also, are a number of spacious houses, most of which are surrounded by small gardens, and overshadowed by mangoes, palms, and tamarinds. At the extremity of this point, which forms the S . entrance point of Bombay harbour, is a light-house. The jurisdiction of the supreme court is confined to the island of Bombay, and to Enropeans in the rest of the presidency; the civil and criminal laws are those of England. Bombay is, next to Madras, the oldest of our possessions in the East. At present it rules the whole N.W. coast of India. The mean temperature of Bombay is higher than that of Calcutta, but lower than that of Madras, which is $84^{\circ}$ Fall., Bombay $82^{\circ}$, and Calcutta $79^{\circ}$.

The population of Bombay has increased tenfold within a century. In 1716, it was estimated at 16,000 ; in 1816, at 161,550 ; it is now, according to the census of 1849 , upwards of 500,000 , composed of British, Portnguese, and Armenians, Jews, Mahometans, Hindoos, and Parsees.-(Mamilton's East India Gaz. ; Von Orlich's Travels in India; Porter's Progress of the Nation; M'Culloch's Account of the British Empire; Dritish Colonial Library; IIistorical and Descriptive Account of British India; Morsburgh's East India Directory; The Oriental Interpreter; Private Information, \&c.)

BOM-FIM, the name of several tns. and vils. Brazil:1, A small tn., prov. of, and 95 m . S.E. Geyaz. Once more
populous than at present; the falling off being the result of the exhaustion of the gold washings in the vicinity.-- 2, A tn., prov. Minas Geraes, 120 m . W. Villa Rica; having a church, and a pop., for town and district, of $3000 .-3$, A consider able vil., prov. Minas Geraes, 75 m . N. Tejuco or Cidade Diamantina. Pop., vil. and dist., 2000.-4, A suburb of the city of Bahia.—There are several other unimportant places of this name.

BOM-JARDIM [good garden], a tn. Brazil, prov. Ceara, 30 m. S. Crato, in a fertile valley of the serra CairirisNovos. The town is small, but the district extensive; yielding mandioca, sugar, \&c. Pop. 6000.

BOM-JESUS [good Jesus], the name of numerous places in Brazil; all unimportant. Among them are a vil., prov. Pernambuco; three vils., prov. Bahia; a par., prov. Matto Grosso ; and an isl., Bay of Rio de Janciro.

BOMMEL, or DE Bommel, a vil. Holland, prov. Zeeland, 14 m. E. by S. Briclle, on the Ilärringvliet. It has a handsome octagonal church, with painted glass wiudows, and a copper-covered stceple.

BOMMEL (Zalt). Sce Zalt-Bommel.
BOMMELERWARD, an enclosed dist. or isl. IIolland, prov. Gelderland. It lies immediately above the meeting of the Waal and the Maas, and is 16 m . long and 6 m . across at its greatest breadth. Besides the town Zalt-Bommel, it contains 17 villages. The soil is a rich clay, and particularly suited for flax and hops. The pop., of which abont two-thirds are Protestant and one-third R . Catholic, is chicfly agricultural, and amounts to about 15,000 .

BOMST, a th. and circle, Prussia, prov. and gov. of Posen. The town lies on the Obra, 10 m. N.E. Zullichau; and has three churches, a good deal of hop and garden ground, and some vineyards. It has also some manufactorics of coarse cloth, and a considerable trade in shocs. Inhabitants, Germans, Poles, and Jews, 2250.—The circle, area, 308 geo. sq. m., is flat, and the soil, though light, tolerably fertile. A considerable part of it is in pasture, and feeds great numbers of cattle. Pop. 44,227.

BON (Care), or Ras Iddair, a cape, Tunis, on the Mediterranean ; lat. $37^{\circ} 4^{\prime} 48^{\prime \prime}$ N.; lon. $11^{\circ} 3^{\prime} 30^{\prime \prime}$ E. (r.)

BONA [anc. Hippo Regius; Arabic, Beled-el-Anab-the town of jujubes], a maritime city, Algeria, prov. of, and 85 m . N.E. Constantine, W. side of the Gulf of Bona; lat. (Lion point) $36^{\circ} 54^{\prime} 30^{\prime \prime} \mathrm{N}$. ; lon. $7^{\circ} 46^{\prime} 30^{\prime \prime} \mathrm{E}$. (1.) It is built at the foot of a hill which rises to the N. and N. W. of the city, and is surrounded by a wall 30 ft . in leight, and nearly 2 m . in circumference, with four gates; and is further defended by a strong fort or citadel on the top of the hill; and the fortifications have been greatly strengthened since the place came into the hands of the French. It is the scat of French judicial courts. The streets are narrow and crooked, but many

BONA, from Fort Cigogne. - Fron Berbrugger, Algerie.
of the houses substantial and well bnilt. There is a good market, with shops, reading-rooms, coffee-honses, and a theatre. The harbour is now nearly choked up with mud, but there are good landing-places in the vicinity, and the trade of the town is still considerable. Its chief manufactures are of burnooses, a piece of Arab dress, and other garments; tapestry, and
saddles. Its exports are corn, wool, ox hides, wax, and coral, being the seat of a fishery of the last. In 1842, the exports amounted to $£ 72,526$; in 1843 , to $£ 95,364$; the imports (1842), 247,681; (1843), £327,689. The eitadel and town were taken, in 1832, by the French, by whom it has been greatly improved. About 1 m. S. the town are the remains of Hippo Regius, once a residence of the Numidian kings, and the episcopal seat of St. Augustine. Pop. (1838), 5310; (1847), 9799.

BONABONA. See Borabora.
BONAIRE, also Buenos-Ayres, or Buen-ayre, an isl. W. Indies, off the coast of Venczuela, 27 m . N.E. Curaçao, by which it is used as a place of transportation for criminals; lat. (lighthonse, S. point) $12^{\circ} 2^{\prime} \mathrm{N}$. ; lon. $68^{\circ} 17^{\prime} \mathrm{W}$. (r.) It is about 20 m . long by 8 to 10 broad; of a very irregular shape, high and hilly, chiefly composed of calcareous deposits, but, in some places, of pure quartz. It is thickly wooded; the soil is hard and dry, suffering from a deficiency of rain, yet not without excellent pasture. On the S. coast, the land is covered with low knolls, clothed with verdant creepers and cactuses, whieh yield considerable quantities of cochineal. The ehief product is Turkish wheat, constituting the general food of the people; the hill sides are covered with Brazil and ycllow wood, but there are no fruit-bearing trees. The island produces sheep and goats, as also asses, which run wild, and are cauglit, for sale, by the Government, to Americans and other foreigners. The flamingo frequents the S.E. peninsula; turtles are eaught on the coast. Large quantities of salt are produeed; and lime is procured by burning the corals with brushwood, but the quality is bad, in consequence of its being slaked with sea-water, for want of fresh. The inhabitants, though not riel, are frank and hospitable. The roadstead is on the S.W. side, in a deep exposed bay, where there is a fort; but vessels can come close up to the shore. Pop. 1348, of whom 112 are whites.

BONACCA, or Guanaja, an isl. Caribbean Sea, Honduras Bay, 30 m . N. Cape Castilla; lat. $16^{\circ} 28^{\prime} \mathrm{N}$. ; lon. $85^{\circ} 55^{\prime}$ W. (R.) It is about 9 m . long, and from 1 to 3 broad; covered with wood, and, towards the centre, attains a height of 1200 ft .

BONATI, a tn. Naples, prov. Principato Citra, 21 m. S. La Sala, near the Gulf of Policastro. Pop. 3300.

BONAVISTA, Cape de Verde Islands. See Boavista.
BONAVISTA.-1, A bay, E. coast, Newfoundland, N. Ame-ica, between Cape Freels on the N., and Cape Bonavista on the S . Its entrance is 35 m . wide; but the bay is crowded with islands, and the whole eoast is extremely rocky and dangerous. -2, A cape, forming the S.E. limit of the above ; lat. $48^{\circ} 42^{\prime} \mathrm{N}$. ; lon. $53^{\circ} 8^{\prime} \mathrm{W}$. (r.) It is a bluff bold headland, having a lighthouse, with a revolving light at two minute intervals, alternately red and white, 150 ft . above the level of the sea.-3, A tn., N. America, Newfoundland, $3 \frac{1}{2} \mathrm{~m}$. S.E. the cape, and on the E. coast of bay of same name. It is a large and straggling place, but is surrounded by a good deal of cultivated land, and has, upon the whole, a respectable appearance. The want of a good harbour, or even good shelter for boats, prevents its advancement.

BONBON (Lake). See Batangas.
BONBY, par. Eng. Lineoln ; 2900 ac. Pop. 386.
BONCHURCH, a vil. and par. England, Isle of Wight; the former pieturesquely situated on an elevation, embosomed among trees, and commanding a delightful view of the sea, about 1 m . E. by N. Ventnor. It is much resorted to by invalids on account of its genial climate, and is rapidly rising into importance. Area of par. 150 ac. Pop. (1841), 302.

BONDENO, a tn. Papal States, 10 m . W.N.W. Ferrara at the confluence of the Panaro and Po d'Argento. One of the defiles that lead aeross the Apennines, commences at this place. Pop. 3000.

BONDJOL, a strong native fortress, isl. Sumatra, prov. Padang, famed as the first scene of the insurrection of the fanatics, called Padries, in Sumatra, in 1833; and that of their last stand, in 1837, when, after much fighting, it fell into the hands of the Dutch.

BONDOU, a little-known country, Senegambia, cap. Boulebani ; lat. $14^{\circ} 21^{\prime}$ N. ; lon. $12^{\circ} 30^{\prime} 37^{\prime \prime}$ W. ; bounded, N. by Galam, W. by Fouta-Damga, E. by the Falémé (a tributary of the Senegal, whtch separates it from Bambouk), and S. by the Tenda and Wooli countries, elose to
the Gambia; extent supposed to bo about 97 m . N. to S ., and 80 m . E. to W. It is mostly a flat country, with somo elevations of no great height, in its N. and central parts; and watered in its E. side by numerous small streams that fall into the Falémé. It is very fertile and well cultivated, producing cotton, millet, maize, indigo, pistaeia-nuts, tobacco, \&c. Vegetation is exuberant, and there are extensive forests, including the baobab, acacia, \&c. Iron abounds, but is not worked, and also some gold is obtained. The people have a tolerable stock of horses, cattle, and sheep. Wild beasts are numerous. The Faléné swarms with crocodiles. The natives are spirited, brave, and (for Africans) industrious; weaving of cotton cloth is carried on to some extent, chiefly of long and narrow slips of cotton, called pagne; which, besides being made up into garments, serve as a kind of currency. The Bondou people are chiefly Foulahs, but include several tribes; many of them can read and write Arabic, there being regular schools for teaching that language; and all, or nearly all, are professed Mahometans; but the bulk of the people trust in a kind of soreerers, and are firm believers in the sovereign efficacy of their gris-gris or charms; some of which are merely written words, taken from the Koran. Nineteen-twentieths of the men of Bondou are in a servile condition; and not a few are absolute slaves. Among their superiors, the chief are, the sissibehs or relatives of the amamy, or sovereign; next in order are the imams, or official functionarics; then come the tamsirs, or judges; after them the talibas, or 'learned men.' All these come under the general name of marabouts; and the sovereign himself is a head marabout, or pontiff. IIe is, in all respects, an absolute prince; and the office is hereditary, usually passing from brother to brother. His influence is very extensive, and he has a considerable revenue, derived from the produce of land, the sale of slaves, tribute from neighbouring countries, tolls on traffic, and presents from French and English traders. Pop. not certainly known, but estimated by some at $1,500,000$. -(Raffenel, Voyage dans l'Afrique Occidentale, in 1843-44.)

BONGA, a tn., E. Africa, cap. of Kafa or Kaffa; lat. $7^{\circ} 10^{\prime} \mathrm{N}$. ; lon. $37^{\circ} 20^{\prime} 23^{\prime \prime}$ E.; represented to be in a richly wooded and fertile country, in some respects resembling Brazil.
bONGAY, Bangey, or Bangavi, an isl. Indian Archipelago, E. coast, Celebes, between Peling and Xoola or Sylla; lat. (S. point) $2^{\circ} 10^{\prime} \mathrm{S}$. ; lon. $123^{\circ} 53^{\prime} \mathrm{E}$. (n.) It gives name to a group of about a hundred islets, much resorted to for slaves and wood.

BONGO, a small isl. Philippines, Illana Bay, isl. Min danao, opposite the river and town of that name; lat. $7^{\circ} 15^{\prime}$ N.; lon. $124^{\circ} 15^{\prime}$ E. Nearly opposite, also, is a well-known watering-place, called Pollock Bay, or Cove, where good anehorage is to be had; but the treacherous disposition of the inhabitants render it dangerous to land, unless every precaution is used.

BONGOOS, a tn. on a bay of same name, W. coast, isl. Sumatra, a few m. S. the town of Padang. It consists of 80 to 100 bamboo houses, inhabited ehiefly by fishermen. The large quantities they daily take, are immediately bought up for the most part, by inland dealers, who dry the fish for future sale. The bay is small, and expanding reefs and shoals make it dangerous for large vessels.

BONIIILL, a vil. and par. Scotland, co. Dumbarton. The village is beautifully situated in the vallcy of the Leven, about 4 m . from its junction with the Clyde, 3 m . N. Dunbarton. It has one principal street, and two smaller; houses generally well built, of a reddish-coloured stone, obtained in the neighbourhood, and roofed with slate; well supplied witl water from the Leven, and the houses, but not the strects, lighted with gas. There are three churelies in the villagethe parish elurch, a neat and handsome structure; the Free church, a U. Presbyterian church, and four sehools, one of which is liberally endowed by the proprietors of one of the printworks in the vicinity, not only for their own work people, but for the public generally. There are three public libraries, one of which is in connection with a mechanics' institute. The inhabitants are nearly all employed in the extensive printworks in the vicinity, in one of which $17,000,000$ yards of cambries, gauzes, de laines, \&e., are printed and finished annually. - The PARISH is about $4 \frac{1}{2} \mathrm{~m}$. in length, and 4 in breadth. Pop. of par. (1841), 6682; of vil. 2041.(Local Correspouldat.)

BONI, or BoNy [called by the inhabitants Sewa], a territory S.W. peniusula of isl. Celebes, W. side gulf of same name, N. of Boolookamba, about 80 m . in length, and stretching from a half to two-thirds across the peninsula. The N . part is beautiful and fertile, producing rice, sago, and cassia. The inhabitants excel in the working of gold, iron, and cotton, in which they trade with the whole Archipelago. The ancient institutions of Boni, whose first prince is believed by the people to have come from heaven, are remarkable for their near approach to constitutional monarchy, and its annals, frem the commencement of authentic history, are highly interesting. Its first King gave the country settled laws, and appointed seven elective lords to assist the Crown in administering the government. Wemen, as well as men, might form part of this chesen council, which had to be consulted on all matters of public importance, and especially about the settlement of the crown, and the making of peace and war. When a crime was committed, the culprit was denounced to the King, who called upon the grandees to try the accused; and, when judgment was pronounced, if the sentence was capital, the Prince gave a wink, and instantly the criminal was dragged out and stabbed to death. If there were aggravating circumstances, the King commanded him to be beund to a tree, and his body to be pricked all over with the points of krises, and then besmcared with syrup, on which the ants immediately attacked him, and he expired under the direst tortures. The Dutch East India Company laving repeatedly assisted the Boni people against their enemies, is said to have made them overpowerful and haughty. When the British took Celebes in 1811, they offended the Bonese by prolibiting the slavetrade, and on being refused indemnity for injuries done to British commerce, were attacked by General Nightingale, who took and plundered their capital. This only produced exasperation, and was followed by some British ships being attacked, and their crews sold into slavery. Hence another expedition against them in 1814, when their King was slain. The Dutch returned to a milder policy, and succeeded in reestablishing friendly relations in 1838, though not until after considerable bloodshed, caused by the obstinacy of the Bonese in claiming a supremacy over all other principalities in Celebes. Pop. 200,000. $\qquad$ The bay, or gulf, is formed between the S.E. and S.W. penirsula of Celebes, and is about 180 geo.m. long, by about 120 broad at the mouth, narrowing to 45 at the upper end. It has numerous shoals, and its navigation is intricate.

BONIFACCIO [Latin, Bonifacium], a seaport tn. Corsica, 45 m . S.S.E. Ajaccio; on the Strait of Benifaccio, which separates Corsica from Sardinia; lat. $41^{\circ} 23^{\prime} 48^{\prime \prime} \mathrm{N}$. ; lon. $9^{\circ} 9^{\prime} 15^{\prime \prime} \mathrm{E}$. (R.) It stands on a peninsula, about 180 ft . above the sea; is well built, and tolerably well fertified, and contains scveral laandsome churches. The pert is good, but difficult of access, on account of its narrow entrance. The town has a court of commerce, and experts wine and oil. The coral fishery is carried on here. In the neighbourhood are curious marine grottoes and granite quarries, in which may still be seen huge blocks and pillars left half finished by the Romans. Pep. 3120 .-The strait of Bonifacio is 7 m . broad, and contains several small islands, on one of which is an ancient pillar, 19 ft . high.

BONIFATI, a tn. Naples, prov. Calabria Citra, 3 m . S.E. Belvedere. It has several churches and a convent. Silk is produced to a large extent in the district. Pop. 2670.

BONIN, or Arzobispo Islands, several groups of islands, N. Pacific Ocean, extending from lat. $27^{\circ} 44^{\prime} 30^{\prime \prime}$ to $26^{\circ} 30^{\prime} \mathrm{N}$. The N.W. island of the most N. cluster, called Parry Group, is in lat $27^{\circ} 43^{\prime} 30^{\prime \prime}$ N.; lon. $142^{\circ} 8^{\prime}$ E.; the cluster consists of small isles, pointed rocks, and very irregular bettom. The largest of the chain is Peel Island, on the W. side of which is a good harbour, called Port Lloyd, in lat. $27^{\circ} 5^{\prime} 30^{\prime \prime} \mathrm{N}$.; lon. $142^{\circ} 11^{\prime} 30^{\prime \prime}$ E.; nearly surrounded by hills, crowned with palm-trees. Almest every valley has a stream of water. Green turtle abound in the sandy bays. Sharks are numerous, and fish of several kinds plentiful.

BONMAHON, or BUNMAHON, a maritime vil. Ireland, co. of, and $14 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Waterford, on St. George's Channel, at the mouth of the Mahon, from which it takes its name. It has a fine beach, and numerous respectable lodging-honses, and is a place of great resort during the summer months for sea-bathing.

Near it are lead and copper mines, which have been occasionally worked to some extent. Pop. 1771.

BONN [Latin, Bonna ad Rhenum], a tn. Prussia, prov. Rhine, pleasantly situated on a gentle acclivity, l. bank, Rhine, about 16 m. S.E. Cologne, having a very pleasing and cheerful appearance; encircled with walls, and surrounded with beautiful gardens. The streets are narrow, and indifferently lighted, and the air often bleak and cold; yet, from its delightful situation, it is one of the most desirable places of residence on the Rline. It comprises about 1200 houses, 36 public buildings, eight churches and chapels, with a number of mills and manufactories, the chief of which are of cottons, silks, and sulphuric acid. Bonn enjoys the reputation of a high antiquity, but derives its greatest celebrity from its university, which has had many distinguished men amongst its professors; ameng others, Schlegel and Niebuhr, the his. terians. The number of students attending it is generally between 600 and 800 . In 1844 the number was 714, of whom 196 were students of theology ( 76 Protestant, and 120 R. Catholic), 232 of law, 103 of medicine, and 120 of philosophy. The building of the university is an immense pile, and was formerly the residence of the electors of Celogne. It has a library of about 100,000 volumes. The principal square in the town is called Minster Square, a fine area planted with trees, and which derives its name from the Minster, or church of St. Cassius, an ancient Gothic structure. The townhal! is the handsomest of the modern public edifices. In the vicinity, at Poppelsderf, are an cxtensive botanic garden, an agricultural school, museum of natural history, with 200,000 specimens of minerals, and 10,000 petrifactions, besides a large collection of zoolegy and plants. Amengst the scientific associations of Bonn is an academy of naturalists, called the Leopold-Caroline Academy, which has extensive collections. There are five elementary schools in the town, and a free school for the education of poor children. Beethoven, the celebrated musician, was a native of Bonn, having been born there on Dec. 17, 1770. Prince Albert was a student here. Bonn has ample means of cenveyance by the railway from Cologne, which was opened in 1844, and passes the tewn; and the numerous steamboats which ply on the Rhine. Pop. 14,369.-The circle, area, 80 geo. sq. m., is level, well wooded, well watered, and fertile, producing in abundance corn of all kinds, flax, tobacco, and wine. Pep. (mostly 12. Cathelic), 50,000 .

BONNETABLE, a tn. France, dep. Sarthe, 12 m . S. Mamers, consisting of two principal parallel streets, joined by numerous smaller ones. The old Gothic castle is one of the best preserved monuments of the fendal times now to be found in the kingdom. In one of its lialls are curious wooden sculptures, with figures of the lords of Bonnetable. The manufactures consist of calicoes, bombazines, and cotton handkerchiefs; and the trade in grain, grass-seeds, fruit, and cattle is considerable. Pop. 3247.

BONNEVAL, a tn. France, dep. Eure-et-Loire, 9 m . N.N.E. Chateaudun; formerly fortified, but nearly demolished by Henry V. of England, while besieging Orleans, and rebuilt by the successors of Charles VII. The parish church has a singular spire, of great height. There are here some spinningmills, and extensive tanneries ; and flannels, blankets, calicoes, and printed goods are made. Trade:-in agricultural produce. Pop. 1780.

BONNEVILLE [anc. Burgum Castrı], a tn. Sardinian States, Savoy, cap. prov. Faucigny; on the Arve, near the junction of the Borne, 16 m . E.S.E. Geneva. It is well built, aud contains a college and a handsome townhouse. The river is crossed by a good stone bridge; and near it is a statue lately erected to King Carlo Felice, and placed on a column 90 ft . high. A fine hard pavement is extensively quarried in the neighbourhood. Pop. 1500.

BONNIEUX, a tn. France, dep. Vaucluse, 6 m . S.W. Apt, formerly surrounded by strong walls. About $2 \frac{1}{4} \mathrm{~m}$. from it is a Roman bridge of three arches, in a state of perfect preservation ; supposed to have been built by the Emperor Julian. Pep. 1256.

BONNINGTON, par. Eng. Kent; 4310 ac. Pop. 155.
BONNY.-1, A river, W. Africa, Upper Guinea, forming one of the mouths of the Niger, and falling, with the New Calabar, into the Bight of Bisfra, its E. point, according to Boteler. being in lat. $4^{\circ} 23^{\prime} 42^{\prime \prime} \mathrm{N}$. ; lon. $7^{\circ} 5^{\prime} 29^{\prime \prime} \mathrm{E}$. It cas
be entered at any time of the tide by vessels drawing 18 ft . water; is deep inside the bar, and affords safe anchorage at all times of the year. Its banks are low and swanpy. Large quantities of palm-oil are exported from this river ; and it has long been notorious for the extent to which the slave-trade has been carried on along its banks.- $2, \mathrm{~A}$ tn., on a narrow and deep creek of the above river. Although the residence of the King, it consists merely of a collection of huts, differing much in quality, size, and style of building, but strongly resembling English cottages in shape. They are composed chiefly of stakes, plastered with mud, roofed with palm-leaves, and all extremely dirty, not excepting the King's dwelling. The inhabitants are remarkably snperstitious; and great numbers of them die annually of dysentery and jungle fever, occasioned by the marshy and unwholesome situation of the town.

BONOA, or Benoa, an isl. Indian Archipelago, Moluccas, 8 m . from the N.W. end of isl. Ceram; lat. (S.W. point) $3^{\circ} 3^{\prime}$ S.; lon. $127^{\circ} 57^{\prime}$ E. (n.) It is about 12 m . long, and 10 m . broad; very hilly, and so stony towards the W. that it is not all inhabited. It was once a noted haunt of piratical Malays, but the inhabitants now devote themsclves to fishing and tillage. There was formerly a Dutch establishment on the island for extirpating clovetrees.

BONORVA, a tn., isl. Sardinia, Alghero, 17 m . N.E. Bosa, on the declivity of a mountain. It has two monasteries, and a breeding stud of horses. Pop. 4274.

BONSALL, par. Eng. Derby; 2750 ac. Pop. 1496.
BONTHAIN, or BoNTEIN, the W. part of the territory Boolekomba-and-Bonthain, with town of same name, in the S.W. peninsula of the isl. Celebes. The country is bcautiful, abounding in rice, timber, and fruits, and swarming with wild boars. It has been twice conquered by the Dutch, and by the Bongay contract was left in their posscssion. See Boo-lekomba-and-Bonthain.-The town lies in a bay of same name, 35 m . S.S.E. Macassar; lat. $5^{\circ} 30^{\prime}$ S.; lon. $120^{\circ}$ E. About 2 m . off there is good anchorage, in 7 or 8 fathoms, sandy bottom.

BONV1LSTON, par., S. Wales, Glamorgan. Pop. 282.
BONYHAD, or BonHard, a market tn. Hungary, circle, beyond the Danube, co. Tolna, 21 m . N.E. Fünfkirchen; with a R. Catholic church, a Reformed church, an alms-house, and a synagogue. Pop 53.10.

BOO, or Hoo, a group of islets, between Gilolo and Papua; lat. $1^{\circ} 12^{\prime}$ S.; lon. $129^{\circ} 20^{\prime}$ E. (L.)

BUOAN, or Bouan, a small isl. Asiatic Archipelago, off the N.E. coast of Borneo ; lat. $6^{\circ} 22^{\prime}$ N.; lon. $118^{\circ} 10^{\prime}$ E.

BOOBY ISLAND, a mere rock, Torres Strait; lat. $10^{\circ} 36^{\prime}$ S. ; lon. $141^{\circ} 52^{\prime} 50^{\prime \prime}$ E. ; but derives interest from containing a depôt of provisions and water, left by men-ofwar and other vessels passing, for the use of those who have been wrecked in the strait. It is one-fourth of a mile in diameter, flat, and abont 30 ft . high, the summit being bare porphyry rock. A valley intersects the N.W. side of the island, in which grow a few creepers, some brushwood, and two or three trees of tolerable size, with a peculiar broad green leaf, which gives shelter to some pigeons and quails, in which latter the island abounds, even more than in the bird which gives its name to the locality. Turtle were once found upon this isle, but none are now taken.-(Stokes's Australia.)

BOODROOM, Boudroum, or Bodrun.-A seaport tn. Asiatic Turkey, pash. Anatolia, 93 m . S. Smyrna; lat. $37^{\circ} 1^{\prime} 21^{\prime \prime} \mathrm{N}$. ; lon. $27^{\circ} 25^{\prime} 18^{\prime \prime}$ E. ; beautifully situated on a rising ground at the bead of a bay, opposite the island of Cos. The houses are of stone, the streets narrow and dirty, and the bazaars miserable. The harbour is small, but well sheltered; with two to three fathoms water, and convenient dockyards. On a projecting rock on the E. side of the harbour is an ancient fortress, built by the knights of Rhodes, in 1402 , and still mounted with cannon. Boodroom is believed to occupy the site of the ancient Halicarnassus, the country of Herodotus; and the magnificent ruins that abound in the town and vicinity would seem to strengthen the idea. Amongst these are a number of temples, and other buildings, ornamented with cornices and columns, and rows of pedestals,
finely sculptured, and of admirable workmanship. On the side of a hill above the town are the remains of an elegant theatre, 280 ft . in diameter, and with 36 rows of marble seats. The seats, and the great part of the proscenium, remain, and the cornices and statuary are but little impaired, although

THE PORT AND CASTLE OF BOODROOM.- From Texier, Deseription de liste alinear.
part of the front wall has fallen in. A picturesque church of the earliest Byzantine age stands near the W. extremity of the terrace that overlooks the city.-2, A tn. [anc. Sagalassus] Asiatic Turkey, pash. Anatolia, about 30 m. S.W. Isbarta; with the remains of seven or eight temples, and numerous other Greek buildings. A picturesque Byzantine church overlooks the city.

BOOKARIA, a tn., W. Africa, 100 m . N.N.E. Free Town, Sierra Leone ; lat. $9^{\circ} 38^{\prime}$ N.; lon. $12^{\circ} 31^{\prime}$ W.

BOOKHAM, two pars. Eng. Surrey:-1, Bookham (Great), 3170 ac. Pop. 963.-2, Bookham (Little), 950 ac. Pop. 237.

BOOKIT BARISAN, a chain of mountains, of primitive formation, isl. Sumatra, running along the whole length of the island, from Acheen Head to the Straits of Sunda.

## BOOLAC. See Boulac.

BOOLEKOMBA, Boolakamba, or Boolookomba, a prov., cap. same name, S.W. peninsula of isl. Celebes. It is now subject to the Government of Macassar, and forms part of the territory called Boolekomba-and-Bonthain. It is the most $S . W$. portion of the peninsula, about 48 m . long by 20 broad; and is particularly productive in rice, which is sown here while gathered in Maros, where it is sown when gathered here, although the two provinces are separated only by lills of no great beight. It produces much gum also, but has no good timber. Wild animals abound, particularly deer. The people are industrious. The chief river is the Kalekongang, on which the town stands, near its mouth. In 1820, the sea rose, in a few moments, from 60 to 80 ft . above its usual height, and again retired, after destroying two villages and many lives. In the W. monsoon, the roadstead is very dangerous for large vessels, though small craft can find shelter in the river. The Dutch have a fort here, which was attacked, without success, in 1825 , by the Bugis.

BOOLEKOMBA-AND-bONTHAIN, a territory, S.W. peninsula, isl. Celebes; about 48 m. W. to E., and 20 m. N. to S.; and bounded, N. by the mountains Kindan and Torotea, S. and E. by the sea, and W. by the Tino. The inhabitants are reckoned the most peaceable and best disposed of the subjects of the Dutch in Celebes. Pop. 25,000.

BOOLEKOMBA I'OINT [called also CAPE LASsoa, or Borak], the S.E. point of the W. peninsula of Celebes; lat. $5^{\circ} 35^{\prime}$ S. ; lon. $120^{\circ} 27^{\prime}$ E. (R.)

BOOLEY, Boobie, or BOobee, a tn. Benin, near the mouth of the Benin river, 120 m . S.E. Badagray; lat. $5^{\circ} 40^{\prime}$ N.; lon. $5^{\circ} 7^{\prime} \mathrm{E}$. The caboceer or head governor of the river resides here. There are two other towns close by-Fish Town and Salt Town.

BOOM, a tn. and com. Belgium, prov. Antwerp, at the junction of the Brussels Canal with the Rupel, $12 \mathrm{~m}, \mathrm{~S}$.

Antwerp city. Boom, being admirably situated for trade, is a busy inland port. It contains 50 brick and tile works, six building-yards, many breweries, tanneries, and saltworks; soapworks, roperies, and sailcloth manufactures; numerous oil, saw, and corn mills, fish-stores, woodyards, \&c. P. 7464.

BOONDEE [anc. Bundi].-1, A principality, IIindoostan, prov. Ajmeer, under British protection; bounded, N. by Jeypoor and Oonjara, W. Jajghur, S. and E. Kotah; area, 2500 sq. m. It was pretty extensive before Kotah and its territory were separated from it. In 1817, more than half the revenues was usurped by Scindia and Holcar, and the peasantry were impoverislied by oppressive exactions; but, in 1818 , the Rajah received a considerable addition of territory, together witis the town of Patun, from the British Government. Althongh small, Boondee is important as the mediun of commnnication between the N. and S. The inhabitants are of the Hara tribe, which has given birth to many famous men, and, among others, to Ram Singh Hara, one of Aurungzebe's most renowned generals.-2, A tn. Hindoostan, prov. Ajmecr, cap. of above principality, and residence of the Rajalh, on the S. declivity of a long range of hills; lat. $25^{\circ} 23^{\prime} \mathrm{N}$. ; lon. $75^{\circ} 30^{\prime} \mathrm{E}$. It consists of Old Boondee and New Boondee; the former surrounded by a high stone wall, extending up the acelivity belind it, and connected with the fortifications on the cliff above; the houses are of stone, and, for the most part, two stories high. The natural situation, antiquity, numerous temples, and magnificent fountains of Boondee, give it a very interesting appearance. For pic-

tFmples and housfe at cajelit bay, noorg. turesque effeet, its main street is almost unequalled. At its upper extremity stands the palaee, a remarkable edifice, built of stone, witls turreted windows and battlements, supported partly by the perpendicular rock, and partly by solid piers of masonry, 400 ft . high. At its Iower extremity is the great temple, dedicated to Krishna. Old Boondee, which is W. of New Boondee, contains some fine fountains and pagodas, but is in a state of general decay. The passes N. of Boondee are strongly defended, and the scenery around is exceedingly pictnresque.-(Asiatic Researches.)

BOONEVILLE, a city and post vil., U. States, Missouri, r. bank, Missouri river, $40 \mathrm{~m} . \mathrm{N} . \mathrm{W}$. Jefferson city. It lias a court-house, Methodist chureh, two academies, and two schools; two ropewalks, and some trade in cattie and provisions. Pop. 2581.

BOONTING ISLANDS, a group of four small islands, Indian Archipelago, N. of Penang, and of moderate height. The most S. is in lat. $5^{\circ} 45^{\prime} \mathrm{N}$. ; lon. $100^{\circ} 20^{\prime} \mathrm{E}$.

BOORHANPOOR [anc. Barhanpura], a tn. Hindoostan, in the Deccan, prov. Candeish, of which it was the ane. cap., 137 m. S. by E. Oojein, in a plain, r. bank, Tapty, which is fordable during the dry season; lat. $21^{\circ} 19^{\prime} \mathrm{N} . ;$ Ion. $76^{\circ} 18^{\prime}$ E. It is one of the largest and best built cities of the Deccan; most of the houses are of briek, with neat façades, and roofed with tiles. Many of the streets are wide, regular, and paved with stone; as are also the Raj bazaar and the market-place, an extensive square, the two handsomest places in the town. The most remarkable public edifiee is the Jumma Musjeed or mosque, a fine pile of gray stone. Boorhanpoor is supplied with water by aqueduets 4 m . in Iength, whieh distribute it through every street beneath the pavement, whence it is drawn up by means of leathern buckets. A singnlar sect of Mahometans, named Bohrah, have their head quarters here. They are the chief merchants in this part of Hindoostan, have Arab features, wear the Arab costume, and derive their origin from a diseiple of their great prophet. Grapes grow abundantly in the neighbourhood, and are said to be the finest in India.

BOORLOS, or Bourlos, a lagoon, Lower Egypt, delta of the Nile, separated from the Mediterranean by a narrow strip of land, the W. extremity 5 m. E. Rosetta. Utmost Iength, 38 m . ; average breadth, about 15 m . It is shallow and marshy, and is connected, by eanals, with both the Damietta and Rosetta branches of the Nile.

BOORO, or Booroo, an isl. Indian Arehipelago, 46 m. W. Amboina; lat. (Fort Defence, Cajeli Bay) $3^{\circ} 22^{\prime} 36^{\prime \prime}$ S.; lon. $127^{\circ} 6^{\prime} 15^{\prime \prime} \mathrm{E}$. (R.) It is oval shaped, 92 m . Iong
by 58 m . broad, and the third largest of the Moluccas. Its largest bay, that of Cajeli, says Sir Edward Belcher, possesses great advantages over Amboina, as regards supplies of poultry, eggs, water, and wood. The harbour also is snug and safe, sheltered from the monsoons, and less troubled with the diurnal rains than Amboina; consequently, better adapted for casual refit, as well as astronomical observations. Viewed from this bay, Booro presents a magnificent panorama. On a shore of the richest verdure, the minarets of the mosques and the bamboo
houses of the natives are seen through the openings between the trees, or erossing the infinite variety of forms assumed by the rich vegetation of the tropies; while, behind this beautiful foreground, rise the lofty mountains of the interior, wooded to their very summits. On the E., a suceession of rising grounds exhale the odours of plantations of balsams. The N.W. side, on the contrary, presents nothing but vast swamps, partly under water, and swarming with erocodiles. Even the higher grounds are watered by a thousand fresh and gencrally limpid streams, which meander in all dircetions, and moisten the turf, covered by the Jussieua tenella, with its beautiful flowers. From the height of its mountains, Booro is seen at a great distance at sca. Mount Dome has an altitude of $10,400 \mathrm{ft}$., and Tomahoo, 6528 ft . above the sea level. The island is watered by 125 rivers, large and small, the Abbo, the Boy, the Ila, \&c. In the centre of the W. part, a spacions lake, 20 fathoms deep, is fed by mountain streams, and communicates by three rivers with the sea. The interior is diffieult of access, and dangerous from the number of serpents. Booro has a variety of valuable woods. Its myrtaceæ supply the best balsams. It produces, besides many odoriferous flowers and resins; the siri, a gramineous plant, gives a highly aromatic oil. The wooded marshes are frequented by large herds of the Sus russa or babyroussa, a kind of hog peculiar to the islands of the Indian Archipelago. The interior of Booro is occupied by Alfoories, reputed to be as mild and pacific as those of Ceram are haughty, quarrelsome, and warlike. They live a frugal life among the hills, feeding chiefly on sago and what game they kill, abandoning the coast to the Malays. To their rooted aversion to the visits of Europeans, and the circumstanee of the island producing no cloves, we probably owe its being, till very lately, neglected by the Dutch, although so near Amboina. The population is matter of conjecture, but, by the last estimate, Booro, with some smaller isles, contained 18,000 souls.-(Van der Aa; Temminck, Coup d eil.)

BOOROOCIRD, BURUOIRD, or Boorojerd, a tn. Persia, prov. Irak-ajemi, cap. gov. of same name, 190 m . N.W. Ispahan ; Iat. $33^{\circ} 43^{\prime} \mathrm{N}$.; lon. $48^{\circ} 45^{\prime} \mathrm{E}$. ; with a castle and several mosques. It lies in a fertile and well-cultivated valley, yielding saffron; belonging to the Lack tribc. Pop. 12,000.

BOOSEMPRA, or Boosum PRAH, a river, N.W. Africa, kingdom, Ashantee. It is formed by the junction of two streams, whieh rise in the interior, at the distance of about 100 m . from the coast, and falls into the Atlantic in lat. $4^{\circ} 52^{\prime} \mathrm{N} . ;$ lon. $1^{\circ} 30^{\prime} \mathrm{W}$. It has yet been examined but a short way inland, and, so far as explored, was found to be 10 C
yards broad, and 4 fathoms deep. The water is quite fresh, and the banks, which are fringed with mangroves, are only 3 or 4 ft . above the stream. There are but 2 ft . on the bar, the difficultics of which for boats, as by these alone it can be attempted, are increased by the enormous rollers that sweep over it. The natives, nevertheless, most adroitly paddle their eanoes both in and out of the river.

BOOTAN, Bhotan, Bhutan, or Butan, an independent state, N. IIindoostan; between lat. $26^{\circ} 18^{\prime}$ and $28^{\circ} 2^{\prime} \mathrm{N}$. ; and lon. $88^{\circ} 32^{\prime}$ and about $92^{\circ} 30^{\prime}$ E. ; bounded, N. by the Himalaya, which divides it from Tibet, S. by Bengal and Assam, and W. by a branch of the Teesta, which separates it from Sikkim; the E. boundary is not certainly known ; length, E. to W., 230 m ., breadth, N. to S., 120 m .; area, 19,000 sq. m. It is a mountainous country, consisting chiefly of terraces of the Himalaya, of whieh, on the frontiers of Tibet, it contains some of the loftiest peaks; that of Chamulari or Chamalari attaining an elevation of $27,200 \mathrm{ft}$. The country lowers gradually by steps to the Brahmapootra, to the basin of whieh it wholly belongs, and zear whieh, on the frontier of Bengal, is a strip of jungle-covered country, 25 m . broad, forming the only plain in Bootan. The loftier mountains are bare, many of them eovered with snow. Lower down, at an elevation of 8000 to $10,000 \mathrm{ft}$., are fine forests of pine, birch, maple, ash, and yew, but no oak. The hilly tracts, likewise, produce the smaller fruits of Europe-blackberries, raspberries, apples, apricots, \&e. The valleys are mere water-courses between the hills; and their vegetation is similar to that of the S. of Europe. In the lower parts, the vegetation is tropical. Iron is the only metal as yet wrought, and good building stone abounds.
The chief river is the Tehinehien, whieh intersects Bootan from N. to S., traverses the valley of Tassisudon, and, after an impetuous course of about 150 m ., falls into the Brahmapootra, below Rangamatty, under the name of the Gadawhar. All the rivers are remarkable for the number of falls in them, and the impetuosity of their courses.

In the N. parts, the elimate is rigorous; in the centre terraces, at an elevation of 8000 to $10,000 \mathrm{ft}$., it is pleasant and healthful; and in the lower grounds, hot and pestilential. Showers are frequent; but the heavy falls of rain which accompany the S . W. monsoon in Bengal seldom oceur.

The wild animals of Bootan are eomparatively few in number. The elephant, rhinoceros, tiger, and buffalo, are found among the jungle and marshes of the plains; and a monkey of a large and handsome species, held eacred both by Bootans and IIindoos. The only domestie animals are horses, eattle, and hogs. The first consists of a breed called Tangum, indigenous to this part of the world, and usually 13 laands high, of a piebald colour, and fine symmetry; strong and active, but said to be somewhat headstrong. They are chiefly bred in the valley of the Pa-tchien.

Agriculture, Trade, \&c.-The natives are industrious cultivators of the soil. Irrigation is extensively employed, and, where the climate is temperate, every part of the mountains which has a favourable aspeet and a coating of soil, is cleared, and adapted for cultivation, by being eut into horizontal beds. Rice, wheat, and barley, are the common agricultural products. The culture of vegetables, excepting turnips, which are remarkably good, is mueh negleeted, although shallots, cucumbers, gourds, and melons, are grown. Bootan trades with all the neighbouring countries, but chiefly with Tibet and Bengal, in horses, linen eloth, musk, fly whisks, walnuts, oranges, and Indian madder, exehanged for woollen eloth, cottons, indigo, sandal wood, asafetida, and spices. Part of the articles brought from Bengal are sent to Tibet, with rice, wheat, and flour. Tea, gold, silver, and embroideries are reeeived in exchange. From Cooeh-Behar, eattle, hogs, dried fish, tobaceo, betel, and coarse cottons, are imported. The chief manufacture is that of paper, made from the bark of a tree, from which material a fabric like silk and satin is also manufactured.

Pcoplc.-The inhabitants of Bootan are generally Buddhists in religion, and are hardy, vigorous, and tall, with smooth and dark skins, broad faces, and high cheek-bones-features prevalent among the Tartars and Chinese. They are not defieient in courage, but are peaceably inelined, and have little skill in the military art. Goitre is a common complaint with those who live near rivers liable to inundations. Woollen
cloth is the usual wear, and animal food, tea, and spirits, the common artieles of consumption. The houses are usnally one story high. The bridges are ingeniously built, some of timber, others of iron; of this latter kind, is one aeross the Tchinchien at Chooka, an admirable structure. The aqneducts are formed of hollowed trunks of trees. No religious forms are observed in marriage; and both men and women are addieted to polygamy. The dead are burnt, and the ashes thrown into the river. On such oecasions, the Gylongs, a sort of priests, officiate.

Government.-The Dherma Rajah, regarded as an incarna tion of the Divinity, is their ecelesiastical chief af well as sovereign. Being a sort of spiritual entity, and of course immortal, he is quite absorbed in the contemplation of his own essence, and leaves the regulation of the affairs of the country to the Deb Rajah, saving only that he appoints one member of the state council, whieh consists of eight persons, without whose authority the Deb Rajah ean do nothing important. The passes from the low countries to the monntains are numerous, under the jurisdiction of offieers styled soobahs, who live in their respective fortresses, visiting the lower country in the rigour of winter, either to enforee their authority or to invade the neighbouring states. Both the lower hill and the plain country are partitioned into small domains, each having a distinct officer for the collection of the revenue, and the superintendence of the police. The Rajah's revenues are usually paid in articles of produce, and merchandise. Tassisudon, Wandipore, Poonakha, Ghassa, Paro, and Murichom, are the chief towns.

History, dic.-In ancient Brahminical legends, Bootan is ealled Madra; but little was known about it till 1772 , when Cooch Beher was invaded by the Deb Rajal, with whom, however, peace was eventually concluded. The boundaries of the country are uncertain; a regular system of encroachment on the British possessions having been long practised by the natives. In 1816, the advance of the Chinese forces towards Nepaul, excited great alarm at the court of the Deb Rajah, who was induced by his fears of the enemy, and hopes of assistance from the British, to deelare himself friendly towards the latter.-(Capt. Turner's Embassy to Thibet; Asiatic Researches.)

BOOTERSTOWN, par. and vil. Irel. Dublin; 541 ac. Pop. 3318.

BOOTHBY, par. Eng. Lincoln; 2850 ac. Pop. 214.
BOO'THBY-PAGNELL, par. Eng. Lineoln; 2560 ac. Pop. 132.

BOOTHIA GULF, a large inland sea, N. of IIudson's Bay, between the island of Boothia Felix and a portion of the continent of N. America on the W., and Melville, Pen and Coekburn Island on the E., between lat. $67^{\circ}$ and $72^{\circ} \mathrm{N}$. It is about 310 m . in length, N.E. to S.W., with a breadth varying from 60 to 100 m . The gulf is entered by Prince Regent's Inlet, off Barrow's Strait, or by Fury and Ileela Strait, from Fox's Channel.

BOOTLE, a market tn. and par. England, eo. Cumberland. The town, $5 \mathrm{~m} . \mathrm{S}$. by L. Ravenglass, has a chureh, an Independent chapel, and some schools; and a little trade in corn, pork, bacon, \&c. Area of par. 6570 ac . Pop. 696.

BOOTON, par. Eng. Norfolk; 1030 ac. Pop. 241.
BOO'TON, Bouton, or Baton.-1, An isl., strait, and tn., Indian Arehipelago. The island lies off the S.E. peninsula of the island of Celebes; lat. (S. point) $5^{\circ} 42^{\prime} \mathrm{S} . ;$ lon. $122^{\circ} 44^{\prime}$ E. (r.) ; $90 \frac{1}{2} \mathrm{~m}$. in length, and varies in breadth from 20 to 40 m . A long narrow strait, to which it gives its name, separates it from the island of Moona; and the large bay of Kalinsoosoo or Dwalbay, lies on the E., presenting a safe anchorage during the W. monsoon. The N. coast is rendered dangerous by a shoal, and the S. by a reef. Booton is hilly, and much wooded. It produces riee, Turkish wheat, sweet potatoes, beans, fruits, sago, spices, among which is the dwarf nutmeg; also, buffaloes and goats, a variety of birds, and edible birds' nests. The inhabitants are of Malay origin, and a dark brown, small, ill-looking race. Though haughty and revengeful, when well treated some are not undeserving of trust. They profess Mahometanism, and manufaeture cotton stuffs, and a tissue from the fibres of the aloe. By treaty, the Dutch were long allowed to employ an Extirpator to traverse the island, and destroy the clove and nutmeg trees, for the preposterous purpose of enhancing their monopoly; but the

Sultan, by a renewal of the Bongay contract, on improved terms, may now grow spices. Pop. including Pangasani, \&c., 300,000 . -The tows stands on the strait, lat. $4^{\circ} 36^{\prime} \mathrm{S}$.; lon. $122^{\circ} 48^{\circ} \mathrm{E}$.; is large, and walled round. The houses are of bamboo; the streets straight and narrow.-2, Two islands, Indian Ocean, N. W. entrance of the Malacea Strait, off the W. coast of the Malay peninsula, from which they are distant about 45 m . They are close together, in about lat. $6^{\circ} 34^{\prime} \mathrm{N} . ;$ lon. $99^{\circ} 17^{\prime} \mathrm{E}$. They are both high, and the easternmost is formed of a regular sloping pyranidal mountain, generally called Bouton Dome, visible trom a distance of upwards of 50 m . When seen from the W ., they appear as one island.

BOOWANG-BESI, Oma, or Harooko, an isl. Indian Archipelago, $1 \frac{1}{4} \mathrm{~m}$. N.E. isl. Anmboina, and about $1 \frac{3}{4} \mathrm{~m}$. long, and $1 \frac{1}{4} \mathrm{~m}$. broad. It is hilly, and the climate reckoned very healthy; yet frightful cutaneous diseases prevail among the natives, and, which is very uncommon in the Indian islands, malformation of the limbs. There are hot springs on the island, resorted to for rheumatism and gont. Many tropical fruits and vegetables thrive in the gardens. The inhabitants on the S. side profess Christianity ; those on the N. Mahometanism. The Dutch bave possessed the island since 1627. Pop. 4000.

## BOPAL. See Bhoraul.

BOPPART, or Boppard, an anc. tu. Prussia, prov. Rhine, 1. bank of that river, where it is joined by the Königsbach, 9 m . S. Coblenz. The houses are mostly of wood, and the streets narrow, ill paved, dark, and dirty. It has several large worsted and cotton factories; considerable manufactures of linen, hosiery, tobacco-pipes, and leather; and numerons mills. Pop. 3654.
bolabora, bolabola, or Bonabona, one of the Society Islands, S. Pacific Ocean; lat. $16^{\circ} 30^{\prime} \mathrm{S} . ;$ lon. $151^{\circ} 45^{\prime} 30^{\prime \prime} \mathrm{W}$. (r.) It is about 21 m in circumference, and presents a singularly picturesque appearanco from the sca,
dyeworks. In the vicinity is a mineral well. The town was founded by Gustavus Adolphus, in 1632. Pop. 2328.

BORBA, a tn . Portugal, prov. Alemtejo, dist. of, and 19 m . W.S.W. Elbas. It is surrounded with walls, and has an old castle, two churches, three monasteries, an hospital, and a poorhouse. Its annual fair is of some inportance. Pop. 2636.

BORBA, a poorold tn. Brazil, prov. Para, advantageously situated on an eminence, r. bank, Madeira, abont 70 m . above its embouchure in the Amazon; lat. $4^{\circ} 22^{\prime} \mathrm{S}$.; lon. $59^{\circ} 30^{\prime} \mathrm{W}$. It has a church, and is a resting-place for the canoes navigating the Madeira. Tobacco and cacao are cultivated in the vicinity to a considerable extent, for expert. The inhabitants live much on the flesh of the tertoise, which is here abundant.

BORBOREMA, a mountain-range, Brazil, forming the S. boundary of prov. Ceara, and trending N.W. to the sea, through prov. Rio-Grande-do-Norte. In gencral it is well wooded, presents a vigorous vegetation, and, from its considerable beight, has a low temperature.

BORCETTE. See Burtscheid.
BORCULO, or Borkelo, a small tn. IIolland, prov. Gelderland, 15 m . E. Zutphen, on the Berkel. It derives its importance from the royal stud kept at the old castle of Borculo, the lordship of which was bought by William V., Prince of Orange, from Prince Adam Czartorinski, in 1777. A stnd of above 100 of the finest horses and mares is kept on the grounds, and has greatly contributed to the improvement of the breed in Holland. The district round Borculo is purcly agricultural ; eight-ninths of the inhabitants Reformcd, oneninth R. Catholics. Pop. of tn . and par. 3750.

## BORCUM. See Borkhum.

BORDEAUX [anc. Burdigala], an important commercial and maritime city, France, cap. dep. Gironde, and of the 11th military division of the kingdom, $284 \mathrm{~m} . \mathrm{S} . \mathrm{W}$. Paris; lat. $44^{\circ} 50^{\prime} 18^{\prime \prime} \mathrm{N}$. ; lon. $0^{\circ} 34^{\prime} 30^{\prime \prime} \mathrm{W}$. (r.); l. bank, Garonne, 57 m . from its mouth. The approach to it by the Paris roal from the $\mathbf{E}$. is very striking. The road winds round the shoulder of a hill, consisting of gently terraced slopes; and on reaching its foot, leads, by a straight avenue 2 m . long, to a magnificent stone bridge of 17 arches, which spans the Garonne, and was erected in 1821, at an expense of $£ 260,000$. This bridgo furnishes perhaps the finest view of the eity, which is built in a crescent form, along the bend of the river, lined with magni ficent quays for more than 3 m ., while Gothic towers and antique spires rise behind, and form the most conspicuous objects in the background. Bordeaux consists of an old and a new town, the boundary between them being formed by the Rue de Chapean
fron which it rises abruptly in the form of a lofty doublepeaked mountain, the highest summit of which, called Piton, attains an elevation of 1095 fect. The sudden ascent of the land from the sea is, however, more apparent than real, there being a considerable margin of level ground next the water, which is fertile, and covered with cocoa palms, and breadfruit trees. Borabora is in an atol or lagoon, being surrounded by a chaplet or ring of coral; the water within which, as usual in such cases, is remarkably pure and limpid. The island abounds with albatrosses, several kinds of petrel, and other birds, including woodpeckers, and small perroquets of rich and splendid plumage. Domestic fowls also are numerous, and were found on this, and the adjoining islands, when first visited by Europeans. Borabora was discovered by Captain Cook in July 1769. Pop. 1800.

BORAS, a tn. Sweden, Wernersborgs or Elfsborgs, län on the Wiske-án, 35 m . E. Gëtteborg or Gottenburg, surrounded by mountains and forests, and in an unfertile district. It is regularly built, is the centre of some local trade; and in end around the town, spinning, weaving, and working in timber are carried on. The most important works are the

Rouge, a wide and handsome street, which, commencing at the quay near the centre of the crescent at the Bourse, stretches across the city E. to W. The old town, lying to the S. of this strect, is chiefly composed of irregular squares, and narrow, crooked strects, with houses which, though substantially built of hewn stone, are mean and ugly. In this respect they present a striking contrast to the new town, which is laid ont with great regularity, and on a seale of magnificence not surpassed by any provincial town in Europe. The streets, squares, and avenues are of the most splendid description, and, in particular, the Faubourg des Chartrons in the N.E., is composed of edifices which at once indicate the good taste and great weallh of their inhabitants. The objects chiefly deserving of notice in the old town are the triumphal arch, called Porte de Bourgogne, placed at the extremity of the bridge, and forming the principal entrance to the town; the cathedral, a fine Gothic edifice, said to date from the ninth century, but destroyed by the Normans, and rebuilt in the 13th century by the English, who are said to lave given it its two clegant spires, 150 ft . high; St. Michael's Church, in the line of the bridge, distinguished by its lofty
detached tower, superb front of florid, Gothic, and rose window framed within a richly decorated arch; the church of St. Croix, at the S. extremity of the town, a specimen of gorgeons Romanesque, with rows of curious bas-reliefs, and elaborately carved mouldings; the Bourse or exchange, and customhouse, both on the quay, not far from the line de Chapeau Rouge; the IIotel de Ville, once the residence of the Archbishops of Bordeaux; and, in its neighbourhood, the Palais

brandy, and fruit. In addition to the articles already mentioned, the trade includes grain, hemp, flax, tar, rosin, turpentine, oil, soap, leather, ironware, cotton twist, and cotton and linen goods, timber, \&c. In 1846, the number of vessels which entered the port was 918 ; tonn. 143,228 ;-cleared, 727 ; tonn. 134,542. In 1843, 48 vessels (tonn. 6637) were engaged in the cod-fishery; but, in 1846, they had fallen off to 11 ; tonn. 847. The whale-fishery, at one time carried on here to a considerable extent, seems to be altogether abandoned. The value of goods placed in bond, in 1846, was $£ 2,108,903$; taken out, $£ 2,268,492$. The number of vessels belonging to the port in same year, was 374 ; tonn. 60,980 . Though Bordeaux depends chiefly on its commerce, it is by no means destitute of manufactures. These include woollen, linen, and cotton goods, gloves, hosiery, soap, chemicals, tobac co,and cordage; but perhaps the most important of all is shipbuilding, for carrying on which admirable yards have been provided.

Bordeaux is mentioned by Strabo and Ptolemy, under the name of Burdigala, and the Romans made it the capital of the second Aquitania. Ausonius, the Latin poet, has left a description of it as it appeared in the fourth century, after which, it suffered from the numerous tribes who ravaged the S . of Europe towards the decline of the Roman empire. In 1132, it passed into the hands of the English by the marriage of Eleanor of Guienne, with Henry, Duke of Normandy, afterwards King of England, and remained in their possession till it was taken from them in 1451. At that period the Bordelais were much
de Justice. The new town is not so rich in public buildings. The most conspicuous are the library (containing about 130,000 volumes), the museum, and the theatre, the latter regarded as the handsomest edifice in Bordeaux, a Grecian structure, with a Corinthian portico of 12 arches, finely situated in an open space on the N. side of the Chapeau liouge. Among the beneficent establislıments, the first place is due to the grand hospital or infirmary, which occupies the highest site in the town, is admirably arranged, and can accommodate above 700 patients. Few cities are so well supplied with extensive and finely planted promenades. Among others may be named those of the Place originally called Louis X VI., and subsequently Philippe IV., Tourny, d'Albret, and the Jardin Publique.

Bordeaux is the seat of a royal court of appeal for the departments of Gironde, Charente, and Dordogne ; of courts of first resort, and of commerce; and has an academy, faculty of theology, of letters, and of sciences; a theological seminary, secondary school of medicine, royal college, school of hydrography and navigation (first class) ; school of painting and design, botanic garden, observatory, chamber of commerce, and bank, founded in 1818. There are consuls resident here from all the States of Europe, and from the States of America. Bordeaux is also the seat of an archbishopric, of which the diocese comprehends the department of Gironde, and is metropolitan to the sees of Agen, Angoulême, Poitiers, Perigueux, La Rochelle, and Luçon.

The position of Bordeaux on the Garonne gives it admirable facilities for trade, and enables it to rank as the second sea port of the kingdom. The river, opposite to the town, is 2000 ft . wide, and deep enough to float vessels of 1200 tons. Up to the bridge its noble quays are lined, and its channel almost covered, with shipping. Besides the immediate access to the sea by the river, Bordeaux has the advantage of a direct communication with the Mediterranean by the canal of Languedoc, and is thereby enabled to supply the S. of France with colonial produce as cheaply as Marseilles. The only railway Bordeanx yet possesses is a short line to Teste, on the coast. Another, to connect it with Tours, and thereby with Paris, is in course of construction. The clief exports are, wine (to the extent, annually, of nearly 80,000 pipes),
more attached to England than to France, and were so averse to the change, that they revolted the following year, although without success. In 1548, IIenry 11., who had recently come to the throne, having resolved to take vengeance on the town, for some disturbance which had taken place in it, despatched an army, under the command of Duke de Montmoreney, who has rendered his name infamous by the cruelties he committed. A Bordelais was hanged at every tenth house, and the municipal authorities were executed in the public square. In modern times, Bordeaux has been rather attached to the Bourbon interest. Eighteen councils have been held at it. The Latin poet, Ausonius, was a native of Bordeaux, as were also Edward the Black Prince, and his son Richard II., Pope Clement, and the celcbrated painter Carle Vernet. Pop. 120,203.

BORDELAIS, a dist. France, which formed part of prov. Guienne, and had Bordeaux for its capital. It now forms alınost the whole of dep. Gironde, and part of dep. Landes.

BORDEN, par. Eng. Kent; 2010 ac. Pop. 860.
BORDENTOWN, a tn., U. States, New Jersey, co. Burlington, l. bank, Dclaware, 26 m . N.E. Philadelphia, and on the railway to New York; built on a plain, 65 ft . above the level of the river; is a cleanly and healthy town; and was the place of residence, during his stay in America, of Joseph Bonaparte, who erected here a splendid mansion, surrounded by extensive and highly ornamented grounds. It is a favourite resort of the people of Philadelphia in the summer season. Pop. 1800.

BORDESHOLM [formerly Bardesholm], a vil. Denmark, IIolstein, cap. bail., and on a lake of same name; and also on the railway between Altona and Kiel, and $11 \mathrm{~m} . \mathrm{S} . \mathrm{S} . \mathrm{W}$. the latter town. It contains a large church, which once belonged to a monastery of Augustines, and was built in 1332.-The BAlLIWICK has an area of 64 geo. sq. m. and is traversed by the Eider, which divides it into two nearly equal parts. Pop. of vil. 433 ; of bail. 8820 .

BORDÖE, one of the Färoe Islands, belonging to Denmark. It belongs to the Norderöe group, whiclı contains six inhabited islands. Pop. 300.

BORDWELL, par. Irel. Queen's co.; 2805 ac . Pop. 957.

Vol. I.

BOREE, a large fortified tn . A fghanistan, prov. Sewestan, on the route called the Borce Pass, leading from Dera Gliazee Khan to Kandahar and Ghuznee; lat. $31^{\circ} \mathrm{N} . ; \operatorname{lon} .69^{\circ} 10^{\prime}$ E.; 185 m. S.S.E. Ghuznce. The country around is fertile, well cultivated, and has a dense population, almost exclusively agricultural.

BOREEL, or Friar Islands, a group of small islets, S.E. coast, Van Diemen's Land, off the most S. point of Brune Island ; lat. $43^{\circ} 32^{\prime}$ S.; lon. $147^{\circ} 21^{\prime}$ E. (r.)

BOREHAM, par. Eng. Essex; 3820 ac. Pop. 1054.
BORERAY.-1, A fertile isl. Scotland, Hebrides, N. from North Uist; length, $1 \frac{1}{2} \mathrm{~m}$. : breadth, about half a mile.2, An islet, Scotland, Hebrides; about 2 m. N. St. Kilda.

BORG (Ter), Burg, or Ter-Burg, a tn. Ilolland, prov. Gelderland, on the Old ljssel, 9 m . S.E. Zutphen. It is open, and beautifully situated amid woods, and has a Reformed and a R. Catholic church, and a school. The inhabitants, though chiefly agricultural, have a little trade, and an ironfoundry. At one time there was much traffic through TerBurg to and from Germany, but the badness of the roads has diverted it to other places. Pop. 700.

BORGA, a seaport tn. Finnish Russia, dist. Nyland, 82 m. N.N.E. Revel, on the Borgai- $i$, near where it falls into the Gnlf of Finland; lat. $60^{\circ} 22^{\prime} \mathrm{N}$. ; lon. $25^{\circ} 45^{\prime}$ E. It has miserable houses, crooked streets, and is the seat of a Lutheran bishop, and chief place of one of the two eparchies of Finland. It possesses a stone cathedral, a wooden church, a gymnasium, and small public library; and has some manufactures of linens and woollens; but its harbour is bad, and its trade insignificant. Pop. 2500, nearly all Swedes.

BORGENTREICH, a th. Prussia, Westphalia, gov. Minden, circle of, and about 7 m . N.E. Warburg. It contains a R. Catholic parish church, and a synagogne. The inhabitants live chiefly by agriculture. Pop. 1733.

BOliGERIIOU'T', a tn. and com. Belgium, prov. Antwerp, on the high road from Antwerp to Turnhout; with bleachfields, dyeworks, and corn mills. Pop. 4491.

BORGHETTO, a tn. and com. Austrian Italy, prov. of, and $7 \mathrm{~m} . \mathrm{S}$. Lodi; on the streamlet Silero, 2 m . from its junction with the Lambro. An annual cattle-fair is held here in August. Pop. 4837.

BORGHOLM, a tn. Sweden, isl. Öland, and the only one on it. It has a good harbour for coasters; was founded in 1817; and is increasing. Pop. 320.

BORGIA, a tn. Naples, prov. Calabria Ultra, 6 m . S.W. Catanzaro; almost entirely destroyed by an earthquake in 1783, and rebuilt nearly on its former site by Ferdinand IV. It has a parish church, and wine and silk of good quality are produced in the neighbourhood. Pop. 3497.

BORGNE BAY, or GUlF, U. States, Louisiana, connects with the Gulf of Mexico by Pascagoula Sound, and on tlie N.W. with Lake Pontchartrain. It is about 40 m . long, and 15 broad.

BORGO, with various affixes, the name of numerous towns, Italy :-1, Borgo Forte, a tn. Austrian Italy, cap. dist. of same name, prov. of, and 9 m . S.S.W. Mantua, l. bank, Po, defended by a citadel, now ruinous. Pop. 3186.-The district, much exposed to the inundations of the Po, is marshy and unhealthy. Pop. 7353.-2, Borgo Franco, a tn. and com. Austrian Italy, prov. of, and 24 m. S.E. Mantua, r. bank, Po. The vicinity is marshy. Pop. 2000.-3, Borgo Lanezzano, a tn. and com. Sardinian States, prov. of, and 9 m . S.E. Novara, on the Arbogna. Silkworms are reared to a large extent in the vicinity, and the town has several silk spinning-mills. Two annual fairs are held. Pop. 4000.4, Borgo Franco, a tn. Sardinian States, prov. of, and 3 m . N.N.W. Ivrea, near l. bank, Doire. Fine grain and fruits are produced here. Pop. 1800.-5, Borgo Manero, a tn. and com. Sardinian States, prov. of, and 17 m . N.N.W. Norara, on the Gogna. It has a college, hospital, and several convents. Pop. 6000.-6, Borgo Sesia, a tn. and com. Sardinian States, prov. Val-de-Sesia, l. bank, river of same name; with manufactures of silk. Pop. 2384.-7, Borgo-san-Dalmazzo, a tn. and com. Sardinian States, prov. of, and 5 m . S.W. Cuneo. It has an ancient Benedictine abbey, and a tolerably active commerce. In the neighbourhood are iron and copper works, and grain and fruits are grown. Pop. 3000.-8, Borgo-sanDonnino, a small city, duchy of Parma, cap. dist. of same name, and see of a bishop, suffragan to the Archbishop of

Bologna; in an agrceable plain, r. bank, Stirone, 15 m . N. W. Parma. It is surrounded by walls, has several gool streets, a cathedral, four parish churches, a college, II cbrew, and some other schools and literary institutions; a ducal palace, Gothic townhouse, hospital, theatre, cavalry barracks, several convents, public baths, and storchouses. Manufactures: woollen, linen, and silken fabries, oil, and wine. An annual fair is held in October. This town obtained its name from St. Donninus, who was belieaded here in 304. Pop. 3829.
The distmet is well watered and fertile, about 38 m . long, and 16 broad; area, 706 sq . m. Pop. 130,195.-9, Dorgo-a-Muzzano, a tn. duchy of Lucca, cap. dist. of same name, $13 \mathrm{~m} . \mathrm{N}$. Lucea, r. bank, Serchio. Pop. 1500.-10, Borgonovo (in Valtidone), a tn . and com. duchy of Piacenza, $3 \mathrm{~m} . \mathrm{S}$. by E. Castel-san-Giovanni, in a plain at the foot of Mount Valtidone. The vicinity is mountainous, but the valleys are fertile. Forests of oak, beech, chestnut, \&c., cover the hill sides, and much cattle is reared. Pop. 5252.-11, Borgo-san Bernardino, or Bettola-san-Bernardino, a tn. and com. Italy, duchy of, and 20 m. S. Piacenza, l. bank, Nure. The vicinity is mountainous, and covered with forests. The valleys are fruitful, and cattle and pigs are reared in great numbers. Pop. 5252.-12, Borgo-san-Lorenzo, a tn. and com. Tuscany, prov. of, and 15 m . N. Florence, on the Sieve. Grain and fruits are good and abundant here, and cattle are reared. Pop. 3225.

BORGO-di-val-sugana, a tn. Austria, Tyrol, in the valley of the Sugana, on the Brenta, 12 m . E. by S. Trent. It is weil built, has a parish church, with three fine pictures, a Franciscan monastery, which was founded in 1603, several schools, an hospital, richly endowed; a theatre, a mineral spring, and a handsome stone bridge over the Brenta. The raising of silk employs about 340 persons. Pop. 3450.

BORGOBRUND, a vil. Austria, Transyl vania, co. Dobak, cap. dist. of same name, 12 m . N.F. Bistritz, at the entrance of a pass over the Carpathians, leading from Transylvania into Bukowina. It contains a Greek non-united church, and has some manufactures of earthenware, particularly tobacco-pipes. The whole district is mountainous. Pop. about 800 .

BORGOMANERO, a tn. Sardinian States, liedmont, prov. of, and 18 m. N.N.W. Novara, 1. bank, Gogna, and nearly equidistant from the S. extremitics of Lakes Maggiore and Orta. It is walled and well built, and contains a communal college, several convents, an hospital, a mont de-piété, \&c. It has little trade, but some manufactures, and three anntal fairs. Pop. 6000.

BORGOO, three conntries, interior A frica:-1, A country in the land of the Tibboos or Tippoos, 15 days' journey S. Fezzan.-2, A country, four days' journey S.S.E. the former, and called also Waday (which see).- 3, A country on the S.W. frontier of Houssa, and separated from it by the Joliba or Niger, and bounded S. by Dahomey and Yaribba.

BORGOTARO, a small tn. Italy, Parma, cap. dist. of same name, 32 m. S.W. Parma, l. bank, Taro. It is well built, surrounded by walls, has three gates, handsome strects, two churches, town and session houses, an hospital, public library, cavalry barracks, theatre, some schools, and public fonntains. Four annual fairs are held here. Pop. 2687
The distict of Borgotaro is hilly, and well wooded; area, 489 sq. m. Pop. 48,784.

BORGUE, a par. and vil. Scotland, stewartry of Kirkcudbright; area, $40 \mathrm{sq} . \mathrm{m}$. ; interesting ruins of the tower of Balmangan, and Plunton Castle. Pop. 1117.

BORISNOFF, or Boryssow, a tn. Russia, cap. dist. of same name, gov. of, and 44 m. N.L. Minsk, l. bank, Berezina. Near to Borissoff, at the village of Stoudianka, the French made their disastrous passage over the Berezina. Pop. 2700.

BORISSOGLEBSK, two tns. Russia:-1, $A$ tn., gov. of, and 55 m . N.W. Yaroslav, r. bank, Wolga, opposite Romanov, built among woods. It has several forges, chiefly employed in making iron pots, and some trade in grain and fish. I'op. about 4000 .-2, A tn., cap. dist. of same name, gov. of, and 102 m. S.E. Sambov, on the Yorona, near its junction with the Khoper. It contains two churches, and is an entrepot for some inland traffic by water. Pop. about 2000.

BORJA, a city, Spain, Aragon, prov. of, and 38 m. W. by N. Saragossa, at the foot of a small hill, on the top of which stand the remains of an ancient castle. It has wellbuilt and paved streets and squares, a collegiate, and two other churches, a college, two endowed schools, townhouse,
two prisons, an hospital, a storehouse, three convents, and a cemetery. Manufactures:-cloth, blankets, silk, hempen fabrics, and brandy. Pop., chiefly agricultural, 4239.

BORJAS, a tn . Spain, Catalonia, prov. of, and 14 m . E. by S. Lerida, tolerably well built, and having a parish chureh, a chapel, townhall, session-house, an endowed school, hospital, prison, and storehouse. Pop., exclusively agrieultural, 2000.

BORKAI, or Boraui.-1, A bay, Aretic Ocean, Siberian coast, between lat. $70^{\circ} 4^{\prime}$ and $72^{\circ} \mathrm{N} . ;$ lon. $129^{\circ}$ and $133^{\circ} \mathrm{E}$. -2 , A cape, forming the N.E. boundary of the above.

BORKEN.-1, A tn. and cirele, Prussia, gov. Münster. The town lies on the Ahe, 34 m . W.S.W. Münster, has a chicory factory, and both manufactures and deals largely in linen. Pop. 3000 - The circle, area, 190 geo. sq. m., is undulating and well wooded, fertile, and well cultivated, and rears a great number of cattle. Its manufactures of woollen, silk, and cotton stuffs, worsted, chicory, and cutlery, are also extensive. Pop. 41,372.-2, A tn. Hesse Cassel, prov. Niederhessen, cirele of, and 4 m. W.N.W. Homberg; on the Olmsbach, at the N. foot of a little basaltic hill, on which a strong castle of the noble family of Borken once stood. It contains a ehurch, synagogue, burgher school, and hospital. The inhabitants depend chiefly on agriculture; five yearly markets. Pop. 1373.

BORKHUM, Borkum, or Borcum [Latin, Burchania], an isl., N. Sea, belonging to IIanover, off the mouth of the Ems, bail. Pewsum; lat. (lighthouse) $53^{\circ} 35^{\prime} 30^{\prime} \mathrm{N}$. ; lon. $6^{\circ} 40^{\prime} 42^{\prime \prime}$ E. (R.); about 14 m . in circumference. At high water, the sea flows through a hollow in the centre of the island, and divides it into two nearly equal parts. Borklum is a parish. Its church has a tower 154 ft . high, which is used as a lightloouse, and provided with English lamps, and 28 parabolic reflectors, which guide the entranee into the Dollart. Most of the male inhabitants are seamen; the remainder support themselves by husbandry, gardening, and the rearing of cattle. Pop. about 500 .

BORLEY, par. Eng. Essex; 730 ac. Pop. 188.
BORMIDA, a river, Sardinia, whieh rises in the Maritime Alps, near Mount Calvi, and in two branches, the one called the W., and the other the E. The Bormida proceeds N. to Bistagno, where the two branches unite. It turns E. till it passes Aequi, near which it resumes its N. course, and, after receiving the Orba, joins r. bank, Tanaro, 2 m . E. Alexaudria.

BORIIIO [German, Worms], a tn. Austrian Italy, gov. Milan, on the route of the Steivio, 31 m . N.E. Soudrio, in the valley of, and on r. bank, Adda, 4550 ft . above the sea level. Near it, upon the side of Mount Braglio, are hot saline springs and baths ( $100^{\circ}$ Fah.), celcbrated by Cassiodorus, and much frequented by invalids. It enjoyed a considerable trade with Venice and the Grisons, but in 1799 it was partly burnt by the Freneh, when it fell into decay, but is again reviving. Pop. 2500.

DORNA, a tm . and bail. Saxony, circle of, and 17 m . S.S.E. Leipzig. The inhabitants live by spinning, weaving, and the ordinary handicrafts. Pol. of tn . 3800 ; of bail. 30,988 .

DORNABI, or Ascession, one of the Caroline Islands, N. Pacific Ocean; lat. $6^{\circ} 48^{\prime}$ N.; lon. $158^{\circ} 25^{\prime}$ E. It is about 80 m . in circumference, of voleanic formation, and so lofty, that it may be seen, in clear weather, 40 m . from a ship's deck. It is surrounded by coral reefs, between which and the island are many small islets, that do not rise more than a few feet above the water, yet are covered with cocoa-nut trees and other timber. Bornabi having more communication with strangers, on aecount of its good larbours, than any of the surrounding islands, is much resorted to by their inhabitants for the purpose of obtaining tobaceo and other foreign commodities. The two principal harbours, Matalanien and lioan Kiddi, are situate, the former on the N.E. side of the island, the latter on the S. side. They are much frequented by whalers.-(Nautical Magazine, 1848.)

BORNEO, an isl. Indian Archipelago, lying under the equator, and nearly bisected by meridian $114^{\circ} \mathrm{E}$. Excepting Australia, it is the largest island on the globe. Its most N. point (Cape Sampanmangio) is in lat. $7^{\circ} 5^{\prime} \mathrm{N}$. ; its most S . (Cape Salatan) in lat. $4^{\circ} 13^{\prime}$ S., so that it extends through $12^{\circ} 18^{\prime}$ of latitude; while, in longitude, it stretches through $10^{\circ} 28^{\prime}$, from Cape Pandan on the W. ( $108^{\circ} 52^{\prime}$ E.), to Cape Oonsang on the E. (in $119^{\circ} 20^{\prime}$ ). The form of Borneo is that of an irregular pentagon, with a small rhomboid attaehed to
it on the side facing the N.E.; or, to use a homely similitude, it may be compared to a shoulder of mutton-the knee-joint pointing to the N.E., and the blade-bone expanding to the S.E. The greatest length of the island is in the direction of N.E. by N., and S.W. by S., from Cape Sampanmangio to Cape Sambar, a distance of 850 m . ; its width, taken at right angles to the direction here in lieated, is, in some places, 600 m., but diminishes towards the N . The area cannot fall short of $270,000 \mathrm{sq} . \mathrm{m}$.; and, consequently, exceeds threefold that of Great Britain.
Surrounding Seas.-Borneo forms the central mass of the Archipelago which extends from Sumatra in the W., to the Moluceas and Philippine Islands in the E.; and which is sharply circumscribed, on the S., by the chain of islands that stretches from Java to the Arru group, in the vicinity of Papua. The seas surrounding it are variously denominated from the adjoining shores. From N. to S.W., it is wasled by the Chinese Sea, which, narrowing in the latter direction, between Cape Sambar and the island of Biliton, takes the name of the Straits of Carimata. On the S., Borneo faces the Sea of Java; on the E., it is separated from Celebes by the Straits of Macassar ; N. of which, from Cape Kanioongan to Cape Oonsang, a distanee of 250 geo . m ., its shores are washed by the Sea of Celebes. From the vicinity of Cape Oonsang (lat. $5^{\circ} \mathrm{N}$. ), the Sooloo Islands extend across, in an E.N.E. direction, to Mindanao; and N. of them is the Sea of Mindoro, which mixes its waters with those of the Chinese Sea, at the N. point of Borneo. The coasts of this great island are besct by numerous reefs, which, in many places, rise into countless islets; and further off lie clusters of islands, such as those of Balabalagan, or Little Paternosters, in the Straits of Macassar; of Carimata, in the straits of the same name; and the islands of Tambelan and Natuna, in the Chinese Sea. These insular groups, usually considered, with little reason, as belonging to Borneo, are as yet hardly known in detail.

General Aspect.-Though the mountains of Borneo are, in some places, visible from the sea, particularly off its N. coasts, yet the gencral character of its shores is that of mangrove wastes, or of interminable low plains, liable to inundation, and covered with dense forests. The parts frequented by Europeans are chiefly in the vicinity of great rivers, which form extensive deltas, wherein there is hardly anything to be seen but the water and the impervious forest. There must, of course, be a great extent of elcvated country in the interior, whence descend the innumerable streams intersecting the maritime tracts ; but still there is reason to believe that a very large portion of Borneo consists of immense alluvial plains of the greatest fertility, and raised but little above the level of the sea.
Mountains.-The mountains in the interior of Borneo, it has been already observed, become more conspicuous towards the N . The highest of them, Kinibaloo, in lat. $6^{\circ} 8^{\prime} \mathrm{N}$., and lon. $116^{\circ} 33^{\prime} \mathrm{E}$., attains an elevation of $13,680 \mathrm{ft}$. On the E. side of this mountain, there is said to be a great lake of the same name, from which, if the accounts of natives are to be relied on, issue numerous rivers. From this culminating point, a clain of mountains may be conjectured to extend S.W. throughout the whole extent of the island, terminating a little E. of Cape Sambar. From about lat. $2^{\circ}$ N., and from that part of the central ridge named Anga-anga, a ramification, known in its suecessive portions as the Longooloo and Sakooroo Mountains, extends E. by S. to Cape Kanioongan, lat. $1^{\circ} \mathrm{N}$. A second ramification leaves the central ridge further S., and, running S.E. about 200 m. , turns S., and finally S.W., till it terminates in Cape Salatan, the most S. point of the island. Again, from the mountains of Madei, in the central region, lat. $1^{\circ} \mathrm{N} .$, a chain of mountains runs W . about 200 m ., ard then N., till it ends in Mount Pangi, near Cape [Tanjong] Datoo, lat. $2^{\circ} 5^{\prime} \mathrm{N}$. Thus it appears that Borneo, the mountain chains of which all branch out from one central nucleus, resembles the neighbouring island of Celebes in its formation much more closely than might be suspected from the hasty comparison of their figures on the map. For if the former island were sunk 1000 ft ., or even 500 ft ., it would lose inmediatcly its compaet form, and its mountain-ranges would figure as narrow peninsulas, some hundreds of miles in length, separated by immense gulfs instcad of alluvial plains. The following list of heights-all, probably, with exception of the first and last, to be considered only as rough estimates-
may serve to give some idea of the configuration of the country:-

Feek.
Kinibaloo ..........................................................................13,680
Kaminting, the S.W. chain ................................................ 6,500
Luangi, S.E. chain, above the sources of the Nagara.. 6,300

Rivers.-The rivers are, in general, tide-rivers, deseending in a winding course, and with little eurrent, through vast level deltas, the lower portions of which are often overflowed by the sea. Henee their mouths are nearly all barred or obstructed by sand-banks; and while, with broad streams and numerous branches, they afford great advantages within for internal communication, they are quite inaceessible from without by vessels of moderate size. They are extremely numerous, and still so little known, that it would be hazardous, in most ease 3 , to venture an opinion as to their relative importanee. It will be sufficient, in this place, to enumerate only the ehief rivers within each of the great basins or river regions marked out by the chains of mountains deseribed above. From Kinibaloo, the monntains running S.W. and then W. to Cape Datoo, confine a maritime tract 600 m . long, faeing the N.W. and N., and intersected, probably, by several hundreds of rivers; the direct course of which, however, from the mountains, can hardly ever exceed 150 m . Towards the N., some of these rivers descend with so lively a stream as to carry fresh water to the sea-side, an advantage of rare oceurrence on other parts of the Bornean coast. In lat. $5^{\circ} \mathrm{N}$. is the estuary of the river of Brúnai or Borneo Proper, which some deseribe as the largest river of the whole island. It is in reality, however, a stream of second or third-rate magnitude; but has the advantage of flowing in a single broad channel, easily entered by ships of burden. Near lat. $2^{\circ} \mathrm{N}$. are the mouths of the Rejang and the Sarebns, both great rivers; the former being nearly 1 m . wide 80 m . above its mouth. But the Batang Loopar, about 50 m . further S., lat. $1^{\circ} 35^{\prime} \mathrm{N}$. ., far exceeds them; and is, probably, the largest river in this region of the island, being 4 or 5 m . wide, with depth of water suffieient for a frigate. Then follows, 40 m . W., the Sarawak, a river of comparatively short course, but offering, in its numerous branehes, intersecting an extensive delta, extraordinary facilities for internal communication. In the region confined by the W. and S.W. chains, flow the Sambas, lat. $1^{\circ} 12^{\prime}$ N., as large a river as that of Brunai and the Kapooas, the most N . mouth of which is under the equator. This is probably the greatest river of Bornee; its sourees being 350 m . distant, in a straight line; while its winding course can hardly be less than 700 m . in length. Between the S.W. and S. chains of mountains, lies an immense alluvial expanse, watered by numerous great rivers, the Pembooan, the Sampit, Mendawei, Kahajan, Murong, and llanjarmassin, or Banjar, increasing in magnitude towards the E.; the last-named river being the largest of all, and hardly inferior to the Kapooas. It is connected by several arms, some of which are above 100 m . inland, with the Mnrong on the W., and thence again with the Kahajan. The charaeter of the country, through which it issues to the sea, is indicated by its name, Banjarmassin, signifying 'usual or frequent inundation;' but this name is given to it only in the flooded delta; higher up it is ealled the Dooson [village-river], its banks being oceupied by a settled agricultural population. The valley of the Nagara, an E. affluent of the Banjarmassin, the sources of which are but three days' journey distant from Pasir, on the E. coast, is one of the most populous districts of the whole island. The region enclosed between the S.E. and E. chains (Pangaloo and Sakooroo), is drained by the Kootai, a river not much inferior to the Banjarmassin, but little known. Its delta, embracing above 100 m . of coast on the Straits of Macassar, begins a little S. of the equator. A Dutch officer, Major G. Mïller, aseended this river in 1825, for the purpose of exploring the interior, and had suceeeded in crossing the mountains into the valley of the Kapooas, when he was unexpectedly attacked and killed by the natives. N. of the E. clain, whieh terminates at Cape Kanioongan, lat. $1^{\circ} \mathrm{N}$., the Pantai, or river of Berow, enters the sea in lat. $2^{\circ}$ N.; while the Sabanoon and Umara, both mouths of the Boo-
longan, lie respeetively in lat. $2^{\circ} 45^{\prime}$ and $2^{\circ} 52^{\prime} \mathrm{N}$. These rivers, though barred, are not inaceessible, and may be navigated a long way up. Further N., for some hundreds of miles, the details of the coast are but little known, but the Kinabatangan, in lat. $5^{\circ} 45^{\prime}$, is reported to be a great river.

Lakes.-Of the lakes, little is known, and that little chiefly: through native information. The most eelebrated of them is that of Kinibaloo, E. side of the mountain of the same name. About three degrees further S., near the source of the Boolongan, report places another great lake (no doubt erroneously), to be, like the former, the source of many great rivers. These two lakes are situate in or near the mountains. In the alluvial plains also, particularly near the large rivers, lakes are numerous, but not remarkable either for magnitude or as interesting pliysical features. Yet the chain of lakes which connects the Kapoeas and the Kotaringin is said to prove that the prineipality of Matan, at the S.W. angle of Borneo, was insulated, at a comparatively reeent period, by a narrow strait or arm of the sea.

Geology.-Borneo being so little explored, its geologieal formation is necessarily very imperfectly known. All that ean be done, therefore, is to bring together those ascertained facts which seem to indicate the general structure of the island. In Sarawak, granite, with the several allied varieties of rock, prevail along the coast, the valleys being filled chiefly with a detritus of feldspathic materials, while limestone mountains encompass this district on the S. The Gunong Ratoos [hundred mountains] also, a chain 3000 ft . high, separating the I'anah-laut, or maritime country, at the S.E. angle of the island, from the valley of the Banjarmassin, is formed of granitie reeks, underlying, probably, the limestone, which shows itself further N., in the same valley. In both the granitie districts here mentioned, are found quartzose masses, resembling scoriæ, widely disseminated, and containing iron. It is in this diluvial formation of quartzose gravel, reddened with oxide of iron, that the gold and diamonds of Borneo are found in such abundance. In the vieinity of Brunai or Borneo, and also in Labuan, 30 m . further N., eoal has been discovered, under circumstanees which indicate the existence of a large field of this valuable mineral. On the river of Martapoora, also, E. of the town of Banjarmassin, have been found beds of excellent coal. Basalts, and other voleanie roeks, oecur in Maludu Bay, at the N. end of the island, and also at the falls of the Dooson, or Banjarmassin river, where it issues from the mountains. Besides gold, the annual produce of which has been estimated at a quarter of a million, Borneo yields copper, tin, antimony, and iron, which last is of the best quality. The diamonds are widely disseminated in the red soil, but the largest are said to be found on Mount Landa, in Pontianak. The business of mining, for gold and diamonds, is wholly in the hands of Chinese adventurers, and is earried on chiefly in Pontianak and Sambas.

Climate.-The wet season in Borneo begins in September, and ends in April, during which time the rain falls heavily, attended with much thunder and lightning, and violent squalls. During the rest of the year, or the dry season, as it is called, copious showers fall nearly every day. In the equatorial parts, the winds are variable throughout the year, sea-breezes, however, blowing close on shore. On the N. shores, the monsoons are those of the Chinese Sea in general N.E. from October to April, and S.W. the remainder of the year; on the S. shores, about Banjarmassin, the monsoons resemble those of Java, being from the W. and E. respeetively, in the seasons already mentioned. The heat is not by any means so great as might be expected, from the geographical position of the country-a circumstance attribntable, no doubt, to the prevailing humidity, the vast extent of forest, sereening the ground, and itself incapable of accumulating or rever berating heat, and to the frequency of the sea-breezes. In Pontianak, the summer heat rarely exceeds $82^{\circ} \mathrm{Fah}$. This equability of temperature, and the atmospheric cireulation, may, perhaps, explain why the Luropean visitors to the swampy, luxuriant shores of Borneo, rarely complain of their insalubrity.

Zoology.-An equatorial land, exceeding France in extent, varied and fertile, and still, for the most part, in a state of nature, may well be supposed to teem with animal life in great diversity of form. Here it will be sufficient to point
out what is peculiar to, or characteristic of, Borneo, in the department of Zoology. A great portion of this island is covered with dense forests, excluding the light, and frequently inundated beneath to a depth of some feet. In these secure retreats lives the orang-outang (Simia satyrus), an animal peculiar to Borneo and Sumatra. It is less formidable than is commonly supposed, and rarely ventures to the ground; but, in running through the forcst from bough to bough, or on the compaet foliage which forms its roof, it displays much address and activity. Two other remarkable apes, the longnosed and the crested, inhabit the skirts of the same woods, near the banks of rivers and lakes. The only gibbon (lar) found in the island, haunts the fig-tree thickets on the slopes of the mountains. In the mountainous districts is found also the striped tiger (Felis macrocelis), which is here the chief beast of prey, though not so powerful nor voracious as the panther. But the most remarkable animal in Borneo, after the orang-outang, is a singularly-whiskered carnivorous creature, resembling at once the otter and ornithorhynehns, and which has received the scientific name of Potamophilus barbatus. The bcar, which spoils the cocoa-nut trees, and steals the honey in the woods, does not appear to be a new species. A poreupine (Hystrix fasciata) supplies a favourite food to the natives, who say that this animal alone car feed with impunity on the upas. There is reason to believe that neither the elephant nor rhinoceros exist in Borneo ; which possesses, however, a peenliar species of hog (Sus barbatus), distinguished by its enormous whiskers and hideous aspect. The banteng, a large and handsome species of buffalo, inhabits the mountains; the napu, a musk, frequents the borders of the woods. Of deer, only three speeies are known; respeeting one of which, the munchae, it is said by the natives, that whoever cats its flesh will die of cutaneous disease. In the rivers of Borneo are three species of crocodile, one of which resembles the gavial of the Ganges. Fish are extremely abundant along the shores. In the Chinese Sea, all the reefs and islets are covered with oysters. In the Straits of Maeassar, pearls and mother-of-pearl are ordinary productions.

Botany.-Of the countless forms of the vegetable kingdom which clothe this prolific island, only a few can here be mentioned. The cocoa-nut, betel, sago, and gomati, the tibre of which serves to make cordage, are the palms most highly esteemed by the natives. The Nipa fruticens also, which adorns the banks of the rivers, where it invariably grows on the side of the deep water, while the mangrove overspreads the shallow side, is of great importance. Its seented flowers feed the bees which furnish the wax exported in sueh quantity; its fruit resembles the cocoa-nut, and its branches serve to form the roofs of houses. This must not be confounded with the niebong, the leaves of which are used to cover the roofs, and its exterior sheath of wood for flooring and boatbuilding. A species of sugar-cane here grows wild, as well as a kind of nutmeg (in this state flavourless), and a cinnamon, which has a taste of cloves. The mountain sides, where there is a sandstone soil, are covered with pine woods; and still higher up, the iron-wood tree (Diospyros) attains, with slow growth, colossal dimensions. In the district of Sarawak, and probably throughout the island, the gutta percha tree (Isomandra gutta) is plentiful. It attains a diameter of 6 ft ., and is called Niato by the natives, who are ignorant of the use of its juice.

Inhabitants.-The Europeans, who now arrogate the dominions of the shores of Borneo, find themselves preceded in that island by three different races-the Chinese, the Malays, and the Dyaks. The first of these are temporary visitors, in constant circulation, and led to this country by the desire of exercising a lucrative industry. The Malays are conquerors, who have issued from Sumatra or the Malayan Peninsula, within the last five centuries, and have established themselves on the coasts, throughout the Indian Archipelago, for the sake of engrossing the commerce. In Borneo they are strictly confined to the sea-board, and banks of the navigable rivers. The interior of that great island still remains wholly to its aboriginal possessors-the Dyaks. But it must be observed, that the native wild tribes of the interior are properly called Dyaks only in the W. Dutel residences, and the adjoining district of Sarawak; in other parts, they are called Biajow, Kajan, Marat, \&c. Yet, notwithstanding the doubts and contradietions uttered on this subject in recent accounts of Borneo, it may be confidently assumed, that the nations owning
these various appellations are all connected together by the ties of a common origin, a common language, and similar manners, though varying in dialeet and fashions, and divided into numberless petty tribes, each of which usually bears the name of the river whereon it is settled.

Dyaks.-The Dyaks are of middling stature, well made, 'but not vigorously developed. They are fairer than the Malays, have good foreheads, regular features, and a frank, agreeable aspect. Their eyes are somewhat oblique, and their cheek-bones prominent, thus seeming to betray a mixture of Mongolian blood. Their dress varies much in different parts of the island. In general, they wear a cotton cloth round the loins. The Doosons of the N. coast wcar immense rings of solid tin or copper round the lower parts of the body and the shoulders; while the Saghai of the S.E. are dressed in

DYAKS.-1. DOOSON, 2. SAGHAI,
From Marryat's Borneo, and Belcher's Voyage of the Samaring.
tigers' skins and rich eloth, with splendid head-dresses made of monkeys' skins and the feathers of the argus pheasant. Others wear rings of ratan, in place of metal ; the neck is loaded with collars of human teeth, or of the teeth of apes and wild boars; the head-dress is made of cloth, deeked with feathers, or of the bark of trees, with tufts of fibre resembling feathers. Their ears are loaded with as many heavy rings as they can bear, which streteh the lobes immoderately. Some tribes are tattooed in blue lines from head to foot, others make war dresses of handsome peltry, preferring the skin of the tiger. Their arms are a buekler of hard wood, a spear, and sword or knife; some tribes use also the sarbacan, or sumpitan, a slender tube, about 5 feet long, through which is blown a small dart, 9 inches long, and no thicker than a strong wire, the point of which is dipped in a poison made from the upas. The women's dress is becoming, but their stays, made of bark, sometimes stiffened with rims of brass, are sewed on them, and never removed except in case of pregnaney. The Dyaks of the W. side of the island generally dwell in sheds or houses, capacious enough to contain the whole community; some have been seen nearly 500 feet long, and eapable of lodging 400 people. These houses are uniformly ereeted on piles of iron-wood, from 5 to 20 feet from the ground. The floors are of split bamboo; the roofs covered with the leaf of the Niebong. Thin partitions of split cane separate the apartments of the married people from the common room; the chief occupies the centre of the building, and in front of his chamber, usually, a portion of the common hall is set apart as the head-house. And here we are led to consider the most revolting characteristic of these people; for the Dyaks, though ordinarily neither fierce, treacherous, nor sanguinary, yet covet human heads; and no man can marry till he has won the object of his affections, by presenting to her at least one of these horrid trophies. These fruits and memo-
rials of murder are pickled, and, with cowry shells in the eye-sockets, and tufts of grass in the ears, are hung up in the head-house. On festivals they are taken down to adorn the persons of the heroes to whom they respeetively belong, who dance with these ornaments dangling at their sides, suspended by belts over the shoulders. A similar eustom of obtaining heads is prevalent among the Alfoories of Celebes and Ceram. The Dyaks, apart from Malayan influenee, seem to have no ideas of religion. They have no form of worship, and no priests; the only superstition distinctly reeognized among them, consists in augury, or in attention to the flight of several birds. Most of the tribes bury the dead; some burn the body, and others suspend the coffin from a tree. In all cases, the head first aequired by the deeeased accompanies him to the grave. The Dyaks marry but one wife, and though there is said to exist among them mueh license before marriage, infidelity is rare. Their government seems to be republican; their chiefs exereise influeuce, but are not armed with effectual authority. These people, even when turned cultivators, and residing in villages, still retain a trace of nomadie habits; when the fertility of their rice grounds is exhausted, they abandon them, and settle elsewhere. They have little industry, yet their sumpitans or blow pipes, their utensils of plaited cane, and their prahus, often 50 feet long, are so many specimens of excellent workmanship. Some of the native tribes on the N. shores of Borneo live much on the water, where they are always ready to attack those who seem weaker than themselves.

Language. -The language of the Dyaks is radically related to the Malayan, both being apparently derived from that primeval Polynesian language, the remains of whieh may now be traced from Madagasear to the Sandwich Islands. It is reported that in the mountainous interior of the island, N . of the valley of the Banjarmassin, there exists a wild people who go quite naked, live in trees, and shun all intercourse They are called by the S. tribes Orang Vút; on the W. coast they are known as the Orang Bunan.

Chinese. - The Chinese who erowd to the shores of Borneo belong to the dregs of the people, yet in their newly-adopted country they exhibit a decided superiority in social and industrial capabilities, and their villages are patterns of good order, comfort, and abundance. The mining business is wholly in their hands, and, after some years' labour, they return to China, generally in good circumstanees, enriehed, it is supposed, by the concealment of gold dust and diamonds. They are aceused of turbulence, that is to say, impatience of Malayan rule, and in truth, if they could bring with them Chinese wives, and dispose themselves to settle permanently in Borneo, they would have long since dispossessed the Malays. For their own protection they combine in soeieties ealled Kong-sies, the members of which are bound by an oath, solemnized by drinking blood, and the administration of which, in China, is forbidden under pain of eapital punishment. The three great

- Kong-sies, which may be said to govern the mining interests of W. Borneo, are Lang-fong in I'ontianak, which is said to lave at its command 6000 fighting men; the other two, viz., Tay-kong, and Lara Sin-ta-kiou, able to levy 10,000 and 5000 combatants respectively, are in Sambas.

Malays.-The Malays in Borneo have lost none of the dis tinetive characters of their nation; they manifest the greatest inciination towards a seafaring life, and many of them may be said to have their home on the waters, following piraey as an oceupation as well as commeree. Though habitually indolent, they are not withont capability of exertion as well as skill, and, with their excellent iron, they can imitate to perfeetion the finest work of our cutlers and gunsmiths.

Antiquitics.-It deserves to be remarked that, both in the valley of the Nagara, E. of the Banjarmassin, and near the banks of the Kapooas, in Pontianak, remains have been found of Hindoo temples, with seulptures, coarse indeed, yet indicative of art and civilization, superior to any now existing in Bornco among either the Dyaks or Malays. At one village on the Nagara, the memory of the Hindoo colony (Orang Kling) is still traditionally preserved. Among the Dyaks also are preserved, as precious heirlooms, with religious care, certain large jars, with dragons in relicf, said to have come from Java, but thought, by good judges, to be of Chinese origin. Such jars, however, are no longer made in Java or $i_{11}$ China, and nothing seems to be preserved of the history of
their manufacture which can throw light on the question of their age.

Produce.-The productions of Borneo whieh find their way into commerce are, gold, platina, tin, antimony, copper, iron, and diamonds. Edible birds' nests, collected in the interior, as well as on the coasts, trepang or holothuria, fished in the Straits of Macassar-these three artieles are destined wholly for the Chinese market. Camphor, iron-wood, ebony, ratans, cassia, wax, sago, and rice, are in general demand.

Divisions.- Of the great island of Borneo, above two-thirds are elaimed by the Duteh, either as actually possessed by them, and subject to their immediate authority, or by virtue of treaties made with the native princes, who have acknowledged their supremacy. The portion exempted from their rule is the N. and narrow part ; its limits on the coast being Tanjong, or Cape Datoo, on the W., lat. $2^{\circ} 5^{\prime} \mathrm{N}$. ; and the month of the river Atas, lat. $3^{\circ} 20^{\prime} \mathrm{N}$., on the $\mathbf{E}$. This maritime region, 1200 m . in extent, was, till lately, divided between two States; the Sultan of Borneo Proper elaiming the dominion of the N.W. coasts, from Tanjong Datoo to the river Kimanis, lat. $5^{\circ} 35^{\prime}$ N. ; while the Sultan of Sooloo domineered over the remainder. But a third power, eapable of counterpoising the influence of the Dutel, has recently arisen here, which threatens to extinguish the preeeding two ere long, if that result be not indeed virtually accomplished already. The district of Sarawak, extending from Tanjong Datoo E.S.E., about 70 m ., to the mouth of the river Samaralian, and consequently within the dominions of Borueo Proper, was purchased in 1842, from its native chiefs, by an English gentleman, Mr. Brooke, and formally and absolutely eeded to Great Britain in the following year, by the Sultan of Borneo, who probably foresaw that he could never reckon on the obedience of his new vassal. In faet, the English rajah of Sarawak attacked and took the city of Brunai or Borneo in July 1846; and among the fruits of his victory may be reckoned the cession to Great Britain, a few months later, of the small island of Labuan, situate about $30 \mathrm{~m} . \mathrm{N}$. the Borneo river, and well fitted, by local eireumstanees, to command the trade of these coasts. Thus the British are now established on the N. coasts of Borneo, where they figure as the protectors of lawful commerce; but, as the Sultans of Bornco Proper and Sooloo, with their subordinate ehiefs, are always more or less obuoxious to the general charge of piraey, and the consequent penalty of extermination, it is obvious that the sway of the British, in these seas, must eventually extend itself over both the shores protected by then, and tle States coerced by the act of protection.

The Dutch possessions and dependencies in Borneo are embraced by a coast line of not less than 1800 m ., from Tanjong Datoo, round by the S., to the river Atas on the E. coast. The former are divided into three residenees or provinces, of very unequal size-Sambas, Pontianak, and Banjarmassin. The first of these adjoins Sarawak, from which it is separated by the mountains on the S.W., and extends about 120 m . along the coast, from Tanjong Datoo to the river Doori. Mount Dajang, its furthest inland limit, is probably 100 m . from the sea. Between the rivers Doori and Kotaringin, the coast boundaries of Pontianak, the distance is 300 m . in a straight line; while, in the interior, this residence embraces the entire valley of the Kapooas. It comprises 24 prineipalities, of which, however, only the following seven are immediately under Duteh control:-Mampowa, Pontianak, Landak, Kooboo, Simpang, Sueeadana, and Matan. And hore it may be observed, that the name Succadana, which means 'terrestrial paradise,' and belongs properly to a small disirict S. of the Simpang river, is by some writers extended to the whole of this region, including Sambas. Among the dependencies of Pontianak are reckoned about 100 islands. The residence of Banjarmassin, or of the S. and E. coasts, far exceeds that of Pontianak in magnitude; and besides, as the chief seat of Government, it elains the vassalage of the dependent states on the E. eoast; these are, the kingdoms or prineipalities of Tanah-13úmbú, Pasir, Kootai, Gonong-Tabur, and Bulongan. Within this ample territory, in the town of Martapoora, about 20 m . from the Duteh capital, the Sultan of Banjarmassin is allowed to retain, within a narrow district, the semblance of independence. The Governor of Banjarmassin was, till 1846, subordinate to the Governor-general of the Duteh Indies, in Batavia; but, since that date, he has
exercised, under the title of Governor of Borneo, plenary and independent powers.

Population. - The population of Borneo may be estimated, with some probability, to be $2,000,000$, of whom 400,000 are Malays, 100,000 Bugis, from Celebes, and 140,000 Chinese; the rest are Dyaks or indigenous tribes.

History and Name. - The Europeans who first visited this island, early in the 16 th century-Lorenzo de Gomez, in 1518, and Pigafetta, with the ships of Magalhaen's expedition, in 1521-both named it Brunai or Brané, from the port and principal city on its N.W. shores, at which they touched. This name, written by the Malays themselves Búrni or Boorni, is obviously the Sanscrit Bhurni or Bhoorni [land]; its conversion into Borneo, and application to the whole island, came into use, among Europeans, in the 17 th century. Some writers have stated that the island, in its whole extent, is called, by the natives, Pulo Kalamantan; but those who have had most intercourse with the native tribes of Borneo, deny that they have any general name for the whole island.

The first Dutchman who arrived at Borneo was Oliver van Noort, in 1598. The reputation of the island for abundance of diamonds and bezoar-stone (the latter was considered, at that time, as a universal medicine) induced the Dutch settled in Batavia to send, in 1608 , to the Queen of Succadana, an officer, demanding a treaty of commerce ; to whom she replied, that 'the trade of her country was free to all nations.' In 1609, however, they succeeded in making a treaty with the Sultan of Sambas. A factory was thus established, and the factors gradually raised themselves into sovereigns, by steps which cannot be here detailed. In 1769, the English, having taken Manilla, obtained from their ally, the Sultan of Sooloo, the cession of his claim to the N. coasts of Bomeo ; and took possession of Balambangan. But, in 1775 , the garrison of that island, composed chiefly of Bugis, was cut to pieces by a band of pirates; and the settlement was consequently abandoned. When Java was taken by the British, in the late war, the Dutch power in Borneo fell to the ground, and the native chiefs, watched by a few British political agents, resumed the exercise of their original authority; but they now found themselves unable to cope with the Chinese Kong-sies; and were, therefore, well pleased at the return, in 1818, of their Dutch masters. In 1842, the boldness of Mr. (now Sir James) Brooke, who had become acquainted with the lucrative commerce of those scas, and contrived to obtain the territory of Sarawak, with the title of Rajah, broke through the limits of the monopoly so long maintained by the Dutch. These, to meet the danger, have renewed their treaties with all the native princes within their influence, in terms which assign them an express supremacy. But British influence must necessarily extend from Labnan and Sarawak over the N. of the island ; and if the maxim of the Qucen of Succadana, in favour of a free trade with all nations, be steadfastly adhered to, that influence will probably gain the ascendant in the S. also.(Van der Aa's Aardrijliskundig Wooräenboek der Nederlanden; Temminck, Coup d'ail sur l'Indes Neerlandaises; Moniteur des Indes; Earl's Eastern Seas; Low's Sarawak; Sir E. Belcler's Voyage of the Samarang; Keppel and Brooke's Borneo; Haussman's Voyage en Malaise ; \&c.)

BORNEO PROPER, a kingdom or independent principality, N.W. coast, isl. Borneo, extending from the common bounds of Sarawak and Sadong (lat. $1^{\circ} 33^{\prime} \mathrm{N}$. ; lon. $110^{\circ} 40^{\prime}$ E.), about 500 m . N.W. to the river Kimanis, in lat. $5^{\circ} 40^{\prime} \mathrm{N}$. It was at the capital of this kingdom that Europeans first learned the name Burni or Boorni, which they afterwards changed into Borneo, and extended to the whole island. The river of Borneo is a noble stream, $1 \frac{1}{2} \mathrm{~m}_{1}$. wide, and with a depth of water for a frigate up to the city, which is situate about 12 m . above the river's mouth, in lat. $4^{\circ} 52^{\prime} \mathrm{N}$. ; lon. $114^{\circ} 52^{\prime} \mathrm{E}$. The city is built on piles in the river, like most Malayan towns, occupying, in three portions, both shores and an island, or rather mud bank, projecting from the $S$. side. The houses are raised about 3 ft . above high water, and are connected together by narrow planks; but the intercourse of the place is carried on chiefly by means of canoes. Borneo has been lately described as a 'Venice of hovels.' It presents a singular spectacle on market-days, when the river is covered with little canoes paddled by women selling catables, and screened by immense hats, made of palm leaves. When Pigafetta visited this place, in 1521 , he sup-
posed it to contain 25,000 houses, or about 100,000 inhabitants; subsequent estimates fell lower, and we find the population of Borneo, at the present day, variously estimated at 22,000 or 10,000 ; the latter number probably being near the truth. Before Europeans had penetrated so far to the E., Borneo enjoyed, in an eminent degree, the prosperity derivable from a most advantageons position on the Chinese seas; but those active rivals quickly intercepted its chief sourees of wealth. Chinese emigrants, however, still frequented the old emporium, where they were deeply engaged in two branches of industry, namely, the cultivation of pepper, and the building of junks, but the disquietude of the country at the commencement of this century, arising probably from the progressive decline of trade, and general loss of fortune, had the effect of driving away these industrious sojourners, and there are few or no Chinese in Borneo at present. The alienation of Sarawak in 1843 , and the forced cession of Labuan to the British, in 1846, were events calculated to hasten the downfall of Bormeo Proper ; for Labuan, uniting equal advantages of position with that of the perfect security afforded by civilized government, and an efficient police, will easily become the mistress of these seas, and the old city of Borneo will sink in decay. The dominion of Borneo, along 500 m . of coast, is little more than nominal. There exists no social organization in the country; there are no roads nor regular communications by land; the Government exercises no prompt or pervading authority, but its wild subjects, habitually pillaged and oppressed, are always ready to disobey, when there ceases to be the power to compel their obedience, and that day is evidentally not far distant.

BORNHEM, a tn. and com. Belgium, prov. Antwerp, 1. bank, Scheldt, 15 m . W. Mechlin, with numerous looms for linen-weaving, several breweries, mills, bleacheries, and tanneries; and trade in seeds, flax, and linen. Pop. 4194.

BORNHOLM [anc. Borringia], an isl. Denmark, Baltic Sea, 90 m . E. Zceland, and 25 m . S. the most S. point of Sweden. Its most N. point is Cape IIammeren, on which is a lighthouse, 279 ft . high, in lat. $55^{\circ} 17^{\prime} 42^{\prime \prime} \mathrm{N}$. ; lon. $14^{\circ} 46^{\prime} 30^{\prime \prime} \mathrm{E}$. (к.) It is about 23 m . long by 18 broad; area, 170 geo. sq. m. In general, the coast is high and rocky, presenting perpendicular cliffs, close to which is deep water. Where cliffis do not prevail, reefs and sandbanks stretch out to sea, rendering all approach dangerous, more especially in stormy weather, when the surf is heavy. The island has no good or secure harbour for large vessels, and only few and indifferent ones for small. The best is at Rönne, on the S.W. side, with $11 \frac{1}{2} \mathrm{ft}$. water. The roadstead, however, is not very good, being exposed to the S.W. winds. Bornholm, both geographically and geologically, belongs to Sweden. In the N. and N.E. it is composed of granite and gneiss, occupying more than a half of the whole area. W. from this crystalline formation, and lying generally N.W. and S.E., are seams of inferior coal, connected with the oolite and the older green sandstone. In the S. are strata of sandstone, schist, and limestone, of the transition scries. Excepting a heath tract near the centre of the island, on a plateau, 250 ft . above the sca, the land is generally fertile, producing the same grain crops as the rest of Denmark, and the same trees, beech excepted. The island has no lakes of any size, and its streams, numerous enough, are merely rivulets, with narrow, rocky courses. Good building stone, and marble, are quarried and exported. The coals are likewise raised and used to some extent, but they are of inferior quality. The island has long been famous for its rock crystals. Its watches have likewise a local reputation. The chief support of the inhabitants is agriculture, cattle-rearing, fishing, and seafaring. The principal town and port is Rönne, after which come Nexöe, and Svanike. Pop. 26,600.-(Baggesen, Der Dänische Staat.)

BORNO, a large vil. and com. Austrian Italy, gov. Milan, prov. of, and 32 m. N.E. Bergamo, r. bank, Oglio. It has a large square, handsome church, two chapels, and a court-house. Pop. 2228.

BORNOS, a tn . Spain, Andalusia, prov. of, and 28 m . E.N.E. Cadiz; on a slope, near r. bank, Guadalete, and built with considerable regularity. The houses are generally of two stories, and many of them have good gardens. There are fine spacious squares, and the strects are usually of good width, but those which follow the direction of the slope on which the town stands, are more or less steep. The most
remarkable building is the palace of the Dukes of Medinaceli, part of which consists of an old Moorish castle, in good preservation. The parish church is large and handsome, and has some good pictures. Manufactures unimportant, and consisting chiefly of linen and cotton eloth, and soap. Bornos is famous for its water, and the fineness of its climate, which makes it the resort of invalids. I'op. 4826.

BORNOU, an extensive kingdom, Central Africa, lying S. and W. Lake Tchad, having the latter, part of Kanem, and the river Shary, and Begharmi, on the E. and S.E., Houssa on the W., Mandara on the S., and the Desert on the N. and N.W.; a tract comprehended between the parallels of $15^{\circ}$ and $10^{\circ} \mathrm{N} . ;$ and the meridians of $12^{\circ}$ and $16^{\circ} 30^{\prime} \mathrm{E}$. The whole country is flat, and by far the greater part is covered with thick underwood, high coarse grass, and creeping and climbing plants, while all around Lake Tchad, and for a considerable distance W., S.W., and S., is alluvial and marshy, and by no means cultivated to the extent it might be.

The heat in Bornou is very great, but not uniform. In the hottest season, that is, from March to May or June, the thermometer sometimes rises to $105^{\circ}$ and $107^{\circ}$ at two o'clock in the afternoon, and is rarely below $100^{\circ}$ even during the night. The hot season is followed by violent thunder-storms, accompanied by heavy rains, which are then nearly continual, with cloudy weather, and a damp and sultry atmosphere. Tlie inhabitants now begin to prepare the ground for corn, and now the rivers and lakes begin to overflow their banks, and confer fertility on the soil. The dry and cold season commences in October. Towards December, and in the beginning of January, the thermometer, no part of the day, mounts higher than $74^{\circ}$ or $75^{\circ}$, and in the morning it descends to $58^{\circ}$ and $60^{\circ}$.

The country produces little besides grain, the principal kind raised being a species of millet, called gussub. Prepared in various ways, it forms the staple food of the inhabitants. Four kinds of beans, all known by the general name gafoody, are also grown in large quantities. Cotton and indigo, the latter of excellent quality, grow wild, close to the Tchad and overflowed grounds. There are no fruit trees of any description in the kingdom, with exception of a few lime and fig trees in the garden of the Sheikh, at Kouka. The only implement of husbandry is an ill-shaped hoe.

The domestic animal are dogs, sheep, goats, cows, horses, and oxen, the last in incalculable herds; horses are also bred in vast numbers. Domestic fowl and game are abundant; and bees so numerous, as in some places to obstruct the passage of travellers.

The wild animals of the country are those commen to tropical Africa-the lion, leopard, elephant, crocodile, hippopotainus, giraffe, \&c. Most of these are eaten by the natives, the flesh of the crocodile, in particular, being reckoned extremely fine, having, according to Denham, 'a green firm fat, resembling turtle, while the calipee has the colour, firmness, and flavour of the finest veal.' The civet cat also abounds, and its secretion forms an important article of trade. Reptiles are numerous, including scorpions, centipedes, enormous toads, and many varieties of serpents, one of which, said to be harmless, measures from 14 to 16 ft . The rivers and lakes abound with fish. The country is frequently desolated by the visitations of the locust, which, though a favourite article of food, is on this account much dreaded by the natives.

The people of Bornon consist of two classes-the descendants of Arab settlers, and the native race; the former called Shouas, and the latter Kanowry. The Shouas, whe are of a light copper complexion, with an open, pleasing countenance, are a shrewd, cunning, and intelligent people, but deceitful and overbearing; the Kanowry, or aborigines, exhibit all the Negro qualities, both moral and physical. They are simple, peaceable, and inoffensive, but wanting in energy ; have flat noses, large mouths, and inexpressive countenances, of a deep black colour. The latter acknowledgg the superiority of the former, and conduct themselves towards them with a conscious inferiority. There are nine different dialects spoken in the country, besides the Arabic. The government is an absolute monarchy; and the King can, at any time, muster a well-disciplined and well-equipped army of 15,000 or 20,000 men, mostly cavalry, armed with sabre, pike, and bow. A favourite and important body of the infantry consists of spearmen from Kanem, on the N. side of Lake Tchad. The
laws are arbitrary; the punishments severe and summary, but generally administered with justice.

The chief articles of export are gold dust, slaves, horses, salt, and civet. The only manufactures known in Bornou are
